Requires preferential consideration Permittee must develop manual and design criteria	Part of HMP	Part of HMP	Less than 1 acre impervious, less than 5000 sf for commercial, retail gas outlet, single family homes not on steep slopes Ep can be greater than 1 if it can be demonstrated that there is no impact.
Santa Rosa	One acre or more impervious surface, 5000 square feet or more impervious surface for commercial, retail gas outlet, single family homes on steep slopes, etc.	Interim Criteria: Match 2 year, 24-hour storm within 1 % Permittee must determine range of flows to determine protective Ep	Part of HMP	No model specified. Continuous simulation needed to determine range of erosive flows.	Requires preferential consideration Permittee must develop manual and design criteria	Part of HMP	Part of HMP	Less than 1 acre impervious, less than 5000 sf for commercial, retail gas outlet, single family homes not on steep slopes

The areas of HM applicability in Alameda County are shown on the map[14] below. To assist location and evaluation of project applicability, the susceptibility map depicts a number of features including:

- hardened channels and culverts at least 24 inches in diameter (green solid or dashed lines);
- natural channels (red lines);
- boundaries of major watersheds (light blue lines); and
- surface streets and highways (gray or black ~~pink~~ lines).

These data are of varying age, precision and accuracy and are not intended for legal description or engineering design. Watersheds extending beyond the County boundaries are shown for illustration purposes only. Project proponents are responsible for verifying and describing actual conditions of site location and drainage.

The map is color-coded as follows:

Solid pink areas: Solid pink designates hilly areas, where high slopes (greater than 25%) occur. The HM Standard and all associated requirements apply in areas shown in solid pink on the map. In this area, the HM Standard does *not* apply if a project proponent demonstrates that all project runoff will flow through enclosed storm drains, existing concrete culverts, or fully hardened (with bed and banks continuously concrete-lined) channels to the tidal area shown in light gray.

Purple/red hatched areas: These are upstream of areas where hydromodification impacts are of concern due to factors such as bank instability, sensitive habitat, or restoration projects. The HM Standard and all associated requirements apply in areas shown in purple/red (printer-dependant) hatch marking on the map. Projects in these areas may be subject to additional agency reviews related to hydrologic, habitat or other watershed-specific concerns.

Solid white areas: Solid white designates the land area between the hills and the tidal zone. This area may be susceptible to hydromodification unless the site is connected to storm drains that discharge to the tidal area. The HM Standard and all associated requirements apply to projects in solid white areas ***unless*** a project proponent demonstrates that all project runoff will flow through fully hardened channels[15]. Short segments of engineered earthen channels (length less than 10 times the maximum width of trapezoidal cross-section) can be considered resistant to erosion if located downstream of a concrete channel of similar or greater length and comparable cross-sectional dimensions. Plans to restore a hardened channel may affect the HM Standard applicability in this area.

Solid gray areas: Solid gray designates areas where streams or channels are tidally influenced or primarily depositional near their outfall in San Francisco Bay. The HM Standard does not apply to projects in this area. Plans to restore a hardened channel may affect the HM Standard applicability in this area.

Dark gray, Eastern County area: Dark gray designates the portion of eastern Alameda County that lies outside of the discharge area of this NPDES permit. This area is in the Central Valley Regional Water Quality Control Board's jurisdiction.

[14] The watercourses potentially susceptible to hydromodification impacts are identified based on an assessment approach developed by Balance Hydrologics (2003).

[15] In this paragraph, "fully hardened channels" include enclosed storm drains, existing concrete culverts, or channels whose bed and banks are continuously concrete-lined to the tidal area shown in light gray on the map.

Potential Exceptions to Map Designations

The Program may choose to prepare a User Guide[16] to be used for evaluating individual receiving waterbodies using detailed methods to assess channel stability and watercourse critical flow. This User Guide would reiterate and collate established stream stability assessment methods that have been presented in the Program's HMP.[17] After the Program has collated its methods into User Guide format, received approval of the User Guide from the Executive Officer,[18] and informed the public through such process as an email list-serve, the User Guide may be used to guide preparation of technical reports for: implementing the HM standard using in-stream or regional measures as described in C.3.f.viii above; determining whether certain projects are discharging to a watercourse that is less susceptible (from point of discharge to the Bay) to hydromodification (e.g., would have a lower potential for erosion than set forth in these requirements); and/or determining if a watercourse has a higher critical flow and project(s) discharging to it are eligible for an alternative Qcp for the purpose of designing onsite or regional measures to control flows draining to these channels (i.e., the actual threshold of erosion-causing critical flow is higher than 10% of the 2-year pre-project flow). In no case shall the design value of Qcp exceed 50% of the 2-year pre-project flow.

[16] The User Guide may be offered under a different title.
[17] The Program's HMP has undergone Water Board staff review and been subject to public notice and comment.
[18] The User Guide will not introduce a new concept, but rather reformat existing methods; therefore, Executive Officer approval is appropriate. See also Finding 6.

rebeccaw@lwa.com

This memorandum describes the Work Plan to be implemented by the City of Sacramento and the County of Sacramento for the New Development BMP Effectiveness Evaluation as prescribed under Permit No. R5-2008-0142.

The current National Pollutant Discharge Elimination System (NPDES) area-wide Municipal Separate Storm Sewer Systems (MS4) permit, Order No. R5-2008-0142, Monitoring and Reporting Program, Provision III.C., requires the permittees to conduct an evaluation of the effectiveness of new development best management practices (BMPs). The provision states:

1. The Permittees shall prepare and implement a work plan over the permit term for monitoring a receiving water site within the Upper Laguna Creek Collaborative project area. The work plan shall be submitted as part of the revised SQIP.

   The objective of the study shall include the following:

   a. Monitor the reduction of pollutants of concern in storm water including, but not limited to, pathogen indicators, nutrients, heavy metals (including total mercury and methylmercury), and pesticides from a minimum of one BMP (e.g., low impact development) to determine BMP effectiveness;
   b. Evaluate the requirements for and installation and maintenance cost of each BMP; and
   c. Develop recommendations for appropriate BMPs for the reduction of pollutants of concern in storm water in the Sacramento urbanized area.

Due to the current and uncertain nature of the housing market, the Permittees do not expect that a development project will be completed within the Upper Laguna Creek watershed within the Permit term. As a result, Permittees propose the following revisions to Provision III. C. Pilot Watershed – New Development BMP Effectiveness Evaluation:

> 1. The Permittees shall prepare and implement a work plan over the permit term for monitoring a receiving water site within the Upper Laguna Creek Collaborative project area. If there is insufficient new development in this study area prior to 2011, the study may be moved to an alternate location and/or be modified to consider a specific new development BMP. The work plan shall include three optional study elements. The work plan shall be submitted as part of the revised SQIP.

This document serves as the Work Plan for the proposed Permit modifications. The document is organized around the following sections:

- Potential Monitoring Locations and Approach
- Sampling Plan
- Technical Report
- Schedule
- References

POTENTIAL MONITORING LOCATIONS AND APPROACH

A BMP or receiving water site will be monitored within Permit years 4 and 5. If a BMP is selected, influent and effluent will be monitored during three storm events each year for a total of six storm events during the permit term. In addition, the ability of the BMP to reduce runoff volume will be monitored as this has an impact on the overall pollutant load. If a receiving water site is selected, the monitoring schedule will match that of the other Permittee receiving water monitoring sites (3 wet, 1 dry per year). As indicated above in the proposed permit modifications, 3 primary options exist:

1) Monitor a new development BMP within the Upper Laguna Creek watershed
2) Monitor a Low Impact Development (LID)-type BMP outside of the Upper Laguna Creek watershed
3) Monitor a receiving water site within the Upper Laguna Creek watershed to establish baseline

Monitor a New Development BMP within the Upper Laguna Creek Watershed

Permittees will track the progress of potential development projects within the Upper Laguna Creek watershed. In particular, the status of two proposed development projects will be tracked closely (Figure 1):

Arboretum (also known as the Waegell Property)

This proposed new development project consists of more than 1,300 acres of mixed use, including residential units, commercial sites, open space and two schools. Initial plans indicate that stormwater management will primarily consist of detention basins designed to prevent hydromodification. While the planning process for this project continues to move forward, completion is not expected within the Permit term.

Suncreek

This proposed new development project consists of approximately 1,300 acres of mixed use which primarily includes medium to high density residential units and small amount of commercial development. Initial plans indicate that stormwater management will primarily consist of detention basins designed to prevent hydromodification. Construction is currently delayed and it is anticipated that 2010 is the earliest possible construction start date which will allow little to no time for BMP monitoring within the Permit term.

In the event that an Upper Laguna Creek watershed development projects appears as though completion is feasible within the Permit term, the Permittees will select one of the detention basins designed to prevent hydromodification for monitoring. This BMP would provide new data regarding the effectiveness of hydromodification criteria with regard to water quality and runoff reduction. Monitoring will be conducted during Permit Years 4 and 5.

Monitor a Low Impact Development (LID)-Type BMP Outside of the Upper Laguna Creek Watershed

If a new development BMP in the Upper Laguna Creek watershed has not been identified for monitoring by the end of Permit Year 2, Permittees will identify a LID-type BMP within the Permittee area. BMP monitoring will be conducted during Permit Years 4 and 5. BMP selection will be prioritized based on data needs. Currently, the Permittees lack information on the ability of the following BMPs to remove Target Pollutants:

- Green Roof
- Infiltration Basin
- Infiltration Trench
- Porous Pavement
- Stormwater Planter
- Vegetated Filter Strip

Monitor a Receiving Water Site within the Upper Laguna Creek Watershed to Establish Baseline

In the event that a new development BMP within the Upper Laguna Creek watershed and a LID-like BMP within the Permittee area cannot be identified, Permittees will establish a receiving water monitoring site in the Upper Laguna Creek watershed to monitor baseline conditions. Receiving water monitoring will be conducted during Permit Years 4 and 5.

Monitoring the receiving water site will provide Permittees with valuable water quality data as the Upper Laguna Creek watershed develops over time. This data can also provide a baseline of water quality conditions for when development activity resumes within the watershed and may be used in conjunction with a BMP effectiveness monitoring site in future Permit terms.

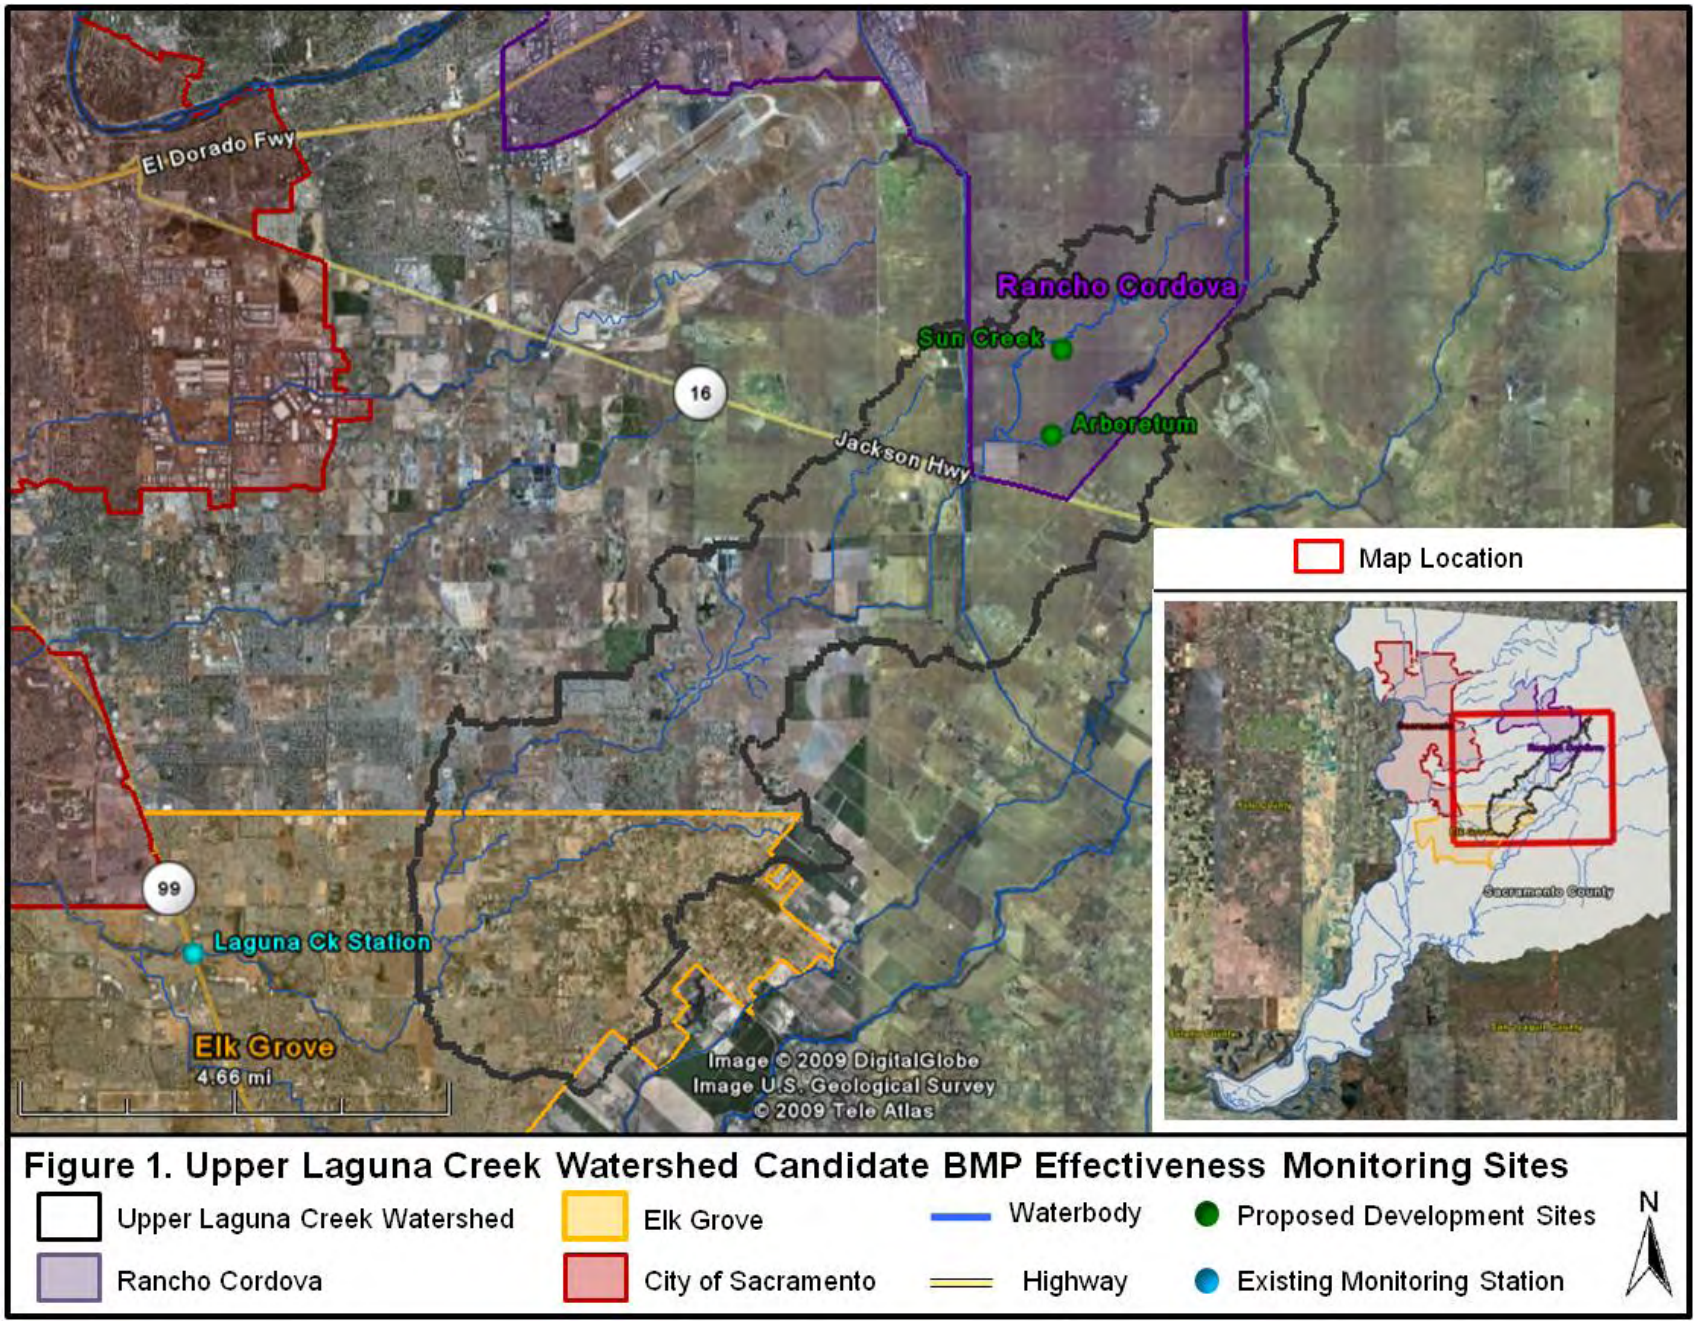

Figure 1. Upper Laguna Creek Watershed Candidate BMP Effectiveness Monitoring Sites

Stormwater Monitoring

If selected, the BMP and receiving water site will be monitored for the constituents outlined in Table 1.

Table 1. Pilot Watershed New Development BMP Effectiveness Evaluation - Monitoring Constituents

Constituent	Method	ML	Units	Lab
Dissolved Oxygen	Field	Sensitivity to 5 mg/l	mg/L	field
pH	Field	0 - 14	std. Units	field
Temperature	Field	None	˚C	field
E. coli	SM9221F	44	MPN/100mL	SCRCL
Fecal Coliform	SM9221E	49	MPN/100mL	SCRCL
Nitrate-Nitrite	EPA 353.2	0.1	mg/L	Caltest
Total Kjeldahl Nitrogen	EPA 351.3	0.1	mg/L	SCRCL
Total Hardness	EPA 130	2	mg/L	FGS
Total Phosphorus	EPA 365.2	0.05	mg/L	Caltest
Total Suspended Solids	EPA 160.2	2	mg/L	SCRCL
Mercury	CVAFS	0.5	ng/L	FGS
Methyl Mercury	CVAFS	0.05	ng/L	FGS
Pyrethroids	SW846 8270 (SIM)	0.01-0.05	µg/L	CRG
Total and Dissolved Copper, Lead, and Zinc	ICP/MS	0.1 to 5.0	µg/L	Caltest
Suspended Sediment Concentration (SSC)	ASTM 2000 D3977-Test Method C Wet Sieving Filtration	5.0	mg/L	CRG

Measuring BMP Effectiveness

BMP monitoring will be conducted at influent and effluent stations. Effectiveness of the BMP will be based on the following variables:

- Runoff volume reduction
- Volume of runoff treated (versus bypassed)
- Statistical difference in effluent quality compared to influent quality
- Distribution of effluent quality achieved

The Effluent Probability Method will be used to determine pollutant removal effectiveness. The Effluent Probability Method determines whether the influent and effluent mean EMCs are statistically different from one another and then examine either a cumulative distribution function of influent and effluent quality.

The entire BMP should be taken into account when measuring effectiveness. Overflow and bypassing of BMPs affect the long-term performance of the stormwater control measure. In order to accurately assess the efficiency of the BMP system, the bypass flow should be taken into

consideration. If possible, a third flow monitor may be installed to measure by-passed flow directly (ASCE, 2002).

SAMPLING PLAN

A sampling plan for compliance monitoring will be developed and submitted once a monitoring site has been selected. The plan will include specification of the following:

- Sampling Stations
- Sampling Protocols
- Event Preparation
- Personal Safety
- Quality Assurance/Quality Control
- Data Analysis and Reporting

TECHNICAL REPORT

A technical report will be submitted at the conclusion of the study describing the results of the water quality monitoring, BMP effectiveness and runoff reduction. The report will document installation and maintenance costs and make recommendations regarding future use and applicability of the BMP within the Sacramento Permittee area.

SCHEDULE

A schedule is provided in Table 2.

Table 2. Schedule for Pilot Watershed New Development BMP Effectiveness Evaluation

Task	Timeframe
Track development progress in Upper Laguna	Years 1 and 2
Identify an Upper Laguna BMP OR LID-type BMP outside of the Upper Laguna Creek watershed OR receiving water site	Year 3
Develop a SAP	Year 3
Monitor Effectiveness	Years 4 and 5
Develop summary Technical Report	Year 5

SUBJECT: **2009 TARGET POLLUTANT UPDATE**

The Sacramento Stormwater Quality Partnership (Partnership) identifies and prioritizes constituent-specific issues through a target pollutant evaluation process. The prioritized list of constituents is used by all Partnership agencies and Stormwater Program elements (e.g., Monitoring, Municipal, New Development, Public Outreach, etc.) to best focus their activities and resources.

This memorandum summarizes the procedure used in early 2009 to update the list according to the March 2001 guidance[1], and documents a program implementation processing step not included in the historic guidance. The purpose of the program implementation processing step is to organize the prioritized constituents for better implementation. In this final step, constituents with similar control or treatment approaches or those addressed through a regulatory or Partnership program are grouped together.

METHODS

The methodology for target pollutant identification and prioritization is presented in detail in the March 2001 guidance document. The four main tasks from that document can be summarized as:

1. Data preparation – compile organize and evaluate impairment listings, water quality, toxicity, and fish tissue data for Sacramento urban runoff and local receiving waters. Data compilation and analysis are summarized in the following attachments:
    a. Attachment A – summary statistics, water quality objectives for all constituents
    b. Attachment B – percent exceedance summaries for prioritized constituents

[1] Sacramento Stormwater Monitoring Program. *Target Pollutant Prioritization Procedure: Instructions and Year 2000 Update.* Prepared by Larry Walker Associates. Mach 2001.

c. Attachment C – 303(d) listing status

d. Attachment D – summary of local TIE identification evaluation data

e. Attachment E – was not prepared in this revision as bioaccumulant issues were scored based on findings from a recent statewide study[2]

2. Potential target pollutant identification – identify potential target pollutants by answering a series of questions regarding impairment of receiving waters and identification in urban runoff. This evaluation is summarized in **Table 1**.

3. Potential target pollutant scoring – score potential target pollutants based on numerical evaluation steps regarding exceedance of water quality objectives, listing status, etc. This evaluation is summarized in **Table 2.**

4. Potential target pollutant ranking – rank based on scores from previous steps. This evaluation is summarized in **Table 3**.

The program implementation processing step is the (new) fifth step in target prioritization. The following evaluation steps are discussed in detail in this memorandum because they are not documented in the March 2001 guidance. This evaluation is summarized in **Table 4**.

Constituent Grouping

Constituents are grouped based on type of constituent, existing control programs (regulatory and Partnership, and anticipated control/treatment programs. The intent is to optimize the target pollutant list into logical groups that can be addressed by the Partnership in a unified manner (e.g., Drinking Water Initiative, Source Identification, pesticide, etc) rather than a more "fractured" constituent-by-constituent basis.

Partnership Work Status

This informational column identifies any completed or ongoing effort that the Partnership initiated or actively contributes.

Initial Scoring

This is the carryover score from the target pollutant scoring step (No. 3).

Initial Ranking Scoring Priority (scoring category No. 1)

A ranking from 1 to 5 is "High" priority, from 5 to 10 is "Medium" priority and everything else is "Low" priority.

RWQE (scoring category No. 2)

A "Yes" or "No" whether it was listed in a previous report of water quality exceedance (RWQE).

---

[2] State Water Resources Control Board, Surface Water Ambient Monitoring Program, *Bioaccumulation of Pollutants in California Waters: A Review of Historic Data and Assessment of Impacts on Fishing and Aquatic Life,* October 24, 2007.

Source Controllability (scoring category No. 3)

This step assesses whether the constituent can be further controlled at the source. Human applied pesticides and sediment/solids were listed as “High” controllability. Nutrients, total Hg, hydrocarbons and unidentified sources were listed as “Medium” controllability. Legacy pollutants, dissolved inorganics, TOC, pathogen indicators and PAHs were listed as “Low” controllability.

Urban Runoff Treatability (scoring category No. 4)

This step assesses the treatability of the constituent with available technologies. The more advanced the treatment requirement, the lower the treatability. Solids based constituents that can be removed with physical settling (e.g., extended detention basins) were listed as high. TOC, hydrocarbons, pathogen indicators and nutrients that would require specialized processes such (GAC) filtration, disinfection or nutrient removal were listed as “Medium” treatability. Dissolved and organic constituents that would require advanced filtration or reverse osmosis were listed as “Low” treatability.

Urban Runoff Impact on Beneficial Use (scoring category No. 5)

This step assesses whether the urban runoff constituent concentration/load has an impact on an existing beneficial use. The assessment is twofold in that both the relative contribution of urban runoff to other sources and whether the constituent is a strong indicator of beneficial use protection. The pesticides and sediment indicators were all listed as “High” impacts because the contribution from urban runoff is known to be high, and a receiving water is impaired as a result. TDS/EC, pathogen indicators, PAHs and bis(2ethylhexyl)phthalate were listed as “Medium” impacts because either the contribution from urban runoff is moderate or a receiving water is impaired as a result of urban runoff. The remaining constituents are listed as “Low” impacts because the contribution from urban runoff is negligible.

Composite Constituent Score Number

From the previous five scoring categories there are a total of four low-medium-high (1-2-3) scoring categories and one yes-no (0.5-0.0) scoring category. For each constituent the low-medium-high scores were averaged and added to the yes-no score for a maximum score of 3.5.

Composite Constituent Priority

For each constituent the score was then translated to an overall priority indicator:

2.5-3.5 - High

1.50-2.49 - Medium

<1.49 - Low

Composite Constituent Grouping Score

The individual constituent scores were averaged for each grouping.

Composite Constituent Grouping Priority

For each grouping the score was converted to an overall priority indicator:

2.5-3.5 - High

1.50-2.49 - Medium

<1.49 - Low

The suggested target pollutant groupings and priority levels are in **Table 5.**

Table 1. Sacramento Stormwater Monitoring Program: Potential Target Pollutant Identification Matrix

Column A	Column B	Column C	Column D	Column E	Column F	Column G	Column H
Constituent	Has constituent been detected in Sacramento urban runoff?	Is the constituent listed as a source of impairment on local 303(d) listings (2008 draft update highlighted yellow)? [Add other 303(d) listed constituents for local or statewide water bodies that do not already appear in Column A of this matrix]	Has the constituent been demonstrated to cause acute or chronic toxicity in Sacramento urban runoff or receiving waters? [Add other constituents that do not already appear in Column A of this matrix as needed.]	Does the constituent have the potential to cause or contribute to the exceedance of standards in receiving waters?	Has the constituent been demonstrated or implicated to cause or contribute to the impairment of beneficial uses in the permitted area or downstream, including the Sacramento-San Joaquin Delta? [Add other constituents that do not already appear in Column A of this matrix as needed.]	Has the constituent been identified as a significant public, regulatory or Permittee concern that has yet to be adequately or completely addressed by draft or adopted Federal, State, or local water quality criteria or regulations? [Add other constituents that do not already appear in Column A of this matrix as needed.]	Based on the answers contained in Columns B through G of Table 1, should the constituent be scored and ranked? (Alternately, should the constituent be placed directly on the Tracking List or the Considered for Additional Monitoring List?)

Table 2. **Sacramento Stormwater Monitoring Program: Potential Target Pollutant Scoring/Ranking Matrix**

Column A	Question #1		Question #2		Question #3		Question #4		Question #5						Question #6		Question #7		Question #8		Question #9		Column T
Potential Target Pollutant	What is the TMDL priority schedule for the water body and pollutant/ stressor as specified on the 303(d) list? [In the case of multiple water bodies, use the highest priority schedule].	Weighted Score (wt. factor = 5)	Have TIE's found the target pollutant to be the cause of acute or chronic toxicity in Sacramento urban runoff from 2002-2008?	Weighted Score (wt. factor = 3)	Have TIE's tests found the target pollutant to be the cause of acute or chronic toxicity in receiving waters in the permitted area from 2002-2008?	Weighted Score (wt. factor = 3)	At what frequency has the target pollutant been found to exceed minimum relevant regulatory criteria in Sacramento urban runoff?	Weighted Score (wt. factor = 10)	At what frequency has the target pollutant been found to exceed minimum applicable criteria in receiving waters in the permitted area from 2002-2008?					Weighted Score (wt. factor = 10)	Has the target pollutant been demonstrated to bioaccumulate to detrimental levels in organisms living in receiving waters in the permitted area?	Weighted Score (wt. factor = 3)	Has the target pollutant been found to cause or contribute to the impairment of beneficial uses in the permitted area or downstream, including the Sacramento-San Joaquin Delta?	Weighted Score (wt. factor = 1)	Has the target pollutant been identified as a significant public, regulatory or Permittee concern that has yet to be adequately or completely addressed by draft or adopted Federal, State or local water quality criteria or regulations?	Weighted Score (wt. factor = 1)	Has source of constituent been banned, widely reduced or restricted, and have monitoring results decreased in recent years?	Weighted Score (wt. factor = 5)	**Target Pollutant Composite Ranking Value**

Table 2: Potential Target Pollutant Scoring/Ranking Matrix

Column A	Question #1		Question #2		Question #3		Question #4		Question #5						Question #6		Question #7		Question #8		Question #9		Column T
Potential Target Pollutant	What is the TMDL priority schedule for the water body and pollutant/ stressor as specified on the 303(d) list? [In the case of multiple water bodies, use the highest priority schedule].	Weighted Score (wt. factor = 5)	Have TIE's found the target pollutant to be the cause of acute or chronic toxicity in Sacramento urban runoff from 2002-2008?	Weighted Score (wt. factor = 3)	Have TIE's tests found the target pollutant to be the cause of acute or chronic toxicity in receiving waters in the permitted area from 2002-2008?	Weighted Score (wt. factor = 3)	At what frequency has the target pollutant been found to exceed minimum relevant regulatory criteria in Sacramento urban runoff?	Weighted Score (wt. factor = 10)	At what frequency has the target pollutant been found to exceed minimum applicable criteria in receiving waters in the permitted area from 2002-2008?					Weighted Score (wt. factor = 10)	Has the target pollutant been demonstrated to bioaccumulate to detrimental levels in organisms living in receiving waters in the permitted area?	Weighted Score (wt. factor = 3)	Has the target pollutant been found to cause or contribute to the impairment of beneficial uses in the permitted area or downstream, including the Sacramento-San Joaquin Delta?	Weighted Score (wt. factor = 1)	Has the target pollutant been identified as a significant public, regulatory or Permittee concern that has yet to be adequately or completely addressed by draft or adopted Federal, State or local water quality criteria or regulations?	Weighted Score (wt. factor = 1)	Has source of constituent been banned, widely reduced or restricted, and have monitoring results decreased in recent years?	Weighted Score (wt. factor = 5)	**Target Pollutant Composite Ranking Value**

Table 2: Potential Target Pollutant Scoring/Ranking Matrix

Column A	Question #1		Question #2		Question #3		Question #4		Question #5						Question #6		Question #7		Question #8		Question #9		Column T
Potential Target Pollutant	What is the TMDL priority schedule for the water body and pollutant/ stressor as specified on the 303(d) list? [In the case of multiple water bodies, use the highest priority schedule].	Weighted Score (wt. factor = 5)	Have TIE's found the target pollutant to be the cause of acute or chronic toxicity in Sacramento urban runoff from 2002-2008?	Weighted Score (wt. factor = 3)	Have TIE's tests found the target pollutant to be the cause of acute or chronic toxicity in receiving waters in the permitted area from 2002-2008?	Weighted Score (wt. factor = 3)	At what frequency has the target pollutant been found to exceed minimum relevant regulatory criteria in Sacramento urban runoff?	Weighted Score (wt. factor = 10)	At what frequency has the target pollutant been found to exceed minimum applicable criteria in receiving waters in the permitted area from 2002-2008?					Weighted Score (wt. factor = 10)	Has the target pollutant been demonstrated to bioaccumulate to detrimental levels in organisms living in receiving waters in the permitted area?	Weighted Score (wt. factor = 3)	Has the target pollutant been found to cause or contribute to the impairment of beneficial uses in the permitted area or downstream, including the Sacramento-San Joaquin Delta?	Weighted Score (wt. factor = 1)	Has the target pollutant been identified as a significant public, regulatory or Permittee concern that has yet to be adequately or completely addressed by draft or adopted Federal, State or local water quality criteria or regulations?	Weighted Score (wt. factor = 1)	Has source of constituent been banned, widely reduced or restricted, and have monitoring results decreased in recent years?	Weighted Score (wt. factor = 5)	**Target Pollutant Composite Ranking Value**
Max. Raw Score/Max. Weighted Score	**5**	**25**	**5**	**15**	**5**	**15**	**1**	**10**	**1**	**1**	**1**	**1**	**1**	**10**	**5**	**15**	**5**	**5**	**5**	**5**	**5**	**-15**	**100 Point Max.**

1. Text in parentheses beneath pollutant count is SWRCB Section 303(d) list TMDL priority schedule: low, medium, high.
2. Group A Pesticides include the following constituents: aldrin, dieldrin, chlordane, endrin, heptachlor, heptachlor epoxide, hexachlorocyclohexane (including Lindane), endosulfan, and toxaphene.
3. Titles in red are updated for 2008 303(d) draft list.

Data Source: United States Environmental Protection Agency (EPA). 1998. Total Maximum Daily Load (TMDL) Program: California List of Impaired Waters for 1998.

Attachment D. Summary of Local Toxicity Identification Evaluation Data

The Permittees collected four toxicity samples at five receiving water locations during the 2003-04 monitoring period. Significant toxicity was not found in any of these samples, and toxicity identification studies were not performed. However, recent work by others in the Sacramento area[1][2] has determined that pyrethroids in the sediments cause toxicity to benthic organisms. Unpublished data collection by the Regional Board has also indicated that there are periods when receiving water aquatic toxicity occurs due to pyrethroids. Based on these data collected by others, and the expected connection between pesticide application and urban runoff, this class of pesticide was determined to be an identified source of aquatic toxicity in both urban runoff and receiving waters.

6.99.495 Collection.

6.99.000 Title.

This Chapter shall be known as the Environmental Management Department Regulatory Fees Ordinance. (SCC 1223 § 2 (part), 2002.)

6.99.001 Purpose.

The provisions of this Chapter establishing fees associated with Hazardous Materials and Waste Regulation are enacted pursuant to the provisions of Health and Safety Code, Sections 101325 and 101280; Division 20, Chapter 6.5 (commencing with Section 25100), Chapter 6.7 (commencing with Section 25280), Chapter 6.95 (commencing with Section 25500) and Chapter 6.11 (commencing with Section 25404); California Water Code (commencing with Section 13700), and California Constitution, Article XI, Section 7. The provisions of this Chapter establishing fees associated with Environmental Health Services are enacted pursuant to the provisions of the California Health and Safety Code, Section 101325, and California Constitution, Article XI, Section 7. The provisions of this Chapter establishing fees associated with the Storm water Compliance Program are enacted pursuant to the provisions of Sacramento County Code Title 15, Chapter 15.12 and California Constitution, Article XI, Section 7. Enactment of the fees is necessary in order to provide a source of revenue with which to defray the personnel and other costs incurred by the County in conducting the regulatory programs established and

otherwise identified by State and local laws and regulations. The costs incurred by the County for such regulatory purposes are not met by any grants by the State of California, any fees prescribed by the State, and other County revenues are insufficient to cover such costs. Fees are established to cover Program costs for a specific fiscal year that runs from July 1 through June 30. (SCC 1270 § 1, 2004; SCC 1223 § 2 (part), 2002.)

6.99.005 Definitions.

As used in this Chapter, the terms identified in Sections 6.99.010 through 6.99.030 shall be ascribed the meanings contained therein. (SCC 1223 § 2 (part), 2002.)

6.99.010 Certified Unified Program Agency (CUPA).

CUPA as defined in Division 20, Chapter 6.11, Section 25404(c) of the California Health and Safety Code refers to the Agency certified by the Secretary of the California Environmental Protection Agency. (SCC 1355 § 2, 2007: SCC 1223 § 2 (part), 2002.)

6.99.011 Auto Body Shops.

An auto body shop is defined as any commercial facility that meets the definition of Standard Industrial Classification Code 7532 except as noted below, and engages in the repair, replacement, painting, or alteration of automobile bodies or body parts when auto body work is the primary activity. This definition also includes auto body work when it is conducted as an ancillary activity within at least three hundred (300) square feet of dedicated shop space. If the facility meets the definition of SIC Code 7532 but is exclusively engaged in repair or replacement of automotive interiors, upholstery, or tops, it shall not be considered an auto body shop. This definition does not include facilities whose primary business is metal plating or powder coating, except to the extent that other activities as described above are conducted on site. (SCC 1355 § 3, 2007: SCC 1270 § 2, 2004.)

6.99.012 Auto Dealers.

An auto dealer is defined as any commercial facility engaged in the sale, leasing, or rental of new or used cars, trucks and vans, motorcycles, or other similar vehicles. This includes facilities that meet the definition of Standard Industrial Classification Codes 5012, 5511, 5521, 5571, 7513, 7514, 7515, or 7519. Some facilities in SIC Code 7999 also fit this definition. This definition excludes commercial facilities engaged exclusively in the sale of the following: automotive bodies, campers, mopeds, motor scooters, snowmobiles, trailers and mobile homes. This definition is limited to facilities that have at least five thousand (5,000) square feet of outdoor area devoted to the display of all autos as defined above, employee parking or other related purposes. (SCC 1355 § 4, 2007: SCC 1270 § 3, 2004.)

6.99.013 Auto Repair Shops.

An auto repair shop is defined as any facility engaged in the repair or replacement of car, truck, van, motorcycle or other motorized vehicle mechanical or exhaust components, or in the replacement of motor oil and other lubricants and fluids when auto repair work is the primary activity. This definition also includes auto repair work when it is conducted as an ancillary activity with at least three hundred (300) square feet of dedicated shop space. Facilities that meets the definition of Standard Industrial Classification Code Sections 7533 (exhaust system repair), 7537 (transmission repair), 7538 (general automotive repair), or 7539 (automotive repair, not elsewhere classified) or 7539 (motorcycle repair shops only) are included in this definition. Facilities in SIC Code 7539 that are engaged exclusively in frame repair, air conditioning repair, axle straightening, or wheel alignment are not included in this definition. This definition includes businesses that conduct retail or wholesale auto repair, as well as those that conduct in house auto repair to service business owned vehicles, as well as those described above. (SCC 1355 § 5, 2007: SCC 1270 § 4, 2004.)

6.99.014 Illegal Methamphetamine Manufacturing or Storage Site.

Means property where a person manufactures methamphetamine or stores methamphetamine or a hazardous chemical used in connection with the manufacturing or storage of methamphetamine. (SCC 1355 § 6, 2007.)

6.99.015 Chemical Compounds.

The number of chemical compounds shall be determined by either discreet Chemical Abstract Service (CAS) or Hazardous Waste Number or individual Material Safety Data Sheets. (SCC 1355 § 7, 2007: SCC 1223 § 2 (part), 2002.)

6.99.016 County Director.

The term “County Director” means the Director of the County Department of Environmental Management, the County staff of that Department who are subordinate to the Director, and any party designated by the Director. (SCC 1355 § 8, 2007: SCC 1270 § 5, 2004; SCC 1223 § 2 (part), 2002.)

6.99.017 Equipment Rentals.

An equipment rental facility is defined as any facility whose primary business is to rent machinery or equipment used for construction, demolition, digging and grading, building maintenance and repair, painting, plastering and texturing, landscaping, cleaning, pressure washing or steam cleaning, or similar activities. An equipment rental facility is also defined as any facility with a different primary business, but that utilizes more than two hundred (200) square feet of outdoor uncovered area for storage, display, or as a workspace associated with rental equipment (as described above), provided that the facility cleans, maintains, repairs or disposes of waste from any equipment at the site. Facilities engaged in the rental of trucks, trailers and automobiles but not also engaged in the rental of any types of equipment listed above are included in the definition of auto dealer and are not considered equipment rental facilities. (SCC 1355 § 9, 2007: SCC 1270 § 6, 2004.)

6.99.018 General Permit Industries.

A General Permit Industry is defined as any facility that should be covered under the State of California’s General Industrial Storm Water Permit. (SCC 1355 § 10, 2007: SCC 1270 § 7, 2004.)

6.99.019 Hourly Rate.

The term “Hourly Rate” refers to the rate used to calculate all program fees provided for in this Chapter. The rate is calculated using methodologies approved and adopted by the Board of Supervisors. The Board of Supervisors may establish the hourly rate for up to five fiscal years in advance and may increase or decrease the hourly rate for any fiscal year if it determines that there has been a significant change in projected program costs. (SCC 1355 § 11, 2007: SCC 1270 § 8, 2004: SCC 1223 § 2 (part), 2002.)

6.99.020 Plan Review.

For purposes of this code, the term “Plan Review” is defined as a review of any necessary plans and or documents required for the issuance of a permit or any other regulatory approval. (SCC 1355 § 12, 2007.)

6.99.021 Kennels.

A kennel is defined as any facility engaged commercially in the rearing, breeding, sheltering, or boarding of dogs, and at which at least four hundred (400) square feet of area is used for the keeping of dogs. (SCC 1270 § 9, 2004.)

6.99.022 Nurseries.

A nursery is defined as any facility that meets the definition of Standard Industrial Classification Code Section 0181, Ornamental Floriculture and Nursery Products. A nursery is also an establishment that sells plants at wholesale or retail and applies pesticides or fertilizers to the plants at that location. (SCC 1270 § 10, 2004.)

6.99.026 Retail Gasoline Outlet.

A retail gas outlet is defined as any fixed facility that sells or distributes gasoline from pumps, including retail sales to the public or as a card lock facility. It does not include mobile suppliers that service fleets at the customer’s work place or job site. A retail gas outlet is not a facility that operates and uses its own gasoline pump to supply gasoline to vehicles that it either owns or operates as part of its own business. (SCC 1270 § 13, 2004.)

6.99.028 Reinspection.

A reinspection means an inspection made for the purpose of determining compliance with corrective orders issued on a Notice to Comply or other official notice of an inspection report. (SCC 1355 § 13, 2007: SCC 1223 § 2 (part), 2002.)

6.99.029 Special Handling.

The term “Special Handling/Service” means any office activity including but not limited to, a plan review, permit application, or other office review that is expedited, and or any field inspection or oversight service that is provided outside of normal business hours. Special handling/service will be provided pursuant to need or request and upon availability of staff, by paying the basic fee, plus an additional fee pursuant to Section 6.99.035. (SCC 1355 § 14, 2007: SCC 1270 § 14, 2004: SCC 1223 § 2 (part), 2002.)

6.99.030 State CUPA Surcharge.

The term “State CUPA Surcharge” shall be deemed to refer to those provisions and fees prescribed pursuant to contained in Section 25404.5 Paragraph (c), and Section 25287 Paragraphs “(a)” and “(b)” of the Health and Safety Code. (SCC 1223 § 2 (part), 2002.)

6.99.035 Permit/License/ Registration/Surcharge Fees.

The County Director shall charge the regulatory, permit, inspection, re-inspection and surcharge fees provided in this chapter. The fees charged pursuant to this section shall be established by the Board of Supervisors based upon the County’s recovery of the projected program costs for that fiscal year. The permit, license, registration and surcharge fees provided for in this chapter shall not be transferable or in any other way assignable. The Board of Supervisors may establish fees for up to five fiscal years in advance based upon projected program costs. The Board may increase or decrease any and all fees for any fiscal year if it determines that there has been a significant change in projected program costs. (SCC 1355 § 15, 2007: SCC 1223 § 2 (part), 2002.)

6.99.060 Credit—Recycled Oil.

If a business which is required to pay a Hazardous Waste Generation fee pursuant to Section 6.99.035 of this Code accepts from the general public and recycles more than fifty (50) gallons of used motor oil per year, then that business shall be entitled to a credit of forty dollars ($40.00) per year towards payment of the following year’s fee. (SCC 1223 § 2 (part), 2002.)

6.99.070 Exceptional Facility Fee—Special Fees.

If the time required by the County Director to conduct inspections or otherwise review, administer, or process issuance of those permits and licenses described by Sections 6.99.076 through 6.99.100, exceed the times specified below, an Exceptional Facility Fee, at one-half the hourly rate, shall be payable for each additional one-half hour or portion thereof:

a.	Permit to install underground storage tanks under Section 6.99.080:	
1.	First tank	16 hours
2.	Each additional tank	2 hours
b.	Permit to close underground storage tanks under Section 6.99.085	
1.	First tank	7 hours
2.	Each additional tank	1 hour
c.	Permit to upgrade underground storage tanks with piping under Section 6.99.086:	
1.	First tank	13 hours
2.	Each additional tank	2 hours

d.	Permit to upgrade underground storage tanks without piping under Section 6.99.087	8 hours
e.	Permit to temporarily abandon underground storage tanks under Section 6.99.090	3.5 hours
f.	Permit to repair underground storage tank, piping or monitoring system under Section 6.99.100	
	5 hours	
1.	Permit for the replacement or repair of spill container (bucket)	3.5 Hours
g.	Fee for review of first time submittals of Risk Management Plan (RMP) under Section 6.99.135	
1.	Level 1 facility	11 hours
2.	Level 2 or 3 facility	24 hours
h.	Fee for remediation or property contaminated by methamphetamine production related activities under Section 6.99.136	18 hours

(SCC 1355 § 16, 2007: SCC 1329 § 2, 2006: SCC 1238 § 4, 2003: SCC 1223 § 2 (part), 2002.)

6.99.075 Fee for Incident Response Cost Recovery.

In connection with the costs incurred by the County Director and/or the County Director's contractor for services provided in the event of a response to the release or threatened release of a hazardous material or any other substance that could potentially have a negative impact to the environment or public health, a fee based on the current hourly rate established pursuant to Section 6.99.019 shall be owed by the Responsible Party for each hour expended or portion thereof per responding specialist, plus contractor costs if any, mitigating the incident. (SCC 1355 § 17, 2007: SCC 1223 § 2 (part), 2002.)

6.99.076 Fee for Oversight of the Remediation of an Illegal Methamphetamine Manufacturing or Storage Site.

In connection with regulatory services by the County Director and or the County Director's contractor for services under Division 20, Chapter 6.9.1 of the California Health and Safety Code, a fee shall be payable in the amount established pursuant to section 6.99.035. (SCC 1355 § 18, 2007.)

6.99.080 Fee for Tank Installation.

In connection with the installation of underground storage tanks as regulated by Chapter 6.34 of this Code, a fee shall be payable in the amount established pursuant to Section 6.99.035. (SCC 1355 § 19, 2007: SCC 1238 § 5, 2003: SCC 1223 § 2 (part), 2002.)

6.99.085 Fee for Tank Closure.

In connection with regulatory services by the County Director under Chapter 6.34 of this Code, a fee shall be payable in the amount established pursuant to Section 6.99.035. (SCC 1355 § 20, 2007: SCC 1238 § 6, 2003: SCC 1223 § 2 (part), 2002.)

6.99.086 Fee for Tank(s) With Piping Upgrade.

In connection with regulatory services by the County Director under Chapter 6.34 of this Code, a fee shall be payable in the amount established pursuant to Section 6.99.035. (SCC 1355 § 21, 2007: SCC 1238 § 7, 2003.)

6.99.087 Fee for Tank(s) Without Piping Upgrade.

In connection with regulatory services by the County Director under Chapter 6.34 of this Code, a fee shall be payable in the amount established pursuant to Section 6.99.035. (SCC 1355 § 22, 2007: SCC 1238 § 8, 2003.)

6.99.090 Fee for Tank Temporary Abandonment.

In connection with regulatory services by the County Director under Chapter 6.34 of this Code, a fee in the amount established pursuant to Section 6.99.035. (SCC 1355 § 23, 2007: SCC 1223 § 2 (part), 2002.)

6.99.100 Fee for Pipe or Monitoring System Repair.

In connection with regulatory services by the County Director under Chapter 6.34 of this Code, a fee in the amount established pursuant to Section 6.99.035 shall be paid in connection with the repair of a pipe as defined in Section 25281.5 of the Health and Safety Code for an existing underground storage tank facility or repair of a monitoring system for such facility. (SCC 1355 § 24, 2007: SCC 1238 § 9, 2003: SCC 1223 § 2 (part), 2002.)

6.99.105 Fee for Well Construction and Concurrent Pump Installation.

In connection with services by the County Director under Chapter 6.28 of this Code, a fee shall be payable in the amount established pursuant to Section 6.99.035. (SCC 1355 § 25, 2007: SCC 1223 § 2 (part), 2002.)

6.99.135 Fee for California Accidental Release (CAL ARP) Prevention Program.

In connection with the regulatory services provided under Chapter 6.96 of this Code, fees for first-time submittals of Risk Management Plans (RMPs) shall be in the amounts established pursuant to Section 6.99.065. The established review times for initial submittals are estimated to be eleven (11) hours for Program Level 1 facilities and twenty-four (24) hours for Program Level 2 and 3 facilities. If a facility changes its operation in a way that does not require a new RMP, the fee for reviewing any revisions requiring agency submittal shall be based upon actual review time on an hourly basis as established pursuant to Section 6.99.065. The annual regulatory program fees for CAL ARP facilities shall be established pursuant to Section 6.99.035. (SCC 1296 § 1, 2005: SCC 1238 § 12, 2003: SCC 1223 § 2 (part), 2002.)

6.99.147 Permit Extension Fee.

In connection with the issuance of a one time extension of any permit granted under Sections 6.99.080 through 6.99.105 a fee equal to twenty (20) percent of the original permit shall be paid. (SCC 1355 § 26, 2007: SCC 1223 § 2 (part), 2002.)

6.99.150 Reinspection Fee.

Whenever, in connection with regulatory services delivered under Chapters 6.28, 6.34, 6.96 or 6.98 of this Code more than one inspection by the County Director is required in connection with a particular activity which is regulated or in which a regulatory violation is identified, a reinspection fee in the amount established pursuant to Section 6.99.065 shall be payable for each one-half hour or portion thereof of time consumed by each reinspection. (SCC 1223 § 2 (part), 2002.)

6.99.160 Consultation Fee.

A fee in the amount established pursuant to Section 6.99.019 shall be payable for each hour or portion thereof of service delivered by the County Director in connection with site remediation, investigation and/or consultation activities required or requested in connection with the contamination of a site by discharge of a hazardous substance, material or waste. (SCC 1355 § 27, 2007: SCC 1223 § 2 (part), 2002.)

6.99.165 Appeal Filing Fee.

Any person authorized to file an appeal under Chapters 6.28, 6.34, 6.96 or 6.98 shall, at the time of filing the appeal and as a condition precedent to the legal effectiveness of the appeal, pay an appeal filing fee in the amount established pursuant to Section 6.99.065. (SCC 1223 § 2 (part), 2002.)

6.99.175 Food Facility Fee.

a. The annual regulatory program fees for a food facility as defined in California Health and Safety Code Section 114380 through Section 114387 shall be established pursuant to Section 6.99.035 for the following facilities:
Food Preparation Establishment (without hood)
Restaurant
Bar
Restaurant/Bar
School/Non Profit Sr. Meal Program
Bakery-No Preparation
Caterer/Low Risk
Caterer/High Risk
Temporary Food Facility (Food Prep/High Risk)
Temporary Food Facility (Packaged Food/Low Risk)
Temporary Food Facility Multi-Event (Food Prep/High Risk)
Temporary Food Facility Multi-Event (Packaged Food/Low Risk)
Produce Stand
Certified Farmers' Market
Retail Mkt (15,000 + Sq.Ft.)
(6,000-14,999 Sq.Ft.)
(Less Than 6,000 Sq. Ft.)
Mobile Food Facility
(Category A)
(Category B)
(Category C)
(Category D)
Mobile Support Unit
Commissary
Satellite Food Dist. Fac.
Seasonal/Low Risk
Seasonal/High Risk
Restricted Food Service Est.
Swap Meet Prepackaged Food Stand (Variable Locations)
b. A Mobile Food Facility Category A is a vehicle as defined in California Health and Safety Code Section 113831 that is permitted to sell prepackaged food, whole uncut produce, whole fish, and whole aquatic invertebrates.
c. A Mobile Food Facility Category B is a vehicle as defined in California Health and Safety Code Section 113831that is permitted to sell unpackaged food that requires no preparation other than heating, popping, blending, portioning, or dispensing. The Mobile Food Facility Category B utilizes a mobile support unit or a permitted facility for its commissary.
d. A Mobile Food Facility Category C is a vehicle as defined in California Health and Safety Code Section 113831 that is permitted to sell unpackaged food that requires no preparation other than heating, popping, blending, portioning or dispensing. The Mobile Food Facility Category C utilizes an onsite commissary that is not used by any other mobile food facility and is not permitted as a separate food facility.
e. A Mobile Food Facility Category D is a vehicle as defined in the California Health and Safety Code, section 113831 that is permitted to sell unpackaged food that is cooked or baked on the vehicle or any unpackaged food that requires preparation beyond heating, popping, blending, portioning or dispensing.
f. A Food Preparation Establishment (without hood) is a "food facility" as defined in Section 113789 of the California Health and Safety Code that handles unpackaged food, and in which any installed heat processing equipment is limited to equipment that does not require mechanical exhaust ventilation pursuant to Section 114149.1 of the Health and Safety Code. (SCC 1355 § 28, 2007: SCC 1223 § 2 (part), 2002.)

6.99.180 Community Event Permit Fees.

a. Sections 114338.1 through 114381.2 of the California Health and Safety Code require that the person or organization in control of any community event having temporary food facilities must obtain a permit.

The applicant for a permit shall pay fees established pursuant to Section 6.99.035 based upon one of the following categories:
1. Community Event Permit—five or fewer Temporary Food Facilities.
2. Community Event Permit—six or more Temporary Food Facilities.
3. Community Event Permit—five or fewer Non-Profit Temporary Food Facilities.
b. No fee shall be charged to nonprofit charitable temporary food facilities, nor to the person or organization responsible for the nonprofit charitable temporary food facilities that operate in conjunction with a community event as defined in Section 113755 of the Health and Safety Code, provided that there are no more than five temporary food facilities at such event and provided all facilities are nonprofit charitable temporary food facilities as defined in Section 113842 of the Health and Safety Code. The County Director shall make educational materials concerning basic concepts of food protection available to the participants of such events.
c. In addition to the Community Event Permit, the operator of each complying Temporary Food Facility must also obtain a permit. Permit fees shall be established pursuant to Section 6.99.035 based upon the following two categories:
Temporary Food Facility—Packaged Foods/Low Risk
Temporary Food Facility—Prepared Foods/High Risk
d. A penalty fee established pursuant to Section 6.99.035 shall be charged to the person or organization in charge of any community event when no permit has been obtained at least two weeks prior to the event.
e. A late fee established pursuant to Section 6.99.035 shall be charged to the operator of any Temporary Food Facility when no permit has been obtained at least two weeks prior to the event.
f. If the applicant for permit to operate a temporary food facility desires to operate at multiple events, a multi-event permit may be issued provided the operator of the temporary food facility:
1. Uses the annual permit only at permitted community events;
2. Completes a risk assessment sheet and receives approval from the County Director for food protection operating procedures, including storage, transportation, preparation, holding and serving, as well as approval for any changes in such procedures;
3. Completes and posts the self-inspection check list prior to operating at each event;
4. Operates in compliance with all applicable laws and codes;
5. Obtains a separate permit for each facility if the applicant operates more than one facility at an event;
6. Provides a list of events at which the applicant plans to operate;
7. Provides proof of satisfactory completion of a class within the three years preceding application approved by the County Director in basic fundamentals of food protection for food preparation operators;
8. Applies for the multi-event permit prior to operating and pays any applicable fees; and
9. Submits a menu.
10. Utilizes an approved commissary and submits a valid commissary letter
The annual multi-event permit fees shall be established pursuant to Section 6.99.035 for the following:
Temporary Food Facility Multi-event (Pkg. Foods/Low Risk)
Temporary Food Facility Multi-event (Food Prep/High Risk) (SCC 1355 § 29, 2007: SCC 1223 § 2 (part), 2002.)

6.99.185 Food Facility Reinspections.

The reinspection fee for food facilities as defined in California Health and Safety Code Section 113700 through Section 113910 shall be established pursuant to Section 6.99.035 for the following facilities:
Food Preparation Establishment (without hood)
Restaurant
Bar
Restaurant/Bar
School/Non Profit Sr. Meal Program
Bakery No Preparation
Caterer/Low Risk
Caterer/High Risk
Temporary Food Facility (Food Prep/High Risk)
Temporary Food Facility (Packaged Food/Low Risk)
Temporary Food Facility Multi-Event (Food Prep/High Risk)

Temporary Food Facility Multi-Event (Pkgd Food/Low Risk)
Produce Stand
Certified Farmers' Market
Retail Mkt (15,000 + Sq. Ft.)
(6,000-14,999 Sq. Ft.)
(Less Than 6,000 Sq. Ft.)
Mobile Food Facility (Category A)
Mobile Food Facility (Category B)
Mobile Food Facility (Category C)
Mobile Food Facility (Category D)
Mobile Food Prep. Unit
Mobile Support Unit
Commissary
Satellite Food Dist. Facility
School Satellite Facility
Restricted Food Service Est.
Swap Meet Prepackaged Food Stand
(Variable Locations)
Seasonal (Low Risk)
Seasonal (High Risk)
(SCC 1355 § 30, 2007: SCC 1333 § 30, 2006: SCC 1223 § 2 (part), 2002.)

6.99.190 Bakery—No Preparation.

The term "Bakery—No Preparation" means a bakery wherein no products are prepared or processed from the beginning state. (SCC 1223 § 2 (part), 2002.)

6.99.195 Multiple Food Facilities.

Any premises with multiple food facilities operating under the same ownership, shall pay the following fees: one hundred (100) percent of the annual fee for the type facility with the highest prescribed fee, and seventy (70) percent of each remaining fee. temporary food facilities, mobile food facilities, mobile support units, swap meet prepackaged food stands, or satellite food distribution facilities shall not be included as multiples and shall pay the basic fee. (SCC 1355 § 31, 2007: SCC 1223 § 2 (part), 2002.)

6.99.200 Nonprofit.

Any charitable or nonprofit organization which is exempt from payment of income taxes by ruling of the Director of Internal Revenue Service. (SCC 1223 § 2 (part), 2002.)

6.99.205 Reinspection Fee—General.

Except as otherwise specified in this Code any fee for a reinspection as defined in Section 6.99.028 shall be established pursuant to sections 6.99.170 and 6.99.172. (SCC 1270 § 16, 2004; SCC 1223 § 2 (part), 2002.)

6.99.210 Operation of a Food Facility Without a Permit.

Any food facility as defined in California State law operating without a permit shall be subject to closure of the facility and a penalty fee not to exceed three times the annual permit fee established for such food facility pursuant to Section 6.99.170. (SCC 1333 § 29, 2006: SCC 1223 § 2 (part), 2002.)

6.99.211 Mandatory Food Safety Education Course Fee.

A per person and per class fee for the Food Safety Education Course shall be established pursuant to Sections 6.99.035 and 6.04.022. (SCC 1355 § 32, 2007.)

6.99.215 Plan Review.

For purposes of this Code, Plan Review is defined as a review of three sets of construction plans for all proposed new food facilities, public swimming pool, spa pool, or wading pool facilities or the remodeling of such existing facilities for compliance with State or local laws and regulations. Fees are due and

payable when plans are submitted to the Environmental Management Department for review. (SCC 1223 § 2 (part), 2002.)

6.99.220 New Food Facility Construction Plan.

A new food facility construction plan shall consist of a plan for a room, building, or place, or portion thereof, intended for use as a food facility. Fees for review of new food facility construction plans are based on square footage and shall be established pursuant to Section 6.99.170 for the following facilities:
a. Prepackaged foods only
b. Food facilities without hoods
1. Less than 2000 sq. ft.
2. 2,000 sq. ft. to 5,999 sq. ft.
3. 6,000 sq. ft. or more
c. Food facilities with hoods
1. Less than 2,000 sq. ft.
2. 2,000 sq. ft. to 5,999 sq. ft.
3. 6,000 sq. ft. or more
(SCC 1223 § 2 (part), 2002.)

6.99.225 Major Remodel Food Facility Construction Plan.

For purposes of this section, the phrase “major remodel of a food facility” means the remodeling or revisions to a food facility, as defined in the Health and Safety Code, to thirty (30) percent or more of the food service related areas, not including the dining area. The terms “major remodel” or “revision” shall include but not be limited to structural alterations to food preparation and storage rooms, removal or replacement of food service equipment, changes in mechanical or plumbing fixtures, or changes in materials and finishes. Fees for review of construction plans for major remodel of a food facility are based on square footage and shall be established pursuant to Section 6.99.170 for the following facilities:
a. Prepackaged foods only
b. Food facilities without hoods
1. Less than 2,000 sq. ft.
2. 2,000 sq. ft. to 5,999 sq. ft.
3. 6,000 sq. ft. or more
c. Food facilities with hoods
1. Less than 2,000 sq. ft.
2. 2,000 sq. ft. to 5,999 sq. ft.
3. 6,000 sq. ft. or more
(SCC 1223 § 2 (part), 2002.)

6.99.230 Minor Remodeling Food Facility Construction Plan.

For purposes of this section the phrase “minor remodel of a food facility” means the remodeling or revisions to a food facility, as defined in the Health and Safety Code, of less than thirty (30) percent of the food service related areas excluding the dining area, including resubmitted plans. The fee for review of a minor remodel plan shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.235 Minor Remodel Plan Review for Single Piece of Food Equipment.

For purposes of this section, a minor remodel plan review for a single piece of food equipment is the review of plans for a single piece of food equipment and related items, such as, the addition of an oven and hood. The fee for review of a single piece of equipment for a food facility shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.240 Miscellaneous Food Facility Plan Review.

The fee for review and approval of additional food facility plans previously approved by the Environmental Health Division shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.245 Public Swimming Pool.

The annual regulatory program fees for a public swimming pool, spa pool and wading pool as defined in California Code of Regulations Title 22, Section 65501(a), (f) and (b) shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.250 Swim Pools with Single Recirculation System.

The annual regulatory program fee for one or more public swim pools that are served by a single recirculation, disinfection, and filtration system, as approved by the County Director, shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.255 Multiple Swimming, Spa, or Wading Pools.

Fees for premises with multiple swimming, spa, or wading pools operating under the same ownership shall be computed at one hundred (100) percent for the highest fee and seventy (70) percent of each remaining fee. (SCC 1223 § 2 (part), 2002.)

6.99.256 Temporarily Inactive Fee-Pool/Spas.

For the purposes of this section, the phrase “Temporarily Inactive Pool, Spa, or Wading Pool” shall mean any pool, spa or wading pool that is maintained empty or unused. The fee for temporarily inactive pool, spa or wading pool shall be established pursuant to Section 6.99.035. (SCC 1355 § 33, 2007.)

6.99.260 Public Swimming Pool Reinspection.

The reinspection fee for a public swimming pool, spa pool and wading pool as defined in California Code of Regulations Title 22, Section 65501(a), (b) and (d) shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.265 Optional Swimming Pool Service Company Registration.

In connection with Registration of Swimming Pool Service Companies by the County Director per Section 6.64.030, the fee for each company shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.270 New Swimming Pool, Spa Pool, Wading Pool or Recreational Water Theme Park Plan Review.

The fee for the review of new construction plan for a public swimming pool, public spa pool, public wading pool or recreational water theme park shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.275 Major Remodel Plan Review for Public Swimming Pool, Spa Pool and Wading Pool.

For purposes of this section major remodeling plan for a public pool, spa or wading pool shall mean remodeling or revision to such a plan of thirty (30) percent or more of the swimming pool, spa pool or wading pool structural area, excluding replacement of equipment solely for repair purposes. The fee for review by the County Director of a major remodeling plan for a public swimming pool, public spa, or public wading pool shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.280 Minor Remodel Plan Review for Public Swimming Pool, Spa and Wading Pool.

For the purposes of this section, a minor remodeling plan for a public swimming pool, spa or wading pool includes resubmitted plans; remodeling or revision shall mean remodeling or revisions to such a plan of less than thirty (30) percent of the swimming pool, spa pool or wading pool structural area or equipment alterations, excluding replacement of equipment solely for repair purposes. The fee for the review by the County Director of minor remodeling plans for a public swimming pool, public spa, or public wading pool shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.285 Minor Remodel Plan Review for Single Piece of Recirculation Equipment.

For purposes of this section a minor remodel plan review for a single piece of recirculation equipment is the review of plans for the replacement of a swimming pool, public spa, or wading pool pump, filter,

sanitizer or other recirculation equipment, excluding replacement of equipment solely for repair purposes. The fee for review of a minor remodel plan for a single piece of recirculation equipment shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.290 Plan Review for Addition of a Single Attraction to a Recreational Water Theme Park.

For purposes of this section a plan review for addition of a single attraction to a recreational water theme park is the review of plans for a single attraction and related appurtenances to an existing recreational water theme park. The fee for plan review for addition of a single attraction shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.300 Miscellaneous Plan.

For purposes of this section a miscellaneous public swimming pool, public spa and public wading pool construction plan is the review of three additional copies of a plan previously approved by the County Director. The fee for review of miscellaneous public swimming pool, public spa or public wading pool plans shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.305 Construction Inspection.

Construction inspection of a public swimming pool, public spa and public wading pool shall consist of a pre-gunite and final inspection. Fees shall be paid when construction plans are submitted for review and shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.310 Public Swimming Pools, Spas, and Wading Pool Construction Reinspection.

The fee for a reinspection by the County Director for construction inspection shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.315 Small Public Water System.

Small public water systems are those systems as defined in the California Health and Safety Code, Section 116275. A new permit application fee, permit amendment fee, repair permit fee and an annual fee for each small public water system regulated by the County Director shall be established pursuant to Section 6.99.035. (SCC 1355 § 34, 2007: SCC 1223 § 2 (part), 2002.)

6.99.320 Protection of Drinking Water Cross Connection Control Tag Fees.

The fee for an approved tag for each backflow assembly tested in compliance with Sacramento County Code Section 6.30.100 shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.325 Plot Plan.

The fee for review and tentative approval of a plot plan for individual water well and/or septic system shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.330 On site Sewage Treatment (Septic Tank) System.

In connection with services by the County Director under Chapter 6.32 of this code, fees in the amount established pursuant to Section 6.99.035 shall be payable. (SCC 1355 § 35, 2007: SCC 1223 § 2 (part), 2002.)

6.99.335 Test Drilling and Engineering Review.

The fee for Test Drilling and Engineering Review as required by Rules and Regulations of the Environmental Health Division, adopted pursuant to SCC Section 6.32.130, shall be established pursuant to Section 6.99.170 for each review or test drilling. (SCC 1223 § 2 (part), 2002.)

6.99.340 Septic Tank Abandonment Fee.

The fee for a permit to abandon a septic tank shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.345 Consulting Services.

The fee for consultations for the installation, location or abandonment of an onsite sewage treatment (septic) system shall be established pursuant to Section 6.99.035. (SCC 1355 § 6, 2007: SCC 1223 § 2 (part), 2002.)

6.99.350 Septic Tank Cleaner Registration Fee.

The fee for the registration of a septic tank cleaner as required by Health and Safety Code Section 117400 shall be established pursuant to Section 6.99.170 for each pump truck. (SCC 1223 § 2 (part), 2002.)

6.99.400 Detention Facilities Fees.

The annual reimbursement from the Sheriff's Department and Probation Department for environmental health regulatory oversight of detention facilities as defined in California Health and Safety Code, Section 101045, shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.405 Employee Housing.

Unless otherwise stated in this Chapter, the annual fees for an employee housing facility or farm labor camp shall be established pursuant to Section 6.99.170 for the following:
a. Fee per employee.
b. Employee Housing Facility or Farm Labor Camp with Biennial Inspection.
(An employee housing facility or farm labor camp with biennial inspection is an employee housing facility or farm labor camp that meets minimum standards and no major code violations are encountered during the inspection. A major code violation is a condition which typically cannot be corrected in one day.)
c. Employee Housing Facility or Farm Labor Camp with Annual Inspection.
(An employee housing facility or farm labor camp with annual inspection is an employee housing facility or farm labor camp that fails to meet minimum standards and a major code violation is encountered during the inspection. A major code violation is a condition that typically cannot be corrected in one day.)
(SCC 1223 § 2 (part), 2002.)

6.99.410 Employee Housing Reinspection Fee.

The fee for reinspection of an employee housing facility or farm labor camp shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.415 Private School License Inspections.

The fees for inspections of nonpublic schools as requested, or as required by Title 5, California Code of Regulations, Section 3064, and California Education Code, Section 56366.1, shall be established pursuant to Section 6.99.170 for each inspection. (SCC 1223 § 2 (part), 2002.)

6.99.420 Hotel/Motel Compliance Program Fees.

The fees for inspections of hotels/motels pursuant to the Sacramento County Hotel/Motel Compliance Program (Chapter 16.21 of the Sacramento County Code) shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.425 Medical Waste Facility Inspection Fee.

The fee for medical waste facilities as defined in Division 2 and Division 22 of the Health and Safety Code shall be established pursuant to Section 6.99.170 for the following:
a. Large Quantity Medical Waste—Acute Care Hospital.
1 to 99 Beds
100 to 199 Beds
200 to 250 Beds
250+ Beds
b. Onsite Treatment of Medical Waste
c. Medical Waste—Skilled Nursing Facility
1 to 199 Beds
200+ Beds
d. Medical Waste Small Quantity Generator—Offsite Treatment

e. Medical Waste Small Quantity Generator—Onsite Treatment
f. Limited Quantity Hauling Exemption
g. Medical Waste—Common Storage Facilities
2 to 15 Generators
16 to 49 Generators
50+ Generators
h. Medical Waste Clinic/ Laboratory/ Mortuary/ Primary Care
i. Tattoo/Body Art/Permanent Cosmetics
(SCC 1223 § 2 (part), 2002.)

6.99.430 Medical Waste Noncompliance.

The medical waste noncompliance fee for purposes of this section is defined as a fee charged to a medical waste generator which generates less than two hundred (200) pounds of medical waste each calendar month and is in violation of the Medical Waste Act, Division 20, Chapter 6.1 of the Health and Safety Code as determined by an onsite inspection. The noncompliance fee shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.435 Solid Waste Facility Fee.

a. The annual fee for solid waste handling or disposal facilities, as defined in Title 14 and Title 27 of the California Code of Regulations, and Division 30 of the California Public Resources Code, shall be established pursuant to Section 6.99.170 for the following:
Municipal Solid Waste Landfill
Construction, Demolition, Inert Landfill
Transfer/Processing Facility
Composting Facility, Quarterly Inspection
Composting Facility, Monthly Inspection
Organic Processor/Chip & Grind
Non-traditional Facility
b. In addition to the fee in subsection (a), each solid waste handling or disposal facility shall be assessed a regional fee for a share of the annual regional program costs pursuant to Section 6.99.170. The amount of the fee for each facility shall be based upon the percent of the total County-wide tonnage received at each facility. The annual County-wide tonnage shall be determined based upon the tonnage reported to the County Director for the last three quarters (April 1—December 31) of the prior calendar year and the first quarter (January 1—March 31) of the current calendar year. This assessment shall be based upon the percent of the total annual County-wide tonnage received at the facility gate.
c. Each facility shall report the tonnage received at the facility gate on a quarterly basis within fifteen (15) days following the end of each quarter.
d. In the event that a new solid waste handling or disposal facility is added during the fourth quarter of the current fiscal year wherein no appropriate history of tonnage (12 months) exists, then the regional fee shall be based upon estimated tonnage for the fourth quarter of the current fiscal year. (SCC 1228 § 1, 2002: SCC 1223 § 2 (part), 2002.)

6.99.440 Closed Site, Refuse Vehicle, Refuse Exemption, and New Facility Permit.

The annual fee for a closed site, refuse vehicle, refuse exemption, and processing a new facility permit shall be established pursuant to Section 6.99.035 for the following:
Closed Site, Quarterly Inspection
Closed Site, Annual Inspection
Refuse Vehicle
Refuse Exemption
New Facility Permit
(SCC 1355 § 37, 2007: SCC 1223 § 2 (part), 2002.)

6.99.445 Enforcement Action.

Cost recovery for enforcement action shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.450 Fixed Mechanical Plan Approval.

For purposes of this section a fixed mechanical plan approval is the tentative approval of a plan by the County Director to determine compliance with Sacramento County Code, Chapter 6.68. The fee for each such plan approval shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.455 Acoustical Report Review.

For purposes of this section an acoustical report review is the review by the County Director of a construction plan for compliance with Sacramento County Code, Chapter 6.68. The fee for an acoustical report shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.460 Special Condition Permit.

The fee for an application for a special condition permit as provided for in Section 6.68.190 shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.465 Noise Ordinance Compliance Inspection.

The fee for determination of compliance to a previous order of correction as issued by the County Director for a violation of Chapter 6.68 shall be established pursuant to Section 6.99.170. (SCC 1223 § 2 (part), 2002.)

6.99.470 Document Search Fee.

A fee established pursuant to Section 6.99.170 shall be charged to any consulting firm, realtor, lending institution or other commercial enterprise for services performed by the County Director in searching files for the purpose of complying with document research requests by those enterprises. (SCC 1223 § 2 (part), 2002.)

6.99.475 Smoking Control.

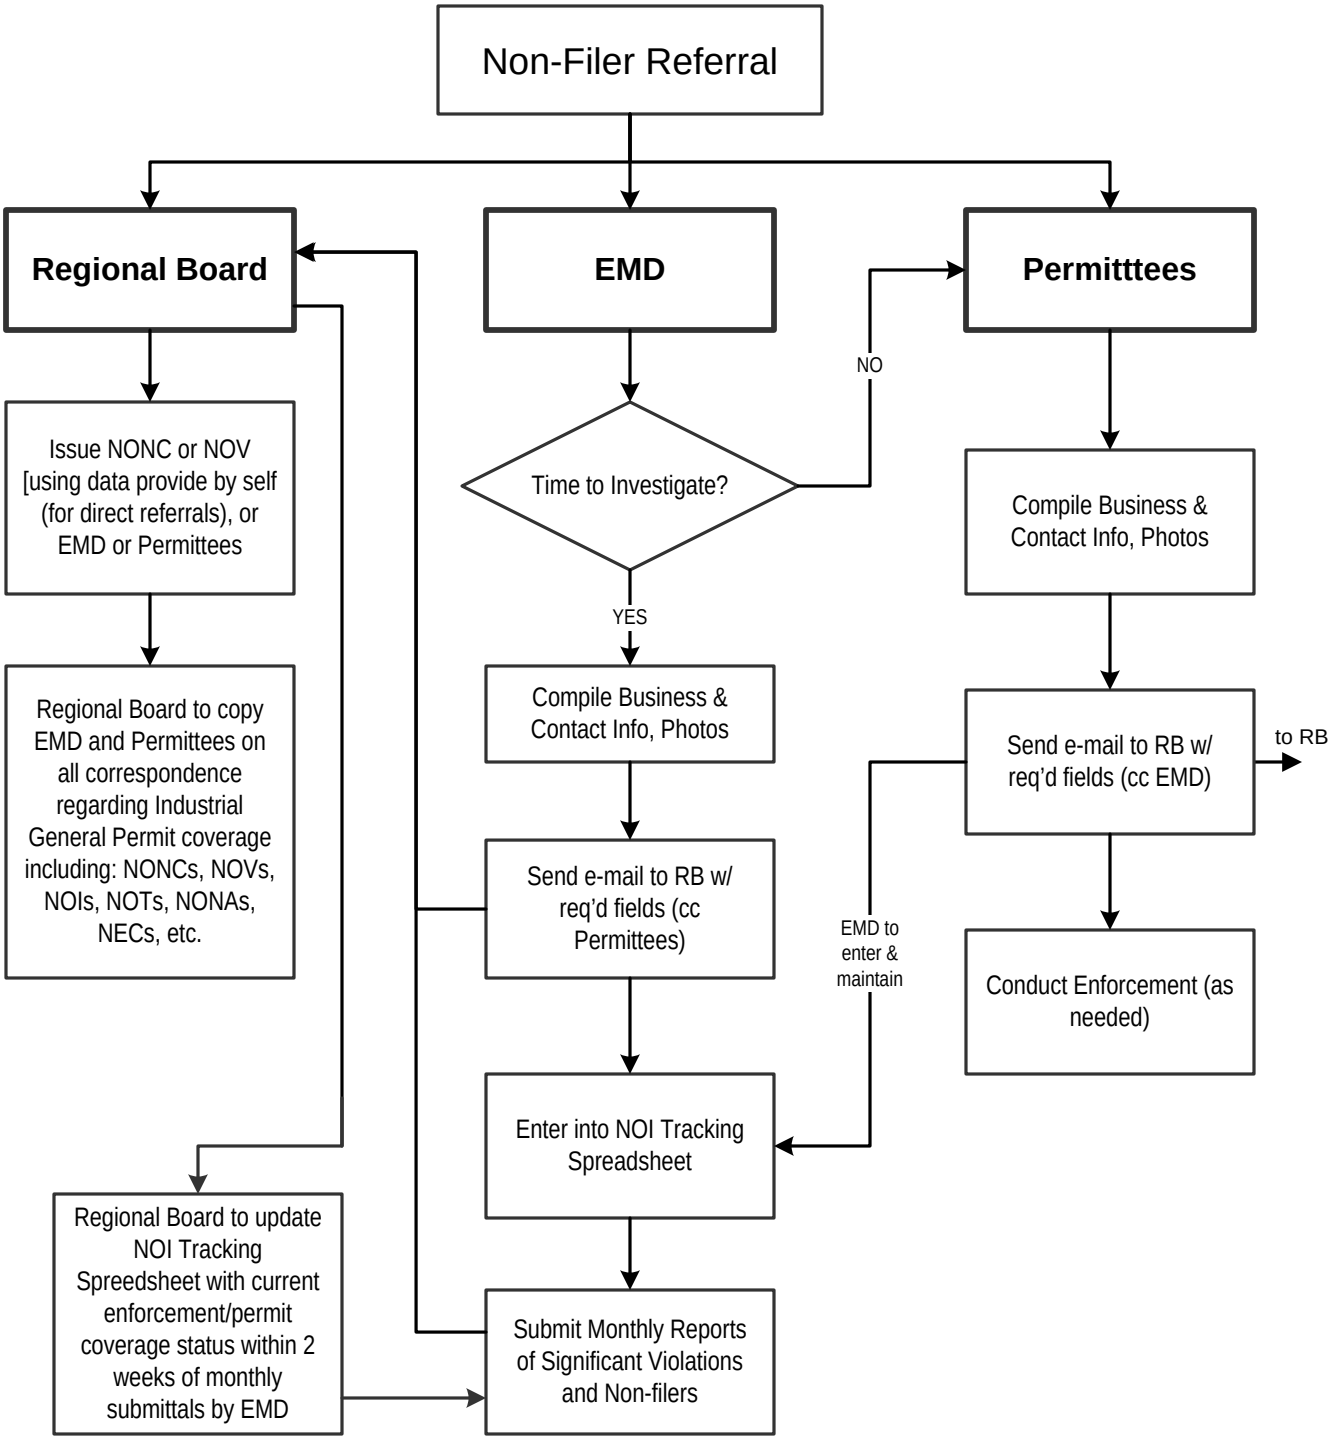
For purposes of enforcement of the provisions of Title 37 of the Sacramento City Code, Chapters 4.61 and 6.84 of the Sacramento County Code, and California Labor Code Section 6404.5, the fees for a smoking exemption, permit, renewal, revised plan, reinspection or complaint verification, additional testing, and laboratory costs shall be established pursuant to Section 6.99.170 for the following:
a. Smoking Exemption or Permit
-Includes application, plan review, and one on-site performance evaluation
b. Renewal of Smoking Exemption or Permit
-Includes application review and one on-site performance evaluation
c. Revised Plan
-Includes review of revised plan
d. Inspection/Reinspection Fee
-Includes the issuance of an official notice when it is determined such facility is not in compliance or a reinspection of facility for compliance with applicable codes
e. Additional Testing
-Includes additional testing at the facility as directed by any special condition of the exemption or permit and shall be charged for each site evaluation
f. Laboratory Costs
-Applicant or permittee shall pay the actual costs for any laboratory testing as required by a special condition of the exemption or permit
(SCC 1223 § 2 (part), 2002.)

6.99.480 Surcharge.

If the County Director is requested or required to perform regulatory functions or work in excess of the cost recovery provided by the fees established pursuant to this Chapter, a surcharge to recover the excess costs shall be assessed at the hourly rate established pursuant to Section 6.99.019. (SCC 1355 § 38, 2007: SCC 1223 § 2 (part), 2002.)

6.99.485 Permit or License—Denial, Suspension, Revocation.

Except as prohibited by federal or State law or regulation, or local ordinance or regulation, the County Director shall be authorized to deny, suspend, revoke, or refuse to renew any permit or license to any party or responsible parties wherein any license, permit, or program cost recovery fees are unpaid and delinquent pursuant to this Chapter. Any decision of the Director to deny, suspend, revoke, or refuse to renew any permit or license may be appealed to the Hearing Authority pursuant to procedures adopted by the Director. Any such appeal shall be in writing, shall state the specific reasons therefore and grounds asserted for relief, and shall be filed with the Director not later than fifteen (15) days after the date of service of any such decision. If an appeal is not filed within the time or in the manner prescribed above, the right to review shall be deemed to have been waived. “Hearing Authority” shall be deemed to refer to one or more persons assigned the responsibility of conducting a hearing by the County Executive. (SCC 1223 § 2 (part), 2002.)



6.99.490 Liability.

All fees prescribed by this Chapter shall be owing by and collectable from: (1) the owner of any land upon which hazardous material or hazardous waste is situated and to which the regulatory activities associated with the fee relate; (2) the lessee or operator of any business or enterprise responsible for hazardous materials or hazardous wastes to which the regulatory activities associated with the fee relate; (3) any contractor who undertakes activities pertaining to hazardous materials or hazardous waste which are regulated by Chapters 6.28, 6.34, 6.96 or 6.98; (4) the owner of any business for which any permit, regulatory, inspection, or plan review fees are provided in this chapter; and (5) the operator of any business for which any permit, regulatory, inspection, or plan review fees are provided in this Chapter. The foregoing parties shall be jointly and severally liable for any and all such fees. (SCC 1223 § 2 (part), 2002.)

6.99.495 Collection.

The County Director shall be responsible for the collection of all fees prescribed by this Chapter. All fees the exact or estimated amount of which can be calculated at the time an application for a Permit or License under Chapters 6.28, 6.34, 6.96 or 6.98 is filed of this Code, shall be so calculated and estimated, and owing pursuant to the filing of the application. No application for such a Permit or License shall be deemed to be complete or valid unless all fees calculated and estimated by the County Director have been submitted with the application. The County Director shall be authorized to order refunds and the County Auditor-Controller shall draw warrants for such refunds in such amounts as the County Director prescribes in connection with any fees collected at the time of application for a Permit or License which were overestimated. Any fees prescribed by this Chapter not collected by the County Director at the time of application for a Permit or License required by Chapters 6.28, 6.34, 6.96 or 6.98, and all other fees prescribed by this Chapter, shall be billed by the County Director to the party or parties responsible for payment therefore. A fee which is owing and unpaid shall become delinquent thirty (30) calendar days following the date of mailing by the County Director of the billing. A delinquency charge in an amount of ten (10) percent of the outstanding account balance, but not less than seventy-five dollars ($75.00) shall be applied and collectable from the parties responsible in connection with all delinquent accounts. All costs, beyond those recovered by any delinquency charge either directly or indirectly incurred by the County Director, including but not limited to court costs, collection costs and handling charges, in collecting unpaid and delinquent accounts shall be owed by the responsible party or parties. The County Director shall be authorized to file and diligently prosecute in the name of the County civil suits in Small Claims Courts and/or Municipal/Superior Courts of competent jurisdiction or seek liens in the name of the County for the collection and recovery of delinquent fees and/or other charges prescribed by this Chapter. (1355 § 39, 2007: SCC 1355 § 39, 2007: SCC 1223 § 2 (part), 2002.)

Statement of Legal Authority

This Statement is provided on behalf of the County of Sacramento pursuant to the "Waste Discharge Requirements, Cities of Citrus Heights, Elk Grove, Folsom, Galt, Rancho Cordova, Sacramento, and County Of Sacramento, Storm Water Discharges from Municipal Separate Storm Sewer System, Sacramento County, Order No. R5-2008-0142, NPDES No. CAS082597" issued by the California Regional Water Quality Control Board, Central Valley Region on September 11, 2008 (hereafter referred to as the "Order").

Section C.6 of the Order requires the preparation of a statement "certified by its chief legal counsel," verifying that adequate authority exists to implement the terms of the Order and requirements of federal stormwater regulations. Section C.6 specifies six items that must be included in the statement:

"6. Each Permittee shall provide to the Executive Officer a statement certified by its chief legal counsel that it has adequate legal authority to implement and enforce each of the requirements contained in 40 CFR 122.26(d)(2)(i)(A-F) and this Order, including any modifications thereto in effect when the certified statement is provided. This statement, which shall be included in Permittees' revised SQIP(s),which shall include the following:

a. Citation of urban runoff related ordinances adopted by the Permittees and the reasons they are enforceable;

b. Progressive enforcement policy and how it will be effectively implemented;

c. Identification of the local administrative and legal procedures available to mandate compliance with urban runoff related ordinances and therefore with the conditions of this Order;

d. Description of how these ordinances are implemented and how enforcement actions under these ordinances may be appealed; and

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions.

f. Description of the Permittee's stormwater management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities.

As required by the Order, a complete discussion of each issue with respect to the County of Sacramento follows.

a. Citation of urban runoff related ordinances adopted by the Permittees and the reasons they are enforceable.

The principal ordinance governing discharges to the County's municipal separate storm sewer system (MS4) is Chapter 15.12 of the Sacramento County Code (the "Storm Water Ordinance"). One of the stated purposes of the Storm Water Ordinance is to "protect and enhance the watercourses within the unincorporated area of the County, by controlling the contribution of urban pollutants to stormwater runoff which enters the County storm drain system in a manner consistent with the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and Municipal Discharge Permit No. CAS082597, and by controlling pollutants that are discharged directly to natural surface waters." The provisions of the Storm Water Ordinance authorize implementation or enforcement of the mandates of the Order and stormwater regulations. Another purpose of the Storm Water Ordinance is to establish appropriate enforcement procedures and penalties for violations of its provisions. The Storm Water Ordinance was amended in 2004 to address previously noted exceptions to the County's authority. A copy of the Storm Water Ordinance is attached hereto as Exhibit "A".

Additionally, the County's Grading Ordinance, Chapter 16.44 of the Sacramento County Code (the "Grading Ordinance"), regulates grading projects and sets conditions for approval of such projects. The County enacted this ordinance specifically to minimize the degradation of the water quality of watercourses caused by grading, filling and excavation of land, and to control sediment and pollutant runoff from other construction-related activities. These goals are achieved by establishing administrative procedures, minimum standards of review, and implementation and enforcement procedures for controlling erosion, sedimentation and other construction-related pollution. A copy of the Grading Ordinance is attached hereto as Exhibit "B".

The County's authority under its ordinances is very wide-ranging and is sufficient to address the mandates contained in the Order. These ordinances were properly published, introduced and adopted by the Sacramento County Board of Supervisors and constitute enforceable enactments pursuant to the County's police power.

b. Progressive enforcement policy and how it will be effectively implemented

All sanctions for violations of the Storm Water Ordinance are available as progressive remedies and may be imposed administratively. Authorized for violations under that Ordinance are administrative civil penalties, treble damages, recovery of abatement costs, and criminal sanctions. These remedies may be cumulative. The Storm Water Ordinance states that each enforcement action "shall take into consideration such factors as the nature, circumstances, extent and gravity of the violation, and the violator's past and present efforts to comply."

The County's Environmental Management Department (EMD) inspects, tracks and ensures compliance with the Order concerning commercial and industrial facilities located in the unincorporated area of the County. Additionally, by memorandum of understanding, EMD also performs this same service in those jurisdictions of the other co-permittees. EMD is designated by the State as a Certified Unified Program Agency and an Environmental Health Agency for the County of Sacramento. EMD's authority is established in Chapter 6.11, Division 20 and Chapter 4, Division 104 of the Health and Safety Code.

c. Identification of the local administrative and legal procedures available to mandate compliance with urban runoff related ordinances and therefore with the conditions of this Order.

