

7/7/14

To The Members Of The Board,

I would like to introduce our company TeraValve. Our signature patented water conservation valve was officially unveiled at the 2014 Building Show at the Jacob Javits Center in NYC. We have completed installations in locations in several states including California. Additionally, the 'TeraValve' itself is manufactured in California.

Clients report between 12% - 25%, and in some cases more, water consumption savings with no loss in pressure. The science and engineering behind the Teravalve can be seen at www.teravalve.net where you will find a brief demonstrational video.

TeraValve is a division of Tera Holdings, LLC - a global green energy management company that offers a full suite of energy savings solutions with presence in several countries across the globe.

I respectfully submit our technology to The Board for their consideration at the upcoming July 15-16 meeting. The Board, with its extensive collective engineering background - will be able to easily understand the TeraValve and its principles and appreciate its simple yet effective performance. The valve is a new and innovative product on the cutting edge of conservation technology, introduced and awarded a patent after 5 years and several million dollars of research & development.

We have received awards and recognition based on our products effectiveness for such clients as Co-Op City, Double Tree and Hilton Hotels, and Jones Lang Lasalle Global Property Management among others. References, client point of contact, media coverage and press release materials are readily available.

In California, the TeraValve is being utilized in several applications such as residences, hotels, commercial operations and manufacturing plants, golf courses, colleges and universities - anywhere water is historically overused or over pressurized. The valve comes in various sizes to accommodate all water pipes and configurations. Valve installation is completed usually within 4-6 hours, is removable within 30 minutes and each valve has a complete 10 year warranty. Our company is dedicated to global water conservation and developing solutions - we would like the opportunity to help The State Of California in an effort to achieve legitimate, measurable state-wide conservation results.

Please contact me personally with any questions or additional information requests.

Thanks for your consideration.

Sincerely,

- Steve Sylvester
