RESCISSION OF COVERAGE; ENROLLEE NO. 2004-0012-DWQ-0022; SYNAGRO WEST LLC, EMIGH LAND LP, AND CHRISTINE MAHONEY LP; EMIGH LAND TP (SO-4); SOLANO COUNTY

On 22 June 2005, the Executive Officer of the Central Valley Regional Water Quality Control Board (Central Valley Water Board) issued a Notice of Applicability (NOA) granting coverage under the State Water Resources Control Board's *General Waste Discharge Requirements for the Discharge of Biosolids to Land* (Biosolids General Order, 2004-0012-DWQ) to Synagro West LLC (Synagro) and Emigh Ltd Farms. The discharge was assigned enrollee number **2004-0012-DWQ-0022**.

The NOA was revised on 18 September 2020 to add new biosolids application areas, increasing the total available acreage from 1,570 to approximately 1,951 acres. A subsequent revision on 29 March 2021 reflected a change in property ownership. The NOA authorizes the application of Class B Biosolids to designated fields at the Emigh Land TP property, which consists of 13 fields totaling approximately 1,951 acres of farmland. Because the Biosolids General Order requires groundwater monitoring in areas where groundwater is encountered at depths less than 25 feet below ground surface, three groundwater monitoring wells MW-1, MW-2, and MW-3 were installed to monitor first-encountered groundwater at Field SO 4-25. These wells are located at 3828 Goose Haven Road, Rio Vista, on Assessor Parcels Numbers (APNs) 0048-01-0030 and 0042-11-0210.

On 28 August 2023, the Central Valley Water Board received a Notice of Termination (NOT) from Synagro. The final application of Class B biosolids occurred on 14 October 2022, which is consistent with the monitoring reports submitted in accordance with the Monitoring and Reporting Program (MRP) R5-2005-0825 Rev1. Pursuant to Provision D.1.b.(1) of the Biosolids General Order, termination for sites using Class B biosolids may not occur until 38 months after the last application date. The Discharger has met the 38-month post-application resting requirement.

We have also received and reviewed the Well Decommissioning Report dated 25 August 2026, prepared and stamped by Michael H. Friedman, a California Professional Geologist with Roux Associates, Inc., confirming that groundwater monitoring wells MW-1, MW-2, and MW-3 have been properly decommissioned in accordance with applicable requirements.

Based on meeting both the 38-month post-application termination requirement and the well-decommissioning requirement, coverage under Order 2004-0012-DWQ is hereby rescinded.

If you have any questions regarding this letter, please contact Lani Andam with our Waste Discharge to Land Permitting Unit at lani.andam@waterboards.ca.gov.