The County Storm Water Ordinance has several administrative procedures available to mandate compliance with the requirements contained in it. As discussed further below, these options include issuing notices of violation to anyone found to be in violation of its provisions, issuing cease and desist orders where violation constitutes an immediate threat to public health or safety, and issuing notices of administrative civil penalty. In addition to administrative enforcement options, the County may seek civil and criminal penalties against a violator and may seek nuisance abatement through the court system. Lastly, Section 15.12.330 allows the Administrator of the County's Municipal Services Agency to promulgate regulations for the implementation of the County's Storm Water Ordinance. This section gives the County the ability to further refine its administrative compliance options.

d. Description of how these ordinances are implemented and how enforcement actions under these ordinances may be appealed.

The County implements its Storm Water Ordinance through the stormwater program detailed in its Stormwater Quality Improvement Plan (SQIP). Additionally, the Storm Water Ordinance sets forth a detailed administrative process for appealing enforcement actions. Section 15.12.540 provides that any person receiving a notice of violation, an administrative compliance order or who otherwise suffers an adverse determination under the Ordinance may request an administrative hearing before an administrative hearing officer appointed pursuant to Government Code section 27720 et seq. The Ordinance requires that the appellant file a written request for an administrative hearing accompanied by payment of an administrative hearing fee in an amount established by the Administrator based upon actual expense. If the person prevails in the appeal, the fee is refunded. Alternatively, the hearing officer may order the appellant to pay additional costs. If no request for hearing is filed within the prescribed filing period, the determination of the Administrator becomes final.

Where an appeal is timely filed, the County will then hold a hearing on the matter before a hearing officer not less than thirty (30) and not more than ninety (90) calendar days from the filing of the written request unless the notice is issued concurrently with a cease and desist order and, in that case, the hearing must take place not more than forty-five (45) days from the date of the notice. A record of the entire proceeding shall be made, and evidence rules established by Government Code § 11513 apply. The hearing officer may, for good cause, grant continuances, and must issue a final decision within ten (10) days of the hearing's conclusion.

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions.

As stated above, the Storm Water Ordinance includes an extensive section on enforcement actions giving the County a wide variety of administrative options in case of violations. The administrative enforcement options include issuing a notice of violation, administrative compliance orders, and cease and desist orders. Issuance of a cease and desist order functions as an injunction in that it allows the Administrator to direct the owner or occupant of any premises, or any other person responsible for any violation of the Ordinance, to take one or more of the following actions: (1) Immediately discontinue any prohibited discharge to the County stormwater conveyance system; (2) Immediately discontinue any other violation of the Ordinance; and (3) Clean up the area affected by the violation. The Administrator may direct by a Cease and Desist Order that any person immediately cease any activity that may lead to a violation of Receiving Water Limitations.

The County has similar authority under the Grading Ordinance. The powers include the issuance of stop work notices, denial of future grading permits and the abatement of nuisance conditions.

f. Description of the Permittee's stormwater management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities.

Compliance with the Order is a County-wide responsibility. The County's Stormwater Quality Improvement Plan (SQIP) provides a detailed explanation of the County's stormwater management structure, which is headed by the County's Department of Water Resources. There, a staff of twelve administer the Order and work with other County departments to implement its requirements. Inter-departmental agreements are adopted when necessary to ensure that other applicable departments understand their responsibilities under the Order.

Based on the foregoing discussion, the Office of the County Counsel respectfully submits this certification.

15.12.520 Cease and Desist Orders.

15.12.525 Enforcement Actions—Content.

15.12.530 Delivery of Notice.

15.12.540 Administrative Appeals.

15.12.543 Conduct of Administrative Hearings—Generally.

15.12.545 Form and Contents of Decision—Finality of Decision.

15.12.548 Procedures for Collection of Administrative Civil Penalty.

15.12.549 Actions Not Prohibited.

15.12.550 Nuisance and Abatement.

15.12.555 Enforcement Policy.

15.12.560 Administrative Civil Penalties.

15.12.570 Criminal Penalties.

15.12.580 Miscellaneous Enforcement Provisions.

Article 6 Recovery of Cost Abatement

15.12.600 Costs of Abatement—Confirmation.

15.12.610 Costs—Assessments.

15.12.620 Treble Costs.

15.12.630 Hearing of Protests.

15.12.640 Assessment for Summary Abatement.

15.12.650 Time for Contest of Assessment.

15.12.660 Filing Copy of Report With County Auditor.

Article 1 General Provisions

15.12.105 Title.

This Chapter shall be known as the “stormwater Ordinance.” (SCC 1280 § 2 (part), 2004)

15.12.110 Findings.

a. The Federal Clean Water Act provides for the regulation and reduction of pollutants discharged into the Waters of the United States by extending National Pollutant Discharge Elimination System (NPDES) requirements to stormwater and urban runoff discharge into the County storm drain system.
b. The State Water Resources Control Board (“State Board”) is the State water pollution control agency for all purposes of the Clean Water Act pursuant to Section 13160 of the California Water Code. The State Board is authorized by the United States Environmental Protection Agency to administer the NPDES program within the State. The Porter-Cologne Water Quality Control Act (Water Code section 13000 et seq.) provides authority for the State NPDES program, including provisions to issue NPDES Permits and Waste Discharge Requirements to regulate discharges of stormwater to waters of the State.
c. Stormwater flows from individual properties to the County storm drain system and then ultimately to the waters of the State.
d. The County is a co-permittee under the Waste Discharge Requirements for County of Sacramento and cities of Citrus Heights, Elk Grove, Folsom, Galt, and Sacramento, Storm Water Discharges from Municipal Separate Storm Sewer Systems Sacramento County (Order No. R5-2002-0206), dated December 6, 2002, which also serves as a National Pollutant Discharge Elimination System Permit under the Federal Clean Water Act (NPDES No. CAS082597). As a co-permittee, the County is required to possess the necessary legal authority, and to implement appropriate procedures, to regulate the entry of pollutants and non-stormwater discharges into and from the County storm drain system.
e. The County’s Municipal Stormwater Permit requires the County effectively to prohibit non-stormwater discharges from the unincorporated urbanized area of the County into the County storm drain system except as otherwise permitted by federal law.
f. Non-stormwater discharges and stormwater pollutants that are discharged directly to waters of the State without passing through the County storm drain system are not subject to the requirements of the Municipal Stormwater Permit. However, such discharges have the potential to degrade water quality and impact the quality of life for the people of the County. Regulation of such discharges by the County provides benefits to its people and protects the local environment.

g. The Board finds in this regard that the provisions of this Chapter are necessary to provide the County with the legal authority necessary to implement and otherwise comply with the requirements of its Municipal Stormwater Permit and to protect the waters of the State for the benefit of its people and the environment. (SCC 1295 § 1, 2005: SCC 1280 § 2 (part), 2004)

15.12.120 Purpose and Intent.

a. This Chapter is adopted pursuant to Article XI, Section 7 of the California Constitution which authorizes the County to exercise its police power to protect and promote the public health, safety and general welfare. While stormwater runoff is one step in the natural cycle of water, human activities, including, but not limited to, agriculture, construction, manufacturing and the operation of an urban infrastructure, may result in undesirable discharges of pollutants and certain sediments. Such discharges may accumulate in local drainage channels and waterways and eventually may be deposited in the natural surface waters. The purpose of this Chapter is to protect and enhance the watercourses within the unincorporated area of the County, by controlling the contribution of urban pollutants to stormwater runoff which enters the County storm drain system in a manner consistent with the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and Municipal discharge Permit No. CAS082597, and by controlling pollutants that are discharged directly to natural surface waters.
b. It is the intent of the Board in adopting this Chapter to provide the County with the legal authority to accomplish the following goals:
1. To benefit the people and environment of the County by protecting water quality in waters of the State;
2. To reduce the discharge of pollutants in stormwater to the maximum extent practicable, whether those discharges are made to the County storm drain system, or directly to natural surface waters;
3. To effectively prohibit Non-stormwater discharges into the County storm drain system or to natural surface waters;
4. To comply with the requirements of the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and NPDES Municipal Storm Water Discharge Permit #CAS082597 as they apply to the discharge of pollutants into and from the County storm drain system;
5. To fully implement the County’s stormwater Quality Improvement Plan;
6. To protect the physical integrity and function of the County storm drain system from the effects of pollutants and materials other than stormwater;
7. To prevent the contamination of groundwater as a result of pollution migration from the County storm drain system;
8. To promote cost effective management and beneficial use of sediments in the County storm drain system;
9. To protect the health and safety of maintenance personnel and the public who may be exposed to pollutants in the County storm drain system or in natural surface waters;
10. To provide for the recovery of regulatory costs incurred by the County in the implementation of this Chapter or its stormwater Quality Improvement Plan, including, but not limited to, enforcement activities, compliance assistance, inspections, investigations, sampling and monitoring; and
11. To establish appropriate enforcement procedures and penalties for violations of the provisions of this Chapter. (SCC 1280 § 2 (part), 2004)

15.12.130 Definitions.

Any term(s) defined in the Federal Clean Water Act, as amended, and/or defined in the regulations for the stormwater discharge permitting program issued by the Environmental Protection Agency, as amended, and which are not specifically defined in this Chapter shall, when used in this Chapter, have the same meaning as set forth in said act or regulation.
As used in this Chapter, the following words and phrases shall have the meanings set forth below unless the context clearly indicates otherwise.
a. “Administrator” means the Administrator of the County of Sacramento’s Municipal Services Agency and his or her designees.
b. “Best management practices” or BMPs means schedules of activities, prohibition of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce to the maximum extent practicable the discharge of pollutants to the County storm drain system or directly or indirectly to natural surface waters. BMPs shall also be defined to include structural controls, treatment controls, source controls, training requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, and drainage from raw materials storage.
c. “Board” means the Board of Supervisors of the County of Sacramento.
d. “County” means the County of Sacramento.
e. “County stormwater permit” means a permit issued to industries by the County to establish requirements intended to eliminate Non-stormwater discharges and control, reduce, or eliminate pollutants in stormwater.
f. “County storm drain system” means those public man-made facilities within the unincorporated area of the County which are owned, operated, maintained or controlled by the County by which stormwater may be conveyed to natural surface waters, including, but not limited to, any roads with drainage systems, municipal streets, catch basins, water quality basins, detention basins, constructed wetlands, artificial channels, aqueducts, curbs, gutters, ditches, sumps, pumping stations, storm drain inlets, and storm drains.
g. “Director of Water Resources” means the Director of the County’s Department of Water Resources, and his or her designees.
h. “Discharge” means the release or placement of any material into the County storm drain system or natural surface waters, including, but not limited to, stormwater, wastewater, pollutants, solid materials, liquids, hazardous waste, raw materials, debris, litter or any other substance.
i. “Discharger” means any person who discharges, or causes to discharge, either directly or indirectly, stormwater or any other material into the County storm drain system or to natural surface waters.
j. “Illicit connection” means any physical connection to the County storm drain system or natural surface waters which is not expressly authorized by the County.
k. “Implementing agency” means the agency or department designated by the Administrator to enforce the provisions of this Chapter with respect to a particular site, facility or industry category.
l. “Industry” or “industrial activity” means any service, business, enterprise, or any other activity conducted by any person for the purpose of monetary or other compensation, or in support of or promotion of such activity. This term shall also mean any similar activity conducted by a non-profit

corporation as defined by the State of California.
m. “Material” means any substance, including, but not limited to, raw materials, finished products, garbage and debris, lawn clippings, leaves and other vegetation, biological and fecal waste, sediment and sludge, oil and grease, gasoline, paints, solvents, cleaners and any fluid or solid containing chemicals.
n. “Municipal Stormwater Permit” means NPDES Permit #CAS082597, including any amendments thereto or successor permit, issued by the Regional Board to the County and the cities of Citrus Heights, Elk Grove, Folsom, Galt, Rancho Cordova, and Sacramento.
o. “National Pollution Discharge Elimination System Permit” or “NPDES Permit” means a permit issued by either the Regional Board, the State Water Resources Control Board pursuant to Chapter 5.5 (commencing with Section 13370) of Division 7 of the Water Code, or the United States Environmental Protection Agency to control discharges from point sources to natural surface waters.
p. “Natural surface water” means creeks, natural ponds or lakes, wetlands, the Sacramento River, American River, Cosumnes River, Mokelumne River, Lake Natoma, or navigable waters of the delta and shall include any waters of the United States contained within the boundaries of the State. Natural surface water does not mean any wet or dry detention basin, constructed wetland, stormwater treatment facility, artificial lake or pond or other man-made body of water.
q. “Non-stormwater discharge” means any discharge to the County storm drain system or directly to natural surface waters which did not originate as surface runoff and drainage from storm events and snow melt, but essentially resulted from human activities, or materials or processes under a persons control. Non-stormwater discharges include but are not limited to discharges of: (1) water that has been used by a person for any purpose such as cleaning, rinsing, cooling, irrigation, aquaculture, recreation, cooking, and industrial processes; (2) water or wastewater that originates or flows from equipment, valves, piping, hoses, containers, tanks, or other man-made apparatus; or (3) any discharge of materials or wastes other than water.
r. “Person” means any natural person as well as any corporation, partnership, public agency, trust, estate, cooperative association, joint venture, business entity or other similar entity, or the agent, employee or representative of any of the above.
s. “Pollutant” means any contaminant or other substance which, as determined by the Administrator, is discharged or has a reasonable potential to be discharged in sufficient quantities or concentrations to cause exceedance of receiving water limitations, or otherwise cause a violation of the Municipal Stormwater Permit. Pollutant may include, but is not limited to, solid waste, sewage, garbage, medical waste, wrecked or discarded equipment, radioactive material, dredged soil, rock, sand, industrial waste, feces, fecal coliform, fecal streptococcus, enterococcus, volatile organic carbon, surfactants, oil and grease, petroleum hydrocarbon, organic solvents, metals, phenols, pesticides, nutrients, suspended or settleable solids, materials causing an increase in biochemical or chemical oxygen or total organic carbon, substances which alter pH, and those pollutants defined in Section 1362(6) of the Federal Clean Water Act.
t. “Potential discharger” means any person who by nature of the enterprise, activity or industry in which such person is engaged, or by the use, possession or ownership of specified types of building, facility, equipment, or materials, is determined by the Administrator to generate or have the capacity to generate pollutants, wastes, or wastewater which have significant potential to be discharged to the County storm drain system or directly to any natural surface waters.

u. “Premises” means any building, lot, parcel or land, or portion thereof, whether improved or unimproved.
v. “Prohibited non-stormwater discharge” means any non-stormwater discharge to the County storm drain system or directly to natural surface waters, which is not otherwise specifically authorized by this Chapter, the Regional Board, State or Federal law, or an NPDES Permit.
w. “Prohibited non-stormwater discharge installation” means any structure or equipment installed at a person’s premises that is not directly connected to the County drain system, but nonetheless is intended or serves to discharge or convey a prohibited non-stormwater discharge to the County storm drain system or waters of the State.
x. “Receiving water limitations” is as defined and listed in Section B.1. of the Municipal Stormwater Permit or any successor document.
y. “Receiving waters” means surface bodies of water, as defined by the Municipal Stormwater Permit, including, but not limited to, creeks and rivers, which serve as discharge points for the County storm drain system.
z. “Regional Board” means the California Regional Water Quality Control Board, Central Valley Region.
aa. “Significant industrial activity” means any industrial activity, individual industrial facility, or class of industrial facilities which is determined by the Administrator to discharge or have the potential to discharge pollutants into stormwater, or non-stormwater in quantities or concentrations which may cause exceedance of receiving water limitations, or for which a requirement has been imposed by the state or federal government on the County to conduct stormwater regulatory activities focused on the facility or activity.
bb. “Significant redevelopment” means the creation or addition of at least five thousand (5,000) square feet of impervious surfaces on an already developed site. Significant redevelopment includes, but is not limited to expansion of a building footprint, or replacement of a structure; replacement of impervious surface that is not part of a routine maintenance activity; and land-disturbing activities related to structural or impervious surfaces.
cc. “Specified performance requirements” means standards adopted by the County that define required conditions or results regarding the elimination of non-stormwater discharges or the control of pollutants in stormwater from specified sources.
dd. “State Construction General Permit” means the State Water Resources Control Board’s Order No. 99-08 – DWQ, National Pollutant Discharge Elimination System (NPDES) General Permit No. CAS000002 Waste Discharge Requirements (WDRS) for discharges of Storm Water Runoff Associated With Construction Activity, and any successor documents.
ee. “State Industrial General Permit” means the State Water Resources Control Board’s “Water Quality Order No. 97-03-DWQ, National Pollutant Discharge Elimination System General Permit No. CAS000001, Waste Discharge Requirements for Discharges of Storm Water Associated With Industrial Activities Excluding Construction Activities” and any successor documents.
ff. “Stormwater” means surface runoff and drainage resulting from storm events and snow melt, including surface runoff and drainage that contains pollutants as a result of contact with man-made or natural sources.
gg. “Threatened prohibited non-stormwater discharge” means any condition or activity which does not currently result in a prohibited non-stormwater discharge but is nevertheless determined by the Administrator to be a condition which results in a substantial likelihood of a future prohibited non-

stormwater discharge;
hh. “Unmitigated stormwater pollutant source” means any existing condition that if left unmitigated is reasonably likely, as determined by the Administrator, to result in a discharge of pollutants in stormwater that will cause or contribute to an exceedance of receiving water limitations, harm or interfere with the County storm drain system, or otherwise pose a threat to public health and safety.
ii. “Waters of the United States” has the same meaning as set forth in Part 122.2 of Title 40 of the Code of Federal Regulations or any successor provision. (SCC 1295 § 2, 2005: SCC 1280 § 2 (part), 2004)

15.12.135 Construction.

The provisions of this Chapter shall be construed to assure consistency with the requirements of the Federal Clean Water Act and any acts amendatory thereof or supplementary thereto, applicable implementing regulations, and NPDES Permit # CAS082597 and any amendment, revision or re-issuance thereof. In the event of a conflict between this Chapter and any federal or state law, regulation, order or permit, the requirement which establishes the higher standard for public health and safety shall govern. (SCC 1280 § 2 (part), 2004)

15.12.140 Applicability.

The provisions of this Chapter shall be applicable to all dischargers and potential dischargers located within the unincorporated area of the County and all dischargers or potential dischargers that discharge either directly or indirectly into the County storm drain system. This Chapter shall also apply, within the unincorporated area of the County, to stormwater and Non-stormwater discharges made directly to natural surface waters. This Chapter shall not be applicable to discharges occurring outside the unincorporated area of the County.
This Chapter shall apply to facilities subject to the State Construction General Permit; the pollutant control provisions of the County Erosion and Sediment Control Ordinance, County Grading permit, or a Building Permit; or any other instrument of the County that establishes pollutant control provisions for construction sites. However, compliance with the requirements of these permits and the Erosion and Sediment Control Ordinance shall constitute compliance with this Chapter.
This Chapter shall not apply to activities conducted by or facilities operated by the State of California or by agencies of the Federal Government. (SCC 1280 § 2 (part), 2004)

15.12.150 Regulatory Consistency.

The provisions of this Chapter shall take precedence over and are controlling with respect to any conflicting or inconsistent provisions in this Code. (SCC 1280 § 2 (part), 2004)

15.12.160 Compliance Disclaimer.

Compliance by any person with the provisions of this Chapter shall not preclude the need to comply with other local, state or federal statutory or regulatory requirements relating to the control of pollutant

discharges or protection of stormwater quality, or both. (SCC 1280 § 2 (part), 2004)

15.12.170 Severability.

If any section, subsection, subdivision, paragraph, sentence, clause or phrase of this Chapter is for any reason held to be invalid or unconstitutional by a decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases of this Chapter. The Board hereby declares that it would have adopted this Chapter and each section, subsection, subdivision, paragraph, sentence, clause or phrase thereof without regard to whether any other section, subsection, subdivision, paragraph, sentence, clause or phrase of this Chapter would subsequently be declared to be invalid or unconstitutional. (SCC 1280 § 2 (part), 2004)

15.12.180 Administration.

Except as otherwise provided herein, the authority to implement this Chapter is vested in the Administrator who shall be responsible for the administration, implementation and enforcement of the provisions of this Chapter. Unless otherwise specified herein, any powers granted to or duties imposed upon the Administrator may be delegated by the Administrator to other County employees or, upon the approval of the Board, to employees of other public agencies. (SCC 1280 § 2 (part), 2004)

15.12.190 Disclaimer of Liability.

The degree of protection required by this Chapter is considered reasonable for regulatory purposes and is based on scientific, engineering and other relevant technical considerations. The standards set forth herein are minimum standards and this Chapter does not imply that compliance will ensure that there will be no unauthorized discharge of pollutants into natural surface waters. This Chapter shall not create liability on the part of the County or any officer or employee thereof for any damages that result from reliance on this Chapter or any administrative decision lawfully made there under. (SCC 1280 § 2 (part), 2004)

Article 2 Prohibited Discharges

15.12.200 Prohibited Non-Stormwater Discharge.

Except as provided in Section 15.12.210, it shall be unlawful for any person to make or cause to be made any Non-stormwater discharge into the County storm drain system or directly to natural surface waters. (SCC 1280 § 2 (part), 2004)

15.12.210 Exceptions To Non-Stormwater Discharge Prohibition.

The following discharges to the County storm drain system are exempt from the otherwise applicable

discharge prohibition set forth in Section 15.12.200:
a. Any discharge regulated under a NPDES Permit issued to the discharger, and administered by the State pursuant to Chapter 5.5 of Division 7 of the Water Code, provided that any such discharge is in compliance with all requirements of the NPDES Permit and all other applicable laws and regulations.
b. Any discharge from any of the following activities provided that any such discharge does not cause or contribute to the violation of any receiving water limitation as determined by the Administrator:
1. Water line flushing;
2. Landscape irrigation;
3. Diverted stream flows;
4. Rising ground waters;
5. Uncontaminated ground water infiltration [as defined in 40 CFR 35.2005(20)] to separate storm sewers;
6. Uncontaminated pumped ground water;
7. discharges from potable water sources;
8. Foundation drains;
9. Air conditioning condensate;
10. Uncontaminated irrigation water;
11. Springs;
12. Water from crawl space pumps;
13. Footing drains;
14. Lawn watering;
15. Individual residential car washing;
16. Flows from riparian habitats and wetlands;
17. Dechlorinated swimming pool discharges; or
18. discharges or flows from emergency fire fighting activities.
c. Any discharges which the Administrator, the County Health Officer or the Regional Board determines in writing are necessary for the protection of public health or safety.
d. Additional categories of non-stormwater discharges which do not cause or contribute to the violation of any receiving water limitation may be excepted from the otherwise applicable prohibition by the Administrator upon approval of the Executive Officer of the Regional Board, as provided in the Municipal Stormwater Permit, or any successor permit. (SCC 1280 § 2 (part), 2004)

15.12.220 Exception to Otherwise Applicable Exemptions.

Notwithstanding the exemptions provided for in Section 15.12.210 above, if the Regional Board or the Administrator determines that a discharge which is otherwise exempt from the prohibition on discharges causes or significantly contributes to the violation of any receiving water limitation or results in the conveyance of significant quantities of pollutants to natural surface waters, or is otherwise a danger to public health or safety, the Administrator may give written notice to the owner or operator of the facility that the discharge exception shall not apply to the discharge at issue following expiration of the thirty (30) day period commencing upon delivery of the notice. Upon expiration of such thirty (30) day period, any such discharge shall be unlawful. Upon finding that any continuance of the discharge poses an immediate significant threat to the environment or to public health and safety, the Administrator may

waive the thirty day waiting period and require immediate cessation of the discharge. (SCC 1280 § 2 (part), 2004)

15.12.230 Prohibited Stormwater Discharges.

It shall be unlawful for any person to discharge, or cause to be discharged, any stormwater or material to the County storm drain system which results in, or contributes to a violation of a receiving water limitation or a violation of the Municipal Stormwater Permit. (SCC 1280 § 2 (part), 2004)

15.12.240 Prohibited Conditions.

a. In the interest of preventing prohibited discharges from occurring, it shall be unlawful for any person to maintain, or cause to be maintained, any of the following conditions:
1. Unmitigated stormwater pollution source;
2. Threatened prohibited non-stormwater discharge;
3. Prohibited non-stormwater discharge Installation; or
4. Illicit connection.
b. Illicit connections shall be subject to removal and abatement by the County pursuant to this Chapter and Title 16 of this Code.
c. The prohibition set forth in subsection (a)(4) above shall apply to illicit connections in existence at the time that this Chapter becomes effective. Upon the effective date of this Chapter, any person who maintains an illicit connection shall have thirty (30) days from the effective date of this Chapter to disconnect and discontinue use of such connection. Notwithstanding the provisions of this section, any person who maintains an illicit connection, as defined in Section 15.12.130, may apply to the County for a Sacramento County Water Agency Permit to continue the connection subject to applicable County standards. No permit shall be issued for any connection or any physical facility or apparatus that is installed, intended, serves, or is known to convey a prohibited discharge to the County storm drain system or waters of the State. (SCC 1295 § 3, 2005: SCC 1280 § 2 (part), 2004)

15.12.250 Negligence or Intent Not Required.

A violation of the provisions of this Article shall occur irrespective of the negligence or intent of the violator to construct, maintain, operate or utilize an illicit connection or to cause, allow or facilitate any prohibited discharge. (SCC 1280 § 2 (part), 2004)

Article 3 Reduction of Pollutants in Stormwater

15.12.300 General Requirements for Best Management Practices.

Any person engaged in activities which may result in pollutants entering the stormwater conveyance system shall, to the maximum extent practicable, undertake BMPs to reduce the risk of Non-stormwater discharge and/or pollutant discharge. (SCC 1280 § 2 (part), 2004)

15.12.302 Significant Industrial Activities.

a. The Administrator may designate as significant industrial activities those industrial activities or facilities which are identified as potentially significant sources of discharges of pollutants to the County storm drain system. A significant industrial activity may occur at stationary facilities or as a mobile activity that takes place at various job sites.
b. Industries for which the Municipal Stormwater Permit specifies that the County shall conduct routine inspections, or which are listed in Municipal Stormwater Permit provision 9 ii c, are hereby designated as significant industrial activities.
c. Notwithstanding subsection (b) of this section, food establishments, as defined in the Section 113780 of the State of California Health and Safety Code, shall not be designated as significant industrial activities.
d. Significant industrial activity designations that apply only to individual facilities may be made by the Administrator and are subject to appeal under section 15.12.540 of this Chapter.
e. Significant industrial activity designations made by the Administrator pursuant to subsection (a) of this section that apply to classes of activities or facilities shall be subject to the requirements of Section 15.12.330 of this Chapter governing the adoption of regulations. (SCC 1295 § 4, 2005: SCC 1280 § 2 (part), 2004)

15.12.305 County Stormwater Permit.

a. The Administrator may require the owner or operator of a significant industrial activity to obtain a County stormwater permit, which may establish any provisions necessary for the implementation of this Chapter, effective control of stormwater pollutants and non-stormwater discharges, and compliance with the Municipal Stormwater Permit. Provisions may include but are not limited to applicable specified performance requirements; and reporting, documentation, training, and monitoring requirements.
b. Notwithstanding subsection (a) of this Section, food establishments, as defined in the State of California Health and Safety Code Section 113780, and industrial facilities required to obtain coverage under the State Industrial General Permit shall not be required to obtain a County stormwater permit.
c. The County stormwater permit shall describe the aspects of business to which it applies, which may include but are not limited to areas, equipment, buildings, industrial processes, or activities of the business.
d. Any person who continues to own or operate a significant industrial activity without obtaining a County stormwater permit if required by the Administrator, shall be in violation of this Chapter.
e. The Administrator may establish permit fees, according to the provisions of Section 15.12.450 of this Chapter, to fund the County’s costs associated with regulating the permitted activity, including but not limited to administration, inspection, enforcement, compliance assistance, and outreach
f. The Administrator may revoke a County stormwater permit for significant violations of this Chapter. Prior to issuance or revocation of any permit, the Administrator shall establish, as part of the enforcement policy required by Section 15.12.555, written policy regarding permit administration, including timelines and criteria for permit revocation and permit reinstatement. Permit revocation and reinstatement decisions by the Administrator shall be subject to appeal under Section 15.12.540 of this

Chapter. (SCC 1280 § 2 (part), 2004)

15.12.310 Containment and Notification of Spills.

a. Any person owning or occupying a premises, or conducting any activity, that has knowledge of any non-stormwater discharge or threatened prohibited discharge, from the premises or activity to the County stormwater conveyance system shall immediately take all reasonable action to contain and otherwise minimize any such discharge.
b. The Administrator may designate individual facilities or types of industries where the owner or operator of the Industry shall be required to notify the Administrator or the implementing agency within twenty-four (24) hours of the discovery of an actual discharge into the County stormwater conveyance system.
c. For any discharge subject to the reporting requirements of the State of California Water Code sections 13271 and 13272, notification in compliance therewith shall constitute sufficient notification for the purposes of this Section. (SCC 1295 § 5, 2005: SCC 1280 § 2 (part), 2004)

15.12.320 Specified Performance Requirements for Industrial Activities.

a. The Administrator may establish specified performance requirements for significant industrial activities that are intended to apply to a class or classes of industries. Such requirements shall be subject to the provisions for adoption of regulations under Section 15.12.330 of this Chapter.
b. The Administrator may impose specified performance requirements that apply to single facilities. Such requirements shall be subject to appeal under Section 15.12.540 of this Chapter.
c. Any facility that it is in compliance with its State or Federal NPDES Permit for stormwater discharges for that facility shall be deemed to have met the requirements of Section 15.12.300, except that any specified performance requirements applicable to such facilities shall also be met. (SCC 1280 § 2 (part), 2004)

15.12.322 Construction Sites With Building Permits.

Any person owning or operating a construction site for which a building permit has been issued shall implement BMPs to control the discharge of pollutants to the maximum extent practicable, and eliminate non-stormwater discharges that are not in compliance with an NPDES Permit. (SCC 1280 § 2 (part), 2004)

15.12.325 Post Construction Requirements for New Development and Significant Redevelopment.

a. The Administrator shall be authorized to establish specified performance requirements and requirements for BMPs as appropriate to minimize the long-term, post construction discharge of stormwater pollutants from new development or significant redevelopment, to implement the development standards plan, and to comply with the requirements associated with development standards in the Municipal Stormwater Permit, including but not limited to Provisions 16 through 26.

The requirements for new development or redevelopment may include but are not limited to performance standards, source control BMPs, treatment BMPs, structural BMPs, operational BMPs, building material specifications or limitations, site design requirements, signage and marking, and associated maintenance programs or schedules.
b. Requirements established pursuant to subsection (a) of this section may be included in development standards, building codes, building permits, conditions of development, or any other appropriate instrument administered by the County. (SCC 1280 § 2 (part), 2004)

15.12.327 BMP Maintenance Requirements.

The Administrator may require a property owner to establish, document, and conduct a maintenance program, subject to approval, for any BMP or to ensure continued compliance with specified performance requirements. This requirement may apply to BMPs required by the County or BMPs that were voluntarily installed. Such a maintenance program may be required when the Administrator determines that proper maintenance is necessary to protect public safety, health, infrastructure, or the environment, or to otherwise meet the purposes of this Chapter. Maintenance requirements established pursuant to this subsection must be appropriate for the site conditions and design of BMPs. (SCC 1295 § 6, 2005: SCC 1280 § 2 (part), 2004)

15.12.330 Administrative Rules and Regulations.

a. The Administrator shall have the authority to promulgate regulations for the implementation of this Chapter. Prior to the Administrator's initiation of any proposed regulations, the Administrator shall submit a public input plan to the Board for its approval. The public input plan approved by the Board shall be generally applicable to the promulgation of regulations by the Administrator.
b. All regulations promulgated by the Administrator shall be consistent with the provisions of this Chapter. Any such regulations, or amendments thereof, shall be filed with the Clerk of the Board. The Clerk shall cause announcement of said rules or regulations to be published in a newspaper of general circulation within ten calendar days. Such announcements shall provide a reasonable summary of the content of the rule. In addition, the Administrator shall make a reasonable effort to identify, notify, and provide copies to any industries which are specifically designated by the Administrator as subject to a rule or regulation. However, neither the failure of the Administrator to provide such notice nor the failure to receive individual notice shall exempt an industry from that rule or regulation. No regulations promulgated by the Administrator or amendments thereof, shall be enforced or become effective until thirty (30) calendar days following the date on which notification of the regulations are published.
c. Any person who asserts that he or she is aggrieved by the terms or application of a regulation issued pursuant to this section may appeal the issuance of such regulation by filing a written notice of appeal with the Clerk of the Board. The notice of appeal shall specifically identify the regulation or regulations from which the appeal is taken and the reasons for the appeal. Upon receipt of such notice, the Clerk of the Board shall schedule the appeal for a public hearing by the Board. At the conclusion of the public hearing the Board shall be vested with jurisdiction to deny the appeal or to rescind or modify the regulation. The Board's determination in this regard shall be final.
d. Any regulation from which an appeal is filed prior to its effective date shall not become effective until

the date of a determination by the Board of the appeal. Any regulation from which an appeal is filed on or subsequent to the effective date thereof shall remain in full force and effect during the pendency of the appeal, and any decision which rescinds or modifies the regulation shall apply prospectively. (SCC 1280 § 2 (part), 2004)

Article 4 Inspection and Monitoring

15.12.400 Scope of Inspections.

a. Prior to commencing any inspection authorized pursuant to this Chapter, the Administrator shall obtain the consent of the owner or occupant of the premises, an inspection warrant or a criminal search warrant.
b. The Administrator may conduct inspections related to purposes of implementing this Chapter on private or public property. Inspections shall be based upon such reasonable selection processes as may be deemed necessary to carry out the objectives of this Chapter, including, but not limited to, compliance with requirements of the Municipal Stormwater Permit, visual evidence, complaints received, knowledge or physical evidence of industrial activities or other pollutant sources, random sampling, sampling in areas with evidence of stormwater contamination, illicit connections, discharge of non-stormwater to the County storm drain system or similar factors.
c. The Administrator may enter upon private property to investigate the source of any discharge to any public street, inlet, gutter, storm drain or the County storm drain system.
d. The Administrator may enter upon private property for the purpose of verifying compliance with the provisions of this Chapter, including, but not limited to, the following:
1. Identifying products produced, processes conducted, chemicals used and materials stored on or contained within the property;
2. Identifying point(s) of discharge of all wastewater, process water systems, pollutants and other discharges from the property;
3. Investigating the drainage patterns of the premises, including natural and graded slopes, and artificial conveyance systems;
4. Establishing the location of all points of discharge from the property, whether by surface run-off or through a storm drain system;
5. Locating any prohibited condition, illicit connection, or the source of any prohibited discharge; and
6. Evaluating implementation of BMPs.
e. For purposes of verifying compliance with the provisions of this Chapter, the Administrator may inspect any vehicle, truck, trailer, tank truck or other mobile equipment, or any stationary equipment, which may reasonably be believed to be used by the business for business-related activities and to be associated with industrial sources of pollutants or with non-stormwater discharges.
f. The Administrator may inspect and copy all records of the owner or occupant of any premises relating to chemicals or processes presently or previously occurring on-site, including materials and/or chemical inventories, facilities maps or schematics or diagrams, material safety data sheets, hazardous waste manifests, business plans, pollution prevention plans, state general permits, monitoring program plans or any other records relating to illicit connections, prohibited discharges or the potential discharge of pollutants to the County storm drain system. In addition, the Administrator may require the owner or

occupant to furnish, within a reasonable time period, copies of all such records.
g. The Administrator may inspect, sample and test any area runoff, soils area (including any groundwater testing), process discharge, materials within any waste storage area (including any container contents), and/or treatment system discharge for the purpose of determining the potential for the contribution of pollutants to the County storm drain system. The Administrator may investigate the integrity and layout of all storm drain and sanitary sewer systems or other pipelines on the premises using appropriate tests, including, but not limited to, smoke and dye tests or video surveys. The Administrator may take photographs or video tape, make measurements or drawings, and create any other record reasonably necessary to document conditions on the premises.
h. The Administrator may erect and maintain monitoring and sampling devices for the purpose of measuring any discharge or potential source of discharge to the County storm drain system. (SCC 1295 § 7, 2005: SCC 1280 § 2 (part), 2004)

15.12.430 Monitoring Requirements for Industrial Facilities.

a. The Administrator may require industries, at their own expense, to conduct and report monitoring of stormwater and non-stormwater discharges from their facilities and operations, for purposes necessary for the implementation of this Chapter or compliance with the Municipal Stormwater Permit. The goals of monitoring may include but are not limited to characterization of known and potential pollutant sources, pollutant content of discharges, and BMP effectiveness. Required forms of monitoring may include but are not limited to toxicity, flow, and analysis of pollutant concentrations.
b. The Administrator may designate specific monitoring requirements and/or require the discharger or potential discharger to submit a monitoring plan that describes specific monitoring requirements. Specific monitoring requirements may include sampling points, sampling times or deadlines, analysis and sampling methods, frequencies, storm event criteria, and other specifications necessary to ensure timely, adequate, accurate, and representative monitoring;
c. The discharger or potential discharger shall ensure that the integrity of the sample is protected at all times, including collection, handling, splitting, transport, and storage. Deliberate tampering with or altering of a sample shall be a violation of this Chapter.
d. The Administrator may specify information that must be documented in association with any sampling and monitoring event. At a minimum, unless otherwise allowed by the Administrator, the discharger or potential discharger shall record and maintain the following information for each sampling event:
1. The date, exact place, method and time of sampling;
2. The name, title, and employer of the person or persons taking the samples;
3. Sample preservation used;
4. The dates analyses were performed;
5. Sample chain of custody forms;
6. Who performed the analyses;
7. Analytical methods used, including detection limits;
8. Quality assurance and quality control documentation;
9. Laboratory reports of analytical results;
10. Any unusual observations or conditions noted during sample acquisition or analysis.

e. Any information submitted pursuant to this section shall be subject to the approval of the Administrator and the Administrator may require additional information if the Administrator determines the information submitted is incomplete or insufficient. (SCC 1280 § 2 (part), 2004)

15.12.435 Reporting Requirements.

a. The Administrator may require any person to report information for purposes related to the purpose and intent of this Chapter. Required information may include but is not limited to the following: characterization of industrial activities; compliance with this Chapter, compliance with a County stormwater permit; compliance with State General Permit requirements; compliance with the County stormwater Ordinance; compliance with administrative enforcement orders or other enforcement actions; discharge monitoring; training; and BMP implementation, effectiveness, and maintenance.
b. The Administrator may require information to be submitted on an as needed basis, or according to a specific schedule as specified in a County stormwater permit.
c. The Administrator may require submitted information to be compiled, summarized, analyzed or organized in a reasonable manner that facilitates its interpretation or other use. As necessary to facilitate the use of information, the Administrator may also specify the medium and format of required submittals.
d. Failure to provide information in a timely manner as required by the Administrator, or knowingly or negligently concealing, destroying, or providing false information shall be a violation of this Chapter. (SCC 1295 § 8, 2005: SCC 1280 § 2 (part), 2004)

15.12.438 Confidentiality of Information.

a. Information and data on a discharger or potential discharger obtained from inspections, reports, questionnaires, applications, permits, monitoring programs, records, or any other form of submittal to the County shall be available to the public or other governmental agency without notification unless the discharger or potential discharger specifically requests confidentiality as to any portion thereof and is able to demonstrate to the satisfaction of the Administrator that the release of such information would divulge information, processes or methods of production entitled to protection as trade secrets of the discharger or potential discharger. Stormwater and non-stormwater discharge constituents and characteristics will not be recognized as confidential information, and effluent data shall be available to the public without restriction.
b. When requested by a discharger or potential discharger furnishing information to the County, and agreed to by the Administrator, the portions of that information which might disclose trade secrets or secret processes shall not be made available for inspection by the public but shall be made available to the County and other governmental agencies for uses related to the ordinance codified in this Chapter, the National Pollutant Discharge Elimination System (NPDES) and/or the pretreatment program, and enforcement of other environmental regulatory programs. Those portions of the information shall also be available for use by the state or any state agency in judicial review or enforcement proceedings involving the discharger or potential discharger furnishing the information.
c. Information and data requested from a discharger or potential discharger which the discharger or potential discharger believes to be proprietary and the release of which to the public would substantially

impair the operations or business interests of the discharger or potential discharger, may alternatively be provided to the County for its review at the facility of the discharger or potential discharger rather than provided to the County for its keeping, at the discretion of the County. The burden will be on the discharger or potential discharger to demonstrate to the satisfaction of the County that such information is proprietary and that this alternative procedure is necessary or appropriate and will not prevent the County from properly carrying out the objectives of this Chapter

d. In the event access to or disclosure of any such confidential or proprietary information is requested pursuant to an action brought under federal or state laws, the County shall have the option, in its sole discretion, of defending itself in such action or requiring the discharger or potential discharger to provide a defense. If the County makes written tender upon a discharger or potential discharger to defend such an action with counsel acceptable to County and such discharger or potential discharger does not appear in and assume the defense of such action within the time specified in the tender, the County shall be free to disclose the information to the party making request therefore. In any event, the discharger or potential discharger shall be liable to the County in defending such action and for any judgment rendered against the County in such action. Payment of all such amounts shall be made by the discharger or potential discharger within thirty (30) days of billing by the County. (SCC 1295 § 9, 2005: SCC 1280 § 2 (part), 2004)

15.12.440 Record Retention.

Any reports, data, or other records and documentation required by the Administrator of a discharger to be collected or submitted for characterizing discharges, demonstrating compliance with this Chapter, or otherwise related to the purposes of this Chapter, shall be retained at the discharger’s premises and made readily available to the Administrator for a period of not less than three years. (SCC 1295 § 10, 2005)

15.12.450 Fees.

The Administrator shall collect such fees as may be established by the Board to provide for the recovery of regulatory costs, including routine inspections and other regulatory functions associated with this Chapter. Any such fees shall be established by resolution of the Board. Failure to pay required fees within the time period set in policy established by the Administrator shall be a violation of this Chapter. There shall be no fee assessed to appeal the determination that a person conducts any significant industrial activity. (SCC 1280 § 2 (part), 2004)

Article 5 Enforcement

15.12.500 Enforcement at Construction Sites with Building Permits.

Any person found to be in violation of any provision of this Chapter in connection with activities subject to a building permit issued pursuant to Title 16 of the Sacramento County Code, shall be subject to the enforcement provisions of both this Chapter and Title 16. (SCC 1295 § 11, 2005: SCC 1280 § 2 (part), 2004)

15.12.505 Notice of Violation.

The Administrator may issue a notice of violation to any person found to be in violation of a provision of this Chapter, including any regulation, permit, information request, order, variance, or other requirement that the Administrator is authorized to enforce or implement pursuant to this Chapter. (SCC 1280 § 2 (part), 2004)

15.12.520 Cease and Desist Orders.

a. Any violation of this Chapter in which the Administrator also determines that the violation constitutes an immediate threat to public health or safety, including by way of illustration and not limitation, significant harm to human or aquatic life or to the County storm drain system or natural surface waters, may result in an order to immediately cease and desist all activities causing such immediate threat.
b. A cease and desist order shall direct the owner or occupant of any premises subject to this Chapter, or any person named therein which is subject to this Chapter, to immediately discontinue all or specified prohibited conditions or discharges to the County storm drain system, natural surface waters, or otherwise, until such time as abatement actions sufficient in the determination of the Administrator have been satisfactorily effected and so confirmed by written amendment to said cease and desist order.
c. Any cease and desist order may be appealed pursuant to the administrative appeals process of this Chapter; provided, however, the effect of the cease and desist order shall remain in effect pending final determination thereof. Nothing shall limit the Administrator's authority to continue enforcement actions under a pending cease and desist order, including modifying a cease and desist order consistent with the purpose and intent of this Chapter.
d. Any cease and desist order shall be cumulative with all of the remedies in this Chapter and as provided by law.
e. A cease and desist order shall inform the discharger of the Administrator's authority and intent to conduct abatement of the violation or threatened violation according to Section 15.12.550, if the discharger fails to comply with the requirements of the order within the specified time frame.
f. If the discharger fails to comply with a cease and desist order within the time specified in the order, the Administrator may conduct abatement of the violation according to Section 15.12.550.
g. Nothing in this section requires the Administrator to issue a cease and desist order before conducting summary abatement as provided under Section 15.12.550. (SCC 1295 § 12, 2005: SCC 1280 § 2 (part), 2004)

15.12.525 Enforcement Actions—Content.

a. In addition to any other content, a notice of violation, or a cease and desist order shall contain the following elements:
1. A statement of the Administrator's findings that indicates a violation has occurred.
2. A citation of the provision of this Chapter that has been violated.
3. A date by which any person must be in compliance with this Chapter, or a date by which an action plan must be submitted by the person to propose a means and time frame by which to correct violations.

The Administrator may extend the compliance date when good cause exists for such an extension.
4. Notification that continued non-compliance may result in additional enforcement action being taken against the business, facility, or any responsible persons.
5. Notification that the County may recover any costs incurred by the County as a result of the violation.
6. Notification that a violation of this Chapter may result in an administrative civil penalty of up to five thousand dollars ($5,000.00) per violation for each day that the violation occurs, or in criminal penalties.
7. Notification that the recipient has a right to a hearing on the matter as set forth in Section 15.12.540 of this Chapter, to determine the enforcement of any administrative civil penalty sought by the Administrator, or to appeal any findings or required corrective actions established by the Administrator.
8. Notification of hearing dates, appeal deadlines, and procedures for requesting a hearing established according to Section 15.12.540 of this Chapter.
b. In addition to any other content, a notice of violation, or a cease and desist order, or a notice of administrative civil penalty may establish required corrective actions, including the following:
1. Terms, conditions, and requirements reasonably related to the provisions of this Chapter, including the following:
A. Cessation of illicit discharges.
B. Correction of prohibited conditions.
C. A requirement for submittal of a written action plan for achieving and maintaining compliance with this Chapter. The Administrator may require the action plan to address specific items, including the following:
i. Specific time schedules for compliance;
ii. Description of BMPs that will be implemented for containment, cleanup, removal, storage, or proper disposal of any material having the potential to contribute pollutants to stormwater runoff;
iii. Identification of persons responsible for compliance with this Chapter.
D. Reporting requirements to demonstrate ongoing compliance.
2. A requirement that the person receiving same shall submit written certification to the Administrator that the necessary corrective actions have been completed. As appropriate for the type of correction action taken, the notice of violation may require documentation that substantiates the certification, including but not limited to receipts, contracts, or photographs.
3. Any other terms or conditions reasonably calculated to prevent additional or on-going violations of this Chapter.
c. A notice of violation, a cease and desist order, or a notice of administrative civil penalty may be issued separately or in combination with another notice or order for the same violations or set of related violations. (SCC 1295 § 13, 2005: SCC 1280 § 2 (part), 2004)

15.12.530 Delivery of Notice.

Any notice of violation, cease and desist order, permit revocation, notice of administrative civil penalty or other enforcement action pursuant to the requirements of this Chapter shall be subject to the following requirements:
a. Delivery shall be deemed complete upon either personal delivery to the recipient or by deposit in the U.S. Mail postage pre-paid for first class delivery.
b. Where the recipient of the notice or order is the owner of the premises, the address for notice or order

shall be the address from the most recently issued equalized assessment roll for the premises.
c. Where the owner or occupant of any premises cannot be located after reasonable efforts of the Administrator, the notice or order shall be deemed delivered after posting on the premises for a period of ten (10) business days. (SCC 1295 § 14, 2005: SCC 1280 § 2 (part), 2004)

15.12.540 Administrative Appeals.

a. Administrative hearings and appeals under this Chapter shall be to a Hearing Officer appointed pursuant to Government Code section 27720 et seq. Each Hearing Officer shall also meet the requirements of Government Code section 11425.30 and any other applicable restriction.
b. Any person served with a notice or order pursuant to this Chapter shall be provided an opportunity for a hearing prior to enforcement of an administrative civil penalty; or to appeal required corrective actions or the Administrator's findings of a violation of this Chapter.
1. Appeal Hearing. If a notice of violation or a cease and desist order is issued, but not concurrently with a notice of administrative civil penalty, the person who receives it shall be afforded an opportunity for a hearing to appeal the Administrator's findings or required corrective actions in the manner described in the following subsections:
A. To appeal the Administrator's findings, required corrective actions, or any provision of a notice or order, the person shall file a written request for hearing. The filing period for a request for hearing shall be set in written policy by the Department issuing the notice or order adopted pursuant to 15.12.330, but shall in no case be less than fifteen (15) calendar days. Any notice or order shall notify the recipient of the specific date by which the notice must be filed. The request for hearing shall be filed with the party issuing the notice or order at the address so designated on the notice and must be accompanied by payment of the Hearing Officer fee, established and amended from time to time by the Administrator based upon actual expense. If the person filing a request for hearing prevails on appeal, then the Hearing Officer fee will be refunded by the Administrator. A request for hearing shall be deemed filed within the filing period if it is postmarked within that period. If a request for hearing is not filed within the proscribed filing period, the notice, order or other action or determination by the Administrator shall become final.
B. Except as provided in subsection (b)(1)(C) of this section, within ninety (90) calendar days of receipt of the request for hearing by the Administrator, the hearing shall be scheduled by the Administrator with a Hearing Officer designated by the Administrator, who shall conduct the hearing in accordance with Chapter 4.5 (commencing with Section 11400) of Part 1 of Division 3 of Title 2 of the Government Code, and the Administrator shall have all the authority granted to an agency by those provisions. Except as provided in subsection (b)(1)(C) of this section, the Hearing Officer shall issue a decision within sixty (60) calendar days after the completion of any hearing conducted pursuant to this section.
C. When a cease and desist order is issued pursuant to this Chapter, the hearing shall be scheduled by the Administrator with a Hearing Officer within fifteen (15) calendar days of receipt by the Administrator of the request for hearing. The Hearing Officer shall issue a decision within fifteen (15) calendar days after the completion of any hearing conducted pursuant to this subsection.
2. Administrative Civil Penalty Hearing. If the Administrator issues a notice of administrative civil penalty, prior to enforcement of any penalty, the person receiving the notice shall be afforded an opportunity for a hearing. The notice shall establish a time, date and place for the hearing before a

Hearing Officer, as follows.
A. The date for the hearing which shall be no less than thirty (30) calendar days and no more than ninety (90) days from the date of the notice, except that if the notice is issued concurrently with a cease and desist order, the hearing date shall be no more than forty-five (45) days from the date of the notice.
B. Alternative dates for the hearing may be established by mutual consent of the person and the Administrator, or as ordered by the Hearing Officer.
3. Combined Hearing. An appeal hearing may be consolidated with a hearing for an administrative civil penalty, as follows:
A. If a notice of administrative civil penalty is issued concurrently with a notice of violation or cease and desist order for the same violation or a related set of violations, and if the person files a request for hearing, according to the procedures established in subsection (b)(1)(A) of this Section, the appeal hearing shall be conducted in conjunction with the administrative civil penalty hearing.
B. If a notice of administrative civil penalty is not issued concurrently with a notice of violation or cease and desist order, but is issued within a reasonably close period of time for the same violation or a related set of violations, and if the person receiving the notice or order files a request for hearing according to the procedures established in subsection (b)(1)(A) of this Section, the appeal hearing may be conducted in conjunction with the administrative civil penalty hearing, at the discretion of the Hearing Officer.
4. Recovery of Hearing Costs. The Administrator may recover the costs incurred by the County for hearings as follows:
A. Cost for Appeal Hearing. For appeal hearings, the provisions of Section 15.12.450 notwithstanding, the Administrator shall set a standard fee to be paid by the person at the time that the request for hearing is filed. The purpose of the fee is to recover the County's costs, or portion thereof, for the Hearing Officer. If the person filing a request for hearing prevails on appeal, then the hearing officer fee will be refunded by the Administrator. In addition, by order of the hearing officer, the County may be awarded its costs, including hearing officer fees above and beyond the standard fee, staff time, and attorneys' fees, in defending against an unsuccessful appeal brought without substantial merit, which costs may be charged jointly and severally against the appellants and recovered as costs of enforcement as provided herein. Such an award must be based upon a finding supported by a preponderance of the evidence that the appeal was without substantial merit or was taken for the sole purpose of delay.
B. Costs for Administrative Civil Penalty Hearing. If the County prevails in seeking an administrative civil penalty, by order of the hearing officer, the County may be awarded costs incurred while seeking the penalty, including hearing officer fees, staff time, and attorneys' fees.
5. If the Administrator finds that a violation(s) may pose an imminent and substantial endangerment to the public health or safety or the environment, any required corrective action established by a notice or order issued under this Chapter that are intended to correct such violations, shall take effect upon issuance, regardless of the filing of a request for hearing.
c. Administrative hearings for matters concerning this Chapter shall be conducted according to Sections 15.12.540 through 15.12.548 hereof. (SCC 1295 § 15, 2005: SCC 1280 § 2 (part), 2004)

15.12.543 Conduct of Administrative Hearings—Generally.

a. General. At the time set for hearing, the Hearing Officer shall state what the prima facie case is, what the burden of proof is, and what the range of penalties is. The Hearing Examiner shall proceed to hear

the testimony of the Administrator, the person, and other competent persons respecting the circumstances of the violation, and other relevant facts concerning the matter. The Hearing Officer shall follow the rules of procedure for conducting hearings established by this Code.

b. Record of Oral Evidence at Hearing. A record of the entire hearing proceedings shall be made by either a certified court reporter or any other means of permanent recording determined to be appropriate by the Hearing Officer. A transcript of the proceedings shall be made available to all parties upon request and upon payment of the fee prescribed therefore. Such fees may be established and revised from time-to-time by the Administrator.

c. Continuances. The Hearing Officer may, upon request of the person, a party in interest, or the Administrator, grant continuances from time to time for good cause shown, or upon his/her own motion. Any continuance granted shall in no way diminish the responsibility of the person and/or parties in interest for maintaining the premises, nor affect other requirements of this Chapter regarding time for challenging any decisions made or actions taken.

d. Oaths—Certification. The Hearing Officer or certified shorthand reporter shall administer the oath or affirmation.

e. Evidence Rules. Government Code of the State of California, Section 11513, as presently written, or hereinafter amended, shall apply to hearings conducted under this Chapter.

f. Rights of Parties. Each party may represent themselves, or be represented by anyone of their choice. Each party may appear at the hearing and offer evidence in this matter and cross examine witnesses.

g. Official Notice. In reaching a decision, official notice may be taken, either before or after submission of the case for decision, of any fact which may be judicially noticed by the courts of this state.

f. Inspection of Premises. The Hearing Officer may inspect the premises involved in the hearing prior to, during or after the hearing, provided that:

1. Notice of such inspection shall be given to the parties before the inspection is made;

2. The parties are given an opportunity to be present during the inspection;

3. The Hearing Officer shall state for the record during the hearing, or file a written statement after the hearing for inclusion in the hearing record, upon completion of the inspection, the material facts observed and the conclusion drawn therefrom; and

4. Each party then shall have a right to rebut or explain the matters so stated by the Hearing Officer either for the record during the hearing or by filing a written statement after the hearing for inclusion in the hearing record.

g. Burden of Proof. The burden of proof in hearings held pursuant to this Chapter shall be as follows:

1. In the case of any notice or order, the Administrator shall bear the burden of proof, by a preponderance of evidence, to show that a violation of this Chapter has occurred.

2. In the case of a notice of administrative civil penalty, the Administrator shall bear the burden of proof, by a preponderance of evidence, to show that a penalty should be assessed.

3. In the case of an appeal regarding the occurrence of a violation, or of required corrective actions, the appellant shall bear the burden of proof, by clear and convincing evidence, to show cause for amending or rejecting all or part of the corrective actions or requirements imposed by the Administrator by a notice or order. (SCC 1295 § 16, 2005)

15.12.545 Form and Contents of Decision—Finality of Decision.

a. Following the hearing, the hearing officer shall issue an order in writing no later than thirty (30) days from the date of the hearing, unless the time is waived by the parties. The order shall contain findings of fact and rationale appropriate to the violation and result, and a resolution of the essential issues raised, including the following:
1. Confirmation or denial of the occurrence of violations of this Chapter that are alleged by the Administrator;
2. Confirmation or rejection of any administrative civil penalty sought by the Administrator, and establishment of the monetary amount of any administrative civil penalty to be enforced.
3. Confirmation, amendment, or rejection of required corrective actions related to compliance with this Chapter that are imposed by the Administrator, but only if those requirements are appealed by the person.
b. The Hearing Officer's order concerning any administrative civil penalty shall be guided by factors including, but not limited to the following: the danger or harm to public health and safety or the environment created by the violation; actions by the person to prevent, correct, or conceal the violation; negligence; intent; recidivism; and any economic benefit associated with non-compliance.
c. The Hearing Officer's order shall uphold required corrective actions if the person fails to show clear and convincing evidence that the required corrective actions are unreasonable or unnecessary for achieving or demonstrating ongoing compliance with this Chapter. The Hearing Officer's order may amend, or reject required corrective actions, provided that compliance with this Chapter will be achieved. The Hearing Officer's order shall not address required corrective actions unless the person files a request for hearing according to the procedures established in Section 15.12.540(b)(1)(A) of this Chapter.
d. The Hearing Officer's order shall inform the person of the following:
1. If the violation is not corrected, or if any required corrective actions are not met within the time(s) required, that the violation may be abated by the County, without further notice or consent of the person or any party in interest, in such manner as may be ordered by the Hearing Officer, and the expense thereof, including all costs of enforcement, incurred by the County as a result of the person's failure to comply, shall be recoverable by the County, and may be made a lien on the subject premises pursuant to the provisions of Government Code Section 25845. Additionally, upon entry of a second or subsequent order within a two-year period finding that the person is responsible for a condition that may be abated in accordance with this Chapter and Government Code Section 25845, or any successor provision thereto, except for conditions abated pursuant to Section 17980 of the Health and Safety Code, the Hearing Officer may order the person to pay treble the costs of abatement pursuant to Government Code Section 25845.5, or any successor provision thereto.
2. The time and manner by which a person may file a challenge to the Hearing Officer's order is governed by Government Code Section 53069.4, or any successor provision thereto.
3. Failure to comply with the Hearing Officer's order shall constitute a misdemeanor and is subject to additional enforcement action, including criminal penalties and additional civil and administrative penalties.
e. The order issued by the Hearing Officer pursuant to this Section shall be effective upon issuance. A copy of the order shall be delivered by the Hearing Officer in accordance with Section 15.12.530.
f. Preparation of a record of the administrative proceeding shall be governed by the provisions of Sacramento County Code, Chapter 1.06, as presently written or hereinafter amended.
g. The provisions of Sacramento County Code, Chapter 1.06 notwithstanding, any challenge to the order

of the Hearing Officer concerning any appeal or administrative civil penalty shall be governed by Government Code Section 53069.4, or any successor provision thereto. Service of the notice of appeal authorized by Government Code Section 53069.4 on the County shall be served upon the Clerk of the Board.
h. After any notice or order made pursuant to this Chapter shall have become final, no person to whom any such order is directed shall fail, neglect or refuse to obey such order. The Administrator may pursue, through County Counsel or the District Attorney, appropriate judicial action against any person who fails to comply with any such notice or order, including charging that person with a misdemeanor offense. (SCC 1295 § 17, 2005)

15.12.548 Procedures for Collection of Administrative Civil Penalty.

a. The administrative penalty shall be due and payable within thirty (30) days after the Hearing Officer's decision is issued. If the penalty is not timely paid, the County may pursue all reasonable and legal means in collecting those sums authorized and due.
b. All administrative civil penalties collected from actions brought pursuant to this Chapter shall be paid to the County department(s) enforcing this Chapter, and shall be deposited into a special account that shall be expended to fund the activities of the department to implement the applicable provisions of this Chapter. (SCC 1295 § 18, 2005)

15.12.549 Actions Not Prohibited.

This Chapter does not do any of the following:
a. Otherwise affect the authority of the Administrator to take any other action authorized by any other provision of law.
b. Restrict the power of a city attorney, district attorney, or the Attorney General to bring, in the name of the people of California, any criminal proceeding otherwise authorized by law.
c. Prevent the Administrator from cooperating with, or participating in, proceeding specified in subsection 15.12.549(b). (SCC 1295 § 19, 2005)

15.12.550 Nuisance and Abatement.

a. Any condition in violation of the provisions of this Chapter, including, but not limited to, the maintenance or use of any illicit connection or the occurrence of any prohibited discharge, is declared and deemed to be a public nuisance.
b. At the request of the Administrator, the County may seek a court order to enjoin or abate the nuisance, or both. Prior to seeking any court order to enjoin or abate a nuisance or threatened nuisance, the Administrator shall issue a cease and desist order to the owner and occupant, if any, of the Premises where the nuisance or threatened nuisance is occurring.
c. At the request of the Administrator, the County may seek an abatement warrant or other appropriate judicial authorization to enter the Premises where any nuisance or threatened nuisance is occurring and to abate the condition and restore the area.

d. In the event the nuisance constitutes an imminent danger to public safety or the environment, the Administrator may enter the premises from which the nuisance emanates, abate the nuisance and restore any property affected by the nuisance without prior notice to or consent from the owner or occupant thereof and without judicial warrant.
1. An imminent danger shall include, but is not limited to, exigent circumstances created by the dispersal of pollutants, where such pollutants present a significant and immediate threat to the public health and safety or the environment.
2. Notwithstanding the authority of the County to conduct an emergency abatement action, an administrative hearing pursuant to Section 15.12.540 shall follow the emergency abatement action. (SCC 1280 § 2 (part), 2004)

15.12.555 Enforcement Policy.

In the interest of achieving consistent enforcement of this Chapter, and in recognition of the need to have enforcement policy adapted to the structure and practices of various implementing agencies, each implementing agency that is delegated enforcement responsibility pursuant to this Chapter by the Administrator or the Board shall submit, to the Director of Water Resources, a draft written enforcement policy. Each such enforcement policy need only address those enforcement duties assigned to the implementing agency. Each policy shall address, if included in the delegated duties, guidelines for: the issuance of notices of violation, issuance of cease and desist orders, County stormwater permit administration, abatement, compliance deadlines, filing periods for administrative appeals, and imposition of administrative civil penalties. Enforcement policies shall take into consideration such factors as the nature, circumstances, extent, and gravity of the violation, and the violator’s past and present efforts to comply. Upon approval by the Director of Water Resources, the enforcement policy shall be deemed adopted by the implementing agency who shall use such policy to achieve consistent enforcement standards by said implementing agency. Any amendments to an enforcement policy must be submitted to the Director of Water Resources for approval. (SCC 1295 § 20, 2005: SCC 1280 § 2 (part), 2004)

15.12.560 Administrative Civil Penalties.

a. In addition to any other remedies provided by this Chapter, the person may be subject to an administrative civil penalty of up to five thousand dollars ($5,000.00) per day for each violation of this Chapter. In seeking imposition of an administrative civil penalty, the Administrator shall commence the procedure by issuing a notice of administrative civil penalty, which shall be served and proof of service shall be made in the same manner as provided in Section 15.12.530 of this Chapter.
b. The notice of administrative civil penalty shall state that the recipient has a right to a hearing as set forth in Section 15.12.540 of this Chapter.
c. Procedures concerning notice, conduct of the hearing, and service shall be as provided in Section 15.12.540 of this Chapter.
d. Subsections 15.12.560(a), (b), and (c) notwithstanding, the Administrator may establish a schedule of fines which, if adopted by the Board, and as it may be amended from time to time by the Board, shall become appended to this Chapter. The schedule of fines shall define specific violations for which an

administrative civil penalty shall apply, and shall assign a specific monetary penalty to be assessed for each violation included in the schedule of fines. When the Administrator has found that such violation has occurred and has issued an appropriate notice or order pursuant to this Chapter, the administrative civil penalty shall be enforceable without further action being required. Any person receiving such a schedule of fines penalty shall be entitled to appeal the Administrator's findings giving rise to such penalty pursuant to the procedure established in Section 15.12.540 of this Chapter. (SCC 1295 § 21, 2005: SCC 1280 § 2 (part), 2004)

15.12.570 Criminal Penalties.

a. Any person who violates any provision of this Chapter, undertakes to conceal any violation of this Chapter, continues any violation of this Chapter after notice thereof, fails to or fails to comply with a specified compliance requirement or a provision of a County stormwater permit, shall be guilty of a misdemeanor and upon conviction thereof be fined not more than one thousand dollars ($1,000.00) or imprisoned for not more than six months in the County Jail, or both.
b. Each day in which a violation occurs and each separate failure to comply with either a separate provision of this Chapter, a notice of violation, a cease and desist order, or failure to comply with specified compliance requirements or a provision of a County stormwater permit, shall constitute a separate violation of this Chapter punishable by fines or sentences in accordance herewith.
c. The Administrator may authorize specifically designated County employees to issue citations for misdemeanor violations of this Chapter pursuant to Penal Code Section 836.5. (SCC 1295 § 22, 2005: SCC 1280 § 2 (part), 2004)

15.12.580 Miscellaneous Enforcement Provisions.

a. Each and every remedy available for the enforcement of this Chapter shall be non-exclusive and it is within the discretion of the Administrator to seek cumulative remedies.
b. The Administrator may request the County to file a civil action in a court of competent jurisdiction seeking an injunction against any threatened or continuing non-compliance with the provisions of this Chapter. Any temporary, preliminary or permanent injunction issued pursuant to this subsection may include an order for reimbursement to the County of all costs incurred in enforcing this Chapter, including, but not limited to, costs of inspection, investigation and monitoring, the costs of abatement undertaken at the expense of the County, costs relating to the restoration of the environment and any other costs or expenses authorized by law.
c. The Administrator may request the County to file an action for civil damages in a court of competent jurisdiction seeking recovery of any of the following:
1. All costs incurred in the enforcement of this Chapter, including, but not limited to, costs relating to investigation, sampling, monitoring, inspection, administrative expenses, all other expenses authorized by law and consequential damages.
2. All costs incurred in mitigating harm to the environment or reducing the threat to human health.
3. Damages for irreparable harm to the environment.
d. The County is authorized to file actions for civil damages resulting from any trespass or nuisance occurring on public property or to the County storm drain system from any violation of this Chapter

where such violation has caused damage, contamination or harm to the environment, public property or the County storm drain system.
e. The remedies available to the County pursuant to the provisions of this Chapter shall not limit the right of the County or any law enforcement agency to seek any other legal or equitable remedy that may be available to it.
f. Each day in which a violation occurs and each separate failure to comply with specified compliance requirements or provision of a County stormwater permit, a separate provision of this Chapter, an Administrative enforcement order, or a cease and desist order shall constitute a separate violation of this Chapter punishable by civil, criminal and administrative penalties in accordance with this Chapter. (SCC 1295 § 23, 2005: SCC 1280 § 2 (part), 2004)

Article 6 Recovery of Cost Abatement

15.12.600 Costs of Abatement—Confirmation.

a. When proceedings under this Chapter result in the correction of a violation of this Chapter or in a final determination that a violation exists subsequent to the date specified in any notice issued pursuant to the provisions of this Chapter, the costs of such proceedings incurred by the County may be assessed against the property. Such costs may include, but are not limited to, those incurred in inspecting property, publication, mailing and posting of notices, conducting hearings, processing appeals and pursuing any judicial action. It is the purpose of this section to allow the assessment against property of costs of proceedings if a violation is corrected in any manner.
b. The Administrator shall keep an account of the administrative and other costs of abatement, and shall submit to the Board for confirmation an itemized written report showing such costs and their proposed assessment to the respective properties. The report shall be filed with the Clerk of the Board not later than fifteen (15) calendar days in advance of the confirmation hearing required below.
c. Upon receipt of the report, the Clerk of the Board shall schedule a public hearing to receive protests and confirm the report. A statement of the proposed assessment and notice of the time, date and place of the hearing, together with reference to the report on file with the Clerk, shall be mailed to the owner or owners of each parcel of property proposed to be assessed shown on the last equalized assessment roll available on the date of mailing of the notice or any other address or addresses ascertained to be more accurate. Such notice shall be mailed not later than fifteen (15) calendar days in advance of the hearing. Notice of the time, date and place of the public hearing by the Board shall be published once in a newspaper of general circulation published with the County.
With respect to each property proposed to be assessed for which the name or the owner or owners is not shown on the last equalized assessment roll or no address for an owner is shown on the last equalized assessment roll, the notice shall show the name or names of the owner or owners, if such name or names are shown on the last equalized assessment roll, the assessor’s parcel number, the street address of the property, if the property has an address and the address is known to the Administrator, the name of the street or road upon which such property abuts, if the property abuts upon a street or road, the amount of the proposed assessment and reference to the report on file with the Clerk. Such publication shall be made not later than fifteen (15) calendar days in advance of the hearing.
d. At the time fixed for receiving and considering the report, the Board shall conduct a public hearing

and shall receive and consider any objections from members of the general public or property owners liable to be assessed for the abatement. Written protests or objections shall specify the date, hour and description of the subject property under hearing. The Board may continue the hearing and delegate to the Administrator or his designee the responsibility of hearing individual protests and submitting a recommendation with respect thereto; provided that the Board provides an opportunity for individual consideration of each project upon receipt of the recommendation by the Administrator. The Board may modify the report if it is deemed necessary. The Board shall then confirm the report by motion or resolution. (SCC 1280 § 2 (part), 2004)

15.12.610 Costs—Assessments.

a. If the costs as confirmed are not paid within thirty (30) days of the date of mailing of the notice or date of publication pursuant to Section 15.12.600 of this chapter, such costs shall be assessed against the parcel of land pursuant to Section 25845 of the Government Code, and shall be transmitted to the Tax Collector for collection and shall be subject to the same penalties and the same procedures and sale in case of delinquency as provided for ad valorem taxes.
b. If subsequent to the mailing of the notice of violation and prior to transmittal of the notice of unpaid costs to the Tax Collector for collection as set forth in subsection (a) of this section, the property subject to the notice of violation is sold, or title otherwise transferred to a bona fide purchaser, said costs shall be the responsibility of the owner of record as of the date said notice of violation was placed in the United States postal system or posted on the property.
c. In addition to assessing the unpaid costs as provided in subsection (a) of this section, the Tax Collector or his designated representative may pursue any remedy provided by law for collection of the unpaid costs. (SCC 1280 § 2 (part), 2004)

15.12.620 Treble Costs.

Pursuant to Government Code Section 25845.5, upon entry of a second or subsequent civil or criminal judgment within a two year period finding that an owner is responsible for a condition in violation of this Chapter that may be abated pursuant to Government Code Section 25845, a court may order the owner to pay treble the costs of abatement. (SCC 1280 § 2 (part), 2004)

15.12.630 Hearing of Protests.

Upon the day and hour fixed for the hearing, the Board shall hear and pass upon the report of the Administrator together with any such protests or objections. The Board may make such revision, correction or modification of the report or the charge as it may deem just; and in the event the Board is satisfied with correctness of the charge, the report of the Administrator (as submitted or as revised, corrected or modified) together with the charge, shall be confirmed or rejected. The decision of the Board on the report and the charge and on all objections or protests shall be final and conclusive. (SCC 1280 § 2 (part), 2004)

15.12.640 Assessment for Summary Abatement.

Where the charge to be made is the result of summary abatement pursuant to Section 15.12.550(d), the Board may determine whether or not the action to abate was proper, and may confirm the charge or not as it may deem proper. (SCC 1295 § 24, 2005: SCC 1280 § 2 (part), 2004)

15.12.650 Time for Contest of Assessment.

The validity of any assessment made under the provisions of this Chapter shall not be contested in any action or proceeding unless the same is commenced within thirty (30) days after the assessment is ordered to be placed upon the assessment roll as provided herein. (SCC 1280 § 2 (part), 2004)

15.12.660 Filing Copy of Report With County Auditor.

A certified copy of the assessment shall be filed with the County Auditor on or before August 1. The descriptions of the parcels reported shall be those used for the same parcels on the map books of the County Assessor for the current year. (SCC 1280 § 2 (part), 2004)

16.44.230 Request for Inspection.

16.44.240 Reports.

16.44.250 Cessation of Work.

16.44.260 Completion of Work.

16.44.270 Inspection.

16.44.280 Grounds for Suspension and Revocation.

16.44.290 Method of Suspension or Revocation.

16.44.300 Appeals.

16.44.310 Appeal Fee.

16.44.320 Appeal Hearings.

16.44.330 Actions on Appeals.

16.44.340 Notices.

16.44.350 Action Against and Release of Security.

16.44.360 Violations.

16.44.370 Laws Not Enforced.

16.44.010 Purpose.

It is the intent of the Board of Supervisors in enacting this chapter to minimize damage to surrounding properties and public rights-of-way, the degradation of the water quality of watercourses, and the disruption of natural or County authorized drainage flows caused by the activities of clearing and grubbing, grading, filling and excavating of land, and sediment and pollutant runoff from other construction related activities, and to comply with the provisions of the County's National Pollutant Discharge Elimination System (NPDES) Permit Number, CA0082597, issued by the California Regional Water Quality Control Board (Regional Board)
These goals will be achieved by establishing administrative procedures, minimum standards of review, and implementation and enforcement procedures for controlling erosion, sedimentation and other pollutant runoff, including construction debris and hazardous substances used on construction sites, and the disruption of existing drainage and related environmental damage caused by the aforementioned activities. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.020 Definitions.

As used in this chapter, the following words and phrases shall have the meanings given in this section:
1. "Administrator" means the Administrator of the Public Works Agency of Sacramento County or his or her designated representative(s).
2. "Applicant" means any person who submits an application for a permit pursuant to this chapter.
3. "Civil engineer" means a professional engineer in the branch of civil engineering holding a valid certificate of registration issued by the State of California.
4. "Clearing and grubbing" means moving or removing by manual or mechanical means trees, vegetation and/or the top four inches or greater of soil.
5. "Compaction" means the act of compacting or consolidating soil and rock material to a specified density, and the resulting compacted state of the material.
6. "Construction site" means any land area on which the activity of clearing and grubbing, grading, excavating, or filling is occurring.
7. "County" is the County of Sacramento.
8. "County Specifications" means the County Improvement Standards, County Standard Construction Specifications and other standards included in applicable County ordinances, regulations and manuals, as amended from time to time.
9. "Engineering geology" means the application of geologic knowledge and principles in the investigation and evaluation of naturally occurring rock and soil for use in the design of civil works.
10. "Environmental Coordinator" is the County official designated by the County Executive to prepare and process environmental documents.
11. "Erosion" means the transport of the ground surface or soil as a result of the movement of wind or water.
12. "Erosion control measures" means seeding, mulching, vegetative buffer strips, sod, plastic covering,

burlap covering, watering and other measures which control the movement of the ground surface or soil.
13. “Grade” is the elevation of the ground surface as measured from a known vertical control.
14. “Grading” includes the act or result of digging, excavating, transporting, spreading, depositing, filling, compacting, settling, or shaping of land surfaces and slopes, and other operations performed by or controlled by human activity involving the physical movement of rock or soil.
15. “Hazardous Substances” means those materials listed in Title 40 of the Code of Federal Regulations (40 CFR) Part 117 and/or 40 CFR Part 302.
16. “National Pollutant Discharge Elimination System (NPDES)” means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under Sections 307, 402, 318, and 405 of the Clean Water Act.
17. “Permittee” means the applicant in whose name a valid permit is issued pursuant to this chapter and the applicant’s agents, employees and designated representative(s).
18. “Person” means any individual, corporation, partnership, association of any type, public agency or any other legal entity.
19. “Pollutants” is as defined in Title 40 CFR Part 122.
20. “Runoff” is surface runoff and drainage related to storm events, snow melt, street washwaters related to street cleaning or maintenance and other waters associated with the construction activity which are or may be introduced into the municipal separate storm sewer system.
21. “Sediment” means soil or earth material deposited by water.
22. “Sediment control measures” means dikes, sediment detention traps, sediment detention basins, filters, fences, barriers, swales, berms, drains, check dams, and other measures which control the deposit of soil or earth material.
23. “Site” means a parcel or parcels of real property owned by one or more than one person on which activity regulated by this chapter is occurring or is proposed to occur.
24. “Slope” is an inclined ground surface the inclination of which is expressed as a percent.
25. “Structure” means anything constructed or erected which requires location on the ground or attached to something having location on the ground.
26. “Watercourse” means a river, stream, creek, basin, lake, pond, waterway, or channel, natural or man-made, having a defined bed and banks. Whenever a watercourse consists of an ordinary channel, and in addition thereto, an overflow channel, the watercourse shall be deemed to include all property lying between the banks of the overflow channel.
27. “Wetlands” means those areas that are inundated or saturated by surface or ground water at a frequency sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions, such as swamps, bogs and marshes. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.030 Delegation.

Whenever in this chapter an authority or power is vested in or a duty is imposed upon an officer or official, an employee subordinate to the officer or official to whom an appropriate delegation has been made shall be entitled to exercise the power or authority and perform the duty. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.040 Administration.

Except as otherwise provided, the Administrator is responsible for administering this chapter and Grading and Erosion Control Permits, and is authorized from time to time to promulgate and enforce rules or regulations consistent with and necessary to implement the purposes, intent and express terms of this chapter.
Any rules or regulations promulgated by the Administrator, or amendments thereof, shall be filed with the Clerk of the Board of Supervisors. The Clerk shall cause said rules or regulations to be published in a newspaper of general circulation within ten (10) calendar days. No rules or regulations promulgated by the Administrator, or amendments thereof, shall be enforced or become effective until thirty (30) calendar days following the date on which the rules or regulations are published. Any person shall have fifteen (15) days after the date of publication in which to file an appeal in accordance with the provisions of Section 16.44.300. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.050 Permits Required.

Except as provided by Sections 16.44.060, 16.44.065 or 16.44.070, a Grading and Erosion Control Permit shall be required to (1) grade, fill, excavate, store or dispose of 350 cubic yards or more of soil or earthly material or (2) clear and grub 1 acre or greater of land within the unincorporated area of the County. A separate permit is required for work on each site unless sites are contiguous, have the same ownership, and are included in the approved plan. Any determination by the Administrator as to whether a permit is required may be appealed pursuant to the provisions of Section 16.44.300. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.060 Permits Not Required.

A. A Grading and Erosion Control Permit shall not be required to (1) grade, fill, excavate, store or dispose of less than three hundred fifty (350) cubic yards of soil or earthly material or (2) clear and grub less than 1 acre of land within the unincorporated area of the County or (3) for the grading, filling, excavating, storing, disposing, or clearing and grubbing for:
a. Swimming pools, basements, or footings of structures if authorized by a valid building permit;
b. Underground utilities;
c. Mining or quarry operations, if a use permit has been granted by the County;
d. Refuse disposal sites operated by a governmental agency;
e. The production of planted agricultural crops.
B. Notwithstanding the provisions of subsection (A) hereof exempting specified activities from the otherwise applicable permit requirements, the activities described in subsection (A) shall be subject to the standards and requirements of this chapter. Any building permit issued in connection with the activities described in subsection (A) or in connection with any building permit issued for a single family residence on an individual lot may be conditioned on compliance with the standards and requirements of this chapter. Any inspections required pursuant to this chapter or any other Chapter of Title 16 of the Sacramento County Code shall include a determination of compliance with the purpose of

this chapter. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.065 Exemptions.

A Grading and Erosion Control Permit shall not be required for, and the provisions of this chapter shall not apply to, grading, filling, excavating, storing, disposing, or clearing and grubbing for situations where, in the determination of the Administrator, there is a clear and imminent danger to life or property, or threat of loss of services for which there is an overriding public concern. The Administrator may, at the time of granting such exemption, impose conditions in accordance with Section 16.44.170, including but not limited to, the requirement for the posting of security. Such exemption must be requested from the Administrator and approved in writing prior to the commencement of any activity regulated by this chapter. (SCC 1002 § 3, 1995.)

16.44.070 Improvement Plans.

Where an improvement plan is being processed in conjunction with either an approved tentative, parcel, or final map; or a development plan is being processed in accordance with the provisions of Title 12 of this Code, such plan shall also be considered as a request to undertake those activities regulated by this chapter. Such plans shall be reviewed and approved, conditionally approved or denied in accordance with the standards and requirements set forth in this chapter and other applicable county specifications. For an approved tentative, parcel, or final map, or development plan; any submitted improvement plans shall include provisions to require compliance with the standards and requirements of this chapter. If an improvement plan is approved, then a Grading and Erosion Control Permit shall not be required. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.080 Application Contents.

The application for a Grading and Erosion Control Permit shall be filed in the Office of the Administrator, and on a form and submitted with such information as is prescribed by the Administrator, including the following:
A. The name, address and telephone number of the applicant and the applicant’s engineer;
B. The address and parcel number of the location for which the permit is sought;
C. A copy of all entitlements granted for the property by the County, including conditions of approval and the environmental documentation;
D. A copy of all required state and federal permits;
E. Plans conforming with the requirements of Section 16.44.090;
F. Specifications conforming with the requirements of Section 16.44.100, if the Administrator expressly requires this information;
G. Security conforming with the requirements of Section 16.44.110;
H. Right of Entry conforming with the requirements of Section 16.44.120;
I. Fees conforming with the requirements of Section 16.44.130;
J. Other information as may be required by the Administrator. (SCC 1002 § 3, 1995; SCC 0928 § 2,

1993.)

16.44.090 Plans.

Plans shall be prepared by a civil engineer in conformance with County Specifications and shall include the following:
A. A vicinity map indicating the site location and significant geographic features;
B. A site delineation map indicating boundary lines of the property and each lot or parcel into which the site is proposed to be divided;
C. The location of on-site and surrounding watercourses and wetlands, existing and proposed drainage systems, and drainage area boundaries and acreages. Additional hydrologic analysis shall be provided as required by the Administrator;
D. The location of existing and proposed roads and structures on the site, and on adjacent property;
E. Accurate contours at two foot intervals for slopes up to ten percent and five foot intervals for slopes over ten percent showing topography of existing ground and locations of existing vegetation, including all oak trees, all other trees over six inches in diameter measured at four and one-half feet above the ground, groves of trees, and natural features such as rock outcroppings. Spot elevations will be required where relatively flat conditions exist. The spot elevations or contour lines shall be extended off-site for a minimum distance of fifty (50) feet, or one hundred (100) feet in flat terrain;
F. Elevations, location, extent and slope of all proposed grading shown by contours, cross-sections or other means, and location of any disposal areas, fills or other special features to be included in the work;
G. A statement of the quantity of material to be excavated, the quantity of material to be filled, whether such excavation or fill is permanent or temporary, and the amount of such material to be imported to or exported from the site;
H. A delineation of the area to be cleared and grubbed;
I. A statement of the estimated starting date, grading completion date, and when site improvements will be completed;
J. The location, implementation schedule, and maintenance schedule of all erosion control measures and sediment control measures to be implemented or constructed prior to, during or after the proposed activity;
K. A description of measures designed to control dust and stabilize the construction site road and entrance;
L. A description of the location and methods of storage and disposal of construction materials;
M. Any additional plans required by the Administrator. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.100 Specifications.

When required by the Administrator, the following information shall be prepared and signed by a civil engineer, and submitted with the application for a Grading and Erosion Control Permit:
A. Preparation of natural ground to occur prior to placement of fill, including provisions for removal of organic or deleterious materials;
B. Quality control of native or imported fill material;
C. Degree of compaction;

D. Gradient of cut and fill slopes;
E. Geotechnical engineering or engineering geology reports used in the development of the above information. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.110 Security.

A. Prior to issuance of the permit, the applicant shall provide security in an amount estimated by the Administrator to be the cost for stabilizing the activity site if the site is abandoned or work is stopped during the performance of the activity described in the permit. The security shall be one of the following, subject to the approval of the Administrator;
1. Bond or bonds by one or more duly authorized corporate sureties.
2. A deposit, either with the County or a responsible escrow agent or trust company, at the option of the County, of money or negotiable bonds of the kind approved for securing deposits of public moneys.
3. An instrument of credit from an agency of the state, federal or local government when an agency of the state, federal, or local government provides at least twenty (20) percent of the financing for the project, or from one or more financial institutions subject to regulation by the state or federal government and pledging that the funds necessary are on deposit and guaranteed for payment, or a letter of credit by such financial institution.
B. The security shall be released to the permittee upon either:
1. Issuance of a certificate of completion, provided no administrative or legal action against such security has been commenced prior to that date and the permittee has complied with the provisions of Section 16.44.260; or
2. Voluntary relinquishment of the permit by the holder thereof to the County, provided no administrative or legal action against such security has been commenced prior to that date and the permittee has complied with the provisions of Section 16.44.250. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.120 Right of Entry.

Whenever any portion of the work requires entry onto adjacent property for any reason, the applicant shall obtain the written consent of the adjacent property owner or his authorized representative, and shall file a copy of said consent with the Administrator before a permit for such work may be issued. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.130 Permit Fees.

A fee shall be paid by the applicant to the County for plan checking and review, materials testing, site inspections, processing, issuance and other services performed by the Administrator in connection with the investigation of an application for, and administration of, a Grading and Erosion Control Permit. The fees for these services shall be in the amount of the actual costs incurred by the County based on the hourly rate of the personnel performing the services, including all overhead costs, and as determined by the Accounting and Fiscal Services Section of the Public Works Agency.

A minimum deposit of seven hundred and fifty dollars ($750) shall be paid by the applicant at the time of and with the filing of the application with the Administrator. In the event the accrued costs exceed the initial deposit, the County shall submit a monthly bill to the applicant for the amount owing as of the date on the bill. Interest of one and one-half percent (1-1/2%) per billing period (28 day cycle) compounded each billing period shall be added to the unpaid balance due to any amount which has not been paid in full within twenty-eight (28) days from the date on the bill.
The Administrator shall not perform any services for an applicant if an amount owing is not paid within twenty-eight (28) days, until such time that all amounts owing and interest thereon is paid in full. The balance of fees owing shall be paid in full prior to final inspection. In the event the actual costs do not exceed the minimum deposit amount, the County shall reimburse the applicant the difference between the deposit amount and the actual total charges. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.140 Environmental Review.

Grading and erosion control permits, and amendments thereto, are subject to the requirements of the California Environmental Quality Act (CEQA). The applicant shall furnish a copy of the application to the Environmental Coordinator for preparation and processing of the appropriate environmental documents. The Administrator is authorized to hold public hearings on Negative Declarations, Draft Environmental Impact Reports and Final Environmental Impact Reports prepared on applications for Grading and Erosion Control Permits, for the purposes of receiving comments from the public. The Administrator shall not approve a Grading and Erosion Control Permit prior to considering the applicable environmental document and complying with the requirements of CEQA and the County Procedures for Preparation and Processing of Environmental Documents. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.150 Application Review.

The Administrator shall review and approve, conditionally approve or deny Grading and Erosion Control Permit applications and improvement plans in accordance with the provisions of this chapter. Grading and Erosion Control Permit applications and improvement plans shall be issued or approved unless the Administrator finds in writing that:
A. The applicant has failed to provide sufficient or adequate plans, information or other data necessary to allow determinations respecting compliance with the provisions of this chapter or County Specifications;
B. The environmental review has not been completed, other provisions of this Code or of state law pertaining to environmental review have not been satisfied, or the activity will have significant adverse environmental impacts which cannot be substantially mitigated. Where the activity will have significant adverse impacts, the Administrator may approve the permit in accordance with the provisions of this chapter, Title 20, and the California Environmental Quality Act of 1970;
C. The proposed activity will violate provisions of this chapter, County Specifications, or state or federal laws, and such violation cannot be resolved by the imposition of conditions pursuant to Section 16.44.170;
D. The proposed activity will adversely affect surrounding properties and public rights-of-way, the water

quality of watercourses, and existing drainage. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.160 Contents of Permit.

The Grading and Erosion Control Permit shall include but not be limited to a complete description of the activity for which it is issued, the property for which it is issued, the date of issuance and the date of expiration, and a description of any and all conditions upon which the permit has been issued. The permit shall be kept at the site during the activity for which the permit was issued. A Grading and Erosion Control Permit authorizes the permittee to undertake only that activity described in the permit and only on the property for which the permit is issued. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.170 Conditions.

The Administrator may at the time of issuance of the Grading and Erosion Control Permit impose such conditions as are necessary to ensure compliance with this chapter, County Specifications, or state or federal laws. Such conditions shall be reasonably related to the public needs created by the proposed activity. Conditions to mitigate environmental impacts of the activity may also be imposed by the Administrator. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.180 Procedure for Imposition.

Any condition imposed pursuant to the provisions of Section 16.44.170 shall be embodied, together with the reasons therefor, in the permit and served upon the applicant or permittee. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.190 Term.

