The California Regional Water Quality Control Board, Central Valley Region, (Central Valley Water Board) finds that:

1. On 23 June 2006, the Central Valley Water Board adopted Waste Discharge Requirements (WDR) Order R5-2006-0058 and Time Schedule Order (TSO) R5-2006-0059, prescribing waste discharge requirements and compliance time schedules, for the State of California, Department of Parks and Recreation (Discharger) Empire Mine State Historic Park (Facility), in Nevada County.

2. WDR Order R5-2006-0058 contains in part, Final Effluent Limitations IV.A.1 as follows:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Units</th>
<th>Effluent Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>Average</td>
</tr>
<tr>
<td>Turbidity</td>
<td>NTU</td>
<td>5</td>
</tr>
<tr>
<td>Arsenic, Total Recoverable</td>
<td>µg/L</td>
<td>10</td>
</tr>
<tr>
<td>Iron, Total Recoverable</td>
<td>µg/L</td>
<td>300</td>
</tr>
<tr>
<td>Manganese, Total Recoverable</td>
<td>µg/L</td>
<td>50</td>
</tr>
</tbody>
</table>

c. Dissolved Oxygen: Dissolved oxygen in the discharge shall be no less than:

i. 85 percent of saturation as the monthly median of the mean daily dissolved oxygen concentration;

ii. 75 percent of saturation as the 95 percentile dissolved oxygen concentration; and

iii. 7.0 mg/L at any time.

3. The Discharger proposed to install a treatment system for removal of arsenic, iron, and manganese to comply with final effluent limitations in WDR Order R5-2006-0058. The proposed treatment system would also assist in compliance with turbidity and dissolved oxygen effluent limitations. WDR Order R5-2006-0058 and TSO R5-2006-0059 required that the treatment system be installed and operational by 18 May 2010.

4. On 8 June 2012, the Central Valley Water Board adopted Waste Discharge Requirements (WDR) Order R5-2012-0050, for the Discharger’s Empire Mine State Historic Park.
5. WDR Order R5-2012-0050 section IV.A.1 includes, in part, the following final effluent limitations:

a. The Discharger shall maintain compliance with the following effluent limitations at Discharge Point No. 001, with compliance measured at Monitoring Location EFF-001 as described in the Monitoring and Reporting Program:

**Table 6. Effluent Limitations**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Units</th>
<th>Effluent Limitations</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>Average</td>
</tr>
<tr>

<tr>
<td>Arsenic, Total Recoverable</td>
<td>µg/L</td>
<td>10</td>
</tr>
</tbody>
</table>

e. Dissolved Oxygen. Dissolved oxygen in the discharge shall be no less than:

   i. 85 percent of saturation as a monthly median of the mean daily dissolved oxygen concentration;

   ii. 75 percent of saturation as the 95th percentile dissolved oxygen concentration within a calendar month; and

   iii. 7.0 mg/L at any time.

f. Iron, Total Recoverable. For a calendar year, the annual average effluent concentration shall not exceed 300 µg/L.

g. Manganese, Total Recoverable. For a calendar year, the annual average effluent concentration shall not exceed 50 µg/L.

h. Turbidity. For a calendar year, the annual average effluent concentration shall not exceed 5 NTUs.

**Need for Time Schedule Extension and Legal Basis**

6. The Discharger installed a new passive treatment system that began operation in November 2011. On 4 January 2012 (amended 17 January 2012), the Discharger requested that it be allowed until 1 June 2015 to achieve compliance with the final effluent limitations for arsenic, dissolved oxygen, iron, manganese, and turbidity. Due to the nature of the passive treatment system, the Discharger anticipates that additional time is necessary for wetland vegetation and biogenic processes to become established and for the system to reach its design capacity for removal of arsenic, iron, manganese, and turbidity. Additionally, the Discharger indicated that the discharge may not be able to comply with the concentration-based effluent limitation for dissolved oxygen during the summer when the effluent flow is low and ambient heat could raise the temperature of the discharge within the
conveyance pipe from the wetlands to the drainage channel, which could reduce the dissolved oxygen concentration.

**Mandatory Minimum Penalties**

7. CWC sections 13385(h) and (i) require the Central Valley Water Board to impose mandatory minimum penalties (MMP’s) upon dischargers that violate certain effluent limitations. CWC section 13385(j)(3) exempts the discharge from mandatory minimum penalties “where the waste discharge is in compliance with either a cease and desist order issued pursuant to Section 13301 or a time schedule order issued pursuant to Section 13300 or 13308, if all the [specified] requirements are met...for the purposes of this subdivision, the time schedule may not exceed five years in length...”

