Subject: Formal Comment by Former CCSD director re:Cambria WDR Update

Attn. John Rokke, Water Resource Control Engineer Central Coast Water Board

Draft Updated Order No. R3-2014-0050. Cambria WDR Update

During my 17 year service on the CCSD board, providing a reliable water supply was always (and still is a high priority). The approx. 6 year drought cycles seriously effects the quality of life of all Cambrians, the district's finances and our Fire Dept's ability to keep us safe.

The project before your board fulfills the need for a permanent water supply facility that can be operated to meet Cambria's water demands and improve overall supply reliability, year-round, safeguard us against water shortages and maintain our self-sufficiency. Also the incorporation of the reuse of recycled water for indirect potable use solves another of our difficulties, without opening the door to runaway growth (always a perceived concern in Cambria).

During the threat of MTBE entering our drinking water from nearby gas storage tanks some years back, your RWQCB worked closely with my CCSD board towards a common sense solution which was much appreciated by us here. I urge your same diligence with a positive referral of the WDR update. Please include this letter in the administrative record for this proceeding.

Sincerely Peter Chaldecott 805-9278575
