Re: Los Osos Sewer Project

Gentlemen:

I respectfully ask that you be willing to listen with an open ear to the negotiating team of the newly elected Los Osos Community Services District.

Yes, **we are all tired** of the ongoing sewer saga of Los Osos, we meaning the public agencies involved and the residents of our community.

But this time we have an **opportunity to get it right.**

Please give our team a chance to give our community a solution to the water pollution problem that takes into consideration the **will of the people, including those with modest income.**

We desire a solution that all the residents of our community can afford. We desire a project that solves the wastewater pollution problem and also meets the requirements of the RWC CB

Please take into consideration why we elected three new members to the LOCSD--three engineers with **actual experience whom we can trust to build us an affordable sewer with an appropriately located treatment facility.**

Thank you for welcoming our newly-formed LOCSD negotiating team and giving the team an opportunity to give our small community a fair and equitable plan.

Sincerely,

Lea Lazaga Nichols