A Grading and Erosion Control Permit shall be effective on the date of issuance, and shall remain in force for one year, unless suspended or revoked by the Administrator, or voluntarily relinquished by the permittee. Before the expiration of a permit, a permittee may apply for an extension of time in which to complete the activity. One extension of not more than one year may be granted by the Administrator. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.200 Transferability.

A Grading and Erosion Control Permit shall not be transferable or assignable from one person to another, unless approved by the Administrator and the person to whom the permit is to be transferred agrees to comply with the requirements of the original permit and to any conditions imposed therein. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.210 Denial of Permit.

The Administrator shall deny an application for a Grading and Erosion Control Permit if any of the findings in Section 16.44.150 are made. Notice shall be served on the applicant, in writing with the reasons stated therefor, pursuant to the provisions of Section 16.44.340. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.220 Amendment of Permit.

Any proposed changes in the activity authorized by the permit shall be submitted to the Administrator for review. The permittee shall not undertake or allow activity to occur which does not conform with the plans or conditions of the original permit, unless approved by the Administrator. The Administrator shall review any proposed changes in the same manner and pursuant to the same standards as the original application. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.230 Request for Inspection.

Requests for inspection of any site subject to the provisions of this chapter shall be made to the Administrator at the following phases of activity. Such a request shall be made at least two full business days in advance of the desired day of inspection.
A. When the site has been cleared of vegetation and unapproved fill, and scarified, benched, or otherwise prepared and before any fill is placed; and the erosion control and sediment control measures to be implemented in this phase have been placed;
B. When approximate final elevations have been established; drainage terraces, swales and other drainage devices have been graded and are ready for paving; berms have been installed at the top of slopes; and the erosion control and sediment control measures to be implemented in this phase have been placed;
C. When work has been completed; slope planting established and irrigation systems installed, if required; and the erosion control and sediment control measures to be implemented in this phase have been placed.
The Administrator, upon inspection of the site, shall notify the person or permittee (1) that the phase of work inspected is approved, or (2) what deficiencies, corrections or other work needs to be completed before approval of that phase. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.240 Reports.

Notification to the Administrator shall be required within twenty-four (24) hours following the failure of authorized measures to prevent erosion or sediment from leaving the construction site; the deposit of debris or material on adjoining property or public rights-of-way, or; the interference with any existing watercourses or drainage facilities. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.250 Cessation of Work.

If activity is ceased on site for any reason for a period in excess of fifteen (15) calendar days, and before

the activity being conducted under the permit is completed, all necessary steps shall be taken to prevent damage through erosion or sedimentation to adjoining properties or to the public rights-of-way or to any natural or artificial drainage facilities or watercourses. The premises shall also be graded to blend into the adjacent terrain. The Administrator shall be notified as soon as possible, but no later than fifteen (15) calendar days, after the cessation of work. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.260 Completion of Work.

After completion of work in accordance with and conforming with an approved permit and delivery to the County of record plans and a grading plan as finally implemented, and payment of all fees, the Administrator shall issue a certificate of completion. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.270 Inspection.

The Administrator may enter and inspect property for which a Grading and Erosion Control Permit has been applied to determine applicability or compliance with this chapter and County Specifications. The Administrator may also inspect any and all property on which grading, filling, clearing and grubbing or excavating activities are occurring. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.280 Grounds for Suspension and Revocation.

A Grading and Erosion Control Permit may be suspended if:
A. The physical state of the property differs from the descriptions, plans or information furnished to the Administrator in the permit application;
B. The activity does not conform to the approved plans, grades, conditions or terms of the permit;
C. The activity is in violation of this chapter, County Specifications, or state or federal laws;
D. Any reports required to be submitted to the Administrator have not been submitted; or
E. Any of the information contained in reports submitted to the Administrator is in error. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.290 Method of Suspension or Revocation.

The Administrator may suspend or revoke a Grading and Erosion Control Permit by issuing a notice of suspension or revocation, stating the reasons therefor, and serving same, upon the permittee. Upon suspension or revocation of a permit, in accordance with the provisions of this Section, the permittee shall immediately cause all grading, filling, excavating, storing, disposing or clearing and grubbing to cease until written authorization is received from the Administrator to proceed with the activity.
The permittee shall have fifteen (15) calendar days after the date of service of the suspension or revocation in which to file an appeal in accordance with the provisions of Section 16.44.300. If such an appeal is filed, the suspension or revocation shall remain in force and be effective until a final decision on the appeal is issued by the Board of Supervisors.
If the Administrator suspends a permit, such permit may either be reinstated or revoked by the

Administrator, depending upon whether the permittee corrects the grounds stated for the suspension in the notice issued by the Administrator. If the permittee fails to remedy the grounds for suspension within a time period specified by the Administrator, but in no event later than sixty (60) calendar days, the Administrator shall revoke the permit. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.300 Appeals.

If the applicant for a Grading and Erosion Control Permit, the permittee, or other persons whose property rights may be affected is dissatisfied with any determination made by the Administrator, such person may appeal to the Board of Supervisors. Any such appeal shall be in writing, shall state the specific reasons therefor and grounds asserted for relief, and shall be filed with the Clerk of the Board of Supervisors not later than fifteen (15) calendar days after the date of the action being appealed. If an appeal is not filed within the time or in the manner prescribed above, the right to review of the action against which the complaint is made shall be deemed to have been waived. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.310 Appeal Fee.

The Board of Supervisors shall by resolution adopt and, from time to time, amend a fee for the filing of appeals. Such fee shall be for the sole purpose of defraying costs incurred for the administration of appeals. The fee for an appeal shall be paid at the time of and with the filing of an appeal. No appeal shall be deemed valid unless the prescribed fee has been paid. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.320 Appeal Hearings.

After the filing of an appeal within the time and in the manner prescribed by Section 16.44.300, the Board of Supervisors shall conduct a hearing for the purpose of determining whether the appeal should be granted. Written notice of the time, date and place of the hearing shall be served upon the Administrator and the appellant not later than ten (10) days preceding the date of the hearing. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.330 Actions on Appeals.

The Board of Supervisors shall review the entire proceeding or proceedings relating to the act or decision being appealed, de novo, and may make any order it deems just and equitable, including the granting of a Grading and Erosion Control Permit. Any hearing may be continued from time to time. At the conclusion of the hearing, the Board of Supervisors shall prepare a written decision which either grants or denies the appeal, and contains findings of fact and conclusions. The written decision, including a copy thereof, shall be filed with the Clerk of the Board of Supervisors. The Clerk shall serve such decision on the applicant or permittee and the Administrator. The decision of the Board of Supervisors shall become final upon the date of filing and service with respect to any appeal. (SCC 1002

§ 3, 1995; SCC 0928 § 2, 1993.)

16.44.340 Notices.

Any notice authorized or required by this chapter shall be deemed to have been filed, served and effective for all purposes on the date when it is personally delivered in writing to the party to whom it is directed or deposited in the United States mail, first class postage prepaid, and addressed to the party to whom it is directed.
Whenever a provision in this chapter requires a public hearing to be conducted, notice of the time, date, place and purpose of the hearing shall be published at least once not later than ten (10) calendar days in advance of the date of commencement of the hearing in a newspaper of general circulation which is published within the County. The same type of notice shall also be served on each permittee whose permit may be affected by the action taken at the conclusion of the hearing. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.350 Action Against and Release of Security.

The Administrator may commence action against the security provided by a permittee if:
A. The permittee ceases activities on site prior to completion of work without complying with the provisions of Section 16.44.250;
B. The permittee fails to comply with the terms of the permit;
C. The activity has caused or is threatening to cause damage or injury to persons, property or the environment.
The monies so obtained shall be used solely to finance remedial work undertaken by the County or a private contractor under contract to the County, and to reimburse the County for any administrative costs and expenses incurred in remedying the situation, including attorneys fees and legal costs incurred in any necessary action to obtain the security. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.360 Violations.

Except as otherwise specifically provided, pursuant to the provisions of Government Code Section 25132, violation of any of the provisions contained in this chapter shall constitute an infraction subject to a fine of one hundred ($100) dollars for each day or any portion thereof a violation continues.
Violation of any of the provisions of this chapter following notice to the permittee by the Administrator advising of the violation and ordering a cessation thereof, shall pursuant to the provisions of Section 1.01.190 contained in Title 1 of this Code, constitute a misdemeanor.
Violation of any of the provisions of this chapter may be remedied by injunction or other civil proceeding commenced in the name of the County pursuant to direction by the Board of Supervisors. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

16.44.370 Laws Not Enforced.

There are many ordinances and other laws applicable to activities permitted under this chapter which are not sought to be enforced under this permitting process. Such laws include, but are not limited to, building, floodplain management, and land development measures. The issuance of a Grading and Erosion Control Permit shall not be deemed to constitute a representation that the activity so permitted or the property upon which such activity is occurring complies with such other ordinances or other laws. Nor shall the existence of such an unrevoked permit be deemed to preclude any criminal or civil remedy for violation of such other ordinances or laws. The possession of a Grading and Erosion Control Permit shall not be deemed to relieve the holder of the requirement to apply for or obtain any other license or permit required by ordinance or statute. (SCC 1002 § 3, 1995; SCC 0928 § 2, 1993.)

Subject: ***County-wide Integrated Pest Management Policy***

Attached is a copy of the final County-wide Integrated Pest Management Policy (IPM), and the related documents entitled "IPM Coordinator Staffing" and "Department IPM Plans." Consistent with the County initiative to be a leader in sustainability for our community, we are establishing this policy for all County operations, facilities, and properties. In addition, the County is required by a Municipal Stormwater Permit, issued by the State of California, to develop and implement an IPM policy for County operations to minimize pesticide discharges to local water bodies.

This policy was developed using a collaborative and participatory process involving representatives from the implementing departments, as well as the County's Business Environmental Resource Center (BERC), and the County Agricultural Commissioner. The County departments primarily responsible for implementing the IPM Policy, are:

- Airports
- General Services
- Regional Parks and Open Space
- Transportation
- Waste Management and Recycling
- Water Resources

Due to their pest management activities, the implementing departments are required to establish department-specific plans. In addition, we request the implementing departments to work together to establish and fund an IPM Coordinator, as outlined in the IPM Coordinator Staffing document.

Other departments and their employees may occasionally need to conduct activities in support of this policy. For example, employees of any County department might receive information to help them recognize and report conditions in their workplace that are conducive to pest populations, or be expected to help prevent pests by disposing of food waste in designated pest-resistant receptacles. The primary purposes of this policy are to:

- Promote the health and safety of employees and citizens
- Protect the environment
- Enhance the sustainability of County operations
- Maintain effective pest management through responsible pesticide use practices and the application of IPM
- Reduce risks associated with pesticide use

If you have questions about this policy, please contact Dave Tamayo, Environmental Specialist IV, with the Department of Water Resources Stormwater Quality Program, at (916) 874-8024 or tamayod@saccounty.net.

We thank you for supporting a policy which ultimately will benefit the environment and quality of life for all County residents and employees.

County of Sacramento Integrated Pest Management Policy	
County IPM Policy	Pest management activities associated with County operations, and County-owned facilities and property shall be in accordance with the principles of Integrated Pest Management (IPM), State and Federal pesticide use laws and regulations, and the Municipal Stormwater Permit. These activities shall also be consistent with this policy's definition of IPM and with guidance established by the County IPM Coordinator.
Background	The County of Sacramento recognizes that: • its citizens and environment should be protected from exposure to pesticides • the County, as a public agency, should model environmentally responsible practices • IPM is a widely established and accepted method of achieving long term, effective pest control while reducing pesticide use and the risks associated with it • the County is subject to the terms of a state-issued Municipal Stormwater Permit that requires minimization of pesticide use and implementation of IPM in County operations and facility management that affect water quality discharged from its municipal separate stormwater sewer system
IPM Definition	For the purposes of its IPM policy, the County adopts the following University of California Statewide Integrated Pest Management (UCIPM) definition: IPM is an ecosystem-based strategy that focuses on long-term prevention of pests or their damage through a combination of techniques such as biological control, habitat manipulation, modification of cultural practices, and use of resistance varieties. Pesticides are used only after monitoring indicates they are needed according to established guidelines, and treatments are made with the goal of removing only target organism. Pest control materials are selected and applied in a manner that minimizes risks to human health, beneficial and non-target organisms, and the environment.
Policy purpose & intent	The purpose and intent of the County IPM Policy is to: • promote the health and safety of employees and citizens • protect the environment • enhance the sustainability of County operations • maintain effective pest management through responsible pesticide use practices and the application of IPM to • reduce risks associated with pesticide use, and • establish the need for an IPM Coordinator
Policy applicability	The County IPM Policy applies to all pest management activities (including those conducted outside areas served by the municipal separate stormwater sewer system, and those occurring in agricultural, rural, and open space areas which are exempt from the requirements of the Municipal Stormwater Permit) conducted by County staff or provided by vendors under contract to the County occurring: • as part of County operations, and/or • at County-owned property and facilities For the purposes of this policy "County operations" and "County-owned property and facilities" do not include conservation easements, utility easements, or other non-possessory interests held by a third party on County-owned property, nor property or facilities for which the County serves as a temporary "pass-through" owner of real property, pending transfer of the property to another party. For facilities where the County is a lessee, rather than the property owner, the County shall, when renewing a lease agreement or entering into a new one, include as a lease condition the requirement that the property owner shall control pests in a manner that meets the requirements of the County IPM policy. This policy does not apply to County-owned property under lease to a tenant at the time of policy adoption, until such time that the lease expires or is otherwise re-negotiated. In some cases, the IPM policy will also apply to other activities that have the potential to significantly affect pest populations—such as maintenance practices and facility designs.

Oversight: ***IPM Coordinator***	The County Executive authorizes the Agricultural Commissioner to designate an IPM Coordinator as a central resource to ensure that the County IPM policy is fully implemented and in compliance with applicable State and Federal laws, regulations, and permits. The duties of the IPM coordinator listed below are intended to serve all departments, and an equitable funding mechanism shall be established by the affected departments. • Provide guidance and oversight for Department IPM Plan content and development. • Establish contract language for pest management vendors • Periodically determine adequacy of Departmental IPM Plans and their implementation. • Develop a common record keeping system. • Gather data and prepare reports to demonstrate compliance with the Municipal Stormwater Permit. Additional duties specific to individual departments, such as detailed technical assistance, may be conducted by the IPM Coordinator under department specific funding mechanisms:
Policy Implementation:	Implementation of the IPM policy will primarily be the responsibility of individual departments. Departments that conduct or contract for pest management shall develop and establish department IPM Plans that comply with this policy and according to guidance established by County Executive or the IPM Coordinator.

County of Sacramento
Integrated Pest Management Policy

Implementation Document: Department IPM Plans

IPM Policy Implementation

In accordance with the County's IPM Policy, every County Department that engages in pest management activities (or contracts through a vendor for such) shall develop and implement a written Department IPM Plan.

This document provides direction regarding the establishment of Department IPM Plans. While originally adopted by the County Executive to facilitate and expedite initial development of Department IPM Plans, the requirements established herein may be amended from time to time by the County IPM Coordinator.

Department IPM Plan approval

Department IPM Plans, and changes to them, shall be submitted to, and are subject to approval by, the County IPM Coordinator. Each Department shall submit its Department IPM Plan for approval by the County IPM Coordinator no later than June 30, 2009.

Department IPM Plan goals

Each Department IPM Plan shall meet the following goals:

- support and allow the Department to effectively carry out its core mission
- maintain a safe and healthy environment for County employees, residents, contractors, and customers
- implement the principles of IPM
- contain sufficient detail to ensure adequate IPM implementation by Department staff
- provide for continuous improvement, including the investigation, and implementation where appropriate, of methods to reduce both pesticide risk and long term pesticide use through the use of cultural, mechanical, physical, and biological measures
- comply with direction from the County IPM Coordinator, and requirements of the County IPM Policy, the County's Municipal Stormwater Permit, and other applicable permits
- conform to the requirements of State and Federal pesticide use regulations

Required elements

The following elements are required in the Department IPM Plan:

- A statement of adoption of the Plan by the Department
- A copy of the County IPM Policy

- Designation of staff responsible for coordination of IPM activities on a department wide or site-by-site basis, as appropriate, and to provide a primary point of contact with the County IPM Coordinator
- Identification of staff positions responsible for and participating in pest management activities and decision making, including but not limited to pesticide applications
- Written pest tolerance thresholds
- Procedures for monitoring pest populations and conditions conducive to pest populations
- Description of site specific pest prevention measures
- Written site specific pest management prescriptions, including pest control advisor recommendations, for any pesticide applications made by the Department or its vendors
- Criteria for the selection and use of pesticides, including justification for the increased or continued use of any pesticides known or likely to cause local water quality impairments, as determined by the County Stormwater Program
- Record keeping procedures for pest management activities, including monitoring, decision making, and pesticide applications. This shall include provisions to collect and retain records for pest management activities conducted by contractors
- IPM contract requirements for vendors providing pest management services (if any) including pest control advisors, pesticide applicators, and structural pest control operators
- Written plan for providing and documenting staff training
- Written procedures for storage of pesticides
- Annual assessment of pest management alternatives
- Annual performance and effectiveness evaluation of the overall Department IPM Plan to be submitted to the County Stormwater Program

Departments that do not directly manage pests, but have operations or facilities with a significant potential to affect pest populations or pest management activities, may be required by the County IPM Coordinator to develop specified elements of an IPM Plan or to participate in and support the plan or portions of a Department IPM Plan established by another Department.

County of Sacramento
Integrated Pest Management Policy

Implementation Document: IPM Coordinator Staffing

IPM Policy

The County IPM policy recognizes the need to establish an IPM Coordinator position to ensure full compliance of the policy by providing oversight and technical assistance to affected departments.

Focus on initial setup

Most of the duties of the IPM Coordinator identified in the IPM policy pertain to the initial setup of components necessary for full implementation of the policy.

IPM Coordinator Staffing

The initial duties of the IPM Coordinator require a significant workload and level of focus that can not be absorbed by the Agricultural Commissioner, Water Resources, or other County departments. Because the IPM Coordinator activities will be focused on initial implementation tasks, and ongoing needs beyond that are uncertain, it is recommended that the County Agricultural Commissioner hire a contractor to fulfill this role initially. After completion of the initial tasks, which may take 1-2 years, the ongoing work load and staffing needs should be evaluated.

Funding of shared vs. department specific work

Many of the IPM Coordinator duties focus on tasks that are common to all the affected departments. In addition, maintaining compliance with the Stormwater Permit is the responsibility of departments that have activities subject to its requirements and provisions. It is recommended that the affected departments develop a mechanism to equitably share the costs for these tasks.

The IPM policy also recognizes that the IPM Coordinator may provide department specific services, such as detailed technical assistance in establishing or implementing a Department IPM plan. Such duties would be most appropriately funded by the individual department. At their discretion, individual departments would be free to obtain such technical assistance either from the IPM Coordinator, or from a separate contractor of their own choosing.

SECTION V - FISCAL YEAR (2005/06) SUMP INSPECTION, PRIORITIZATION, AND CLEANING 5

APPENDIX A - FISCAL YEAR (2005/06) SUMP INSPECTION, PRIORITIZATION, AND CLEANING

SECTION I - BACKGROUND

Program History

The County of Sacramento (County) regulates stormwater discharges from our municipal separate storm sewer system or MS4 system in accordance with the National Pollutant Discharge Elimination System (NPDES). The County's MS4 Permit was issued in 1990 under Phase I stormwater permitting, as a joint permit for the Cities of Sacramento, Folsom and Galt.

The current MS4 Permit was adopted on December 6, 2002 and expires on December 1, 2007 and the Cities of Citrus Heights, Elk Grove and Rancho Cordova have been added as co-permittees in the current MS4 Permit. Each co-permittee must document compliance with the MS4 Permit and the County currently provides limited drainage maintenance and stormwater quality services to Citrus Heights and Rancho Cordova. Therefore, any services provided by the County on behalf of these cities or within its own jurisdiction must be documented accordingly.

The MS4 Permit requires the County to develop and implement a stormwater management program with the goal of reducing the discharge of pollutants to the maximum extent practicable.

Permit Requirements

Provision C10e.ii of the MS4 Permit requires that procedures be developed for maintaining catch basins and sumps. The County's storm drain system is designed with drain inlets (no sumps) instead of catch basins (with sumps). Instead the system incorporates sumps in the bottom of storm drain manholes and at storm drain pump stations.

In order to meet MS4 permitting requirements, the County proposed a program for manhole sump and pump station sump maintenance in the July, 2003 Stormwater Quality Improvement Plan (SQIP). The 2003 SQIP program included the following:

- Prioritization of manhole and pump station sumps for cleaning based on accumulation of waste and presence or absence of downstream BMPs;
- A schedule of inspection and cleaning for removal of accumulated waste (e.g., sediment, trash, debris, and other pollutants) based on prioritization. At a minimum, cleaning of prioritized manhole and pump station sumps shall occur prior to the rainy season (Oct. 1);
- Record keeping of cleaning and overall quantity of waste removed;
- Proper disposal of waste removed pursuant to applicable laws; and
- Measures to eliminate waste discharges during storm drain system maintenance and cleaning activities.

Manhole Prioritization Criteria

The County will prioritize manhole sumps for cleaning based on accumulation of waste and the presence or absence of downstream BMPs. Initially, manhole sumps will be prioritized for cleaning based on the following criteria described in the July, 2003 SQIP, as follows:

- Is a manhole sump located immediately upstream or in the proximity of sensitive receiving waters? If yes, the sump is given a higher priority.
- Is a manhole sump located upstream of a regional storm water quality BMP (e.g., Water Quality detention basin)? If yes, the sump is given a lower priority, because sediment and other pollutants will be treated and/or removed by the downstream BMP.
- Are manhole sumps present in upstream or downstream manholes? If not, the sump is given a higher priority.
- Are adjacent pipes cleaned during regular maintenance program activities? (30-inch and larger diameter pipes are not cleaned by the regular maintenance program, since they are considered self- cleaning). If yes, the sump is given a lower priority.

In addition, storm drain manhole sumps that are upstream of storm drain pump station sumps and detention basins will be given a lower priority sump rating for the purposes of this program.

High priority manhole sumps will be inspected and where necessary cleaned annually prior to the rainy season (October 1). Sumps that are not considered high priority sumps in Citrus Heights, Rancho Cordova, and in the Unincorporated portion of the County will be cleaned during regular maintenance program activities. A system-wide cleaning currently takes approximately 10 years to complete. In addition, maintenance staff will be dispatched to clean inlets and sumps when debris, sediment, or trapped waste is reported.

In the future, the criteria listed above will be adjusted to address pollutant accumulation as data pertaining to the accumulation rate of sediment and debris is collected during manhole and pump station sump maintenance operations.

Storm Drain Pump Station Prioritization

Sumps on storm water pump stations are inspected annually for sediment and debris and are cleaned as necessary prior to the rainy season. All pump station sumps are considered high priority and will remain on the annual inspection and cleaning schedule in the foreseeable years.

SECTION II - PREVIOUS SUMP INSPECTION AND CLEANING EFFORTS

Storm Drain Manhole Inspection and Cleaning Efforts

In previous years the most downstream manhole in each of the storm drain systems was identified as the initial location for field inspections for each storm drain contributing to receiving waters. Field inspections included documenting if the storm drain manhole had a sump and measurements of the accumulation of sediment/debris and sump depth. If the most downstream manhole in the storm drain system did not have a sump, inspections proceeded to the next upstream manhole/s until a sump was reached. Upstream sump inspections also documented if the manhole had a sump and sump measurements.

Storm Drain Pump Station Sump Inspection

All storm drain pump station sumps are inspected on a yearly basis in the spring/early summer as part of a pump station preventative maintenance program. The inspection consists of inspecting the sump and removing the sediment or debris accumulated in the sump.

SECTION III - SUMP INSPECTION AND CLEANING PROCEDURES

Recordkeeping of Sump Inspections and Cleanings

Recordkeeping and reporting is a critical part of the Sump Cleaning Program to demonstrate compliance with the Stormwater Permit and to provide data for evaluating the effectiveness of the activities. Every attempt shall be made to quantify efforts in ways that relate to protection of water quality. For example, records of volume of waste removed from storm drain system sumps will be used to measure the County's ability to reduce the amount of such material discharged downstream to local creeks and rivers.

During storm drain manhole inspections and cleaning, recordkeeping includes recording the following:

1. Manhole number
2. Downstream water body
3. Outfall manhole (Y/N)

4. Manhole sump depth
5. Depth of accumulated sediment/debris in sump
6. Quantity of debris removed

Records are also kept of all inspections and cleanings performed on storm drain pump stations sumps. Pump station sump inspection recordkeeping includes:

1. Length, width, and depth of sump
2. Depth of accumulated sediment/debris in sump

Finally, manpower, equipment usage, and associated work performed by the County's regular maintenance program will be recorded and ultimately used to determine the magnitude of high priority manhole sumps that will be able to be cleaned in the current fiscal year.

Prioritized List of Inspections

A list of prioritized sumps will be compiled from each previous year's data. Each manhole on the prioritized list is to be inspected at least once during the following fiscal year. Several manholes may be inaccessible due to fenced backyards or other encroachments made by the public. Every practical effort should be made to inspect the manholes included on the prioritized sump list. However, when a manhole is not accessible the next available manhole upstream should be inspected in its place. If a manhole is skipped, notes should be made with regard to why the manhole was skipped and which manhole was inspected in its place.

Procedures for Storm Drain Sump Inspection

Each manhole inspected shall be inspected according to the following procedure:

1. Use a manhole pick to remove manhole the cover completely from manhole rim.
2. If the manhole has either a channelized bottom or does not have a sump, record the findings in the comments section and proceed to the next manhole.
3. If the manhole has a sump, the inspector is to record both the sump depth and the depth of accumulated debris in the sump.
4. After recording information from the manhole's interior the manhole rim should be cleaned of debris and the cover replaced.

In general, if a manhole sump is encountered there will be standing water in the sump. If the manhole is properly constructed the depth of the standing water should be approximately the same as the sump depth from the outlet invert when no debris is present.

If debris is present an initial reading should be noted as the depth to debris. A second reading should then be taken using a survey rod or other firm measurement device by forcing the rod through the debris to the manhole bottom. This second reading should be

recorded as the sump depth. The difference between the first and second measurement should then be recorded as the depth of debris in the manhole.

Procedures for Storm Drain Manhole Cleaning

In general sumps will be dewatered and cleaned using vactor-truck equipment. However, in areas that are not accessible to vactor trucks such as residential backyards and parkways, debris may be removed using hand tools. When material is removed from the manhole bottom the quantity of debris must be recorded by either of the following:

1. Measuring the total volume removed in cubic feet or
2. Measuring the average depth of removed debris and the interior footprint of the manhole then calculating the total debris removed in cubic feet.

   (i.e. $Volume = Depth * \pi * \left(\frac{Diameter\ of\ Manhole}{2} \right)^2$)

Procedures for Pump Station Sump Inspection and Cleaning

Pump station sumps are to be inspected and cleaned each year as part of the annual maintenance program. During the inspection and cleaning process, all debris that has accumulated within the pump station sump is to have its volume recorded and then be removed.

Due to the wide variation in size between pump station sumps a standard cleaning procedure has not been presented. In general, sumps will be cleaned with vactor trucks during their annual inspection.

SECTION IV - MONITORING AND EVALUATION OF SUMP MANHOLE CLEANING PROGRAM

Monitoring and evaluation activities required by the MS4 permit are an important aspect of the sump cleaning program. Periodic in-house evaluations will be conducted primarily through collection and analysis of records, site visits, and interviews with maintenance staff to assess effectiveness of the program. The goal is to continuously improve the cost-effectiveness and environmental benefits of the program. Ongoing monitoring and evaluation of the program assures that the County is properly adhering to and fulfilling permit compliance.

SECTION V - FISCAL YEAR (2005/06) SUMP INSPECTION, PRIORITIZATION, AND CLEANING

The updated 2005/06 sump inspection, prioritization, and cleaning program focuses on storm drain pump station sumps and manhole sumps on storm drain systems immediately outfalling to sensitive receiving waters of creeks and rivers in Sacramento County. Initial priority has been placed on drainage basins with outfalls to the American River, Arcade Creek, and Morrison Creek. Maintenance data collected from the inspection and cleaning program will be used to annually update and reassess each previous year's program.

Each successive fiscal year's program will attempt to refine inspections and cleaning efforts completed during the previous year's program. Storm drain systems immediately outfalling to receiving waters will be reinspected to determine if there has been appreciable sediment/debris accumulation since the completion of last year's inspection and cleaning program. In addition, the program will be expanded to include tributaries, waters affected by new construction, and contributing systems that were not previously identified. Appendix A includes a list of storm drain manholes identified for this year's program.

Appendix C – December 31, 2009 - MOU Extension

SECTION 1 - BACKGROUND

The County of Sacramento maintains approximately 350 miles of creeks and channels in the unincorporated portions of the County, and the Cities of Citrus Heights and Rancho Cordova. These 350 miles are composed of approximately 300 miles of unlined open creeks and channels, and 50 miles of concrete lined channels. For maintenance purposes, creeks and channels are broken up into six different categories that range from natural to various degrees of improved and unimproved channels (T1 through T5) according to the requirements of California Fish and Game. T1 channels are improved channels without riparian habitat. T2's are improved channels with significant riparian habitat. T3's are improved mitigated channels. T4's are unimproved channels without significant riparian habitat, and T5's are unimproved channel with significant riparian habitat. Natural streams (N) typically include significant riparian habitat and have been included into the natural streams program by resolution from the County Board of Supervisors.

The classification of each channel significantly affects the type of work, cleaning schedule, and equipment that can be used within the boundaries of each water course. For example concrete lined channel may be cleaned by hand or by mechanical tools year round. However, creeks that have been included in the natural steams program may only be cleaned by hand maintenance crews between June 1st and October 30th of each year.

SECTION 2 - PERMIT REQUIREMENTS

NPDES Permitting

The County of Sacramento (County) regulates stormwater discharges from our municipal separate storm drain system or MS4 system in accordance with the National Pollutant Discharge Elimination System (NPDES). The County's MS4 Permit was issued in 1990 under Phase I stormwater permitting, as a joint permit for the Cities of Sacramento, Folsom and Galt (Permit Number CAS082597).

The current MS4 Permit was adopted on December 6, 2002 and expires on December 1, 2007 and the Cities of Citrus Heights, Elk Grove and Rancho Cordova have been added as co-permittees in the current MS4 Permit. Each co-permittee must document compliance with the MS4 Permit and the County currently provides limited drainage maintenance and stormwater quality services to Citrus Heights and Rancho Cordova. Therefore, any services provided by the County on behalf of these cities or within its own jurisdiction must be documented accordingly. The County no longer provides and stormwater services to the City of Elk Grove.

As a requirement of the NPDES permit the County prepares an annual work plan for each fiscal year. The work plan requires that the County prepare and implement guidelines for operating and maintaining creeks and channels. The content of this guideline is intended to satisfy NPDES requirements.

United States Department of Fish and Game

Creek and channel maintenance shall occur in accordance with State of California, Department of Fish and Game (Fish and Game) requirements. Current Fish and Game requirements are outlined in the 2000-2004 Memorandum of Understanding between the

County of Sacramento and California Department of Fish and Game Regarding Routine Maintenance Activities in Unimproved and Improved Channels (MOU). This MOU was extended in October, 2004 through December, 2009. A copy of the MOU is provided in Appendix A.

SECTION 3 - CHANNEL TYPES

The following is a brief summary of the channel classification system used by the County. Exhibits detailing the various channel types encountered within the county can be found at the end of Appendix A.

Channel Type T1

Type T1 channels include improved creeks and channels without significant riparian habitat and in which significant man-made alterations have occurred to improve the passage of irrigation and/or flood flows, including straightening the channel or containing the flows within constructed banks and concrete-lined, rip rapped, or vegetation barren earth channels with modified banks. T1 channels may be mechanically cleaned or hand cleaned year round. All other creek and channel designations shall be cleaned and maintained in accordance with the scheduling restrictions listed below.

Channel Type T2

These waterways include improved creeks and channels with significant riparian habitat in which significant man-made alterations have occurred to improve the passage of irrigation and/or flood flows, including straightening the channel or containing the flows within earth lined, constructed banks. The riparian habitat consists of volunteer vegetative growth and does not contain mitigated riparian habitat.

Channel Type T3

T3 channels include improved mitigated channels in which significant man-made alterations have occurred to improve the passage of irrigation and/or flood flows, including straightening the channel or containing the flows within constructed banks and rip rapped, or earth channels with modified banks, and where significant efforts to mitigate the previous loss of riparian habitat are incorporated into the channel.

Channel Type T4

These channels include unimproved waterways without significant riparian habitat in which significant man-made alterations and/or improvements have not occurred and where significant riparian habitat does not exist.

Channel Type T5

These channels include unimproved waterways with significant riparian habitat in which significant man-made alterations and/or improvements have not occurred.

Designated Natural Stream

These channels exist as both improved and unimproved channels. The natural streams are those designated by the County as natural streams by resolution and typically contain significant riparian habitat. A designated natural stream shall also be defined, as appropriate,

by the previously listed types 1 through 5. These streams shall have the flow line cleaned only. A copy of the creeks and channels included in the Natural Stream Program is provided in Appendix B.

SECTION 4 - STANDARD PROTOCOL FOR OPERATING AND MAINATIANING CREEKS AND CHANNELS

The following is a brief summary of maintenance practices and restrictions for the creeks and channels maintained by the County. Detailed practices and procedures as required by the Fish and Game MOU are included in Appendix A.

Annual Creek and Channel Inspections

The County shall visually inspect all creeks and channels a minimum of once per year. The inspections will start in January and must be completed by the end of May in order to complete the cleaning schedule for the months that follow. Inspections are done by walking and/or driving the channels to check for erosion, vegetation, debris, illicit connections, and flow obstructions. There are three broad maintenance categories for work performed on creeks and channels. These three categories include mechanical cleaning, hand crew cleaning, and spraying.

Mechanical Cleaning

Mechanical cleaning involves the use of machinery to remove vegetation, debris, and sediment from drainage facilities. Examples of machinery that are commonly used by maintenance crews include bobcats, excavators, backhoes, and/or slope mowers. Mechanical cleaning shall be performed on non channels at the request of Drainage Operations and Maintenance Section, and on concrete lined channels annually.

Hand Crew Cleaning

Hand crew cleaning is the most prevalent type of cleaning performed on the creeks and channels. This type of cleaning involves the use of shovels, picks, weed eaters and chainsaws. This type of cleaning shall be done on designated creeks and channels once per year as determined by the annual inspection. This type of cleaning is used to remove debris from channels, re-establish flow lines, and create fire breaks. Currently, the City of Citrus Heights performs hand cleaning within its jurisdiction. The County does not provide either hand crew cleaning or spraying within the City of Citrus Heights jurisdiction.

Spraying

Spraying shall be conducted as outlined in the Standard Protocol for Application of Herbicides and Pesticides for the use at Creeks, Channels, and Detention Basins Maintained by County Drainage Maintenance, and the County of Sacramento Aquatic Pesticide Application Plan, July 2004.

The County uses the application of herbicides and pesticides to help limit growth of vegetation in drainage channels, detention basins, creeks and on levees. Application of herbicides and pesticides significantly reduces the need for hand and mechanical cleaning and helps to maintain the stormwater carrying capacity of County drainage facilities.

Glyphosate is the only type of aquatic pesticide applied by the County to drainage channels, detention basins, creeks, and levees maintained by the County. Glyphosate is a non-selective herbicide that kills vegetation that it comes in contact with.

Spraying is conducted within incorporated and unincorporated partitions of Sacramento County and the City of Rancho Cordova. The County does not currently provide spraying services for the City of Citrus Heights.

Authorized Maintenance Activities
The following are Fish and Game authorized maintenance activities. In the event that a maintenance activity does not meet authorization requirements, Fish and Game must be notified in writing 14 days prior to the commencement of work.

Debris or Obstruction Removal

- Scope - Removal of debris which noticeably reduce channel capacity or would result in accelerated erosion and/or cause pump damage.

- Limitations – Unless chipped or mulched, all cleared debris must be removed from the 100-year flood plain. Large diameter limbs and trees left for natural habitat must be staked or cabled in place to prevent flotation.

Silt, Sand, or Sediment Removal

- Scope - Removal/displacement of silt, sand, or sediment in the immediate vicinity of man-made facilities or structures which cause obstruction to flow.

- Limitations – Removal shall be limited to within 100 feet of drainage structures. Work shall be completed during low flow conditions. Turbidity shall be minimized by silt fences and/or bypass pumping.

Vegetation Control

- Scope - Control of aquatic vegetation to remove obstructions to flow from toe of slope to toe of slope of unimproved channels, as shown on Exhibit 7 of Appendix A. Control of weeds and grasses on maintenance roads within the banks, to conduct facility inspection, by mechanical means, hand labor, or chemical application. Control of the lower branches of woody growth, less than 4-inches DBH, growing on the lower stream banks from ground level to a distance of 6 feet above the ground level. Removal of non-native vegetation from top of bank to top of bank as shown on Exhibit 8 of Appendix A. Control of vegetation may be performed with the use of mechanical devices, chemicals, or hand labor.

- Limitations – Trees greater than 4-inches in diameter at breast height shall not be removed. Only herbicides registered with the California Department of Pesticide

Regulation shall be used. Wildlife shall be allowed to leave the maintenance are unharmed and shall not be flushed or removed from the site.

Repair of Previous Erosion Control Work

- Scope - Repair of failed rock, sacked concrete, or gabion section providing erosion control.

- Limitations – Maintenance activities shall be limited to within 20 feet of existing structures.

Minor Erosion Control Work

- Scope - Sloping, installation of rock, gabions, or other erosion control measures as shown in Exhibits 6 and 7 of Appendix A, to stabilize the eroded area.

- Limitations – Work shall be limited within 30-feet vertically from channel invert and no longer than 50-feet in length. Work shall be completed during low or no flow conditions. Vegetation removal shall be minimized. Channel bottom and immediate area shall be returned to its natural state at project completion including scarifying compacted channel bottom and replanting vegetation.

Overbank Maintenance

- Scope – Work performed outside of the channel bottom, side slopes, and top of bank. Overbank areas are typically within the floodplain but outside of the main floodway.

- Limitations – Maintenance activities within the overbank area of natural streams shall not be permitted without coordination with Fish and Game. No net loss of habitat shall be permitted.

Maintenance Schedule Limitations

The following is a list of scheduling limitations during which all work within a creek or channel must be performed. The limitations apply to all channel types other than T1 channels. In the event that schedule conflicts occur, the most restrictive limitation shall govern.

Mechanical Crews - June 1 to October 30

Hand Crews - June 1 to March 1

Spraying - March 1 to November 30

Giant Garter Snake Habitat - May 1 to October 1

APPENDIX A

CALIFORNIA FISH AND GAME MEMORANDUM OF UNDERSTANDING

MEMORANDUM OF UNDERSTANDING

between

COUNTY OF SACRAMENTO PUBLIC WORKS AGENCY

and

CALIFORNIA DEPARTMENT OF FISH AND GAME

regarding

ROUTINE MAINTENANCE ACTIVITIES
IN UNIMPROVED and IMPROVED CHANNELS

(2000 - 2004)

This Memorandum of Understanding (MOU) by and between the California Department of Fish and Game, hereinafter called the "Department", and the COUNTY OF SACRAMENTO PUBLIC WORKS AGENCY, hereinafter called the "Agency", is for the purpose of delineating and defining routine maintenance activities in improved channels and unimproved natural channels and shall not require further notice and agreement in compliance with Section 1601 of the Fish and Game Code.

WHEREAS, Section 1601 of the Fish and Game Code allows the Department to propose reasonable modifications to certain maintenance and construction projects as would allow for the protection and continuance of existing fish and wildlife resources that may be substantially adversely affected by that construction project; and

WHEREAS, with regard to any project that involves routine maintenance and operation of water supply, drainage, flood control, or waste treatment and disposal facilities, notice to, and agreement with, the Department is not required subsequent to the initial notification and agreement, unless the work as described in the agreement is substantially changed or conditions affecting fish and wildlife resources change, and the resources are adversely affected by the activity conducted under the agreement; and

WHEREAS, it is essential that the Agency perform routine maintenance activities within improved channels and unimproved natural channels to maintain the designed capacity of the channel(s), to protect the Agency’s investment, to prevent loss of life and property, and to promote efficient and wise use or disposal of water; and

WHEREAS, consistent with the policies of California Fish and Game Code Section 1600 et seq., the protection and conservation of the fish and wildlife resources of California are of utmost public interest, and fish and wildlife conservation is a proper responsibility of the State; and

WHEREAS, in order to avoid future conflicts, it is mutually beneficial to delineate and define limited natural stream maintenance and routine maintenance, to establish procedures to expedite maintenance activities, and to provide for the protection and continuance of the existing fish or wildlife resources during such maintenance activities; and

WHEREAS, nothing in this MOU shall constitute a waiver of any future or current Department claims to the use and maintenance of natural conditions under the public trust doctrine; and

WHEREAS, nothing in this MOU shall constitute a waiver of the Agency's claimed rights to maintain and operate the channel(s) solely from the flood control standpoint without a 1601 agreement; and

WHEREAS, this MOU is not intended to affect the Agency's rights under Fish and Game Section 1601 (f) to undertake emergency work necessary to protect life or property.

NOW THEREFORE, the Department and the Agency agree as follows:

I. DEFINITIONS

The following definitions shall govern this MOU:

(Type 1) Improved Channel without significant riparian habitat- An improved channel without significant riparian habitat is defined as a channel of a stream or river in which significant man-made alterations have occurred to improve the passage of irrigation and/or flood flows, including straightening the channel or containing the flows within constructed banks and concrete-lined, rip rapped, or vegetation barren earth channels with modified banks (including leveed systems). This type of channel lacks any significant riparian habitat. The waterway reaches listed in Exhibit 1 attached hereto include the exclusive list of improved channels as defined in the MOU.

(Type 2) Improved Channel with significant riparian habitat- An improved channel with significant riparian habitat is defined as a channel of a stream or river in which significant man-made alterations have occurred to improve the passage of irrigation and/or flood flows, including straightening the channel or containing the flows within earth lined, constructed banks (including leveed systems). The riparian habitat consists of volunteer vegetative growth and does not contain mitigated riparian habitat.

(Type 3) Improved Mitigated Channel- An improved mitigated channel is defined as the channel of a stream or river in which significant man-made alterations have occurred to improve the passage of irrigation and/or flood flows, including straightening the channel or containing the flows within constructed banks and rip rapped, or earth channels with modified banks (including leveed systems) and where significant efforts to mitigate the previous loss of riparian habitat are incorporated into the channel. The waterway reaches listed in Exhibit 1 attached hereto includes the exclusive list of improved mitigated channels as defined in the MOU.

(Type 4) Unimproved channel without significant riparian habitat- An unimproved channel without significant riparian habitat is defined as a channel of a stream or river in which significant man-made alterations and/or improvements have not occurred and where significant riparian habitat does not exist. Channels not listed in Exhibit 1 attached hereto are considered to be unimproved channels with significant riparian habitat.

(Type 5) Unimproved channel with significant riparian habitat- An unimproved channel with significant riparian habitat is defined as a channel of a stream or river in which significant man-made alterations and/or improvements have not occurred. This type of channel contains significant riparian habitat. The waterway reaches listed in Exhibit 1 attached hereto includes the exclusive list of unimproved channels as defined in the MOU.

Designated Natural Stream – These channels exist as both improved and unimproved channels. The natural streams are those designated by the County as natural streams by resolution and typically contain significant riparian habitat. A designated natural stream shall also be defined, as appropriate, by the previously listed types 1 through 5.

Channel banks, channel bottoms, low flow channels and other appurtenant features of channel Types 1 through 5 are defined by the illustrations shown on Exhibits 2 through 6.

Significant riparian habitat – Woody vegetation within the 100 year flood plain, such as willows, cottonwood trees, alders, oaks, and other native trees, shrubs, and bushes that provides habitat to birds, rodents, and other types of animals.

Maintenance activities – Limited and routine maintenance activities in natural streams and other channels are defined as the removal/displacement of sand, silt, sediment, debris, rubbish, woody or aquatic vegetation and other obstructions to flow; the control of weeds, grasses, and emergent vegetation; and the cleaning, clearing, repair, and replacement with in-kind or similar erosion control facilities and constructed channel improvements; all as authorized to maintain the structural integrity and capacity of the channels.

Diameter Breast Height (DBH) - Diameter of a tree trunk at a point measured 4 ½ feet above grade.

Overbank – Overbank areas are defined as the areas outside of the channel bottom, side slopes, and top of bank. Overbank areas are typically within the floodplain but outside of the main floodway. Special conditions are included in this document for maintenance work in the Overbank areas of Designated Natural Streams.

II. AUTHORIZED ACTIVITIES

The routine maintenance activities identified below, when performed on the channel(s) and work area(s) specifically specified in Exhibit 1 and in accordance with the procedures described below, shall not require further notice to, or agreement with, the Department. For unanticipated routine maintenance activities that are located outside the approved stream type location or outside the approved work period, the Agency, shall provide the Department written notice of such activities 14 days prior to commencement of the work (See Exhibit 11). The Department may require individual streambed alteration agreements for activities that are deemed not to be routine maintenance.

A. Debris or Obstruction Removal

Removal of debris, trash, rubbish, flood-deposited woody and herbaceous vegetation, fallen trees, dead trees which are in clear danger of falling in or across the channel, branches, and associated debris which noticeably reduces channel capacity, would result in accelerated erosion and/or cause pump damage.

Mitigation Measure: All cleared vegetation and debris shall be removed from the normal high water areas of the stream corridor and shall not be redeposited within the 100-year floodplain or the debris may be "chipped" and scattered as "mulch" at the project sites. Fallen trees and large tree limbs may be moved outside of and parallel to the main flow area of the stream. They shall be staked and cabled to the ground to prevent floatation and to provide biological habitat.

B. Silt, Sand, or Sediment Removal

Removal/displacement of silt, sand, or sediment in the immediate vicinity of man-made facilities or structures which cause obstruction to flow.

Mitigation Measure: In natural streams and unimproved channels, excavation of silt, sand or sediment shall not exceed 100 - feet linear from the structure without specific notice to the Department. Removal of silt, sand, sediment from improved channels and the forebay of sump pumping plants shall be performed to the extent necessary to ensure proper operation of the improved channels and sump pumping plant.

Mitigation Measure: Precautions to minimize turbidity/siltation shall be taken into account during silt, sand, and sediment removal activities. Silt, sand, and sediment removal operations shall be limited to periods when there is low or no stream flow.

Mitigation Measure: In natural streams, unimproved channels, and in improved mitigated channels, unless otherwise agreed, should stream flow exist, the stream flow should be diverted using gravity flow through temporary culverts/pipes or pumped around the work site with the use of hoses. Where appropriate, silt fences, screening, or other measures should be placed in the channels to reduce turbidity caused by the maintenance activity. Any temporary dam or other artificial obstruction constructed shall only be built from materials such as sandbags or clean gravel which will cause little or no siltation. When any dam or other artificial obstruction is being constructed, maintained, or placed in operation, sufficient water shall at all times be allowed to pass downstream to maintain aquatic life below the dam or other artificial obstruction.

Mitigation Measure: Where removal of accumulated sand, silt, sediment, and other obstructions to maintain channel capacity in a natural stream, unimproved channel, or improved mitigated channel exceed 100 feet, the Agency shall submit separate plans detailing the project. Channels should be cleared in such a manner that trees greater than four (4) inches DBH are avoided or are trimmed as is necessary to gain access. In channels where small trees are contiguous on both sides of the watercourse, thinning of trees may be authorized to permit access. Removal of all vegetation along long reaches of the stream bank shall be avoided. Unless agreed otherwise, any work area left barren of vegetation as a result of the maintenance activities shall be restored to its natural state by seeding, or other agreed upon means with native species of trees, shrubs, and grasses, within thirty (30) days or by October 30th of the year the activity occurred.

C. Vegetation Control

Control of aquatic and terrestrial vegetation may be performed with the use of mechanical devices, chemicals, or hand labor. The following activities are authorized: Control of aquatic vegetation, weeds, grasses, shrubs and woody growth to remove obstructions to flow in improved channels and in the channel bottom from toe of slope to toe of slope of unimproved channels, as shown on Exhibit 7. Control of weeds and grasses on maintenance roads within the banks, to conduct facility inspection, by mechanical means, hand labor, or chemical application. Control of the lower branches of woody growth, less than four (4) inches DBH, growing on the lower stream banks from ground level to a distance of 6 feet above the ground level. Where appropriate, removal of non-native

vegetation (bamboo, tree tobacco, castor bean, pampas grass, eucalyptus, acacia, etc.), including stump and root removal from top of bank to top of bank, as shown on Exhibit 8.

Mitigation Measure: Trees greater than four (4) inches DBH shall not be removed without consultation with the Department.

Mitigation Measure: Cleared or trimmed vegetation may be "chipped" and scattered as "mulch" at the project sites or removed from the normal high water areas of the stream corridor.

Mitigation Measure: Only herbicides registered with the California Department of Pesticide Regulation shall be used. All herbicides shall be applied in accordance with regulations set by the California Department of Pesticide Regulation. All herbicides shall be used according to labeled instructions, (specifically the use of chemicals in the vicinity of State Waters). Labeled instructions for the herbicide used shall be made available to the Department upon request. Any non-plant aquatic life killed by chemical treatment shall be reported immediately to the DEPARTMENT.

Mitigation Measure: If any wildlife is encountered during the course of routine maintenance, said wildlife shall be allowed to leave the maintenance area unharmed, and shall be flushed, hazed, or herded in a safe direction away from the project site. No trees shall be disturbed that contain active bird nests until all eggs have hatched and young birds have fledged without prior consultation and approval of a Department representative.

D. Overbank Maintenance (Designated Natural Streams)

When it becomes necessary to work in the overbank area of any designated natural stream an amendment to the MOU shall be submitted by the Agency to the Department for review. All maintenance activities and mitigation measures shall be conducted in compliance with this Section II, "Authorized Activities," parts A, B, C, E and F and the following:

Mitigation Measure: To protect and maintain riparian wetland systems and to ensure a "No Net Loss" in wildlife value or acreage or wetlands and riparian habitat, the Agency shall have overbank maintenance activity in a designated natural stream monitored by a qualified biologist or botanist. The monitoring report shall identify and enumerate the vegetation and acreage impacted by the maintenance activity. The monitoring report, at a

minimum, shall include all areas within the low flow channel overbank areas. The Agency shall submit to the Department a revegetation plan which endeavors to ensure no net loss of riparian habitat or values. Upon approval of the Department, implementation of the revegetation plan shall begin as soon as is practical after completion of maintenance activity in the specified reaches of natural stream. To ensure a successful revegetation effort, all planted trees shall be monitored and maintained as necessary for five (5) years. Any recurring maintenance in mitigated overbank areas shall be considered routine and shall not require additional mitigation measures.

E. Repair of Previous Erosion Control Work

Repair of failed rock, sacked concrete, or gabion section. Maintenance activities shall be confined to the failed section and immediately adjacent areas (adjacent areas not to exceed twenty (20) feet) affected by the failure.

F. Minor Erosion Control Work

Sloping, installation of rock, gabions, or other erosion control measures as shown in Exhibits 6 and 7, from the toe of slope in the channel to a maximum of thirty (30) feet, measured vertically, above the channel invert to stabilize the eroded area. The length of the project work shall be less than fifty (50) feet.

Mitigation Measure: Project work shall be limited to periods when there is low or no stream flow. Unless otherwise agreed, should stream flow exist, the stream flow shall be diverted using gravity flow through temporary culverts/pipes or pumped around the work site with the use of hoses. Any temporary dam or other artificial obstruction constructed shall only be built from materials such as sandbags or clean gravel which will cause little or no siltation. When any dam or other artificial obstruction is being constructed, maintained, or placed in operation, sufficient water shall at all times be allowed to pass downstream to maintain aquatic life below the dam. Project work shall be performed in a manner that minimizes stream turbidity.

Mitigation Measure: Removal of vegetation shall be minimized. Trees greater than four (4) inches DBH shall not be removed without consultation with the Department. To the extent possible, the stream channel shall be returned to its natural state and without creating a possible future bank erosion problem. Erosion control shall be confined to specific locations listed in Exhibit 9 and 10.

Mitigation Measure: Upon project completion, the stream channel bottom shall be scarified from the work site to the equipment entrance, where activities have caused compaction of the streambed soil material. Unless agreed otherwise, any work area left barren of vegetation as a result of the maintenance activities shall be restored to its natural state by seeding, or other agreed upon means with native species of trees, shrubs, and grasses, within thirty (30) days or by October 30th of the year the activity occurred.

III. TIME AND MANNER OF MAINTENANCE ACTIVITIES

A. SCHEDULE LIMITS

Maintenance activities shall be performed at a time and in a manner so that the proposed maintenance activities minimize adverse impacts and provide for the protection and continuance of the fish and wildlife. Periods of implementation of maintenance activities within **unimproved channels with significant riparian habitat (Type 5), improved channels with significant riparian habitat (Type 2), improved mitigated channels (Type 3) and the flowing portion of unimproved channels without significant riparian habitat (Type 4) listed in Exhibit 1, and all other channels (regardless of type) not listed in Exhibit 1** are as follows:

Mechanical crews - June 1 to October 30 *

Hand crews - June 1 to March 1 * (regular cleaning)
Critical Locations Anytime debris build-up at bridges or culverts threatens to flood existing structures or facilities.

Giant Garter Snake Habitat - May 1 to October 1 *

* In the case of schedule conflicts the more restrictive limits shall apply.

Implementation of maintenance activities outside the wetted (flowing) portion of **unimproved channels without significant riparian habitat (Type 4) listed in Exhibit 1, and improved channels without significant riparian vegetation (Type 1) listed in Exhibit 1** are not restricted to a specific time period, unless otherwise agreed to in writing.

2. OTHER REQUIREMENTS

Giant Garter Snake

The following creeks maintained by the County of Sacramento Stormwater Utility have been identified by the Fish & Wildlife Service as critical habitat for the Giant Garter Snake:

Creek Name	Watershed Number
Laguna Creek (from Excelsior Rd to Sheldon Rd West of Bruceville Rd.)	16
Elk Grove Creek (from Bradshaw Rd to the confluence of Laguna Ck)	47

Adjoining creeks, channels, or tributaries within one mile of the above named creek reaches

Construction and Maintenance activities within the Giant Garter Snake habitat will be conducted only between May 1 and October 1 (see Section III A.) when snakes are more active and are expected to move to avoid danger. Should the Giant Garter Snake be encountered on these creeks or any other maintenance area they may be flushed or herded to adjacent areas where no work will occur for at least one month. Sightings shall be reported to the Fish and Wildlife Service at (916) 979-2725.

Channel bank vegetation removal shall be performed on one side of creek, channel, or ditch at a time to allow snakes to migrate to the opposite side. Dewatered habitat shall remain dry for a minimum of 15 consecutive days prior to excavating of filling.

Should it become necessary to work in the Giant Garter Snake habitat between October 2 and April 30 Stormwater Utility Crews will contact the Fish and Wildlife Service at (916) 979-2725.

Western Pond Turtle

The following creeks maintained by the County of Sacramento Stormwater Utility have been identified as habitat for the Western Pond Turtle:

Creek Name	Watershed Number
Dry Creek North	27
Linda Creek	30

Should the Western Pond Turtle be encountered on these creeks or any other maintenance area they shall not be harassed, flushed, herded, or otherwise disturbed and work shall be avoided within 200 feet of the Western Pond Turtle aquatic habitat.

Salmon and Steelhead

The following creeks maintained by the County of Sacramento Stormwater Utility have been identified as habitat for spawning Salmon and Steelhead:

Creek Name	Watershed Number
Dry Creek North	27
Linda Creek	30

Mitigation is accomplished through avoidance of work during spawning seasons and is met by adherence to the schedule and method limits in Section III A of this document.

Elderberry Plant (Habitat for Elderberry Longhorn Beetle)

Elderberry plants 1.0 inch in diameter at ground level shall be identified, marked, and protected to the drip line of the plant.

Oak Trees

Viable Oak Trees greater than 6.0 inch DBH shall be mitigated for at a minimum replacement ratio of 1:1 DBH. Viable oak trees greater than 6.0 inch DBH may be removed without mitigation if they are a safety hazard or cause damage to the hydraulic capacity of the channel.

Raptor and Songbird Nesting

Maintenance crews shall avoid working within the drip line of trees or shrubs that are, at the time of work, providing habitat for nesting raptors or songbirds.

Beaver Dams

The dams shall be removed under the methods and mitigation measures in Section IIA, "Debris and Obstruction Removal", of this MOU. Pond levelers, beaver relievers or other devices designed to discourage beaver dam construction and/or control the size of impoundments caused by beaver dams may be deployed.

IV. REPORTING REQUIREMENTS

The Agency shall provide to the Regional Manager, Region 2 of the Department, Exhibit 1 and a report describing the proposed maintenance activities and anticipated time schedule. Exhibit 1 and the report shall be submitted for review and approval prior to commencement of maintenance activities. The Department reserves the right to modify the stream definition types if maintenance activities at specific locations are viewed to adversely impact significant wildlife habitat. The written report shall include the following information: Typical problem descriptions, proposed solutions, equipment to be used, and the scheduled time periods of proposed activity. For unanticipated routine maintenance

activities that are located outside the approved stream type location or outside the approved work period, the Agency, shall provide the Department written notice of such activities 14 days prior to commencement of the work (See Exhibit 11). The Agency shall notify the Department of any modifications made to Exhibit 1 and the proposed maintenance activities (See Section VI below).

V. FEES

A fee of $5,180.00 for a five year period shall be paid to the Department prior to commencement of maintenance activities. This negotiated fee is based on the anticipated annual costs that will be reasonably incurred by the Department to administer and monitor the routine maintenance described in this MOU.

VI. AMENDMENT AND TERMINATION

This MOU cannot be amended or modified in any way except by a written agreement duly executed by the Department and the Agency. Any proposal for amendment or modifications must be delivered for review and approval by the Regional Manager or the official designated by the Regional Manager. If the Agency gives notice to and obtains the agreement of the Department to maintain additional specific facilities on improved or unimproved channels, any such additional facilities shall be added to Exhibit 1 by written amendment to this MOU, and all provisions of this MOU shall apply.

This MOU becomes effective on receipt of signed MOU and the fee agreed to in Section V. of this MOU. This MOU may be terminated by either party. Said termination shall become effective three (3) months after the party not initiating the termination has been duly notified in writing. This MOU expires on December 31, 2004. After the termination of this MOU the Agency may seek a new MOU. The Agency shall submit new exhibits when requesting a new MOU. The MOU processing fee is subject to change.

The Department reserves the right to suspend and/or revoke this MOU if the Department determines that the circumstances warrant. The circumstances that could require a reevaluation include, but are not limited to, the following: A) Failure to comply with the terms/conditions of this MOU. B) The information provided by the operator in support of the MOU is determined by the Department to be incomplete, or inaccurate. C) When new information becomes available to the Department representative(s) that was not known when preparing the original terms/conditions of this MOU. D) The project as described in the notification/agreement has changed, or conditions affecting fish and wildlife resources change.

VII. ENTIRE AGREEMENT

This MOU, along with the exhibits attached hereto, constitutes the entire Agreement and understanding between the Department and the Agency for routine maintenance activities. This MOU supersedes all prior and contemporaneous routine activity agreements, representation, understanding, if any, whether oral or written.

A copy of this MOU must be provided to the Contractor/work crew and must be in their possession at the work site. The MOU shall be presented to any Department of Fish & Game employee inspecting the stream maintenance activity.

VIII. OTHER ENVIRONMENTAL LAWS, STATUTES, OR REGULATIONS

This MOU does not constitute any form of authorization, permit, biological opinion, or compliance with the requirements and provisions of any other statue, regulation, requirement, or ordinance respecting the protection or conservation of fish and wildlife resources. Those statutes include, but are not limited to, the California Environmental Quality Act, the California Endangered Species Act, or the Federal Endangered Species Act.

Various work and activities encompassed by this MOU may require prior approval by the Corps of Engineers and/or may be governed by special conditions of the Department of the Army permit issued for the project. Nothing in this MOU shall be construed to alleviate the need to comply with the terms and conditions of the Department of the Army permit or obtain the Corps of Engineers authorization, where applicable.

APPENDIX B

NATURAL STREAMS ZONING CODE

235-160. Purpose

The Natural Streams (NS) Combining Zone as shown on the Comprehensive Zoning Plans shall be used to regulate property along the designated Natural Streams within the unincorporated area of the County to:

(a) Protect current and future occupants of land subject to flooding from the physical damage of flooding.

(b) Protect property from flood losses and prevent noncompatible development in floodprone areas.

(c) Protect and preserve the natural character and amenities of the Natural Streams.

(d) Minimize the placement of fill in floodplain areas of the Natural Streams.

(e) Protect and enhance the quality of water entering and flowing within the Natural Streams.

(f) Preserve the recreation potential of the Natural Streams.

235-161. Applicability of (NS) Combining Zone Designation

(a) The (NS) appearing after a zone abbreviation on the Comprehensive Zoning Plans indicates that the property so classified is subject to the provisions of this Article in addition to those of the underlying zone, except as otherwise specified in this Article.

(b) The (NS) Combining Zone may be applied to the unincorporated area of the County adjacent to or near the designated Natural Streams for which the Board determines that land development may have an impact on the preservation or enhancement of scenic, recreational, hydrological, or related values along or near the Natural Streams.

(c) For purposes of this Article the following streams or portions of streams are herein designated as Natural Streams:

(1) Arcade Creek - from Auburn Boulevard (near Winding Way) to Greenback Lane (east of Almond Avenue).

(2) Arcade Creek - South Branch - from the confluence with Arcade Creek to approximately 1100 feet east of Kenneth Avenue.

(3) Brooktree Creek - from the confluence with Arcade Creek to San Juan Avenue.

(4) Carmichael Creek - from Ancil Hoffman Park to Walnut Road.

(5) Chicken Ranch Slough - from Cottage Way to approximately 350 feet west of Garfield Avenue.

(6) Coyle Creek - from the confluence with Brooktree Creek to Madison Avenue.

(7) Cripple Creek - from the confluence with Arcade Creek to approximately 400 feet north of Central Avenue.

(8) Kohler Creek - from the confluence with Arcade Creek to Madison Avenue.

(9) Linda Creek - from the Placer County line near Old Auburn Road to the Placer County line near Mountain Avenue.

(10) Minnesota Creek - from the American River Parkway to approximately 550 feet north of Olive Street.

(11) San Juan Creek - from the confluence with Arcade Creek to Greenback Lane.

(12) Strong Ranch Slough - from Arden Way to approximately 800 feet east of Walnut Avenue.

(13) Verde Cruz Creek - from the confluence with Arcade Creek to approximately 1800 feet west of Dewey Drive.

Subject: **Request to Renew the Memorandum of Understanding (MOU) between the County of Sacramento Public Works Agency (Agency) and the California Department of Fish and Game (Department) regarding Routine Maintenance Activities in Unimproved and Improved Channels**

Dear Mr. Kenning:

The Department of Fish and Game (Department) has reviewed your October 8, 2004 request to renew the Memorandum of Understanding (MOU) between the County of Sacramento Public Works Agency (Agency) and the California Department of Fish and Game regarding Routine Maintenance Activities in Unimproved and Improved Channels in Sacramento County. The original MOU was signed by the Department on December 13, 2000 and is scheduled to expire on December 31, 2004.

The Department hereby agrees to renew the Memorandum of Understanding between the County of Sacramento Public Works Agency and the California Department of Fish and Game regarding Routine Maintenance Activities in Unimproved and Improved Channels. The MOU will be extended from December 31, 2004 to December 31, 2009. All the provisions and conditions in the original MOU remain in effect. The renewal becomes effective on receipt of the $5,180.00 routine maintenance fee and return of this letter.

Copy of this letter and a copy of the original MOU should be readily available to present to any Department of Fish & Game employee inspecting the stream maintenance activity.

If you have questions regarding this matter, please contact Mr. Gary Hobgood, Environmental Scientist at (916) 983-6920 or Mr. Dale Watkins, Lake and Streambed Alteration Agreement Program at (916) 358-2842.

Please sign the attached Renewal Signature Page indicating your acceptance of these terms and return to the Department of Fish and Game, Region 2, 1701 Nimbus Road, Suite A, Rancho Cordova, CA 95670.

4. Sacramento CA Urbanized Area w streets 16

1. INTRODUCTION

1.1. Purpose

The purpose and intent of this prioritized listing of street sweeping is a good faith effort to comply with National Pollutant Discharge Elimination System (NPDES) requirements as administered though the California Regional Water Quality Control Board, Central Valley Region. In partnership with other County of Sacramento Departments, Agencies, and Sections it is the intent of the Department of Transportation to comply with all applicable requirements to reduce to maximum extent practicable pollutants from or deposited within the County of Sacramento's road right of way.

1.2. Background

Through the Sacramento County Department of Water Resource the Department of Transportation has direction to create, publish, and implement a prioritized street sweeping program as directed in Section 10.f.ii. of the Tentative Order for Storm Water Discharges. The Tentative order states;

Beginning 1 July 2008 each Permittee shall perform street sweeping of curbed streets according to the following schedule:

Priority A: These streets and/or street segments shall be swept at least once per month.

Priority B: These streets and/or street segments shall be swept at least once every other month. Arterials and Bike Lanes

Priority C: The residential neighborhoods in the unincorporated areas of the county. These will be swept every other month or as needed.

1.3. Area of Coverage

The area defined in Section 10.f.ii is limited to curbed streets within the MS4 permit area. However, it is the intent of the County of Sacramento Department of Transportation to comply with and extend the same or similar street sweeping prioritization to as much of its service area as is possible. The Department of Transportation recognizes pollutants occur on all County road right of ways and as a good steward of the community wishes to preserve

and protect all receiving waters of the Sacramento County region. (See maps of coverage area)

2. STREET SWEEPING PRIORITIZATION

2.1. Criteria for Prioritization

The criteria for prioritization will consider those streets, which have the potential to generate the most pollutants as being top priority in frequency of street sweeping. As the Department of Transportation has no hard data in direct correlation to the quantities of materials actually removed, the following criteria will be followed until verifiable data can be obtained.

1.) Traffic volume.
2.) Location of adjacent business such as shopping centers and industrial plants
3.) Past requests for street sweeping
4.) Cumulative knowledge and recollection of DOT employees

2.2. Street Sweeping Prioritization Schedule

The following schedule is for Priority A and B streets using the above criteria. All other streets listed on the Department of Transportation scheduled sweeping lists are Priority C. All streets/roads will be swept when there is need such as hazardous material spills, gravel, and heavy soil, ECT. Additionally the Sacramento County Department of Transportation has commitments to sweep designated bike lanes on County road right of way bi-monthly. These bike lanes are located to the right edge of traveled lanes, which accumulate the most debris. The designated bike lane listing follows the prioritization schedule.

3. MONITORING PROGRAM EFFECTIVENESS

3.1. Database Analysis

The Sacramento County Department of Transportation is utilizing an electronic maintenance management system to track the quantities of sweeping materials removed from the road right of way by sweeper activities. After tracking an annual cycle of street sweeping, a comparison of the amount of debris removed and the areas being swept will be made to determine if sweeping frequency should be increased. With current equipment in inventory it is not possible to determine the volume or weight of debris removed from individual streets. Should the Department of Transportation discover areas with high quantities of materials being removed further investigation will be initiated using the same criteria as was used for initial prioritization.

1.) Traffic volume.
2.) Location of adjacent business such as shopping centers and industrial plants
3.) Past requests for street sweeping.
4.) Cumulative knowledge and recollection of DOT employees

3.2. Awareness and Communication

Through training of supervisors and sweeper operators the Sacramento County Department of Transportation will continuously evaluate the need for sweeping. Utilizing the linked team meetings, sweeping schedules may be adjusted at crew level to increase the frequency of sweeping streets known to have high potential to pollute the stormwater system.

County of Sacramento
Stormwater Detention Basins

B-01

Unionhouse Creek / East Stockton Boulevard

General Information

APN	115-0210-030
Owner	County of Sacramento
Facility Map #	292-167
Thomas Guide Page	338-C5
Construction Project	None
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	1.7
Side Slopes	2:1
Obstructions	Stockpile on south side
Pump Station Associated w/ Basin	None

Location

Detention basin #1 is located along the west side of E. Stockton Blvd. (north of Rangeview Lane).

Security

The security system for the detention basin includes a 6’ high chain-link fence bordering the perimeter with #2214 Masterlocks at the access gates. There are two points of entry into the site: one at the north end, and one at the south end. Both gates are accessible to vehicles via East Stockton Blvd.

Inspection and Maintenance
The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin Interior: Check for erosion at waterline, floating debris, and excess vegetation.
- Basin Inlets (2): Check for debris, cracks in the structure, and erosion.
- Basin Outlet (1): Check for debris in the trash/access rack, cracks in the structure, erosion, and assure the rack is properly locked/secured.

Routine Maintenance: Perform During Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the entire basin.

- Spraying: Spraying is permitted year-round in and around the detention basin. During this task, follow the *Standard Protocol for Application of Herbicides and Pesticides for Use at Creeks, Channels, and Detention Basins* to ensure proper usage of pesticides. Please follow the specific instructions as stated below:

  During the summer visit: "#2 – Treat vegetation that may obstruct proper flow of channel through basin. #1 for 50' flat area at gates on north and south ends of basin. Avoid allowing spray to drift into desirable vegetation. #1 includes aquatic and terrestrial application".

  During the fall visit: "#7 – to maintain 50' flat area at the gates on the north and south ends of the basin. Avoid application to the inside of the banks of drainage. Avoid allowing spray to drift into desirable vegetation."

  During the winter visit: "#12 – to maintain 50' flat area at the gates on the north and south ends of the basin. Avoid application to the inside of the banks of drainage. Avoid allowing spray to drift into desirable vegetation."

  The instructions may be altered due to current site or weather conditions. However, each change must be accompanied by a recommendation for use by a Pest Control Advisor.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

Owner	State of California; Sacramento & San Joaquin Drainage Districts
Facility Map #	334-164
Thomas Guide Page	298-B3
Construction Project	American River Levee Project
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	10.8
Side Slopes	3:1
Obstructions	None
Pump Station Associated w/ Basin	D-05 Howe Avenue

Location

Detention basin #3 is located on Ethan Way (south of Hurley Way).

Security

The basin is secured by a six-foot high chain-link fence. There are a total of four access points: two via Ethan Way, one via the American River bike trail, and one via the D-05 Howe Avenue pump station. The access point via the bike trail on the southwest side of the basin requires a Cyber key. The other three access points require a #3207 Masterlock key.

Inspection and Maintenance
The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin Interior: Check for large/floating debris and excess vegetation.
- Basin Inlets (2): Check for erosion and debris.
- Basin Outlets (2): Check for debris in the trash/access rack, cracks in the structure, erosion, and assure the rack is properly locked/secured.

Routine Maintenance: Perform During Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the west and north side flat areas along the fence.

- Spraying: Spraying is permitted year-round in and around the detention basin. During this task, follow the *Standard Protocol for Application of Herbicides and Pesticides for Use at Creeks, Channels, and Detention Basins* to ensure proper usage of pesticides. Please follow the specific instructions as stated below:

  During the fall visit: "#4 to maintain flat area to fence at the top of east and north sides of basin where no potential for erosion exists. Avoid allowing spray to drift into desirable vegetation."

  During the winter visit: "#7 for maintenance road, flat area to fence where no potential erosion exists. Avoid allowing spray to drift into desirable vegetation." In addition, assist with pump station sump cleaning.

  The instructions may be altered due to current site or weather conditions. However, each change must be accompanied by a recommendation for use by a Pest Control Advisor.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-04

Manlove

General Information

APN	075-0010-002
Owner	County of Sacramento
Facility Map #	328-179
Thomas Guide Page	298-H6
Construction Project	Flood Control Project
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	2.3
Side Slopes	3:1
Obstructions	None
Pump Station Associated w/ Basin	D-10 Manlove

Location

Detention basin #4 is located west of the intersection of Waterton Way and Twin Falls Drive.

Security

The basin is secured partly by a 6’ high chain-link fence and partly by 6’ high wooden fencing. There are two access points to the site and three to the basin itself. The two access points to the site are via Woodman Way and Waterton Way. The Woodman Way entrance is not accessible to vehicles, but the Waterton Way entrance is. To access the basin itself, there are two gates west of the D-10 Manlove pump station and one gate east of the station. Different keys are required for each gate: Masterlock key #2214 for the west traffic gate, a Cyber key for the west pedestrian gate, and a Masterlock key #A105 for the east traffic gate.

Inspection and Maintenance
The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation, sediment, and floating debris.
- Basin Interior: Check for large debris, and excess vegetation.
- Basin Inlet (1): Check for debris, cracks in the structure, and erosion.
- Basin Outlet (1): Check for debris in the trash rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.
- Flap Gate (1): Inspect to make sure no debris is blocking the flap gate, that it is free swinging, and is in good condition.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed twice per year during the spring and summer visits to the entire basin.

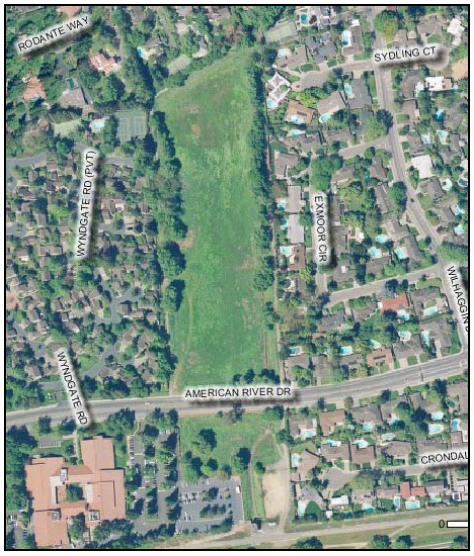
- Spraying: As per the *Aquatic Pesticides Application Plan*, spraying is only permitted between the months of April and December. During this task follow the *Standard Protocol for Application of Herbicides and Pesticides for the use at Creeks, Channels, and Detention Basins* to ensure proper usage of pesticides. Please follow the specific instructions as stated below:

  In the early part of the year: "#4 to maintain flat area to fence at top of basin. Avoid application to inside banks of drainage. Avoid allowing spray to drift into desirable vegetation."

  In the spring: "#1 for flat area to fence on east and west sides at top of basin. Avoid allowing spray to drift into desirable vegetation."

  In the fall: "#1 for flat area to fence on east and west sides at the top of the basin. Avoid allowing spray to drift into desirable vegetation."

  At the end of the year: "#7 to maintain flat area to fence at the top of the basin. Avoid application to inside banks of drainage. Avoid allowing spray to drift into desirable vegetation."



The instructions may be altered due to current site or weather conditions. However, each change must be accompanied by a recommendation for use by a Pest Control Advisor.

- Hand Cleaning: Hand cleaning will be performed per the annual Sheriff maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

General Information

APN	292-0180-021
Owner	Sacramento & San Joaquin Drainage Districts
Facility Map #	328-176, 328-179, 330-176, 330-179
Thomas Guide Page	298-G5
Construction Project	American River Levee Project
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	13
Side Slopes	Unknown
Obstructions	American River Drive divides the basin
Pump Station Associated w/ Basin	D-43 Wilhaggin

Location

Detention basin #5 is located on the north and south sides of American River Drive (east of Watt Avenue).

Security

Both the north and south portions of the basin are secured partly by 6’ high chain-link fencing and partly by 6’ high wooden fencing. There are a total of four access points: two access points for each portion. All four entrances are accessible via American River Drive: two on the east side and two on the west side of the street.

Both gates to the northern portion of the basin are accessible to vehicles and require a Masterlock key #2214. Both gates for the southern portion are accessible to vehicles. The east side gate requires a Masterlock key #A105, and the west side gate requires a Masterlock key #2214.

Inspection and Maintenance

The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin Interior: Check for large/floating debris and excess vegetation.
- Basin Low Flow Pipe System: Check for debris or sediment that might block flow or erosion.
- Basin Inlets (5): Check for debris, cracks in the structure, and erosion.
- Basin Outlets (2): Check for debris in the trash rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.
- Access Road: Check for erosion, loss of gravel, and vegetation.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the entire basin.

- Spraying: As per the *Aquatic Pesticides Application Plan*, spraying is only permitted between the months of April and December. During this task follow the *Standard Protocol for Application of Herbicides and Pesticides for Use at Creeks, Channels, and Detention Basins* to ensure proper usage of pesticides. Please follow the specific instructions stated below:

  Spray twice per year: "#2- Treat vegetation growing in bottom, cracks, and top edge of concrete. Also for spot treatment of service road, flat area at top of basin, and fence line. Avoid allowing spray to drift into desirable vegetation."

  The instructions may be altered due to current site or weather conditions. However, each change must be accompanied by a recommendation for use by a Pest Control Advisor.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-06

Silver Springs Ranch / Dierks Ranch

General Information

APN	123-0220-062
Owner	County of Sacramento
Facility Map #	290-200
Thomas Guide Page	339-G6
Construction Project	Dierks Ranch
Wet or Dry	Wet Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	5.0
Side Slopes	3:1
Obstructions	Three islands on south side
Pump Station Associated w/ Basin	None

Location

Detention basin #6 is located at the northeast corner of the intersection of Excelsior Road and Stallion Way.

Security

The security system for the basin consists of 6’ high wrought iron fencing and post and cable fencing. There are four points of entry to the basin that are all secured by cables. One is located on Stallion Way, another is at the end of Belgian Court, and two are on Steed Way. There are no County locks on the cables, but there are gaps in the post and cable fencing at these locations to allow for pedestrians to access the site.

Inspection and Maintenance
The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Basin Interior: Check for erosion at waterline, floating debris, and excess vegetation.
- Basin Inlets (3): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.
- Basin Outlets (3): Check for debris, cracks in the structure, and erosion.

Note: Per the Maintenance Agreement with the Silver Springs Ranch Homeowners Association: "The County's maintenance responsibility of the basin shall include the removal of bulrush, cattails, algae, and volunteer trees growing along the bank areas within the basin." The County is only responsible for maintaining the flow of drainage within the basin itself.

Routine Maintenance: Perform at Various Visits

- Mowing: No mowing occurs at this basin.

- Spraying: As per the *Aquatic Pesticides Application Plan*, spraying is only permitted between the months of April and December. During this task, follow the *Standard Protocol for Application of Herbicides and Pesticides for Use at Creeks, Channels, and Detention Basins* to ensure proper usage of pesticides. Please follow the specific instructions as stated below:

  During the summer visit: "treat vegetation encroaching into detention basin."

  The instructions may be altered due to current site or weather conditions. However, each change must be accompanied by a recommendation for use by a Pest Control Advisor.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning shall only be performed along the banks of the detention basin. If the drainage flow is blocked, then hand cleaning may be performed within the basin.

B-25

Antelope North Road

General Information

APN	203-0240-014
Owner	County of Sacramento Water District
Facility Map #	384-191
Thomas Guide Page	239-D5
Construction Project	East Antelope Legends
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	2.2
Side Slopes	3:1
Obstructions	None
Pump Station Associated w/ Basin	None

Location

Detention basin #25 is located on the east side of Antelope North Road (north of Great Valley Drive).

Security

Between the maintenance road surrounding the basin and Antelope North Road, the basin is secured by post and cable fencing. On the north side, the basin is secured by 6' high chain-link paneled fencing. On the south and east sides, the basin is bordered by the creek and temporary orange mesh fencing.

To access the basin site, there is one traffic gate on the west side. The gate is secured by a chain and Masterlock #2214. The basin itself is easily accessible by pedestrians.

Inspection and Maintenance

The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin Interior: Check for erosion, large/floating debris, and excess vegetation.
- Basin Inlets (4): Check for debris, cracks in the structure, erosion, and condition of stone rip-rap.
- Basin Outlets (1): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin. Only mow from the fencing to the water line.

- Spraying: As per the *Aquatic Pesticides Application Plan*, spraying is only permitted between the months of April and December. During this task follow the *Standard Protocol for Application of Herbicides and Pesticides for the use at Creeks, Channels, and Detention Basins* to ensure proper usage of pesticides. Please follow the specific instructions stated below:

  During the spring and summer visits: "#4 to maintain service road where there is no potential for erosion. Avoid allowing spray to drift into desirable vegetation. #2 treat only vegetation which may obstruct proper flow through low flow channel. Avoid allowing spray to drift into desirable vegetation."

  During the fall visit: "#2 treat only vegetation which may obstruct proper flow through low flow channel. Avoid allowing spray to drift into desirable vegetation."

  The instructions may be altered due to current site or weather conditions. However, each change must be accompanied by a recommendation for use by a Pest Control Advisor.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, replacing stone rip-rap to inlet and outlet structures as needed, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-38

North Metro Air Park

General Information

APN	201-1020-073
Owner	County of Sacramento
Facility Map #	374-125, 376-125
Thomas Guide Page	256-E3
Construction Project	Metro Air Park
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	23
Side Slopes	4:1
Obstructions	None
Pump Station Associated w/ Basin	D-49 Metro Air Park

Location

Detention basin #38 is located west of Bayou Way (north of detention basin #39 and the proposed Meister Way).

Security

The basin plans originally stated that post and cable fencing was to be constructed around the basin, but that note was deleted. The basin does not currently have any exterior fencing on site. There are two access ramps that lead to the interior of the basin, one on the north side and the other on the south side. The plans stated that a traffic gate should have been constructed on the north access ramp, but neither the north nor the south access ramp has a traffic gate.

Inspection and Maintenance

Current maintenance is performed by the developer of the Metro Air Park project. The County of Sacramento will begin maintaining the basin after a substantial amount of construction has been performed and the developer has stopped dewatering. When the County of Sacramento takes over maintenance of the basin, it is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine gates and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Basin Interior: Check for erosion, large/floating debris, and excess vegetation.
- Basin Inlets (3): Check for debris, cracks in the structure, and erosion.
- Basin Outlets (1): Check for debris, cracks in the structure, erosion, and condition of rip-rap.
- Low Flow System: Check inlets and outlets for clogging debris or excess sediment.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin.

- Spraying: Current environmental restrictions prohibit spraying.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from inlet and outlet structures, replacing stone rip-rap to inlet and outlet structures as needed, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-39

South Metro Air Park

General Information

APN	201-1020-067
Owner	County of Sacramento
Facility Map #	372-125, 374-125
Thomas Guide Page	256-E4
Construction Project	Metro Air Park
Wet or Dry	Wet Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	19
Side Slopes	4:1
Obstructions	Three interior islands
Pump Station Associated w/ Basin	D-49 Metro Air Park

Location

Detention basin #39 is located west of Bayou Way (south of detention basin #38 and the proposed Meister Way).

Security

The basin plans originally stated that post and cable fencing were to be installed around the basin, but that note was deleted. The basin does not currently have any exterior fencing on site. There are two access ramps that lead to the interior of the basin, one on the north side and the other on the south side. The south access ramp does not have a gate, but the north ramp has a traffic gate with a Cyber lock.

Inspection and Maintenance

Current maintenance is performed by the developer of the Metro Air Park project. The County of Sacramento will begin maintaining the basin after a substantial amount of construction has been performed and the developer has stopped dewatering. When the County of Sacramento does maintain the basin, it is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation, sediment, and erosion at waterline.
- Basin Interior: Check for erosion, large/floating debris, and excess vegetation.
- Basin Inlets (7): Check for debris, cracks in the structure, and erosion. Note: some inlets may be submerged.
- Basin Outlets (1): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin.

- Spraying: Current environmental restrictions prohibit spraying.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-78

Unionhouse Creek / Elk Grove Florin Road

General Information

APN	121-0030-050; 121-0030-051; 121-0030-056
Owner	County of Sacramento
Facility Map #	294-179
Thomas Guide Page	338-H4
Construction Project	None
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	5.0
Side Slopes	Unknown
Obstructions	Stockpiles on southeast and northwest sides
Pump Station Associated w/ Basin	None

Location

Detention basin #78 is located on the east side of Elk Grove Florin Road (south of Leland Avenue).

Security

To access the basin, there is one traffic gate located on the east side of Elk Grove Florin Road. There is no fencing surrounding the site. The lock on the traffic gate is a #3207 Masterlock.

Inspection and Maintenance

The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin Interior: Check for erosion, large/floating debris, and excess vegetation.
- Basin Inlets (1): Check the inlet weir for overgrown vegetation.
- Basin Outlets (1): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.
- Access Road: Check for overgrown vegetation and gravel.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin.

- Spraying: Spraying is not performed at the Unionhouse Creek / Elk Grove Florin Road detention basin.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-79

Strawberry Creek / East Stockton Blvd.

General Information

APN	115-0130-032
Owner	County of Sacramento
Facility Map #	288-167
Thomas Guide Page	338-C6
Construction Project	None
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	3.7
Side Slopes	1:1
Obstructions	100’ Easement dividing basins
Pump Station Associated w/ Basin	None

Location

Detention basin #79 is located on the west side of East Stockton Blvd. (north of the Calvine Road on-ramp to Highway 99).

Security

The basin is completely enclosed by a 6’ high chain-link fence, and has three access gates. One vehicle swing gate is located on the north end of the basin and is secured by a Masterlock #2214. The two gates on the south end include a rolling traffic gate with Masterlock #3207 and a pedestrian gate with Masterlock #2214. All gates are accessible via East Stockton Blvd.

Inspection and Maintenance

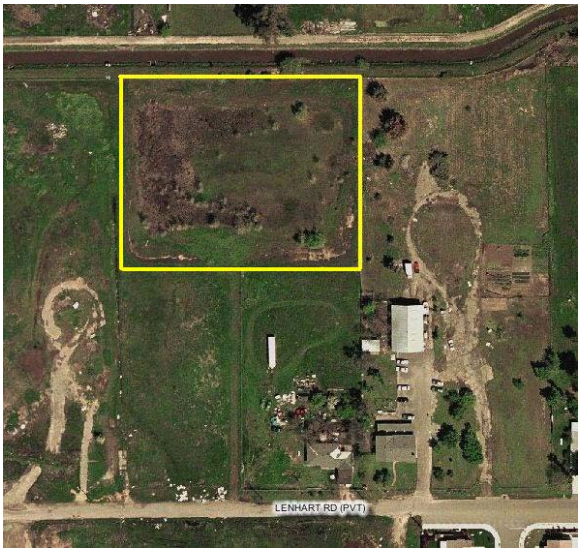
The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Basin Interior: Check for erosion, large/floating debris, and excess vegetation.
- Basin Inlet (1): Check overflow weir for cracks in the structure and vegetation.
- Basin Equalizer (2): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.
- Basin Outlets (2): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.
- Flap Gates (2): Inspect to make sure no debris is blocking the flap gates, that they are free swinging, and are in good condition.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin.



- Spraying: Spraying is not performed at the Strawberry Creek / East Stockton Blvd. detention basin.

- Hand Cleaning: Hand cleaning will be performed per the annual Sheriff Maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from inlet and outlet structures, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-81

Unionhouse Creek / Lenhart

General Information

APN	115-0210-034
Owner	County of Sacramento
Facility Map #	292-167
Thomas Guide Page	338-C5
Construction Project	None
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	1.9
Side Slopes	3:1
Obstructions	Multiple cottonwood trees
Pump Station Associated w/ Basin	None

Location

Detention basin #81 is located north of Lenhart Road (west of Roseview Way).

Security

The basin has a 6' high chain-link fence enclosing the site. There is one vehicle access gate with a #3207 Masterlock. The basin is accessible via Lenhart Road.

Inspection and Maintenance

The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing, access road, and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Basin Interior: Check for erosion, large/floating debris, and excess vegetation.
- Basin Outlets (1): Check for debris, cracks in the structure, and erosion.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin.

- Spraying: Spraying is not performed at the Lenhart / Unionhouse Creek detention basin.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from outlet structure, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-84

Bear Hollow

General Information

APN	072-0370-096
Owner	City of Rancho Cordova
Facility Map #	328-206 / 328-203
Thomas Guide Page	299-J5
Construction Project	Villages at Zinfandel
Wet or Dry	Wet Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	24
Side Slopes	3:1
Obstructions	None
Pump Station Associated w/ Basin	D-44 Bear Hollow

Location

Detention basin #84 is located south of the North Mather Drive and Spoto Drive intersection.

Security

There are three access points to the basin that are all vehicle accessible. The swinging gate that is located on the east side of the basin is secured by #2214 Masterlock. Another access point is located off of North Mather Drive and is secured by a piece of wire. The third access point is a swinging traffic gate on the south side of the D-44 Bear Hollow pump station, secured by a Cyber lock.