8. Per the requirements of CWC section 13385(j)(3), the Central Valley Water Board finds that:
   
   a. This Order specifies the actions that the Discharger is required to take in order to correct the violations that would otherwise be subject to CWC section 13385(h) and (i).

   b. To comply with final effluent limitations, the Discharger proposed that an additional three years is necessary to allow at least two growing seasons for wetland plants to grow and an additional year afterwards to provide time for biogenic processes to become well established to achieve final compliance with effluent limitations for arsenic, dissolved oxygen, iron, manganese, and turbidity. The Discharger indicated that the effect of radiant heating will be reduced by shading as the system matures, and proposed that additional measures may be undertaken to comply with the dissolved oxygen effluent limitations if additional monitoring indicates that the discharge is unable to comply with the final effluent limitations for dissolved oxygen after two growing seasons (at least two calendar years). The final effluent limitations for arsenic, dissolved oxygen, iron, manganese, and turbidity in WDR Order R5-2006-0058 were new, more stringent, or modified regulatory requirements that became applicable to the waste discharge after the effective date of the waste discharge requirements (1 August 2006) or 18 May 2010 as reflected in the time schedule of TSO R5-2006-0059, and after 1 July 2000. Additional new or modified control measures are necessary in order to comply with the final effluent limitations for arsenic, iron, and manganese. The new or modified control measures cannot be designed, installed, and put into operation within 30 calendar days as reflected in the compliance schedule in this Order.

   c. This Order establishes a time schedule to bring the waste discharge into compliance with the effluent limitations that is as short as possible, taking into account the technological, operational, and economic factors that affect the design, development, and implementation of the control measures that are necessary to comply with the effluent limitations.

9. TSO R5-2006-0059 provided protection from MMP’s, for violations of effluent limitations for arsenic, iron, and manganese, from 23 June 2006 to 18 May 2010. The compliance schedule did not exceed five years.
10. Previous CDO's or TSO's have not provided the Discharger with protection from MMP's for violations of the final effluent limitations for turbidity and dissolved oxygen.

11. Per the requirements of CWC Section 13385(j)(3)(C)(i), an individual Cease and Desist Order or Time Schedule Order may provide protection from MMP's for no more than five years, except as provided in Water Code section 13385(j)(3)(C)(ii). MMP protection was extended for approximately four years in TSO R5-2006-0059 and thus the compliance schedule did not exceed five years.

12. Per the requirements of CWC Section 13385(j)(3)(C)(ii)(I) for the purpose of treatment facility upgrade, the time schedule shall not exceed 10 years. Per the requirements of 13385(j)(3)(C)(ii)(II) following a public hearing, and upon a showing that the Discharger is making diligent progress toward bringing the waste discharge into compliance with the effluent limitation, the Central Valley Water Board may extend the time schedule for an additional five years beyond the initial five years, if the Discharger demonstrates that the additional time is necessary to comply with the effluent limitation. In accordance with CWC Section 13385(j)(3)(C)(ii)(I) the total length of the compliance schedules is less than ten years. The Central Valley Water Board finds, as described in previous findings in this Order, that the Discharger has demonstrated due diligence and is making diligent progress to bring the waste discharge into compliance with final effluent limitations. The Central Valley Water Board also finds that because of the treatment system’s vegetation and biogenic processes necessity to mature and become established for the treatment system to reach its design capacity, additional time is necessary to comply with the final effluent limitations.

13. Compliance with this Order exempts the Discharger from MMPs for violations of certain final effluent limitations found in WDR Order R5-2012-0050 as follows:

   a. Arsenic: Previous Orders provided protection from MMPs from 23 June 2006 to 18 May 2010. This Order provides protection from 8 June 2012 (the date of this Order) until 1 June 2015.

   b. Iron and manganese: Previous Orders provided protection from MMPs from 23 June 2006 to 18 May 2010. This Order provides protection from 8 June 2012 until 1 June 2015.

   c. Dissolved oxygen and turbidity: This Order does not provide protection from MMPs.

14. In accordance with CWC section 13385(j)(3), the total length of protection from MMPs for the constituents listed in Finding 11 above is less than ten years.

15. This Order provides a time schedule for completing the actions necessary to ensure compliance with the final effluent limitations for arsenic, iron, and manganese contained in WDR Order R5-2012-0050. Since the time schedule for completion of actions necessary to bring the waste discharge into compliance exceeds one year, this Order includes interim effluent limitations and interim requirements and dates for their achievement.
16. This Order includes new, performance-based interim effluent limitations for arsenic, iron, and manganese.

a. For arsenic, this Order establishes an interim maximum daily effluent limitation (MDEL) and an interim average monthly effluent limitation (AMEL) based on the current treatment plant performance. The MDEL was calculated using the mean of the effluent data plus 3.3 standard deviations, and the AMEL was calculated using the mean plus 2.0 standard deviations. The following table shows the values used in the calculations and the resulting interim effluent limitations for arsenic:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Units</th>
<th>Mean</th>
<th>Standard Deviation</th>
<th>Interim Effluent Limitation Maximum Daily</th>
<th>Interim Effluent Limitation Average Monthly</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arsenic, Total Recoverable</td>
<td>µg/L</td>
<td>100</td>
<td>155</td>
<td>600</td>
<td>400</td>
</tr>
</tbody>
</table>

b. For iron and manganese, this Order establishes the new interim annual average effluent limitations based on the maximum observed annual average concentrations for these constituents between May 2008 and April 2011.

