Subject: Comment Letter Cambria WDR Update

Reference: Draft Updated Order No.R3-2014-0050

We support the EWS Project. Cambria needs a reliable water supply. It should not have to face water shortages because of climate change effects. The SWF will help prevent seawater intrusion into production wells. It will also prevent subsidence of the San Simeon Creek aquifer. These are just some of the important effects.

We have been on the water wait list since 1988. We feel Cambria owes water hookup permits to wait list lot owners. There can't be over growth since Cambria is limited to 4,650 residential units. (This limit was set by the CCSD 2008 Water Master Plan.)

Sincerely,

Sherwin and Marilyn Rubin