Inspection and Maintenance
The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin Interior: Check for erosion, large/floating debris, and excess vegetation.
- Basin Inlets (4): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.
- Basin Outlets (1): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin.

- Spraying: As per the *Aquatic Pesticides Application Plan*, spraying is only permitted between the months of April and December. During this task follow the *Standard Protocol for Application of Herbicides and Pesticides for the use at Creeks, Channels, and Detention Basins* to ensure proper usage of pesticides. Please follow the specific instructions stated below:

  #2- Treat only vegetation which may obstruct proper flow in center of basin. Use caution to avoid spray or drift to desirable vegetation.

  The instructions may be altered due to current site or weather conditions. However, each change must be accompanied by a recommendation for use by a Pest Control Advisor.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-88

Hackberry

General Information

APN	230-0860-005
Owner	Justin and Denise Massey
Facility Map #	358-191
Thomas Guide Page	279-C1
Construction Project	Hackberry Estates (1998)
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	1.0
Side Slopes	3:1
Obstructions	None
Pump Station Associated w/ Basin	None

Location

Detention Basin #88 is located in the backyard of 5731 Delbrook Lane.

Security

The basin is almost completely surrounded by a 6’ high wooden fence. There are some areas that are damaged and some that are completely torn down. The basin has two points of entry: one is a traffic gate that is partially blocked by vegetation and has no lock, and the other is a pedestrian gate with no lock. Both points are located on the west side of the house and are accessible from Delbrook Lane.

Maintenance

Hackberry detention basin is not on the maintenance schedule and is currently maintained by the homeowner. Since the parcel is not owned by the County of Sacramento and there is no easement, the County does not perform maintenance at this site.

B-89

Hazelwood

General Information

APN	271-0243-007 through 010
Owner	County of Sacramento
Facility Map #	344-182
Thomas Guide Page	278-J6
Construction Project	Hazelwood
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	1.7
Side Slopes	3:1
Obstructions	None
Pump Station Associated w/ Basin	None

Location

Detention basin #89 is the public Hazelwood Greens Park located south of the Wrendale Way and Hazelwood Avenue intersection.

Security

County employees can access the basin with a #2214 Masterlock key through the rolling traffic gate on the northwest side. The basin can also be accessed through the pedestrian gate on the northeast side, but only during normal hours of park operation. The hours of operation for the park are 7 AM to sunset.

The detention basin is secured by 6’ high wooden fencing on the west, east, and south sides. On the north side, the basin is secured by metal fencing.

Maintenance

The Hazelwood detention basin is also known as Hazelwood Greens Park. It is operated and mostly maintained by Mission Oaks Recreation and Park District. The Park District performs all of the landscape and waste management maintenance.

The County of Sacramento inspects and cleans the trash rack on an annual basis. During the rainy season, the trash rack may need to be cleaned more often if necessary.

B-90

Silver Legends

General Information

APN	122-0120-038
Owner	County of Sacramento
Facility Map #	286-194
Thomas Guide Page	339-D7
Construction Project	Silver Legends Unit 2
Wet or Dry	Wet Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	2.2
Side Slopes	Unknown
Special Features	None
Pump Station Associated w/ Basin	D-22 Silver Legends

Location

Detention basin #90 is located at the south end of Country Ranch Drive.

Security

The detention basin is enclosed by 6’ high chain-link fencing and 6’ high wooden fencing. There are two points of entry into the site: one at the south end of Country Ranch Drive, and another at the west end of Silver Legends Court. Both access points require a Cyber key.

Inspection and Maintenance

The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing, the access road, and the access ramp for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Basin Interior: Check for erosion at waterline, floating debris, and excess vegetation.
- Basin Inlets (2): Check the inlet pipe and inlet weir for debris, cracks in the structure, and erosion.
- Basin Outlets (1): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin.

- Spraying: Spraying is not performed at the Silver Legends detention basin.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from inlet and outlet structures, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-91

Laguna Creek / Polo Crosse

General Information

APN	122-0420-022
Owner	J & L Properties
Facility Map #	290-200
Thomas Guide Page	339-F6
Construction Project	Silver Springs
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	2.8
Side Slopes	3:1
Special Features	Concrete lined swale on east side
Pump Station Associated w/ Basin	None

Location

Detention basin #91 is located on the northeast corner of Palm Beach Drive and Polo Crosse Avenue.

Security

On both sides of the basin securing the culverts are 4’ high metal fencing held in place by two stone columns on either side. To transition to the post and cable fencing on the west side of the basin, there is 6-8 LF of 6’ high wrought iron fencing.

There is a minor security system in place that blocks vehicle traffic from driving into the basin. The north access ramp has a 6' high wrought iron gate with a #3207 Masterlock. The south access ramp has a cable with a #2214 Masterlock. The basin itself is easily accessible by pedestrians.

Maintenance

The Polo Crosse detention basin is owned and mostly maintained by J & L Properties. The owner is responsible for weed abatement for fire control purposes, and litter pick up. The County of Sacramento has a 60-foot wide drainage easement alongside the eastern boundary of the basin. It is the responsibility of the County of Sacramento to perform flood control maintenance on the easement.

B-92

Fox Creek

General Information

APN	206-0033-004
Owner	Gabriel Morales and Crystal Dubois
Facility Map #	376-155
Thomas Guide Page	257-H1
Construction Project	None
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	2.4
Side Slopes	Unknown
Obstructions	None
Pump Station Associated w/ Basin	None

Location

Detention basin #92 is located north of the Rio Linda Boulevard and Q Street intersection.

Security

The basin area is secured by a 6’ high chain-link fence around the majority of the perimeter with a 6’ high wrought iron fence, along the private properties adjacent to the preserve area, securing the remainder of the basin. The one access point is located on the east side of the basin via Front Street and the access gate is secured by a #2214 Masterlock.

Inspection and Maintenance

The Fox Creek detention basin is primarily maintained by the Wildlife Heritage Foundation. The County of Sacramento is responsible for maintaining the hydraulic capacity of the drainage channel through vegetation and/or sediment removal. This site is to be visited for inspection and maintenance twice per year to ensure proper operation.

Inspection: Perform Each Visit

- Site Conditions: Examine access gate and road for damage and overgrown vegetation.
- Channel Interior: Check for erosion at water line, large/floating debris, and excess vegetation.
- Channel Inlet (1): Located on the east end of the basin and adjacent to Front Street, a culvert structure allows water into the drainage corridor. Check for debris, cracks in the structure, erosion, and overgrown vegetation.
- Channel Outlets (2): The two outfalls are located on the west side of the basin adjacent to Rio Linda Boulevard. Check for debris, cracks in the structure, erosion, and overgrown vegetation.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing is not performed at the Fox Creek detention basin.

- Spraying: Spraying is not performed at the Fox Creek detention basin.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, replacing stone rip-rap to inlet and outlet structures as needed, removing dead vegetation from channel, and making any repairs as needed following inspection.

B-95

Robla Creek

General Information

APN	214-0330-072
Owner	County of Sacramento
Facility Map #	368-155
Thomas Guide Page	257-H4
Construction Project	Robla Creek Improvement Project
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Flood Control

Site Characteristics

Acreage	2.1
Side Slopes	Unknown
Special Features	None
Pump Station Associated w/ Basin	None

Location

Detention basin #95 is located north of G Street (east of Rio Linda Blvd).

Security

Post and cable fencing enclose the basin on the south and west sides. The east side is bordered Dry Creek, and the north side is bordered by houses. There are two access points on the south side of the basin, via G Street. Both access points consist of traffic gates: one with an American lock, and the other with a #A105 Masterlock.

Inspection and Maintenance

The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing, access road, and access ramp for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin Interior: Check for erosion, large/floating debris, and excess vegetation.
- Basin Inlets (1): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.
- Basin Outlet Channel (1): Check for flow line for excess debris and vegetation.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin.

- Spraying: Spraying is not performed at the Robla Creek detention basin.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, replacing stone rip-rap to inlet and outlet structures as needed, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-96

Ottomon Hills

General Information

APN	213-1030-018
Owner	County of Sacramento
Facility Map #	374-227
Thomas Guide Page	260-H2
Construction Project	Ottomon Hills
Wet or Dry	Dry Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	0.75
Side Slopes	3:1
Obstructions	None
Pump Station Associated w/ Basin	None

Location

Detention basin #96 is located on the southeast corner of Wiltshire Way and Main Avenue.

Security

Post and cable fencing enclose the basin on the north and west sides. The east side is bordered by 6' high wooden fencing and the south is bordered by Linda Creek. The only access point is a traffic gate on the north side of the basin via Wiltshire Way. The traffic gate is secured by a #3207 Masterlock.

Inspection and Maintenance
The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine fencing and access ramps for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin interior: Check for erosion, large/floating debris, and excess vegetation.
- Basin Inlets (1): Check for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured.
- Basin Outlets (3): Check the outlet pipes for debris in the trash/access rack, cracks in the structure, erosion, and make sure the rack is properly locked/secured. Check the overflow weir for cracks in the structure and erosion.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed during the spring and summer visits to the basin.

- Spraying: As per the *Aquatic Pesticides Application Plan*, spraying is only permitted between the months of April and December. During this task follow the *Standard Protocol for Application of Herbicides and Pesticides for the use at Creeks, Channels, and Detention Basins* to ensure proper usage of pesticides. Please follow the specific instructions stated below:

  #2- Treat only vegetation which may obstruct proper flow in center of basin. Use caution to avoid spray or drift to desirable vegetation.

  The instructions may be altered due to current site or weather conditions. However, each change must be accompanied by a recommendation for use by a Pest Control Advisor.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

  Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, replacing stone rip-rap to inlet and outlet structures as needed, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-98

Anatolia North

General Information

APN	067-0430-028
Owner	City of Rancho Cordova
Facility Map #	318-215
Thomas Guide Page	320-D2
Construction Project	Anatolia II
Wet or Dry	Wet Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	9.5
Side Slopes	3:1
Obstructions	Anatolia North Channel inhibits slope mowing on the south and east slopes of the detention basin.
Pump Station Associated w/ Basin	None

Location

Detention basin #98 is located at the southeast corner of the intersection of Sunrise Boulevard and Bosphorus Drive.

Security

The basin does not currently have any exterior fencing on site. There is one vehicle access point at the northeast corner of the basin off of Anatolia Drive. A locked pipe gate (Masterlock #2214) guards an access ramp into the adjacent Anatolia North Channel.

Inspection and Maintenance

The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin.

Inspection: Perform Each Visit

- Site Conditions: Examine pipe gate and access ramp for damage and overgrown vegetation.
- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin interior: Check for erosion at water line, large/floating debris, and excess vegetation. Woody vegetation may colonize basin. Basin was designed to accommodate low-medium density shrubby vegetation.
- Basin Inlets (3): A 30" diameter pipe outfalls at the northwest corner of the basin adjacent to Sunrise Boulevard. A 30" diameter pipe outfalls on the north side of the basin south of Niobe Circle. A low-flow 18" diameter pipe lies below the inlet weir at the northeast corner of the basin. Check for debris, cracks in structure, and erosion. Check access control racks for debris and ensure they are locked and secured.
- Inlet Weir (1): Located at the northwest corner of basin. Check riprap for erosion and displacement.
- Basin Outlets (1): Water leaves the basin through a 12" diameter pipe at the southwest corner of the basin and into the Anatolia North Channel. Check for debris, cracks in structure, and erosion.
-

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed twice per year during the spring and summer visits to the basin.

- Spraying: Spraying is not performed at the Anatolia North detention basin at this time.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, replacing stone rip-rap to inlet and outlet structures as needed, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

B-99

Anatolia South

General Information

APN	067-0090-037
Owner	Sun Ridge, LLC
Facility Map #	318-215, 318-218, 316-215
Thomas Guide Page	320-D3
Construction Project	Anatolia II
Wet or Dry	Wet Basin
Water Quality/Flood Control/Dual	Dual

Site Characteristics

Acreage	36.7
Side Slopes	3:1
Obstructions	Emergent marsh/ riparian wetland. No formal vehicular access locations exist.
Pump Station Associated w/ Basin	None

Location

Detention basin # 99 is along the east side of Sunrise Boulevard approximately 1000 feet south of the intersection of Sunrise Boulevard and Justinian Drive.

Security

This basin does not currently have any exterior fencing on site. No formal access points exist at this time. Access to the north side of the basin can be gained from the open area planned for Rancho Del Sol Park. The outlet structure can be accessed directly off of Sunrise Boulevard.

Inspection and Maintenance

The basin is to be visited for inspection and maintenance four times per year to ensure proper operation of the basin. However, maintenance is not allowed in the emergent marsh/ riparian wetland, the middle chamber of the detention basin, unless the proper permits are obtained from the appropriate regulatory agencies.

Inspection: Perform Each Visit

- Basin Slopes: Check for erosion, excess vegetation, debris, and animal burrows.
- Flow Line: Check for excess vegetation and sediment.
- Basin interior: Check for erosion at water line, large/floating debris, and excess vegetation. Woody vegetation may colonize basin. Basin was designed to accommodate low-medium density shrubby vegetation.
- Basin Inlets (2): A 30" diameter pipe outfalls on the north side of the basin south of Pyxis Circle. A 36" diameter pipe outfalls at the northwest corner of the basin adjacent to Sunrise Boulevard. Check for debris, cracks in the structure, and erosion. Check access control racks for debris and ensure they are locked and secured.
- Basin Outlets (1): Water leaves the basin through a single 42" diameter pipe at the southwest corner of the basin, adjacent to Sunrise Boulevard, and into the Folsom South Channel Overchute. Check for debris, cracks in structure, and erosion. Check trash rack for debris and ensure they are locked and secure.
- Spillway Weirs (2): Located on the south side of the basin and allows water to spill from the basin into the Anatolia Wetland Preserve. Check riprap for erosion and displacement.

Routine Maintenance: Perform at Various Visits

- Mowing: Mowing will be performed twice per year during the spring and summer visits to the basin.

- Spraying: Spraying is not performed at the Anatolia South detention basin.

- Hand Cleaning: Hand cleaning will be performed per the annual maintenance schedule. According to the *Memorandum of Understanding* with the Department of Fish & Game, regularly scheduled hand cleaning is only permitted between June 1st and March 1st. If during inspection it is found that debris or sediment is blocking flow and may cause flooding, then hand cleaning is permitted at any time.

Hand cleaning tasks include: Removing sediment and debris from low flow line, removing sediment and debris from inlet and outlet structures, replacing stone rip-rap to inlet and outlet structures as needed, removing dead vegetation from entire basin, and making any repairs as needed following inspection.

Future Detention Basins

1. Anatolia III (temporary)

6. North Douglas

North Highlands
Conservation Easement

APN	203-0070-082
Owner	Ken Whitney
Acreage	2.3
Facility Map Page	384-179
Thomas Guide Page	238-J5
Grantee, Preserve Manager	The Habitat Management Foundation, Ken Whitney

Purpose

The purpose of the North Highlands conservation easement is to preserve, protect, and establish maintenance of the wetland area surrounding creek segment 54R10 of the Antelope Creek watershed.

Preserve Manager (Grantee) Responsibilities

1. *Maintaining fencing and signage.*
2. *Coordinating trash removal.*
3. *Conducting thatch/exotic plant management when necessary with qualified personnel.*
4. *During the initial construction of created wetlands and the subsequent five year monitoring program, the Preserve Manager (Grantee) will review monitoring data, and recommend and coordinate with the Corps of Engineers for any remedial action.*
5. *General annual inspections of the Preserve.*
6. *Arrange for any corrective action necessary to ensure the performance of the habitat at the Preserve.*

The Preserve Manager may retain professional biologists, botanists, and other types of consultants to conduct inspections and monitoring activities at the Preserve.

Qualified Personnel Responsibilities (By Others)

1. *Drainage channel function and erosion monitoring tasks.*
2. *Evaluating the accumulation of dead vegetative matter (thatch) and recommending removal as needed.*
3. *Evaluating the presence of newly introduced exotic plants and recommend management, if needed.*
4. *Evaluating site conditions and recommending remedial action to the Preserve Manager (Grantee).*
5. *Provide corrective action as needed to ensure the success of the conservation area.*

Maintenance Activities and Guidelines

1. *Thatch Management*
   a. *Controlled Burns: Consult local fire authorities and notify Corps of Engineers if planned.*
   b. *Mowing: Notify Corps of Engineers prior to mowing and remove cut vegetation from site.*
2. *Flood Control: When necessary, remove vegetation, sediment, and trees from flow line using hand tools.*
3. *Non-Native Plant Species Management:*
   a. *Hand/Mechanical Removal: Removal using handheld equipment is the desired method of non-native plant species management. The Corps of Engineers does not need to be notified if small mechanical equipment is used.*
   b. *Biological Controls: Currently there is no biological control for Himalayan Blackberry, but there is for yellow star thistle. If a biological control is to be used, notify the Corps of Engineers and consult with the County Agricultural Commissioner for details.*
   c. *Use of Herbicides for Non-Native/Exotic Pest Plant Management: Any use of herbicide, pesticide, fungicide, or insecticide must be approved by the Corps of Engineers prior to application.*
4. *Tree Removal: Native tree removal is only permitted if it is diseased, a threat to other trees, or is a danger to public safety or private property. The Corps of Engineers is to be notified if any tree removal is planned.*
5. *Mosquitoes: If mosquito control is necessary, consult with the local Mosquito Vector Control District and send a plan of action to the Corps of Engineers for review and approval.*
6. *Trash Removal: The Preserve Manager will coordinate any trash removal as needed.*
7. *Fencing and Signage: The Preserve Manager is responsible for the maintenance and replacement of the gates, fencing, and signage.*

Prohibited Activities

The following activities are prohibited unless necessary to accomplish preservation, maintenance, repair, fire protection or enhancement as may be authorized by the Corps of Engineers.

1. *Access to the Preserve: There will be no public access to the Preserve*
2. *Vegetation Removal: No killing, removal, or alteration to native vegetation unless described above.*
3. *Burning and Dumping: No burning or dumping of rubbish, garbage, or any other waste unless for thatch management.*
4. *Disking: Disking is prohibited*
5. *Additional Roads, Trails, Benches, and Utility Lines: There will be no roads, trails, or benches in the Preserve area. Future construction of these structures must be approved by the Corps of Engineers.*
6. *Equipment or Fuel Storage: There will be no equipment or fuel storage within the Preserve.*
7. *Topography: Once adjacent development is complete in the area, there will be no leveling, grading, exploration, development, extraction of oil, gas, or minerals.*
8. *Pesticides or Chemical Agents: Other than the uses listed above, there will be no use of pesticides, fungicides, insecticides, or any other chemical agents.*
9. *Motor-Vehicle Use: No motorized vehicles shall be ridden, brought, used, or permitted on any portion of the Preserve except for the following: maintenance purposes, mosquito abatement, emergency, or law enforcement situations.*
10. *Construction: Once adjacent development is complete, no construction shall be allowed except for the above mentioned purposes.*
11. *Non-native plants: No non-native plants will be planted in the Preserve.*

Preserve Inspections and Reporting

General Inspection: A general inspection will be conducted once per year during July. During the inspection, each of the following will be evaluated:

- *Erosion*
- *Fire-Hazard Reduction*
- *Fencing and Signage*
- *Trash Accumulation*
- *Unauthorized Motor Vehicle Use*

Biological Inspection: A biological inspection will be conducted once per year during September or October. During the inspection, each of the following will be evaluated:

- *Habitat Function*
- *Thatch Accumulation*
- *Newly Introduced Non-Native Plant Species*
- *Preserve Function*

Annual Reporting Requirements: The monitoring biologist will create an annual report and submit it to the Corps of Engineers no later than December 31 of each year. The report will include:

- *A map of the Preserve*
- *Photos documenting the status of the Preserve*
- *A description of proposed activities and maintenance or management actions*
- *A description of actions for which the Corps of Engineers notification or approval was not needed but were carried out during the year*
- *Observations from the biological inspection*
- *Recommendations for altered management practices*

Barrett Ranch
Conservation Easement

APN	203-0120-087, 203-0120-088
Owner	Wildlife Heritage Foundation
Acreage	1.06
Facility Map Page	378-182
Thomas Guide Page	239-A7, 259-A1
Grantee, Preserve Manager	Wildlife Heritage Foundation

Purpose

The purpose of the Barrett Ranch conservation easement is to preserve, protect, and establish maintenance of the wetland area surrounding creek segment 55P17 of the Sierra Creek watershed.

Preserve Manager (Grantee) Responsibilities

1. *Maintaining fencing and signage.*
2. *Coordinating trash removal*
3. *Conducting thatch/invasive plant management when necessary with qualified personnel.*
4. *Reviewing monitoring data, and recommending and coordinating with the Corps of Engineers for any remedial action.*
5. *Maintaining a log for the Preserve that will contain a record of all activities, correspondence, and determinations regarding the Preserve.*
6. *Performing general inspections of the Preserve.*
7. *Coordinating an annual biological inspection by a qualified biologist.*
8. *Arranging for any corrective action necessary to ensure the performance of the habitat at the Preserve.*

The Preserve Manager may retain professional biologists, botanists and other types of consultants to conduct inspections and monitoring activities at the Preserve.

Qualified Personnel Responsibilities (By Others)

1. *Monitoring swale function and erosion.*
2. *Evaluating the accumulation of dead vegetative matter (thatch) and recommending removal as needed.*
3. *Evaluating the presence of newly introduced non-native plants and recommend management, if needed.*
4. *Conduction the biological inspection, collecting data on the Preserve and preparing reports.*
5. *Evaluating site conditions and recommending remedial action to the Preserve Manager (Grantee).*
6. *Assist in reviewing or planning restoration activities, use of the Preserve for education, or other tasks such as grant proposal.*

Maintenance Activities and Guidelines

1. *Thatch Management*
   a. *Controlled Burns: Consult local fire authorities and notify Corps of Engineers if planned.*
   b. *Mowing: Notify Corps of Engineers prior to mowing and remove cut vegetation from site.*
   c. *Grazing: Small grazers are permissible for thatch management. Submit a plan to the Corps of Engineers for review and approval.*
2. *Non-Native Plant Species Management:*
   a. *Hand/Mechanical Removal: Removal using handheld equipment is the desired method of non-native plant species management. The Corps of Engineers does not need to be notified if small mechanical equipment is used.*
   b. *Biological Controls: Currently there is no biological control for Himalayan Blackberry, but there is for yellow star thistle. If a biological control is to be used, notify the Corps of Engineers and consult with the County Agricultural Commissioner for details.*
   c. *Use of Herbicides for Non-Native/Exotic Pest Plant Management: Any use of herbicide, pesticide, fungicide, or insecticide must be approved by the Corps of Engineers prior to application.*
3. *Tree Removal: Native tree removal is only permitted if it is diseased, a threat to other trees, or is a danger to public safety or private property. The Corps of Engineers is to be notified if any tree removal is planned.*
4. *Mosquitoes: If mosquito control is necessary, consult with the local Mosquito Vector Control District and keep the Corps of Engineers informed through the annual report.*
5. *Beaver Management: If beaver dams become established, the Preserve Manager should consult with the Monitoring Biologist to decide whether to leave the beavers alone, install beaver baffling devices, breach the beaver dam, or remove the beavers. The Corps of Engineers will be notified through the annual report.*
6. *Trash Removal: The Preserve Manager will coordinate any trash removal as needed.*
7. *Fencing and Signage: The Preserve Manager is responsible for the maintenance and replacement of the gates, post-and-cable fencing, and signage.*
8. *Fire Breaks: The Preserve Manager can create a 10-foot minimum firebreak along the west side of the Preserve, although it is not required by the Corps of Engineers.*

Prohibited Activities

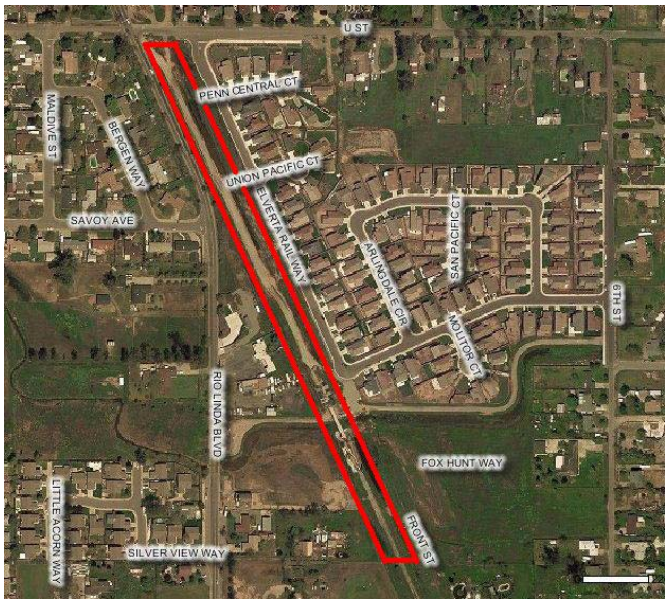
The following activities are prohibited unless necessary to accomplish preservation, maintenance, repair, fire protection or enhancement as may be authorized by the Corps of Engineers.

1. *Access to the Preserve: There will be no public access to the Preserve.*
2. *Vegetation Removal: No killing, removal, or alteration to native vegetation unless described above.*
3. *Burning and Dumping: No burning or dumping of rubbish, garbage, or any other waste unless for thatch management.*
4. *Disking: Disking is prohibited.*
5. *Additional Roads, trails, benched, and utility lines: There will be no roads, trails, or benches in the Preserve area. Future construction of these structures must be approved by the Corps of Engineers.*
6. *Equipment or fuel storage: There will be no equipment or fuel storage within the Preserve.*
7. *Topography: Once adjacent development is complete in the area, there will be no leveling, grading, exploration, development, extraction of oil, gas, or minerals.*
8. *Pesticides or Chemical Agents: Other than the uses listed above, there will be no use of pesticides, fungicides, insecticides, or any other chemical agents.*
9. *Motor-Vehicle Use: No motorized vehicles shall be ridden, brought, used, or permitted on any portion of the Preserve except for the following: maintenance purposes, mosquito abatement, emergency, or law enforcement situations.*
10. *Construction: Once adjacent development is complete, no construction shall be allowed except for the above mentioned purposes.*
11. *Non-native plants: No non-native plants will be planted in the Preserve.*

Preserve Inspections and Reporting

General Inspection: A general inspection will be conducted a minimum of twice per year, one during the summer and one during the winter. During the inspection, each of the following will be evaluated:

- *Erosion*
- *Fire-Hazard Reduction*
- *Fencing and Signage*
- *Trash Accumulation*
- *Unauthorized Motor Vehicle Use*



Biological Inspection: A biological inspection will be conducted twice per year: once during the spring, and once during the fall. The spring inspection is to assess the various habitats during the floristic season. The fall inspection is to assess upland habitats, problem areas, and success or restoration efforts. Although each inspection has a different focus, each of the following will be evaluated:

- *Habitat Function*
- *Thatch Accumulation*
- *Newly Introduced Non-Native Plant Species*
- *Preserve Function*

Annual Reporting Requirements: The monitoring biologist will create an annual report and submit it to the Corps of Engineers no later than December 31 of each year. The report will include:

- *A map of the Preserve*
- *Photos documenting the status of the Preserve*
- *A description of proposed activities and maintenance or management actions*
- *A description of actions for which the Corps of Engineers notification or approval was not needed but were carried out during the year*
- *Observations from the biological inspection*
- *Recommendations for altered management practices*

Fox Creek
Conservation Easement

Appendix B

COUNTY OF SACRAMENTO

Inter-Department Correspondence

MP mp
HN
KD KD FOR SIGNATURE

October 14, 2004

TO: Michael Peterson. Principal Civil Engineer
Department of Water Resources

FROM: Stephen Kenning, Senior Civil Engineer
Drainage Operations and Maintenance

SUBJECT: **MOU Between SacDOT and SacDWR**

Attached for your review are two identical copies of an MOU between SacDOT (Sacramento County Department of Transportation) and SacDWR (Sacramento County Department of Water Resources). Both copies have been reviewed by me, and have already been signed off by Tom Zlotkowski of SacDOT.

Please review the attached MOU and then forward to Keith DeVore for his signature. Send the original signed documents to Todd Peterson for filing and final distribution. Or Paul Brokken (5-7136) can pick-up the documents after they have been signed by Keith.

The purpose of the attached MOU is to allow SacDOT's landscape contractor to maintain SacDWR's stormwater detention basin located at on the west side of E. Stockton Boulevard, at the N/B Highway 99 off-ramp at Mack Road (across E. Stockton Boulevard from Costco). Piggybacking SacDOT's current contract will result in competitive pricing for the work, as well as minimizing the SacDWR staff time that would otherwise be needed to separately bid the work.

SacDWR's previous maintenance contract for this detention basin expired in July 2004. It was determined that SacDOT's current landscape contractor could perform the maintenance on this property for a lower annual fee than SacDWR paid for last year's contract landscape maintenance. Last year, SacDWR paid approximately $500 per month, while SacDOT's estimated monthly billing fee will be $378 per month. SacDOT will bill SacDWR annually. SacDOT has been utilizing this contractor for several years (California Landscape Associates, Inc.), and the contractor has been giving honest and reliable service.

Todd Peterson solicited a bid from MSA's Department of Parks and Recreation. Their bid for the landscape maintenance work at the subject stormwater detention was $1,200 per month.

Your prompt attention to this matter is appreciated.

TRANSPORTATION DEPT.
SEP 1 2004

MEMORANDUM OF UNDERSTANDING

REGARDING: **Landscape Maintenance Agreement For E. Stockton Blvd Stormwater Detention Basin**

BETWEEN: **Sacramento County Department of Transportation**

AND: **Sacramento County Department of Water Resources**

DATE: **September 7, 2004**

RECEIVED
SEP 23 2004
SAC-DEPARTMENT OF WATER RESOURCES
DRAINAGE OPERATIONS & MAINTENANCE

A. GENERAL:

1. DEFINITIONS:
   SacDOT: Sacramento County Department of Transportation
   SacDWR: Sacramento County Department of Water Resources

2. PURPOSE:
   The purpose of this Memorandum is to agree upon and clarify the responsibilities and duties between SacDOT and SacDWR for landscape maintenance services at the E. Stockton Boulevard Stormwater Detention Basin site.

3. LOCATION:
   The detention basin is located on the west side of E. Stockton Boulevard, at the N/B Highway 99 off-ramp at Mack Road (across E. Stockton Boulevard from Costco). APN: 115-0210-030-0000. See attached Vicinity Map, "**Exhibit 1**".

4. BACKGROUND:
   SacDWR's previous landscape maintenance contract for the subject detention basin expired in July 2004. SacDWR would prefer to utilize SacDOT's expertise in contracting out landscape maintenance services.

B. RESPONSIBLITIES:

1. Landscape Maintenance services shall be consistent with the current level of service used throughout SacDOT's Contract Services Section privately contracted work. SacDOT will contract with a private company to perform the landscape maintenance services as follows:

- Removal of litter and debris from shrub areas and adjacent hardscapes, and weed control (weekly);

- Maintenance, repair, and replacement of irrigation heads, valves, backflow preventors, and controllers (weekly inspection);

- Shrub and tree maintenance, including pruning, fertilization, staking, stake removal, guying, and pest control (alternate months); and

- Plant material replacement (as needed or requested).

2. The landscape maintenance as detailed in this agreement does NOT include maintenance of the basin sideslopes or invert. The maintenance and removal of vegetation and trash in the basin sideslopes and invert shall be the responsibility of SacDWR.

3. The monthly maintenance cost for the above listed routine landscape maintenance shall be determined by the bid amount for the East Stockton Detention Basin site in the current contract.

4. Unscheduled work shall be performed as needed and shall not exceed 30% of the monthly maintenance without prior approval by SacDWR.

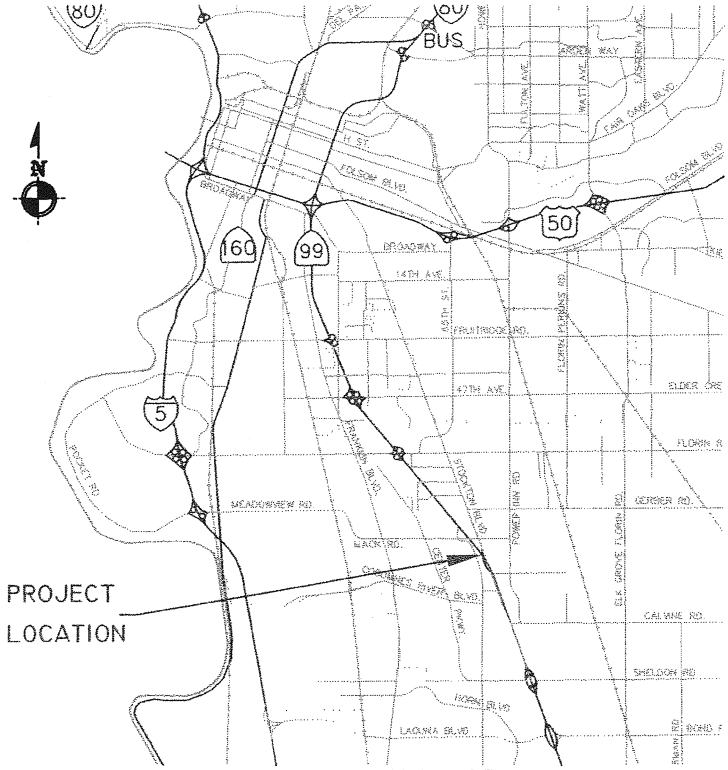
5. SacDOT administration costs are estimated at a total of 24 hours annually and are billable at the most current rate for the specific staff position performing the administration.

6. All costs shall be determined at the close of the fiscal year and reimbursement requests shall be prepared by DOT and forwarded to DWQ. The costs shall be identified by: monthly maintenance costs, unscheduled work or SacDOT staff time to administer the landscape maintenance services.

7. Utility costs shall be managed and paid by SacDWR.

C. MISCELLANEOUS:

1. This Agreement shall be in effect immediately and remain in effect until either Department decides to terminate this Agreement. The required termination notice lead time shall be dependant upon contractual obligations of the current executed contract with the vendor; currently a 30-day notice to remove a project site for a contract is required.



2. Modifications or amendments affecting this Agreement shall be in writing, and approved and executed by both parties.

3. This Agreement constitutes the understanding between SacDOT and SacDWR as to the subject matter contained herein.

RE: Landscape Maintenance for East Stockton Detention Basin

Mr. Krieger:

As requested, the following are landscape maintenance estimate and related items to the site.

A weekly service for maintaining the site with trash pickup, irrigation management, shrub pruning up to 6 times per year along with general maintenance. This would include weed control and fertilizer.

Monthly cost: $378.00

Irrigation repairs & other:

Lateral line repair	Approx.	$35.00
Cap 7 emitter heads	Approx.	$42.00
Prune dead branches on some shrubs	Approx.	$38.00

Should you like to discuss this matter further, please contact our office. If you would like to proceed let our staff know ASAP. This would allow us to schedule our personnel.

Respectfully,

Todd F. Marentis

COUNTY OF SACRAMENTO

Municipal Services Agency Correspondence

DATE: 5/3/2007

TO: Ray Thompson
Deputy County Council

FROM: Jon Money
Associate Engineer

SUBJECT: **Maintenance Agreement – Silver Springs Ranch**

Ray,

Enclosed is a maintenance agreement for a detention basin in the Silver Springs Ranch subdivision that we have been trying to finalize for a number of years. Bill Forrest had negotiated most of the contract before he took a position with the City of Galt and had sent previous copies to County Council for review. The homeowner's association has finally signed off and I need your and Keith Devore's signatures to finalize the document.

Please review the attached document for any errors, sign and then forward to Keith for signature. You can then send it back to me or have your office record it. Please let me know if you have any additional questions.

Thanks,
Jon Money

COUNTY COUNSEL

5/16/07

Keith:

I have approved this as to form – based mostly on the observation that it was signed by the other party in February and the problems I see with the document are probably insignificant in the large picture of needing to get this done.

Ray

Keith, this agreement identifies associations obligations & limits County's for installation of improvements w/in County land used for a detention basin. Please sign

MAINTENANCE AGREEMENT

THIS AGREEMENT (the "Agreement") made and entered into this 18th day of May 2005, by and between the **COUNTY OF SACRAMENTO, a political subdivision of the State of California** hereinafter called "County" and, **Silver Springs Ranch Homeowners Association** hereinafter called "Association."

RECITALS

A. The Association provides facilities of mutual benefit to the property owners of the subdivision known as Dierk's Ranch Subdivision Map (AKA Silver Springs Ranch). The Association will construct, reconstruct, repair and forever maintain thereon, a pedestrian path/walkway, landscaping, irrigation systems and post and cable fencing (the "Facilities"), on land deeded to the County of Sacramento for drainage purposes (APN 123-0220-062) (the "Basin").

B. County agrees to allow construction of the above-named Facilities within the Basin provided the Association enters into this Agreement to forever maintain said Facilities.

AGREEMENT

NOW, THEREFORE, in consideration of the foregoing recitals and the mutual promises herein, the parties agree as follows:

1. **Permit to Construct.** The County shall permit the construction and maintenance of the identified Facilities described in Recital A, above, on the Basin (APN 123-022-062). If any new facilities are to be constructed after the signature date of this Agreement, then the Association will obtain Water Agency Permits from the County.

2. **Agreement Binding On Successors In Interest.** This Agreement is an instrument affecting the title or possession of the real property. All the terms, covenants and conditions herein imposed shall be binding upon and inure to the benefit of the successors in interest of Association. Upon any sale or division of the real property, the terms of this Agreement shall apply separately to each parcel, and the owner of each parcel shall succeed to the obligations imposed on Association by this Agreement. As used in this Agreement, the term "Association" shall include all successors in interest to the above named Association. This Agreement shall be recorded in the office of the County Recorder.

3. **Association Maintenance Obligations.** Beginning as of the date hereof, Association, at Association's sole cost and expense, shall maintain the Facilities in good working order and repair such. This includes the maintenance of the entire perimeter of the Basin from the boundary line of the Basin parcel to two feet (2') from the top of the slope, including the landscaping, shredded bark and mulch, weed control, litter removal, irrigation system, pedestrian walkways and shoulders, and post and cable fencing. The open style wrought iron/tubular steel fencing that is the border of the detention basin and the surrounding private lots shall be the responsibility of the private lot owners. As point of information, the basin is engineered to never be dry. Mosquito abatement measures shall be the responsibility of the County and the applicable Vector Control District. Vegetation debris and sediment shall be disposed of properly off-site and not within the detention Basin parcel. The maintenance, repairs and locking of all post and cable fencing and gates shall be the responsibility of the Association. The Association may use "Round-Up" or similar formulated herbicides within the Basin but shall not apply such herbicides within the water or within 24 hours of expected rain The County shall have no obligation to maintain the identified Facilities.

4. **Indemnity.** The Association agrees to indemnify and to hold harmless the County, the Sacramento County Water Agency, a political subdivision of the State of California, their officers, employees, and agents from any and all losses, liability or damage that may result to either the Association, his assigns, successors in interest, tenants, or any third party as a direct or indirect result of the use, or maintenance of said facilities. Association shall defend, indemnify, and hold harmless County, its Board of Supervisors, officers, directors, agents, employees and volunteers from and against any and all demands, claims, actions, liabilities, losses, damages, and costs, including reasonable attorneys' fees, arising out of or resulting from the performance of this Agreement, regardless of whether caused in part by a party indemnified hereunder.

5. **County Maintenance Responsibilities**. The County only accepts maintenance responsibility for the flood control and stormwater quality treatment aspects of the detention Basin and the outfall drainage facilities. The basin will not be maintained for aesthetic enhancement. The County will not be responsible for litter removal anywhere with the detention Basin parcel. The County's maintenance obligations for the Basin starts from two feet (2') from the top of slope. Vegetation debris and sediment from the Basin shall be disposed of properly off-site and not within the Basin or Facilities. The County's maintenance responsibility of the Basin shall include the removal of bulrush, cattails, algae, and volunteer trees growing along the bank areas within the Basin. The County shall use reasonable care to avoid damaging or removing trees planted by Morrison Homes as part of the development of the Silver Springs/Dierks Ranch development. Volunteer (naturally occurring) trees that grow on the islands that are within the detention basin will not be trimmed or removed by the County. The County may use "Round-Up" or similar formulated herbicides within the Basin but shall not apply such herbicides within the water or within 24 hours of expected rain. The County shall utilize Aqua-Master for vegetation control within the water areas of the Basin. The County will attempt to coordinate maintenance activities with the Association to facilitate mosquito abatement activities. Association may hire a third party contractor to complete maintenance desired by Association but not completed by County.

6. **Waiver of Claims**. Association, its heirs, assigns, and successors in interest shall unconditionally waive any claim of liability on the part of the County, its officers, agents and employees for any property damage or personal injury arising out of, or in any way related to, the maintenance of the facilities by the Association.

7. **Authority**. Each party warrants that the person[s] signing this Agreement on behalf of the party is authorized to do so, and the party has full power and authority to make the agreements contained herein.

8. **Notices**. All notices, consents, approvals and other communications under this Agreement shall be in writing and shall be deemed to have been duly given or made (a) upon delivery if hand delivered; (b) one (1) day after delivery to any overnight courier service, fee prepaid; or (c) three (3) days after deposit with the United States Postal Service as registered or certified mail, postage prepaid, and in each case addressed as follows:

9. Entire Agreement. This Agreement constitutes the entire agreement between the parties hereto regardless of any prior oral or written memoranda or purported agreement, and this Agreement may only be modified in a writing that is signed by all of the parties hereto. This Agreement is binding upon the parties hereto and on their respective affiliates, successors, heirs, legal representatives, and assigns.

10. Further Acts. The parties agree to execute and deliver such further documents as may be necessary or appropriate to effectuate the purposes of this Agreement.

11. Construction. Each party was represented by legal counsel in the negotiation and execution of this Agreement or had opportunity to consult with an attorney of the party's choice. As a result of that representation or opportunity for representation, the terms of this Agreement were created out of the combined efforts of the parties and their attorneys, if any, and shall be construed neither for nor against either party.

12. Counterparts. This Agreement may be executed simultaneously in any number of counterparts, each of which shall be deemed an original, and all of which shall together constitute one and the same agreement.

In witness whereof, the parties have signed this Agreement effective as of the Date first written above.

By
Clerk of the Board

December 7, 1999

TO: Board of Supervisors

FROM: Department of District Engineering

SUBJECT: **AGREEMENT FOR MAINTENANCE OF HAZELWOOD AVENUE STORMWATER DETENTION FACILITY**

RECOMMENDATION:

It is recommended that your Board approve the attached Resolution authorizing the Chair to execute the attached Agreement for Maintenance of Hazelwood Avenue Stormwater Detention Facility.

DISCUSSION:

On May 18, 1999 your Board approved award of Contract 3341, the Hazelwood-Mission Storm Drain Project, to Azteca Construction. Construction of this project is scheduled for completion in early December, 1999. A portion of this project includes the construction of approximately two acres of landscaped storm drain detention basin. The detention basin is located at 4600 Hazelwood Avenue approximately 500 feet west of Mission Avenue. The detention basin design is done in cooperation with local residents, Mission Oaks Recreation and Park District, Sacramento County Regional Parks, and the Water Resources Division.

This project is a remedial drainage project in an established neighborhood. All of the participating parties determined that the detention basin should be an attractive open area with regular security patrols and maintained landscaping. The basin is designed to be a "dry" public green area most of the time and will only detain water for a limited amount of time during storm events. The detention basin is in the vicinity of public parks operated and maintained by Mission Oaks Recreation and Park District. Mission Oaks is a dependent district of the County of Sacramento.

The attached agreement provides for the County Stormwater Utility to reimburse Mission Oaks Recreation and Park District for the expense and administration of maintaining the Hazelwood detention basin during normal "dry" use. The services provided by Mission Oaks include landscape maintenance, utility costs, patrols by off duty Sheriff's deputies, and administrative

overhead. The agreement also states that County forces will clean up the basin after storm events which have floated in debris external to the landscaped basin area. The Mission Oaks Recreation and Park District Advisory Board of Directors approved and signed two copies of the agreement (attached) on November 2, 1999.

FINANCIAL CONSIDERATIONS:

The estimated average monthly cost for this service is $1,100. Funding for this service is budgeted for and will be paid for by the Stormwater Utility.

RECOMMENDATION:

It is recommended that your Board approve the attached Resolution authorizing the Chair to execute the attached Agreement for Maintenance of Hazelwood Avenue Stormwater Detention Facility.

Respectfully submitted,

Robert F. Shanks, Director
Department of District Engineering

CLERK OF THE BOARD

AGREEMENT FOR MAINTENANCE OF HAZELWOOD AVENUE STORMWATER DETENTION FACILITY

This Agreement is made and entered into this 7th day of December, 1999, by and between the Water Resources Division of the Public Works Agency, County of Sacramento, a political subdivision of the State of California, hereinafter referred to as "COUNTY" and Mission Oaks Recreation and Park District, a dependent district of the County of Sacramento, and a political subdivision of the State of California, hereinafter referred to as "DISTRICT".

RECITALS

WHEREAS, COUNTY has constructed the Hazelwood Avenue Stormwater Detention Facility; and

WHEREAS, COUNTY has determined that it is necessary to provide maintenance of the Hazelwood Avenue Stormwater Detention Facility; and

WHEREAS, DISTRICT desires to maintain the Hazelwood Avenue Stormwater Detention Facility; and

WHEREAS, COUNTY desires to engage DISTRICT to perform the needed services;

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth, COUNTY and DISTRICT agree as follows:

I. INCORPORATION OF RECITALS

The foregoing recitals are hereby incorporated by reference.

II. TERM

This Agreement shall be effective as of the date first written above and shall remain in effect until and unless terminated by one or both parties of this Agreement.

III. SCOPE OF WORK

The District shall perform and be responsible for the following services:

A. Maintaining the quality of the landscaped areas equal to that provided other District parks, although mowing may be precluded during wet weather conditions due to the specific function of the facility.

B. Providing security patrols on a schedule consistent with that provided other District parks.

C. Providing for opening and closing the easternmost access gate daily, based on a schedule consistent with that provided other District parks.

D. Providing the County Public Works Agency with a gate key for access.

E. Cleaning up park-related debris, such as tree limbs and other debris, that are not floated in by storm water from an external source to the landscaped basin area.

The County shall perform and be responsible for the following services:

A. Coordinating with District staff the scheduling of the maintenance of the drainage structure by County crews to forestall damage to turf and irrigation heads.

B. Scheduling County crews to clean up and remove debris floated in by storm water from an external source to the landscaped basin area and notifying the District of such activities.

C. Either the District or the County may open the westernmost gate for the purpose of maintenance. The gate is to be locked after the work is completed.

IV. APPORTIONMENT OF COSTS

The County agrees to pay the district for the cost, including administrative overhead, of performing the duties outlined in Section III. "Scope of Work".

Maintenance and other related expenses shall be determined based on actual costs, with periodic adjustments to the Agreement for any anticipated increased expenses, such as those associated with the District's contractual agreement for landscape maintenance and utility costs, including water. Monthly adjustments may be made, as needed, for unanticipated expenses, such as repair of acts of vandalism or damage from a flood event.

V. INVOICES, PAYMENTS, AND NOTICES

A. DISTRICT shall submit periodic invoices, not more frequently than monthly, for the services actually rendered during the preceding period. COUNTY and DISTRICT shall mutually agree on the format, content, and supporting documentation for invoices that will provide sufficient project management information to identify the actual level of work effort and the actual expenditures on tasks and subtasks required by this Agreement. COUNTY shall pay, within thirty (30) days of receipt and approval, invoiced amounts that are undisputed. The parties agree to exercise good faith and diligence in the resolution of any disputed invoiced amounts.

B. Any invoice, payment, notice, demand, request, consent, or approval that either party hereto may or is required to give the other shall be in writing and shall be either personally delivered or sent by mail, addressed as follows:

TO COUNTY:	TO DISTRICT:
County of Sacramento Water Resources Division 827 Seventh Street, Room 301 Sacramento, CA 95814 ATTN: Brett Forrester	Mission Oaks Recreation and Park District 3344 Mission Avenue Carmichael, CA 95608 ATTN: Debby Walker

VI. INDEMNIFICATION

DISTRICT shall indemnify, defend, and hold harmless the COUNTY, its officers, agents, employees, and representatives from and against any and all claims, losses, costs, expenses, injuries, liabilities, damages, demands, and actions arising out of or resulting from the performance of this Agreement, caused by any negligent or willful act or omission of the DISTRICT, its officers, agents, employees, representatives, or anyone directly or indirectly acting on behalf of the DISTRICT.

COUNTY shall indemnify, defend, and hold harmless the DISTRICT, its officers, agents, employees, and representatives from and against any and all claims, losses, costs, expenses, injuries, liabilities, damages, demands, and actions arising out of or resulting from the performance of this Agreement, caused by any negligent or willful act or omission of the COUNTY, its officers, agents, employees, representatives, or anyone directly or indirectly acting on behalf of the COUNTY.

VII. APPLICABLE LAWS

This Agreement shall be deemed to be executed within the State of California and construed with and governed by the laws of the State of California. Any action arising out of this Agreement shall be filed in any appropriate Sacramento County Court having jurisdiction or, if appropriate, in the United States District Court for the Eastern District of California.

VIII. TERMINATION

A. Either party may terminate this Agreement upon the substantial failure of performance by the other party, provided such terminating party first transmits written notice of intent to terminate to the party failing to perform and allows such party a reasonable opportunity to correct said failure of performance.

B. COUNTY shall have the right to terminate this Agreement at any time by serving upon DISTRICT sixty (60) days advance written notice of termination. The notice shall be deemed served and effective for all purposes on the date it is deposited with the United States Postal Service, first class postage prepaid and addressed to DISTRICT at the address indicated in this Agreement.

IX. AMENDMENTS

Modification or amendments affecting the scope of work hereunder that result in an increase of the compensation to be paid by COUNTY to DISTRICT under this Agreement shall be in writing and executed by both parties.

XI. ENTIRE AGREEMENT

This Agreement, all exhibits attached hereto, all other terms or provisions incorporated herein by reference, and any notice to proceed issued in accordance with the terms hereto constitute the entire Agreement and understanding between the COUNTY and the DISTRICT as to the subject matter contained herein and supersede all prior understandings, agreements, and documentation relating to the subject matter of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year first written above.

RESOLUTION NO. 99-1555

RESOLUTION TO EXECUTE THE AGREEMENT FOR MAINTENANCE OF HAZELWOOD AVENUE STORMWATER DETENTION FACILITY

WHEREAS, COUNTY desires to engage the services of the **MISSION OAKS RECREATION AND PARK DISTRICT** for maintenance of the Hazelwood Avenue Stormwater detention Facility; and

WHEREAS, DISTRICT desires to maintain the Hazelwood Avenue Stormwater Detention Facility; and

NOW, THEREFORE, BE IT RESOLVED AND ORDERED that the Chair of the Board of Supervisors be and is hereby authorized and directed to execute an agreement, in the form hereto attached, on behalf of the COUNTY OF SACRAMENTO, a political subdivision of the State of California, with MISSION OAKS RECREATION & PARK DISTRICT, a dependent district of the County of Sacramento, and to do and perform everything necessary to carry out the purpose of this resolution.

ON A MOTION BY Supervisor Johnson, seconded by Supervisor Collin, the foregoing resolution was passed and adopted this 7th day of December, 19 99, by the following vote, to wit:

AYES:	**Supervisors:**	Collin, Dickinson, Niello, Nottoli, Johnson
NOES:	**Supervisors:**	none
ABSENT:	**Supervisors:**	none
ABSTAIN:	**Supervisors:**	none

Muriel P. Johnson
Chair, Board of Supervisors

COUNTY OF SACRAMENTO (SEAL) CALIFORNIA

ATTEST: Cindy M. Turner
Clerk, Board of Supervisors

In accordance with Section 25103 of the Government Code of the State of California a copy of this document has been delivered to the Chairman of the Board of Supervisors, County of Sacramento on

DEC 07 1999

By Wayne Dowling
Deputy Clerk, Board of Supervisors

FILED

BOARD OF SUPERVISORS

BY Cindy M. Turner
CLERK OF THE BOARD

AGREEMENT FOR MAINTENANCE OF HAZELWOOD AVENUE STORMWATER DETENTION FACILITY

This Agreement is made and entered into this 7th day of December, 1999, by and between the Water Resources Division of the Public Works Agency, County of Sacramento, a political subdivision of the State of California, hereinafter referred to as "COUNTY" and Mission Oaks Recreation and Park District, a dependent district of the County of Sacramento, and a political subdivision of the State of California, hereinafter referred to as "DISTRICT".

RECITALS

WHEREAS, COUNTY has constructed the Hazelwood Avenue Stormwater Detention Facility; and

WHEREAS, COUNTY has determined that it is necessary to provide maintenance of the Hazelwood Avenue Stormwater Detention Facility; and

WHEREAS, DISTRICT desires to maintain the Hazelwood Avenue Stormwater Detention Facility; and

WHEREAS, COUNTY desires to engage DISTRICT to perform the needed services;

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth, COUNTY and DISTRICT agree as follows:

RECEIVED
DEPARTMENT OF PUBLIC WORKS
WATER RESOURCES DIVISION
NOV 08 1999
FILE

I. INCORPORATION OF RECITALS

The foregoing recitals are hereby incorporated by reference.

II. TERM

This Agreement shall be effective as of the date first written above and shall remain in effect until and unless terminated by one or both parties of this Agreement.

III. SCOPE OF WORK

The District shall perform and be responsible for the following services:

A. Maintaining the quality of the landscaped areas equal to that provided other District parks, although mowing may be precluded during wet weather conditions due to the specific function of the facility.

B. Providing security patrols on a schedule consistent with that provided other District parks.

C. Providing for opening and closing the easternmost access gate daily, based on a schedule consistent with that provided other District parks.

D. Providing the County Public Works Agency with a gate key for access.

E. Cleaning up park-related debris, such as tree limbs and other debris, that are not floated in by storm water from an external source to the landscaped basin area.

The County shall perform and be responsible for the following services:

A. Coordinating with District staff the scheduling of the maintenance of the drainage structure by County crews to forestall damage to turf and irrigation heads.

B. Scheduling County crews to clean up and remove debris floated in by storm water from an external source to the landscaped basin area and notifying the District of such activities.

C. Either the District or the County may open the westernmost gate for the purpose of maintenance. The gate is to be locked after the work is completed.

IV. APPORTIONMENT OF COSTS

The County agrees to pay the district for the cost, including administrative overhead, of performing the duties outlined in Section III. "Scope of Work".

Maintenance and other related expenses shall be determined based on actual costs, with periodic adjustments to the Agreement for any anticipated increased expenses, such as those associated with the District's contractual agreement for landscape maintenance and utility costs, including water. Monthly adjustments may be made, as needed, for unanticipated expenses, such as repair of acts of vandalism or damage from a flood event.

V. INVOICES, PAYMENTS, AND NOTICES

A. DISTRICT shall submit periodic invoices, not more frequently than monthly, for the services actually rendered during the preceding period. COUNTY and DISTRICT shall mutually agree on the format, content, and supporting documentation for invoices that will provide sufficient project management information to identify the actual level of work effort and the actual expenditures on tasks and subtasks required by this Agreement. COUNTY shall pay, within thirty (30) days of receipt and approval, invoiced amounts that are undisputed. The parties agree to exercise good faith and diligence in the resolution of any disputed invoiced amounts.

B. Any invoice, payment, notice, demand, request, consent, or approval that either party hereto may or is required to give the other shall be in writing and shall be either personally delivered or sent by mail, addressed as follows:

TO COUNTY:	TO DISTRICT:
County of Sacramento Water Resources Division 827 Seventh Street, Room 301 Sacramento, CA 95814 ATTN: Brett Forrester	Mission Oaks Recreation and Park District 3344 Mission Avenue Carmichael, CA 95608 ATTN: Debby Walker

VI. INDEMNIFICATION

DISTRICT shall indemnify, defend, and hold harmless the COUNTY, its officers, agents, employees, and representatives from and against any and all claims, losses, costs, expenses, injuries, liabilities, damages, demands, and actions arising out of or resulting from the performance of this Agreement, caused by any negligent or willful act or omission of the DISTRICT, its officers, agents, employees, representatives, or anyone directly or indirectly acting on behalf of the DISTRICT.

COUNTY shall indemnify, defend, and hold harmless the DISTRICT, its officers, agents, employees, and representatives from and against any and all claims, losses, costs, expenses, injuries, liabilities, damages, demands, and actions arising out of or resulting from the performance of this Agreement, caused by any negligent or willful act or omission of the COUNTY, its officers, agents, employees, representatives, or anyone directly or indirectly acting on behalf of the COUNTY.

VII. APPLICABLE LAWS

This Agreement shall be deemed to be executed within the State of California and construed with and governed by the laws of the State of California. Any action arising out of this Agreement shall be filed in any appropriate Sacramento County Court having jurisdiction or, if appropriate, in the United States District Court for the Eastern District of California.

VIII. TERMINATION

A. Either party may terminate this Agreement upon the substantial failure of performance by the other party, provided such terminating party first transmits written notice of intent to terminate to the party failing to perform and allows such party a reasonable opportunity to correct said failure of performance.

B. COUNTY shall have the right to terminate this Agreement at any time by serving upon DISTRICT sixty (60) days advance written notice of termination. The notice shall be deemed served and effective for all purposes on the date it is deposited with the United States Postal Service, first class postage prepaid and addressed to DISTRICT at the address indicated in this Agreement.

IX. AMENDMENTS

Modification or amendments affecting the scope of work hereunder that result in an increase of the compensation to be paid by COUNTY to DISTRICT under this Agreement shall be in writing and executed by both parties.

XI. ENTIRE AGREEMENT

This Agreement, all exhibits attached hereto, all other terms or provisions incorporated herein by reference, and any notice to proceed issued in accordance with the terms hereto constitute the entire Agreement and understanding between the COUNTY and the DISTRICT as to the subject matter contained herein and supersede all prior understandings, agreements, and documentation relating to the subject matter of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year first written above.

Standard Protocol for Application of Herbicides and Pesticides for use at Creeks, Channels, and Detention Basins Maintained by County Drainage Maintenance

Updated November, 2005

Prepared by
Department of Water Resources
Drainage Operations and Maintenance Section

TABLE OF CONTENTS

SECTION 1 - BACKGROUND 1

Aquatic Pesticide Application 1
Type of Aquatic Pesticide Used 1

SECTION 2 - PERMIT REQUIREMENTS 1

SECTION 3 - STANDARD PROTOCOL FOR APPLICATION OF HERBICIDES AND PESTICIDES 2

Best Mangement Prarctices (BMP) 2
Water Quality Assessment 3
Safety and Storage 3

SECTION 1 - BACKGROUND

Aquatic Pesticide Application

The County of Sacramento (County) uses the application of herbicides and pesticides to help limit growth of vegetation in drainage channels, detention basins, creeks and on levees. Application of herbicides and pesticides significantly reduces the need for hand and mechanical cleaning of the above mentioned drainage facilities. Applying herbicides and pesticides substantially helps to maintain the stormwater carrying capacity of County drainage facilities.

Type of Aquatic Pesticide Used

Glyphosate is the only type of aquatic pesticide applied by the County to drainage channels, detention basins, creeks, and levees maintained by the County. These applications are limited to the boundaries of the County's Stormwater Utility and the City of Rancho Cordova. Glyphosate is the active ingredient in Aquamaster™ manufactured by the Monsanto Company and Rodeo® manufactured by Dow Agrosciences. Glyphosate is a non-selective herbicide that kills vegetation that it comes in contact with.

SECTION 2 - PERMIT REQUIREMENTS

On 12 March 2001, the Ninth Circuit Court of Appeals ruled that discharges of pollutants from the use of aquatic pesticides to waters of the United States require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Consequently, the State Water Resources Control Board (SWRCB) developed an Aquatic Pesticide Permit (General Permit No. CAG990003) to cover short-term seasonal discharges by public entities of pollutants associated with the application of aquatic pesticide for resource or pest management to waters of the United States. An updated version of SWRCB's Aquatic Pesticide Permit (General Permit No. CAG990005) was completed in 2004. The basic requirements of this General Permit include the following:

1. The applicator must follow all pesticide label instructions and any Use Permits issued by a County Agricultural Commissioner (CAC);
2. The discharger must be licensed by the Department of Pesticide Regulation (DPR) or work under the supervision of someone who is licensed if the aquatic pesticide is considered a restricted material;
3. The discharger must comply with effluent limitations including developing and implementing an Aquatic Pesticides Application Plan;
4. The discharger must comply with applicable receiving water limitations; and
5. The discharger must comply with monitoring and reporting requirements.

The County submitted a Notice of Intent (NOI) application June 4, 2004 for coverage under this General Permit. Subsequently, the County submitted the *County of Sacramento Aquatic Pesticide Application Plan, July 2004* (APAP) to the Regional Water Quality Control Board (RWQCB) on July 29, 2004 and was issued a RWQCB facility identification number (WDID# A5A34NP00022).

The application plan requires that the County prepare and implement a standardized protocol for application of pesticides, herbicides (including pre-emergent), and fertilizers. (The County does not apply fertilizer to drainage facilities.) All aquatic applications of pesticides shall be conducted in accordance with the July 2004 APAP.

SECTION 3 - STANDARD PROTOCOL FOR APPLICATION OF HERBICIDES AND PESTICIDES

Best Mangement Prarctices (BMP)

During pesticide application BMPs shall be implemented by the County to maximize efficiency of control efforts and minimize adverse impacts to the environment. Visual observations are to be made after applications to assess pesticide effectiveness and impacts to the surrounding environment. In addition, annual water quality results will be reviewed to evaluate BMP efficiency. The County implements the aquatic pesticide application BMPs listed below.

1. Licensing, and Training. Section policy requires that the crew leaders applying pesticides be licensed by California Department of Pesticides Regulations. Sacramento County Channel Maintenance has one licensed Pest Control Advisors (PCA), 22 Qualified Applicator Certified holders, and 6 Qualified Applicator License holders. All employees that make aquatic applications must be licensed with a Qualified Applicator Certificate or Qualified Applicator License. All applicators must go through annual training. Training covers such topics as safe application techniques, proper use of application equipment, applicable laws and regulations (including water quality), and specific information about the use of aquatic and non-aquatic herbicides.

2. Pesticide Recommendations. Each pesticide application must be accompanied by a recommendation for use by a PCA. The PCA recommendation is written to allow only pesticide use that is consistent with the pesticide label.

3. Preliminary Site Evaluations are made at a minimum of once per year by the PCA to determine areas in need of treatment, suitability and location of a treatment site, and precautions to be followed during treatment.

4. Secondary Site Evaluations and Pre-treatment Monitoring are conducted by the applicator upon arrival at the site. Some factors considered are weed species present, growth stage, weed location, and weed density. These factors are used to determine whether mechanical, manual, or aquatic herbicide controls shall be used. If herbicide treatment is the preferred method, type of application and rate are recorded.

5. BMPs Done Prior to and During a Treatment. In general, the applicator considers site conditions, weather conditions, and water use in making the decision to proceed with treatment or to postpone an aquatic pesticide application.

    a) If the wind is high enough or becomes high enough to cause significant drift at the start or during an aquatic glyphosate application, the application is either postponed or terminated.

b) If it is raining or rain is expected shortly after a scheduled aquatic glyphosate application, the application is postponed. If the water level in the creek or channel is significantly higher than normal, the application is postponed.

c) If the applicator observes livestock feeding in the drainage area, lack of vegetative obstructions, children playing in the creek or channel, or water being pumped for irrigation purposes the application is postponed.

d) If it appears that there is a possibility of erosion or large scale soil movement the application will be postponed and the Pest Control Advisor will be notified.

e) Glyphosate will be used to spot-treat by applying the aquatic pesticide directly to the target vegetation while minimizing overspray. Control of vegetation is achieved while using the least amount of herbicide possible to achieve desired effects. Applications are made "spray to wet", not to the point of runoff. Only minor amounts of unavoidable glyphosate overspray and runoff from sprayed vegetation will come into contact with the water in the drainage channels.

6. Post Treatment Evaluation. The assessment of herbicide application efficacy normally begins one week after application and continues for the rest of the growing season. If a treatment is ineffective, a drainage area is modified by construction, or hazards to the application are identified, crews either take corrective action by modifying the application or remove that particular creek or channel segment from the application schedule.

Water Quality Assessment

When preparing a pesticide solution, applicators take into consideration recommendations from the manufacturer, as well as previous experience of certain types of vegetation. Based on this past experience with the amount of pesticide required at certain locations, glyphosate mixing ratios/concentrations used in the County service areas are to be at or below the manufacturer's recommended levels. By following BMP guidelines presented above, concentrations of glyphosate detected in the water bodies immediately following application, were below the federal drinking water standard.

Safety and Storage

Drainage maintenance staff stores no more than five 2 ½ gal containers of pesticides at any time. All material is stored either in a locked compartment on the applicator truck or in a locked indoor storage room. Pesticides are obtained for use from these areas or from a vendor on an as needed basis. Storage requirements stated on the pesticide label and MSDS must be closely followed. No fertilizer is stored or used.

All pesticides currently used by drainage maintenance staff are labeled Category III or Category IV – CAUTION! – the least toxic pesticide category. County drainage crews do not use, store, or handle any materials that are labeled Category I – DANGER!

The storage area is inspected weekly by drainage maintenance supervisors. It is inspected annually by the Sacramento County Agricultural Commissioner's Office.

Procedures for Conducting On Going Screening for Illicit Connection

SECTION I - BACKGROUND

The County of Sacramento (County) has a National Pollutant Discharge Elimination System (NPDES) permit that regulates Illicit Discharges/Connections to our municipal separate storm sewer system (MS4), or our storm drain system. We refer to this permit as the Municipal Stormwater Permit or MS4 Permit.

The County's MS4 Permit was issued in 1990 under Phase I stormwater permitting, at which time the Central Valley Regional Water Quality Control Board (RWQCB) adopted NPDES storm water permits for medium (serving between 100,000 and 250,000 people) and large (serving 250,000 people) municipalities. Sacramento County was issued an MS4 permit jointly with the cities of Sacramento, Folsom and Galt.

The most current version of the MS4 Permit was adopted on December 6, 2002 and expires on December 1, 2007. The new cities of Citrus Heights, Elk Grove and Rancho Cordova have been added as co-permittees in the current MS4 Permit. The County currently provides all of the drainage maintenance and stormwater quality services to the City of Rancho Cordova. The County provides a portion of the drainage maintenance and stormwater quality services to the City of Citrus Heights. Each co-permittee must document compliance with the MS4 Permit, which means that any services provided by the County on behalf of these cities must be documented accordingly.

Illicit discharges are considered "illicit" because MS4s are not designed to accept, process, or discharge such non-storm water wastes. Illicit connections and illegal dumping are the main types of illicit discharges. Illegal dumping is the dumping of liquid or solid wastes into a storm drain system. Illicit connection is a piped connection allowing illicit discharges to flow into the storm drain system. The result is untreated discharges that contribute to high levels of pollutants, including heavy metals, toxics, oil and grease, solvents, nutrients, viruses, and bacteria to receiving waters where it can impair beneficial uses. Federal regulations define an illicit discharge as "any discharge to a storm drain system (MS4) that is not composed entirely of stormwater…" with some exceptions. These exceptions are listed in Section IV of this document.

The County of Sacramento is to implement an Illicit Discharge Detection and Elimination Program containing measures to actively seek, investigate, eliminate, and enforce ordinances illicit connections.

SECTION II – PERMIT REQUIREMENTS

The Permit Provision 11d.i.a. states that agencies shall address Initial Field Screening of its storm drain systems for illicit connections in accordance with the following schedule.

- Open channels: No later than September 1, 2004.
- Underground pipes in priority areas no later than June 1, 2005.
- Underground pipes with a diameter of 36 inches or greater no later than June 1, 2006.

The Permit Provision 11d.i.b. states that agencies shall develop procedures to conduct on-going field screening activities during the life of the Order, including areas or locations that will be evaluated by such field screens.

Per Permit Provision 11.d.ii.a, upon the discovery or upon receiving a report of a suspected illicit connection, the permittees shall initiate an investigation within 21 days to determine the source of the connection, the nature and volume of discharge through the connection, and the responsible party for the connection.

Per Permit Provision 11.d.ii.b, upon confirmation of the illicit nature of a storm drain connection, the permittees shall ensure termination of the connection within 180 days, using enforcement authority as necessary.

Per Permit Provision 11.d.i.b as explained in Table 4.6.1 of July 2003 Stormwater Improvement Plan, the County will develop tools for use by field crews to record field screening activities associated with illicit connections.

The Permit Provision 11.c states that, b**y** June 1, 2003 and annually thereafter, each permittee shall train all their targeted employees who are responsible for identification, investigation, termination, cleanup, and reporting of illicit connections.

Sacramento County's July, 2003 Stormwater Improvement Plan (Table 4.6.1, 11.d.ii.b) outlines that the County will develop and submit written procedures and recordkeeping tools for use by field crews in documenting field screening activities and referring problems to the Stormwater Quality Group. These procedures shall include other subjects such as procedures for the elimination of illicit connections, strategies for controlling illicit connections, and enforcement of ordinances.

SECTION III - INITIAL FIELD SCREENING FOR ILLICIT CONNECTIONS

The County performed and completed initial field screening of open channels and pipe systems in 1993, 1994, and 1995. Completion of the screening was documented in the February 1996 final County Stormwater Management Plan Report of which the Board approved as complying with Provision 11.d.i.a. of the Permit. The City of Rancho Cordova was not a city when the current permit was issued and is represented by that same Initial Field Screening the County performed in the mid 1990's.
However, since Citrus Heights was already a City when the current permit was issued, they did not meet the initial field screening for illicit connections requirement. The Appendix will explain how the City of Citrus Heights is planning to satisfy the requirements of the Permit.

SECTION IV – ON GOING SCREENING FOR ILLICIT CONNECTIONS

On-Going Screening

The Sacramento County's On-going Screening Program for illicit connections encompasses the unincorporated area of Sacramento County as well as the Cities of Citrus Heights and Rancho Cordova. The County conducts open channel and pipe maintenance for the City of Rancho Cordova. The County conducts only the stormdrain pipe maintenance for the City of Citrus Heights and will only conduct the on-going screening associated with the pipe systems (and not the open channel system) for the City of Citrus Heights. The City of Citrus Heights will conduct screening of their open channel system.

The goals and objectives of the On-going Screening Program are to:

1. Locate Evidence of Illicit Connections During Regular Inspection and Maintenance Activities of Stormdrain Facilities.
2. Trace and identify locations of the source(s) that contribute pollutants to the known Illicit Connections.

County maintenance crews will conduct on-going screening for illicit connections to the piped and open channel storm drain systems. Field maintenance crews are trained to identify and locate evidence of potential illicit connections to the open channels and record the information on a Field Data Sheet shown in Figure 1. Stormdrain pipe systems are inspected when maintenance crews are performing their usual maintenance activities on such facilities as manholes, pipes, drainage inlets and open channels. This information will be recorded on a Field Data Sheet as shown in Figure 2.

When maintenance crews encounter illicit discharges that are known or suspected to contain hazardous substances, they will immediately report it to Sacramento County Hazardous Materials Division and response will be within one business day of discovery of a report of a suspected illicit discharge (Per Permit Provision 11.e.i) with activities to abate, contain, and clean up such illicit discharges.

When maintenance crews encounter illicit discharges that are not suspected to contain hazardous substances, staff will conduct investigation and termination per Permit Provisions 11.d.ii.a and 11.d.ii.b respectively. The investigation will occur within 21 days to determine the source, type, and volume of discharge, and responsible party of all identified illicit storm drain connections. Upon identification of source, nature and responsible party, termination of the illicit connection will occur within 180 days (per Permit Provision 11.d.ii.b), using enforcement authority as necessary.

Locating Evidence of Illicit Connections During Regular/Routine Inspection and Maintenance Activities of Stormdrain Facilities

County Maintenance Supervisors perform annual inspections of the creeks and open channels in the unincorporated portion of the County and in the City of Rancho Cordova (not in the City of Citrus Heights) to prepare their annual pesticide application and channel cleaning schedules. While they are inspecting the creeks and channels for recommended maintenance activities; stormdrain pipe system outfalls, minor channels and ditches will be inspected for evidence of illicit discharges/connections. Supervisors will be looking for indicators of illicit discharges such as untreated wastewater (e.g. toilet paper), stained and/or structurally damaged storm drain systems that could accept unauthorized non-stormwater flows. They will be observing for smells, color/clarity of water, flow estimation and other information such as is indicated in Figures 1 and 2 - Field Data Sheets for On-going Screening for Open Channels and Stormdrain Pipe Systems respectively. Maintenance supervisors are required to fill out "Field Data Sheets" when they see any evidence of illicit discharges from outfall pipes, channels, (major or minor) and ditches. The completed Field Data Sheets are provided to County Drainage Operations and Maintenance Section and Stormwater Quality Sections for further investigation and study.

Channel maintenance crews are trained to look for evidence of illicit discharges while performing their maintenance activities on or in the vicinity of outfall pipes, manholes, channels, and ditches. They will also be required to fill out Field Data Sheets when encountering suspected illicit pollutants. The completed Field Data Sheets will be forwarded to County Drainage Operations and Maintenance and Stormwater Quality Sections for further investigation and study.

Pipe maintenance crews perform video inspections of the stormdrain pipe systems when there is a suspected engineering or maintenance problem such as blockage due to roots, crushed pipe, or other problem. These video inspections are recorded on Field Data Sheets as shown in Figure 5. While performing these video inspections, crews observe for evidences of illicit discharges and are able to locate pipes that are not mapped on County Facility Maps that may be an illicit connection. County maintenance has one full time crew (40 hours/week) that is exclusively devoted to video inspection activities. Pipe maintenance crews will also be required to fill out a Field Data Sheet when encountering suspected illicit discharges/connections and forward the Field Data Sheets to County Drainage Operations/Maintenance and Stormwater Quality Sections for further investigation and study.

Sacramento County is performing a Sump Cleaning Program per Permit Provision 10e.ii that requires the County to prioritize catch basins and sumps for cleaning based on accumulation of waste and presence or absence of downsream Best Management Practices (BMP's). This Sump Cleaning Program consists of a sump inspection and cleaning program that furnishes additional opportunity to locate suspected illicit discharges/connections portions of the stormdrain system. This Program also requires the filling out of Field Data Sheets when encountering suspected illicit discharges and connections.

SECTION V – INVESTIGATION OF SUSPECTED ILLICIT CONNECTIONS

Reporting to Stormwater Quality Staff for Further Investigation

Stormwater Quality Staff (staff) and Drainage Operations and Maintenance staff receives reports of suspected illicit connections from field observations made by County maintenance personnel, the public, County Stormwater Monitoring Program and other methods. Staff then begins an investigation within 21 days.

The non-hazardous, non-stormwater discharges are typically investigated by staff or by the Environmental Management Department. Staff will conduct the actual investigation and will be supported by Drainage Operations and Maintenance personnel to conduct activities such as video inspection of stormdrain pipe systems to help pinpoint the location of an illicit connection. The investigation shall be followed up with enforcement action, when appropriate.

An illicit connection discharging possible hazardous materials is immediately referred to Sacramento County Transportation Hazardous Waste for investigation and cleanup. When the suspected illicit connection has an active discharge, Per Permit Provision 11.e.i, , abatement and cleanup of illicit discharges that are known or suspected to contain hazardous substances (as defined by California law), shall be responded to within one business day of discovery or a report of a suspected illicit discharge, with activities to abate, contain, and clean up such illicit discharges. For illicit discharges not known or suspected to contain hazardous substances, response occurs within five days of discovery or report, and at a minimum requirement the identified responsible party(s) to immediately cease such discharges.

Tracing the Location of the Illicit Connection

When there is evidence of unauthorized non-stormwater flows in a particular stormdrain system, various methods can be used to pinpoint the exact source of the discharge. Many techniques that can be used include manhole observation, video inspection, smoke testing, dye testing, and aerial infrared/thermal photography.

Sacramento County utilizes the key tracing technique of manhole observation in which dry weather flows are traced upstream along the conveyance system to bracket the location of the source. Upstream drainage inlets and manholes associated with the downstream evidence of pollutants are also surveyed to help bracket the location of the illicit connection. When the location of the illicit discharge source has been bracketed, video inspection is used to confirm and document the illicit connection.

When an illicit connection to the stormdrain system is located, it can receive discharges from several other sources connected to it. Smoke testing will be considered as a method of locating multiple sources contributing to an illicit connection. This technique is only used when after talking with business owners, residential property owners or anyone that may believe/indicate that there could be multiple sources contributing to the discharge of one illicit connection to the storm drain system. This technique involves injecting non-toxic smoke into the stormdrain pipes and then noting the emergence of smoke illicit connections

to the stormdrain systems. Smoke testing is typically used to survey an area all at once, in contrast to dye testing, which tests one building at a time.

Dye testing is used only when a particular building is isolated and determined to be the only contributing source to the illicit connection. It is also used as a final confirmation of the buildings that emitted smoke. This technique involves flushing non-toxic dye into toilets and sinks and observing sanitary sewer and stormdrain systems for the presence of dye. Prior to performing this test, building owners and occupants will be informed in advance and gain permission for entry. Local public health and state water quality staff will be notified so that they will be prepared to respond to citizens calling about any dye observed in surface waters.

SECTION VI – ELIMINATION OF ILLICIT CONNECTIONS

Procedure for Elimination of Illicit Connections

When the responsible party of an illicit connection or discharge is identified, the party will be educated on the impacts of their actions and be provided literature from the Stormwater Management Ordinance that states:

(a) It is unlawful for any person to establish, use or maintain, or cause to establish, use or maintain, any illicit connection. Illicit connections shall be subject to removal and abatement by the County pursuant to chapter 16.02 of this Code.
(b) The prohibition set forth in subsection (a) above shall apply to illicit connections in existence at the time that this Chapter becomes effective. Any person who maintains an illicit connection shall disconnect and discontinue use of such connection. Any person who maintains an illicit connection may apply to the County for a Sacramento County Water Agency Permit to continue the connection subject to applicable County Standards.

They will also be furnished information regarding Best Management Practices (BMP), as appropriate. Discussion will then cover the methods of eliminating the illicit connection, including disposal options, recycling, and possible connection to the sanitary sewer.

The responsible party is then officially notified to correct the problem. They are directed to proceed with disconnection procedures and remove the illicit connection. Follow-up activities will then take place until the connection has been terminated. Enforcement actions, as allowed by Sacramento County Code, Title 15.12 (Sacramento County Stormwater Management and Discharge Control Ordinance) will be exercised as necessary.

SECTION VII - RECORDKEEPING/REPORTING OF NON-PERMITTED AND PERMITED CONNECTIONS

Recordkeeping Tools for Field Crews in Documenting Screening Activities

Figures 1 through 5 are the primary record keeping tools for the Initial Screening of pipe systems for Citrus Heights and the County's On-going Screening for the unincorporated portion of the County and the city Rancho Cordova for open channels and pipe systems. This recordkeeping will enable the County to report the progress of our Illicit Connection Program in the October 1 Annual Reports submitted to the Regional Water Quality Board. This recordkeeping and reporting will demonstrate that Sacramento County is meeting Stormwater Permit compliance.

Document Actions Taken of Illicit Connections

The County documents the investigation, elimination, and enforcement of illicit connections. This information will be used to evaluate on an annual basis the patterns and trends of illicit connections in order to:

(1) Determine the appropriate frequency for repeat inspections of high, medium, and low priority areas based on an investigation of the municipality's entire drainage area.
(2) Review annually the internal investigation results and assess whether goals were met and what changes or improvements are necessary.
(3) Obtain feedback from complaining parties, other agencies, and citizens on response to their concern or complaint.
(4) Obtain feedback from personnel assigned to respond to, or inspect for, illicit connections.

The County maintains a comprehensive list of all permitted connections and the status of illicit connections under investigation to quantify our efforts and make improvements to the Illicit Connection Program.

SECTION VIII - STAFF TRAINING

Educate County Staff

The County retains staff and consultants with the experience and expertise needed to conduct meaningful outreach to various County audiences through workshops, correspondence, and educational materials so that all targeted staff receives the important message of protecting stormwater quality.

County maintenance personnel responsible for operating and maintaining County storm drain facilities are given annual training on procedures for detecting, investigating, cleanup, and reporting of illicit connections to the County's storm drain system. County maintenance crews are educated about how to identify suspected illicit connections and procedures for investigation.

SECTION IX - STRATEGIES FOR REDUCING THE NUMBER OF ILLICIT CONNECTIONS

Stormwater Management Ordinance

On June 16, 1998 the Sacramento Board of Supervisors Adopted the Stormwater Management Ordinance to the Sacramento County Code (Chapter 15.12.). The Ordinance fulfills a requirement of the National Pollutant Elimination System Permit for municipal stormwater discharges. This Ordinance makes most discharges to the stormdrain system illegal as listed below:

- Sanitary Wastewater
- Improper oil disposal
- Water from washing of concrete trucks
- Spills from roadway and other accidents
- Improper disposal of auto and household toxics
- Chemicals, hazardous materials, garbage
- Dewatering of construction sites
- Effluent from septic tanks
- Car wash wastewaters
- Laundry wastewaters
- Non-contact cooling water
- Radiator flushing disposal
- Metal plating baths

Allowable discharges to the stormdrains are:

- Waterline flushing
- Landscape irrigation
- Diverted stream flows
- Water from crawl space pumps
- Uncontaminated ground water infiltration
- Uncontaminated pumped groundwater
- Discharges from potable water sources
- Flows from riparian habit & wetlands
- De-chlorinated swimming pool discharges, and Street wash water
- Irrigation water
- Springs
- Footing drains
- Lawn watering
- Individual car washing
- Foundation drains
- Air conditioning condensation
- Rising ground waters

This stormwater Ordinance is the mechanism (law) which enables Sacramento County to prohibit illicit connections to the stormdrain system and empowers the County to enforce and remove illicit connections.

Public Outreach Element

Public Outreach targets everyone who lives or does business in Sacramento County. The basic message is that most non-stormwater discharges are illegal and that dumping into storm drain systems pollutes local waterways. People are educated on alternatives to illegal connections and discharges. The County conducts outreach to various County audiences through workshops, correspondence, and educational materials so that all receives the important message of protecting stormwater quality.

Public education has an important role to play in changing the habits of the public. The public, being educated about the hazards associated with illegal discharges, connections and improper disposal of wastes can be an effective tool when organized groups lobby for the

return of a stream or a reservoir to a clean and attractive condition. Public education helps to minimize future illicit connections and discharges to the storm drain system.

Sacramento County is involved in a continuing education program reaching the public in many ways including going to schools, industries, businesses, homeowners, developers, and contractors to educate about reducing pollution. Other outreach methods include Volunteer Programs such as Creek Week where the public can help clean local creeks and a Stenciling Program where groups such as the Boy Scouts will paint "No dumping –Drains to Creek" on storm drain inlets.

Public Notification Hotlines

Illicit discharges and connections can be reported to the drainage maintenance and flooding phone number, **875-RAIN.** This phone number is publicized by the Department of Water Resources Stormwater Program as the primary phone number for the public to report illegal discharges and connections. This phone number is intended for calls from the unincorporated areas of the County and the Cities of Citrus Heights and Rancho Cordova. As calls are received from the public reporting of illicit discharges and connections, County Stormwater staff initiates the investigations with the goal of eliminating non-authorized discharges and connections.

County Nuisance Hotline

The Nuisance Hotline, 875-5656, is operated by the County Consolidated Utility Billing Service (CUBS). It is used by many County agencies for receiving public complaints. Although 875-RAIN will be the number publicized by the Stormwater Program as the main number for reporting illegal discharges and connections, the CUBS Hotline will likely continue to receive such calls. Calls received by CUBS regarding hazardous materials discharged to the storm drain system are currently forwarded to the County Department of Transportation, and calls regarding non-hazardous materials being discharged to the storm drain system are referred to 875-RAIN.

SECTION X - ENFORCEMENT OF STORMWATER ORDINANCES

Stormwater Ordinance

On June 16, 1998 the Sacramento Board of Supervisors Adopted the Stormwater Management Ordinance to the Sacramento County Code (Chapter 15.12). Article 5, "Enforcement" states the enforcement powers of the Stormwater Ordinance as outlined below:

(a) The Administrator may deliver to the owner or occupant of any premises; or to any person responsible for an illicit connection; prohibited discharge, maintenance of a threatened prohibited discharge, failure to implement BMPs in accordance with Section 15.12.200 (b), or any other violation of the chapter a notice of non-Compliance.

(b) The Notice of Non-Compliance shall identify the provision that has been violated. The Notice of Non-Compliance shall state that continued noncompliance may result in additional enforcement actions, including the recovery of any costs incurred by the County.

(c) The Notice of Non-Compliance shall identify a compliance date that must be met; provided however, that the compliance date may not exceed (90) days unless the Administrator extends the compliance deadline an additional period not exceeding ninety (90) days when good cause exists for the extension.

Enforcement and Follow-up

After the responsible party is officially notified to remove the illicit connection and correction is not proceeding in the required time, then it may be necessary to use enforcement procedures as set forth below in the Stormwater Ordinance. The following enforcement steps will be exercised as necessary as set forth below by Sacramento County Code, Title 15.12 (Sacramento County Stormwater Management and Discharge Control Ordinance).

1. A notice of Violation (NOV) delivered to the violator that requires the violator to take such steps such as monitoring, elimination of an illicit connection, or payment/fine to have it removed by County forces including administrative costs.
2. The person receiving the NOV has an opportunity to appeal it.
3. If the person receiving the NOV does not appeal or loses the appeal and fails to correct the violation, the County may "take any and all measure necessary to abate the violation and/or restore the property".
4. Seek an injunction against the violator "restraining the person from activities which could create further violations and/or compelling the person to perform abatement or remediation of the violation.

APPENDIX
INITIAL FIELD SCREENING PROGRAM FOR THE CITY OF CITRUS HEIGHTS

The Permit Provision 12d.i.a. states that agencies shall address Initial Field Screening of its open channels and pipe storm drain systems for illicit connections in accordance with the following schedule.

- Open channels: No later than September 1, 2004
- Underground pipes in priority areas no later than June 1, 2005.
- Underground pipes with a diameter of 36 inches or greater no later than June 1, 2006.

The City of Citrus Heights maintains their own open channels and is responsible for the Initial Field Screening of their open channels. This Initial Field Screening Program of their open channels will be covered in the Annual Report prepared by Citrus Heights to be submitted to the Regional Water Quality Control Board October 1, 2004.

The County is currently under contract with the City of Citrus Heights to perform maintenance of their underground pipe system and will perform the Initial Field Screening of their pipe system as a part of the maintenance activities the County currently performs for the City. Storm drain systems that are outside public right of way (backyard and side yard) are identified as priority for the purposes of this program because those areas are considered to be more prone to illicit connections. Based on the manpower that the County of Sacramento is able to furnish to this field screening, the County will screen 25% of the priority pipe systems less than 36" in diameter no later than June 1, 2005. The balance of the unscreened storndrain systems will be screened at the rate of 25% of the remaining stormdrain systems in each of the following three years.

The Initial Field Screening of the storm drain pipe systems in Citrus Heights will consist of conducting manhole observations to locate storm drain system reaches with evidence of illicit discharge/connection. These manhole observations will be recorded on Field Data Sheets as shown on Figures 3 and 4. The manhole observations will begin at the manhole immediately downstream of priority areas (in the public right of way). If there is evidence of illicit discharge in this manhole, the inspector will then proceed to the next upstream manhole located in sideyard/backyard of residential or commercial property. These steps will be repeated until the inspector reaches the public right of way again or observes a manhole not having evidence of an illicit discharge/connection. When the inspector reaches a manhole not having evidence of an illicit discharge/connection, the source is likely to be located between the manhole with no evidence of illicit discharge and the next downstream manhole having evidence of an illicit discharge. This likely discharge pipe segment will be video inspected to confirm and locate the suspected illicit connection or infiltration and documented on Field Data Sheets as shown in Figure 5.

For illicit discharges that are known or suspected to contain hazardous substances, response will be within one business day of discovery or a report of a suspected illicit discharge (per Permit Provision 11 e.i) with activities to abate, contain, and clean up such illicit discharges.

Stormwater Quality staff will conduct investigation and enforcement per Permit Provisions 11 d.ii.a and 11 d.ii.b respectively. The investigation will occur within 21 days to determine the source, type and volume of discharge, and responsible party of all identified illicit storm drain connections. Upon identification of source, type and responsible party, termination of the illicit connection will occur within 180 days (per Permit Provision 11.d.ii.b), using enforcement authority as necessary.

