John Rokke

We have lived in Cambria for over 20 years and know that periodic droughts will occur. Cambria now has in place equipment to supply potable water during expected droughts. It is very important that the required permits are issued to insure that this equipment can be activated when additional water is needed or useful for the health and safety of Cambria's residents. It is very important to have water available for fire prevention (irrigation) and fire suppression in this area.