17. The Central Valley Water Board finds that the Discharger can maintain compliance with the interim effluent limitations included in this Order. Interim effluent limitations are established when compliance with the final effluent limitations cannot be achieved by the existing Facility. Discharge of constituents in concentrations in excess of the final effluent limitations, but in compliance with the interim effluent limitations, can significantly degrade water quality and adversely affect the beneficial uses of the receiving stream on a long-term basis. The interim effluent limitations, however, establish an enforceable ceiling concentration until compliance with the final effluent limitation can be achieved.

18. If an interim effluent limit contained in this Order is exceeded, then the Discharger is subject to MMPs for that particular exceedance as it will no longer meet the exemption in CWC 13385(j)(3). It is the intent of the Board that a violation of an interim monthly effluent limitation subjects the Discharger to only one MMP for that monthly averaging period. In addition, a violation of an interim daily maximum effluent limit subjects the Discharger to one MMP for the day in which the sample was collected.

Other Regulatory Requirements

19. California Water Code section 13300 states: "Whenever a regional board finds that a discharge of waste is taking place or threatening to take place that violates or will violate requirements prescribed by the regional board, or the state board, or that the waste collection, treatment, or disposal facilities of a discharger are approaching capacity, the board may require the discharger to submit for approval of the board, with such modifications as it may deem necessary, a detailed time schedule of specific actions the discharger shall take in order to correct or prevent a violation of requirements."
IT IS HEREBY ORDERED THAT Time Schedule Order R5-2006-0059 is rescinded, except for enforcement purposes, and, pursuant to California Water Code Sections 13300 and 13267:

1. The Discharger shall comply with the following time schedule to submit reports and ensure completion of the compliance project described in Finding 8, above:
2. The following interim effluent limitations for arsenic, iron, and manganese shall be effective upon adoption of this Order, and shall apply in lieu of the corresponding final effluent limitations in WDR Order R5-2012-0050. The Discharger shall comply with the following interim effluent limitations through 31 May 2015, or when the Discharger is able to come into compliance with the final effluent limitations shown below, whichever is sooner.

a. **Arsenic.** Arsenic in the effluent shall not exceed:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Units</th>
<th>Maximum Daily</th>
<th>Average Monthly</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arsenic, Total Recoverable</td>
<td>µg/L</td>
<td>600</td>
<td>400</td>
</tr>
</tbody>
</table>

b. **Iron, Total Recoverable.** For a calendar year, the annual average effluent concentration shall not exceed 11,000 µg/L.

c. **Manganese, Total Recoverable.** For a calendar year, the annual average effluent concentration shall not exceed 3,000 µg/L.

3. Any person signing a document submitted under this Order shall make the following certification:

“I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my knowledge and on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.”

4. In accordance with California Business and Professions Code sections 6735, 7835, and 7835.1, engineering and geologic evaluations and judgments shall be performed by or under the direction of registered professionals competent and proficient in the fields pertinent to the
required activities. All technical reports specified herein that contain work plans for, that
describe the conduct of investigations and studies, or that contain technical conclusions and
recommendations concerning engineering and geology shall be prepared by or under the
direction of appropriately qualified professional(s), even if not explicitly stated. Each technical
report submitted by the Discharger shall contain the professional's signature and/or stamp of
the seal.

If, in the opinion of the Executive Officer, the Discharger fails to comply with the provisions of
this Order, the Executive Officer may refer this matter to the Attorney General for judicial
enforcement, may issue a complaint for administrative civil liability, or may take other
enforcement actions. Failure to comply with this Order or with the WDRs may result in the
assessment of Administrative Civil Liability of up to $10,000 per violation, per day, depending on
the violation, pursuant to the Water Code, including sections 13268, 13350 and 13385. The
Central Valley Water Board reserves its right to take any enforcement actions authorized by law.

Any person aggrieved by this action of the Central Valley Water Board may petition the State
Water Board to review the action in accordance with Water Code section 13320 and California
Code of Regulations, title 23, sections 2050 and following. The State Water Board must receive
the petition by 5:00 p.m., 30 days after the date of this Order, except that if the thirtieth day
following the date of this Order falls on a Saturday, Sunday, or state holiday, the petition must
be received by the State Water Board by 5:00 p.m. on the next business day. Copies of the law
and regulations applicable to filing petitions may be found on the Internet at:
http://www.waterboards.ca.gov/public_notices/petitions/water_quality
or will be provided upon request.

I, PAMELA C. CREEDON, Executive Officer, do hereby certify the foregoing is a full, true, and
correct copy of an Order adopted by the California Regional Water Quality Control Board, Central
Valley Region, on 8 June 2012.

Original Signed By

PAMELA C. CREEDON, Executive Officer