Field crews will document their initial screening activities using forms similar to (Figure 3 – Documentation of Facilities Initially Screened for Illicit Connections, Figure 4 – Field Data Sheet for Initial Screening of Stormdrain Pipe Systems, Figure 5 – Video Inspection of Pipe Segment Suspected of Illicit Discharge/Inspection). All storm drain systems that have portions of the systems outside the right of way in Citrus Heights will be inspected for illicit discharges and connections according to the Permit schedule as described above.

A storm system map will be prepared showing the location of all storm drain systems (including all intake and discharge areas of the system) within the City. Illicit connections encountered during the Initial Field Screening Program will also be shown on the map. This map will formulate a better awareness of the locations of known illicit connections.

Hazardous Materials Program

1. Overview of Haz-Mat Program

The Sacramento County Department of Transportation (SAC DOT) will respond to all hazardous material incidents that occur in or on County property or right of ways. This includes Parks**, sidewalks*, and creeks** as well as the roadway. The County also contracts with the City of Citrus Heights for its emergency Haz-Mat response. It is not within the scope of responsibility or capacity of SAC DOT to mitigate all Haz-Mat incidents. The County reserves the right to find and request mitigation/remediation from responsible parties. When possible the County will bill responsible parties for any clean up labor hours, materials, or other costs incurred as a result of a Haz-Mat response. The County of Sacramento Department of Transportation SAC DOT is not responsible for and is not required to respond to or clean up hazardous materials incidents that occur on property that is not owned by or within the a right of way of the Sacramento County Public Works Agency.

The current Sacramento County Department of Transportation SAC DOT Haz-Mat response team consists of 17 Highway Maintenance Supervisors, 2 Equipment Operators, 16 Senior Highway Maintenance workers, and a Highway Maintenance Worker/yardperson.
The equipment pool currently available consists of a sandtruck, 6 mobile sweepers with Haz-mat trained operators, 17 emergency response trucks, backhoes, dumptrucks, a vactor, and other highway maintenance equipment.

Sacramento County Department of Transportation SAC DOT maintains two emergency response materials storage containers. One is located in the SAC DOT auxiliary yard, and another inside the gated SAC DOT facility located at 4949 Roseville Rd. These containers hold stockpiles of absorbent, hydrophobic absorbent pads, baking soda (acid neutralizer), drums, pumps, and absorbent booms for the collection of hydrocarbon material.

Sacramento County Department of Transportation SAC DOT maintains two secure temporary emergency response storage areas for disposal of hazardous materials that are removed and/or swept up from the County right of way. A fire and spill safe locker is located at 4135 Traffic way. A roll away bin for storing contaminated absorbents is located at 4949 Roseville Road.

The goal of the SAC DOT Haz-Mat response team is public safety first, to protect the public from contamination or harm from hazardous materials incidents that fall under SAC DOT responsibility, to protect the environment from contamination and harm from hazardous materials whenever possible within the scope of its responsibilities, and to protect public property and individual property from damage whenever possible within the scope of its responsibilities and good common sense.

***On Road**: **is defined as any incident that is within the maintained road index ROW or on SAC DOT property.**

****Off Road**: **is defined as those incidents that involve DI's, MH's, creeks, or County property including parks and County buildings.**

2. Criteria for Defining a "Haz-Mat"

Hazardous Materials will be defined as " any material which because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment…"{California Health & Safety Code, Chapter 6.95, Section 255501(n)}

A list of hazardous materials can be found in California Health and Safety Code sections 25117 and 25115. The list includes but is not limited to cement above PH 12.5, motor vehicle fluids, paint, drug lab wastes, pool chemicals, hypodermic needles, pesticides, battery acid, and fuel.

Haz-mat incidents will be classified by level:

Level I

Level I is an incident that involves a known substance. Level I incidents include but are not limited to any spill, release, potential release, or dumping of Oil, fuel, hypodermic needles, paint, household products, motor vehicle fluids, food products, or any known substance or combination thereof that can be dealt with and/or cleaned up without a respirator being required, or require no more than level "D" protection. Level I incidents require minimal exclusion of the public beyond the perimeter of the scene. Level I responders shall be trained to a level that will meet or exceed the scope of training in SARA Title III (OSHA), Title 29 CFR Section 1910 for first responders. Level I incidents may be upgraded to level II.

Level II

Level II is any spill, release, potential release, or dumping that involves an unknown or potentially dangerous material. Level II incidents are those incidents that may require the use of special protective equipment, respirators, tools, or equipment.

- Incidents that require road closures or civilian evacuation.
- The hazardous material incident has become one of multiple agency involvement.
- Involves a fire.

Level II Haz-mats usually initiate a response from the Fire Department Hazardous Material Response Team. Level II responders shall be trained to a level that will meet or exceed the scope of training in SARA Title III (OSHA), Title 29 CFR Section 1910 for first responders. A level II Haz-mat may be upgraded to a Level III incident.

Level III

Level III incidents are hazardous materials incidents that may involve fires, evacuations, or road closures, and will require an incident command system. Level III incidents are Multi-agency in nature. Level III Haz-mats initiate a response from the Fire Department Hazardous Material Response Team Level III responders shall be trained to a level that will meet or exceed the scope of training in SARA Title III (OSHA), Title 29 CFR Section 1910.

3. Specific Procedures for Level I Haz-Mat Response

a). Responsibilities:

The community supervisors will be responsible to respond to all hazardous materials incidents in their designated community within the County Right Of Way or on County controlled or owned property during normal business hours.

The On-call supervisor shall be responsible for responding to and evaluating all incidents after hours. Any spill, release, or dumping of the above mentioned materials onto/into County right of way or property shall be considered a Haz-Mat incident. SAC DOT Haz-Mat responders will utilize any legal, safe, and cost effective method necessary within the scope of its authority to abate, minimize, prevent, and/or mitigate hazardous material incidents regardless of department controlling that right of way or property.

The on-call, regional, or first on scene SAC DOT supervisor will determine the level of SAC DOT response.

b) Minor Spills:

Minor spills of oil, gas, diesel, antifreeze, transmission fluid, and oil based paint in county right-of-way or on County controlled/owned property will be cleaned up with solid-a-sorb or an absorbent such as sand. It is necessary to clean these materials from County maintained public surfaces to prevent slip hazards, vehicle accidents, and contamination to the stormwater system. *Tow truck drivers should clean up an accident scene.* If there is a responsible party attempt to get them to contact a clean up company (see attached). EMD/Sheriff/Law Enforcement can assist in this effort.

After the absorbent is swept up it shall be packaged for transport, or transported in the hopper of a mobile sweeper, to the Haz-Mat bin at 4949 Roseville Rd.

If a spill contaminates soil, for example a roadside shoulder, the soil can be removed, bagged or loaded on a truck and disposed of in the Haz-Mat bin at Roseville Road and Watt Avenue. South area supervisors have the option of dropping off (half full, marked and labeled, as to the contents and origin, bags of used solid-a-sorb and/or soil at the haz-mat area located in the sign's maintenance yard to be transported to Roseville Road facility by the Yard person.

* Latex paint spills can be absorbed with solid-a-sorb solidified and disposed of in normal refuse destined for the landfill.
* Cement spills depending on the size can be picked up by a sweeper or by hand solidified and disposed of in normal refuse destined for the landfill or recycled.

Note: A "complete cleanup" on a spill will be when the pavement surface is dry. As the operator of the property (Right of Way) SAC DOT Haz-Mat responders have authority over how and when a spill or release is contained and/or cleaned up. Highway Patrol and Sheriff officers may assume command of any scene involving roads and /or property. Under most circumstances SAC DOT Haz-Mat responders will be required to authorize the expenditure of County funds for the cleanup and disposal costs and thus must exercise caution in response to demands from other agencies in regards to safety and expense.

c) Sharps: Usually refer to used hypodermic needles found by crews in the County right-of ways. Sharps pose a potential health hazard to the public from biological contamination. The definition of sharps is any device having acute edges or protuberances capable of cutting or piercing the skin. Examples include hypodermic needles, syringes, and blades such as

scalpels or knifes. Sharps constitute a hazard to public health and safety and when found on County Right Of Way are to be picked up with a long handled tool (not hands) and put into a sharps container. Sharps containers will be issued to Haz-Mat trained personnel by the Haz-Mat supervisor. Once a needle has been placed inside the sharps container it must be turned in for disposal to the Haz-Mat supervisor within 7 days. Isolyser kits contain an acid that neutralizes pathogens and may be used for 6 months. The Haz-Mat supervisor will dispose of turned in sharps in accordance with state law.

d) Leaking Vehicle/Vehicle Accidents: Leaking vehicles are a major point source of stormwater contamination, cause damage to the pavement surface, and present a hazard to motorists and pedestrian traffic. Many of these calls are associated with neighbors calling in on other neighbors because the leaking vehicle is creating an eye sore on their street.
The severity of the leak will dictate the action taken. If the leak is large and has been ongoing for a period of time solid-a-sorb may have to be used to clean up. If the leak is smaller it may be that no clean up is necessary.
The next step is to make contact with the owner of the vehicle. Direct the vehicle owner to have the leak fixed or to park the vehicle in the driveway. If the owner is not available, leave your business card and request they call you.

Note: If the vehicle's registration is expired call Zoning Enforcement (Vehicle Abatement) #875-5656, and report the vehicle to them. You will be asked for the location, make, model, color, and license plate number of the vehicle.

e) Automobile batteries: Contain acid and lead and must be removed from County right of way and be properly disposed of to prevent environmental contamination. Automobile batteries are handled in two ways. First, if the battery is intact with no leaks it can be picked up and dropped off in the Light Equipment battery room located on the south west side of the building. You must go to the front counter of the parts room <u>first</u> and notify the parts personnel. The second situation would involve a battery that is cracked and has leaking fluids. When a battery has liquid leaking from it, place the battery in a 5-gallon bucket and apply sodium bicarbonate to neutralize the spill. **Remember that acid/base reactions require the presence of water**. Buckets containing leaking batteries can be covered and dropped off at the Haz-Mat yard.

f) Illegal dumping of hazardous materials: These materials may pose an immediate and/or potential threat to the health and/or safety of the public and the environment. SAC DOT is not responsible for hazardous materials incidents that occur on private property.
If an illegal dump within the scope of authority and responsibility is deemed by a Haz-Mat team member to be an immediate threat to the public safety or health or the environment SAC DOT may be required to pick up and/or clean up the containers or material. If unknown, the materials may need to be categorized by Fire (Haz-Cat) in order to determine if the material is safe to transport the incident then becomes a level II; Notify EMD and deny entry of unauthorized personnel, protect yourself and others. Try to prevent any corruption of the scene, as the Sheriff may want to investigate the incident. When the material is deemed safe to transport bring it to 4135 Traffic Way and mark it with the date and location of the dump as well as the responders name or initials before placing it into the fire safe Haz-Mat shed G. Use the appropriate coding if the material is associated with a NCU.

g) Material in a storm drain: Is defined as any hazardous substance that intentionally or inadvertently has entered the underground storm drain system. In the underground system hazardous materials can pose a threat to the health and/or safety of the public and the environment. The Sacramento County Department of Water Quality, when operationally possible, will assist with the identification of facilities and cleanup of materials such as sewage spills and aggregate spills into storm drains and creeks. The Sacramento County Department of Water Quality will not assist in the cleanup of hazardous materials, which may be considered damaging to County equipment or hazardous to human health for which they have not been trained such as petroleum products. SAC DOT is not responsible for incidents within the underground drainage system that involve materials that have no explicit training requirements to handle such as aggregate or latex paint spills. Such spills or incidents once determined to not be a hazard to health or the environment will be referred to Water Quality for clean up as deemed appropriate by County Water Quality in accordance with stormwater protection guidelines or regular maintenance. Title 15, Section 15.12.100 of the Sacramento County Code prohibits discharges to the "County storm-water conveyance system." Section 15.12.140 prohibits threatened discharges (open buckets and barrels). Prevent further contamination of the system if possible by damming or diking the drain (the local fire department is an excellent resource for this type of activity. County Central can contact Fire if you require assistance) and cleaning up any contaminate in the gutter. If material has entered the underground system or is an aggregate material or sewage call Com. 3 and have them notify Water Quality for assistance/advice. SAC DOT responders who are not confined space trained may not remove the cover of a utility access hole or enter the underground system. If material has not entered the drain you can clean up the material with pads or absorbent. Dispose of absorbents in the bin at Roseville and Watt.

h) Material in a creek is presently within the scope of responsibility of SAC DOT. Call County Communications (Com 3) immediately and notify Water Quality, and the Haz-mat Supervisor for assistance. Hazardous materials that have reached a watershed pose the greatest risk of damage to public safety and the environment. Notify County Central of any such instances and have them call EMD/ Water Quality. County Water Quality will provide maps books and assistance such as sandbags and pumps for creeks and plugs for outfalls. County Water Quality Channel Maintenance personnel are not Haz-Mat trained and therefore should not be exposed to any material, which may be hazardous to human health regardless of level. Note the color of the contamination, the location and direction of flow, and give an estimate of the approximate density of the contaminate, if it floats or looks oily, if it appears miscible, and if the contamination is heavy or light. Notify Fish and Game/OES. Attempt to locate the source of the contamination. Search the creek up stream to the outfall, or drive around the neighborhood and look for contamination going into a storm drain. Highway Supervisors are responsible for calls in creeks in their areas. In the interest of public safety SAC DOT may be required to provide traffic control or other assistance. Hydrocarbon (oil/gas) absorbent booms are located in the storage shed at Roseville and Watt as well as in the Haz-Mat shed located in the auxiliary Yard. The Haz-Mat supervisor, the on-call supervisor and the yard person have keys to these sheds and may be called for assistance.

A Haz-Mat supervisor will respond to all:

- Level 3 Haz-mats
- Large containers
- Major incidents
- When assistance is needed.

4. Level II Procedures:

The On-call Supervisor will respond. County Fire usually will determine level II response. If the situation warrants call a Haz-Mat Supervisor for assistance. All Transportation On-call supervisors are trained to Level II response in SARA Title III (OSHA), Title 29 CFR Section 1910 for first responders. All On-call supervisors are capable of level II response. Because of the time consuming nature of level II response such as multiple agency involvement, jurisdictional complications, the need for underground system and creek maps and knowledge of various agencies as well as contracts it is at the discretion of the responding supervisor to call a Haz-mat supervisor for assistance as needed. The criteria to use in the abatement of level II Haz-mat incidents are:

- **Contact #950 or #760 if unsure as to how to proceed!!!!**
- Determine jurisdiction
- Determine extent of hazard
- Follow guidelines of importance- (Self, public, environment, property)-in that order.
- Notify appropriate agencies
- Coordinate containment effort
- Determine appropriate response effort
- Work within command system
- Protect the County's interests
- Try to locate responsible party
- Document response effort
- Use appropriate cost effective mitigation and/or remediation up to and including utilizing other agencies (the Sheriff, and the Department of Fish and Game) to compel responsible parties to hire a clean up company.
- File reports with appropriate agencies

5. Supplies and Equipment

- **148-702** F-350 Haz-mat response truck, Stocked with drums, test kits, absorbents, pumps, underground system mapbooks, sodium bicarb, and a 2-ton crane. Assigned to Mike. Garcia
- **135-705** F-250 Haz-mat response truck, absorbents, tools, maps, drum, buckets, and pumps. Used as yard person truck. Parked in space 34 when not in use.
- **17, 135 series supervisor's trucks stocked with solid a sorb, brooms, shovels and assorted tools.**
- **171-431** Sand spreader truck, loaded with sand, ready 24/7 parked in H warehouse.
- **779-582** mobile sweeper designated to yard. For sweeping up spills and absorbents

- **G-shed** Fire safe, spill contained locker with ventilator and alarm. Located on the West side of the lot at 4135 Traffic Way. Used to store emergency response generated hazardous waste. EPA# CAS111111034
- **F-shed** spill contained locker located at 3860 Branch Center Road, used for storage of absorbent pads, containerizing equipment, pumps, acid neutralizers, and visqueen used to abate hazardous material incidents.
- **H-warehouse** used to house sandtruck and to stockpile palletized absorbent.
- **On Call shed** located at 4949 Roseville Rd. used to store Palletized absorbent, absorbent pads, and tools.
- **On Call shed** located at 3860 Branch Center Rd. used to store palletized absorbent, absorbent pads, and tools.
- **10 Yard bin Located** at 4949 Roseville Rd, Contract with Safety Kleen (vendor) 10 yard hydraulic close top roll away bin used to temporarily (90 days) store fuel and oil spill contaminated soils and absorbent from Haz-mat response. EPA CAS111111034.
- **Sacramento County Department of Transportation,** Various backhoes, dumptrucks, Vactors, Pumps, Mobile Sweepers, and other types of highway construction equipment that can be utilized in an emergency situation.

The following are the recommended supplies needed to abate **minor hazardous material incidents** and are recommended to be on all on all supervisors' trucks.

- 2- 25 lbs. Bags of Solid-a-Sorb
- 1- park patrol grabber
- 1- box of garbage bags
- 1- grip tight battery carrier
- 1- push broom
- 1- square point shovel (An aluminum Snow type shovel is preferable)
- 1- 5 gallon plastic bucket with lid.
- 1- 1gallon container of sodium bicarbonate
- 1- Pack of PH paper
- 1- Sharps container
- 5- Absorbent pads

5. Disposal Procedures

Hazardous materials collected by the Sacramento County Emergency response effort shall be disposed of pursuant to the Code of Federal Regulations Title 40, and California Code of Regulations Title 22. Hazardous Waste that is generated by the SAC DOT emergency response effort shall be temporarily (<90 days) stored at 4135 Traffic way or 4949 Roseville road and disposed of as per contract under EPA # CAS111111034. Compressed Gas Cylinders can be disposed of by the rental company that owns them (AirGas, Coca-Cola) if the company can be contacted. Propane bottles can be disposed of per contract with Suburban Propane in Rancho Cordova. In accordance with SAC DOT SWPP place all haz-mat related containers into the fire safe spill containment shed located at 4135 Traffic Way.

7.
Documentation Procedures

Documentation **shall** be completed in the comments section of the appropriate:

1. *__Hansen Service Request__
2. Haz-mat Response Report

Documentation will include the following:

1. Your name
2. Date that you responded to incident
3. Incident location
4. Time you arrived and departed
5. Action(s) taken
6. On Road vs. Off Road
7. Type and amount of material
8. Supplies used
9. Responders that were present
10. Disposal of material

8.
Communications

All Haz-mat calls will be dispatched directly to the Community Supervisors. If the Community Supervisor is not available dispatch order will be as follows:

- Another Community Supervisor in close proximity.
- A Haz-Mat Supervisor, Mike Garcia or Glen Phillips
- Any Supervisor.

Central Communications shall be utilized to notify other agencies.
The Haz-Mat supervisor will distribute communications, prepare Water resources reports, quarterly and annual reports, annual Hazard communication, and provide guidance and support as necessary.
A copy of these procedures will be kept in the on-call box.
New phone lists will be distributed on an as needed basis. (See attached)

AREA PLAN FOR

EMERGENCY RESPONSE TO

HAZARDOUS MATERIALS INCIDENTS

IN SACRAMENTO COUNTY

SEPTEMBER, 2007

SACRAMENTO COUNTY
ENVIRONMENTAL MANAGEMENT DEPARTMENT
HAZARDOUS MATERIALS DIVISION
8475 JACKSON ROAD, SUITE 200
SACRAMENTO, CA 95826

(916) 875-8550

WWW.EMD.SACCOUNTY.NET

ACKNOWLEDGEMENT

Although the Sacramento County Environmental Management Department (EMD) is responsible for writing, maintaining and distributing the Area Plan for Emergency Response to Hazardous Materials Incidents, the completion of this task would not be possible without the cooperation and teamwork of several people representing local and state organizations. The result of this multi-agency effort is a concise, detailed document that outlines appropriate response actions to hazardous materials incidents within Sacramento County. EMD would like to specifically acknowledge the efforts of the following individuals who contributed significant time and energy in the review and editing of this document.

- Dr. Karen Tait, Sacramento County Health Department
- Mark Wells, Sacramento Metropolitan Fire District
- Mike Teague, Sacramento Metropolitan Fire District
- Ed Vasquez, Sacramento City Fire Department
- Rick Vasquez, Sacramento City Fire Department
- Jan Dunbar, Sacramento City Fire Department
- Jeff Welchman, Sacramento County Public Works – Dept. of Transportation

Sincerely,

Val F. Siebal, Director
Sacramento County Environmental Management Department

CHAPTER 1: PROPOSED AREA PLAN

(Title 19 CCR § 2720)

A. DESCRIPTION AND IMPLEMENTATION OF AREA PLAN

The use, storage and transportation of hazardous materials and the generation and transportation of hazardous wastes are issues of increasing importance in the protection of life, the environment and property in Sacramento County. The prevalence of businesses routinely storing and handling hazardous materials and hazardous wastes has prompted an increasing awareness and concern for the public's health and safety. Hazardous material emergencies may be the result of threatened releases, highway accidents, clandestine drug laboratories, train derailments, pipeline transportation accidents, fire and/or spills at fixed facilities or the result of a response to a weapons of mass destruction (WMD) incident. The Area Plan describes the responsibilities of local, state and federal agencies during incidents involving the release and/or threatened release of hazardous materials.

In California, all state agencies are required to use the Standardized Emergency Management System (SEMS), as outlined in Section 8607 of the California Government Code. SEMS standardizes the principles and methods of emergency response in California. The Incident Command System (ICS) operates under SEMS and is an efficient tool for responding to all types of incidents. All local fire departments use the ICS when responding to incidents. Under the Incident Command Structure, the Incident Commander (IC) has the primary responsibility and the authority to activate a response consistent with the Area Plan. On February 8, 2005, Governor Schwarzenegger issued Executive Order S-2-05, directing the Governor's Office of Emergency Services to integrate the National Incident Management System (NIMS) into SEMS. Integrating NIMS into SEMS provides statewide consistency with emergency response activities and a nationwide approach for federal, state, local, and tribal governments to work together more effectively and efficiently. It is the intent of this Area Plan to comply with NIMS wherever changes may have occurred.

The State legislature, in recognizing the risks that hazardous materials and wastes pose to emergency responders and the community, created a hazardous material disclosure program under Chapter 6.95, Section 25500, et seq., of the Health and Safety Code. This program requires the Sacramento County Environmental Management Department (EMD) to develop a Hazardous Material Emergency Response Area Plan (Area Plan) detailing the duties and responsibilities of governmental and other response agencies in a hazardous material incident. The Area Plan provides information for agencies involved in hazardous material response within Sacramento County.

There are several plans related to the Area Plan which deal with hazardous materials emergency response at the federal, state, regional and local levels. These plans include but are not limited to the National Contingency Plan, the California Hazardous Substances Response Plan, the Railroad Accident

Prevention and Immediate Deployment (RAPID) Plan, the Region IV Local Emergency Planning Committee (LEPC) Hazardous Material Emergency Response Plan and the Local Agencies' (both Cities and County) Emergency Plans. The National Contingency Plan addresses the hazardous material response procedures for the National and Regional Response Teams. The California Hazardous Substances Response Plan addresses the State's hazardous material response procedures. The purpose of the RAPID plan is to describe how state departments and agencies that are members of the Railroad Accident Prevention and Immediate Deployment Force will respond to assist local agencies and work cooperatively at large-scale hazardous material releases resulting from surface transportation accidents. This plan also describes how funds in the Hazardous Spill Prevention Account authorized by the Public Utilities Commission Regulations, Section 7714, will be used to train and equip state and local hazardous material response teams. The Region IV LEPC Hazardous Material Response Plan, as mandated by Title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), describes hazardous material emergency response for the eleven Region IV counties: Alpine, Amador, Calaveras, El Dorado, Nevada, Placer, Sacramento, San Joaquin, Stanislaus, Tuolumne, and Yolo. Lastly, the Local Agencies' Emergency Plans address many types of natural and man-made emergencies.

B. PROVISIONS FOR INTEGRATING INFORMATION FROM BUSINESS PLANS

The disclosure program requires businesses in Sacramento County that store hazardous materials and/or hazardous waste in quantities equal to or greater than 55-gallons of a liquid, 500-pounds of a solid, or 200 cubic feet of gas, to prepare a business emergency response plan (Hazardous Materials Plan) and submit the Plan to EMD. The intent of the disclosure program is to provide first responders with site-specific information such as chemical inventory, emergency phone numbers, and facility site maps indicating location and quantities of hazardous materials and wastes stored on site. The information is collected and verified by EMD for compatibility with the Area Plan.

EMD has identified business facilities that handle and store reportable quantities of hazardous materials and hazardous waste. EMD provides the Sacramento Regional Fire/EMS Communications Center with a bi-weekly update on CD-Rom which includes hazardous material business plans, hazardous material inventory sheets, site maps, and contingency plans. This information is also distributed to each of the fire department's Hazardous Materials Response Teams (HMRTs) and is maintained on EMD's incident response vehicle.

During a hazardous materials incident the information from the CD's may be used to supplement the Area Plan guidelines at fixed facilities. By developing hazardous material emergency response plans, both businesses and governmental agencies can be better prepared for a coordinated response to these hazardous material incidents, thereby minimizing potential risks to life, the environment and property.

C. REPORTING FORM FOR AREA PLAN

EMD, the Certified Unified Program Agency (CUPA) for Sacramento County, is responsible for meeting the reporting form requirements of the California Code of Regulations, Title 19, Chapter 2, Subchapter 3, Article 3. EMD will demonstrate compliance through the use of the "Optional Model Reporting Form" which serves as the Table of Contents for this Plan (page i).

CHAPTER 2: EMERGENCY RESPONSE PROCEDURES

(Title 19 CCR § 2722)

A. APPROACH, RECOGNITION, AND EVALUATION OF RELEASES AND THREATENED RELEASES BY EMERGENCY RESPONSE PERSONNEL

1. APPROACH

The first emergency personnel to arrive at an incident will act as the Incident Commander (IC) until relieved by a representative who has the appropriate IC authority as identified in the following section. First responders are trained to respond in a defensive manner. The primary responsibilities of these responders may include the following:

a. The order of completion of the tasks is incident specific and should be based on protecting life, the environment and property.

b. Isolate the scene and deny entry (establish zones).

c. Identify the product and product characteristics (if identification can be done safely - i.e., from a safe distance).

d. Establish a command post in the support zone using the SEMS (Standard Emergency Management System) Incident Command System. The command post is established upwind, uphill and/or upstream from the incident.

e. Assess the type of incident and request appropriate resources based on the level of emergency.

f. Ensure notification of all appropriate agencies.

g. If necessary, rescue victims if it can be done safely (i.e., if proper level of protection is available.)

h. Provide emergency medical care, including decontamination of exposed persons.

i. Determine need for protective actions (e. g., evacuation or sheltering in place.)

j. Conduct evacuation, if appropriate.

Perimeter security and traffic control is the responsibility of the law enforcement agency having traffic investigative authority and should be initiated as soon as possible to minimize contamination of citizens and to allow emergency response personnel to perform their tasks without interference.

The IC will be responsible for coordinating the multi-agency operations (i.e., fire, law enforcement, EMD, public works, etc.) and designating the safety officer. An example of the IC Checklist is included in Appendix D and may be used to facilitate this responsibility.

2. RECOGNITION

Recognizing the type and degree of hazard present is usually one of the first steps after arriving at an incident. The substance involved must be identified in order to respond appropriately to the hazards. Among the sources of hazardous material identification are the following:

a. Placards

b. Shipping manifests

c. Visual observation

d. Package labels

e. Container shapes, sizes and/or color

f. Information from drivers, shippers, operators, and/or witnesses

g. Chemtrec - Chemical Transportation Emergency Center provides two types of assistance during a hazardous material incident:

   (1) Relays information in regards to the specific chemical (see Appendix E for optional Chemtrec Communication Form.)

   (2) Will contact manufacturer or other expert for additional information or on-site assistance.

The IC may use the above resources to identify the substance involved (if the identification can be done safely i.e. from a safe distance). On Level II incidents, the Sacramento Area Hazardous Materials Response Teams (HMRT's) will provide sample retrieval, material identification and/or categorization. These units have equipment available for sampling, monitoring and identification testing. This equipment will be used to evaluate the extent of the release. The EMD IR Team representative is available to provide technical support. The full extent of EMD's responsibilities is explained in further detail in Chapter 4 of this Plan. HMRT units have the equipment available to respond to most Level III incidents. If the incident requires additional personnel or equipment beyond the capabilities of the fire departments HMRT unit(s) the IC may exercise Sacramento County's Mutual Aid agreement or the State Master Mutual Aid Agreement to which all counties are signatories**.**

3. EVALUATION

The level of response may vary due to differing perceptions of the incident by response personnel, based upon on their experience and training. In Sacramento County, three (3) levels of hazardous material emergencies have been developed to assist in determining the level of response needed during a hazardous material incident. The identified response criteria include:

- Tools and equipment needed;
- Intervention expertise needed;
- Protective clothing;
- Extent or evacuation;
- Extent of special intervention activities;
- Extent of local, state, or federal assistance required;
- Extent of injury or death;
- Extent of decontamination procedures.

a. **Level I Incident (Minor)**

(1) Spills, leaks, and ruptures involving known hazardous materials which can be reasonably contained, extinguished, and/or abated utilizing existing equipment, supplies and resources immediately available to the First Responders – Operational (F.R.O.) of the fire department having jurisdiction; and

(2) Hazardous materials incidents which do not exceed the necessity to utilize standard structural/flammable liquid protective equipment immediately available to the first responder, and/or

(3) Hazardous material incidents which may require the removal and evacuation of civilians within the immediate designated perimeter of the incident scene.

b. **Level II Incident (Moderate)**

(1) Hazardous material incidents which may require the use of any kind of specialized protective clothing, equipment, tool, instrument, knowledge or expertise of the HMRT, and which is not available to and beyond the scope of training of the First Responder – Operational of the agency having jurisdiction; and/or

(2) Hazardous material incidents which can only be identified, tested, sampled, contained, extinguished, and/or abated utilizing the expertise and resources of the HMRT; and/or

(3) Hazardous material incidents which, based upon the hazard threat of the substance, require evacuation of civilians within the area of the fire department having jurisdiction; and/or

(4) Hazardous material incidents that are permitted to burn for a controlled period of time or are allowed to consume themselves, or which may require special extinguishing techniques and objectives.

c. **Level III Incident (Major – Catastrophic)**

(1) Hazardous material incidents that can only be contained and/or abated by utilizing the highly specialized equipment, services, or supplies available from special municipal, environmental, and industrial response personnel and teams who are in support of the activities of the HMRT. Such equipment, techniques, and qualified personnel are in excess of or are in addition to those available from the on-scene HMRT and/or

(2) Fires involving hazardous materials that are allowed to burn due to ineffectiveness or dangers of the use of extinguishing agents, or the unavailability of water, the threat of large container failure by explosion, detonation, or, or a container failure has already occurred; and/or

(3) Hazardous material incidents which require evacuation of people from large geographical area extending across jurisdictional boundaries; and/or there are serious injuries or deaths as a result of the hazardous material incident.

4. DISPATCH/NOTIFICATION PROCEDURES FOR HAZARDOUS MATERIAL INCIDENTS:

Each level of a Hazardous Materials Incident has a minimum deployment of resources that are required. These requirements are subject to change as policies in the fire departments are updated and/or revised and therefore are not detailed here. Fire Dispatch maintains the call down lists for hazardous material incidents and will be advised by fire personnel of any changes. Additional personnel from other agencies may be added to the call down list maintained by fire dispatch and notified of the incident.

EMD IR Team Notification: An alpha-numeric pager is the primary method of alerting the EMD IR Team members of a hazardous materials incident. The dispatch center will be given a call back telephone number or radio contact. A page will be sent out to the EMD IR team member on call. The alerted IR Team member will contact the County Central operator to obtain information regarding the incident and confirm they are

responding. EMD should be notified of any incident, including but not limited to a fire or possible release that occurs at a facility which stores or generates hazardous materials or hazardous waste.

All other agencies will be contacted by the dispatch center of the agency having jurisdiction on an as-needed basis, as determined by the IC. Individuals working for agencies that may be required to respond to a hazardous materials incident should only respond to an incident if requested by the IC.

In the event of a spill involving hazardous material or hazardous waste which constitutes an immediate threat to public health, EMD will coordinate and function as a liaison with the County Health Officer to initiate actions to declare a county health emergency. Appendix A provides guidelines for such a declaration.

B. MONITORING AND DECONTAMINATION GUIDELINES FOR EMERGENCY RESPONSE PERSONNEL

1. GENERAL

Decontamination (or contamination reduction) is the physical and/or chemical process of reducing and preventing the spread of contamination from persons and equipment used at a hazardous material incident.

At every incident involving hazardous materials there is a possibility that response personnel and their equipment will become contaminated. The contaminant poses a threat, not only to the persons contaminated, but also to other personnel who may subsequently have contact with them or the equipment. Emergency response personnel and equipment are subjected to various degrees of chemical contamination as a result of exposures encountered at hazardous material incidents. Response personnel can become contaminated in a number of ways, including exposures to vapors and gases, walking or driving through released liquids, powders, or contaminated soils, and from contact with other contaminated personnel, victims, or equipment.

A committee comprised of local responding agencies was formed to create the Regional Mass Casualty Decontamination Protocol. This document has been completed and is currently being reviewed for adoption by local agencies. This document will be incorporated into the Area Plan once it has been adopted.

2. TYPES OF DECONTAMINATION

Decontamination (decon) can be divided into three types which are described as follows:

a. First Responder or Emergency Decon - refers to decon that is urgent, field expedient and there is an immediate need to remove

contaminants. Most often it is done to civilians or response personnel who have had direct exposure to hazardous solids, liquids, mist, smoke and certain gases, and who are displaying related symptoms. It is a two stage process: the first stage consists of clothing removal (privacy will be provided only if it will not delay the decontamination process), and a gross contaminants removal with copious amount of water; the second stage is a soap-and-water scrub and rinse. Exposures to the eyes might involve flushing for longer durations. Provide emergency covering (i.e., emergency blankets and sheets for the victims). The environment and personal modesty are not of primary importance when there are potentially life-threatening injuries/exposures; however, emergency decon should, if possible, take place in the least environmentally sensitive area. Once adequate resources are available, and incident conditions will allow, steps should be taken as soon as possible to minimize the impact of such emergency operations on the environment. Rescuers should don the best available PPE when performing Emergency Decon.

b. Technical (Primary) Decon - refers to that form of decon which is provided to personnel working in the Exclusion Zone or Contamination Reduction Zone. Although accelerated, it is a more thorough and detailed process than emergency decon. It is organized and conducted by hazmat teams or specially trained decon teams. A Contamination Reduction Corridor is established prior to entry of a hazmat team and is conducted within the Contamination Reduction Zone. This generally includes Hazmat Entry and Decon Teams working in Level A or Level B protective clothing. Primary decon provides for the collection of the contaminants for analysis, treatment or proper disposal.

c. Mass Casualty Decon - refers to decon provided to civilians that may have been exposed to hazardous chemicals, but are not displaying any related symptoms of exposure. Secondary Decon may also be used following Emergency Decon for victims displaying related symptoms. In Secondary Decon there is time to contain runoff water and provide for modesty. This level of decon might involve the use of tents, trailers, tarps, containment basins and/or showers. Secondary Decon is time consuming for victims with immediate life-threatening injuries/ exposures.

3. EXTENT OF DECONTAMINATION REQUIRED

Decontamination procedures should be tailored to the specific hazards of the incident and may vary in complexity and number of steps, depending on the degree of hazard and the employee's exposure to the hazard. Decontamination procedures for personnel and personal protective equipment will vary depending upon the specific hazardous material or symptoms of exposure, since one procedure or method may not work for

all substances. Evaluation of decontamination methods and procedures should be performed, as necessary, to assure that employees are not exposed to hazards by reusing personal protective equipment.

To achieve plan objectives and protect responders from harm or risk as a result of exposure to hazardous materials, the following general guidelines should be used when the decision to decontaminate personnel and/or equipment is made by the IC and/or the EMD IR team member. In general, the HMRT units may complete decon for all responding agencies. If decontamination guidelines are not specified by the IC, each responding agency is responsible for decontaminating their own equipment based on the policies and procedures developed by their department. The exact procedure to use must be determined after evaluating a number of factors specific to the incident. The following factors must be considered when determining which decontamination process to use:

a. Prevention of further contamination. Minimizing contact with potential contaminants is essential to keep the incident from escalating.

b. The physical and chemical properties of the hazardous material. The very properties that make a chemical more hazardous also make it more difficult to decon. Gases are more likely to permeate clothing and skin tissue. Liquids are harder to see and remove than powders and other solid materials. Low-viscosity liquids may permeate more readily than high-viscosity liquids. Soluble materials will be easier to decon than non-soluble materials.

c. The amount and location of contamination. The more of the body that has been contaminated, the more involved the decon process will be. If contaminants are located near the face, there is a greater likelihood of harm due to inhalation or ingestion. If a product is located in other body cavities, folds, nails or hair, there is greater likelihood of permeation into the body. For this reason it is recommended to start decon with the head and then work down. Eyes, ears, nose, mouth, hair, armpits, etc., need to be thoroughly decontaminated, and open wounds need to be completely irrigated.

d. Contact time and temperature. The longer a contaminant is in contact with an object, the greater the probability and extent of contamination. For this reason, minimizing contact time is one of the most important objectives of decon. Temperature will also increase vapor production, which may in turn affect the rate of permeation.

e. Level of protection and work function. The Technical/Reference Specialist and the Decon Team Leader will determine the level of protective clothing needed for the Decon Team. Risk factors may

include but are not limited to; physical state of material, the likelihood of contamination and the task to be performed.

f. Reasons for leaving the hazard site. People with life-threatening medical emergencies may need very rapid emergency decon.

4. DECONTAMINATION PROCEDURES

Decontamination shall be performed whenever contamination is suspected. Decontamination is the responsibility of each responding agency. Decisions to decontaminate personnel should be made by or in conjunction with the IC.

The Contamination-Reduction Corridor will be established at all hazardous materials incidents, involving entry operation or decontamination for victims, responders, or equipment. The Decontamination Leader, in conjunction with the Technical/Reference Specialist, and the Assistant Safety Officer-Hazardous Materials will determine the extent of preparation for decontamination based on the hazard evaluation.

Fire department personnel trained to the First Responder Operation Decon level may be used to staff the decontamination area. Such personnel will be at the same level of protection or one level lower than the Entry Team.

All personnel and equipment entering the Exclusion Zone will be decontaminated and evaluated following final exit, if the material is hazardous and exposure is possible. Personnel exposed to toxic material(s) will take a shower following the operation in addition to on-site decontamination. The waste water generated during the decontamination process will be evaluated by the EMD IR team member who will give recommendations for disposal of the wastes generated and coordinate disposal operations with the appropriate hazardous waste disposal contractor.

a. General Decontamination Procedures – The organization setting up the decon area will have its own decontamination policies and procedures. Every incident will have unique situations and these procedures should be modified to meet the specific needs of the incident.

b. Decontamination During Medical Emergencies - In a properly functioning hazardous material response, victims will be decontaminated in the contamination reduction zone by properly suited and protected emergency responders (Primary or Secondary Decontamination). If needed, Primary or Secondary Decontamination will include removal of clothing, flushing affected skin and hair with water, and if needed, a mild soap and water wash.

5. BASELINE/ANNUAL MEDICAL MONITORING FOR EMERGENCY RESPONSE PERSONNELL

All agencies sending personnel to respond to hazardous materials incidents in Sacramento County are responsible for following the medical monitoring programs as outlined in their policies and procedures.

C. MONITORING AND DECONTAMINATION GUIDELINES FOR EMERGENCY RESPONSE EQUIPMENT

1. GENERAL

Emergency response personnel and equipment are subjected to various degrees of chemical contamination as a result of exposures encountered at hazardous material incidents.

a. Decontamination of Equipment – Measures should be taken to prevent contamination of sampling and monitoring equipment. Sampling devices typically become contaminated, but monitoring instruments, unless they are splashed, usually do not. Once contaminated, instruments are difficult to clean without damaging them. Any delicate instrument which cannot be decontaminated easily should be protected while it is being used.

Decontamination equipment, materials and supplies are generally selected based on risk assessment. In the event that decon is necessary, the HMRT unit would be equipped with the materials necessary for use during most hazardous materials incidents.

b. Sanitizing of Personal Protective Equipment - Respirators, reusable protective clothing, and other personal articles must be decontaminated and sanitized. The inside of masks and clothing becomes soiled due to exhalation, body oils, and perspiration. The manufacturer's instructions should be used to sanitize the respirator mask. If practical, protective clothing should be machine washed after a thorough decontamination; otherwise it must be cleaned by hand. Each responding agency is responsible for decontaminating their own equipment based on the policies and procedures developed by their department.

c. Persistent Contamination - In some instances, clothing and other equipment will become contaminated with substances that cannot be removed by normal decontamination procedures. A solvent may be used to remove such contamination from equipment if it does not destroy or degrade the protective material. If persistent contamination is expected, disposable garments should be used. Testing for persistent contamination of protective clothing and

appropriate decontamination must be done by qualified laboratory personnel.

2. DISPOSAL OF CONTAMINATED MATERIALS

All materials and equipment used for decontamination must be disposed of properly. Clothing, tools, buckets, brushes, and all other contaminated equipment that can not be decontaminated on-site must be secured in drums or other containers and labeled. Clothing not completely decontaminated on-site should be secured in plastic bags and disposed of with the clean up contractor.

Contaminated wash and rinse solutions should be contained by using step-in-containers (for example, decon pool) to hold spent solutions. Another containment method is to dig a trench about 4 inches deep and line it with plastic. In both cases, the spent solutions are transferred to drums, which are labeled and disposed of with other substances on-site by the clean up contractor.

CHAPTER 3: PRE-EMERGENCY PLANNING

(Title 19 CCR § 2723)

A. PRE-INCIDENT SURVEYS OF BUSINESS SITES

EMD inspects all businesses in Sacramento County that are regulated by Chapters 6.5, 6.7, and 6.95 of the Health and Safety Code at a minimum, every three years. Due to the frequency of these inspections, EMD has deemed pre-incident surveys unnecessary

EMD provides the fire department's communication center with CD-ROMs which contain information on local businesses within their jurisdiction including hazardous material inventories, emergency phone numbers, and site maps. EMD has also identified businesses that handle and store extremely hazardous materials and present the greatest risk to emergency responders. These are facilities which exceed threshold amounts of extremely hazardous substances and are required to prepare a Risk Management Plan (RMP). A current list of these facilities may be obtained by contacting EMD.

It is the responsibility of each fire jurisdiction to determine the necessity of pre-fire inspections.

B. PRE-EMERGENCY PLANNING AND COORDINATION AMONG EMERGENCY RESPONSE PERSONNEL WITHIN THE JURISDICTION

Pre-emergency planning shall include coordination and training of emergency response personnel between responding agencies.

EMD will coordinate training on the final Area Plan to ensure all agencies that might have responsibilities during a hazardous materials incident response are aware of the requirements.

1. AREA PLAN REVISIONS

The Area Plan will be completely reviewed and revised every three years by EMD as required by the California Code of Regulations, Title 19, Chapter 4, Article 3, Section 2721. During the revision process EMD will request input from the participating agencies on the Area Plan Distribution List (Appendix H) which includes all appropriate city, county, and state agencies. In the interim, the Plan will be maintained through the coordination with local, state and federal agencies in addition to reviewing actual responses and the ongoing collection of new data. Any changes will be reviewed and approved by the appropriate agencies. Revisions will be routed to all agencies on the Area Plan Distribution List and forwarded to the Governor's Office of Emergency Services. These revisions will be recorded in the Record of Revisions (Appendix H) and will be available for review in electronic format on the County's website at http://www.emd.saccounty.net.

C. LOCAL, STATE AND FEDERAL EMERGENCY FUNDING AND ACCESS

1. FUNDING

The IC will, under advice from the EMD IR Team Member, take all necessary steps to ensure restoration of the scene to a normal condition after a hazardous material incident. The responsible party for the clean-up will be the agency that has jurisdiction where the incident initially occurred, or the identified responsible party (i.e. property owner) even if the contamination has migrated off-site. Steps include, but are not limited to:

a. If the incident occurs on a State highway, the CHP is the designated IC and will notify the California Transportation Agency (CalTrans) in order to obtain their services for clean up.

b. If the incident occurs on a County road or on private property, the IC or designee will contact the responsible party, i.e., trucking company, chemical company, facility owner, property owner, etc., and inform them of their obligation to mitigate the incident and give them the opportunity to provide their own clean up service and/or contract with a registered hazardous waste hauler.

c. For a minor incident on private property or on a public road, when a responsible party cannot be reached or is uncooperative, the IC, through consultation with EMD will explore alternate clean-up options. If unavailable, EMD will make contact with the DTSC Duty Officer to access funding and determine if substance triggers the hazardous waste criteria (see Appendix G).

d. For a major incident requiring a costly clean-up, if a cooperative, responsible party cannot be contacted, State or Federal Superfund funding should be considered. EMD can assist in this effort.

The IC or designee will consult with EMD and the clean up crews to confirm adequacy of the clean up procedures, which may involve removal or treatment of the waste. The clean up should include any on- or off-road contamination which may have occurred.

If mitigation cannot be completed, post "Warning Hazardous Material" signs or tape in a conspicuous location near the incident until clean up is accomplished. This decision will be made by the IC, in conjunction with the EMD IR Team Member.

The IC has overall responsibility to maintain surveillance of the scene and ensure adherence to applicable regulations and may delegate this responsibility to another agency (i.e. EMD, Public

Works, etc.) once the incident has been contained, and declared to be in the "Recovery Phase".

2. RECOVERY OF DAMAGES AND CLEAN UP COSTS

Spills or incidents occurring on private property shall be the responsibility of the property owner and/or the responsible party causing the spill. All costs associated with response and recovery from a spill or incident, be it public or private, shall be the responsibility of the property owner and/or the responsible party causing the spill.

3. ENFORCEMENT

When on-scene operations are directed by city or county personnel, any required post incident enforcement shall be taken through the appropriate public agency having jurisdiction. In situations where a State or Federal response team directs on-scene operations, that team shall be responsible for enforcement of appropriate laws and regulations.

D. ACCESS TO STATE APPROVED AND PERMITTED HAZARDOUS WASTE DISPOSAL FACILITIES AND EMERGENCY RESPONSE CONTRACTORS

It is the responsibility of the IC to make certain that the spilled material is to be transported in an approved manner and in accordance with the Code of Federal Regulations, Title 49 and the California Code of Regulations, Title 22. The EMD IR Team Member will be available for advice on these technical issues as well as locations of approved hazardous waste disposal sites. A current list of emergency clean-up companies and registered hazardous waste haulers can be obtained by contacting EMD.

E. INTEGRATED RESPONSE MANAGEMENT SYSTEM

1. ORGANIZATION

The local organization which will respond to a hazardous material incident is structured to provide a multi-agency response using the National Incident Management System (NIMS). Integrating NIMS into the previous Standard Emergency Management System (SEMS) provides statewide consistency with emergency response activities and a nationwide approach for federal, state, local, and tribal governments to work together more effectively and efficiently. It is the intent of this Area Plan to comply with NIMS wherever changes may have occurred. All local fire departments use the Incident Command System (ICS) when responding to incidents. Under ICS, the Incident Commander (IC) has the primary responsibility and the authority to activate a response consistent with the Area Plan.

The system is designed to minimize duplication of effort by giving each person a structured role in the organization, and each organization its piece of the larger response. This system clearly defines the chain of

command and limits the control of any one individual. For major incidents, State assistance would be accessed to provide support to local response as coordinated through the IC. The level of the response, skills necessary to abate the problem, and agencies participating in the emergency organization, will be geared to the nature of each specific hazardous material incident. On incidents involving multiple agencies or jurisdictions, the use of a unified command structure is mandatory.

The Sacramento County Office of Emergency Services is responsible for overall pre-emergency planning and coordination among the various emergency responder agencies within the incorporated cities and unincorporated areas of Sacramento County. This includes the coordination of emergency assistance between jurisdictions. This responsibility also lies with the Region IV LEPC, as required by SARA Title III and the Community Right to Know Act.

Roles and responsibilities of the various agencies that might respond to a hazardous materials incident are identified in Chapter 4 of this Area Plan. Appendix I identifies a list of acronyms and standardized terms used during hazardous material incidents.

2. ROLE DEFINITIONS IN THE INCIDENT COMMAND SYSTEM (ICS)

In California, the Firescope Incident Command System (ICS) is the required structure to be used by response agencies involved in a hazardous materials incident. ICS provides the framework from which all response agencies, as well as the responsible party, can work together in an efficient and effective manner in accordance with NIMS. The ICS is the standardized management system utilized in handling emergencies and ICS is applicable to large and small hazardous material incidents. The ICS system consists of procedures for controlling personnel, facilities, equipment and communication.

a. Incident Commander (IC)

The IC shall employ overall management, coordination and responsibility over a hazardous material incident, including a WMD event. The IC shall be responsible for the identification of incident resources and needs, the procurement of the resources so as to abate the incident, and protect life, environment and property.

The IC shall not be responsible for the detailed direction of technical or specialized procedures, but shall oversee that these procedures are carried out when needed. Scene management decisions are to be made with the assistance of the Operation's Chief, expert advisors, and/or specialty employees.

The IC shall be:

California Highway Patrol (CHP): On State highways and county roads in unincorporated areas.

Sheriff: Off highway in the unincorporated areas.

Police Departments: All incidents within city limits except in the City of Sacramento where it is the Sacramento Fire Department.

Other: The IC shall be the designated emergency response official on the scene in the absence of law enforcement, provided that the jurisdiction has prepared a written agreement prior to an incident.

b. Operations Chief (Ops Chief)

The Ops Chief is the designated fire official responding to the scene of a hazardous material incident, including events involving WMD. The Ops Chief will provide resources to assist in securing and maintaining immediate control of the incident until the situation has been stabilized.

The Ops Chief shall be responsible for directing the efforts of, and be responsible for, but not limited to, rescue and first aid; suppression activities; containment; cleanup; personnel protection and safety; and coordinating incident efforts with the IC.

c. Hazardous Materials Group Supervisor

The Hazardous Materials Group Supervisor reports to the Operations Section Chief. The Hazardous Materials Group Supervisor is responsible for the implementation of the phases of the Incident Action Plan dealing with the Hazardous Materials Group operations. The Hazardous Materials Group Supervisor is responsible for the assignment of resources within the Hazardous Materials Group, reporting on the progress of operations and the status of resources within the Group. The Hazardous Materials Group Supervisor directs the overall operations of the Hazardous Materials Group.

d. Safety Officer

The IC will designate the safety officer. This person is responsible for assuring the overall safety of all operations performed at the incident by all agencies. This will be done with respect to the highest levels of safety and health. The Safety Officer will report directly to the IC.

e. Emergency Medical Services (EMS)

EMS personnel will work under the direction of the IC to provide emergency medical care to victims. These emergency incidents are either on or off the highway which results in injuries requiring on-scene medical care.

f. EMD Incident Response Team

EMD maintains an Incident Response Team staffed with Environmental Specialists assigned to the department's Hazardous Materials Division, who also act as representatives of the County Health Officer. One Environmental Specialist maintains on-call status at all times and is activated through the Sacramento County Operations Center. EMD personnel, in conjunction with the IC and the Ops Chief, are responsible for determining when the area is safe for re-entry and/or the incident is mitigated, in addition to hazardous waste disposal operation supervision in the “Recovery Phase”.

g. Public Information Officer (PIO)

This person is designated by the IC for the collection of facts, circumstances, and events which have transpired since onset of the incident. Under the direction of the IC, the PIO will compile and present the information to the media. This includes the briefing and update of media personnel on actions taken or to be taken. When possible this should be accomplished in an area away from the command post. No one at the scene should be authorized to talk to the media except the PIO or IC.

h. Federal On-Scene Coordinator (FOSC)

Under the National Contingency Plan (NCP), the Federal On Scene Coordinator (FOSC) is the senior official for all response efforts. These responsibilities are shared between the U.S. Coast Guard (USCG) and the U.S. Environmental Protection Agency (USEPA). The USCG is the lead for response and recovery efforts at oil and hazardous materials incidents in the coastal zone, while the USEPA is the lead for oil and hazardous materials incidents in the inland zone. Boundaries between the USCG and the USEPA zones can be found in the Regional Contingency Plan and in each of the three California Coastal Marine Area Contingency Plans. In some circumstances, the FOSC may be a representative from the Department of Defense or Department of Energy, dependent upon agency jurisdiction.

The FOSC is the pre-designated federal official responsible for directing and coordinating responses to releases of hazardous substances to the environment and discharges of oil to navigable waters of the United States in the inland areas. Pursuant to Section 300.135 of NCP, the FOSC promotes the use of a Unified Command System that brings together the functions of the federal government, state government, local government, and the responsible party to achieve an effective and efficient response. The goal of the Unified Command (UC) is to reach a consensus whenever possible, but the FOSC always retains the authority to take all actions that he or she deems necessary to mitigate the effects of the spill. The FOSC, the state/local government representatives, and the responsible party, are all involved with varying degrees of responsibility, regardless of the size and severity of the incident. The FOSC in every case retains the authority to direct the spill response. In many situations, the FOSC may choose to monitor the actions of the responsible party and/or state/local governments and provide support and advice where appropriate. However, under the Clean Water Act, Section 311 (c)(2) the FOSC must direct responses to spills that pose a substantial threat to the public health, or welfare of the United States.

Typically, the FOSC will receive spill notification from the National Response Center (NRC), the Governor's Office of Emergency Services (OES) Warning Center and/or the Responsible Party (RP) and assesses the level of federal response required for the incident. For a Level One Incident, the FOSC may follow-up on the initial notification and contact the local responders to determine the status of the incident and whether federal assistance is needed. For Level Two Incidents, the FOSC may respond or dispatch a Superfund Technical Assistance and Response Team (START) unit from San Francisco, California or Long Beach, California to monitor the response and provide technical assistance to the local responders. For Level Three Incidents, the FOSC will respond to the incident. In most cases, the FOSC will mobilize START and the USCG Pacific Strike Team. If the incident exceeds the capabilities of the local and State jurisdictions, and the responsible party cannot mobilize sufficient resources, the FOSC will also mobilize the Emergency Response and Removal Support (ERRS) cleanup contractor. The mobilization of federal cleanup resources does not replace the ICS or UC, but will integrate into the existing ICS where appropriate.

Chapter 4: NOTIFICATION AND COORDINATION

(Title CCR 19 § 2724)

A. NOTIFICATION OF AND COORDINATION WITH EMERGENCY RESPONSE PERSONNEL

1. ACTIVATION

The Sacramento Area Plan shall be activated by the IC to the degree necessary, whenever a hazardous material or WMD incident occurs. This plan covers hazardous material incidents that occur in any part of the county or cities, including but not limited to releases to the air, land, or waters throughout the county, including rivers, reservoirs, canals, groundwater, storm drains and sewers.

2. NOTIFICATION

County Communications will be the central notification point for all hazardous material incidents involving county responders (excluding fire and law enforcement personnel). The IC will make the determination regarding who is to be notified. It is assumed the general public will use 911 to report incidents.

The public agency first on-scene should request needed resources through their dispatch and take whatever immediate counteractions necessary to contain and reduce the spread of the material and its effects within the training limitations of the responding personnel.

Hazardous Material Incident Notification Diagram - See Appendix B.

Emergency Telephone Numbers - See Appendix C.

B. EMERGENCY COMMUNICATIONS DURING AN EMERGENCY RESPONSE

1. COMMUNICATIONS

Coordination of all communication should be the responsibility of the appropriate Dispatch Centers. The primary means of communication during an incident or potential incident will be through the use of the primary 800 MHz radio frequencies licensed to the various public emergency response agencies in Sacramento County. Notification and requests for assistance will be handled through each agencies appropriate dispatch centers.

C. RESPONSIBILITY MATRIX

The following section details the roles and responsibilities of the Agencies that may respond to a hazardous materials incident. The descriptions below were

reviewed by each respective agency during the revision process and were current at the time this Area Plan revision was completed.

LOCAL AGENCIES

1. Law Enforcement - The law enforcement agency having the investigative authority on the scene will become the IC and will have the duties of establishing the Command Post, traffic control, and providing security to the scene and the surrounding area. The IC will be responsible for coordinating the efforts of the various agencies which may be involved in the incident and will maintain contact with Emergency Dispatch.

   a. **SHERIFF'S DEPARTMENT**

      Primary Responsibilities:

      (1) For incidents that occur off-highway, within the unincorporated area of Sacramento County, the Sheriff's Department will serve as IC.

      (2) The Sheriff's Department will provide pertinent informational data concerning the incident, when requested, to the State Office of Emergency Services, and the Sacramento County Emergency Operations Coordinator.

      (3) For incidents that occur upon a highway, or within incorporated limits of a city, the Sheriff's Department will assist the IC upon request.

      (4) The Sheriff's Department responsibility for an incident occurring off-highway in unincorporated areas of the County shall include but not necessarily be limited to:

         (a) Overall incident management as per Section 2454 of the California Vehicle Code (CVC), including establishing the On-Scene Command Post, if the scope of the incident indicates a need.

         (b) Notification of all public and private agencies concerned with the emergency. (Sheriff's Dispatch will assist in notification upon request.)

         (c) Obtaining and relaying technical information.

         (d) Coordinating all communication from the scene to all emergency responders.

(e) Identification of hazardous materials from bills of lading, placards, or other papers.

(f) Coordinate the rescue of injured persons and insuring that medical care is provided.

(g) Coordinate spectator and traffic control.

(h) Evacuation, if necessary.

(i) Resolving role and authority conflicts when there is a disagreement between two or more emergency responders.

(j) Handle media inquiries. All news releases concerning overall operations shall be made by the IC or his designated representative. The IC shall confer with allied agency supervisors regarding news releases or inquiries regarding their operations.

(k) Provide the County Office of Emergency Operations with a copy of the final after action report.

(l) Provide explosive ordinance disposal response when requested.

After Hours Notification: Sheriff Officer's are available on a 24-hour basis and may be contacted through their dispatch or by calling 911.

b. **DISTRICT ATTORNEY'S OFFICE – ENVIRONMENTAL PROSECUTION INVESTIGATION UNIT**

Primary Responsibilities:

(1) The D.A. Investigator, although a law enforcement officer under Penal Code 830.1, will not assume primary first responder responsibilities nor assume Incident Command responsibilities, but will gather preliminary incident data for a civil and criminal prosecution assessment and advise the Environmental Prosecution Unit's Deputy District Attorney of the data.

(2) The D.A. Investigator will respond to requests for assistance by calling fire dispatch, the Incident's Ranking Fire Official or the Incident Commander within any incorporated or unincorporated area of Sacramento County and assess the need for a response to the scene

based on the initial circumstances, which may indicate a need for a civil or criminal investigation. If the D.A. Investigator is not available at the time of the incident, contact may be made with the Deputy District Attorney assigned to the Environmental Crimes Unit through the Sacramento County Operator.

(3) The D.A. Investigator will assist first responders on an advisory basis and as a liaison with law enforcement, other investigative and regulatory agencies on an as needed basis when the incident requires the need for those resources.

(4) The D.A. Investigator will provide pertinent informational data concerning the incident, when requested, to the State Governor's Office of Emergency Services in the event no other law enforcement agency is present at the scene and no other responders have done so.

(5) The D.A. Investigator will maintain Level "B" Personal Protective Equipment (PPE) training and equipment to perform "Hot Zone" entries in furtherance of his duties.

(6) The D.A. Investigator's responsibility for an incident occurring in the incorporated or unincorporated areas of the County shall include but not necessarily be limited to:

(a) An initial assessment of the incident to consider whether a civil or criminal investigation would be appropriate from the District Attorney's Office perspective.

(b) Notification of public agencies through Fire or Sheriff's Communications to facilitate the response of necessary agencies when it is required to begin a civil or criminal investigation.

(c) Obtaining and relaying investigative information to the Environmental Prosecution Deputy District Attorney.

(d) Assist with evacuation or life saving measures, only if necessary, as this is the usual responsibility of the primary first responders.

(e) Assist law enforcement or other investigative agencies with the facilitation of search and arrest warrants, if necessary, and perform follow-up investigation on cases after the initial investigation

by a law enforcement, fire, investigative or regulatory agency has been facilitated.

After Hours Notification: The Environmental Crimes Criminal Investigator will be paged through fire dispatch for all Level II and Level III Incidents.

c. **MUNICIPAL (CITY POLICE DEPARTMENTS) - INCLUDING ALL INCORPORATED CITIES IN SACRAMENTO COUNTY**

Primary Responsibilities:

(1) Upon a street, roadway or highway when the police department has primary traffic investigative authority (2454 CVC) and off-highway within the City, the Police Department shall serve as IC, except in the City of Sacramento.

(2) Functional responsibilities include:

(a) Overall incident management as per 2464 CVC, including establishing an on-scene command post if the scope of the incident indicates a need.

(b) Notification in accordance with the Notification Sections and Responsibilities Chart in Appendix B.

(c) Obtaining and relaying technical information.

(d) Coordinating all communications from the scene to all emergency responders.

(e) Identification of hazardous materials from bills of lading, placards, papers, and other sources.

(f) Rescue of the injured and providing medical care.

(g) Removal of disabled vehicles.

(h) Spectator and short-term traffic control.

(i) Investigation.

(j) Resolving role and authority conflicts when there is a disagreement between two or more emergency responders.

(k) Handle press inquiries. All news releases concerning overall operations shall be made by the IC or his designated representative. The IC shall

confer with allied agency supervisors regarding news releases or inquiries regarding their operations.

(l) Provide for a joint agency incident evaluation and critique as the scope of the incident warrants.

After Hours Notification: City Police Officer's may be contacted for response by contacting their dispatch or by calling 911.

2. Fire Service - The designated Fire Department official responding to the scene will become the Operations Chief and should utilize all available expertise and equipment for identification and containment of the incident.

a. **FIRE SERVICES (ALL FIRE DEPARTMENTS/DISTRICTS WITHIN SACRAMENTO COUNTY)**

Primary Responsibilities: The primary functions may be different between Fire Districts/Departments due to the level of training of its personnel and the equipment available

(1) Fire prevention, suppression, and prevention of explosions.

(2) Provide extrications, rescue, and emergency first aid for victims. Primary responsibility for rendering or ensuring that medical care is transferred to other emergency medical personnel upon their arrival, when the other emergency medical personnel are the "more medically qualified licensed health care professionals," per California Health & Safety Code (H&SC) Section 1482.5.

(3) Contain hazardous conditions within the limitations of the resources available.

(4) Provide a Safety Officer and advise of proper safety procedures.

(5) For all incidents occurring within the City of Sacramento (except on freeways), the Fire Department will serve as Incident Commander and will establish and maintain the Field Command Post.

Secondary Responsibilities:

(1) Assisting the "most medically qualified licensed emergency health care professional" with first aid for the injured.

(2) Identification of hazardous material.

(a) Utilization of safety suits and self-contained breathing apparatus to enter the hazardous zone.

(b) Obtain physical evidence to assist in identifying material, including bills of lading, invoice, placarding, and package labels.

(3) Provide technical manuals to determine emergency procedures for specific types of hazardous materials.

(4) Provide emergency lighting and generators.

(5) Advise Incident Commander of feasibility of necessity to evacuate area.

(6) Advise IC on safety of area for re-entry by civilian population.

(7) Provide copy of incident report to County Emergency Operations Division.

(8) Fire District personnel will conduct pre-incident site familiarization surveys.

b. **HAZARDOUS MATERIALS RESPONSE TEAM (HMRT)**

(1) The HMRT may be requested by Fire Services in accordance with the Sacramento HMRT Mutual Aid Joint Powers Agreement (Appendix J).

(2) The HMRT responds to all Level II and Level III incidents. Upon arrival the HMRT will immediately report to the Fire Department IC/Ops Chief and establish a Haz Mat Group, as identified in the Incident Command System. If applicable, the Fire Department Ops Chief shall regularly consult with the Law Enforcement IC responsible for overall scene management to insure appropriate coordination of all objectives and operations.

After Hours Notification: The fire department may be contacted for response through fire dispatch or by calling 911.

3. Local Support Agencies – The following agencies may be called upon for assistance during an incident at the request of the IC. Representatives from these agencies shall report to the command center to notify the IC of their arrival.

a. **ENVIRONMENTAL MANAGEMENT DEPARTMENT (EMD)**

EMD is authorized to take any preventative measure that may be necessary to protect and preserve the public from any health and/or environmental hazard.

EMD will respond at the request of the IC and will provide technical assistance to the IC. In the event of a spill involving hazardous materials which constitute an immediate threat to public health, EMD will work with the County Health Officer to initiate actions to declare a county health emergency. Appendix A provides guidelines for such a declaration. EMD will contact OES for spill notification during hazardous materials incidents if this has not already been done.

(1) **Hazardous Materials Division:**

Primary Responsibilities:

(a) Provide advice and consult with the Incident Commander on public health and environmental issues during an incident.

(b) Represent the County Health Officer during hazardous material incidents.

(c) Supervise and approve the post-incident environmental clean-up when required.

(d) Investigate, gather evidence, and write reports for environmental crimes cases.

(e) Maintain and update the Sacramento County Area Plan.

(f) As appropriate, may request the Sacramento Area HMRT to respond to an incident through the County Communications Center.

(g) When necessary, may contact Cal/EPA to access State Emergency Reserve Account and/or notify the OES State Warning Center.

(h) Receive notification and respond as necessary to after hours Environmental Health Division emergencies.

Secondary Responsibilities:

(a) During large incidents, EMD personnel may act as the liaison between Unified Command and other responding agencies.

After Hours Notification: The EMD Hazardous Materials Incident Response Team is on call twenty-four hours a day and responds to all Level II and III incidents. They can be reached via pager through the County Communication Center.

(2) **Environmental Health (EH) Division**

Primary Responsibilities:

Environmental Health Division can provide advice, assistance and inspection in the following program areas:

(a) Food protection, food safety, and food borne illness investigations for retail food facilities, including restaurants, markets, delis, coffee houses, bars, public and private schools, mobile food vendors, and temporary events;

(b) Recreational Health including public pools, spas and public beaches;

(c) Noise and noise level violations;

(d) Farm Labor Camp inspections;

(e) Detention Facility inspections;

(f) Smoking Control including Tobacco Retailers and Environmental Tobacco Smoke; and

(g) Tattoo & Body Art.

Secondary Responsibilities:

(a) EH may assist the local health officer during investigations involving major food borne illnesses cases.

After Hours Notification: The Environmental Health Division does not assign personnel to be on-call after hours. The Hazardous Materials Incident Response Team member on-call will

be notified for a health related issue and will attempt to contact personnel who have volunteered to be available during an emergency.

(3) **Water Protection Division:**

The Water Protection Division can provide advice, assistance and inspection in the following program areas:

(a) Public and private water systems and drinking water safety;

(b) Cross connection control;

(c) Reclaimed water; and

(d) Septic Tanks, septic cleaners, and septic waste hauling.

After Hours Notification: The Water Protection Division does not assign personnel to be on call after hours. The Hazardous Materials Incident Response Team member on-call will be notified for a water protection related issue and will attempt to contact personnel who have volunteered to be available during an emergency.

b. **COUNTY COMMUNICATIONS CENTER**

The County Communications Center is part of an integrated statewide communications network with the capability to contact City, County, State, and Federal Emergency Service Personnel.

Primary Responsibilities:

(1) The County Communications Center has an emergency notification system which provides the County with the capability of contacting designated local emergency officials twenty-four hours per day.

(2) In the event of an emergency incident involving suspected hazardous materials, the County Communications Center will assist the Incident Commander in alerting local County officials by means of the County's telephone, radio, and pager systems.

(3) EMD Haz Mat Incident Response Team will be notified via pager and fax when an OES Spill Report is received by the County Communications Office.

(4) Sacramento County Communications Center has home numbers for all responsible employees.

After Hours Notification: County Operators provide assistance on a twenty-four hour basis and can be reached at (916) 875-6900.

c. **COUNTY EMERGENCY OPERATIONS OFFICE**

Primary Responsibilities:

(1) The Sacramento County Emergency Operations Office has responsibility for overall emergency incident planning, Operational Area response coordination, emergency activation and management of the Emergency Operations Center within the County.

(2) The Sacramento County Emergency Operations Office reviews the Sacramento County Emergency Operations Plan.

(3) The Sacramento County Emergency Operations Office Alert Officer is on-call twenty-four hours per day and will respond to incidents upon request. The Alert Officer is to be notified of all Level III hazardous materials incidents, any incident that involves or may involve loss of life, significant property damage, or require care and shelter of the public for greater than 12 hours, and incidents that impact multiple jurisdictions or disciplines that are outside of the typical incidents responded to by the law, fire and other first response organizations. This notification shall be made through the County Operator.

(4) The Sacramento County Emergency Operations Office will assist in notifying affected County agencies as necessary.

(5) The Sacramento County Emergency Operations Office will request mutual aid resources needed for the response other than those that would normally be obtained through law, fire, or medical mutual aid systems.

After Hours Notification: The Alert Officer of the Emergency Operations Office is notified by the County Communications Center for all after hours incidents or request for information and assistance.

d. **SACRAMENTO COUNTY MUNICIPAL SERVICES AGENCY, DEPARTMENT OF TRANSPORTATION (SacDOT)**

The Sacramento County Board of Supervisors has delegated responsibility for responding to and mitigating hazardous material incidents occurring on a public right of way, within the unincorporated area of the County to the Municipal Services Agency, Department of Transportation (SacDOT). Some incorporated cities have contracted with SacDOT to assist in the clean-up of hazardous material incidents in their jurisdiction. SacDOT currently provides contracted Haz Mat service to the City of Rancho Cordova.

Primary Responsibilities:

(1) SacDOT has authority under the Streets and Highways Code to remove or cause to be removed any "encroachment" on County maintained roadways or right of ways. Responsibility for removing a spilled cargo is thus implied.

(2) SacDOT will respond to hazardous materials incidents within County roadway and storm drain systems, and on County controlled property such as County parks. It is not within the scope of SacDOT authority to mitigate all hazardous materials incidents, such as those occurring on private property, or on right-of-ways that have not been accepted by the County for maintenance.

(3) SacDOT will provide barricades and other physical traffic control devices during long-term road closure or restriction.

(4) SacDOT has twenty-four hour response capability and will use County resources or contracted services to isolate the area, deny entry to the public, and abate the hazard. For Level II and III incidents, SacDOT will participate as needed as part of a Unified Command System in order to classify unknown substances and implement the containment and removal of the material.

(5) SacDOT personnel are not trained or equipped to enter areas that have the potential to be immediately dangerous to life or health. SacDOT employees are not equipped with air monitoring devices or self-contained breathing apparatuses, which precludes them from entering confined spaces and areas that may produce a respiratory hazard or possible oxygen deficient or explosive environment.

(6) SacDOT will rely on the department that is responsible for the operation of the contaminated system or property to open service entrances, identify system routes, provide physical barriers to the spread of the incident, and mitigate any non-hazardous materials.

(7) SacDOT reserves the right to demand immediate mitigation from the party(s) responsible for causing a hazardous materials incident. When possible, SacDOT will bill the responsible party(s) for any costs incurred by SacDOT.

(8) SacDOT reserves the authority to close or restrict the use of a County highway to all traffic as per H&SC Section 942.5, and will provide traffic control as warranted.

After Hours Notification: SacDOT has twenty-four hour response capability and can be reached by contacting the County Communications Operator at (916) 875-6900.

e. **SACRAMENTO COUNTY MUNICIPAL SERVICES AGENCY, DEPARTMENT OF WATER QUALITY (DWQ)**

(1) **County Sanitation District 1 (CSD-1):**

(a) Responsible for the operation and maintenance of local sanitary sewer collections system (mainlines, collector pipes, and pump stations), which include most unincorporated areas of Sacramento County, the cities of Elk Grove, Citrus Heights, and Rancho Cordova, and portions of the City of Sacramento and Folsom.

(b) CSD-1 has 300 filled sand bags prepared to be used at any time.

(c) CSD-1 has confined spaces personnel that are trained and are fully equipped for entry into the CSD-1 sewer collection system.

After Hours Notification: CSD-1 employees are available on a twenty-four hour basis and may be contacted via the County Communications Center at (916) 875-6900.

(2) **Sacramento Regional County Sanitation District (SRCSD):**

(a) Responsible for the operation and maintenance for the County interceptor conveyance system (pipelines from 36-inch to up to 12 feet in diameter)

that conveys wastewater from CSD-1 and the cities of Sacramento, Folsom and West Sacramento, large sewage pump stations, and the Sacramento Regional Wastewater Treatment Plant (SRWTP) in Elk Grove. The SRWTP uses and stores significant amounts of chlorine and sulfur dioxide. Large amount of oxygen and digester gas (methane) are also found in this facility. The sewage pump stations use and store bioxide, sodium hypochlorite and diesel fuel.

(b) SRCSD has personnel trained to respond to chlorine and sulfur dioxide leaks at the SRWTP.

(c) SRCSD has personnel (SRWTP and Interceptors) that are trained and are fully equipped in confined space entry into SRCSD facilities.

After Hours Notification: SRCSD employees are available after hours and may be contacted by calling the SRWTP Plant Control Center at (916) 875-9400 or (916) 875-9406, or through the County Communications Center at (916) 875-6900.

(3) **Wastewater Source Control Section (WSCS)**

(a) Responsible for assessment of pollutant loading to the SRWTP, by providing initial review of requests for the discharge of pollutants other than septage related to emergency incidents.

(b) WSCS staff are on-call to respond to suspect or actual deleterious discharges to the CSD-1 and SRCSD collection systems or the SRWTP. Response actions may include "on-the-spot" sampling, site inspection, and enforcement action.

After Hours Notification: County Communications does not maintain a stand-by list for WSCS, however several managers are available on standy-by and can be contacted via an Emergency Contact List maintained by EMD.

e. **SACRAMENTO COUNTY MUNICIPAL SERVICES AGENCY, DEPARTMENT OF WATER RESOURCES (DWR)**

Primary Responsibilities:

(1) Responsible for the protection, improvement, and guarantee of a safe water supply.

(2) DWR personnel are available to render assistance in ensuring availability of a safe water supply from all DWR owned and operated facilities.

(3) DWR requests notification of all incidents involving hazardous materials which affect or may affect any DWR owned and operated water supply facilities.

After Hours Notification: DWR employees are available after hours and may be contacted by calling the County Communications Center at (916) 875-6900.

g. **SACRAMENTO COUNTY MUNICIPAL SERVICES AGENCY DEPARTMENT OF WATER RESOURCES (DWR) STORMWATER QUALITY SECTION**

Primary Responsibilities:

(1) Stormwater Quality staff is responsible for protecting the County storm water conveyance system and the waters of the state from any discharges that cause, or threaten to cause, a condition of pollution, contamination, or nuisance.

(2) Stormwater Quality staff will conduct investigations and coordinate with appropriate agencies to determine the source and or responsible party in order to conduct administrative enforcement.

(3) Stormwater Quality staff requests notification of all incidents involving hazardous materials which affect or may affect the stormwater conveyance system or waters of the state throughout Sacramento County.

After Hours Notification: DWR employees are available after hours and may be contacted by calling the County Communications Center at (916) 875-6900.

h. **AGRICULTURAL COMMISSIONER (AG. COM.)**

The county Agricultural Commissioner is responsible for enforcement of all state and federal regulations relating to the use of herbicides, insecticides, pesticides, and rodenticides. The county commissioner provides technical advice at the scene and may assist in cleanup as necessary.

Primary Responsibilities:

(1) The Agricultural Commissioner has general responsibility to provide for proper and safe pesticide use while protecting employees that handle pesticides, the public,

and the environment from potential adverse effects due to pesticides.

(2) The Agricultural Commissioner will provide technical assistance on pesticide-related incidents.

(3) The Agricultural Commissioner will assist in identification of unknown substances suspected of being pesticides.

(4) The Agricultural Commissioner will investigate and prosecute cases involving violation of law pertaining to the use of pesticides.

(5) The Agricultural Commissioner has access to the "California Department of Pesticide Regulation" for medical consultants and toxicologists, and to the Pesticide Analysis Laboratory and will provide information on general levels of toxicity, pesticide manufacturer's label reference library, and pesticide computer registration for specific identifications information.

(6) The Agricultural Commissioner shall be notified of a release of a pesticide (i.e. chlorine) in order to conduct an accident investigation into the release.

(7) The Agricultural Commissioner shall implement and follow minimum standard protocols for responding to pesticide drift emergencies. At the time of the revision of this Area Plan, the regulations regarding these standards are in the process of being amended by the Governor's Office of Emergency Services. The protocols will be incorporated into this Area Plan once approved.

After Hours Notification: The County Ag Dept. does not assign personnel to be on-call after business hours, however phone numbers of key Ag Dept. management personnel are available on the emergency contact list updated and maintained by EMD in the event an incident requires Ag support.

i. **SACRAMENTO COUNTY PUBLIC HEALTH**

The Health Officer or designee must be notified by the responding agency of human exposure to any toxic chemical (including pesticides) infectious agent, or radiation resulting from a release of material into the environment. The release may be accidental or may be the result of a deliberate act. Depending on the incident, the role of Public Health may include:

(1) Declaration of a local health emergency by the Health Officer whenever a release of a hazardous material has occurred and when in the Health Officer's judgment such a release constitutes an immediate threat to the public health.

(2) Declaration that it is safe to reoccupy the incident area as part of the recovery operation.

(3) Coordination with law enforcement (FBI and local enforcement) for the investigation of human disease if it appears that biological, chemical, or radioactive agents may have been used for purposes of terrorism or with other criminal intent.

(4) Coordination with the Sacramento Public Health Laboratory for the testing and processing of human and environmental specimens as indicated.

(5) Coordination of Emergency Medical Services that may be required.

(6) Monitoring public health effects as indicated.

The Health Officer has delegated authority to the Director of Environmental Health to carry out Public Health activities that are specific to the field of environmental health, including investigation and remediation of hazardous material and food safety concerns. The Director of Environmental Management (or designee) confers with the Health Officer (or designee) as necessary to assure that their combined efforts address the overall public health priorities defined by the Health Officer.

The Health Officer or designee must be notified of instances of possible bioterrorism. In most cases, hazardous materials incident response specialists will identify such situations when responding to the scene where a suspicious substance has been received and determined by law enforcement to represent a potential threat warranting further investigation. The role of the Health Officer includes:

(1) Development and maintenance of protocols delineating the role of public health in responding to incidents of possible terrorist release of hazardous substances.

(2) Coordination with Environmental Management Incident Response Personnel, law enforcement (generally the Federal Bureau of Investigations as the lead federal investigative agency responding to terrorism), and other

responders on the scene to facilitate laboratory testing of evidence and management of exposed persons.

(3) Provision of Public Health laboratory services using appropriate chain-of-custody procedures and testing protocols, including those established under the Laboratory Response Network of the Centers for Disease Control.

(4) Notification of potentially exposed persons of the laboratory test results to the extent necessary to provide reassurance or recommend protective medical interventions to prevent illness that might result from the exposure.

The Health Officer provides authorization for re-occupancy of facilities or other areas that have been evacuated as the result of an official action of an emergency response or other authorized agency, the Environmental Management Department, or following an order of the Health Officer pursuant to Penal Code section 409.5.

(1) The Environmental Management Department Hazardous Materials Division has delegated authority to authorize re-occupancy on behalf of the Health Officer under circumstances where training and testing capabilities lead to a clear determination of the hazardous substance, correction of the problem that resulted in the evacuation, and determination that the substance no longer constitutes a danger.

(2) Prior to a re-occupancy decision, the Health Officer must be consulted under circumstances in which the potential hazard is not clearly identified and/or when the evacuated site cannot be declared safe for occupancy without further action. In this case, the Environmental Management Department and Health Officer will develop a plan as necessary to (a) perform additional environmental testing, and (b) undertake decontamination measures to render the premises safe. Additional agencies such as the Environmental Protection Agency will be engaged when necessary.

(3) In situations where a business owner or private citizen initiates an evacuation out of concern for a possible hazardous substance that is *not* substantiated by hazardous materials specialists or the Public Health Officer, re-occupancy does not require authorization by the Health Officer. The party responsible for the facility may use discretion in re-occupying the facility and may choose

to engage the assistance of a private industrial hygienist in making that decision.

After Hours Notification: The County Health Officer (or designee) is available on a twenty-four hour basis and may be contacted via pager through the County Communications Office at (916) 875-6900.

j. **SACRAMENTO METROPOLITAN AIR QUALITY MANAGEMENT DISTRICT (SMAQMD)**

SMAQMD and the regional Air Quality Management District (AQMD) are responsible for the control of air pollution from stationary sources.

Primary Responsibilities:

(1) The SMAQMD is responsible for protecting air quality in the County of Sacramento.

(2) The SMAQMD should be notified of any incident which releases air pollutants into the atmosphere.

(3) The SMAQMD can assist in the investigation of incidents to determine if any federal, state, or local air quality regulations have been violated.

After Hours Notification: Management staff at SMAQMD are available after hours and may be contacted via pager through the County Communications Office (916) 875-6900.

STATE AGENCIES

a. **CALIFORNIA HIGHWAY PATROL (CHP)**

The California Highway Patrol (CHP) functions as the Incident Commander or part of the Unified Command for hazardous materials incidents that occur on all state freeways and state buildings and grounds, even if located within political boundaries of a city.

Primary Responsibilities:

(1) Upon a highway within Sacramento County (excluding incorporated cities) and on all freeways, CHP will serve as Incident Commander and statewide information, assistance, and notification coordinator.

(2) Upon a highway, outside of CHP area of responsibility (upon City streets, etc.), CHP will serve as a statewide information assistance and notification coordinator.

(3) CHP will assume responsibilities as State Agency Coordinator (SAC) at incidents on all highways within the County.

(4) CHP will provide assistance and support as requested at all non-highway incidents.

(5) At an on-terminal (loading, unloading or temporary storage) incident, the CHP Motor Carrier Safety Regulations Unit may seek prosecution for violations. The CHP will not assume responsibility for scene management.

(6) The CHP's functional responsibilities for on-highway hazardous materials incidents within a CHP area of responsibility shall include but not necessarily be limited to:

(a) Overall Incident management as per 2454 CVC, including establishing the On-Scene Command Post, if the scope of the incident indicates a need.

(b) Statewide information, assistance and notification duties.

(c) Notification of agencies in accordance with the "Hazardous Material Incident Notification Diagram" outlined in Appendix B.

(d) Obtaining and relaying technical information.

(e) Coordinating all communications from the scene to all emergency responders.

(f) Identification of hazardous materials from bill of lading, placards, papers, or other sources.

(g) Rescue of the injured, and providing medical care.

(h) Removal of disabled vehicles.

(i) Spectator and short-term traffic control.

(j) Investigation.

(k) Resolving role and authority conflicts when there is a disagreement between two or more emergency responders.

(l) Handle media inquiries. All news releases concerning overall operations shall be made by the Incident Commander of his designated representative. The Incident Commander shall confer with allied agency supervisors regarding news release or inquiries regarding their operations.

(m) Provide for a joint agency incident evaluation and critique as the scope of the incident warrants.

After Hours Notification: CHP officers are available on a twenty-four basis and may be contacted by calling 911.

b. **GOVERNOR'S OFFICE OF EMERGENCY SERVICES (OES)**

The Governor's Office of Emergency Services is responsible for general planning, notification and coordination of State agencies mutual aid response to hazardous material incidents.

Primary Responsibilities:

(1) Updates and maintains that State of California Hazardous Material Incident Contingency Plan, with technical inputs from the State Interagency Advisory Committees.

(2) Provides guidance on the emergency response system within which CHP takes responsibility for incidents on highways within CHP jurisdiction.

(3) Coordinates with CHP to notify or alert the State and Federal agencies regarding an incident.

(4) Provides training assistance in local jurisdictions including preparation and distribution of special notices concerning unusual incidents or response techniques.

(5) Coordinates public information and press releases with local, State and Federal agencies.

(6) Coordinates State Mutual Aid.

Secondary Responsibilities:

(1) In cases where radioactive material is involved, OES when requested by the State Department of Health Services will:

(a) Assist in coordinating State radiological monitoring of areas, personnel and equipment in support of County authority.

(b) Assist in assessing the radiological situation.

(c) Operate the California State Warning Center (located at State OES).

(d) Provide dosimeters and portable radiation detection equipment to State and local agencies which have emergency response assignments.

(e) During major incidents, the OES will furnish such communication facilities as mutually determined by the Department of Health Services, OES representative, and the State Agency Coordinator.

After Hours Notification: OES maintains a twenty-four hour spill notification hotline which receives and notifies the appropriate agencies of all reported hazardous materials incidents. During a hazardous materials emergency, state agencies may be contacted after hours by calling the California State Warning Center at (800) 852-7550.

c. **CALIFORNIA DEPARTMENT OF TRANSPORTATION (CALTRANS)**

The California Department of Transportation (Caltrans) is responsible for planning, designing, constructing, operating, and maintaining the state highway system. In coordination with other response agencies they ensure proper cleanup and restoration of the highway within its rights-of-way. Caltrans is responsible to determine the degree and type of maintenance required to restore the flow of traffic while protecting the health, safety, convenience, and welfare of the general public.

The cleanup of contamination or repair of damaged property outside the state right-of-was, even if the incident commences from within the rights-of-way, is not legally or financially the responsibility of Caltrans. Within the state highway right-of-way, Caltrans will perform the following:

Primary Responsibilities:

(1) During hazardous materials incidents upon State highways, Caltrans may contain, remove or authorize a private company to contain or remove all materials spilled on the highway under the authority of H&S Code Section 91 and CVC Section 23113.

(2) Caltrans is empowered to direct the method of abatement of the hazardous materials.

(3) Caltrans may close a State highway to all traffic as authorized by H&S Code Section 124. Caltrans will assist CHP in traffic control and routing requirements and provide long-term traffic control as per the Joint Operational Policy State dated July 30, 1971 (Highway Patrol G.O. 100.43m Annex A).

(4) Caltrans will assist and may utilize the services of emergency response contractors to aid in identification and clean-up of any spilled substances that are on state property only. The party responsible for the spill is liable for the removal and/or clean-up of any spilled substance that migrates from state property to private property.

After Hours Notification: Caltrans has twenty-four hour response capability and all necessary equipment for road repair and/or maintenance. Caltrans personnel may be contacted via the Caltrans dispatch operator.

d. **STATE WATER RESOURCES CONTROL BOARD (SWRCB)**

The primary responsibility of the State Water Resources Control Board (SWRCB) is to protect the state's surface, coastal, and ground water resources. This involves a proactive role in providing technical assistance to the Liaison Officer and the State Department of Toxic Substances Control in evaluating the potential impact of hazardous materials spills to water resources.

Primary Responsibilities:

(1) Provide expert advice concerning the potential impact of a hazardous material incident on water resources, including the nature of potential effects and expected timing.

(2) Conduct water sampling, monitoring, analysis and assessment activities to assist in the evaluation or mitigation of the problem.

(3) Designate areas for disposal on contaminated oil or hazardous debris removed during clean-up of a spill.

(4) Advise the State Agency Coordinator of critical water uses in the area that might be affected by the spill so that countermeasures can be implemented.

(5) Assist the Department of Health Service in advising critical water users of the situation.

(6) Utilizing statutory and regulatory authority to effect clean-up impose cease and desist or abatement order; release available funding for appropriate activities, assess fines and press for recovery of costs abatement, mitigation, or contract clean-up.

After Hours Notification: During a hazardous materials emergency, SWRCB may be contacted after hours by calling the California State Warning Center at (800) 852-7550.

e. **CALIFORNIA DEPARTMENT OF WATER RESOURCES (DWR)**

The Department of Water Resources (DWR) has primary responsibility to protect the operation and water quality of the State Water Project from pollutants. This includes providing water of a quality that can be used for agriculturan, recreational, municipal, and industrial purposes.

Primary Responsibilities:

If the system is, or is likely to be, affected by a hazardous material incident, the DWR will:

(1) Investigate necessary corrective actions to mitigate any incident affecting the project.

(2) Provide access routes to the project and a list of protection priorities to mitigate the spread of any pollutant affecting the project.

f. **CALIFORNIA DEPARTMENT OF INDUSTRIAL RELATIONS (DIR), DIVISION OF OCCUPATIONAL SAFETY & HEALTH)**

Primary Responsibilities**:** The primary responsibility of the Division of Occupational Safety & Health Administration (CalOSHA) is to prevent and regulate occupational exposures and injuries in the workplace.

