Subject: Comment Letter-Cambria WDR Update

Dear John

By now you have heard all the reasons why the CCSD should have a fully permitted Sustainable Water Facility to provide water to the city of Cambria to make sure without any doubt the town will have sufficient water during the summer months when a drought is in effect.

My wife and I have owned two lots(side by side) for 30 years and have and we are on the CCSD wait list number 270 and have been watching the slow progress over the years. We have also been watching the anti growth people as they destroy any progress in fixing any the water problem. Around 6 years ago we were in town and decided to attend a CCSD meeting where the anti growth group were in full force, as i watched Rick Hawley stand up and ask the board to help him save some of the fish in very low aquifers and he appeared to be very authentic and the in the same sentence started to reprimand the board along with very negative comments from some of his followers. It was apparent to me they did not have all the facts. My heart goes out the board and any other agency that deal with this group. I find interesting that Rick and his followers have not come up with a better solution.

I have decided to keep this email short as you have plenty to do and I can only hope the vote will pass.

Thank you for your time

Lance & Debbie from Rossford Ohio (today 14 degrees)