Secondary Responsibilities: DIR has responsibilities for accidents at industrial sites in which workers are killed or injured and will respond to hazardous material incidents with industrial site origins. The DIR will:

(1) Assist the Incident Commander in evaluating the health hazards of toxic materials at incidents involving industrial sites.

(2) Recommend personnel protective measures for use by response personnel cleaning up an incident.

(3) Provide radiological monitoring and assessment when requested by Radiological Health Services.

After Hours Notification: During a hazardous materials emergency, DIR may be contacted after hours by calling the California State Warning Center at (800) 852-7550.

g. **CALIFORNIA DEPARTMENT OF FISH AND GAME (DFG)**

The California Department of Fish and Game (DFG) has public trust responsibility for the state's fish, wildlife, and their habitat. The mission of DFG is to preserve, protect, and enhance the state's living natural resources and the habitat on which these resources depend.

Primary Responsibilities:

(1) DFG is tasked with enforcement of State law relating to protection of fish and game, their habitat and other natural resources.

(2) DFG shall be notified of any incident which may contaminate any waterway with substances or materials that are deleterious to fish, plant or bird life.

(3) DFG can provide recommendations to minimize injury to wildlife and their habitat from hazardous material incidents and subsequent clean-up efforts.

(4) DFG will supervise and approve clean-up of incidents affecting the fish and wildlife reserves.

(5) DFG will function as State agency coordinator for off-highway hazardous material incidents and oil spills.

(6) In the event of an oil spill into marine waters, DFG will activate the State's Oil Spill Contingency Plan.

After Hours Notification: DFG personnel are available on a twenty-four hour basis and may be contacted through the California Sate Warning Center or by contacting the DFG dispatch operator.

h. **CALIFORNIA DEPARTMENT OF PESTICIDE REGULATION (DPR)**

The Department of Pesticide Regulation (DPR), under Cal/EPA, is the designated state agency responsible for regulating the registration, sale, and use of agricultural chemicals (including pesticides, fertilizers, and livestock drugs) prior to entering the waste stream. DPR has no regulatory responsibility during hazardous materials emergencies. DPR and the County Agricultural Commissioner have the responsibility to investigate any complaint or incident concerning pesticide exposure and may take regulatory and enforcement action.

The Department has legal authority to abate (through cease and desist orders) any situation involving pesticides which pose an immediate hazard to the public or the environment. The department is notified through the Sacramento County Agricultural Commissioner for all incidents involving pesticides or potential contamination of agricultural products.

Primary Responsibilities:

(1) Upon request from the Agricultural Commission, provide technical assistance on pesticide related incidents.

(2) Advise State and local authorities of the agricultural aspects related to contaminated farm lands, feed, farm animals, etc. Develop, with the assistance of the County Agricultural Commission, lists of dairies, stock ranches and farms that may require monitoring or sampling following a release of hazardous materials.

(3) Support actions required to reduce contamination of agricultural animals and products. Included are activities relating to sampling of food and fodder in coordination with the State Department of Health Services.

(4) Assist the Sacramento County Agricultural Commissioner in quarantining contaminated food and fodder.

(5) Provide technical assistance and information to farmers concerning the impact of environmental contamination of farm products.

(6) Monitor environmental contamination of farm properties in support of Department of Health Services and local authority.

After Hours Notification: During a hazardous materials emergency, DPR may be contacted after hours by calling the California State Warning Center at (800) 852-7550.

i. **CALIFORNIA DEPARTMENT OF HEALTH SERVICES, RADIOLOGICAL HEALTH BRANCH (RHB)**

The CDHS Radiological Health Branch (RHB) has statutory responsibility to regulate the use of radioactive materials through licensing and compliance programs. The RHB has responsibility for licensing and control of all radioactive material in California, excluding nuclear power, Department of Defense materials and Federal Department of Energy sponsored activities.

Primary Responsibilities:

(1) Be responsible for monitoring the radioactive environment, personnel and equipment in support of local authority.

(2) Provide for laboratory analysis of air, water, food and fodder samples taken by State and local authority.

(3) Establish and direct measures to mitigate the radiological impact on the public (the Department of Food and Agriculture and the Sacramento County Agricultural Commissioner may assist in the prevention of the consumption of unacceptable contaminated food and fodder).

(4) Establish human exposure criteria and assess the public health impact of radiation levels.

(5) Recommend measures or limit the spread of radioactive contamination.

(6) Direct and assist local Emergency Response personnel in defining and establishing contaminated areas.

(7) Identify laboratories capable of providing radiological support.

(8) Direct and assist in collection of ingestion pathway samples.

(9) Establish procedures and recommendations for use of substances to prevent or reduce the effects of contamination.

(10) Participate in local emergency response training programs.

(11) Request Federal Department of Energy radiological assistance when deemed necessary.

After Hours Notification: During a hazardous materials emergency, state agencies may be contacted after hours by calling the California State Warning Center at (800) 852-7550.

j. **CALIFORNIA DEPARTMENT OF TOXIC SUBSTANCES CONTROL (DTSC)**

The Department of Toxic Substances Control (DTSC) is the primary lead for the handling, storage, treatment, and disposal of hazardous wastes. In addition, it coordinates emergency funding for off-highway emergency response incidents, clandestine drug lab cleanups (including abandoned hazardous wastes resulting from these labs), and oversees the cleanup of sites contaminated with hazardous substances.

Primary Responsibilities:

(1) Respond to incidents involving facilities or activities, where the division has permitting or enforcement responsibilities to ensure compliance with regulations.

(2) Assess and provide financial support for emergency response and clandestine drug lab, pre-incident needs in the form of equipment, training, and general preparedness.

(3) Evaluate and fund requests for financial assistance for off-highway emergency response incidents and clandestine drug lab clean-ups, if funding criteria are met.

(4) Issue emergency Environmental Protection Agency (EPA) identification numbers for non-responsible party incidents or clandestine drug lab clean-ups where funding has been approved.

(5) Provide or facilitate access to technical advice regarding the safe handling or suitable disposal of toxic materials and alternative funding sources, if appropriate.

After Hours Notification: The Duty Officer for Emergency Response Personnel can be contacted after hours by calling (800) 852-7550

k. **CALIFORNIA AIR RESOURCES BOARD (ARB)**

The Air Resources Board is mandated to protect and enhance the ambient air quality of the state. The ARB fulfills this responsibility through local and regional air pollution control authorities.

The ARB can assist first responders during the release of toxic industrial chemicals or fires that may impact nearby communities. The Board conducts assessments in communities beyond the hot zone to supplement local Hazmat team's efforts near the incident.

Primary Responsibilities:

The ARB has the following capabilities that can be called upon at the request of local governments:

(1) Plume modeling of the event using either direct the application of in house models, or in conjunction with Lawrence Livermore Labs.

(2) Meteorological assessments including deployment of meteorological instrumentation if needed to facilitate plume modeling.

(3) Emissions characterization.

(4) Air monitoring including air toxics using a trailer assets and/or portable detectors.

5) Analytical laboratory capability to analyze air samples.

(6) On-site communications center to coordinate ARB efforts with Incident Command.

After Hours Notification: If assistance is required the Sacramento Air Quality Management Department (SMAQMD) has the ability to contact ARB personnel after hours.

FEDERAL AGENCIES

a. DEPARTMENT OF DEFENSE (DOD)

Primary Responsibilities: The Department of Defense (DOD) will provide assistance in investigations to evaluate the magnitude and severity of discharges or releases on or adjacent to resources under the jurisdiction of DOD. The DOD also documents damage to natural resources under their management authority. DOD will provide a Federal On-Scene Coordinator (FOSC) for releases of hazardous substances, pollutants, or contaminants from DOD facilities and vessels. USEPA or USCG will act as FOSC for oil discharges from DOD facilities or vessels.

Secondary Responsibilities: Assistance from the DOD may be available for very large, slow-developing hazardous material incidents if a State of Emergency has been declared. To the

extent that military capabilities are not compromised, as directed by the Governor, the DOD will:

(1) Assist in the evaluation of the threatened areas.

(2) Provide assistance to civil law enforcement operations, including access control of restricted or evacuated areas.

(3) Assist in caring for people from evacuated areas by:

(a) Providing and operating field kitchens or field operations as available.

(b) Providing shelter and feeding at available Military Department facilities.

(c) Providing assistance to American National Red Cross (ANRC) and local welfare agencies.

(4) Provide medical assistance;

(5) Assist in the clearance of rubble and debris;

(6) Provide assistance in communications;

(7) Provide air and surface transportation of authorized personnel, equipment and supplies. Assist in the distribution of equipment and supplies;

(8) Provide technical advice and resources for handling and disposing of explosives.

After Hours Notification: If the IC determines the need for federal assistance during a hazardous materials emergency, the required agency can be contacted by calling the National Response Center (NRC) at (800) 424-8802.

b. **FEDERAL BUREAU OF INVESTIGATIONS (FBI)**

(1) Assume the lead Federal agency in Crisis Management and assigned with the primary responsibility to respond to terrorism threats or incidents.

(2) Provide assistance with designated and specialized response units in the areas of sampling, detection, and identification of the nuclear, biological, and chemical agents. Certain response units are also equipped with a variety of personal protective equipment (Level A-C) and rescue apparatus.

(3) Provide other specialized units responsible for crime scene documentation and evidence collection in support of the criminal investigations, intelligence collection and analysis, and critical incident response group to conduct tactical and crisis management efforts.

After Hours Notification: If the IC determines the need for federal assistance during a hazardous materials emergency, the required agency can be contacted by calling the National Response Center (NRC) at (800) 424-8802

c. **FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA)**

Primary Responsibilities: The Federal Emergency Management Agency (FEMA), under the Department of Homeland Security (DHS) is the federal lead for the management of Presidentially declared disasters and coordinates with other Federal agencies for disaster response and recovery activities. Administer the Federal Disaster Assistance Program. Currently, the Federal Response Plan (FRP) provides the mechanism for coordinating delivery of federal assistance and resources to augment efforts of state and local governments overwhelmed by a major disaster or emergency.

The FRP includes Emergency Support Function (ESF) #10, Hazardous Materials (Primary Agency USEPA), which provides federal support to state and local governments in response to an actual or potential discharge and/or release of hazardous materials following a major disaster or emergency. As an element of the FRP, SFT #10 may be activated under one of the following conditions:

(1) In response to a disaster for which the President (through FEMA) determines that federal assistance is required to supplement the response efforts of the affected State and local government, under the Robert T. Stafford Disaster Relief and Emergency Assistance Act; or

(2) In anticipation of a major disaster or emergency that is expected to result in a declaration under the Stafford Act.

(3) After a Presidential Declaration of Emergency, FEMA will also:

(a) Coordinate all disaster relief assistance.

(b) Provide technical or advisory assistance.

(c) Remove debris.

(d) Provide temporary housing assistance.

(e) Assist with the distribution of supplies.

(f) Provide general assistance.

(4) Provide hazardous materials and related training through the National Emergency Training Center's resident and non-resident programs, and through its administration of SARA Title III training grant contracts with the state.

After Hours Notification: If the IC determines the need for federal assistance during a hazardous materials emergency, the required agency can be contacted by calling the National Response Center (NRC) at (800) 424-8802.

VOLUNTEER AGENCIES

a. AMERICAN RED CROSS

The American Red Cross provides relief for persons affected by disasters including providing food, clothing, and lodging; supplemental medical and nursing assistance, various family services, and rehabilitation. During disasters, the Red Cross operates independently of, but coordinates with, local government.

The American Red Cross is a humanitarian organization, led by volunteers, that provides relief to victims of disasters and helps people prevent, prepare for, and respond to emergencies. It does this through services that are consistent with its congressional charter and the fundamental principles of the International Red Cross movement. American Red Cross Services Provide:

Primary Responsibilities:

(1) Direct assistance to individuals and families in meeting crises and emergencies.

(a.) Provide shelter and care to citizens forced to evacuate homes.

(b) Provide licensed nurses and mental health workers to meet immediate needs.

(2) Provide on-site feeding to disaster workers engaged in the abatement of the hazardous materials incident.

(3) Instruction to promote health and safety.

(4) An organizational structure through which people can help one another locally, nationally, and internationally.

(5) Provide the services of our Emergency Communications Response Vehicle. This vehicle provides service and data via satellite in the form of 10 IP wireless phones and 6 wireless laptop computers. The vehicle also has an auxiliary AC generator of 8,500 watts and a cooling capacity to run up to 48-hours without refueling. In addition, it has interagency operable capabilities.

After Hours Notification: The local Red Cross office is typically contacted by Fire Dispatch and does have personnel available to respond after hours if required.

CHAPTER 5: TRAINING

(H&SC Title 19 § 2725)

A. TRAINING RESPONSE PERSONNEL TO RESPOND TO A RELEASE OR THREATENED RELEASE OF HAZARDOUS MATERIAL

1. Training Requirements for Local Hazardous Material Response Agencies

According to federal (CFR Title 29, Section 1910.120) and state (CCR Title 8, Section 5192) regulations, there are five levels of "employees who participate, or are expected to participate, in emergency response…" These are minimum levels of training and should be considered the basis for all responders. Training should be based on the hazards that are expected to be encountered, and higher degrees of initial and continuing training are recommended.

Hazardous material emergency response training may be accomplished through various methods including, but not limited to classroom training, field exercises, and incident critiques. Pursuant to standards set by Cal/OSHA (CCR Title 8, Section 5192) employees who are responsible for responding to hazardous material emergency situations that may expose them to hazardous substances must be trained in how to respond to expected emergencies. For further guidance regarding additional training needs and frequency of training, see CCR Title 8, Section 5192. The intent of this Area Plan is to identify the minimum training requirements as set forth in the regulations. Each agency is responsible for documenting and tracking the training of their employees according to internal policies and procedures.

Activities required when responding to incidents can be divided into five broad, interacting elements:

a. Recognition: Identification of the substance involved and the characteristics which determine its degree of hazard.

b. Evaluation: Impact or risk the substances pose to public health and the environment.

c. Control: Methods to eliminate or reduce the impact of the incident.

d. Information: Knowledge acquired concerning the conditions or circumstances particular to an incident.

e. Safety: Protection of responders from harm or risk.

There are five levels of training that must be provided to emergency response staff potentially exposed to hazardous materials.

2. The Five Levels of Training are Identified as Follows:

a. Level 1: First Responder (Awareness Level)

First responders at the awareness level are individuals who are likely to witness or discover a hazardous substance release and who have been trained to initiate an emergency response sequence by notifying the authorities of the release. First responders at the awareness level shall have sufficient training or shall have had sufficient experience to objectively demonstrate competency in the following areas:

(1) An understanding of what hazardous materials are and the risks associated with them in an incident;

(2) An understanding of the potential outcomes associated with an emergency created when hazardous materials are present;

(3) The ability to recognize the presence of hazardous materials in an emergency;

(4) The ability to identify the hazardous materials, if possible;

(5) An understanding of the role of the first responder awareness level individual in the employer's emergency response plan, including site security and control, and the U.S. Department of Transportation's Emergency Response Guidebook; and

(6) The ability to realize the need for additional resources, and to make appropriate notifications to the communication center.

b. Level 2: First Responder (Operations Level)

First responders at the operations level are individuals who respond to releases or potential releases of hazardous substances as part of the initial response to the site for the purpose of protecting nearby persons, property, or the environment from the effects of the release. They are trained to respond in a defensive fashion without actually trying to stop the release. Their function is to contain the release from a safe distance, keep it from spreading, and prevent exposures. First responders at the operational level shall have received at least eight hours of training or have had sufficient experience to objectively demonstrate competency in the following areas, in

addition to those listed for the awareness level, and the employer shall so certify:

(1) Knowledge of the basic hazard and risk assessment techniques.

(2) Know how to select and use proper PPE provided to the first responder operational level.

(3) An understanding of basic hazardous materials terms.

(4) Know how to perform basic control, containment, and/or confinement operations and rescue injured or contaminated persons within the capabilities of the resources and PPE available with their unit.

(5) Know how to implement basic equipment, victim, and rescue personnel decontamination procedures.

(6) An understanding of the relevant standard operating procedures and termination procedures.

c. Level 3: Hazardous Materials Technicians

Hazardous Materials Technicians are individuals who respond to releases or potential releases for the purpose of stopping the release. They assume a more aggressive role than a first responder at the operations level in that they will approach the point of release to plug, patch, or otherwise stop the release of a hazardous substance. Hazardous materials technicians shall have received at least 24 hours of training equal to the first responder operations level and, in addition, have competency in the following areas, and the employer shall so certify:

(1) Knowledge of how to implement the employer's emergency response plan;

(2) Knowledge of the classification, identification, and verification of known and unknown materials by using field survey instruments and equipment;

(3) Ability to function within an assigned role in ICS;

(4) Knowledge of how to select and use proper specialized chemical personal protective equipment provided to the hazardous materials technician;

(5) Understanding of hazard and risk assessment techniques;

(6) Ability to perform advance control, containment, and/or confinement operations within the capabilities of the resources and personal protective equipment available with the unit;

(7) Understanding and the ability to implement decontamination procedures;

(8) Understanding of termination procedures; and

(9) An understanding of basic chemical and toxicological terminology and behavior.

d. Level 4: Hazardous Materials Specialist

Hazardous Materials Specialists are individuals who respond with, and provide support to, hazardous materials technicians. Their duties parallel those of the hazardous materials technician. However, their duties require a more directed or specific knowledge of the various substances they may be called upon to contain. The hazardous materials specialist would also act as the site liaison with federal, state, local, and other government authorities in regard to site activities. Hazardous Materials Specialists shall have received at least 24 hours of training equal to the Technician level and, in addition, have competency in the following areas, and the employer shall so certify:

(1) Knowledge of how to implement the local emergency response plan;

(2) Understanding of the classification, identification, and verification of known and unknown materials by using advanced survey instruments and equipment;

(3) Knowledge of the State Emergency Plan;

(4) Ability to select and use proper specialized chemical personal protective equipment provided to the hazardous materials specialist;

(5) Understanding of in-depth hazard and risk techniques;

(6) Ability to perform specialized control, containment, and/or confinement operations within the capabilities of the resources and personal protective equipment available;

(7) Ability to determine and implement decontamination procedures;

(8) Ability to develop a site safety and control plan; and

(9) Understanding of chemical, radiological, and toxicological terminology and behavior.

e. Level 5: On-Scene Incident Commander

Incident Commanders who will assume control of the incident scene beyond the first responder awareness level will receive at least 24 hours of training equal to the Level 2: first responder (operations level) and, in addition, have competency in the following areas (and the employer will so certify):

(1) Know and be able to implement the employer's ICS;

(2) Know how to implement the employer's emergency response plan;

(3) Knowledge of the state emergency response plan and of the Federal Regional Response Team;

(4) Know how to implement the local emergency response plan;

(5) Know and understand the hazards and risks associated with employees working in chemical protective clothing; and

(6) Know and understand the importance of decontamination procedures.

B. TRAINING DOCUMENTATION

State law (CCR Title 8, Section 5192,) requires documentation for hazardous materials response training. Each agency will be responsible for maintaining the documentation on employee hazardous materials training. Each agency's training officer is responsible for the maintenance and completeness of these training files. A training log should be maintained listing each employees annual refresher due date.

C. JOINT FIELD OR TABLE TOP TRAINING EXERCISES

Region IV LEPC receives Federal Grant money to conduct this training.

The County Emergency Operations Office is responsible for emergency management training and exercise. The County Emergency Operations Office is to be notified of anticipated training and exercises being planned within the county. The Emergency Operations Office will coordinate and involve supporting agencies as needed to support the training or exercise. The Emergency Operations Office will be provided a copy of the "After Action Report" to

document the Exercise. As part of that responsibility, the County Emergency Operations Office participates in the grant distribution for our Operational Area.

CHAPTER 6: PUBLIC SAFETY AND INFORMATION

(Title 19 CCR § 2726)

A. SITE PERIMETER SECURITY AND SAFETY DURING A RELEASE OR THREATENED RELEASE

1. Law Enforcement:

Law enforcement includes CHP, the County Sheriff's Department and Police Departments from the cities of Sacramento, Citrus Heights, Elk Grove, Rancho Cordova, Folsom, and Galt. The authority for the management of the scene of an on-highway spill or disaster is vested in the appropriate law enforcement agency having primary traffic investigative authority on the highway where the spill occurs.

With the exception of the City of Sacramento, the law enforcement agency with jurisdictional authority is typically the IC during a hazardous materials incident, and the local fire department assumes the role of operations manager. The IC has the duties of establishing the Command Post, traffic control, and providing security to the scene and surrounding area. When necessary the IC will be responsible for instructing the PIO to execute the evacuation notification and the re-entry notification. The IC is responsible for coordinating the efforts of the various agencies which may be involved in the incident.

B. INFORMING BUSINESS PERSONNEL AND THE AFFECTED PUBLIC OF SAFETY PROCEDURES TO FOLLOW DURING A RELEASE OR THREATENED RELEASE

1. General:

Informing business personnel and the affected public of safety precautions, and/or evacuation procedures to follow during a release or threatened release of a hazardous material, shall be the responsibility of the Sacramento County Sheriff's Department for unincorporated areas and local police departments within the incorporated cities. At the request of the IC assistance shall be provided from other appropriate local response agencies. The following procedures should be followed to ensure that adequate and accurate information is disseminated to the general public in a timely manner:

a. Unless otherwise stated, the central point for the release of information to the public concerning safety procedures and/or evacuation warnings during a hazardous material incident will be the IC or his/her designated representative at a location well away from the incident.

b. Where it appears that evacuation of the public from a hazardous material incident is imminent, the following should be considered as a minimum:

(1) Persons being asked to evacuate should be told where to go and how to get there.

(2) The public should be told what Emergency Alerting System (EAS) station to listen to.

(3) Local Office of Emergency Services will be responsible for arranging for shelter and necessary conveniences.

(4) A public address system will be used to inform the public and businesses where to evacuate to or instructed to shelter in place.

2. Reception Centers:

Sacramento County and cities have a "Memorandum of Understanding" with all school districts to use public schools as reception centers where the American Red Cross will provide registration and locator services in mass evacuation situations. County Social Services Department will be responsible for arranging other temporary housing and issuance of emergency food stamps when needed. The county fairground, local churches and volunteer private homes are potential housing resources.

3. Responding Agency Responsibilities:

Each agency shall perform those tasks charged to that agency related to the emergency operation and shall confer with the IC for coordination of those tasks. The IC may request assistance from private agencies on an as need basis.

C. DESIGNATION OF RESPONSIBILITY FOR COORDINATING RELEASE OF INFORMATION TO PUBLIC AND THE EMERGENCY ALERTING SERVICE (EAS)

1. Information/Media Relations:

Providing factual and timely information to the media is an extremely important function. To provide inaccurate information or appear disinterested in assisting media representatives at the scene of a hazardous material incident would be counterproductive.

Therefore, it will be necessary to identify a SAFE area for the media to be properly briefed and escorted if necessary to ensure they receive accurate data without jeopardizing the effectiveness of the emergency operations.

2. Responsibilities and Operating Concerns:

The IC will designate a Public Information Officer (PIO) who would become the only source of information to be released to the news media. This person would be responsible for:

a. The activation of the Emergency Alerting Service (EAS), if deemed necessary by IC.

b. Preparing the EAS announcement.

c. Maintaining a current status of all activities involving the hazardous material incident.

d. Insuring that all releases to the media and public are coordinated among all participating agencies.

3. News Media Ingress to Hazardous Material Incident Scenes:

The California Penal Code, Section 409.5(d) permits members of the news media to enter hazardous substance spill incidents.

Once properly identified with a valid press card, the news media shall be advised that entering the scene may be hazardous to their health and safety, and should exercise due caution before entering.

The press shall be immediately advised of the danger and a recommendation made that all personnel remain at a safe distance. Equipment and/or personnel subjected to possible contamination, resulting from encroachment upon contaminated area or other events, will be considered to be contaminated and decontamination measures taken.

D. INFORMING MEDICAL AND HEALTH FACILITIES OF THE NATURE OF THE INCIDENT AND THE SUBSTANCE(S) INVOLVED

1. The IC will be responsible for notifying the medical facility of any exposure or possible exposure to hazardous substance(s). The IC should provide the medical facility with as much information prior to victim(s) arrival at the medical facility.

2. UC Davis is the Disaster Control Facility. The Disaster Control Facility will be responsible on a 24 hour basis for:

a. Coordinating the means of transportation of casualties and medical resources to health care facilities.

b. Coordinating the relocation of patients from damaged or untenable health care facilities.

c. Communicating with regional poison control centers, to obtain toxicological or any other pertinent information they may provide or have access to.

3. Emergency Medical Services (EMS) is responsible on a 24 hour basis for:

a. Coordinating disaster medical care operations within the county.

b. Coordinating the procurement and allocation of critical public and private medical and other resources required to support disaster medical care operations in the affected area.

c. Maintaining liaison with the appropriate American Red Cross Chapter and volunteer services agencies within the jurisdiction.

d. Maintaining liaison with the IC or designated contact for other relevant emergency services such as: communications, fire and rescue, health, law enforcement and traffic control, transportation, welfare, etc.

e. Requests for additional medical transportation resources, if local resources are insufficient, will be made through the EMS Agency.

f. Communicating with other EMS Agencies on matters requiring assistance from their jurisdictions, state or federal governments.

E. EVACUATION PLANS

1. General Procedures:

The decision to evacuate due to a hazardous material incident is determined by the IC with assistance from the Environmental Management Department and/or the County Health Officer and will be based upon the following factors:

a. Type of hazardous material involved

b. Condition of the material

c. Duration and amount of release

d. Condition of containment devices

e. Wind speed, direction and potential changes

f. Weather conditions: temperature, relative humidity, barometric pressure

An evacuation should be implemented if sufficient time exists to complete the evacuation before the hazard reaches any part of

the evacuation area, and if the evacuation would cause a lesser risk to public health and safety than sheltering-in-place. Fire agencies, EMD and the Sacramento Metropolitan Air Quality Management District (SMAQMD) have the ability to determine evacuation distances. Fire agencies may use the evacuation distances referenced in the Department of Transportation's Emergency Response Guidebook. The Emergency Response Guidebook can serve as a guide to first responders (law enforcement, fire, health, transportation) for initial action to be taken at a hazardous material incident; including basic emergency actions and evacuation distances for various materials.

2. Evacuation Responsibilities:

a. Incident Commander (IC)

(1) Takes appropriate actions to see that information on the evacuation is disseminated to all individuals within the area to be evacuated. Law enforcement personnel will not be utilized for evacuation in areas where protective clothing is required.

(2) Identifies area to be evacuated and specifies lines of the perimeter.

(3) Coordinates to initiate the evacuation.

(4) Ensures that evacuation information is continuously disseminated to the Emergency Operations Center (EOC) and other agencies.

(5) Verifies whether the evacuation is emergency or precautionary.

(6) Takes measures to prevent and control against looting in the evacuation area.

b. County Office of Emergency Services

(1) Coordinates shelter locations and evacuation routing and transportation needs as part of the Operational Area Emergency Operations Center activity.

(2) Notifies appropriate individuals on the Disaster Alert Roster.

(3) Notifies the State Office of Emergency Service of the situation and provides appropriate updates.

(4) Provides continuous monitoring of the situation to ensure that activities are proceeding as directed and that agencies involved in the support operation are informed of the status of the evacuation.

(5) Maintaining liaison with the IC or designated contact for emergency services such as communications, fire and rescue.

c. American Red Cross

(1) Opens shelters as requested and provides staffing as determined.

(2) Provides information to the EOC on the status of the shelter and its occupants.

(3) Coordinates the decimation of information to the public with the EOC and the PIO.

(4) Mass Care is the function and process by which Red Cross provides for immediate emergency needs of disaster victims or emergency workers in a disaster-affected area in the most expeditious manner, without identifying specific needs of individuals or families on a case-by-case basis. Mass Care assistance is provided through any necessary combination of three integrated elements – individual or congregate temporary shelters, fixed or mobile feeding operations, and the direct distribution of relief supplies.

(a) Sheltering - Sheltering may include congregate sheltering or the use of commercial facilities, such as motels and hotels, as shelters for individuals or families. Shelters may be open in anticipation of a disaster, during an evacuation, or after a disaster occurs. Shelters are intended as a safe haven from impending disaster and/or short-term emergency housing until disaster victims can return to their homes or locate alternate housing after a disaster. Whether before or after a disaster, shelters will be located in safe areas and provide appropriate services.

(b) Feeding - Feeding operations will provide regular meals in shelters and appropriate food service at additional fixed sites or via mobile distribution for victims in the affected area. Food will meet public health and nutritional requirements, and to the extent possible, match the religious and cultural sensitivities of those being served.

c. School Districts

(1) Coordinates with American Red Cross on the availability of schools to be used as shelters.

(2) Coordinates with the EOC on public information.

3. Shelter Locations and Transportation:

a. Evacuation procedures will be coordinated between the IC or a designated representative, and the County Office of Emergency Services. Together, these representatives will select the most appropriate area for establishing a shelter. The County Office of Emergency Services will coordinate with the American Red Cross and the appropriate schools districts to select the best location within the area which has been identified for sheltering. Upon determination of the shelter location, the Offices of Emergency Services (OES) will coordinate with the IC to establish evacuee pick-up points.

b. Sheltering information including evacuation centers and evacuee pick-up points will be disseminated to the following:

(1) Incident Site

(2) Evacuation Section

(3) News Media via Public Information Officer

(4) Other agencies as appropriate

4. Post Evacuation:

a. Once the evacuation area is determined to be safe, EMD will work with the County Health Officer to advise the IC that it is safe for the evacuees to return. The IC should advise the EOC of the actions to be taken prior to the removal of barricades or collapse of the evacuation perimeter. The EOC will coordinate with the emergency shelters to develop plans for returning the shelter inhabitants to the evacuated area. The PIO is responsible for disseminating post evacuation information to the news media.

b. Depending on the incident, EMD and the County Health Officer will provide post information to evacuees regarding their evacuated areas. This may include information on:

(1) Cleaning procedures for clothing, cooking utensils and furniture

(2) Handling of food substances

(3) Care of pets

(4) Care of plants

(5) Lingering or long term health effects

c. After the incident conclusion, the County Office of Emergency Services will assemble information from the Red Cross, and other agencies participating in the evacuation for the consolidation of appropriate formal records.

5. Sheltering in Place:

a. Sheltering-in-place is a viable alternative to evacuation for incidents involving a short-term, unexpected toxic airborne release, when there is little or no time for notification and evacuation. Sheltering-in-place requires that people stay indoors and make their homes and buildings airtight. This can be done by closing doors, windows and vents and by closing air conditioning and heating systems until the toxic cloud passes. Once the toxic cloud has passed, the concentration of toxic material indoors may be higher than outdoors, due to infiltration. It may then be necessary for the occupants to move outdoors.

b. Considerations:

(1) The decision to shelter-in-place is the IC's responsibility and should be based on the following:

(a) Material released

[1] type

[2] concentration

[3] estimated duration of the release

(b) Location of the release

(c) Toxicological effects

(d) Atmospheric conditions

[1] wind direction

[2] speed

[3] stability

[4] weather

[5] temperature

[6] dispersion patterns

(e) Time of Day

(f) Number of people at risk

(g) Type of population (ambulatory, non-ambulatory)

(h) Location of population

(i) Emergency response and response time

(j) Time necessary to conduct evacuation

(k) Adequacy of the shelters

6. Instructions for the Public:

(a) The effectiveness of sheltering-in-place is dependent on initial public information and periodic informational updates. The public should be instructed to do the following:

(1) Close all internal and external doors and close and lock all windows

(2) Stop drafts: use wet towels in gaps under doors and duct tape around sides/cracks on doors and windows.

(3) Turn off outside ventilation and close vents to the outside.

(4) Turn off all sources of ignition, if it is safe to do so.

(5) Turn off home air-conditioners and switch inlets to closed position. Seal any gaps around air-conditioners windows units with tape, plastic sheeting, paper, or aluminum wrap.

(6) Turn off and cover exhaust fans in kitchens, bathrooms, dryer vents and other spaces.

(7) Turn off clothes dryer.

(8) Close fireplace dampers.

(9) Hold a wet cloth or handkerchief over nose and mouth.

(10) For a higher degree of protection, stay in the bathroom, close the door, and turn on the cold water in the shower using a strong spray to "wash" the air.

(11) If an explosion is possible outdoors, close drapes, curtains, and shades over windows. Stay away from windows to prevent potential injury from flying glass.

(12) Minimize the use of elevators in buildings. Elevators tend to "pump" outdoor air through a building as they travel up and down.

(13) Once the toxic cloud passes and all steps have been taken to ensure that the incident will not recur, the ventilation must be increased by opening windows and doors, turning on ventilation systems and moving occupants outdoors.

(14) Other specifics related to the incident.

6. Re-Occupancy Guidelines:

(a) The Health Officer provides authorization for re-occupancy of facilities or other areas that have been evacuated as the result of an official action of an emergency response or other authorized agency, the Environmental Management Department, or following an order of the Health Officer pursuant to Penal Code section 409.5.

(1) The Environmental Management Department Hazardous Materials Division has delegated authority to authorize re-occupancy on behalf of the Health Officer under circumstances where training and testing capabilities lead to a clear determination of the hazardous substance, correction of the problem that resulted in the evacuation, and determination that the substance no longer constitutes a danger.

(2) Prior to a re-occupancy decision, the Health Officer must be consulted under circumstances in which the potential hazard is not clearly identified and/or when the evacuated site cannot be declared safe for occupancy without further action. In this case, the Environmental Management Department and Health Officer will develop a plan as necessary to (a) perform additional environmental testing, and (b) undertake decontamination measures to render the premises safe. Where necessary, additional agencies, such as the Environmental Protection Agency, will be engaged.

(3) In situations where a business owner or private citizen initiates an evacuation out of concern for a possible hazardous substance that is *not* substantiated by hazardous materials specialists or the Public Health Officer, re-occupancy does not require authorization by the Health Officer. The party responsible for the facility may use discretion in re-occupying the facility and may choose to engage the assistance of a private industrial hygienist in making that decision.

CHAPTER 7: SUPPLIES AND EQUIPMENT

(Title 19 CCR § 2727)

A. EMERGENCY RESPONSE SUPPLIES AND EQUIPMENT SPECIFICALLY DESIGNATED FOR POTENTIAL EMERGENCIES IN THE JURISDICTION

This section contains information on equipment and supplies maintained by Sacramento County's HMRT's. The EMD IR Team is most likely to respond as a technical reference to a level II hazardous material incident and does not typically carry spill response equipment. The fire departments, public works departments and Caltrans have the ability to clean up small petroleum hydrocarbon releases on roadways and on the right of way. These agencies are capable of responding in various degrees and have designated staff to test, maintain and decontaminate equipment on a regular basis.

Agency equipment lists are subject to change as new technology is developed and roles and responsibilities change. A current list of supplies which are available for use during an emergency response may be obtained by contacting the individual agency.

B. TESTING AND MAINTENANCE OF EMERGENCY SUPPLIES AND EQUIPMENT

Fire protection agencies will be responsible for maintaining and testing Self Contained Breathing Apparatus (SCBAs) and structural fire fighting equipment. This equipment will be tested and maintained according to manufacturer's specifications.

All other agencies that maintain equipment and supplies available for response to a hazardous materials incident are responsible for the testing and maintenance of this equipment. Responding agencies must ensure there are adequate emergency supplies on hand at all times.

CHAPTER 8: CRITIQUE AND FOLLOW-UP

(Title 19 CCR § 2728)

A. CRITIQUE

When applicable, interagency incident critiques will be held to provide a means to determine the efficiency of the response efforts and provide methods of improving safety and incident operations. The critique is held to determine:

1. What went wrong?
2. What went right?
3. What was learned?
4. Can we improve our operations in the future?
5. Should the plan be changed?
6. Determine what costs were incurred.
7. Gather reports from all involved.

The critique should not be used to point accusing fingers and to lay blame on any one person or agency.

B. FOLLOW-UP

Based on the outcome of the critique it should be determined what items need to be checked on and who should conduct the follow-up, i.e.:

1. Recovery of agency costs
2. Enforcement actions if necessary
3. Corrections in plans and procedures
4. Agency responsibilities

APPENDIX A

GUIDELINES FOR DECLARING A COUNTY HEALTH EMERGENCY

GUIDELINES FOR DECLARING A COUNTY HEALTH EMERGENCY

AUTHORITY

These guidelines are promulgated pursuant to Section 101075 et seq of the California Health and Safety Code.

CRITERIA FOR DECLARATION OF A Local HEALTH EMERGENCY BY THE HEALTH OFFICER.

The health officer may declare a local health emergency in the jurisdiction or affected area of the County whenever the Health Officer reasonably determines that the release or escape of hazardous waste or medical waste, or waste which may become hazardous waste or medical waste, poses an immediate threat to public health, or if there is an imminent and proximate threat of the introduction of any contagious, infectious, or communicable disease, chemical agent, noncommunicable biologic agent, toxin, or radioactive agent.

1. "Hazardous materials" means the materials identified above, including:

    a. systemic poisons, carcinogens, mutagens, teratogens, and biologic toxins;

    b. corrosive substances;

    c. flammable substances;

    d. irritants;

    e. strong sensitizers;

    f. substances which generate pressure through decomposition;

    g. radioactive materials;

    h. infectious substances;

    i. reactive substances.

2. "Hazardous waste" means a waste, or combination of wastes, which because of its quantity, concentration, or physical, chemical, or infectious characteristics may do any of the following:

    a. Cause, or significantly contribute to an increase in mortality or an increase in serious irreversible or incapacitating reversible illness,

    b. Pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

3. “Medical waste” means waste which meets both of the following requirements:

   a. The waste is composed of waste which is generated or produced as a result of any of the following actions:

      i. Diagnosis, treatment, or immunization of human beings or animals;

      ii. Research pertaining to the activities specified in (a)(i);

      iii. The production or testing of biologicals;

      iv. The accumulation of properly contained home generated sharps waste that is brought by a patient, a member of the patient’s family, or by a person authorized by the enforcement agency, to a point of consolidation approved by the enforcement agency pursuant to Section 117904 or authorized pursuant to Section 118147 of the Medical Waste Management Act (H&SC 117600-118360);

      v. Removal of a regulated waste, as defined in Section 5193 of Title 8 of the California Code of Regulations, from a trauma scene by a trauma scene waste management practitioner.

   b. The waste is either of the following:

      i. Biohazardous waste; or

      ii. Sharps waste.

4. "Waste," for the purpose of this plan, means either of the following:

   a. Any material for which no use or reuse is intended and which is to be discarded.

   b. Any material which spills, escapes, or is released from any manufacturing, industrial, commercial, or other plant, facility, or process, or which escapes or is released from the transporting or transferring from one place to another, or during the pumping, processing, storing, or packaging, or which enters or may enter an unconfined air space or a surface water course which is not totally contained on the contiguous property of such plant, facility or process, or which enters, or may enter, the groundwater underlying such plant, facility, or process.

Spills, releases, or introduction of any hazardous material identified above do not necessarily call for the declaration of a local health emergency. In order for such a declaration to be made, the following criteria should be met:

(A) If the released hazardous material is hazardous waste or medical waste, the material and the nature of its release must constitute an immediate threat to the public health. Such a threat exists with respect to hazardous waste if any of the following conditions exist:

1. The released material, if of a known composition, is, or may be, present in an uncontrolled environment in concentrations which may meet the above stated definition of a hazardous waste.

2. The released material, if of a known or unknown composition, has produced, or alleged to have produced, symptoms of acute toxicity among persons exposed to it.

3. The released material, if of an unknown composition, is a product or by-product of an industrial process or a reaction of materials known or suspected to contain a hazardous material, and which may be present in an uncontrolled environment in concentrations which could meet the above stated definition of a hazardous waste.

(B) If hazardous material is a contagious, infectious, or communicable disease, chemical agent, non-communicable biologic agent, toxin, or radioactive agent, there must be an imminent and proximate threat of the introduction of such material that poses an immediate threat to public health.

(C) The declaration by the Health Officer of a local health emergency is recommended when it appears to the Health Officer that any of the following may be necessary or advisable to provide an adequate response to the release of hazardous material:

1. Health Officer supervision and control over County environmental health and sanitation programs and personnel as needed to ensure availability of field staff to respond to the emergency. (Authority H&S Code §101310)

2. Enhanced compliance of affected parties in carrying out required actions including disclosure of information regarding the released materials and cooperation regarding testing of the materials.

3. Resources available through mutual aid and other sources of disaster assistance when local resources are considered insufficient to fully respond to the event.

PROCEDURE AND RESPONSIBILITIES FOR IDENTIFYING A POTENTIAL LOCAL HEALTH EMERGENCY INVOLVING A HAZARDOUS MATERIALS RELEASE

(A) Receipt of Initial Report:

1. Telephone reports and electronic reports of hazardous materials releases will be received according to procedures established in this plan.

2. Upon receipt of the telephone report or electronic report, the responsible agency will obtain as much information pertinent to the release as possible.

3. The Director of the Environmental Management Department (EMD) or designee shall be informed, as soon as is reasonably possible after receipt of the initial report that a hazardous materials release has occurred.

(B) Investigation:

1. After receipt of the initial report, the responsible agency representative will respond to the scene of the incident when appropriate and will obtain necessary further information to recommend immediate life-protective measures and to provide pertinent information to the Health Officer regarding the need to declare a local health emergency.

2. The responsible agency representative will provide all available information obtained to the Director of EMD or designee as soon as is reasonably possible.

3. The responsible agency will, if possible, collect samples of the released material for subsequent laboratory analysis.

4. The Director of EMD or designee shall make or cause to be made an investigation, including an on-the-scene investigation when appropriate, for the purpose of obtaining available medically related information and other pertinent information from alleged victims, medical personnel treating victims, owners of the hazardous material involved, or any other person(s) who may have information pertinent to the situation.

(C) Evaluation of Situation:

1. Upon receiving the investigation report, the Director of EMD or designee shall evaluate the emergency situation and, when appropriate, shall consult with the Health Officer or designee to assist the Health Officer in determining whether a local health emergency declaration is advisable.

2. All responding hazardous materials agencies report any hazardous releases to the State OES Warning Center.

PROCEDURES FOR DECLARING A LOCAL HEALTH EMERGENCY

A. Declaration of a Local Health Emergency

1. If the Health Officer determines that declaration of a local health emergency is necessary, he/she shall immediately do so verbally, followed as soon as possible by a written declaration containing the following information:

a. The circumstances leading to the declaration, including the nature of the hazardous material released, if known, and the act or accident causing the release.

b. A precise delineation of the area(s) affected by the release.

c. The occurrence of any injuries or illnesses attributed to the release.

d. The potential risk created by the release, if known.

e. The reasons the declaration is necessary.

f. The anticipated period of time the declaration will remain in effect.

g. The measures necessary to abate the emergency, to the extent known at the time of the declaration.

2. Initiate ratification of the declaration of local health emergency per Section B below on the same day that the declaration is made.

3. The verbal and written declaration shall be immediately issued to the following parties:

a. The person(s) or firm(s) believed to be responsible for the hazardous material.

b. The responsible Public Safety Agency(ies).

c. The County Office of Emergency Services.

d. The Emergency Medical Services Agency.

e. The County Board of Supervisors.

f. The Sacramento County Counsel.

g. The State Health Officer

h. The City Managers/Administrators (as applicable).

i. The news media, if appropriate (Released through IC).

j. Other persons requesting copies, if appropriate.

If terrorism or a crime is believed to be involved, the Health Officer, in cooperation with the investigating law enforcement agency, may restrict notification and disclosure of information to the Board of Supervisors and such other persons and agencies as is appropriate under the circumstances.

4. The Health Officer shall issue progress reports at reasonable intervals to the parties listed in A(3) (b)-(h) and to A(3)(a),(i) and (j) as appropriate. If terrorism or a crime is believed to be involved, the Health Officer, in cooperation with the investigating law enforcement agency, may restrict notification and disclosure of information to the Board of Supervisors and such other persons and agencies as is appropriate under the circumstances.

5. Termination of a Local Health Emergency Lasting Seven (7) Days Or Less

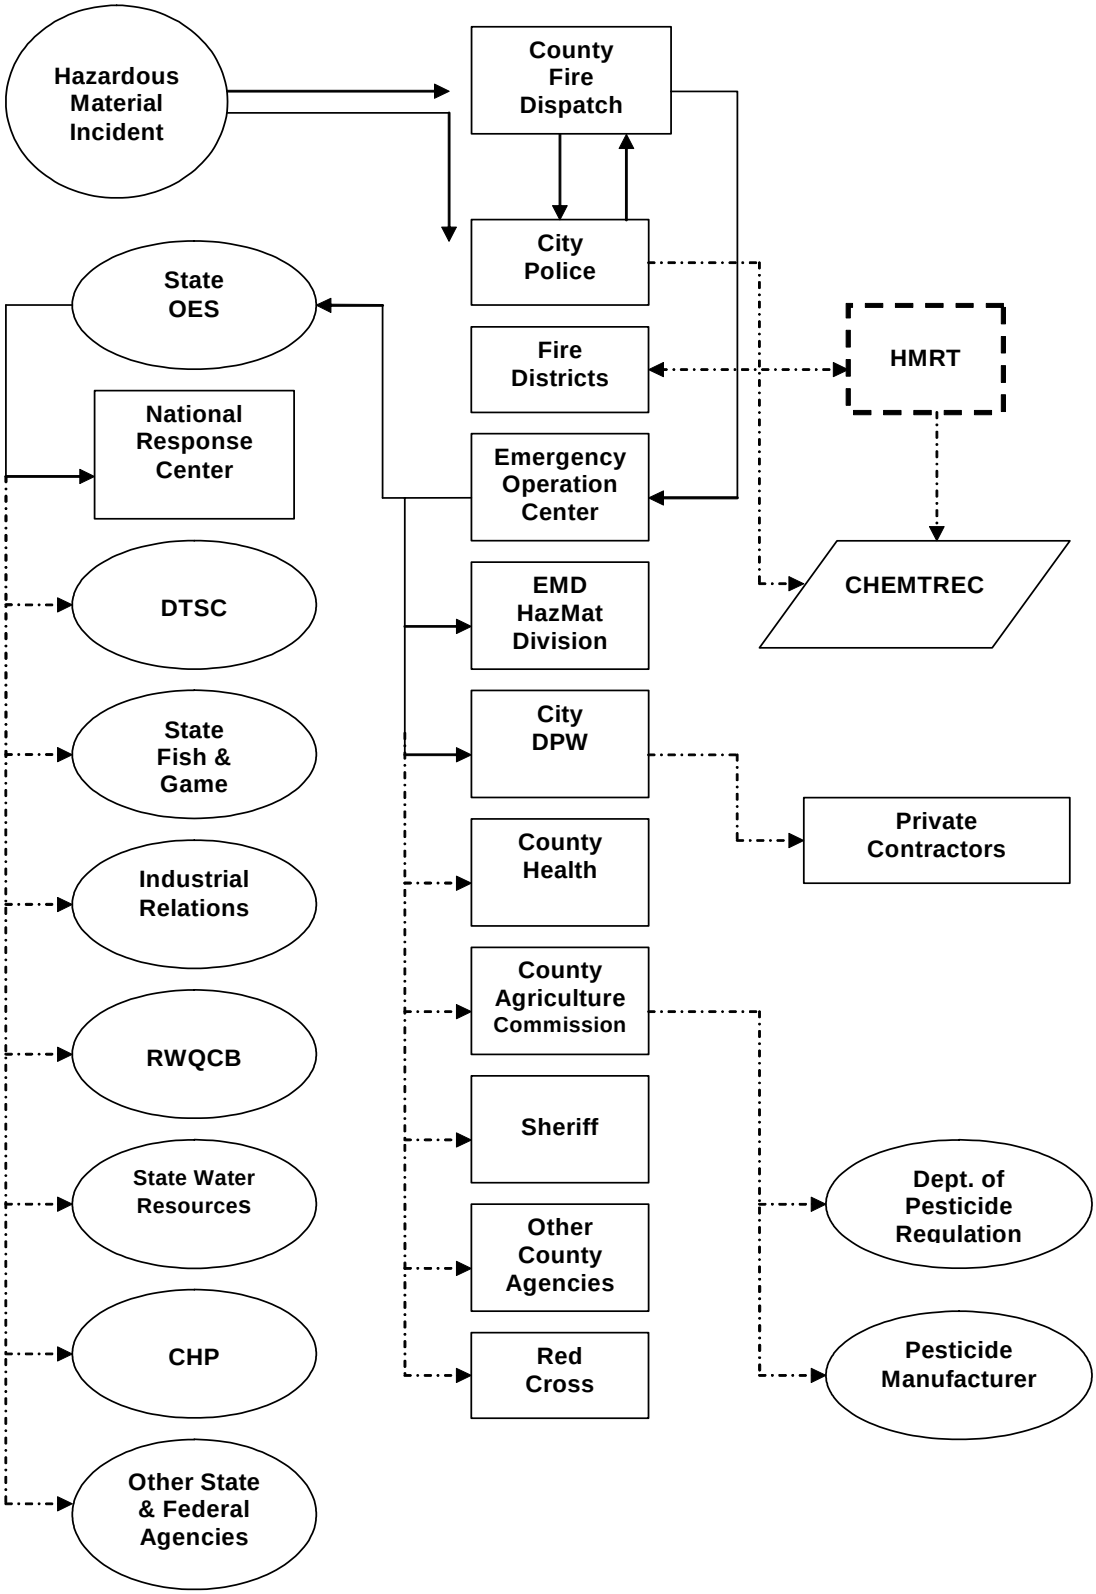
   The local health emergency shall be terminated at the earliest possible date that conditions warrant termination. For a local health emergency lasting seven days or less, the Health Officer shall terminate the local health emergency and shall notify the parties listed above in A(3) (b)-(h), and A(3)(a),(i) and (j) as appropriate, of such termination. The Health Officer shall request removal from the Board of Supervisors' agenda of any pending request for Board ratification per (B) below when the declaration has been terminated by the Health Officer.

(B) Ratification and Review by Board of Supervisors of Local Health Emergencies Extending Beyond Seven (7) Days

1. If, in the opinion of the Health Officer, it is necessary to extend the local health emergency beyond seven (7) days, he/she shall prepare a request to place ratification of the declaration of the local health emergency on the Board of Supervisors' agenda before expiration of 7 days from when the declaration was made.

2. The request for ratification shall contain a complete description of the events constituting the emergency, the nature of the public health hazard, the reasons for the declaration by the Health Officer, the reasons the declaration must be extended, and an estimate of how long the emergency will continue.

3. Copies of the request for ratification shall be distributed to the parties named in A(3) above.



4. Should the declaration be ratified, the Health Officer shall present progress reports to the Board on the state of the emergency not less than every fourteen (14) days for review by the Board of Supervisors, with his/her recommendation as to whether the local health emergency should be continued or terminated. Copies of such progress reports shall be distributed to the parties named in A(3) above.

5. The Board of Supervisors shall proclaim a termination of a local health emergency that has been ratified by the Board at the earliest possible date that conditions warrant termination

OTHER TELEPHONE NUMBERS: State Agencies

AGENCY	PHONE NUMBER	AGENCY ROLE
Air Resources Board (ARB)	VIA THE OES WARNING CENTER: (800) 852-7550	Protects and enhances the ambient air quality of the state, through local and regional air pollution authorities.

OTHER TELEPHONE NUMBERS: State Agencies

AGENCY	PHONE NUMBER	AGENCY ROLE
California Coastal Commission (CCC)	(415) 904-5200 **PAGER**: (415) 201-5792	Responsible for planning, permitting and enforcement of development of California's coastline; issues emergency permits to expedite response activities and provides technical advice during an oil/hazardous materials spill.
California Integrated Waste Management Board (CIWMB)	(916) 341-6454	Oversees household hazardous waste (HHW) programs within California; coordinates with counties requesting HHW assistance.
Department of Fish & Game, Office of Spill Prevention & Response (OSPR)	OSPR COMMUNICATION CENTER: (916) 445-0045	Natural Resource Trustee for the state of California; ensures that fish, wildlife and their habitats are protected & any issues are addressed by the IC/UC during response and cleanup phases; ensures that cleanup, remediation and restoration are done appropriately.
Division of Oil, Gas, & Geothermal Resources (DOGGR)	**District #6** (Sacramento)**:** (916) 322-1110	Responsible for preventing damage to life, health, property, and the environment resulting from oil, gas and geothermal drilling, production, or plugging and abandonment operations.
Department of Health Services (DHS)	(916) 323-9869	Ensures the safety and reliability of the public water supplies; ensures the safety of interim/emergency water supplies; interfaces with local governments for safe drinking water, food, and medical.
Department of Toxic Substances Control (DTSC)	(916) 255-6504	Protects human health and the environment; provides local assistance from requests via the Hazardous Waste Account; regulatory authority for emergency removals; coordinates the RAPID Force.
	TOXICS HOTLINE: (800) 258-6942	To report violations of hazardous waste laws.

NOTE: ***STATE AGENCIES can also be accessed via the OES Warning Center at (800) 852-7550***

OTHER TELEPHONE NUMBERS: Federal Agencies

AGENCY	PHONE NUMBER	AGENCY ROLE
U.S. Environmental Protection Agency, Region IX (USEPA)	**GENERAL NUMBER**: (800) 321-7349 or (415) 947-8000	**FOSC** for inland hazardous materials and oil spills; ensures that response actions are taken to control and remove discharges of oil and hazardous materials into the inland zone. Under CERCLA/OPA '90, provides limited, pre-declaration assistance for hazardous materials release assessment and cleanup.
	EPA SPILL PHONE: (415) 947-4400	For spills of oil or hazardous materials.
	SARA TITLE III HOTLINE: (800) 424-9346	For questions on the federal Emergency Planning and Community Right-to-Know Act.
U.S. Coast Guard (USCG)	**MARINE SAFETY OFFICE:** **San Francisco** (510) 683-6470	**FOSC** for marine hazardous materials and oil spills; ensures that response actions are taken to control and remove discharges of oil and hazardous material releases into the coastal zone; access to OPA '90 (oil) and CERCLA (hazardous materials) funding; control of navigable waterways.
Federal Emergency Management Agency, Region IX (FEMA)	**24-HOUR DUTY OFFICER** (510) 627-7250	Administers the Federal Disaster Assistance Program; supports state and local response efforts upon request after declaration of an emergency; provides federal funding for hazardous materials response & cleanup efforts (ESF #10).

NOTE: ***FEDERAL agencies can also be accessed via the National Response Center at (800) 424-8802***

OTHER TELEPHONE NUMBERS

AGENCY	PHONE NUMBER	AGENCY ROLE
Poison Control Centers	(800) 876-4766	Provides: regional hospital capabilities for hazardous materials victims; poison/exposure information to hospital staff, emergency response personnel, and the general public; assist with drug identification for law enforcement agencies.
CHEMTREC	(800) 424-9300	Provides: emergency information for chemical releases & fire control measures; precautionary information; assist with chemical identification if unknown; notification of manufacturer and/or shipper.

☎ IMPORTANT TELEPHONE NUMBERS ☎

for EMERGENCY FUNDING

When accessing emergency funding. The Responsible Party (RP) is liable for the costs associated with the abatement and mitigation of a hazardous material spill. If the RP is unknown, unwilling or unable to provide a safe and adequate response, government may have to ensure the protection of the public health and safety, and the environment by providing abatement and mitigation of the spill. The following telephone numbers are provided to assist responding agencies.

Remember: Use the responsible party and local resources first, before calling on state and federal resources!

State:

IMPACT	AGENCY AND FUND NAME	TELEPHONE NUMBER
Human Health & **Environment**	**Department of Toxic Substances Control** Emergency Reserve Account	(916) 323-3600 or (800) 260-3972 … ask for the DTSC Duty Officer

CHEMTREC COMMUNICATION FORM

Phone: 1-800-424-9300

SUGGESTIONS:

This is an optional reporting form. Complete all appropriate items below before calling Chemtrec. – Starred items (*) are essential.

INFORMATION TO BE PROVIDED

I. Time initial call placed _____

*2. What happened? _____

*3. Where _____

*4. When _____

*5. Chemical(s) involved (if unknown provide items 10 thru 14)

_____

_____

_____

_____

*6. Prevailing weather conditions _____

*7. Nature of surrounding area _____

*8. Who caller is and where located _____

*9. How and where telephone contact can be re-established with caller or another response party at the scene _____

CHEMTREC COMMUNICATION FORM (CONT.)

For more detailed assistance or if chemicals are unknown, provide as much of the following information as possible:

10. Rail car or truck number _____

11. Type and condition of container(s) _____

12. Shipper or manufacturer _____

13. Carrier _____

14. Consignee and destination _____

CHEMTREC SHOULD PROVIDE

Product _____

Common Name(s) _____

Physical Appearance and Form _____

Nature of the product _____

Hazard Information:

Fire Hazard _____

Explosion Hazard _____

Health Hazard _____

Reaction with water _____

Environmental/Pollution Hazards _____

APPENDIX F

EXAMPLE HAZARDOUS MATERIALS – INCIDENT REPORTS

The forms shown in this Appendix are used by various Sacramento agencies in order to collect and archive information regarding incidents involving hazardous materials. The following are examples of the Sacramento Metropolitan Fire Department's Hazardous Materials Report, EMD's Incident Response Report, and the City of Sacramento's Hazardous Materials Incident Response Report. In some cases, these forms contain confidential details that may not be available to the public in their entirety. Questions regarding the information contained in these reports should be directed to the responsible agency.

Sacramento Metropolitan Fire District
HAZARDOUS MATERIALS
SITE-SAFETY/INCIDENT ACTION PLAN

Date: _____ Time: _____ Incident Number_____

Incident Location: _____ OES Control Number_____

Initial Incident Assessment

Brief Description of incident: _____

INCIDENT DE-BRIEF

_____ Chemicals were involved in this incident. Common signs and symptoms _____Any personnel who believe they may have been exposed to or contaminated by a substance involved shall complete a fire department exposure report and notify the Supervisor Immediately.

Incident Termination

The completed Site-Safety Plan, as well as all other supporting documentation completed by those assigned ICS Positions, shall be forwarded to the Incident Commander. The IC will utilize the information for the Incident report, then forward the documentation to the HAZ-MAT BC.

Incident Evaluation

All personnel involved in this incident are encouraged to send an informal summary evaluation of the incident to the HAZMAT Captain via e-mail within one week. Please include "Lessons Learned" both good and bad. This information will be use to compile an "Incident Evaluation".

APPENDIX G

PROCEDURES FOR USE OF STATE EMERGENCY RESERVE ACCOUNT

PROCEDURES FOR USE OF STATE EMERGENCY RESERVE ACCOUNT

(A) General

Section 25354, California Health and Safety Code, authorizes the disbursement of funds from the California Environmental Protection Agency (CAL EPA), Department of Toxics Substance Control, (DTSC) Emergency Reserve Account (ERA). CAL EPA may expend funds available in the Reserve Account for the purpose of taking corrective action necessary to remedy or prevent an imminent emergency resulting from a fire or explosion of, or human exposure to, hazardous substances. This includes "midnight dumping" of barrels or discharges of fluids; spill situations without a responsible party or other actions needed to prevent potential emergencies (e.g. fencing, guard service, sampling, or immediate remedial measures for dangerous sites with uncooperative responsible parties). In some instances, emergency response associated with illegal drug laboratory wastes is eligible for funding.

Verification of hazards and utilization of emergency reserve account funds are the joint responsibility of the County Office of Emergency Services and the Environmental Management Department (EMD). EMD works jointly with CAL EPA in overseeing corrective actions and the work of cleanup contractors.

Prior authorization for funding is a must, and no retroactive payments are made by the state.

(B) Criteria for Requesting Funds

Before requesting assistance, local agencies should determine:

1. If the material is a hazardous substance.

2. The quantity released or spilled.

3. The hazard characterization (the substance should be identified to show toxicity, demonstrate a pH of greater than 12.5 or less than 2, be reactive, or flammable).

4. Location of the incident relative to waterways, the public, and sensitive environmental areas.

5. Whether the property is publicly or privately owned (areas under the control of state or federal agencies will not usually be eligible for funding).

6. That potential responsible party or alternative funding is not available.

(C) Special Conditions for Use of State Funds

1. ALL INCIDENTS MUST BE REPORTED TO DTSC IN ADVANCE OF FUNDS BEING OBLIGATED AND THE DTSC DUTY OFFICER IS THE ONLY PERSON THAT CAN AUTHORIZE A CONTRACTOR TO RESPOND.

2. In instances where hazardous wastes have been abandoned on property where the owner is clearly not the perpetrator and the wastes do not have an identifiable owner, state funding may be requested.

3. Funding for drug laboratory waste cleanup will only be approved when such wastes are found abandoned in an area accessible to the public or are associated with a clandestine drug laboratory in an area accessible to the public. Cleanup of materials found associated with planned law enforcement action, including contaminated appurtenances, will not be financed by DTSC if such materials can be secured as evidence or from public access.

4. In emergencies with a responsible party who is willing to be accountable, but the cleanup contractors will not do the work because of questionable credit histories, the responsible party may be backed up by the assurance of ERA funding in the event of failure to pay.

5. Potentially dangerous situations involving uncooperative responsible parties may be stabilized by the state to prevent emergencies.

6. Cleanup of the following materials involved in incidents will not be funded unless special circumstances exist which are determined by DTSC to represent a significant threat to human health (e.g., larger volumes or the presence of PCB's confirmed by laboratory analysis):

   - Waste oil
   - Diesel fuel
   - Fuel tank spills from vehicular accidents
   - Radioactive waste
   - Infectious waste
   - Latex paint
   - Household hazardous materials

7. Properties owned by the Federal Government or by the State of California will not be eligible for funding. The specific agency in control of the property will bear responsibility for the cleanup unless a clear emergency exists which the responsible agency is unable to address in a proper and timely manner. In remote areas or other instances where ownership is uncertain, the ERA may be used if a delay to verify ownership would create an endangerment.

8. Releases on state highways or within state highway right-of-ways will be handled by the California Department of Transportation (CALTRANS).

Reports of such releases should be addressed to OES who will in turn notify CALTRANS.

(D) To Request Funding

Contact the County Office of Emergency Services (through Communications), or the Governor's Office of Emergency Services 24-hour toll free number (800) 852-7550, and request that the Warning Control Officer contact the on-call Duty Officer in the CAL EPA, Department of Toxic Substance Control to seek approval for assistance from the reserve account. The Duty Officer will contact the local agency making the request as soon as he/she is notified.

(E) Reporting Requirements

1. As a condition of receiving funding, requesting agencies must complete an "Emergency Response Incident Report" and the "Cleanup Work log" (see attached). Manifests, contractor's service orders, and photographs must also be submitted.

2. Responsible party information collected during or after the incident investigation has been completed must be submitted to the state.

3. Responsible party information may include the names and addresses of property leaseholders, property owners, assessor parcel numbers, vehicle licenses or identification numbers, names of registered owners and driver's license numbers.

4. Other details that may be available at the scene of an incident and need to be reported include the following:

    - names affiliations of other agency personnel responding to the incident.
    - names/address of witnesses
    - container label information
    - container label information
    - bills of lading
    - other evidence, e.g. cancelled checks, old letters and/or medical prescriptions.

APPENDIX H

RECORD OF REVISIONS AND AREA PLAN DISTRIBUTION LIST

The first Notice of Revision to the Sacramento County 2003 Area Plan was mailed out in February of 2007. Each of the agencies identified on the following table were given copies of the 2003 Area Plan and asked to submit comments and/or suggested changes. The updated Area Plan was completed in September 2007. Sacramento County is mandated by law to revise the Area Plan every three years. Any revisions to the Plan prior to the 2010 review date will be identified in this section.

Any changes, updates or corrections that are required prior to the 2010 review date should be forwarded to:

Heather Tanner
Environmental Specialist III
Sacramento County EMD

APPENDIX I

HAZARDOUS MATERIALS EMERGENCY RESPONSE
GLOSSARY OF STANDARDIZED TERMS AND ACRONYMS

HAZARDOUS MATERIALS EMERGENCY RESPONSE
GLOSSARY OF STANDARDIZED TERMS AND ACRONYMS

ABATEMENT - The actions taken to reduce the amount, degree of the hazard, or intensity of the release or threatened release of a hazardous material.

ABSORBENT MATERIAL - A material designed to pick up and hold liquid hazardous material to prevent contamination spread.

ABSORPTION - 1) The process of absorbing or "picking up" a liquid hazardous material to prevent enlargement of the contaminated area; 2) Movement of a toxicant into the circulatory system by oral, dermal, or inhalation exposure.

ACCEPTABLE RISK - A risk judged to be outweighed by corresponding benefits or one that is of such a degree that it is considered to pose minimal potential for adverse effects.

ACCESS CONTROL POINT - The point of entry and exit that regulates traffic to and from control zones.

ACGIH - See American Conference of Governmental Industrial Hygienists.

ACID - A hydrogen-containing corrosive material that reacts with water to produce hydrogen ions; a proton donor.

ACUTE EFFECT - An adverse action on a human or animal, generally after a single significant exposure, which may be mild or severe. (See Chronic Effect.)

ACUTE EXPOSURE - Exposure that is short in duration.

ACUTE RELEASE - Release of a hazardous material that is short in duration.

ACUTE TOXICITY - Any harmful effect produced by a single short-term exposure that may result in severe biological harm or death.

ADJUVANT - A substance used in pesticide formulation to aid its action. (Also used in the manufacture of drugs.)

ADMINISTERING AGENCY (AA) - The designated unit of a county or city tasked to administer the local implementation of the State and Federal hazardous material emergency planning and community right-to-know programs. Also known as Certified Uniform Program Agencies (CUPAs).

ADSORPTION - Process of adhering to a surface.

AEROSOLS - Liquid droplets, or solid particles dispersed in air, that are of fine enough particle size (0.01 to 100 microns) to remain dispersed for a period of time.

AFTER ACTION REPORT - A post-incident analysis report generated by a responsible party or responding agency after termination of a hazardous material incident describing actions taken, materials involved, impacts, etc.

AGENCY SPECIFIC PLAN - An emergency plan written by and addressing an individual agency's response actions, capabilities and resources.

AIHA - See American Industrial Hygiene Association.

AIRBORNE POLLUTANTS - Contaminants that are carried/released into the atmosphere or air.

AIR MODELING - Mathematical models used to predict movement and concentrations of chemicals in the atmosphere.

AIR MONITORING -To measure, record, and/or detect pollutants in ambient air.

AIR PURIFYING RESPIRATORS (APR) - Personal Protective Equipment; a breathing mask with specific chemical cartridges designed to either filter particulates or absorb contaminants before they enter the worker's breathing zone. They are intended to be used only in atmospheres where the chemical hazards and concentrations are known.

AIR PURIFYING RESPIRATOR - POWERED - An APR with a portable motor to force air through the filtering/purifying cartridges for use only in atmospheres where the chemical hazards and concentrations are known.

AIR QUALITY MANAGEMENT DISTRICT - A local/regional air pollution agency responsible for regulation and monitoring of air quality.

ALKALI - A hydroxide containing (-OH) corrosive material that is soluble in water, neutralizes acids, and is irritating or destructive to tissue.

AMBIENT AIR QUALITY - Quality of the surrounding atmosphere or circulating air.

AMERICAN CONFERENCE OF GOVERNMENTAL INDUSTRIAL HYGIENISTS (ACGIH) - A professional society of persons responsible for full-time industrial hygiene programs, who are employed by official governmental units. Its primary function is to encourage the interchange of experience among governmental industrial hygienists, and to collect and make available information of value to them. ACGIH promotes standards and techniques in industrial hygiene, and coordinates governmental activities with community agencies.

AMERICAN INDUSTRIAL HYGIENE ASSOCIATION (AIHA) - An organization of professionals trained in the recognition and control of health hazards and the prevention of illness related thereto. It promotes the study and control of environmental factors affecting the health of industrial workers, and provides information and communication services pertaining to industrial hygiene.

AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI) - The Institute serves as a clearinghouse for nationally coordinated voluntary safety, engineering and industrial standards developed by industrial firms, trade associations, technical societies, consumer organizations, and government agencies.

AMERICAN SOCIETY FOR TESTING AND MATERIALS (ASTM) - The Society establishes voluntary consensus standards for materials, products, systems, and services. Sponsors research projects, develops standard test methods, specifications, and recommended practices now in use.

ANHYDROUS - Free from water, dry.

AREA PLAN - A document established to facilitate emergency response to a release or threatened release of a hazardous material within a city or county. (California Health and Safety Code, Section 25503, Chapter 6.95)

ASBESTOS - A silicate of calcium or magnesium mineral, the friable form occurring in threadlike fibers; noncombustible and a nonconductor of electricity; a known carcinogen.

ASBESTOSIS - A disease of the lungs caused by the inhalation of fine airborne fibers of asbestos.

ASPHYXIANT - A vapor or gas that can cause unconsciousness or death by suffocation (lack of oxygen).

ASSESSMENT - The process of determining the nature and degree of hazard of a hazardous material or hazardous materials incident.

ASSISTING AGENCIES - Any agency that assists the jurisdictional agency at the scene of a hazardous materials incident by providing a service or support not within the immediate responsibility or capability of the agency having jurisdiction. (Sacramento Fire Department HMRT)

ASSOCIATION OF AMERICAN PESTICIDE CONTROL OFFICIALS, INC. - This association consists of officials charged by law with active execution of the laws regulating the sale of economic poisons, and of deputies designated by these officials employed by State, Territorial, dominion, or Federal agencies.

ASSOCIATION OF AMERICAN RAILROADS - A central coordinating and research agency of the American railway industry.

AUTHORITY HAVING JURISDICTION - 1) Provides for the position of Incident Commander at the scene of a hazardous materials incident occurring within their jurisdictional authority boundaries. 2) The organization, office, or individual responsible for approving the equipment, an installation, or a procedure. (NFPA)

BASE (CHEMICAL) - A hydroxide containing (-OH) corrosive material that when in a water solution is bitter, more or less irritating, or caustic to the skin.

BASE (ICS) - The location at which the primary logistics functions are coordinated and administered. The ICS may be collocated with the ICP.

BIOASSAY - Determination of the relative strength and toxicity of a substance (such as a drug) by comparing its effect on a test organism with that of a standard preparation.

BIOACCUMULATION - Absorption and storage of toxic chemicals from the environment in an organism, usually in body fat.

BIOHAZARD - Infectious agents presenting a risk or potential risk to living organisms, either directly through infection or indirectly through disruption of the environment.

BIOHAZARD AREA - Any area in which work has been, or is being performed, with infectious agents or materials.

BIOLOGICAL AGENTS - Biological materials those are capable of causing acute or long-term damage to living organisms. (NFPA 1990, 1-3)

BIOLOGICAL HALF-LIFE - The time required for a living organism to eliminate half of a substance which it takes in.

BIOLOGICAL TREATMENT - A process by which waste is rendered less hazardous, or is reduced in volume, by relying on the action of microorganisms.

BLASTING AGENT - A material designed for blasting which has been tested and found to be so insensitive that there is very little probability of accidental initiation to explosion or of transition from deflagration to detonation.

BOILING LIQUID EXPANDING VAPOR EXPLOSION (BLEVE) - A container failure with a release of energy, often rapidly and violently, which is accompanied by a release of gas to the atmosphere and propulsion of the container or container pieces due to an overpressure rupture.

BOOM - A floating physical barrier serving as a continuous obstruction to the spread of a contaminant.

BOOTIE - A sock like over-boot protector worn to minimize contamination.

BREAKTHROUGH TIME - The elapsed time between initial contact of the hazardous chemical with the outside surface of a barrier, such as protective clothing material, and the time at which the chemical can be detected at the inside surface of the material.

BREATHING ZONE AIR SAMPLE - A sample collected in the breathing area of a worker to assess exposure to airborne contaminants.

BUDDY SYSTEM - A system of organizing employees into work groups in such a manner that each employee of the work group is designated to be observed by at least one other employee in the work group. [8 CCR 5192 (a)(3)]

BUFFER ZONE - The area of land that surrounds a hazardous waste facility on which certain usages and activities are restricted to protect the public health and safety, and the environment from existing or potential hazards caused by the migration of hazardous waste.

BUREAU OF ALCOHOL, TOBACCO AND FIREARMS (ATF) - The Federal bureau that enforces and administers firearms and explosive laws, as well as those covering the production, use and distribution of alcohol and tobacco products.

BUSINESS PLAN - A written plan and inventory developed by a business for each facility, site, or branch that provides emergency response guidelines for a release of hazardous materials meeting the requirements of H&SC 25504.

CALIFORNIA ACCIDENTAL RELEASE PREVENTION PROGRAM (CalARP) - The California Accidental Release Prevention (CalARP) Program is the federal Accidental Release Prevention (ARP) Program with some state specific requirements. On January 1, 1997, Chapter 6.95, Sections 25531 to 25545.3 HSC repealed statutes for California's former Risk Management and Prevention (RMPP) Program and mandated the new CalARP program.

CALIFORNIA AIR RESOURCES BOARD (ARB) - The State board that enforces and implements California and Federal air pollution control laws.

CALIFORNIA DEPARTMENT OF FISH AND GAME (DFG) - The State department which enforces provisions of the State Fish and Game Code that prohibits pollution of habitats, waters and ocean waters; and acts as the State Liaison Officer at major off highway hazardous materials incidents.

CALIFORNIA DEPARTMENT OF FORESTRY AND FIRE PROTECTION (CDF) - A State resources department that protects unincorporated lands from wildfire and responds to public safety emergencies.

CALIFORNIA DEPARTMENT OF HEALTH SERVICES (DHS) - The State department containing the Radiological Health Branch, Office of Drinking Water and Office of Risk Assessment in addition to medical and health services.

CALIFORNIA DEPARTMENT OF TOXIC SUBSTANCES CONTROL (DTSC) - The State department responsible for regulation of storage, transport, treatment, and disposal of hazardous waste; and oversight of remediation and long-term clean up of sites contaminated with hazardous substance.

CALIFORNIA DEPARTMENT OF TRANSPORTATION (Caltrans) - The State department responsible for planning, designing, constructing, operating, and maintaining the State's highway system. It will ensure, in cooperation with other public and private agencies, the identification and containment of hazardous materials and restoration of orderly traffic flow. It will contract with cleanup companies to assist with cleanup.

CALIFORNIA DIVISION OF OCCUPATIONAL SAFETY AND HEALTH (Cal/OSHA) - The State division responsible for enforcement of worker safety laws.

CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY (Cal/EPA) - The State agency consisting of the Departments of Toxic Substances Control and Pesticide Regulation, the Office of Environmental Health Hazard Assessment, the Department of Water Resources and Regional Water Quality Control Boards, the Air Resources Board and the Integrated Waste Management Board. Cal/EPA sets the policy and direction that the member organizations pursue.

CALIFORNIA FIRE MUTUAL AID PLAN - A pre-plan agreement comprised of fire jurisdictions within the State of California to respond and assist in the event of any incident that has been determined to be outside the local fire jurisdiction's capabilities.

CALIFORNIA HAZARDOUS MATERIALS INCIDENT REPORTING SYSTEM (CHMIRS) - A mandatory post-incident reporting system to collect statistical data on hazardous material incidents in California. This data includes a description of the disaster, the location, the time and date, the state and local agencies responding, the actions taken by the agencies, and the agency, which had primary authority for responding to the disaster. (Chapter 6.95 of the Health and Safety Code, Title 19 CCR, and Government Code Section 8574.8 (d))

CALIFORNIA HIGHWAY PATROL (CHP) - The State agency with primary responsibility for traffic supervision and control on all State highways constructed as freeways, all State-owned vehicular crossings, and on most State and county highways and roadways in unincorporated areas of the State. The department enforces hazardous materials transportation laws and acts as Incident Commander, Liaison Officer, and the Statewide information, assistance, and notification coordinator for all hazardous materials incidents within its jurisdiction.

CALIFORNIA LAW ENFORCEMENT MUTUAL AID PLAN - Establishes the State policy for law enforcement mutual aid and outlines the procedures for coordination of alerting, dispatching, and utilization of law enforcement personnel and equipment resources.

CALIFORNIA OFFICE OF EMERGENCY SERVICES (OES) - The State agency responsible for administration of Health and Safety Code Chapter 6.95 and Title 19 CCR, and development of Statewide disaster response plans, and coordination of Statewide mutual aid.

CALIFORNIA SPECIALIZED TRAINING INSTITUTE (CSTI) - The organization within the Governor's Office of Emergency Services with the responsibility to standardize curriculum and certify instructors, students, and classes in the area of hazardous materials emergency response for the public and private sectors.

CALIFORNIA STATE EMERGENCY PLAN - The document established pursuant to Section 8568 of the California Government Code that addresses the State's response to extraordinary emergency situations associated with natural disasters, technological incidents, and war emergency operations.

CALIFORNIA STATE FIRE MARSHAL (SFM) - A division of the Department of Forestry and Fire Protection for the safety of all interstate and intrastate hazardous liquid pipelines in California.

CANADIAN TRANSPORT EMERGENCY CENTER (CANUTEC) - A 24 hour, government sponsored hot line for chemical emergencies (the Canadian version of CHEMTREC.)

CARBOY - A container, usually encased in a protective basket or crate, used to ship hazardous materials, particularly corrosives.

CARCINOGEN - An agent that produces or is suspected of producing cancer. (FEMA HMCP)

CASCADE SYSTEM - Several air cylinders attached in series to fill Self Contained Breathing Apparatus (SCBA) bottles.

CATASTROPHIC INCIDENT - An event that significantly exceeds the resources of a jurisdiction.

CEASE AND DESIST ORDER - Legal direction to stop any and all activities.

CELSIUS (CENTIGRADE) C - The internationally used scale for measuring temperature, in which 100o is the boiling point of water at sea level (1 atmosphere), and 0o is the freezing point.

CENTER FOR DISEASE CONTROL (CDC) - The federally funded research organization tasked with disease control and research.

CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) - The law that may require Environmental Impact Reports (EIRs) at sites where significant activities occur.

CFR - 1) Crash, Fire, Rescue personnel; trained in aircraft fire fighting and rescue; 2) Code of Federal Regulations; enforced by federal and state agencies and contains roles for the function of federal government.

CGA - See Compressed Gas Association.

CHEMICAL ABSTRACTS SERVICE (CAS) NUMBER - A numbering system assigned by the American Chemical Society often used by local and State hazardous materials compliance legislation for tracking chemicals in the workplace and in the community.

CHEMICAL HAZARDS RESPONSE INFORMATION SYSTEM/HAZARD ASSESSMENT COMPUTER SYSTEM (CHRIS/HACS) - Developed by the Coast Guard, HACS is a computerized model of the CHRIS manuals (containing chemical-specific data), and is used by Federal on-scene coordinators during a chemical spill/response.

CHEMICAL MANUFACTURERS ASSOCIATION (CMA) - The parent organization that operates CHEMTREC.

CHEMICAL PROTECTIVE CLOTHING MATERIAL - Any material or combination of materials used in an item of clothing for the purpose of isolating parts of the wearer's body from contact with a hazardous chemical. (NFPA 1991,1-3)

CHEMICAL PROTECTIVE SUIT - Single or multi-piece garment constructed of chemical protective clothing materials designed and configured to protect the wearer's torso, head, arms, legs, hands, and feet. (NFPA 1991, 1-3)

CHEMICAL RESISTANCE - The ability to resist chemical attack. The attack is dependent on the method of test and its severity is measured by determining the changes in physical properties. Time, temperature, stress, and reagent may all be factors that affect the chemical resistance of a material.

CHEMICAL RESISTANT MATERIALS - Materials that are specifically designed to inhibit or resist the passage of chemicals into and through the material by the processes of penetration, permeation or degradation.

CHEMICAL TRANSPORTATION EMERGENCY CENTER (CHEMTREC) - The Chemical Transportation Center, operated by the Chemical Manufacturers Association (CMA), can provide information and technical assistance to emergency responders. [Phone number (800) 424-9300]

CHEMNET - A mutual aid network of chemical shippers and contractors. It is activated when a member shipper cannot respond promptly to an incident involving chemicals. (Contact is made through CHEMTREC.)

CHLOREP - The chlorine emergency plan, established by the Chlorine Institute, enables the nearest producer of chlorine to respond to an incident involving chlorine. (Contact is made through CHEMTREC.)

CHLORINE KITS - Standardized kits commercially manufactured by contract with the Chlorine Institute to provide equipment to control or stop leaks in chlorine cylinders, tanks, and transportation tank cars.

CHRONIC EFFECT - Delayed or slowly developing harm resulting from a chemical exposure, which is often hard to recognize.

CLANDESTINE LABORATORY - An operation consisting of a sufficient combination of apparatus and chemicals that either have been or could be used in the illegal manufacture/synthesis of controlled substances.

CLEAN AIR ACT - A set of national standards for ambient air quality that defines the principal types and levels of pollution that should not be exceeded. This law requires States to develop "State implementation plans" for achieving the ambient air standards in each air quality control region in the State.

CLEANUP - Incident scene activities directed toward removing hazardous materials, contamination, debris, damaged containers, tools, dirt, water, and road surfaces in accordance with proper and legal standards, and returning the site to as near a normal state as existed prior to the incident. (Sacramento Fire Department HMRT)

CLEANUP COMPANY (HAZARDOUS WASTE) - A commercial business entity available for hire to specifically remove, transport, and/or dispose of hazardous wastes; and when appropriate, must meet California Highway Patrol and Department of Toxic Substances Control requirements.

CLEANUP OPERATION - An operation where hazardous substances are removed, contained, incinerated, neutralized, stabilized, cleared up, or in any other manner processed or handled with the ultimate goal of making the site safer for people or the environment. (8 CCR 5192(a)(3))

CLEAN WATER ACT (CWA) - Federal legislation to protect the nation's water and set State water quality standards for interstate navigable waters as the basis for pollution control and enforcement. The main objective is to restore and maintain the chemical, physical and biological integrity of the Nation's waters.

COLD ZONE - The area outside of the warm zone. Equipment and personnel are not expected to become contaminated in this area. This is the area where resources are assembled to support the hazardous materials operation.

COLORIMETRIC TUBES - Glass tubes containing a chemically treated substrate that reacts with specific airborne chemicals to produce a distinctive color. The tubes are calibrated to indicate approximate concentrations in air.

COMBINED LIQUID WASTE SAMPLER (COLIWASSA) - A tool designed to provide stratified sampling of a liquid container.

COMBUSTIBILITY - The ability of a substance to undergo rapid chemical combination with oxygen, with the evolution of heat.

COMBUSTIBLE LIQUID - Liquids with a flashpoint above 100o F. (49 CFR 173.120 (b)(2).)

COMBUSTION PRODUCT - By-products produced or generated during the burning or oxidation of a fuel.

COMMAND - The act of directing, ordering, and/or controlling resources by virtue of explicit legal, agency, or delegated authority. (NIIMS)

COMMAND POST - The location from which the primary command functions are executed, usually co-located with the incident base.

COMMUNITY AWARENESS AND EMERGENCY RESPONSE (CAER) - A program developed by the Chemical Manufacturers Association (CMA) to provide guidance for chemical plant managers to assist them in taking the initiative in cooperating with local communities developing integrated hazardous materials response plans.

COMMUNITY RIGHT-TO-KNOW - Legislation requiring business establishments to provide chemical inventory information to local agencies or the public.

COMPANY (FIRE USAGE) - Any piece of fire response equipment having a full complement of personnel. (NIIMS)

COMPATIBILITY - The matching of protective chemical clothing to the hazardous material involved to provide the best protection for the worker.

COMPATIBILITY CHARTS - Permeation and penetration data supplied by manufacturers of chemical protective clothing to indicate chemical resistance and breakthrough time of various garment materials as tested against a battery of chemicals. This test data should be in accordance with ASTM and NFPA standards.

COMPREHENSIVE ENVIRONMENTAL RESPONSE, COMPENSATION, AND LIABILITY ACT (CERCLA) - Known as CERCLA or SUPERFUND, it addresses hazardous substance releases into the environment and the cleanup of inactive hazardous waste sites. It also requires those who release hazardous substances, as defined by the Environmental Protection Agency (EPA), above certain levels (known as "reportable quantities") to notify the National Response Center.

COMPRESSED GAS - Any material or mixture having an absolute pressure exceeding 40 p.s.i. in the container at 70^{o} F or, regardless of the pressure at 70^{o} F, having an absolute pressure exceeding 104 p.s.i. at 130^{o} F; or any liquid flammable material having a vapor pressure exceeding 40 p.s.i. absolute at 100^{o} F as determined by testing. Also includes cryogenic or "refrigerated liquids" (DOT) with boiling points lower than -130^{o} F at 1 atmosphere.

COMPRESSED GAS ASSOCIATION (CGA) - An association of firms producing and distributing compressed, liquefied, and cryogenic gases; also manufacturers of related equipment. CGA submits recommendations to appropriate government agencies to improve safety standards and methods of handling, transporting, and storing gases; acts as advisor to regulatory authorities and other agencies concerned with safe handling of compressed gases; collaborates with national organizations to develop specifications and standards of safety.

COMPUTER AIDED MANAGEMENT OF EMERGENCY OPERATIONS (CAMEO) - A computer data base storage-retrieval system of pre-planning and emergency data for on-scene use at hazardous materials incidents.

CONFINEMENT - Procedures taken to keep a material in a defined or localized area.

CONSIGNEE - The addressee to whom the item is shipped.

CONTACT - Being exposed to an undesirable or unknown substance that may pose a threat to health and safety. (Sacramento Fire Department HMRT)

CONTAINER - Any device, in which a hazardous material is stored, transported, disposed of, or otherwise handled.

CONTAINER, INTERMODAL, ISO - An article of transport equipment that meets the standards of the International Organization for Standardization (ISO) designed to facilitate and optimize the carriage of goods by one or more modes of transportation without intermediate handling of the contents and equipped with features permitting ready handling and transfer from one mode to another. Containers may be fully enclosed with one or more doors, open top, tank, refrigerated, open rack, gondola, flatrack, and other designs. Included in this definition are modules or arrays that can be coupled to form an intrinsic unit regardless of intention to move single or in multiplex configurations.

CONTAINMENT - All activities necessary to bring the incident to a point of stabilization and to establish a degree of safety for emergency personnel greater than existed upon arrival.

CONTAMINATION - An uncontained substance or process that poses a threat to life, health, or the environment. (NFPA 472, sections 1-3)

CONTAMINATION CONTROL LINE - The established line around the contamination reduction zone that separates it from the support zone.

CONTAMINATION REDUCTION ZONE - Term used by the Coast Guard to identify the area of moderate hazard where threat of contamination spread to the immediate surrounding area is low. It is the area immediately outside of the inner hot zone. (See Warm Zone.)

CONTINGENCY PLAN - A pre-planned document presenting an organized and coordinated plan of action to limit potential pollution in case of fire, explosion, or discharge of hazardous materials; defines specific responsibilities and tasks.

CONTROL - The procedures, techniques, and methods used in the mitigation of a hazardous materials incident, including containment, extinguishment, and confinement.

CONTROL ZONES - The designation of areas at a hazardous materials incident based upon safety and the degree of hazard. (NFPA 472, sections 1-3) (See Support Zone, Warm Zone, Hot Zone, and Decontamination Corridor.)

COORDINATION - To bring together, in a uniform and controlled manner, the functions of all agencies on scene. (Sacramento Fire Department HMRT)

CORROSIVE - The ability to cause destruction of living tissue or many solid materials surfaces by chemical action.

COST RECOVERY - A procedure that allows for the agency having jurisdiction to pursue reimbursement for all costs associated with a hazardous materials incident. (Sacramento Fire Department HMRT)

COUNCIL ON ENVIRONMENTAL ALTERNATIVES (CEA) - Encourages people to conserve, rather than consume, their environment. The Council concentrates on the area of energy, and provides specific recommendations that encourage individuals to recognize and assume responsibility for environmentally sound choices available to them.

CRYOGENIC - Gases, usually liquefied, that induce freezing temperatures of -150^{o} F and below (liquid oxygen, liquid helium, liquid natural gas, liquid hydrogen, etc.).

DAMAGE ASSESSMENT - Gathering information on the type, extent, and costs of damage after an incident.

DAMMING - A procedure consisting of constructing a dike or embankment to totally immobilize a flowing waterway contaminated with a liquid or solid hazardous substance. (EPA, 600/2-77-277)

DANGEROUS WHEN WET - A label required for water reactive materials (solid) being shipped under U.S. DOT, ICAO, and IMO regulations. A labeled material that is in contact with water or moisture may produce flammable gases. In some cases, these gases are capable of spontaneous combustion. (49 CFR 171.8)

DECLARED EMERGENCY - An action taken by a jurisdiction according to the California Emergency Services Act and local ordinances in response to the impact of a real or threatened hazard that exceeds local resources.

DECONTAMINATION (DECON) - The physical and/or chemical process of reducing and preventing the spread of contamination from persons and equipment used at a hazardous materials incident. (Also referred to as “contamination reduction”.) (NFPA 472, 1-3)

DECONTAMINATION CORRIDOR - A distinct area within the warm zone that functions as a protective buffer and bridge between the hot zone and the cold zone, where decontamination stations and personnel are located to conduct decontamination procedures. (Sacramento Fire Department HMRT)

DECONTAMINATION OFFICER - A position within the FIRESCOPE ICS HM-120 that has responsibility for identifying the decontamination corridor location & types of decontamination, assigning stations, and managing all decontamination procedures.

DECONTAMINATION TEAM - A group of personnel and resources operating within a decontamination corridor.

DEGRADATION - The loss in physical properties of an item of protective clothing due to exposure to chemicals, use, or ambient conditions.

DELAYED TOXIC EXPOSURE EFFECT - The condition in which symptoms of an exposure are not present immediately after the exposure, but are delayed for a relatively short period of time (such as pulmonary edema a few hours after an inhalation exposure).

DELETERIOUS SUBSTANCES - Substances not normally harmful to humans that may be harmful to the environment.

DEPARTMENT OF COMMERCE (DOC) - A Federal agency whose primary mission is to encourage, serve and promote economic development and technological advancement.

DEPARTMENT OF Defense (DOD) - The Federal entity that provides the military forces needed to deter war and protect the security of our country.

DEPARTMENT OF ENERGY (DOE) - The Federal agency which provides the framework for a comprehensive and balanced national energy plan through coordination and administration of the energy functions of the federal government; and to be responsible for long term, high risk research, development and demonstration of energy technology, the marketing of federal power, energy conservation, the nuclear weapons program, regulation of energy production and use, and a central energy data collection and analysis program.

DEPARTMENT OF JUSTICE (DOJ) - The Federal department which serves as counsel for the citizens of the Nation; represents them in enforcing the law in the public interest; through its thousands of lawyers, investigators, and agents it plays a key role in protection against criminals and subversion, in insuring healthy competition of business in our free enterprise system, in safeguarding the consumer, and in enforcing drug, immigration, and naturalization laws; plays a significant role in protecting citizens through its efforts for effective law enforcement, crime prevention, crime detection, and prosecution and rehabilitation of offenders; conducts all suits in the Supreme Court in which the United States is concerned; and represents the Federal Government in legal matters.

DEPARTMENT OF LABOR (DOL) - The purpose of the Department of Labor is to foster, promote, and develop the welfare of the wage earners of the United States, to improve their working conditions, and to advance their opportunities for profitable employment.

DEPARTMENT OF STATE (DOS) - This department advises the President in formulation and execution of foreign policy; promotes long-range security and well-being of the United States; determines and analyzes the facts relating to American overseas interest, makes recommendations on policy and future action, and takes the necessary steps to carry out established policy; engages in continuous consultation with the American public, the Congress, other U.S. departments and agencies, and foreign governments.

DEPARTMENT OF TRANSPORTATION (DOT) - This agency assures the coordinated, effective administration of the transportation programs of the Federal government and develops national transportation policies and programs conducive to the provision of fast, safe, efficient and convenient transportation at the lowest possible cost.

DESICCANT - A substance, such as silica gel, that removes moisture (water vapor) from the air to maintain a dry atmosphere in containers of food or chemical packaging.

DETECTORS -

Combustible Gas Indicator (CGI) Detector: Measures the presence of a combustible gas or vapor in air.

Corrosivity (pH) Detector: A meter or paper that indicates the relative acidity or alkalinity of a substance, generally using an international scale of 0 (acid) through 14 (alkali-caustic). (See pH.)

Flame Ionization Detector (FID): A device used to determine the presence of hydrocarbons in air.

Gas Chromatograph/ Mass Spectrometer Detector (GC/MS): An instrument used for identifying and analyzing organics.

Heat Detector: An instrument used to detect heat by sensing infrared waves.

Photoionization Detector (PID): A device used to determine the presence of gases/vapors in low concentrations in air.

Radiation Beta Survey Detector: An instrument used to detect beta radiation.

Radiation Dosimeter Detector: An instrument that measures the amount of radiation to which a person has been exposed.

Radiation Gamma Survey Detector: An instrument used for the detection of ionizing radiation, principally gamma radiation, by means of a gas-filled tube.

Temperature Detector: An instrument, either mechanical or electronic, used to determine the temperature of ambient air, liquids, or surfaces.

DHS - See California Department of Health Services.

DIKE - An embankment or ridge, natural or man-made, used to control the movement of liquids, sludges, solids, or other materials.

DIKE OVERFLOW - A dike constructed in a manner that allows uncontaminated water to flow unobstructed over the dike while keeping the contaminant behind the dike.

DIKE UNDERFLOW - A dike constructed in a manner that allows uncontaminated water to flow unobstructed under the dike while keeping the contaminant behind the dike.

DISPERSION - To spread, scatter, or diffuse through air, soil, surface or ground water.

DISPOSAL DRUM - A reference to a specially constructed drum used to overpack damaged or leaking containers of hazardous materials for shipment.

DIVERSION - The intentional, controlled movement of a hazardous material to relocate it into an area where it will pose less harm to the community and the environment. (Sacramento Fire Department HMRT)

DIVISION - That organizational level within the ICS having responsibility for operations within a defined geographic area. The "Division" Officer directs approximately 5 Companies, and answers to the "Operations" Officer.

DOSE - The amount of substance ingested, absorbed, and/or inhaled per exposure period.

DOUBLE GLOVING - A set of gloves worn over those already in place for enhanced protection.

DOWNWIND - In the direction in which the wind blows.

DUST - Solid particles generated by handling, crushing, grinding, rapid impact, detonation, and decrepitation of organic or inorganic materials such as rock, ore, metal, coal, wood, and grain.

ECOLOGY - A branch of science concerned with the interrelationship of organisms and their environments.

ECONOMIC POISON - As defined in the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), an economic poison is "any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any insects, rodents, nematodes, fungi, or weeds, or any other forms of life declared to be pests... any substance intended for use as a plant regulator, defoliant, or desiccant." As defined, economic poisons are generally known as pesticides.

ECOSYSTEM - A habitat formed by the interaction of a community of organisms with their environment.

EDEMA - The swelling of body tissues resulting from fluid retention.

EMERGENCY MEDICAL SERVICES (EMS) - Functions as required to provide emergency medical care for ill or injured persons by trained providers.

EMERGENCY MEDICAL SERVICES AGENCY - Plans and coordinates local public and private emergency medical services systems. Sets the local standards for medical care and transport of victims. California Health and Safety Code Section 1058 vests authority for patient care management in the most qualified medical care provider.

EMERGENCY MEDICAL SERVICES AUTHORITY (EMSA) - The State agency responsible for developing general guidelines for triage and handling of contaminated/exposed patients; develops and promotes hazardous materials training for emergency medical responders in the field and hospital emergency rooms; identifies and coordinates the procurement of medical assistance, supplies, and hospital beds when local and/or regional resources are depleted; and coordinates the evaluation of casualties to other areas of the State.

EMERGENCY OPERATIONS CENTER (EOC) - The secured site where government officials exercise centralized coordination in an emergency. The EOC serves as a resource center and coordination point for additional field assistance. It also provides executive directives to and liaison for State and federal government representatives, and considers and mandates protective actions.

EMERGENCY OPERATIONS PLAN - A document that identifies the available personnel, equipment, facilities, supplies, and other resources in the jurisdiction, and states the method or scheme for coordinated actions to be taken by individuals and government services in the event of natural, man-made, and attack related disasters.

EMERGENCY RESERVE ACCOUNT FOR HAZARDOUS MATERIAL INCIDENTS - A fund administered by the California Department of Toxic Substances Control to finance actions only for the purpose of remediation or prevention of threats of fire, explosion or human health hazards resulting from a release or potential release of a hazardous substance. (Health and Safety Code 25354)

EMERGENCY RESPONSE - Response to any occurrence, which has or could result in a release of a hazardous substance. (8 CCR 5192), (19 CCR 2402)

EMERGENCY RESPONSE ORGANIZATION - An organization that utilizes personnel trained in emergency response. (19 CCR 2402)

EMERGENCY RESPONSE PERSONNEL - Personnel assigned to organizations that have the responsibility for responding to different types of emergency situations. (NFPA 1991, 1-3)

EMPTY PACKAGING - Any packaging having a capacity of 110 gallons or less that contains only the residue of a hazardous material in table 2 of 49 CFR 172.504.

ENDOTHERMIC - A process or chemical reaction, which is accompanied by absorption of heat.

ENGINE (FIRE USAGE) - Any emergency response vehicle providing specified levels of pumping, water, hose capacity, and personnel.

ENTRY POINT - A specified and controlled location where access into the hot zone occurs at a hazardous materials incident.

ENTRY TEAM LEADER - The entry leader is responsible for the overall entry operations of assigned personnel within the hot zone. (FIRESCOPE ICS-HM)

ENVIRONMENTAL PROTECTION AGENCY (EPA) - The purpose of the Environmental Protection Agency (EPA) is to protect and enhance our environment today and for future generations to the fullest extent possible under the laws enacted by Congress. The Agency's mission is to control and abate pollution in the areas of water, air, solid waste, pesticides, noise, and radiation. EPA's mandate is to mount an integrated, coordinated attack on environmental pollution in cooperation with State and local governments.

EPA - See Environmental Protection Agency.

ETIOLOGICAL AGENT - A viable microorganism or its toxin, which causes or may cause human disease.

EVACUATION - The removal of potentially endangered, but not yet exposed, persons from an area threatened by a hazardous materials incident. (FIRESCOPE ICS-HM)

EXPLOSIVE ORDNANCE DISPOSAL (EOD) - Military or civilian bomb squads.

EXTREMELY HAZARDOUS SUBSTANCES (EHS) - Environmental Protection Agency (EPA) uses this term for chemicals that must be reported pursuant to SARA, Title III. The list of these substances and the threshold planning quantities are identified in 40 CFR 355. Releases of extremely hazardous substances as defined by EPA must be reported to the National Response Center. In California, the term Acutely Hazardous Material (AHM) is used. They are identical to the EHS in 40 CFR.

EXTREMELY HAZARDOUS WASTE - Any hazardous waste or mixture of hazardous wastes which, if human exposure should occur, may likely result in death, disabling injury or serious illness caused by the hazardous waste or mixture of hazardous wastes because of its quantity, concentration or chemical characteristics.

EXCLUSION ZONE - See Hot Zone.

EXOTHERMIC - A process or chemical reaction, which is accompanied by the evolution of heat.

EXPLOSION-PROOF EQUIPMENT - Instruments whose enclosure is designed and constructed to prevent the ignition of an explosive atmosphere. Certification for explosion proof performance is subject to compliance with ASTM standards.

EXPLOSIVE - Any chemical compound, mixture, or device, of which the primary or common purpose is to function by explosion, i.e., with substantial instantaneous release of gas and heat. (49 CFR 173.50)

EXPOSURE - The subjection of a person to a toxic substance or harmful physical agent through any route of entry.

FAHRENHEIT - The scale of temperature in which 212o is the boiling point of water at 760 mm Hg and 32o is the freezing point.

FEDERAL INSECTICIDE, FUNGICIDE, AND RODENTICIDE ACT (FIFRA) - An act that requires pesticides to be registered and labeled, makes it illegal to detach or destroy pesticide labels, and provides for pesticide inspections. An amendment to FIFRA now requires EPA to determine whether a pesticide "will perform its intended function without causing unreasonable adverse effects on the environment" or human health.

FEDERAL WATER POLLUTION CONTROL ACT (WPCA) - See Clean Water Act.

FIBROSIS - A condition marked by an increase of interstitial fibrous tissue.

FILTER CANISTER - A container filled with sorbents and catalysts that removes gases and vapors from air drawn through the unit. The canister may also contain an aerosol (particulate) filter to remove solid or liquid particles. (Air purifying canister type breathing apparatus are not approved for use during emergencies by the fire service in California.)

FIRST RESPONDER - The first trained person(s) to arrive at the scene of a hazardous materials incident. May be from the public or private sector of emergency services.

FIRST RESPONDER, AWARENESS LEVEL - Individuals who are likely to witness or discover a hazardous substance release who have been trained to initiate an emergency response sequence by notifying the proper authorities of the release. They would take no further action beyond notifying the authorities of the release. (8 CCR 5192(q)(6))

FIRST RESPONDER, OPERATIONS LEVEL - Individuals who respond to releases or potential releases of hazardous substances as part of the initial response to the site for the purpose of protecting nearby persons, property, or the environment from the effects of the release. They are trained to respond in a defensive fashion without actually trying to stop the release. Their function is to contain the release from a safe distance, keep it from spreading, and prevent exposures. (8 CCR 5192(q)(6))

FLAMMABLE LIQUID - Any liquid having a flash point below 100o F (37.8o C). (49 CFR 173.115(a))

FLAMMABLE RANGE - A mixture of flammable gas, as mixed with air, expressed as a percent. Each gas has a range including a lower limit and upper limit and between these limits the mixture is flammable (explosive).

FLAMMABLE SOLID - Any solid material, other than one classed as an explosive, which under conditions normally incident to transportation is liable to cause fires through friction, retains heat from manufacturing or processing, or which can be ignited readily and when ignited burns so vigorously and persistently as to create a serious transportation hazard. Included in this class are spontaneously combustible and water-reactive materials. (49 CFR 173.150)

FLASHPOINT - The minimum temperature of a liquid at which it gives off vapors sufficiently fast to form an ignitable mixture with air and will flash when subjected to an external ignition source, but will not continue to burn.

FOOD AND DRUG ADMINISTRATION (FDA) - Performs, directs, and coordinates detection and control activities which protect consumers against adulterated, misbranded, or falsely advertised foods, drugs, medical devices, and hazardous products.

FULL PROTECTIVE CLOTHING - Protective clothing worn primarily by fire fighters which includes helmet, coat, pants, boots, gloves, and self-contained breathing apparatus designed for structural fire fighting. It does not provide specialized chemical protection.

FULLY ENCAPSULATING SUITS - Chemical protective suits that are designed to offer full body protection, including Self Contained Breathing Apparatus (SCBA), are gas tight, and meet the design criteria as outlined in NFPA Standard 1991.

FUME - Airborne dispersion consisting of minute solid particles arising from the heating of a solid material such as lead, in distinction to a gas or vapor. This physical change is often accompanied by a chemical reaction, such as oxidation. Fumes flocculate and sometimes coalesce. Odorous gases and vapors should not be called fumes.

GAS - A state of matter in which the material has very low density and viscosity; can expand and contract greatly in response to changes in temperature and pressure; easily diffuses into other gases; readily and uniformly distributes itself throughout any container. A gas can be changed to a liquid or solid state by the combined effect of increased pressure and/or decreased temperature.

GELLING - A process of adding a specific material that is designed to coagulate a liquid facilitating its isolation and removal.

GROUNDING - Method whereby activities that may generate static electricity will be prevented from discharging a spark and thereby not produce an ignition point.

GROUP - Groups are established to divide the incident into functional areas of operation.

HABITAT - The native environment of an animal or plant; the natural place for life and growth of an animal or plant.

HALONS - Fire suppressing gases that are composed of straight chain carbon atoms with a variety of halogen atoms attached.

HALOGENS - A chemical family that includes fluorine, chlorine, bromine, and iodine.

HAZARD - Any situation that has the potential for causing damage to life, property, and/or the environment.

HAZARD CLASS - The classification of hazardous materials as categorized and defined by the Department of Transportation in 49 CFR. The Hazardous Materials Table (49 CFR Part 172.101) designates specific materials as hazardous for the purpose of transportation. It also classifies each material and specifies requirements pertaining to its packaging, labeling, and transportation.

Class 1: Explosives
Division 1.1 Explosives with a mass explosion hazard
Division 1.2 Explosives with a projection hazard
Division 1.3 Explosives with predominantly a fire hazard
Division 1.4 Explosives with no significant blast hazard
Division 1.5 Very insensitive explosives
Division 1.6 Extremely insensitive explosive articles

Class 2: Gases
Division 2.1 Flammable gases
Division 2.2 Nonflammable gases
Division 2.3 Poison gas
Division 2.4 Corrosive gases

Class 3: Flammable liquids
Division 3.1 Flashpoint below -18^{o}C (0^{o}F)
Division 3.2 Flashpoint -18^{o}C and above, but less than 23oC (73^{o}F)
Division 3.3 Flashpoint 23^{o}C and up to 61^{o}C (141^{o}F)

Class 4: Flammable solids; spontaneously combustible materials; & materials that are dangerous when wet
Division 4.1 Flammable solids
Division 4.2 Spontaneously combustible materials
Division 4.3 Materials that are dangerous when wet

Class 5: Oxidizers and organic peroxides
Division 5.1 Oxidizers
Division 5.2 Organic peroxides

Class 6: Poisons and etiologic materials
Division 6.1 Poisonous materials
Division 6.2 Etiologic (infectious) materials

Class 7: Radioactive materials
Any material, or combination of materials, that spontaneously gives off ionizing radiation. It has a specific activity greater than 0.002 microcuries per gram.

Class 8: Corrosives
A material, liquid, or solid that causes visible destruction or irreversible alteration to human skin or a liquid that has a severe corrosion rate on steel or aluminum.

Class 9: Miscellaneous
A material which presents a hazard during transport, but which is not included in any other hazard class (such as a hazardous substance or a hazardous waste).

ORM-D: Other regulated material
A material, which, although otherwise subjected to regulations, presents a limited hazard during transportation due to its form, quantity and packaging.

HAZARDOUS AIR POLLUTANT - An airborne pollutant that may cause or contribute to an increase in mortality or serious illness.

HAZARDOUS CHEMICAL - A term used by the United States Occupational Safety and Health Administration (OSHA) to denote any chemical that would be a risk to employees if exposed in the workplace. The list of hazardous chemicals is found in 29 CFR.

HAZARDOUS MATERIAL (HAZARDOUS MATERIALS) - A substance or combination of substances which, because of quantity, concentration, physical, chemical or infectious characteristics may cause, or significantly contribute to an increase in deaths or serious illness; and/or pose a substantial present or potential hazard to humans or the environment.

HAZARDOUS MATERIAL CATEGORIZATION (HAZCAT) - A field analysis process to determine basic hazardous materials hazard classification and some chemical and physical properties of unknowns.

HAZARDOUS MATERIALS EMERGENCY - The release or threatened release of a hazardous material that may impact the public health, safety and/or the environment.

HAZARDOUS MATERIAL INCIDENT CONTINGENCY PLAN (HMICP) - The State's hazardous materials emergency plan published by OES from 1991 to 2004 pursuant to Government Code §8574.17.

HAZARDOUS MATERIALS INCIDENT TOOL KIT (TOOL KIT) - The reference document born from the split of the HMICP and the STDCP.

HAZARDOUS MATERIALS RESPONSE TEAM (HMRT) - An organized group of employees, designated by the employer, who are expected to perform work to handle and control actual or potential leaks or spills of hazardous substances requiring possible close approach to the substance. A Hazardous materials Team may be a separate component of a fire brigade or a fire department or other appropriately trained and equipped units from public or private agencies.

HAZARDOUS MATERIALS RESPONSE TEAM -- TECHNICIAN LEVEL - Consists of an organized group of employees, designated by the employer in compliance with 8 CCR 5192(q)(6), trained to function at the hazardous materials incident at the Technician Level in accordance with NFPA 472, Chapter 3 (1990). Additionally, personnel on the team are capable of the following:

The ability to carry out the duties of these positions as identified in FIRESCOPE ICS-HM-120:

a. Group Supervisor

b. Entry Leader

c. Hazardous Material Safety Officer

d. Site Access Control Officer

e. Decontamination Leader

f. Technical Specialist-Hazardous Material Reference

Note: Multiple positions can be handled by one person dependent upon the complexity and/or severity of the incident.

Members are assigned positions in accordance with 8 CCR 5192 appropriately trained to include but not be limited to entry with splash protective clothing:

a. Entry Team - 2

b. Backup Team – 2

HAZARDOUS MATERIALS RESPONSE TEAM -- SPECIALIST LEVEL - Consists of an organized group of employees, designated by the employer in compliance with 8 CCR 5192(q)(6), trained to function at the hazardous materials incident at the Specialist Level in accordance with NFPA Standard 472, Chapter 4 (1990). Additionally, personnel on the team are capable of the following:

The ability to carry out the duties of these positions as identified in FIRESCOPE ICS-HM-120:

a. Group Leader

b. Entry Team Leader

c. Hazardous Material Safety Officer

d. Site Access Control Officer

e. Decontamination Leader

f. Technical Specialist-Hazardous Material Reference

Note: Multiple positions can be handled by one person dependent upon the complexity and/or severity of the incident.

Members are assigned positions in accordance with 8 CCR 5192 appropriately trained for entry with vapor protective clothing:

a. Entry Team - 2

b. Backup Team – 2

HAZARDOUS MATERIALS RESPONSE TEAM -- SPECIALTY - Consists of an organized group of employees, designated by the employer in compliance with 8 CCR 5192(q)(6), who are trained in the hazards of specific hazardous substances, and/or specific techniques or support services, and/or the provision of specialized technical advice and assistance in compliance with 8 CCR 5192(q)(5). The Team is capable, either within their own team or in agreement with a Hazardous Materials Response Team on scene, of the following:

The ability to carry out the duties of these positions as identified in FIRESCOPE ICS-HM-120:

a. Group Supervisor

b. Entry Team Leader

c. Hazardous Material Safety Officer

d. Site Access Control Officer

e. Decontamination Leader

f. Technical Specialist-Hazardous Material Reference

Note: Multiple positions can be handled by one person dependent upon the complexity and/or severity of the incident.

Members are assigned positions in accordance with 8 CCR 5192 appropriately trained to include but not be limited to entry with splash protection:

a. Entry team - 2

b. Backup team – 2

HAZARDOUS SUBSTANCE - Hazardous Substance, as used by the California Department of Toxic Substances Control, encompasses every chemical regulated by both the Department of Transportation (hazardous materials) and the Environmental Protection Agency (hazardous waste), including emergency response (8 CCR 5192).

HAZARDOUS WASTE - 1) Waste materials or mixtures of waste which require special handling and disposal because of their potential to damage health and/or the environment; 2) The Environmental Protection Agency uses the term hazardous waste for chemicals that are regulated under the Resource Conservation and Recovery Act and are listed in 40 CFR 261.33 (d). Environmental Protection Agency or California Department of Toxic Substances Control regulated hazardous waste, when in transport, must also meet 49 CFR parts 170 through 179.

HAZARDOUS WASTE LEACHATE - Any liquid that has percolated through or drained from hazardous waste placed in or on the ground.

HAZARDOUS WASTE MANAGEMENT DECONTAMINATION LEADER - Systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous wastes. (ICS-HM-222-3)
Reports to the Hazardous Materials Group Supervisor. The Decontamination Leader is responsible for the operations of the decontamination element, providing decontamination as required by the Incident Action Plan.

HAZARDOUS WASTE MANIFEST, UNIFORM - • Review Common Responsibilities. The shipping document, originated and signed by the waste generator or an authorized representative, that contains the information required by law and must accompany shipments of hazardous waste. (40 CFR 262, Subpart B) • Establish the Contamination Reduction Corridor(s). Identify contaminated people and equipment.

HAZARDOUS WASTE SITE - Maintain control of movement of people and equipment within the Contamination Reduction Zone. A location where hazardous wastes are located, and there is either a threat of a release or an actual release of these wastes which may have an adverse effect on public health or the environment. • Maintain communications and coordinate operations with the Entry Leader. Maintain communications and coordinate operations with the Site Access Control Leader and the Safe Refuge Area Manager (if activated).

HEALTH HAZARD, CHEMICAL - Coordinate handling, storage, and transfer of contaminants within the Contamination Reduction Zone. Any chemical or chemical mixture, whose physical or chemical properties may cause acute or chronic health effects [8 CCR 5192 (a)(3)]. • Maintain Unit/Activity Log (ICS Form 214).

HEAVY METAL - A high-density metallic element that may demonstrate health hazards as a result of exposure and may contribute to contamination of the environment. This includes chromium (Cr), beryllium (Be), lead (Pb), mercury (Hg), zinc (Zn), copper (Cu), cadmium (Cd) and others.

HEPATOTOXIC - A substance that negatively affects the liver. An agricultural chemical intended for killing plants or interrupting their normal growth. (See Pesticides.)

HIGH PERFORMANCE LIQUID CHROMATOGRAPHY (HPLC) - A procedure used in organics analysis to separate chemical mixtures based on differential ionic absorption to various substrates.

HOT TAPPING - A sophisticated method of welding on and the cutting of holes through liquid, compressed gas vessels, and piping for the purpose of relieving pressure and/or removing product.

HOT ZONE - An area immediately surrounding a hazardous materials incident, which extends far enough to prevent adverse effects from hazardous materials releases to personnel outside the zone. This zone is also referred to as the “exclusion zone”, the “red zone”, and the “restricted zone” in other documents. (NFPA 472, 1-3)

HAZARDOUS MATERIALS TRANSPORTATION ACT (HMTA) - The Hazardous Materials Transportation Act of 1975 (HMTA), is the major transportation-related statute affecting transportation of hazardous cargoes. Regulations apply to ". . . any person who transports, or causes to be transported or shipped, a hazardous material; or who manufactures, fabricates, marks, maintains, reconditions, repairs, or tests a package or container which is represented, marked, certified, or sold by such person for use in the transportation in commerce of certain hazardous materials."

HYGROSCOPIC - A substance that has the property of absorbing moisture from the air, such as silica gel.

HYPERGOLIC - Two chemical substances that spontaneously ignite upon mixing.

IGNITABLE MATERIAL - Any material having, as a liquid, a flash point less than 140o F or, if not a liquid, is capable of causing fire through friction, absorption of moisture or spontaneous chemical changes.

IGNITION TEMPERATURE - The minimum temperature at which a material will initiate or maintain combustion.

IMMEDIATELY DANGEROUS TO LIFE OR HEALTH (IDLH) - An atmospheric concentration of any toxic, corrosive or asphyxiant substance that poses an immediate threat to life or would cause irreversible or delayed adverse health effects or would interfere with an individual's ability to escape from a dangerous atmosphere. (8 CCR 5192(a)3)

INFORMATION OFFICER (IO) - The individual assigned to act as the liaison between the Incident Commander and the news media, as well as other groups.

INCIDENT - An event involving a hazardous material or a release or potential release of a hazardous material.

INCIDENT ACTION PLAN (IAP) - A plan developed at the field response level that contains objectives reflecting the overall incident strategy and specific tactical actions and supporting information for the next operational period. The plan may be oral or written.

INCIDENT COMMAND - A disciplined method of management established for the specific purpose of control and direction of resources and personnel.

INCIDENT COMMANDER (IC) - The individual responsible for overall management of the incident at the field level.

INCIDENT COMMAND POST - See Command Post.

INCIDENT COMMAND SYSTEM (ICS) - The combination of facilities, equipment, personnel, procedures, and communications operating within a common organizational structure, with responsibility for the management of resources to effectively accomplish stated objectives pertinent to an incident.

INCOMPATIBLE WASTE - Waste unsuitable for commingling with another waste or material.

INDUSTRIAL WASTES - Unwanted materials produced in or eliminated from an industrial operation.

INFECTIOUS WASTE - Waste containing pathogens; may consist of tissues, organs, body parts, blood, and body fluids.

INGESTION - The process of taking substances such as food, drink, and medicine into the body through the mouth.

INHIBITOR - A chemical added to another substance to prevent or slow down an unwanted or sudden occurrence of chemical change.

INORGANIC COMPOUNDS - Chemical compounds that do not contain the element carbon with the exception of carbon oxides and carbon sulfides.

INSECTICIDE - A chemical product used to kill and control insects. (See Pesticides.)

INTERNATIONAL AIR TRANSPORT ASSOCIATION (IATA) - An association of air carriers that develop guidelines for transportation of cargo.

INTERNATIONAL CIVIL AVIATION ORGANIZATION (ICAO) - An organization that develops the principles and techniques of international air navigation and fosters the planning and development of international air transport so as to insure safe and orderly growth.

INVESTIGATE - To systematically search or inquire into the particulars of an incident, and collect the necessary evidence to seek criminal and/or civil prosecution.

IRRITANT - A material that has an anesthetic, irritating, noxious, toxic, or other similar property that can cause extreme annoyance or discomfort. (49 CFR)

ISOLATING THE SCENE - Preventing persons and equipment from becoming exposed to a release or threatened release of a hazardous material by the establishment of site control zones.

JURISDICTION SPECIFIC PLAN - A plan that details emergency activities, capabilities, responsibilities and resources within an area, agency, facility or political subdivision.

LABPACK - Putting multiple small containers of chemicals with compatible chemical characteristics in a disposal drum with absorbent material.

LACRIMATION - Tearing produced by eye irritation.

LC50 **(lethal concentration, 50%) -** The amount of a toxicant in air that is deadly to 50% of the exposed lab animal population within a specified time.

LD50 **(lethal dose, 50%) -** The amount of a toxicant administered by other than inhalation which is deadly to 50% of the exposed lab animal population within a specified time.

LEAK - The uncontrolled release of a hazardous material that could pose a threat to health, safety, and/or the environment.

LEAK CONTROL COMPOUNDS - Substances used for the plugging and patching of leaks in non-pressure containers.

LEAK CONTROL DEVICES - Tools and equipment used for the plugging and patching of leaks in non-pressure and some low-pressure containers, pipes, and tanks.

LEVEL OF PROTECTION - In addition to appropriate respiratory protection, designations of types of personal protective equipment to be worn based on NFPA standards.

- ***Level A*** - Vapor protective suit for hazardous chemical emergencies.
- ***Level B*** - Liquid splash protective suit for hazardous chemical emergencies.
- ***Level C*** - Limited use protective suit for hazardous chemical emergencies.

Level One Incident :
Hazardous materials incidents which can be correctly contained, extinguished, and/or abated utilizing equipment, supplies, and resources immediately available to first responders having jurisdiction, and whose qualifications are limited to and do not exceed the scope of training as explained in 8 CCR 5192, or California Government Code (CGC), Chapter 1503, with reference to "First Responder, Operational Level".

Level Two Incident:
Hazardous materials incidents which can only be identified, tested, sampled, contained, extinguished, and/or abated utilizing the resources of a Hazardous Materials Response Team, which requires the use of specialized chemical protective clothing, and whose qualifications are explained in 8 CCR 5192, or California Government Code (CGC), Chapter 1503, with reference to "Hazardous Materials Technician Level".

Level Three Incident :
A hazardous materials incident which is beyond the controlling capabilities of a Hazardous Materials Response Team (Technician or Specialist Level) whose qualifications are explained in 8 CCR 5192, or California Government Code, Chapter 1503; and/or requires the use of two or more Hazardous Materials Response Teams; and/or must be additionally assisted by qualified specialty teams or individuals.

LOCAL DISASTER PLAN - A plan developed and used by local government for extraordinary events.

LOCAL EMERGENCY PLANNING COMMITTEE (LEPC) - A committee appointed by a State emergency response commission, as required by SARA Title III, to formulate a comprehensive emergency plan for its corresponding Office of Emergency Services mutual aid region.

LOCAL GOVERNMENT - Local agencies as defined in Government Code § 8680.2 and special districts as defined in California Code of Regulations, Title 19 Division 2, Chapter 5, CDAA, § 2900 (y).

LOCALIZED EXPOSURE - Contact with a limited area, usually an external body surface.

LOGISTICS CHIEF - That organizational position within the ICS having responsibility for summoning and managing support, apparatus, equipment and personnel.

LOWER EXPLOSIVE LIMIT (LEL) - The lowest concentration of the material in air that can be detonated by spark, shock, or fire, etc.

MACROENCAPSULATION - The isolation of a waste by embedding it in, or surrounding it with, a material that acts as a barrier to water or air (e.g., clay and plastic liners).

MANIFEST, UNIFORM HAZARDOUS WASTE - A document required by 40 CFR 262 to accompany any shipment of hazardous waste from the point of generation to the point of final disposal/destruction. (See Shipping Papers and Hazardous Waste Manifest, Uniform)

MARKING - The required descriptive name, instructions, cautions, weight, or specifications or combination thereof on containers of hazardous materials/hazardous waste.

MATERIAL SAFETY DATA SHEET (MSDS) - A document which contains information regarding the specific identity of hazardous chemicals, including information on health effects, first aid, chemical and physical properties, and emergency phone numbers.

MELTING POINT - The temperature at which a material changes from a solid to a liquid.

MICROORGANISM - A living organism not discretely visible to the unaided eye.

MIDNIGHT DUMPING - Illegal disposal of hazardous materials.

MIST - Suspended liquid droplets generated by condensation from the gaseous to the liquid state or by breaking up a liquid into a dispersed state, such as by splashing, foaming, or atomizing. A mist is formed when a finely divided liquid is suspended in air.

MITIGATION - Any action employed to contain, reduce, or eliminate the harmful effects of a spill or release of a hazardous material.

MONITORING - The act of systematically checking to determine contaminant levels and atmospheric conditions.

MONITORING ENVIRONMENTAL CONTAMINATION - Use of instruments and other techniques to determine the presence or levels of hazardous materials.

MONITORING EQUIPMENT - Instruments and devices used to identify, qualify, and/or quantify contaminants.

MUTAGEN - A substance capable of causing genetic damage.

MUTUAL AID - An agreement to supply, if available, specifically agreed upon aid or support in an emergency situation between two or more agencies, jurisdictions, or political sub-divisions without the expectation of reimbursement.

NARCOSIS - Stupor or unconsciousness produced by chemical substances.

NATIONAL CONTINGENCY PLAN (NCP) - Created by CERCLA to define the federal response authority and responsibility for oil and hazardous material spills.

NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) - An international voluntary membership organization to promote improved fire protection and prevention, establish safeguards against loss of life and property by fire, and writes and publishes the American National Standards.

NATIONAL INTERAGENCY INCIDENT MANAGEMENT SYSTEM (NIIMS) - A standardized systems approach to incident management that consists of five major sub-divisions collectively providing a total systems approach to all-risk incident management.

NATIONAL INSTITUTE FOR OCCUPATIONAL SAFETY AND HEALTH (NIOSH) - A Federal agency, which, among other activities, tests and certifies respiratory protective devices, air-sampling detector tubes, and recommends occupational exposure limits for various substances.

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION (NOAA) - The agency responsible to serve as scientific support coordinator for a federal on scene coordinator. Assists in oil spill and air toxics modeling and meteorological monitoring and oceanic research.

NATIONAL PESTICIDE TELECOMMUNICATIONS NETWORK (NPTN) - The 24-hour national hotline (800) 858-PEST operated by the Texas Tech University School of Medicine providing toll-free information about pesticide safety, application, chemistry and toxicology to callers in the U.S., Puerto Rico, and the Virgin Islands. Questions are answered directly or via next day mail.

NATIONAL RESPONSE CENTER (NRC) - A communications center operated by the United States Coast Guard headquarters located in Washington, DC. They provide information on suggested technical emergency actions, and must be notified by the spiller within 24 hours of any spill of a reportable quantity of a hazardous substance.

NECROSIS - Death in a particular part of a living tissue.

NEPHROTOXIC - A substance that negatively affects the kidneys.

NEUROTOXIC - A substance that negatively affects the nervous system.

NEUTRALIZATION - The process by which acid or alkaline properties of a solution are altered by addition of certain reagents to bring the hydrogen and hydroxide concentrations to equal value (pH 7 is neutral).

NON-FLAMMABLE GAS - Any material or mixture, in a cylinder or tank, other than poison or flammable gas, having an absolute pressure in the container exceeding 40 p.s.i at 70^{o} F, or having an absolute pressure exceeding 104 p.s.i at 130^{o} F. (49 CFR)

NORTH AMERICAN (NA) IDENTIFICATION NUMBER - A four-digit number, preceded by “NA”, used in the United States and Canada to identify a hazardous material or group of hazardous materials in transportation.

NOT OTHERWISE SPECIFIED (NOS or n.o.s.) - In shipping regulations, the term is used for classes of substances to which restrictions apply, but for which the individual members of the class are not listed in the regulations.

OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) - Component of the United States Department of Labor; an agency with safety and health regulatory and enforcement authorities for most United States industries, businesses and States.

ODOR THRESHOLD - The lowest concentration in the atmosphere that can be detected by the human sense of smell. Often a poor indicator of toxicity risk.

OFFICE OF HAZARDOUS MATERIALS SAFETY (OHMS) - A Federal agency tasked with the research and recommended revisions to 49 CFR.

OIL - Any of numerous mineral, vegetable, and synthetic substances and vegetable and animal fats those are generally slippery, combustible, viscous, liquid or liquefiable at room temperature.

OIL SPILL CLEANUP AGENT - Any material used in removing oil from the environment, including inert sorbent materials, approved chemical dispersants, surface collecting agents, sinking agents, and biological additives.

OLFACTORY - Pertaining to the sense of smell.

ON-SCENE COORDINATOR (OSC) - As explained in the National Contingency Plan, it is the pre-designated Federal official who coordinates Federal activities at a hazardous material incident, and monitors the incident for compliance with Federal pollution laws.

OPERATIONS - The coordinated tactical response of all field operations in accordance with the Incident Action Plan.

ORAL TOXICITY - Adverse effects resulting from taking a substance into the body through the mouth.

ORGANIC PEROXIDE - Strong oxidizers, often chemically unstable, containing the -o-o- structure. They react readily with solvents or fuels resulting in an explosion or fire.

OVERPACK - An enclosure used to consolidate two or more packages of hazardous material. “Overpack” does not include a freight container.

OXIDIZER - A chemical, other than a blasting agent or explosive, that initiates or promotes combustion in other materials thereby causing fire either of itself or through the release of oxygen or other gases. (49 CFR 173.151)

OXYGEN DEFICIENCY - A concentration of oxygen insufficient to support life.

OXYGEN DEFICIENT ATMOSPHERE - An atmosphere that contains an oxygen content less than 19.5 % by volume at sea level.

PACIFIC STRIKE TEAM - The National Strike Force pollution control team equipped and trained to assist in responses to oil or chemical incidents occurring in the western United States and administered by the United States Coast Guard.

PALLETS - A low portable platform constructed of wood, metal, plastic, or fiberboard, built to specified dimensions, on which supplies are loaded, transported, or stored in units.

PARTS PER BILLION (ppb) - A unit for measuring the concentration of a particular substance equal to one (1) unit combined with 999,999,999 other units.

PARTS PER MILLION (ppm) - A unit for measuring the concentration of a particular substance equal to one (1) unit combined with 999,999 other units.

PATHOGEN - Any disease producing organism, including viruses.

PCB CONTAMINATED ELECTRICAL EQUIPMENT - Any electrical equipment, including transformers, that contains at least 50 ppm but less than 500 ppm of PCBs. (40 CFR 761.3)

PCB ITEM - An item containing PCBs at a concentration of 5 ppm or greater. (40 CFR 761.3)

PCB TRANSFORMER - Any transformer that contains 500 ppm of PCBs or greater. (40 CFR 761.3)

PENETRATION - The movement of liquid molecules through a chemical protective clothing, suit, garment or material.

PERMEATION - The movement of vapor or gas molecules through a chemical protective garment material.

PERMEATION KITS - Kits assembled for the purpose of testing on-site an unknown liquid substance for permeability of chemical protective clothing.

PERMISSIBLE EXPOSURE LIMIT (PEL) - The employees' permitted exposure limit to any material listed in Table Z-1, Z-2, or Z-3 of OSHA regulations, section 1910.1000, Air Contaminants.

PERSISTENT TOXIC SUBSTANCE - A material or waste that resists natural degradation or detoxification and may present long term health and environmental hazards.

PERSONAL PROTECTIVE EQUIPMENT (PPE) - Equipment provided to shield or isolate a person from the chemical, physical, and thermal hazards that may be encountered at a hazardous materials incident. Adequate personal protective equipment should protect the respiratory system, skin, eyes, face, hands, feet, head, body, and hearing. Personal protective equipment includes- personal protective clothing, self-contained positive pressure breathing apparatus, and air purifying respirators. (NFPA 472, 1-3)

PESTICIDES - A chemical or mixture of chemicals used to destroy, prevent, or control any living organism considered to be a pest.

pH - A numerical designation of the negative logarithm of hydrogen ion concentration. A pH of 7.0 is neutrality; higher values indicate alkalinity and lower values indicate acidity.

PLUGGING AND PATCHING KITS - Kits commercially available or privately assembled for the purpose of providing capabilities for emergency plugging and patching of leaking containers, pipes, and tanks.

PLUME - A vapor, liquid, dust, or gaseous cloud formation that has shape and buoyancy.

PNEUMONITIS - Inflammation of the lungs characterized by an outpouring of fluid in the lungs.

POISON CONTROL CENTERS - California is served by four certified and designated regional poison control centers. Each PCC is available 24 hours a day and can provide immediate health effects, scene management, victim decontamination, and other emergency medical treatment advice for hazardous materials emergencies. A physician specializing in medical toxicology is available for back-up consultation.

POLLUTION - Contamination of air, water, land, or other natural resources that will or is likely to create a public nuisance and cause health and environmental harm.

POLYCHLORINATED BIPHENYL (PCB) - One of several aromatic compounds containing two benzene nuclei with two or more chlorine atoms.

POLYMERIZATION - A chemical reaction, usually carried out with a catalyst, heat, or light, and often under high pressure, which generates high temperature and when uncontrolled may be violent.

POST EMERGENCY RESPONSE - That portion of an emergency response performed after the immediate threat of a release has been stabilized or eliminated and cleanup of the site has begun.

POST-INCIDENT ANALYSIS - The termination phase of an incident that includes completion of the required forms and documentation for conducting a critique.

PRE-INCIDENT PLANNING - The process associated with preparing for the response to a hazard by developing plans, identifying resources, conducting exercises, and other techniques to improve an agency's or organization's response capabilities.

PREVENTION PLAN - See California Accidental Release Prevention Program (CalARP).

PRODUCT SUBSTITUTION - Replacing a hazardous substance in a process with a less hazardous substance.

PROPER SHIPPING NAME - The DOT designated name for a commodity or material. (49 CFR 172.101)

PROPOSITION 65 - California Safe Drinking Water Act of 1986.

PROTECTIVE CLOTHING - See Personal Protective Equipment (PPE).

PULMONARY - Pertaining to the lungs.

PYROPHORIC - A substance that ignites spontaneously in dry or moist air at or below 130o F. (49 CFR 173.115(c))

QUALITATIVE FIT TEST - A physical testing of a breathing apparatus face piece to the wearer, performed in an atmosphere of amyl acetate or irritant smoke to evaluate whether the wearer can detect the contaminant, indicating mask leakage and improper fit.

RADIATION ABSORBED DOSE (RAD) - A basic unit of absorbed dose of ionizing radiation.

RADIOACTIVE - The spontaneous disintegration of unstable nuclei accompanied by emission of nuclear radiation.

RADIOACTIVE MATERIAL (RAM) - Any material, or combination of materials, that spontaneously emits ionizing radiation and has a specific activity greater than 0.002 microcuries per gram. (49 CFR 173.389)

RECORDER - See Technical Specialist - Hazardous Materials Reference.

RECOVERY DRUM - See Disposal Drum.

REFERENCE LIBRARY - A selection of chemical textbooks, reference books, microfiche, and computer data programs typically carried by a hazardous materials response team.

REGIONAL PLAN - A hazardous material plan developed pursuant to SARA Title III.

REGIONAL RESPONSE TEAM - Composed of representatives of the Federal agencies and a representative from each State in the ten Federal EPA regions as specified in the NCP.

REGIONAL WATER QUALITY CONTROL BOARD (RWQCB) - This agency in conjunction with the State Water Resources Control Board (SWRCB) is charged with managing statewide water quality.

RELEASE, THREATENED RELEASE - The actual or potential spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment, including the abandonment or discarding of barrels, containers, and other closed receptacles of any hazardous material.

REMEDIAL ACTION - Actions taken to mitigate the effects of a release or threatened release of a hazardous material to protect health or the environment.

REMOVAL ACTION - See Mitigation.

REPORTABLE INCIDENT - Any incident that has or may impact the public health, safety or the environment, or is otherwise required by law to be reported.

REPORTABLE QUANTITY (RQ) - The designated amount of a specific material that if spilled or released requires immediate notification to the National Response Center (NRC). (49 CFR 172.101, 40 CFR 117.3, 173. and 302.6)

RESCUE - The removal of victims from an area determined to be contaminated or otherwise hazardous by appropriately trained and equipped personnel.

RESIDUE - A material remaining in a package after its contents have been emptied and before the packaging is refilled, or cleaned and purged of vapor to remove any potential hazard.

RESOURCE CONSERVATION AND RECOVERY ACT (RCRA) - The Federal framework for the proper management and disposal of hazardous wastes. This program is administered by EPA and may be delegated to the States.

RESPIRATORY PROTECTIVE EQUIPMENT - See SCBA and Air Purifying Respirators.

RESPONSE - That portion of incident management where personnel are involved in controlling a hazardous material incident. (NFPA 472, 1-3)

RESPONSIBLE PARTY (RP) - A legally recognized entity (person, corporation, business, or partnership, etc.) that has a legally recognized status of financial accountability and liability for action necessary to abate and mitigate adverse environmental and human health and safety impacts resulting from a non-permitted release or discharge of hazardous material; the person or agency found legally accountable for the cleanup of the incident.

RISK ANALYSIS - A process to analyze the probability that harm may occur to life, property, and the environment and to note the risks to be taken to identify the incident objectives.

RISK MANAGEMENT - Decision-making process which involves such considerations as risk assessment, technological feasibility, economic information about costs and benefits, statutory requirements, public concerns, and other factors.

RISK MANAGEMENT PREVENTION PLAN (RMPP) - This program has been replaced by the California Accidental Release Prevention Program (CalARP).

ROENTGEN - A measure of the charge produced in air created by ionizing radiation, usually in reference to gamma radiation.

ROENTGEN EQUIVALENT MAN (REM) - The unit of dose equivalent; takes into account the effectiveness of different types of radiation.

RUPTURE - The physical failure of a container or mechanical device, releasing or threatening to release a hazardous material.
(Sacramento Fire Department HMRT)

SAFETY OFFICER - Selected by the Incident Commander, a person at an emergency incident responsible for assuring that all overall operations performed at the incident by all agencies present are done so with respect to the highest levels of safety and health. The Safety Officer shall report directly to the Incident Commander.

SALVAGE DRUM - See Recovery Drum.

SAMPLE - To take a representative portion of the material for evidence or analytical purposes.

SARA TITLE III REGIONAL PLAN - See Regional and Local Plan.

SCBA - See “Self Contained Breathing Apparatus”.

SCENARIO - An outline of a natural or expected course of events.

SCENE - The location impacted or potentially impacted by a hazard.

SECONDARY MATERIALS - Spent materials, sludges, by-products, scrap metal and commercial chemical products recycled in ways that differ from their normal use.

SELECTIVE TOXICITY - The capacity of a chemical to injure one kind of living matter without harming another, even though the two may be in intimate contact.

SELF CONTAINED BREATHING APPARATUS (SCBA) - A positive pressure, self-contained breathing apparatus (SCBA) or combination SCBA/supplied air breathing apparatus certified by the National Institute for Occupational Safety and Health (NIOSH) and the Mine Safety and Health Administration (MSHA), or the appropriate approval agency for use in atmospheres that are immediately dangerous to life or health (IDLH). (NFPA 1991, 1-3)

SENSITIZER - A substance which on first exposure causes little or no reaction in humans or test animals, but which on repeated exposure may cause a marked response not necessarily limited to the contact site.

SHELTERING IN PLACE/IN PLACE PROTECTION - To direct people to quickly go inside a building and remain inside until the danger passes.

SHIPPING PAPERS - Generic term used to refer to documents that must accompany all shipments of goods for transportation. These include Uniform Hazardous Waste Manifests, Bills of Lading, Consists, etc. Shipping papers are intended to describe what hazardous materials are contained within the shipment, if any.

SHORT TERM EXPOSURE LIMIT (STEL) - See Threshold Limit Value –Short Term Exposure Limit (TLV-STEL).

SITE - Any facility or location within the scope of 8 CCR 5192(a)(3).

SKIMMER - Physical systems whereby a liquid phase is recovered from another liquid phase due to polarity differences and stored or transferred for further processing. Typical use is to remove petroleum products floating on a water body.

SLUDGE - Accumulated solids, semisolids, or liquid waste generated from wastewaters, drilling operations, or other fluids.

SMOKE - An air suspension (aerosol) of particles, often originating from combustion or sublimation.

SOLIDIFICATION - Process whereby a contaminant is permanently immobilized in a substrate to prevent future migration away from the container.

SOLUBILITY - The ability or tendency of one substance to blend uniformly with another.

SOLVENTS - A liquid substance capable of dissolving or dispersing one or more other substances to form a uniformly dispersed mixture.

SPILL - The release of a liquid, powder, or solid hazardous materials in a manner that poses a threat to air, water, ground, and to the environment.
(See Incident)

SPILLER - See Responsible Party.

SPONTANEOUSLY COMBUSTIBLE - See Pyrophoric.

STABILIZATION - The period of an incident where the adverse behavior of the hazardous material is controlled. (NFPA 472, 1-3)

STAGING AREA - The area established for temporary location of available resources closer to the incident site to reduce response time.

STATE WARNING CENTER, CALIFORNIA STATE WARNING CENTER, OES WARNING CENTER - The Governor's Office of Emergency Services Warning Center facilitates emergency communications with government agencies at all levels. The California State Warning Center monitors seismic activity, weather and other conditions that could cause a disaster and is the central reporting office for any release or threatened release of a hazardous material. The California State Warning Center is the initial contact point in the state to initiate coordination and begin to mobilize federal, state and local agencies during a disaster.

STORAGE - Containment of hazardous materials on a temporary basis in such a manner as to not constitute disposal of such materials.

STRICT LIABILITY - The responsible party is liable even though they have exercised reasonable care.

SUPERFUND AMENDMENTS & REAUTHORIZATION ACT (SARA) - Created for the purpose of establishing Federal statutes for right-to-know standards, emergency response to hazardous materials incidents, re-authorized the Federal superfund, and mandated States to implement equivalent regulations/requirements.

SUPPORT ZONE - See Cold Zone.

SURFACE IMPOUNDMENT - A natural depression, human made excavation or diked area designed to hold an accumulation of liquid wastes or waste containing free liquids.

SYNERGISTIC EFFECT - The combined effect of two chemicals that is greater than the sum of the effect of each agent alone.

SYSTEMIC - Pertaining to the internal organs and structures of the body.

SYSTEMIC TOXIC EXPOSURE - Toxic effects to the body as a whole spreading via the bloodstream and often displaying delayed symptoms.

TEAM LEADER - See Entry Team Leader.

TECHNICAL SPECIALIST -- HAZARDOUS MATERIALS REFERENCE - Person assigned to document activities of the Hazardous Material Team and gather information relevant to the chemicals involved and their hazards.

TERATOGEN - A substance or agent that can result in malformations of a fetus.

TERATOGENICITY - Ability to produce birth defects.

TERMINATION - That portion of incident management where personnel are involved in documenting safety procedures, site operations, hazards faced, and lessons learned from the incident. Termination is divided into three phases- Debriefing, Post-Incident analysis, and Critique. (NFPA 472, 1-3) (See Post-Incident Analysis.)

THIEVING ROD - A glass rod used like a COLIWASSA, except the liquid is contained in the tube by a vacuum pressure.

THRESHOLD - The point where a physiological or toxicological effect begins to be produced by the smallest degree of stimulation.

THRESHOLD LIMIT VALUE (TLV) - The value for an airborne toxic material that is to be used as a guide in the control of health hazards and represents the concentration to which nearly all workers may be exposed 8 hours per day over extended periods of time without adverse effects.

THRESHOLD LIMIT VALUE - CEILING (TLV-C) - The concentration that should not be exceeded during any part of the working exposure.

THRESHOLD LIMIT VALUE - TIME WEIGHTED AVERAGE (TLV-TWA) - An exposure level under which most people can work consistently for 8 hours a day, day after day, with no harmful effects.

THRESHOLD LIMIT VALUE SHORT TERM EXPOSURE LIMIT (TLV-STEL) - A 15-minute time-weighted coverage exposure which should not be exceeded at any time during a work day, nor repeated more than 4 times per day, even if the 8-hour time-weighted average is within the Threshold Limit Value (TLV).

THRESHOLD PLANNING QUANTITY (TPQ) - The quantity designated for each extremely hazardous substance that triggers a required notification by facilities to the State emergency response commission that such facilities are subject to reporting under SARA Title III.

TOTALLY ENCAPSULATED SUITS - Special protective suits made of materials that prevent toxic or corrosive substances or vapors from coming in contact with the body. (See Fully Encapsulated Suit.)

TOXIC - Poisonous; relating to or caused by a toxin; able to cause injury by contact or systemic action to plants, animals or people.

TOXIC CHEMICALS - EPA uses this term for chemicals whose total emissions and releases must be reported annually by owners and operators of certain facilities that manufacture, process or otherwise use a listed toxic chemical as identified in SARA Title III.

TOXICITY - A relative property of a chemical agent that refers to its harmful effect on some biological mechanism and the conditions under which this effect occurs.

TRAFFIC CONTROL/CROWD CONTROL - Action(s) by law enforcement to secure and/or minimize exposure of the public to unsafe conditions resulting from emergency incidents, impediments and congestion.

TREATMENT - Any method, technique, or process which changes the physical, chemical, or biological character or composition of any hazardous waste, or removes or reduces its harmful properties or characteristics for any purpose.

UNITED NATIONS (UN) IDENTIFICATION NUMBER - When UN precedes a four-digit number, it indicates that this identification number is used internationally to identify a hazardous material.

UPPER EXPLOSIVE LIMIT (UEL) - The highest concentration of the material in air that can be detonated.

UPWIND - In or toward the direction from which the wind blows.

VAPOR - An air dispersion of molecules of a substance that is normally a liquid or solid at standard temperature and pressure.

VAPOR DISPERSION - The movement of vapor clouds in air due to turbulence, gravity, spreading, and mixing.

VAPOR PROTECTIVE SUIT - See Levels of Protection.

VULNERABILITY - The susceptibility of life, the environment, and/or property, to damage by a hazard.

WARM ZONE - The area where personnel and equipment decontamination and hot zone support takes place. It includes control points for the access corridor and thus assists in reducing the spread of contamination. This is also referred to as the "decontamination", "contamination reduction", "yellow zone", or "limited access zone" in other documents. (NFPA 472, 1-3)

WATER REACTIVE - Having properties of, when contacted by water, reacting violently, generating extreme heat, burning, exploding, or rapidly reacting to produce an ignitable, toxic, or corrosive mist, vapor, or gas.

Glossary of Terms: Terrorism

ACETYLCHOLINE - A chemical neurotransmitter produced by nerve cells acting as a chemical "messenger" to stimulate the heart, skeletal muscles, and numerous secretory glands.

ACETYLCHOLINESTERASE - An enzyme that normally hydrolyzes the neurotransmitter acetylchloline, thereby stopping its activity, but can be inhibited by organophosphates, carbamates and certain other "nerve agents".

AEROBIC - Capable of living and growing only in the presence of free oxygen.

ANTHRAX - A rod shaped aerobic bacteria Bacillus Anthracis that is spore producing and exists in three forms; The pulmonary form is usually 100 % lethal.

ANTIBIOTIC - A substance that inhibits the growth of or kills micro-organisms.

ANTIPERSONNEL - Agents those are effective directly against humans.

ANTITOXIN - A substance found or introduced into the blood serum or other body fluid that is specifically antagonistic to a toxin.

ASEPTIC - Free from infection.

ATROPINE - Therapeutic drug used as an antidote for nerve agents, is very effective in blocking the effects of excess acetylcholine.

BACILLUS - A rod-shaped bacterium.

BACTERIA - Single celled living microscopic organism varying in size from 0.5µm to 5 µm with a nucleus, intracellular structure, and a cell wall capable of duplicating itself through cell division. Some types of bacteria can transform into spores that may last for years or decades. Some types of bacteria can produce highly lethal toxins (Botullinum).

BACTERIAL AGENT - A pathogenic substance that can cause disease in humans and animals by means of two mechanisms; By invading living tissue or by producing poisonous toxins, or both.

BIOLOGICAL AGENT - Usually refers to all agents that may cause disease or death including bacteria, virus, and toxins.

BIOLOGICAL TOXIN - A chemical substance produced by a living organism, such as bacteria, plant, animal or insect, that by itself can be highly lethal, such as botullinum or ricin.

BIOLOGICAL WARFARE - The intentional use of biological agents as weapons to kill or injure humans, animals, or plants, or to damage equipment.

BIOLOGICAL WARFARE AGENT - Military use of living organisms or their toxins with the intent to cause death, disability, or damage to humans.

BLISTER AGENT - Substances that cause blistering and destruction of the skin through liquid or aerosol contact.

BLOOD AGENT - An antiquated military term implying that the site of action of cyanides is in the blood, but more accurately is described as an oxygen blocker for every cell in the body, beginning with the blood.

BOTULISM - Poisoning by botulinum toxin that is produced by the bacillus Clostridium Botulinim is anaerobic, and is usually 65% lethal.

BRITISH ANTI-LEWISITE - Therapeutic drug used as an antidote for Lewisite, is a heavy metal chelator, not often used, results are not guaranteed.

CARDIAC - Pertaining to the heart.

CARRIER - An individual who harbors specific disease organisms without showing symptoms, thus serving as a means of conveying infection.

CELL - A small mass of protoplasm, generally including a nucleus, surrounded by a semi-permeable membrane.

CHEMICAL AGENT - A chemical substance that is intended for use in military operations to kill, seriously injure, or incapacitate people through its physiological effects; See also *Chemical Warfare Agent*.

CHEMICAL WARFARE AGENTS - A chemical substance that is intended for use in military operations to kill, seriously injure or incapacitate, and are usually divided into 5 groups: Nerve, Blood, Respiratory (choking), Incapacitating, and Blister (vesicants).

CHEMOTHERAPY - The treatment of disease by chemicals that affect the causative organism unfavorably without seriously reacting on the patient.

CHOKING AGENTS - Substances that irritate, inflame, or cause physical injury to the tissues of the respiratory system, throat, nose and mouth.

CHOLERA - An acute infectious gastrointestinal disease with a mortality rate as high as 30%.

COMMUNICABLE - Capable of being transmitted from one individual to another.

CONTAGIOUS - Transmissible from one individual to another.

CUTANEOUS - Pertaining to the skin.

CYANOGEN CHLORIDE (CK) - A *blood agent* chemical warfare agent, causing almost immediate respiratory and cardiac failure within minutes of inhalation; Not as lethal as hydrogen cyanide.

CYTOTOXIN - A toxin that causes cellular destruction or interfere with metabolic processes, particularly with the respiratory and circulatory systems.

DIARRHEA - Abnormal frequency and liquidity of intestinal discharges.

DIAZEPAM - Therapeutic drug used as an antidote for nerve agents, is very effective as an anti-convulsant and to reduce brain damage.

DISEASE - Illness or sickness.

DISINFECTANT - An agent, usually chemical, that destroys infective agents.

DISTILLED MUSTARD (HD) - A *vesicant* chemical warfare agent used in WWI this sulfur mustard causes severe dermal and eye destruction and burns; is an oily liquid with a garlic odor.

ENCEPHALITIS - Inflammation of the brain.

EDEMA - Excessive accumulation of fluid in body tissue or body cavities.

ENDEMIC - Native to or prevalent in a particular district or region; having a low incidence but is constantly present in a given community or environment.

ENDOTOXIN - A toxin that is produced within a micro-organism and retained within the cell until it disintegrates.

EPIDEMIC - An outbreak of disease that spreads rapidly and attacks many individuals in the same region at the same time.

ERYTHEMA - Reddening of skin resembling a good case of sunburn; Typical of moderate exposure to *Mustard Substances* and *Lewisite.*

EXOTOXIN - A toxin excreted by a living organism.

H = Refers to a Levinstein mustard, a series of persistent blister agents that include distilled mustard (HD), and the nitrogen mustards (HN-1, HN-2, and HN-3).

HYDROCYANIC ACID (AC) - A *blood agent* chemical warfare agent causing almost immediate respiratory and cardiac failure within minutes of inhalation; Most lethal of the cyanides; Also known as hydrogen cyanide.

INCAPACITATING AGENTS - A group of chemical warfare agents intended to incapacitate rather that injure or kill, by causing severe eye and nasal distress and irritation; Popular with law enforcement for riot control; Examples are Mace and Pepper Spray.

INFECTION - Invasion of body tissues by organisms, usually pathogenic, which multiply and cause disease.

INFECTIOUS DISEASE - One that is caused by a living agent, such as bacteria, protozoa, virus, or fungi, and may or may not be contagious.

INVASIVENESS - The ability of a micro-organism to enter the body and spread throughout the tissues.

INTOXICATION - Poisoning.

INTRAVENOUS - Within the vein.

LACRIMATOR - A compound that causes a large flow of tears and irritates the skin; A Tearing Agent.

LETHAL AGENTS - Biological or chemical agents that could cause significant human mortality.

LEWISITE (L) - A *vesicant* chemical warfare agent used in WWI as a gas or aerosol, causes moderate to severe dermal and eye destruction and burns, heavily used but not totally successful, was considered a minor military threat.

MALAISE - A feeling of bodily discomfort.

MARK I - Military kit containing antidotes Atropine and Prolidoxime Chloride.

MACE® (CN) - An *incapacitating* agent "chloroacetophenone" popular with law enforcement and military to render recipient temporarily incapable of resistance or flight. Less popular than stronger military formulation CS.

MALAISE - A vague feeling of bodily discomfort.

MICRO-ORGANISM - Any organism, such as bacteria, viruses, and some fungi, that can be seen only with a microscope.

MIOSIS - Excessive contraction of the pupil.

MUSTARD (H) - A *vesicant* chemical warfare agent used in WWI as a gas or aerosol, causes severe dermal and eye destruction and burns. The term "mustard" usually refers to "sulfur mustard"; the more pure distilled mustard is referred to as "distilled mustard".

MUSTARGEN - A *vesicant* chemical warfare agent used in WWI as a gas or aerosol, is HN2 derivative of nitrogen mustard and the most popular during WWI.

MYCOTOXIN - A toxin produced by fungi.

NAUSEA - Tendency to vomit; sickness of the stomach.

NECROSIS - Death of a cell or group of cells in contact with living tissue.

NEURAL - Relating or pertaining to the nerves.

NEUROTOXIN - A substance that is poisonous or destructive to nerve tissue.

NERVE AGENT - Substances that interfere with the central nervous system primarily through liquid contact (skin) and lesser so through aerosol (lungs).

NEUROTOXINS - Toxins that interfere with nerve impulses and may affect the central nervous system; Tend to act rapidly.

NITROGEN MUSTARD (HN) - A *vesicant* chemical warfare agent synthesized during WWI, there are three derivatives, HN1, HN2, and HN3.

NONPERSISTENT AGENT - An agent that upon release loses its ability to cause casualties after 10 to 15 minutes, typical of most incapacitating agents.

NUCLEUS - A body within a cell that is the center of reproductive activities of the cell.

ORGANO-PHOSPHATE - A phosphate containing organic compound that inhibit cholinesterase enzymes.

2-PAM CHLORIDE - Used in treatment of nerve agent poisoning.

PATHOGENIC - Causing disease.

PATHOGEN - Any disease producing micro-organism or material, which includes virus, bacteria, rickettsia, fungi and mycoplasma.

PERCUTANEOUS AGENT - Able to be absorbed by the body through the skin.

PERSISTENT AGENT - An agent that upon release retains its casualty producing effects for an extended period of time, usually from 30 minutes to several days; A substance usually having a low evaporation rate and its vapor is heavier than air.

PHOSGENE - A *respiratory agent* chemical warfare agent used in WWI as a gas, causes severe upper respiratory distress and edema as it hydrolysises to hydrochloric acid.

PHOSGENE OXIME - A *vesicant* chemical warfare agent, not popular, little used, was a minor military threat, is highly corrosive and a irritant.

PHYTOTOXIN - A toxin derived from a plant, such as ricin.

PLAGUE - Or “Black Death”, is an aerobic bacterium *Yersinia Pestis* and occurs in three clinical forms; Pneumonic that can be 90% lethal, Septicemic, and Bubonic, which is the most common and may be 30% lethal; Pneumonic is highly contagious.

RESPIRATORY AGENT - Also referred to as pulmonary agents, a reference to chemical agents that attack the mucous membranes of the respiratory tract causing severe pain and edema; Chlorine, phosgene and oxides of nitrogen are examples.

RICIN - A poisonous toxin distilled from the seed of the castor oil plant.

RIOT CONTROL AGENT - An incapacitating agent intended to temporarily render a person inoperative by causing extreme distress and pain, but is not lethal; Examples are CN (MACE) and CS.

SARIN (GB) - A nerve agent developed by the Germans during WWII that has an LC_{50} skin dose of 100-200 mg.

SEPTIC - Produced by or due to putrefaction or morbid germs.

SOMAN (GD) - A nerve agent developed by the Germans during WWII that has an LC_{50} skin dose of 50-70 mg.

SPORES - A bacteria cell with a hardened shell that is more resistant to cold, heat, drying, chemicals and radiation than the bacterium itself, and may lie dormant for decades; They germinate when conditions are favorable and transform into bacteria cells.

SULFUR MUSTARD (H) - A *vesicant* chemical warfare agent synthesized during WWI, there are two derivatives H, and HD. See also “Mustard”.

SYMPTOMS - Functional evidence of disease or of conditions, or a change in conditions that indicate a mental or bodily state.

TABUN (GA) - A nerve agent developed by the Germans during WWII that has an LC_{50} skin dose of 200-400 mg.

TEAR AGENT - An incapacitating agent that produces irritating or disabling effects that rapidly disappear within minutes after exposure; A Lacrimator.

TERRORISM - The unlawful use of force against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in the furtherance of political or social objectives.

TOXIC - Poisonous and perhaps deadly depending on the dose and resistance of the individual.

TOXICITY - The quality of being poisonous depending on the potency of the toxin.

TOXIN - A chemical substance that is a product of a living organism, - plant, animal or bacteria, - which produce adverse or lethal effects on humans and animals; True toxins are protein like, more or less unstable particularly on contact with air, and require a short incubation or latent period to produce symptoms.

TRANSMISSIBLE AGENT - Pathogens that can spread disease from person to person.

V AGENTS - Persistent, highly toxic nerve agents developed in mid 1950's and absorbed primarily through the skin; An example is VX with a skin LC_{50} dose of 10-50 mg.

VACCINE - A preparation of killed or attenuated infective toxic agent used as an inoculation to produce active artificial immunity.

VESICANT - A vapor or liquid chemical threat to dermal and eyes intended to cause severe burns and blistering with delayed effects appearing hours after contact. Prolong exposure causes bone marrow damage. There are no acceptable and reliable antidotes.

VIABLE - Capable of living.

VIRAL AGENT - A virus organism that brings about changes in healthy hosts cell such that the hosts cell usually dies.

VIRULENCE - Refers to the relative infectiousness of an organism or its ability to overcome the defenses of the host.

VIRUS - Extremely small submicroscopic agents from 0.02µm to 0.2µm with a nucleocapsid protein coat or lipid/glycoprotein coat, containing genetic RNA or DNA material, but not having a nucleus and incapable of duplicating itself through cell division; Invades a host cell and takes over the nucleus in order to replicate.

VOMITING AGENT - An incapacitating agent that encourages uncontrolled vomiting, nausea, coughing, sneezing, tearing, and pain to the affected areas, but rarely causes death.

APPENDIX J

AGREEMENTS FOR THE FORMATION AND MAINTENANCE OF HAZARDOUS MATERIALS INCIDENT RESPONSE TEAMS (HMRTS) WITHIN SACRAMENTO COUNTY

COUNTY OF SACRAMENTO AGREEMENT NO. # _____

AGREEMENT

This AGREEMENT is made and entered into as of this 23rd day of May, 2006, by and between the COUNTY OF SACRAMENTO, a political subdivision of the State of California, hereinafter referred to as "COUNTY", and THE CITY OF SACRAMENTO, a municipal corporation of the State of California (hereinafter referred to as "CITY"). This AGREEMENT is made to amend the prior agreement made between these same parties dated June 15, 2004.

RECITALS

WHEREAS, the timely response to and proper management of incidents involving the intentional or unintentional release of hazardous materials are critical to the protection of human health and the environment; and

WHEREAS, the proper management and control of responses to emergency incidents involving hazardous materials requires highly specialized training, equipment, supplies, communications and other resources in order to provide adequate protection for the health and safety of the public and emergency response personnel; and

WHEREAS, CITY has a hazardous materials response teams (hereinafter called "HAZ-MAT TEAM"), with specialized apparatus, equipment and capabilities; and

WHEREAS, the cost of establishing and maintaining a hazardous materials response team capability is so expensive and occurrence of emergency response incidents requiring the specialized expertise of a hazardous materials response team has increased so significantly that the COUNTY has determined that it would be more economical, feasible and appropriate to utilize the services of the HAZ-MAT TEAM available from the CITY rather than to develop and maintain duplicate response teams in various locations in the unincorporated area of Sacramento County; and

WHEREAS, CITY has offered, subject to consideration, to provide the services of their HAZ-MAT TEAM to Elk Grove Community Services District Fire Department, City of Folsom Fire Department, Galt Fire Protection District, Isleton Fire Protection District, Isleton Fire Department, Wilton Fire Protection District, Walnut Grove Fire Protection District, Delta Fire Protection District, Herald Fire Protection District and Delta Fire Protection District (hereafter called "COUNTY FIRE DISTRICTS") and to COUNTY under the provisions of this agreement and a separate mutual aid agreement:

CITY
AGREEMENT NO. 2006-1086

CITY
AGREEMENT NO. 2006-1086

WHEREAS, COUNTY and CITY desire to enter into this Agreement on the terms and conditions set forth herein.

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth, COUNTY and CITY agree as follows:

I. SCOPE OF SERVICES

CITY shall provide services in the amount, type and manner described in Exhibit A, which is attached hereto and incorporated herein.

II. TERM

This Agreement shall be effective and commence as of the date first written above and shall end on July 1, 2009.

III. NOTICE

Any notice, demand, request, consent, or approval that either party hereto may or is required to give the other pursuant to this Agreement shall be in writing and shall be either personally delivered or sent by certified mail-return receipt requested, addressed as follows:

TO COUNTY	TO CITY
DIRECTOR Environmental Management Department 8475 Jackson Road, Suite 230 Sacramento, CA 95826	FIRE CHIEF Sacramento Fire Department 5770 Freeport Blvd, Suite 200 Sacramento, CA 95822-3516

Either party may change the address to which subsequent notice and/or other communications can be sent by giving written notice designating a change of address to the other party, which shall be effective upon receipt. Notice shall be deemed effective on the date of receipt.

IV. COMPLIANCE WITH LAWS

CITY and COUNTY shall observe and comply with all applicable Federal, State, and County laws, regulations and ordinances.

V. STATUS OF CITY

1. CITY shall comply with all applicable state, federal and local laws relating to child and family support enforcement, including, but not limited to, disclosure of information and compliance with earnings assignment orders as provided in Chapter 8 (commencing with Section 5200) of Part 5 of Division 9 of the California State Family Code and Chapter 2.160 of the Sacramento County Code. CITY shall comply with all earnings assignment orders with respect to its employees and shall provide the names of all new employees to the New Hire Registry maintained by the California Employment Development Department;

2. Failure to comply with state and federal reporting requirements regarding CITY employees or failure to implement lawfully served wage and earnings assignment orders or notices of assignment shall constitute a default under this Agreement. Failure to cure such default within 90 days of notice by the COUNTY shall be grounds for termination of the contract.

VII. BENEFITS WAIVER

1. CITY acknowledges and agrees that CITY employees are not entitled to receive the following benefits and/or compensation from COUNTY: medical, dental, vision and retirement benefits, life and disability insurance, sick leave, bereavement leave, jury duty leave, parental leave, or any other similar benefits or compensation otherwise provided to permanent civil service employees pursuant to the County Charter, the County Code, the Civil Service Rule, the Sacramento County Employees' Retirement System and/or any and all memoranda of understanding between COUNTY and its employee organizations. Should CITY or any employee of CITY seek to obtain such benefits from COUNTY, CITY agrees to indemnify and hold harmless COUNTY from any and all claims that may be made against COUNTY for such benefits.

2. CITY agrees to include in all subcontracts subject to this Agreement that subcontractors are not employees of COUNTY and are not entitled to any benefits from COUNTY: medical, dental, vision and retirement benefits, life and disability insurance, sick leave, bereavement leave, jury duty leave, parental leave, or any other similar benefits or compensation otherwise provided to permanent civil service employees pursuant to the County Charter, the County Code, the Civil Service Rule, the Sacramento County Employees' Retirement System and/or any and all memoranda of understanding between COUNTY and its employee organizations.

VIII. CONFLICT OF INTEREST

CITY and CITY officers and employees shall not have a financial interest, or acquire any financial interest, direct or indirect, in any business, property, or source of income which could be financially affected by or otherwise conflict in any manner or degree with the performance of services required under this Agreement.

IX. NONDISCRIMINATION IN EMPLOYMENT, SERVICES, BENEFITS AND FACILITIES

1. CITY agrees and assures COUNTY that CITY shall comply with all applicable federal, state, and local anti-discrimination laws, regulations, and ordinances and that it will not unlawfully discriminate, harass, or allow harassment against any employee, applicant for employment, employee or agent of COUNTY, or recipient of services contemplated to be provided or provided under this Agreement, because of race, ancestry, marital status, color, religious creed, political belief, national origin, ethnic group identification, sex, sexual orientation, age (over 40), medical condition (including HIV and AIDS), or physical or mental disability. CITY shall ensure that the evaluation and treatment of its employees and applicants for employment, the treatment of COUNTY employees and agents, and recipients of services are free from such discrimination and harassment.

2. CITY represents that it is in compliance with and agrees that it will continue to comply with the Americans with Disabilities Act of 1990 (42 U.S.C. § 12101 et seq.) and regulations and guidelines issued pursuant thereto.

3. CITY agrees to compile data, maintain records and submit reports as required by law to permit effective enforcement of all applicable antidiscrimination laws and this provision.

4. CITY shall include this nondiscrimination provision in all subcontracts related to this Agreement.

X. INDEMNIFICATION

1. CITY shall indemnify, defend and hold harmless COUNTY, its Board of Supervisors, officers, directors, agents, employees, and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of the CITY, its officers, employees, or agents (including its volunteers and students).

This Agreement shall be deemed to have been prepared equally by both of the parties, and the Agreement and its individual provisions shall not be construed or interpreted more favorably for one party on the basis that the other party prepared it.

XV. DIRECTOR

As used in this Agreement, "DIRECTOR" shall mean the Director of the Environmental Management Department, or his/her designee.

XVI. DISPUTES

Any dispute arising under this Agreement shall be decided by DIRECTOR and the City of Sacramento Fire Chief, with the assistance of their operational staff. In the event that the DIRECTOR and the City of Sacramento Fire Chief cannot resolve the dispute, the Sacramento County Executive and City of Sacramento City Manager shall meet within thirty (30) days to consider the matter and reach a decision. In the event that the Sacramento County Executive and City of Sacramento City Manager cannot resolve the dispute, the matter shall be set for arbitration according to the rules of the American Arbitration Association within thirty (30) days after either the Sacramento County Executive or City of Sacramento City Manager requests that the matter be set for arbitration. If the parties cannot agree on selection of an arbitrator, they shall request appointment of an arbitrator by the State Mediation Service. The parties shall share equally the cost of the arbitrator.

XVII. TERMINATION

1. Either party may terminate this Agreement without cause upon one hundred eighty (180) days written notice to the other party.

2. COUNTY may terminate this Agreement for cause upon giving thirty (30) days written notice to CITY should CITY materially fail to perform this Agreement in the time and/or manner specified. Before such termination takes effect, however, CITY shall have thirty (30) days to cure the failure to perform. In the event of such termination, COUNTY may proceed with the work in any manner deemed proper by COUNTY. If notice of termination for cause is given by COUNTY to CITY and it is later determined that CITY was not in default or the default was excusable, then the notice of termination shall be deemed to have been given without cause pursuant to paragraph 1 above.

3. COUNTY may terminate or amend this Agreement upon giving one hundred twenty (120) days written notice to CITY, if advised that funds are not available from external sources for this Agreement or for any

portion hereof, or if funds in COUNTY yearly proposed and final budget are not appropriated by COUNTY for this Agreement or any portion hereof.

4. If this Agreement is terminated under paragraphs 1, 2 or 3 above, CITY shall be paid for any services completed and provided prior to the date of contract termination, and for all unchangeable obligations incurred by CITY prior to the date of notice. In no event, however, shall COUNTY pay CITY an amount which exceeds a pro rata portion of the Agreement total based on the portion of the Agreement term that has elapsed on the effective date of the termination. Unchangeable obligations include those services required to be provided by CITY due to its "continuity of care" obligations.

5. CITY shall not incur any expenses under this Agreement after notice of termination and shall cancel any outstanding expense obligations to a third party that CITY can legally cancel.

XVIII. REPORTS

CITY shall, without additional compensation therefore, make fiscal, program evaluation, progress, and such other reports as may be reasonably required by DIRECTOR concerning CITY activities as they affect the contract duties and purposes herein. COUNTY shall explain procedures for reporting the required information.

XIX. AUDITS AND RECORDS

Upon COUNTY request, COUNTY or its designee shall have the right at reasonable times and intervals to audit, at CITY premises, CITY financial and program records related to this Agreement as COUNTY deems necessary to determine CITY compliance with legal and contractual requirements and the correctness of claims submitted by CITY. CITY shall maintain such records for a period of four years following termination of the Agreement, and shall make them available for copying upon COUNTY request at COUNTY expense.

XX. PRIOR AGREEMENTS

This Agreement constitutes the entire contract between COUNTY and CITY regarding the subject matter of this Agreement. Any prior agreements, whether oral or written, between COUNTY and CITY regarding the subject matter of this Agreement are hereby terminated effective immediately upon full execution of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year first written above.

CITY AGREEMENT NO 2006-1086

COUNTY OF SACRAMENTO «TYPE» AGREEMENT NO.«cntrctnmbr»

CITY AGREEMENT NO. 2006-1086

EXHIBIT A to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY," and
and the CITY OF SACRAMENTO, hereafter referred to as "CITY"

I. SCOPE OF SERVICES

1. Immediately upon notification of an emergency situation involving hazardous materials that has been classified as a LEVEL II or LEVEL III INCIDENT, the CITY shall dispatch a HAZ MAT TEAM to respond to the scene. If more than two LEVEL II or LEVEL III hazardous materials incidents are occurring simultaneous within the City or County of Sacramento, the determination of the priority of response by a HAZ-MAT TEAM shall be at the sole discretion of the highest ranking chief officer of the Sacramento Fire Department on-duty or on-call at the time, based upon the assessment of the risks to the public or environment associated with the incident without regard to whether the incident is within the CITY or the unincorporated areas of the COUNTY.

2. Immediately upon arrival at the scene of the emergency hazardous materials incident, the HAZ-MAT TEAM Captain shall report to the Incident Commander having jurisdiction, and shall establish the Haz-Mat Group as identified in the Incident Command System. The Haz-Mat Group Safety Officer shall make immediate contact with the Safety Officer of the incident.

3. The services to be provided by the HAZ-MAT TEAM to COUNTY or COUNTY FIRE DISTRICTS shall include the following:

   a. Assessing the scene as to the appropriate classification of the level of the incident, determination of any additional personal or environmental protective measures that may be required without further delay and determining the possible need for an additional assistance not already requested;

   b. Providing rescue to victims, if necessary, and if possible without exposing emergency response personnel to unreasonable life-threatening risks;

   c. Identification of the types and quantities of any hazardous materials involved, determination of the hazards they pose to life, environment and property, and advice as to appropriate measures necessary to mitigate, contain and suppress the emergency hazardous materials incident;

d. Providing advice, assistance and special supplies in the extinguishment of any fires that may exist or pose a threat, if such extinguishment is considered to be essential by the Incident Commander, and in the selection of extinguishing agents to be utilized and the methods of application;

e. Providing advice, assistance and location of special supplies in the suppression and containment of the hazardous materials involved in the incident including measures such as temporary diking, diverting, channeling, plugging, removal of fuel, and the elimination of ignition sources.

f. Providing advice and assistance in the establishment of a Field Command Post in an appropriate and safe location;

g. Providing advice and assistance in the establishment of a Resource Pool Staging Area in an appropriate and safe location;

h. Providing advice and assistance in the determination and establishment of any restricted (hot) or limited access (warm) zones, and any areas that may need to be evaluated;

i. Providing technical coordination with any private sector resources that may be involved in response to the emergency hazardous materials incidents;

j. Providing advice and assistance to the County Environmental Management Department, the Department of Public Works, and the Emergency Operations Division of the Department of General Services of County as may be requested for the purpose of declaring a health emergency or a state of emergency, coordinating emergency response activities of County departments, and clean-up and restoration of the affected site to normal daily use;

k. Providing technical information to the Incident Commander for dissemination to the public through the facilities of the Emergency broadcast System or directly to news media regarding the emergency hazardous materials incident;

l. Providing advice and assistance as necessary, in the training of COUNTY FIRE DISTRICTS and COUNTY emergency response personnel; and

m. Providing information as to the cost of the response by HAZ-MAT TEAM.

4. Nothing in this Agreement or any Exhibit thereto shall obligate the CITY to respond outside of Sacramento County.

II. COMPENSATION SCHEDULE

For the services to be provided by CITY, COUNTY shall pay to CITY the following amounts:

For fiscal year 2006-07:	$254,600 base fee, plus the actual cost of response for each incident in the COUNTY. The total amount (base fee plus response cost) paid to CITY by COUNTY shall not exceed $268,000.
For fiscal year 2007-08:	$273,695 base fee, plus the actual cost of response for each incident in the COUNTY. The total amount (base fee plus response cost) paid to CITY by COUNTY shall not exceed $288,100.
For fiscal year 2008-09:	Base fee of $273,695 adjusted by a percentage increase as indicated by the United States City Average Consumer Price Index for Urban and Clerical Workers between March 2007 and March 2008 (rounded to the nearest tenth of 1%), plus the actual cost of response for each incident in the COUNTY. The total amount (base fee plus response cost) paid to CITY by COUNTY shall not exceed $288,100 adjusted by a percentage increase as indicated by the United States City Average Consumer Price Index for Urban and Clerical Workers between March 2007 and March 2008 (rounded to the nearest tenth of 1%), plus the actual cost of response for each incident in the COUNTY.

III. BILLING SCHEDULE and INVOICE FORMAT

1. CITY shall submit invoices consistent with the following schedule:

   a. Not later than October 15th of each contract year:

      Amount totaling one-half (1/2) of the base fee

   b. Not later than February 15th of each contract year:

      Amount totaling one-half of the base fee plus CITY costs incurred from responding to hazardous materials incidents from July 1 through December 31 of the contract year.

   c. Not later than July 20th following the conclusion of the contract year:

      Amount totaling CITY costs incurred from responding to hazardous materials incidents from January 1 through June 30 of the contract year.

   d. The total amount billed from all Invoices submitted pursuant to paragraphs 1a, 1b. and 1c. above shall not exceed the total contract limit for the contract year.

2. Costs incurred from responding to hazardous materials incidents shall be documented separately by incident. The following Information will be included:
   a. Date of the incident.
   b. Numbers of hours spent on scene.
   c. Number of personnel responding.
   d. Personnel salary cost.
   e. Any equipment or materials cost.

EXHIBIT B to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY,"
and the CITY OF SACRAMENTO, hereafter referred to as "CITY"

I. INSURANCE REQUIREMENTS

1. Each party, at its sole cost and expense, shall carry insurance, or self-insure its activities in connection with this Agreement, and obtain, keep in force and maintain, insurance or equivalent program of self-insurance, for professional liability, general liability, workers compensation and business automobile liability adequate to cover its potential liabilities hereunder.

2. CITY shall furnish COUNTY with certificates evidencing coverage required below. **The County Risk Manager may approve self-insurance programs in lieu of required policies of insurance if, in the opinion of the Risk Manager, the interests of the County and general public are adequately protected.** All certificates or evidences of self-insurance are to be received and approved by COUNTY before performance commences.

II. MINIMUM SCOPE OF INSURANCE.

Coverage shall be at least as broad as:

1. GENERAL LIABILITY: Insurance Services Office's Commercial General Liability occurrence coverage form CG 0001. Including, but not limited to Premises/Operations, Products/Completed Operations, and Personal & Advertising Injury, without exclusions or limitations unless approved by County Risk Management Office.

2. AUTOMOBILE LIABILITY: Insurance Services Office's Commercial Automobile Liability coverage form CA 0001, auto coverage symbol "1" (any auto). If there are no owned or leased vehicles, symbols 8 and 9 for non-owned and hired autos shall apply.

3. WORKERS' COMPENSATION: Statutory requirements of the State of California and Employer's Liability Insurance.

4. PROFESSIONAL LIABILITY *or* Errors and Omissions Liability insurance appropriate to CITY's profession.

5. UMBRELLA or Excess Liability policies are acceptable where the need for

higher liability limits is noted in the Minimum Limits of Insurance and shall provide liability coverages that are at least follow form over the underlying insurance requirements where necessary for Commercial General Liability, Automobile Liability, Employers' Liability, and any other liability coverage designated under the Minimum Scope of Insurance.

III. MINIMUM LIMITS OF INSURANCE

1. General Liability shall be made on an Occurrence basis (as opposed to Claims Made basis). Minimum limits and structure shall be:

General Aggregate:	$2,000,000
Product Comp/Op Aggregate:	$2,000,000
Personal & Adv Injury:	$1,000,000
Each Occurrence:	$1,000,000
Fire Damage:	$ 100,000

2. Automobile Liability: $1,000,000 Combined Single Limit per accident for bodily injury and property damage.

3. Workers' Compensation: Statutory.

4. Employer's Liability: $1,000,000 per accident for bodily injury or disease.

5. Professional Liability or Errors and Omissions Liability: $1,000,000 per occurrence.

RESOLUTION NO. 2006-0630

BE IT RESOLVED AND ORDERED that the Chair of the Board of Supervisors be and is hereby authorized and directed to execute an agreement to provide for hazardous materials incident response service by the Sacramento City Fire Department to other County Fire Districts, in the form hereto attached, on behalf of the COUNTY OF SACRAMENTO, a political subdivision of the State of California, with City of Sacramento and to do and perform everything necessary to carry out the purpose of this Resolution.

On a motion by Supervisor Dickinson, seconded by Supervisor Nottoli, the foregoing Resolution was passed and adopted by the Board of Supervisors of the County of Sacramento this 23rd day of May, 2006, by the following vote, to wit:

AYES: Supervisors, Dickinson, Nottoli, MacGlashan

NOES: Supervisors, None

ABSENT: Supervisors, Collin, Peters

ABSTAIN: Supervisors, None

XXI. TRAINIING

At a frequency not exceeding once each calendar quarter, COUNTY Environmental Management Department will make available at least two of their Incident Response Team personnel to participate in HAZMAT response training conducted by CITY. Each training event shall not exceed eight hours in duration.

COUNTY OF SACRAMENTO AGREEMENT NO. # _____

AGREEMENT

This AGREEMENT is made and entered into as of this 23rd day of May 2006, by and between the COUNTY OF SACRAMENTO, a political subdivision of the State of California, hereinafter referred to as "COUNTY", and THE SACRAMENTO METROPOLITAN FIRE DISTRICT, (hereinafter referred to as "METRO"). This AGREEMENT is made to amend the prior agreement made between these same parties dated June 17, 2004.

RECITALS

WHEREAS, the timely response to and proper management of incidents involving the intentional or unintentional release of hazardous materials are critical to the protection of human health and the environment; and

WHEREAS, the proper management and control of responses to emergency incidents involving hazardous materials requires highly specialized training, equipment, supplies, communications and other resources in order to provide adequate protection for the health and safety of the public and emergency response personnel; and

WHEREAS, METRO has recognized the need for expanding the number of hazardous materials response teams available the various fire districts or departments throughout Sacramento County to mitigate situations involving the release of such materials; and

WHEREAS, METRO is developing a hazardous materials response team (hereinafter called "HAZ-MAT TEAM"), with specialized apparatus, equipment and capabilities to augment existing area incident response resources; and

WHEREAS, because the HAZ-MAT TEAM being established by METRO will require a transition period to achieve full operational capability, METRO is not seeking financial consideration over the term of this Agreement; and

WHEREAS, the cost of establishing and maintaining a hazardous materials response team capability is so expensive and occurrence of emergency response incidents requiring the specialized expertise of a hazardous materials response team has increased so significantly that the COUNTY has determined that it would be more economical, feasible and appropriate to utilize the services of the HAZ-MAT TEAM available from METRO rather than to develop and maintain duplicate response teams in various locations in the unincorporated area of Sacramento County; and

WHEREAS, METRO has offered to provide the services of their HAZ-MAT TEAM to hazardous materials incidents within their jurisdiction and on a case by case basis to the Elk Grove Community Services District Fire Department, City of Folsom Fire Department, Galt Fire Protection District, Isleton Fire Protection District, Isleton Fire Department, Wilton Fire Protection District, Walnut Grove Fire Protection District, Delta Fire Protection District, Herald Fire Protection District and Delta Fire Protection District (hereafter called "COUNTY FIRE DISTRICTS") and to COUNTY under the provisions of this agreement and a separate mutual aid agreement:

WHEREAS, COUNTY and METRO desire to enter into this Agreement on the terms and conditions set forth herein.

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth, COUNTY and METRO agree as follows:

I. **SCOPE OF SERVICES**

METRO shall provide services in the amount, type and manner described in Exhibit A, which is attached hereto and incorporated herein.

II. **TERM**

This Amended Agreement shall be effective and commence as of the date first written above and shall end on July 1, 2009.

III. **NOTICE**

Any notice, demand, request, consent, or approval that either party hereto may or is required to give the other pursuant to this Agreement shall be in writing and shall be either personally delivered or sent by certified mail-return receipt requested, addressed as follows:

TO COUNTY	TO METRO
DIRECTOR Environmental Management Department 8475 Jackson Road, Suite 230 Sacramento, CA 95826	FIRE CHIEF Sacramento Metropolitan Fire District 2101 Hurley Way Sacramento, CA 95825-3208

Either party may change the address to which subsequent notice and/or other communications can be sent by giving written notice designating a

change of address to the other party, which shall be effective upon receipt. Notice shall be deemed effective on the date of receipt.

IV. COMPLIANCE WITH LAWS

METRO and COUNTY shall observe and comply with all applicable Federal, State, and County laws, regulations and ordinances.

V. STATUS OF METRO

1. It is understood and agreed that METRO (including METRO employees) is an independent special district and that no relationship of employer-employee exists between the parties hereto. METRO assigned personnel shall not be entitled to any benefits payable to employees of COUNTY. COUNTY is not required to make any deductions or withholdings from the compensation payable to METRO under the provisions of this Agreement; and as an independent special district, METRO hereby indemnifies and holds COUNTY harmless from any and all claims that may be made against COUNTY based upon any contention by any employee of METRO that an employer-employee relationship exists by reason of this Agreement.

2. It is further understood and agreed by the parties hereto that METRO in the performance of its obligation hereunder is subject to the control or direction of COUNTY as to the designation of tasks to be performed, the results to be accomplished by the services hereunder agreed to be rendered and performed, and not the means, methods, or sequence used by METRO for accomplishing the results.

3. If, in the performance of this Agreement, any third persons are employed by METRO, such person shall be entirely and exclusively under the direction, supervision, and control of METRO. All terms of employment, including hours, wages, working conditions, discipline, hiring, and discharging, or any other terms of employment or requirements of law, shall be determined by METRO, and the COUNTY shall have no right or authority over such persons or the terms of such employment.

4. It is further understood and agreed that as an independent special district, and not an employee of COUNTY, METRO assigned personnel shall not have any entitlement as a COUNTY employee, right to act on behalf of COUNTY in any capacity whatsoever as agent, nor to bind COUNTY to any obligation whatsoever. METRO employees shall not be covered by COUNTY's worker's compensation; nor shall METRO employees be entitled to compensated sick leave,

vacation leave, retirement entitlement, participation in group health, dental, life and other insurance programs, or entitled to other fringe benefits payable by the COUNTY to employees of the COUNTY.

5. It is further understood and agreed that METRO must issue W-2 and 941 Forms for income and employment tax purposes, for all of METRO assigned personnel under the terms and conditions of this Agreement.

VI. COMPLIANCE WITH CHILD, FAMILY AND SPOUSAL SUPPORT REPORTING OBLIGATIONS

1. METRO shall comply with all applicable state, federal and local laws relating to child and family support enforcement, including, but not limited to, disclosure of information and compliance with earnings assignment orders as provided in Chapter 8 (commencing with Section 5200) of Part 5 of Division 9 of the California State Family Code and Chapter 2.160 of the Sacramento County Code. METRO shall comply with all earnings assignment orders with respect to its employees and shall provide the names of all new employees to the New Hire Registry maintained by the California Employment Development Department;

2. Failure to comply with state and federal reporting requirements regarding METRO employees or failure to implement lawfully served wage and earnings assignment orders or notices of assignment shall constitute a default under this Agreement. Failure to cure such default within 90 days of notice by the COUNTY shall be grounds for termination of the contract.

VII. BENEFITS WAIVER

1. METRO acknowledges and agrees that METRO employees are not entitled to receive the following benefits and/or compensation from COUNTY: medical, dental, vision and retirement benefits, life and disability insurance, sick leave, bereavement leave, jury duty leave, parental leave, or any other similar benefits or compensation otherwise provided to permanent civil service employees pursuant to the County Charter, the County Code, the Civil Service Rule, the Sacramento County Employees' Retirement System and/or any and all memoranda of understanding between COUNTY and its employee organizations. Should METRO or any employee of METRO seek to obtain such benefits from COUNTY, METRO agrees to indemnify and hold harmless COUNTY from any and all claims that may be made against COUNTY for such benefits.

2. METRO agrees to include in all subcontracts subject to this Agreement that subcontractors are not employees of COUNTY and are not entitled

to any benefits from COUNTY: medical, dental, vision and retirement benefits, life and disability insurance, sick leave, bereavement leave, jury duty leave, parental leave, or any other similar benefits or compensation otherwise provided to permanent civil service employees pursuant to the County Charter, the County Code, the Civil Service Rule, the Sacramento County Employees' Retirement System and/or any and all memoranda of understanding between COUNTY and its employee organizations.

VIII. CONFLICT OF INTEREST

METRO and METRO officers and employees shall not have a financial interest, or acquire any financial interest, direct or indirect, in any business, property, or source of income which could be financially affected by or otherwise conflict in any manner or degree with the performance of services required under this Agreement.

IX. NONDISCRIMINATION IN EMPLOYMENT, SERVICES, BENEFITS AND FACILITIES

1. METRO agrees and assures COUNTY that METRO shall comply with all applicable federal, state, and local anti-discrimination laws, regulations, and ordinances and that it will not unlawfully discriminate, harass, or allow harassment against any employee, applicant for employment, employee or agent of COUNTY, or recipient of services contemplated to be provided or provided under this Agreement, because of race, ancestry, marital status, color, religious creed, political belief, national origin, ethnic group identification, sex, sexual orientation, age (over 40), medical condition (including HIV and AIDS), or physical or mental disability. METRO shall ensure that the evaluation and treatment of its employees and applicants for employment, the treatment of COUNTY employees and agents, and recipients of services are free from such discrimination and harassment.

2. METRO represents that it is in compliance with and agrees that it will continue to comply with the Americans with Disabilities Act of 1990 (42 U.S.C. § 12101 et seq.) and regulations and guidelines issued pursuant thereto.

3. METRO agrees to compile data, maintain records and submit reports as required by law to permit effective enforcement of all applicable antidiscrimination laws and this provision.

4. METRO shall include this nondiscrimination provision in all subcontracts related to this Agreement.

X. INDEMNIFICATION

1. METRO shall indemnify, defend and hold harmless COUNTY, its Board of Supervisors, officers, directors, agents, employees, and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of METRO, its officers, employees, or agents (including its volunteers and students).

2. COUNTY shall indemnify, defend, and hold harmless METRO and its officers, directors, agents, employees, and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of COUNTY, its Board of Supervisors, officers, employees, or agents (including its volunteers).

XI. INSURANCE

Without limiting METRO indemnification, METRO shall maintain in force at all times during the term of this Agreement and any extensions or modifications hereto, insurance as specified in Exhibit B. It is understood and agreed that COUNTY shall not pay any sum to METRO under this Agreement unless and until COUNTY is satisfied that all insurance required by this Agreement is in force at the time services hereunder are rendered.

XII. SUBCONTRACTS, ASSIGNMENT

1. Any subcontracting will be subject to all applicable provisions of this Agreement. Subcontracting services delivered under this Agreement shall not in any way relieve METRO of any duty or responsibility under this Agreement and METRO shall remain primarily obligated for the performance of all services.

2. This Agreement is not assignable by METRO in whole or in part, without the prior written consent of COUNTY.

XIII. AMENDMENT AND WAIVER

Except as provided herein, no alteration, amendment, variation, or waiver of the terms of this Agreement shall be valid unless made in writing and signed by both parties. Waiver by either party of any default, breach or condition precedent shall not be construed as a waiver of any other default, breach or condition precedent, or any other right hereunder. No interpretation of any provision of this Agreement shall be binding upon COUNTY unless agreed in writing by DIRECTOR and counsel for COUNTY.

XIV. INTERPRETATION

This Agreement shall be deemed to have been prepared equally by both of the parties, and the Agreement and its individual provisions shall not be construed or interpreted more favorably for one party on the basis that the other party prepared it.

XV. DIRECTOR

As used in this Agreement, "DIRECTOR" shall mean the Director of the Environmental Management Department, or his/her designee.

XVI. DISPUTES

Any dispute arising under this Agreement shall be decided by DIRECTOR who shall put his decision in writing and mail a copy thereof to the address for notice to METRO. The decision of DIRECTOR shall be final unless within thirty (30) days from the date of mailing of such copy METRO appeals the decision in writing to the Sacramento County Board of Supervisors. In connection with any appeal proceeding under this paragraph, METRO shall be afforded the opportunity to be heard and offer evidence in support of its appeal. Pending a final decision of dispute hereunder METRO shall proceed diligently with the performance of the Agreement and in accordance with DIRECTOR's decision, unless the DIRECTOR's decision states otherwise. The decision of the Board of Supervisors on the appeal shall be the COUNTY's final decision.

XVII. TERMINATION

1. Either party may terminate this Agreement without cause upon thirty (30) days written notice to the other party.

2. COUNTY may terminate this Agreement for cause upon giving ten (10) days written notice to METRO should METRO materially fail to perform this Agreement in the time and/or manner specified. Before such

termination takes effect, however, METRO shall have ten (10) days to cure the failure to perform. In the event of such termination, COUNTY may proceed with the work in any manner deemed proper by COUNTY. If notice of termination for cause is given by COUNTY to METRO and it is later determined that METRO was not in default or the default was excusable, then the notice of termination shall be deemed to have been given without cause pursuant to paragraph 1 above.

3. METRO shall not incur any expenses under this Agreement after notice of termination and shall cancel any outstanding expense obligations to a third party that METRO can legally cancel.

XVIII. REPORTS

METRO shall, without additional compensation therefore, make fiscal, program evaluation, progress, and such other reports as may be reasonably required by DIRECTOR concerning METRO activities as they affect the contract duties and purposes herein. COUNTY shall explain procedures for reporting the required information.

XIX. AUDITS AND RECORDS

Upon COUNTY request, COUNTY or its designee shall have the right at reasonable times and intervals to audit, at METRO premises, METRO program records related to this Agreement as COUNTY deems necessary to determine METRO compliance with legal and contractual requirements. METRO shall maintain such records for a period of four years following termination of the Agreement, and shall make them available for copying upon COUNTY request at COUNTY expense.

XX. PRIOR AGREEMENTS

This Agreement constitutes the entire contract between COUNTY and METRO regarding the subject matter of this Agreement. Any prior agreements, whether oral or written, between COUNTY and METRO regarding the subject matter of this Agreement are hereby terminated effective immediately upon full execution of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year first written above.

COUNTY OF SACRAMENTO «TYPE» AGREEMENT NO.«cntrctnmbr»

EXHIBIT A to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY," and
and the SACRAMENTO METROPLITAN FIRE DISTRICT, hereafter referred to as "METRO"

I. SCOPE OF SERVICES

1. Immediately upon notification of an emergency situation involving hazardous materials that has been classified as a LEVEL II or LEVEL III INCIDENT, the METRO shall dispatch a HAZ MAT TEAM to respond to the scene. If more than three LEVEL II or LEVEL III hazardous materials incidents are occurring simultaneous within the METRO or County of Sacramento, the determination of the priority of response by a HAZ-MAT TEAM shall be at the sole discretion of the highest ranking chief officer of the Sacramento Metropolitan Fire Department on-duty or on-call at the time, based upon the assessment of the risks to the public or environment associated with the incident without regard to whether the incident is within the Sacramento Metropolitan Fire District or other areas of Sacramento County.

2. Immediately upon arrival at the scene of the emergency hazardous materials incident, the HAZ-MAT TEAM Captain shall report to the Incident Commander having jurisdiction, and shall establish the Haz-Mat Group as identified in the Incident Command System. The Haz-Mat Group Safety Officer shall make immediate contact with the Safety Officer of the incident.

3. The services to be provided by the HAZ-MAT TEAM to COUNTY or COUNTY FIRE DISTRICTS shall include the following:

   a. Assessing the scene as to the appropriate classification of the level of the incident, determination of any additional personal or environmental protective measures that may be required without further delay and determining the possible need for an additional assistance not already requested;

   b. Providing rescue to victims, if necessary, and if possible without exposing emergency response personnel to unreasonable life-threatening risks;

   c. Identification of the types and quantities of any hazardous materials involved, determination of the hazards they pose to life, environment and property, and advice as to appropriate measures necessary to

mitigate, contain and suppress the emergency hazardous materials incident;

d. Providing advice, assistance and special supplies in the extinguishment of any fires that may exist or pose a threat, if such extinguishment is considered to be essential by the Incident Commander, and in the selection of extinguishing agents to be utilized and the methods of application;

e. Providing advice, assistance and location of special supplies in the suppression and containment of the hazardous materials involved in the incident including measures such as temporary diking, diverting, channeling, plugging, removal of fuel, and the elimination of ignition sources.

f. Providing advice and assistance in the establishment of a Field Command Post in an appropriate and safe location;

g. Providing advice and assistance in the establishment of a Resource Pool Staging Area in an appropriate and safe location;

h. Providing advice and assistance in the determination and establishment of any restricted (hot) or limited access (warm) zones, and any areas that may need to be evaluated;

i. Providing technical coordination with any private sector resources that may be involved in response to the emergency hazardous materials incidents;

j. Providing advice and assistance to the County Environmental Management Department, the Department of Public Works, and the Emergency Operations Division of the Department of General Services of County as may be requested for the purpose of declaring a health emergency or a state of emergency, coordinating emergency response activities of County departments, and clean-up and restoration of the affected site to normal daily use;

k. Providing technical information to the Incident Commander for dissemination to the public through the facilities of the Emergency broadcast System or directly to news media regarding the emergency hazardous materials incident;

l. Providing advice and assistance as necessary, in the training of COUNTY FIRE DISTRICTS and COUNTY emergency response personnel; and

m. Providing information as to the cost of the response by HAZ-MAT TEAM.

4. Nothing in this Agreement or any Exhibit thereto shall obligate the METRO to respond outside of Sacramento County.

II. COMPENSATION SCHEDULE

For the services provided by METRO, COUNTY shall pay to METRO the following amounts:

For fiscal year 2006-07:	$125,400 base fee, plus the actual cost of response for each incident in the COUNTY. The total amount (base fee plus response cost) paid to METRO by COUNTY shall not exceed $132,000.
For fiscal year 2007-08:	$134,805 base fee, plus the actual cost of response for each incident in the COUNTY. The total amount (base fee plus response cost) paid to METRO by COUNTY shall not exceed $141,900.
For fiscal year 2008-09:	Base fee of $134,805 adjusted by a percentage increase as indicated by the United States City Average consumer Price Index for Urban and Clerical Workers between March 2007 and March 2008 (rounded to the nearest tenth of 1%), plus the actual cost of response for each incident in the COUNTY. The total amount (base fee plus response cost) paid to METRO by COUNTY shall not exceed $141,900 adjusted by a percentage increase as indicated by the United States City Average Consumer Price Index for Urban and Clerical Workers between March 2007 and March 2008 (rounded to the nearest 1%), plus the actual cost of response for each incident in the COUNTY.

III. BILLING SCHEDULE and INVOICE FORMAT

1. METRO shall submit invoices consistent with the following schedule:
   a. Not later than October 15th of each contract year:

      Amount totaling one-half (1/2) of the base fee

   b. Not later than February 15th of each contract year:

      Amount totaling one-half of the base fee plus METRO costs incurred from responding to hazardous materials incidents form July 1 through December 31 of the contract year.

   c. Not later than July 20th following the conclusion of the contract year:

      Amount totaling METRO costs incurred from responding to hazardous materials incidents from January 1 through June 30 of the contract year.

   d. The total amount billed from all Invoices submitted pursuant to paragraphs 1a, 1b and 1c above shall not exceed the total contract limit for the contract year.

2. Costs incurred from responding to hazardous materials incidents shall be documented separately by incident. The following information will be included:
   a. Date of the incident.
   b. Numbers of hours spent on scene.
   c. Number of personnel responding.
   d. Personnel salary cost.
   e. Any equipment or materials cost.

EXHIBIT B to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY,"
and the SACRAMENTO METROPOLITAN FIRE DISTRICT, hereafter referred to as "METRO"

I. INSURANCE REQUIREMENTS

1. Each party, at its sole cost and expense, shall carry insurance, or self-insure its activities in connection with this Agreement, and obtain, keep in force and maintain, insurance or equivalent program of self-insurance, for professional liability, general liability, workers compensation and business automobile liability adequate to cover its potential liabilities hereunder.

2. METRO shall furnish COUNTY with certificates evidencing coverage required below. **The County Risk Manager may approve self-insurance programs in lieu of required policies of insurance if, in the opinion of the Risk Manager, the interests of the County and general public are adequately protected.** All certificates or evidences of self-insurance are to be received and approved by COUNTY before performance commences.

II. MINIMUM SCOPE OF INSURANCE.

Coverage shall be at least as broad as:

1. GENERAL LIABILITY: Insurance Services Office's Commercial General Liability occurrence coverage form CG 0001. Including, but not limited to Premises/Operations, Products/Completed Operations, and Personal & Advertising Injury, without exclusions or limitations unless approved by County Risk Management Office.

2. AUTOMOBILE LIABILITY: Insurance Services Office's Commercial Automobile Liability coverage form CA 0001, auto coverage symbol "1" (any auto). If there are no owned or leased vehicles, symbols 8 and 9 for non-owned and hired autos shall apply.

3. WORKERS' COMPENSATION: Legally self-insured.

4. PROFESSIONAL LIABILITY *or* Errors and Omissions Liability insurance appropriate to METRO's profession.

5. UMBRELLA or Excess Liability policies are acceptable where the need for

higher liability limits is noted in the Minimum Limits of Insurance and shall provide liability coverages that are at least follow form over the underlying insurance requirements where necessary for Commercial General Liability, Automobile Liability, Employers' Liability, and any other liability coverage designated under the Minimum Scope of Insurance.

III. MINIMUM LIMITS OF INSURANCE

1. General Liability shall be made on an Occurrence basis (as opposed to Claims Made basis). Minimum limits and structure shall be:

General Aggregate:	$2,000,000
Product Comp/Op Aggregate:	$2,000,000
Personal & Adv Injury:	$1,000,000
Each Occurrence:	$1,000,000
Fire Damage:	$ 100,000

2. Automobile Liability: $1,000,000 Combined Single Limit per accident for bodily injury and property damage.

3. Workers' Compensation: Statutory.

4. Employer's Liability: $1,000,000 per accident for bodily injury or disease.

5. Professional Liability or Errors and Omissions Liability: $1,000,000 per occurrence.

JOINT AGREEMENTS BETWEEN EMD AND INCORPORATED CITIES IN SACRAMENTO COUNTY

CITY OF CITRUS HEIGHTS

RECEIVED
JUN 29 2006
ENTAL MANAGEMENT DEPT.

COUNTY OF SACRAMENTO AGREEMENT NO. # _____

AGREEMENT

THIS AGREEMENT is made and entered into as of this 23 day of June, 2006, between the COUNTY OF SACRAMENTO, a political subdivision of the State of California, hereinafter referred to as "COUNTY", and THE CITY OF CITRUS HEIGHTS, a municipal corporation of the State of California (hereinafter referred to as "CITY").

RECITALS

WHEREAS, the timely response to and proper management of incidents involving the intentional or unintentional release of hazardous materials are critical to the protection of human health and the environment; and

WHEREAS, the proper management and control of responses to emergency incidents involving hazardous materials requires highly specialized training, equipment, supplies, communications and other resources in order to provide adequate protection for the health and safety of the public and emergency response personnel; and

WHEREAS, COUNTY has entered into contractual agreements with the Sacramento Fire Department and the Sacramento Metropolitan Fire District, hereafter referred to as "CONTRACTORS" to provide hazardous materials response teams (hereinafter called "HAZ-MAT TEAM"), with specialized apparatus, equipment and capabilities; and

WHEREAS, the cost of establishing and maintaining a hazardous materials response team capability is so expensive and occurrence of emergency response incidents requiring the specialized expertise of a hazardous materials response team has increased so significantly that the CITY has determined that it would be more economical, feasible and appropriate to utilize the services of the HAZ-MAT TEAM available from the COUNTY through its contractual agreements with CONTRACTORS rather than to develop and maintain duplicate response teams; and

WHEREAS, COUNTY has offered, subject to consideration, to include CITY within the scope of service coverage of HAZ-MAT TEAM through the provisions of its contractual agreements with CONTRACTORS and a separate mutual aid agreement:

WHEREAS, COUNTY and CITY desire to enter into this Agreement on the terms and conditions set forth herein.

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth, the parties hereto agree as follows:

I. SCOPE OF SERVICES

COUNTY provide services in the amount, type and manner described in Exhibit "A", which is attached hereto and incorporated herein. Payment to be made by CITY per Exhibit "B" which is attached hereto and incorporated herein.

II. TERM

This Agreement shall be effective and commence as July 1, 2006 and shall end on June 30, 2009.

III. NOTICE

Any notice, demand, request, consent, or approval that either party hereto may or is required to give the other pursuant to this Agreement shall be in writing and shall be either personally delivered or sent by certified mail-return receipt requested, addressed as follows:

TO COUNTY	TO CITY
DIRECTOR Sacramento County Environmental Management Department 8475 Jackson Road, Suite 230 Sacramento, CA 95826	CITY MANAGER City of Citrus Heights 6237 Fountain Square Drive Citrus Heights, CA 95621

Either party may change the address to which subsequent notice and/or other communications can be sent by giving written notice designating a change of address to the other party, which shall be effective upon receipt. Notice shall be deemed effective on the date of receipt.

IV. COMPLIANCE WITH LAWS

CITY and COUNTY shall observe and comply with all applicable Federal, State, and County laws, regulations and ordinances.

V. CONFLICT OF INTEREST

CITY and CITY officers and employees shall not have a financial interest, or acquire any financial interest, direct or indirect, in any business, property, or source of income which could be financially affected by or otherwise conflict in any manner or degree with the performance of services required under this Agreement.

VI. INDEMNIFICATION

1. CITY shall indemnify, defend and hold harmless COUNTY, its Board of Supervisors, officers, directors, agents, employees, contractors and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of the CITY, its officers, employees, or agents (including its volunteers and students).

2. COUNTY shall indemnify, defend, and hold harmless CITY and its officers, directors, agents, employees, and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of COUNTY, its Board of Supervisors, officers, employees, or agents (including its volunteers).

VII. INSURANCE

Without limiting COUNTY or CONTRACTORS indemnification, COUNTY and CONTRACTORS shall maintain in force at all times during the term of this Agreement and any extensions or modifications hereto, insurance as specified in Exhibit C.

VIII. SUBCONTRACTS, ASSIGNMENT

1. Any subcontracting will be subject to all applicable provisions of this Agreement. Subcontracting services delivered under this Agreement shall not in any way relieve COUNTY of any duty or responsibility under this Agreement and COUNTY shall remain primarily obligated for the performance of all services.

2. This Agreement is not assignable by COUNTY in whole or in part, without the prior written consent of CITY.

IX. AMENDMENT AND WAIVER

Except as provided herein, no alteration, amendment, variation, or waiver of the terms of this Agreement shall be valid unless made in writing and signed by both parties. Waiver by either party of any default, breach or condition precedent shall not be construed as a waiver of any other default, breach or condition precedent, or any other right hereunder.

X. INTERPRETATION

This Agreement shall be deemed to have been prepared equally by both of the parties, and the Agreement and its individual provisions shall not be construed or interpreted more favorably for one party on the basis that the other party prepared it.

XI. TERMINATION

Either party may terminate this Agreement upon one hundred and eighty (180) days written notice to the other party. Notice shall be deemed served on the date of mailing.

XII. PRIOR AGREEMENTS

This Agreement constitutes the entire contract between COUNTY and CITY regarding the subject matter of this Agreement. Any prior agreements, whether oral or written, between COUNTY and CITY regarding the subject matter of this Agreement are hereby terminated effective immediately upon full execution of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year first written above.

EXHIBIT A to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY," and
and the CITY OF CITRUS HEIGHTS, hereafter referred to as "CITY"

I. SCOPE OF SERVICES

COUNTY DESCRIPTION OF SERVICES

COUNTY will work within a partnership relationship with CITY and provide the following services:

1. Immediately upon notification of an emergency situation involving hazardous materials that has been classified as a LEVEL II or LEVEL III INCIDENT, the COUNTY, through its contractual agreement with CONTRACTORS, shall provide for the dispatch a HAZ MAT TEAM to respond to the scene. If more than three LEVEL II or LEVEL III hazardous materials incidents are occurring simultaneous within the CITY or other areas of the COUNTY, the determination of the priority of response by a HAZ-MAT TEAM shall be at the sole discretion of the highest ranking chief officer of the Sacramento Fire Department or Sacramento Metropolitan Fire Protection District on-duty or on-call at the time, based upon the assessment of the risks to the public or environment associated with the incident without regard to whether the incident is within the CITY or other areas of the COUNTY.

2. Immediately upon arrival at the scene of the emergency hazardous materials incident, the HAZ-MAT TEAM Captain shall report to the Incident Commander having jurisdiction, and shall establish the Haz-Mat Group as identified in the Incident Command System. The Haz-Mat Group Safety Officer shall make immediate contact with the Safety Officer of the incident.

3. The services to be provided by the HAZ-MAT TEAM to COUNTY or COUNTY FIRE DISTRICTS shall include the following:

    a. Assessing the scene as to the appropriate classification of the level of the incident, determination of any additional personal or environmental protective measures that may be required without further delay and determining the possible need for an additional assistance not already requested;

b. Providing rescue to victims, if necessary, and if possible without exposing emergency response personnel to unreasonable life-threatening risks;

c. Identification of the types and quantities of any hazardous materials involved, determination of the hazards they pose to life, environment and property, and advice as to appropriate measures necessary to mitigate, contain and suppress the emergency hazardous materials incident;

d. Providing advice, assistance and special supplies in the extinguishment of any fires that may exist or pose a threat, if such extinguishment is considered to be essential by the Incident Commander, and in the selection of extinguishing agents to be utilized and the methods of application;

e. Providing advice, assistance and location of special supplies in the suppression and containment of the hazardous materials involved in the incident including measures such as temporary diking, diverting, channeling, plugging, removal of fuel, and the elimination of ignition sources.

f. Providing advice and assistance in the establishment of a Field Command Post in an appropriate and safe location;

g. Providing advice and assistance in the establishment of a Resource Pool Staging Area in an appropriate and safe location;

h. Providing advice and assistance in the determination and establishment of any restricted (hot) or limited access (warm) zones, and any areas that may need to be evaluated;

i. Providing technical coordination with any private sector resources that may be involved in response to the emergency hazardous materials incidents;

j. Providing advice and assistance to the County Environmental Management Department, the CITY Department of Public Works, and the Emergency Operations Division of the Department of General Services of County as may be requested for the purpose of declaring a health emergency or a state of emergency, coordinating emergency response activities of CITY departments, and clean-up and restoration of the affected site to normal daily use;

k. Providing technical information to the Incident Commander for dissemination to the public through the facilities of the Emergency

broadcast System or directly to news media regarding the emergency hazardous materials incident;

l. Providing advice and assistance as necessary, in the training of COUNTY FIRE DISTRICTS and CITY emergency response personnel; and

m. Providing information as to the cost of the response by HAZ-MAT TEAM.

4. Nothing in this Agreement or any Exhibit thereto shall obligate the COUNTY to provide HAZ-MAT TEAM services outside of Sacramento County.

EXHIBIT B to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY,"
and the CITY OF CITRUS HEIGHTS, hereafter referred to as "CITY"

COMPENSATION SCHEDULE

1. For the services provided by County through its contractual agreements with the Sacramento Fire Department and the Sacramento Metropolitan Fire District, CITY shall pay to COUNTY the following amounts:

   For fiscal year 2006-07 beginning July 1, 2006: $ 40,000

   For fiscal year 2007-08 beginning July 1, 2007: $ 43,000

   For fiscal year 2008-09 beginning July 1, 2008: $ 43,000 adjusted by a percentage increase as indicated by the United States City Average Consumer Price Index for Urban and Clerical Workers between March 2007 and March 2008 (rounded to the nearest tenth of 1%)

2. Payment will be provided through in two equal semi-annual payments due on September 1st and March 1st during each contract year.

3. Payment shall be made to Sacramento County Environmental Management Department and sent to the following address:

   Sacramento County Environmental Management Department
   8475 Jackson Road, Suite 230
   Sacramento, CA 95628

EXHIBIT C to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY,"
and the CITY OF CITRUS HEIGHTS, hereafter referred to as "CITY"

I. INSURANCE REQUIREMENTS

1. Each party, at its sole cost and expense, shall carry insurance, or self-insure its activities in connection with this Agreement, and obtain, keep in force and maintain, insurance or equivalent program of self-insurance, for professional liability, general liability, workers compensation and business automobile liability adequate to cover its potential liabilities hereunder.

2. If requested, COUNTY shall furnish CITY with certificates evidencing coverage of the Sacramento Fire Department and Sacramento Metropolitan Fire District, hereafter referred to as "CONTRACTORS" as required below. The COUNTY Risk Manager may approve self-insurance programs in lieu of required policies of insurance if, in the opinion of the Risk Manager, the interests of the COUNTY, CITY, and general public are adequately protected. All CONTRACTOR certificates or evidences of self-insurance are to be received and approved by COUNTY before performance commences.

II. MINIMUM SCOPE OF INSURANCE.

Coverage of CONTRACTORS shall be at least as broad as:

1. GENERAL LIABILITY: Insurance Services Office's Commercial General Liability occurrence coverage form CG 0001. Including, but not limited to Premises/Operations, Products/Completed Operations, and Personal & Advertising Injury, without exclusions or limitations unless approved by County Risk Management Office.

2. AUTOMOBILE LIABILITY: Insurance Services Office's Commercial Automobile Liability coverage form CA 0001, auto coverage symbol "1" (any auto). If there are no owned or leased vehicles, symbols 8 and 9 for non-owned and hired autos shall apply.

3. WORKERS' COMPENSATION: Statutory requirements of the State of California and Employer's Liability Insurance.

4. PROFESSIONAL LIABILITY *or* Errors and Omissions Liability insurance appropriate to CONTRACTORS profession.

5. UMBRELLA or Excess Liability policies are acceptable where the need for higher liability limits is noted in the Minimum Limits of Insurance and shall provide liability coverage that are at least follow form over the underlying insurance requirements where necessary for Commercial General Liability, Automobile Liability, Employers' Liability, and any other liability coverage designated under the Minimum Scope of Insurance.

III. MINIMUM LIMITS OF INSURANCE

1. General Liability shall be made on an Occurrence basis (as opposed to Claims Made basis). Minimum limits and structure shall be:

General Aggregate:	$2,000,000
Product Comp/Op Aggregate:	$2,000,000
Personal & Adv Injury:	$1,000,000
Each Occurrence:	$1,000,000
Fire Damage:	$ 100,000

2. Automobile Liability: $1,000,000 Combined Single Limit per accident for bodily injury and property damage.

3. Workers' Compensation: Statutory.

4. Employer's Liability: $1,000,000 per accident for bodily injury or disease.

5. Professional Liability or Errors and Omissions Liability: $1,000,000 per occurrence.

COUNTY OF SACRAMENTO AGREEMENT NO. # _____

AGREEMENT

THIS AGREEMENT is made and entered into as of this 3rd day of Nov. 2004, between the COUNTY OF SACRAMENTO, a political subdivision of the State of California, hereinafter referred to as "COUNTY", and THE CITY OF ELK GROVE, a municipal corporation of the State of California (hereinafter referred to as "CITY").

WHEREAS, COUNTY has entered into contractual agreements with the Sacramento Fire Department and the Sacramento Metropolitan Fire District, hereafter referred to as "CONTRACTORS" to provide hazardous materials response teams (hereinafter called "HAZ-MAT TEAM"), with specialized apparatus, equipment and capabilities; and

WHEREAS, COUNTY and CITY desire to enter into this Agreement on the terms and conditions set forth herein.

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth, the parties hereto agree as follows:

I. **SCOPE OF SERVICES**

COUNTY provide services in the amount, type and manner described in Exhibit "A", which is attached hereto and incorporated herein.

II. **TERM**

This Agreement shall be effective and commence as of July 1, 2004 and shall end on June 30, 2009.

III. **NOTICE**

Any notice, demand, request, consent, or approval that either party hereto may or is required to give the other pursuant to this Agreement shall be in writing and shall be either personally delivered or sent by certified mail-return receipt requested, addressed as follows:

TO COUNTY	TO CITY
DIRECTOR Sacramento County Environmental Management Department 8475 Jackson Road, Suite 230 Sacramento, CA 95826	CITY MANAGER City of Elk Grove 8400 Laguna Palms Way Elk Grove, CA 95758

Either party may change the address to which subsequent notice and/or other communications can be sent by giving written notice designating a change of address to the other party, which shall be effective upon receipt. Notice shall be deemed effective on the date of receipt.

IV. COMPLIANCE WITH LAWS

CITY and COUNTY shall observe and comply with all applicable Federal, State, and County laws, regulations and ordinances.

V. CONFLICT OF INTEREST

CITY and CITY officers and employees shall not have a financial interest, or acquire any financial interest, direct or indirect, in any business, property, or source of income which could be financially affected by or otherwise conflict in any manner or degree with the performance of services required under this Agreement.

VI. INDEMNIFICATION

1. CITY shall indemnify, defend and hold harmless COUNTY, its Board of Supervisors, officers, directors, agents, employees, contractors and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of the CITY, its officers, employees, or agents (including its volunteers and students).

2. COUNTY shall indemnify, defend, and hold harmless CITY and its officers, directors, agents, employees, and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of COUNTY, its Board of Supervisors, officers, employees, or agents (including its volunteers).

VII. INSURANCE

Without limiting COUNTY or CONTRACTORS indemnification, COUNTY and CONTRACTORS shall maintain in force at all times during the term of this Agreement and any extensions or modifications hereto, insurance as specified in Exhibit C.

VIII. SUBCONTRACTS, ASSIGNMENT

1. Any subcontracting will be subject to all applicable provisions of this Agreement. Subcontracting services delivered under this Agreement shall not in any way relieve COUNTY of any duty or responsibility under this Agreement and COUNTY shall remain primarily obligated for the performance of all services.

2. This Agreement is not assignable by COUNTY in whole or in part, without the prior written consent of CITY.

IX. AMENDMENT AND WAIVER

Except as provided herein, no alteration, amendment, variation, or waiver of the terms of this Agreement shall be valid unless made in writing and signed by both parties. Waiver by either party of any default, breach or condition precedent shall not be construed as a waiver of any other default, breach or condition precedent, or any other right hereunder.

X. INTERPRETATION

This Agreement shall be deemed to have been prepared equally by both of the parties, and the Agreement and its individual provisions shall not be construed or interpreted more favorably for one party on the basis that the other party prepared it.

XI. TERMINATION

Either party may terminate this Agreement upon one hundred and eighty (180) days written notice to the other party. Notice shall be deemed served on the date of mailing.

XII. PRIOR AGREEMENTS

This Agreement constitutes the entire contract between COUNTY and CITY regarding the subject matter of this Agreement. Any prior agreements, whether oral or written, between COUNTY and CITY regarding the subject matter of this Agreement are hereby terminated effective immediately upon full execution of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year first written above.

COUNTY OF SACRAMENTO «TYPE» AGREEMENT NO.«cntrctnmbr»

EXHIBIT A to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY," and
and the CITY OF ELK GROVE, hereafter referred to as "CITY"

I. SCOPE OF SERVICES

COUNTY DESCRIPTION OF SERVICES

COUNTY will work within a partnership relationship with CITY and provide the following services:

1. Immediately upon notification of an emergency situation involving hazardous materials that has been classified as a LEVEL II or LEVEL III INCIDENT, the COUNTY, through its contractual agreement with CONTRACTORS, shall provide for the dispatch a HAZ MAT TEAM to respond to the scene. If more than three LEVEL II or LEVEL III hazardous materials incidents are occurring simultaneous within the CITY or other areas of the COUNTY, the determination of the priority of response by a HAZ-MAT TEAM shall be at the sole discretion of the highest ranking chief officer of the Sacramento Fire Department or Sacramento Metropolitan Fire Protection District on-duty or on-call at the time, based upon the assessment of the risks to the public or environment associated with the incident without regard to whether the incident is within the CITY or other areas of the COUNTY.

2. Immediately upon arrival at the scene of the emergency hazardous materials incident, the HAZ-MAT TEAM Captain shall report to the Incident Commander having jurisdiction, and shall establish the Haz-Mat Group as identified in the Incident Command System. The Haz-Mat Group Safety Officer shall make immediate contact with the Safety Officer of the incident.

3. The services to be provided by the HAZ-MAT TEAM to COUNTY or COUNTY FIRE DISTRICTS shall include the following:

    a. Assessing the scene as to the appropriate classification of the level of the incident, determination of any additional personal or environmental protective measures that may be required without further delay and determining the possible need for an additional assistance not already requested;

b. Providing rescue to victims, if necessary, and if possible without exposing emergency response personnel to unreasonable life-threatening risks;

c. Identification of the types and quantities of any hazardous materials involved, determination of the hazards they pose to life, environment and property, and advice as to appropriate measures necessary to mitigate, contain and suppress the emergency hazardous materials incident;

d. Providing advice, assistance and special supplies in the extinguishment of any fires that may exist or pose a threat, if such extinguishment is considered to be essential by the Incident Commander, and in the selection of extinguishing agents to be utilized and the methods of application;

e. Providing advice, assistance and location of special supplies in the suppression and containment of the hazardous materials involved in the incident including measures such as temporary diking, diverting, channeling, plugging, removal of fuel, and the elimination of ignition sources.

f. Providing advice and assistance in the establishment of a Field Command Post in an appropriate and safe location;

g. Providing advice and assistance in the establishment of a Resource Pool Staging Area in an appropriate and safe location;

h. Providing advice and assistance in the determination and establishment of any restricted (hot) or limited access (warm) zones, and any areas that may need to be evaluated;

i. Providing technical coordination with any private sector resources that may be involved in response to the emergency hazardous materials incidents;

j. Providing advice and assistance to the County Environmental Management Department, the CITY Department of Public Works, and the Emergency Operations Division of the Department of General Services of County as may be requested for the purpose of declaring a health emergency or a state of emergency, coordinating emergency response activities of CITY departments, and clean-up and restoration of the affected site to normal daily use;

k. Providing technical information to the Incident Commander for dissemination to the public through the facilities of the Emergency

broadcast System or directly to news media regarding the emergency hazardous materials incident;

l. Providing advice and assistance as necessary, in the training of COUNTY FIRE DISTRICTS and CITY emergency response personnel; and

m. Providing information as to the cost of the response by HAZ-MAT TEAM.

4. Nothing in this Agreement or any Exhibit thereto shall obligate the COUNTY to provide HAZ-MAT TEAM services outside of Sacramento County.

EXHIBIT B to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY,"
and the CITY OF ELK GROVE, hereafter referred to as "CITY"

COMPENSATION SCHEDULE

1. For the services provided by County through its contractual agreements with the Sacramento Fire Department and the Sacramento Metropolitan Fire District, CITY shall pay to COUNTY the following amounts:

   For fiscal year 2004-05 beginning July 1, 2004: $44,280

   For fiscal year 2005-06 beginning July 1, 2005: $46,740

   For fiscal year 2006-07 beginning July 1, 2006: $49,200

   For fiscal year 2007-08 beginning July 1, 2007: $52,890

   For fiscal year 2008-09 beginning July 1, 2008: $52,890 adjusted by a percentage increase as indicated by the United States City Average Consumer Price Index for Urban and Clerical Workers between March 2007 and March 2008 (rounded to the nearest tenth of 1%)

2. Payment will be provided through in two equal semi-annual payments due on September 1st and March 1st during each contract year.

3. Payment shall be made to Sacramento County Environmental Management Department and sent to the following address:

   Sacramento County Environmental Management Department
   8475 Jackson Road, Suite 230
   Sacramento, CA 95628

EXHIBIT C to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY,"
and the CITY OF ELK GROVE, hereafter referred to as "CITY"

I. INSURANCE REQUIREMENTS

1. Each party, at its sole cost and expense, shall carry insurance, or self-insure its activities in connection with this Agreement, and obtain, keep in force and maintain, insurance or equivalent program of self-insurance, for professional liability, general liability, workers compensation and business automobile liability adequate to cover its potential liabilities hereunder.

2. If requested, COUNTY shall furnish CITY with certificates evidencing coverage of the Sacramento Fire Department and Sacramento Metropolitan Fire District, hereafter referred to as "CONTRACTORS" as required below. The COUNTY Risk Manager may approve self-insurance programs in lieu of required policies of insurance if, in the opinion of the Risk Manager, the interests of the COUNTY, CITY, and general public are adequately protected. All CONTRACTOR certificates or evidences of self-insurance are to be received and approved by COUNTY before performance commences.

II. MINIMUM SCOPE OF INSURANCE.

Coverage of CONTRACTORS shall be at least as broad as:

1. GENERAL LIABILITY: Insurance Services Office's Commercial General Liability occurrence coverage form CG 0001. Including, but not limited to Premises/Operations, Products/Completed Operations, and Personal & Advertising Injury, without exclusions or limitations unless approved by County Risk Management Office.

2. AUTOMOBILE LIABILITY: Insurance Services Office's Commercial Automobile Liability coverage form CA 0001, auto coverage symbol "1" (any auto). If there are no owned or leased vehicles, symbols 8 and 9 for non-owned and hired autos shall apply.

3. WORKERS' COMPENSATION: Statutory requirements of the State of California and Employer's Liability Insurance.

4. PROFESSIONAL LIABILITY *or* Errors and Omissions Liability insurance appropriate to CONTRACTORS profession.

5. UMBRELLA or Excess Liability policies are acceptable where the need for higher liability limits is noted in the Minimum Limits of Insurance and shall provide liability coverage that are at least follow form over the underlying insurance requirements where necessary for Commercial General Liability, Automobile Liability, Employers' Liability, and any other liability coverage designated under the Minimum Scope of Insurance.

III. MINIMUM LIMITS OF INSURANCE

1. General Liability shall be made on an Occurrence basis (as opposed to Claims Made basis). Minimum limits and structure shall be:

General Aggregate:	$2,000,000
Product Comp/Op Aggregate:	$2,000,000
Personal & Adv Injury:	$1,000,000
Each Occurrence:	$1,000,000
Fire Damage:	$ 100,000

2. Automobile Liability: $1,000,000 Combined Single Limit per accident for bodily injury and property damage.

3. Workers' Compensation: Statutory.

4. Employer's Liability: $1,000,000 per accident for bodily injury or disease.

5. Professional Liability or Errors and Omissions Liability: $1,000,000 per occurrence.

CITY OF FOLSOM

COUNTY OF SACRAMENTO **AGREEMENT NO. #** EMD 001

AGREEMENT

THIS AGREEMENT is made and entered into as of this 21 day of Dec, 2004, between the COUNTY OF SACRAMENTO, a political subdivision of the State of California, hereinafter referred to as "COUNTY", and THE CITY OF FOLSOM, a municipal corporation of the State of California (hereinafter referred to as "CITY").

RECITALS

WHEREAS, the timely response to and proper management of incidents involving the intentional or unintentional release of hazardous materials are critical to the protection of human health and the environment; and

WHEREAS, the proper management and control of responses to emergency incidents involving hazardous materials requires highly specialized training, equipment, supplies, communications and other resources in order to provide adequate protection for the health and safety of the public and emergency response personnel; and

WHEREAS, COUNTY has entered into contractual agreements with the Sacramento Fire Department and the Sacramento Metropolitan Fire District, hereafter referred to as "CONTRACTORS" to provide hazardous materials response teams (hereinafter called "HAZ-MAT TEAM"), with specialized apparatus, equipment and capabilities; and

WHEREAS, the cost of establishing and maintaining a hazardous materials response team capability is so expensive and occurrence of emergency response incidents requiring the specialized expertise of a hazardous materials response team has increased so significantly that the CITY has determined that it would be more economical, feasible and appropriate to utilize the services of the HAZ-MAT TEAM available from the COUNTY through its contractual agreements with CONTRACTORS rather than to develop and maintain duplicate response teams; and

WHEREAS, COUNTY has offered, subject to consideration, to include CITY within the scope of service coverage of HAZ-MAT TEAM through the provisions of its contractual agreements with CONTRACTORS and a separate mutual aid agreement:

WHEREAS, COUNTY and CITY desire to enter into this Agreement on the terms and conditions set forth herein.

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth, the parties hereto agree as follows:

I. **SCOPE OF SERVICES**

COUNTY provide services in the amount, type and manner described in Exhibit "A", which is attached hereto and incorporated herein.
PAYMENT TO BE MADE BY CITY PER EXHIBIT "B".

II. **TERM**

This Agreement shall be effective and commence as July 1, 2004 and shall end on June 30, 2009.

III. **NOTICE**

Any notice, demand, request, consent, or approval that either party hereto may or is required to give the other pursuant to this Agreement shall be in writing and shall be either personally delivered or sent by certified mail-return receipt requested, addressed as follows:

TO COUNTY	TO CITY
DIRECTOR Sacramento County Environmental Management Department 8475 Jackson Road, Suite 230 Sacramento, CA 95826	CITY MANAGER City of Folsom 50 Natoma Street Folsom, CA 95630

Either party may change the address to which subsequent notice and/or other communications can be sent by giving written notice designating a change of address to the other party, which shall be effective upon receipt. Notice shall be deemed effective on the date of receipt.

IV. **COMPLIANCE WITH LAWS**

CITY and COUNTY shall observe and comply with all applicable Federal, State, and County laws, regulations and ordinances.

V. **CONFLICT OF INTEREST**

CITY and CITY officers and employees shall not have a financial interest, or acquire any financial interest, direct or indirect, in any business, property, or source of income which could be financially affected by or otherwise conflict in any manner or degree with the performance of services required under this Agreement.

VI. **INDEMNIFICATION**

1. CITY shall indemnify, defend and hold harmless COUNTY, its Board of Supervisors, officers, directors, agents, employees, contractors and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of the CITY, its officers, employees, volunteers or agents.

2. COUNTY shall indemnify, defend, and hold harmless CITY and its officers, directors, agents, employees, and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of COUNTY, its Board of Supervisors, officers, employees, volunteers or agents.

VII. **INSURANCE**

Without limiting COUNTY or CONTRACTORS indemnification, COUNTY and CONTRACTORS shall maintain in force at all times during the term of this Agreement and any extensions or modifications hereto, insurance as specified in Exhibit C.

VIII. SUBCONTRACTS, ASSIGNMENT

1. COUNTY shall not subcontract any portion of the work provided in this Agreement, except to the CONTRACTORS, without the prior written consent of the City. COUNTY shall not permit CONTRACTORS to subcontract any of the work CONTRACTORS are to provide without the prior written consent of the City. Subcontracting services delivered under this Agreement shall not in any way relieve COUNTY of any duty or responsibility under this Agreement and COUNTY shall remain primarily obligated for the performance of all services.

2. This Agreement is not assignable by COUNTY in whole or in part, without the prior written consent of CITY.

IX. AMENDMENT AND WAIVER

Except as provided herein, no alteration, amendment, variation, or waiver of the terms of this Agreement shall be valid unless made in writing and signed by both parties. Waiver by either party of any default, breach or condition precedent shall not be construed as a waiver of any other default, breach or condition precedent, or any other right hereunder.

X. INTERPRETATION

This Agreement shall be deemed to have been prepared equally by both of the parties, and the Agreement and its individual provisions shall not be construed or interpreted more favorably for one party on the basis that the other party prepared it.

XI. TERMINATION

Either party may terminate this Agreement upon one hundred and eighty (180) days written notice to the other party. Notice shall be deemed served on the date of mailing.

XII. PRIOR AGREEMENTS

This Agreement constitutes the entire contract between COUNTY and CITY regarding the subject matter of this Agreement. Any prior agreements, whether oral or written, between COUNTY and CITY regarding the subject matter of this Agreement are hereby terminated effective immediately upon full execution of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year first written above.

COUNTY OF SACRAMENTO «TYPE» AGREEMENT NO.«cntrctnmbr»

EXHIBIT A to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY," and
and the CITY OF FOLSOM, hereafter referred to as "CITY"

I. SCOPE OF SERVICES

COUNTY DESCRIPTION OF SERVICES

COUNTY shall provide the following services:

1. Immediately upon notification of an emergency situation involving hazardous materials that has been classified as a LEVEL II or LEVEL III INCIDENT, the COUNTY, through its contractual agreement with CONTRACTORS, shall provide for the dispatch a HAZ MAT TEAM to respond to the scene. If more than three LEVEL II or LEVEL III hazardous materials incidents are occurring simultaneous within the CITY or other areas of the COUNTY, the determination of the priority of response by a HAZ-MAT TEAM shall be at the sole discretion of the highest ranking chief officer of the Sacramento Fire Department or Sacramento Metropolitan Fire Protection District on-duty or on-call at the time, based upon the assessment of the risks to the public or environment associated with the incident without regard to whether the incident is within the CITY or other areas of the COUNTY.

2. Immediately upon arrival at the scene of the emergency hazardous materials incident, the HAZ-MAT TEAM Captain shall report to the Incident Commander having jurisdiction, and shall establish the Haz-Mat Group as identified in the Incident Command System. The Haz-Mat Group Safety Officer shall make immediate contact with the Safety Officer of the incident.

3. The services to be provided by the HAZ-MAT TEAM to COUNTY or COUNTY FIRE AGENCIES shall include the following:

    a. Assessing the scene as to the appropriate classification of the level of the incident, determination of any additional personal or environmental protective measures that may be required without further delay and determining the possible need for an additional assistance not already requested;

    b. Providing rescue to victims, if necessary, and if possible without exposing emergency response personnel to unreasonable life-threatening risks;

c. Identification of the types and quantities of any hazardous materials involved, determination of the hazards they pose to life, environment and property, and advice as to appropriate measures necessary to mitigate, contain and suppress the emergency hazardous materials incident;

d. Providing advice, assistance and special supplies in the extinguishment of any fires that may exist or pose a threat, if such extinguishment is considered to be essential by the Incident Commander, and in the selection of extinguishing agents to be utilized and the methods of application;

e. Providing advice, assistance and location of special supplies in the suppression and containment of the hazardous materials involved in the incident including measures such as temporary diking, diverting, channeling, plugging, removal of fuel, and the elimination of ignition sources.

f. Providing advice and assistance in the establishment of a Field Command Post in an appropriate and safe location;

g. Providing advice and assistance in the establishment of a Resource Pool Staging Area in an appropriate and safe location;

h. Providing advice and assistance in the determination and establishment of any restricted (hot) or limited access (warm) zones, and any areas that may need to be evaluated;

i. Providing technical coordination with any private sector resources that may be involved in response to the emergency hazardous materials incidents;

j. Providing advice and assistance to the County Environmental Management Department, the CITY Department of Public Works, and the Emergency Operations Division of the Department of General Services of County as may be requested for the purpose of declaring a health emergency or a state of emergency, coordinating emergency response activities of CITY departments, and clean-up and restoration of the affected site to normal daily use;

k. Providing technical information to the Incident Commander for dissemination to the public through the facilities of the Emergency broadcast System or directly to news media regarding the emergency hazardous materials incident;

l. Providing advice and assistance as necessary, in the training of COUNTY FIRE AGENCIES and CITY emergency response personnel; and

m. Providing information as to the cost of the response by HAZ-MAT TEAM.

4. Nothing in this Agreement or any Exhibit thereto shall obligate the COUNTY to provide HAZ-MAT TEAM services outside of Sacramento County.

CITY OF GALT

COUNTY OF SACRAMENTO **AGREEMENT NO. # _____**

AGREEMENT

THIS AGREEMENT is made and entered into as of this 10th day of Oct, 2004, between the COUNTY OF SACRAMENTO, a political subdivision of the State of California, hereinafter referred to as "COUNTY", and THE CITY OF GALT, a municipal corporation of the State of California (hereinafter referred to as "CITY").

RECITALS

WHEREAS, the timely response to and proper management of incidents involving the intentional or unintentional release of hazardous materials are critical to the protection of human health and the environment; and

WHEREAS, the proper management and control of responses to emergency incidents involving hazardous materials requires highly specialized training, equipment, supplies, communications and other resources in order to provide adequate protection for the health and safety of the public and emergency response personnel; and

WHEREAS, COUNTY has entered into contractual agreements with the Sacramento Fire Department and the Sacramento Metropolitan Fire District, hereafter referred to as "CONTRACTORS" to provide hazardous materials response teams (hereinafter called "HAZ-MAT TEAM"), with specialized apparatus, equipment and capabilities; and

WHEREAS, the cost of establishing and maintaining a hazardous materials response team capability is so expensive and occurrence of emergency response incidents requiring the specialized expertise of a hazardous materials response team has increased so significantly that the CITY has determined that it would be more economical, feasible and appropriate to utilize the services of the HAZ-MAT TEAM available from the COUNTY through its contractual agreements with CONTRACTORS rather than to develop and maintain duplicate response teams; and

WHEREAS, COUNTY has offered, subject to consideration, to include CITY within the scope of service coverage of HAZ-MAT TEAM through the provisions of its contractual agreements with CONTRACTORS and a separate mutual aid agreement:

WHEREAS, COUNTY and CITY desire to enter into this Agreement on the terms and conditions set forth herein.

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth, the parties hereto agree as follows:

I. **SCOPE OF SERVICES**

COUNTY provide services in the amount, type and manner described in Exhibit "A", which is attached hereto and incorporated herein.

II. **TERM**

This Agreement shall be effective and commence as of July 1, 2004 and shall end on June 30, 2009.

III. **NOTICE**

Any notice, demand, request, consent, or approval that either party hereto may or is required to give the other pursuant to this Agreement shall be in writing and shall be either personally delivered or sent by certified mail-return receipt requested, addressed as follows:

TO COUNTY	TO CITY
DIRECTOR Sacramento County Environmental Management Department 8475 Jackson Road, Suite 230 Sacramento, CA 95826	CITY MANAGER City of Galt 380 Civic Drive Galt, CA 95632

Either party may change the address to which subsequent notice and/or other communications can be sent by giving written notice designating a change of address to the other party, which shall be effective upon receipt. Notice shall be deemed effective on the date of receipt.

IV. COMPLIANCE WITH LAWS

CITY and COUNTY shall observe and comply with all applicable Federal, State, County and City laws, regulations and ordinances.

V. CONFLICT OF INTEREST

CITY and CITY officers and employees shall not have a financial interest, or acquire any financial interest, direct or indirect, in any business, property, or source of income which could be financially affected by or otherwise conflict in any manner or degree with the performance of services required under this Agreement.

VI. INDEMNIFICATION

1. CITY shall indemnify, defend and hold harmless COUNTY, its Board of Supervisors, officers, directors, agents, employees, contractors and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of the CITY, its officers, employees, or agents (including its volunteers).

2. COUNTY shall indemnify, defend, and hold harmless CITY and its City Council, officers, directors, agents, employees, and volunteers, from and against any and all liability, loss, expense (including payment of reasonable attorney's fees), or claims for injury or damages arising out of the performance of this Agreement, only in proportion to and to the extent such liability, loss, expense, attorneys' fees or claims for injury or damages are caused by or result from the negligent or intentional act or omission of COUNTY, its Board of Supervisors, officers, employees, CONTRACTORS, or agents (including its volunteers).

VII. INSURANCE

Without limiting COUNTY or CONTRACTORS indemnification, COUNTY and CONTRACTORS shall maintain in force at all times during the term of this Agreement and any extensions or modifications hereto, insurance as specified in Exhibit C.

VIII. **SUBCONTRACTS, ASSIGNMENT**

1. Any subcontracting will be subject to all applicable provisions of this Agreement. Subcontracting services delivered under this Agreement shall not in any way relieve COUNTY of any duty or responsibility under this Agreement and COUNTY shall remain primarily obligated for the performance of all services.

2. This Agreement is not assignable by COUNTY in whole or in part, without the prior written consent of CITY.

IX. **AMENDMENT AND WAIVER**

Except as provided herein, no alteration, amendment, variation, or waiver of the terms of this Agreement shall be valid unless made in writing and signed by both parties. Waiver by either party of any default, breach or condition precedent shall not be construed as a waiver of any other default, breach or condition precedent, or any other right hereunder.

X. **INTERPRETATION**

This Agreement shall be deemed to have been prepared equally by both of the parties, and the Agreement and its individual provisions shall not be construed or interpreted more favorably for one party on the basis that the other party prepared it.

XI. **TERMINATION**

Either party may terminate this Agreement upon one hundred and eighty (180) days written notice to the other party. Notice shall be deemed served on the date of mailing.

XII. **PRIOR AGREEMENTS**

This Agreement constitutes the entire contract between COUNTY and CITY regarding the subject matter of this Agreement. Any prior agreements, whether oral or written, between COUNTY and CITY regarding the subject matter of this Agreement are hereby terminated effective immediately upon full execution of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year first written above.

COUNTY OF SACRAMENTO, a political subdivision of the State of California

By: _____ Date: 10/4/04

Director, Sacramento County
Environmental Management Department

Attest: _____ Date: 10-25-04

County Counsel

CITY OF GALT, a municipal corporation of the State of California

By: _____ Date: Sept. 24, 04

City Manager

Attest: _____ Date: 9-28-04

City Clerk

Approved as to form:

_____ Date: 9-28-04

City Attorney

COUNTY OF SACRAMENTO «TYPE» AGREEMENT NO.«cntrctnmbr»

EXHIBIT A to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY," and
and the CITY OF GALT, hereafter referred to as "CITY"

I. SCOPE OF SERVICES

COUNTY DESCRIPTION OF SERVICES

COUNTY will work within a partnership relationship with CITY and provide the following services:

1. Immediately upon notification of an emergency situation involving hazardous materials that has been classified as a LEVEL II or LEVEL III INCIDENT, the COUNTY, through its contractual agreement with CONTRACTORS, shall provide for the dispatch a HAZ MAT TEAM to respond to the scene. If more than three LEVEL II or LEVEL III hazardous materials incidents are occurring simultaneous within the CITY or other areas of the COUNTY, the determination of the priority of response by a HAZ-MAT TEAM shall be at the sole discretion of the highest ranking chief officer of the Sacramento Fire Department or Sacramento Metropolitan Fire Protection District on-duty or on-call at the time, based upon the assessment of the risks to the public or environment associated with the incident without regard to whether the incident is within the CITY or other areas of the COUNTY.

2. Immediately upon arrival at the scene of the emergency hazardous materials incident, the HAZ-MAT TEAM Captain shall report to the Incident Commander having jurisdiction, and shall establish the Haz-Mat Group as identified in the Incident Command System. The Haz-Mat Group Safety Officer shall make immediate contact with the Safety Officer of the incident.

3. The services to be provided by the HAZ-MAT TEAM to COUNTY or COUNTY FIRE DISTRICTS shall include the following:

    a. Assessing the scene as to the appropriate classification of the level of the incident, determination of any additional personal or environmental protective measures that may be required without further delay and determining the possible need for an additional assistance not already requested;

b. Providing rescue to victims, if necessary, and if possible without exposing emergency response personnel to unreasonable life-threatening risks;

c. Identification of the types and quantities of any hazardous materials involved, determination of the hazards they pose to life, environment and property, and advice as to appropriate measures necessary to mitigate, contain and suppress the emergency hazardous materials incident;

d. Providing advice, assistance and special supplies in the extinguishment of any fires that may exist or pose a threat, if such extinguishment is considered to be essential by the Incident Commander, and in the selection of extinguishing agents to be utilized and the methods of application;

e. Providing advice, assistance and location of special supplies in the suppression and containment of the hazardous materials involved in the incident including measures such as temporary diking, diverting, channeling, plugging, removal of fuel, and the elimination of ignition sources.

f. Providing advice and assistance in the establishment of a Field Command Post in an appropriate and safe location;

g. Providing advice and assistance in the establishment of a Resource Pool Staging Area in an appropriate and safe location;

h. Providing advice and assistance in the determination and establishment of any restricted (hot) or limited access (warm) zones, and any areas that may need to be evaluated;

i. Providing technical coordination with any private sector resources that may be involved in response to the emergency hazardous materials incidents;

j. Providing advice and assistance to the County Environmental Management Department, the CITY Department of Public Works, and the Emergency Operations Division of the Department of General Services of County as may be requested for the purpose of declaring a health emergency or a state of emergency, coordinating emergency response activities of CITY departments, and clean-up and restoration of the affected site to normal daily use;

k. Providing technical information to the Incident Commander for dissemination to the public through the facilities of the Emergency

broadcast System or directly to news media regarding the emergency hazardous materials incident;

l. Providing advice and assistance as necessary, in the training of COUNTY FIRE DISTRICTS and CITY emergency response personnel; and

m. Providing information as to the cost of the response by HAZ-MAT TEAM.

4. Nothing in this Agreement or any Exhibit thereto shall obligate the COUNTY to provide HAZ-MAT TEAM services outside of Sacramento County.

EXHIBIT B to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY,"
and the CITY OF GALT, hereafter referred to as "CITY"

COMPENSATION SCHEDULE

1. For the services provided by County through its contractual agreements with the Sacramento Fire Department and the Sacramento Metropolitan Fire District, CITY shall pay to COUNTY the following amounts:

   For fiscal year 2004-05 beginning July 1, 2004: $9,000

   For fiscal year 2005-06 beginning July 1, 2005: $9,500

   For fiscal year 2006-07 beginning July 1, 2006: $10,000

   For fiscal year 2007-08 beginning July 1, 2007: $10,750

   For fiscal year 2008-09 beginning July 1, 2008: $10,750 adjusted by a percentage increase as indicated by the United States City Average Consumer Price Index for Urban and Clerical Workers between March 2007 and March 2008 (rounded to the nearest tenth of 1%)

2. Payment will be provided through in two equal semi-annual payments due on September 1st and March 1st during each contract year.

3. Payment shall be made to Sacramento County Environmental Management Department and sent to the following address:

   Sacramento County Environmental Management Department
   8475 Jackson Road, Suite 230
   Sacramento, CA 95628

EXHIBIT C to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY,"
and the CITY OF GALT, hereafter referred to as "CITY"

I. INSURANCE REQUIREMENTS

1. Each party, at its sole cost and expense, shall carry insurance, or self-insure its activities in connection with this Agreement, and obtain, keep in force and maintain, insurance or equivalent program of self-insurance, for professional liability, general liability, workers compensation and business automobile liability adequate to cover its potential liabilities hereunder.

2. If requested, COUNTY shall furnish CITY with certificates evidencing coverage of the Sacramento Fire Department and Sacramento Metropolitan Fire District, hereafter referred to as "CONTRACTORS" as required below. The COUNTY Risk Manager and CITY may approve self-insurance programs in lieu of required policies of insurance if, in the opinion of the Risk Manager, the interests of the COUNTY, CITY, and general public are adequately protected. All CONTRACTOR certificates or evidences of self-insurance are to be received and approved by COUNTY and CITY before performance commences.

II. MINIMUM SCOPE OF INSURANCE.

Coverage of CONTRACTORS shall be at least as broad as:

1. GENERAL LIABILITY: Insurance Services Office's Commercial General Liability occurrence coverage form CG 0001. Including, but not limited to Premises/Operations, Products/Completed Operations, and Personal & Advertising Injury, without exclusions or limitations unless approved by County Risk Management Office.

2. AUTOMOBILE LIABILITY: Insurance Services Office's Commercial Automobile Liability coverage form CA 0001, auto coverage symbol "1" (any auto). If there are no owned or leased vehicles, symbols 8 and 9 for non-owned and hired autos shall apply.

3. WORKERS' COMPENSATION: Statutory requirements of the State of California and Employer's Liability Insurance.

4. PROFESSIONAL LIABILITY *or* Errors and Omissions Liability insurance appropriate to CONTRACTORS profession.

5. UMBRELLA or Excess Liability policies are acceptable where the need for higher liability limits is noted in the Minimum Limits of Insurance and shall provide liability coverage that are at least follow form over the underlying insurance requirements where necessary for Commercial General Liability, Automobile Liability, Employers' Liability, and any other liability coverage designated under the Minimum Scope of Insurance.

III. MINIMUM LIMITS OF INSURANCE

1. General Liability shall be made on an Occurrence basis (as opposed to Claims Made basis). Minimum limits and structure shall be:

General Aggregate:	$2,000,000
Product Comp/Op Aggregate:	$2,000,000
Personal & Adv Injury:	$1,000,000
Each Occurrence:	$1,000,000
Fire Damage:	$ 100,000

2. Automobile Liability: $1,000,000 Combined Single Limit per accident for bodily injury and property damage.

3. Workers' Compensation: Statutory.

4. Employer's Liability: $1,000,000 per accident for bodily injury or disease.

5. Professional Liability or Errors and Omissions Liability: $1,000,000 per occurrence.

Appendix 4A

Program Element Accomplishments

Construction Element Accomplishments

Ordinance and Standards

- Developed Grading and Erosion Control Questionnaire in September 1991 to identify small infill projects that may potentially cause drainage and/or sedimentation problems prior to approval of the project.
- Grading, Erosion and Sediment Control Ordinance
  - Adopted Grading, Erosion and Sediment Control Ordinance in December 1993.
  - Amended Ordinance in February 2001 to ensure that projects in North Natomas complied with federal and state endangered species requirements during the period in which the Natomas Habitat Conservation Plan was invalid.
- Amended Ordinance and adopted an Erosion and Sediment Control Fee Resolution on October 21, 2003, to enable the City to fund the erosion and sediment control inspection program for private construction projects. The ordinances were last updated in FY 04/05.
- Grading, Erosion and Sediment Control Manual (Grading Manual)
  - Completed Grading Manual in January 1994.
  - Updated standard drawings in the Grading Manual to be consistent with the proposed joint City/County construction specifications and participated in the development of the joint specifications in 1996/97.
  - Developed standard notes for Erosion and Sediment Control Plans in 1997/98.
  - Revised the standard drawings in 2005/06.
  - The standard specifications for construction projects were last updated in June 2007 which included a new section; Section 16, Water Quality Control and Standard Drawings. These standard notes and technical drawings are available on the City's website.
- Adopted the City of Sacramento Stormwater Management and Discharge Control Ordinance (Stormwater Ordinance) in February 1998.
- Partnered with the County to draft an example standard erosion and sediment control plan in 2005/06.

Inspection and Enforcement

- Revised review procedures for development plans and California Environmental Quality Act (CEQA) documents to include erosion and sediment control practices beginning in 1991. Since 1991, standard conditions have been developed, and projects are conditioned during the entitlement process to comply with City and state grading, erosion and sediment control requirements. The City also reviews Environmental Impact Reports and Mitigation Monitoring Plans to ensure that erosion, sediment and pollutant control is addressed.

- Developed standard language in accordance with the City and state grading, erosion and sediment control requirements and included in construction specifications for City projects in 1993/94. Incorporated standard construction specification into Department of Utilities contracts in 1996/97. Revised Department of Utilities language in 2002 with addition of the construction specifications.
- Began issuing grading permits, which included Erosion and Sediment Control Plans, during the improvement plan and building permit process in 1994/95.
- Acquired the part-time services of three Water Waste Inspectors in December 1995 to enforce stormwater requirements at construction sites. These inspectors began inspecting residential subdivisions during 1995/96 and commercial projects in 1996/97. In 1998, the part-time inspectors were replaced with a full-time inspector dedicated to ensuring private development construction sites comply with City erosion, sediment and pollution control requirements. In 2002, an additional full-time inspector was added to increase coverage at private construction sites.
- Sent winterization letters to construction projects requesting certification that sites were prepared for the rainy season in October 1998, 1999, 2000 and 2002; and distributed the Regional Board Rainy Season letter in October 2003, 2004, 2005 and 2006.
- Sent a citywide notice in March 2001 to developers and builders of active construction sites notifying them that failure to implement effective erosion, sediment and pollutant control measures year around would result in the issuance of stop work orders.
- Developed in December 2001, in conjunction with the County and Regional Board, a local guidance document that assists agency staff and the development community in complying with the April 2000 General Construction Permit Modifications regarding sediment impaired water bodies and non-visible pollutants in SWPPPs.
- Developed a new Street/Sidewalk Washing program and implemented it in December 2001. This program addresses the sedimentation found in newly constructed drainage systems resulting from street washing at construction sites. The program restricts regular street washing at construction sites to Friday afternoons and Saturdays after a City inspector certifies the site has been dry cleaned and is free of sediment and other materials.
- Developed a database to track inspections and generate inspection reports in 2002/03.
- Participated in developing and assisted in the funding of the California Stormwater Quality Association (CASQA) BMP Handbooks (formerly the California Stormwater Quality Task Force). The BMP Handbook revisions were completed in 2003.
- Verify that the State General Construction Permit Storm Water Pollution Prevention Plan contains 1) a vicinity map, 2) a site map, 3) a list of potential sources of stormwater pollution, 4) type and location of erosion and sediment control BMPs to be used, 5) contact information for the person responsible for implementing the SWPPP, and 6) certification statement prior to issuing a permit. This procedure was implemented in 2003.
- Prioritized construction sites as a high or moderate threat to water quality in 2003/04. High priority sites are inspected a minimum of twice per month from October 1 – April 30 and monthly thereafter. Moderate sites are inspected a minimum of monthly year round.

Training and Outreach

Outreach to development and construction communities

- Beginning in 1991, conducted various workshops for the development and construction community on the following topics: Construction Program, proposed ordinances, Grading, Erosion and Sediment Control Manual (Grading Manual), and recommended control measures and state requirements. The City of Sacramento (City) conducted four workshops in October 1999 and participated in various workshops sponsored by International Conference of Building Officials (ICBO) during 1999/00. The City's workshops covered City and state erosion, sediment and pollution control requirements. Two workshops were targeted for municipal inspectors, and two were held for the development community. The ICBO workshops covered the State General Construction Permit requirements and effective and non-effective best management practices (BMPs).
- Beginning in 1994, developed various outreach materials, including a Construction Fact Sheet and brochures for six different construction related activities (Concrete Applications, Earth Moving Activities, Heavy Equipment Operation, Landscaping and Pool Maintenance, Painting and Solvents, and Roadwork and Paving). The Concrete and Paint brochures were updated during the Second Permit term and were translated into Spanish in 2005.
- Partnered with the County to create a new pamphlet entitled "Construction on Small Building Sites" in April 2004.
- Participated in the Permittee Inspection Coordination Committee (PICC) formed by the County of Sacramento from May 2000 through 2004 to discuss standards enforcement procedures, and new product and technology. The group was composed of program and inspection staff from the Sacramento Area Stormwater Permittees (Permittees), County Regional Sanitation District, City of Stockton, and California Regional Water Quality Control Board, Central Valley Region (Regional Water Board). The goal of the work group was to share information and provide a consistent message to the development community. The work group was disbanded in June 2004. (this is not a training or outreach activities)
- Partnered with the County of Sacramento (County) and Regional Water Board to develop a Stormwater Pollution Prevention Plan (SWPPP) Preparation Course. Participated in or co-sponsored 15 various training courses with the County, Permittees or Building Industry Association (BIA), and the Regional Water Board from October 2000 through June 2002. Co-sponsored workshops with the Permittees entitled, "Preparing and Implementing SWPPPs for Construction Activities" on August 12, 2002, and March 31 and June 24, 2004 and "Simple Tools for NPDES Compliance" on September 18 and October 3, 2002.
- Permittees and Regional Water Board sponsored and conducted the following Pre-wet Season forums for the development and construction community: September 1 and 11, 2003, September 8 and 14, 2004, September 19 and 20, 2005 and September 25 and October 02, 2007.
- Partnered with the Permittees to conduct an informational meeting with consultants conducting training on Sacramento stormwater requirements on December 11, 2002, and erosion and sediment control vendor training on September 25, 2003.
- Permittees in partnership with Thunder Mountain Enterprises, Inc. sponsored and conducted a couple of training sessions for the development and construction community on topics related to NPDES program, SWPPP preparation and proper implementation, local and state requirements, and Low Impact Development, among other things.

Training to municipal staff

- Conducted regular training/coordination meetings and tailgate sessions with City plan checking and inspection staff. Specific tailgate sessions were held with developers, project engineers, inspectors, consultants, and contractors for development projects in the North Natomas area in the fall of 1998.
- Conducted annual training from 2003/04 through 2007/08 for municipal staff whose jobs are engaged in construction activities. Staff targeted included various departments such as the Department of General Services (Facility Design & Inspection), Parks and Recreation (landscape architects & inspection), Planning (Long Range, Current, Environmental) Transportation (project managers and inspection), Utilities (development review staff, project managers, inspection) and Development Services (Matrix staff).

Effectiveness Evaluation

- Completed the Construction Site Inlet Protection Special Study in 1995/96, which evaluated the effectiveness of four inlet protection BMPs.
- Completed work plan for evaluation of the Construction Element including the development of the plan review and field audit forms in 1996/97. Began plan review and field audit by stormwater staff in 1997/98. Conducted an audit of the Construction Element in 1999/00. This audit was performed by a consultant and included evaluation of the City's standards, Grading Manual, and plan check and inspection processes and quality. The results of this audit will be used to identify and prioritize areas needing improvement in the Construction Program.

Illicit Discharge Element Accomplishments

Inspection and Enforcement

- Adopted Stormwater Ordinance in February 1998 and updated the Ordinance in 2004.
- Conducted an Illicit Connection Field Screening Program between 1995 and 1998. Demonstrated that illicit connections were not a significant problem. Only two illicit connections were found and subsequently connected to the sanitary sewer.
- Developed procedures to respond to reports of illicit discharges and to contain, clean and abate the discharges.
- Developed enforcement response procedures
- Began using Water Quality Inspectors in 2007 to provide enforcement for parties responsible for illicit discharges.
- Developed a database for tracking of illicit discharge complaints and enforcement actions.

Waste Disposal Alternatives

- Initiated an ongoing program for curbside collection of used motor oil by the Solid Waste Division in 1995.
- Continued to conduct quarterly household hazardous waste collection events through the Solid Waste Division. In 1999, a new solid waste transfer station provided facilities that accept daily deposits of small amounts of household-generated hazardous wastes.

Spill Response and Source Investigation

- Provided ongoing spill response notification procedures and training for the Department of Utilities 24-hour City Operator.
- Began ongoing 24-hour availability of City Field Services and Fire Department Hazardous Materials staff in 1992 for response to prohibited non-stormwater discharges in the City for documentation, investigation, reporting, and clean up.
- Implemented an ongoing phone line in 1992, for public reporting of incidents of prohibited non-stormwater discharges.
- Developed a Stormwater Program website in 1998, which provides pollution prevention information and on-line reporting of illegal discharges.

Training and Outreach

- As a deterrent to illegal dumping, approximately 95% of all drain inlets have been labeled with the message “No Dumping Flows to River”.
- Produced various public outreach materials for use by Field Services and Program staff to distribute in areas that have experienced extreme or repeated dumping incidents or other water quality problems.
- Provided ongoing training for drainage maintenance and other municipal staff to identify and help investigate illicit connections or evidence of illegal dumping.
- Implemented Charity Car Wash program in FY09.
- Implemented multi-cultural outreach program to address Russian, Hmong, and Spanish populations.

Industrial Element Accomplishments

Significant Industries Control Program

- Developed a customized industrial database in 1997, which contains all business licenses filed in the City, facilities under the State Industrial General Permit for Stormwater Discharges Associated with Industrial Activities (State Industrial General Permit), and those industries identified in the 1991 industrial identification work.
- Included language in the City development review process requiring the owner(s) of a planned industrial development to submit a determination of the need for coverage under the State Industrial General Permit to the Department of Utilities for approval.
- Developed a rating system in 1996 to prioritize industries with regard to specific activities and the probability or significance of pollutants and non-stormwater discharges.
- Developed and implemented the Clean Water Business Partner (CWBP) Program, a nonstructural control program, for the mobile carpet cleaning industry in 1997. Added landscape contractors in 2000.
- The Permittees developed a list of priority commercial businesses and industry categories subject to either routine inspections or targeted outreach and definitions for each. Environmental Management Department (EMD) refined the definitions of the priority industries based on field inspection observations.

Inspection and Enforcement

- Adopted the Stormwater Ordinance in 1998. Ordinance was amended in 2004 to provide the County of Sacramento's Environmental Management Department (EMD) with legal authority to conduct inspections and enforcement for targeted industries on behalf of the City. Said amendment includes an agreement (MOU) that was executed and approved in December 09, 2003 between the two jurisdictions.
- Participated in the Sacramento Area Pollution Prevention Committee, formed in 1996, and the Environmental Task Force, formed in 1999, which provide opportunities for Industrial Element staff to network with other pollution prevention agencies.
- Initiated coordinated inspections for food service facilities, metal recyclers, and businesses with sewer pretreatment permits in 1999.
- Developed EMD's Commercial and Industrial Stormwater Compliance Program (CISCP) to establish routine stormwater inspections of targeted industries, to be conducted in conjunction with other regulatory inspections. The successful CISCP program is now being referred to by regulators and others in the State as a model for those developing similar programs. EMD is authorized to conduct the CISCP on behalf of the Permittees through a Memorandum of Understanding (MOU) executed by each Permittee in 2003. Local stormwater ordinances were revised by the Permittees in 2004 to provide EMD with billing and enforcement authority county-wide.
- By June 30, 2007 completed the first cycle of stormwater compliance inspections by EMD for the following facilities: auto repair and body shops, auto dealers, gas stations, restaurants, nurseries, kennels, equipment rental businesses, and facilities covered under the General Industrial Permit.

- Developed and implemented the Complaint-based Storm Water Compliance Program (CBSCP) to address non-stormwater discharges by industries and commercial businesses that are not cover under the CISCP program. Conducted inspections and enforcement including: Issued verbal warnings, Notices of Violations, and Administrative Penalties.

Training and Outreach

- Conducted a compliance assistance workshop in 1996 on the State Industrial General Permit.
- Provided annual education and training for City Field Services staff to help them identify and report stormwater pollution problems observed in the field to Industrial Element staff.
- Produced educational outreach materials in 1995 for commercial and do-it-yourself painters, food service facilities, pool maintenance companies, concrete application, heavy equipment operation, landscaping, road work and paving, and dry cleaning businesses.
- Sent outreach materials to priority industries twice during the 2003-2007 Permit term.

Municipal Operations Element Accomplishments

Spill Response

- Revised SSO response plan in March 2007 to include current regulatory requirements.

Municipal Capital Improvement Projects

- Provided technical assistance for City construction projects.
- Incorporated regional water quality control measures in North Natomas and Jacinto Creek detention basins.
- Provided water quality features in the Wood Lake drainage system maintenance and improvement project.
- Trained City construction inspectors on proper BMP implementation standards to be used on City construction site.

Municipal Facilities

- Participated in the review of design plans for proposed municipal facilities.
- Regularly coordinate with and provide guidance to project managers and inspection staff for construction of municipal facilities.
- Identified and minimized non-stormwater discharges from equipment and vehicle washing.
- Audited all City vehicle maintenance facilities, material storage facilities and corporation yards in 2004 to determine which facilities should prepare and implement pollution prevention plans.
- Developed pollution prevention plans for the 28th Street Landfill (closed) in 2007, 24th Street Corporation Yard in 2002, North Area Corporation Yard in 2007, and the Meadowview City Service Complex in 2002.
- Annually maintain City owned and operated parking facilities.

Municipal Activities

- Developed a City wide Integrated Pest Management (IPM) Policy in 2006.
- Conducted monthly street sweeping of 3,010 curb miles.
- Evaluated Street Maintenance Practices in 2007, and developed written procedures for BMP implementation.
- Implemented a voluntary program for containerization of green waste in 2004.
- Annually clean sumps and removed sediment from drainage channels.
- Annually clean storm drainage collection pipes and appurtenances.
- Regularly operate and maintain settling/treatment facilities at regional detention basins.
- Conduct fire fighting hose manipulation training at a facility equipped with BMPs.

Training and Outreach

- Annually attend various tailgate meetings and conducted specific training sessions to provide Program information and to increase awareness of water quality issues associated with municipal activities.

- Developed and conduct an IPM training program beginning in 2007.
- Conducted inspector training.

New Development Element Accomplishments

Ordinance and Design Standards

- Adopted the Stormwater Ordinance in February 1998.

Stormwater Quality Design Manual

- Completed Volume 2 (Hydrology Standards) of the City/County Drainage Manuals in December 1996, which provides the accepted methods for estimating runoff peak flows and volumes for design of drainage facilities and determining the optimum volume of storage for water quality detention basins.
- In 1996/97, conducted the Volume 5 Work Group, comprised of four private engineering firms that reviewed and critiqued the design criteria and control measures in the Draft Volume 5 (Standards for Design of New Development On-site Stormwater Quality Control Measures) of the City/County Drainage Manuals, January 1995.
- Completed Volume 4 (Manual of Standards for Design of Joint Use Stormwater Detention Facilities) of the City/County Drainage Manuals in 1997/98. The manual provides standards for design, operation and maintenance of joint-use park/detention facilities.
- Completed North Natomas Drainage Design and Procedures Manual in 1997/98. The manual includes criteria for the control of urban runoff pollutants from new developments on a regional basis. This manual requires stormwater quality control facilities for low-intensity storms and initial flows from larger storms (i.e., first flush) as well as natural processes for non-storm flows, irrigation runoff and dry weather conditions. The regional stormwater criteria from this manual were incorporated into the 2007 Stormwater Quality Design Manual for Sacramento and South Placer Regions.
- Participated in workgroup to incorporate stormwater requirements and control measures into existing ordinances and guidance manuals for parking lot tree shade and multifamily housing in 1998/99.
- Completed the Guidance Manual for On-site Stormwater Quality Control Measures in January 2000. This manual had previously been known and utilized as Volume 5 (Standards for Design of New Development On-site Stormwater Quality Control Measures) of the City/County Drainage Manuals during its draft stages.
- Completed the Stormwater Quality Design Manual for Sacramento and South Placer Regions in May 2007, which is the current manual. The manual includes the stormwater quality requirements for new developments and significant redevelopments, numeric sizing criteria and design and maintenance criteria for source controls, runoff reduction measures and treatment controls.

Development Standards Plan

- Prepared the Development Standards Plan (DSP) that was submitted to the Regional Board on December 1, 2003, and approved by the Regional Board in May 2005. The DSP included an overview of the development review process, existing development standards including a comparison to the stormwater Permit requirements, proposed amendments to the development standards, and an evaluation of the numeric sizing criteria for treatment controls. The DSP also included a review of existing planning procedures and codes and policies to determine if water quality protection principles listed in the Stormwater Permit were included.
- The development standards were amended in May 2006.

Development Standard Implementation (Regional and On-site Stormwater Controls)

Environmental Review Procedure

- Began review of CEQA documents to ensure new developments address water quality mitigation measures for stormwater runoff in 1991/92.
- Revised the Initial Study Checklist to consider potential stormwater quality impacts in June 2003.

Development Projects Review

- Began conditioning projects during the entitlement process to comply with post-construction stormwater requirements in 1993.
- Developed planning principles requiring the North Natomas Drainage Master Plan to formulate flood control and water quality alternatives for development of 7,000+ acres in 1992. Using the water quality design criteria developed in 1997/98, drainage master plans were developed and basins were designed. The regional facilities in North Natomas include Basin Nos. 1, 2, 3, 4, 5, 6a, 6b, 7a, 7b, 8a, and 8c. The types of water quality features utilized in the basins are combination wet/dry water quality basins, dry extended detention basins, low flow channels, and micropools. Maintenance plans have been prepared for several of these basins.
- Began incorporating regional water quality detention basins into the 500+ acre Jacinto Creek Planning Area in 1993/94. Regional water quality ponds have been incorporated into Laguna Vega North and South, Laguna Vista, and Sheldon Farms.

- **Stormwater Treatment Device Maintenance**
- Completed and began utilizing a "Stormwater Treatment Device Access and Maintenance Agreement" in 1995/96 to ensure that property owners commit to long-term maintenance for on-site structural control measures.
- As of May 2006, maintenance agreements are required for all treatment control measures.
- Sent letters annually requesting inspection and maintenance records for proprietary devices installed on private property from June 2001 through 2008 to ensure that devices are being maintained.
- Trained and tasked student interns and started field visit and inspections of the post-construction site treatment control measures.
- Incorporated various on-site stormwater treatment control measures into the drainage systems for private development projects since 1995. These control measures include vegetated swales, Fossil Filter catch basin insert, CDS Filters, Jensen/Tiechert Interceptors, Jensen Storm Vault, Stormceptor, and Vortech. These devices have been installed at various development projects, including retail centers, office parks, equipment rental facilities, and manufacturing facilities.

Technical Review and Assistance

- Provided technical support to Department of Transportation on stormwater quality design using vegetative swales and stormwater planters for the Dixieanne Green Street project in 2008.

- Provided information and review of the draft 2030 General Plan and MEIR in 2008. 2030 General Plan was adopted March 3, 2009 and incorporated water quality and watershed protection principals into City wide policy.
- Working with other Permittees and completed HMP pilot study for Elder Creek watershed in south Sacramento County in 08/09.
- Completed HMP work plan in 2009.

Training and Outreach

- Completed renderings of on-site control measures (Vegetated Swale, Infiltration Trench and Interceptor) in 1995/96. These renderings were completed to demonstrate how stormwater control measures could be incorporated into actual development projects. They were used in training City staff and the development community.

Outreach to development and construction community

- Conducted outreach to the development community on post construction stormwater quality requirements in 1996/97 and again in 1998/99. The presentations included information on City policy, standard conditions, recommended source control and treatment control measures, and reference materials. The 1996/97 audiences included the Consulting Engineers and Land Surveyors of California (CELSOC) and American Society of Landscape Architects (ASLA). The 1998/99 audiences included CELSOC; ASLA; American Society of Civil Engineers (ASCE); Building Industry Association (BIA); and private architectural, planning and engineering consulting firms.
- Prepared and distributed newsletter in 1998/99 to explain the need to incorporate stormwater quality control measures in the development planning process.
- Co-sponsored a Low Impact Development (LID) Workshop – Better Site Design on May 19, 2004 with the Permittees.
- Conducted outreach to the development community on the revised development standards and new regional Stormwater Design Manual in 2006/07. Outreach included creation and distribution of Project Update Fact Sheets, articles and notices through the professional organizations such as BIA, CELSOC, AIA, APA and ASLA, and presentations. A presentation was given to BIA in February 2007 and two public workshops were held in March 2007. Staff also presented the information to the City's Development Oversight Committee in April 2006 and June 2007.
- Conducted outreach to development communities through the NPDES compliance and SWPPP training sponsored by Thunder Mountain Enterprises, Inc. on September 27, 2007 and January 16, 2008 at two locations (Folsom, Sacramento). City presented low impact development and the new requirements in the NPDES permit.

Training to municipal staff

- Conducted training/coordination meetings with City planners, plan checking staff and inspectors from the Planning, Public Works, Building, and Utilities departments beginning in 1996.
- Meetings introduced the new on-site guidance manual and post-construction requirements to the Planning Department Environmental and Development Services staff in May 2000 and Public Works Department Architectural, Design and Inspection Sections in June 2000.

- Conducted annual training from December 2004 through 2007/08 for municipal staff whose jobs are engaged in development planning. Staff targeted included various departments such as the Department of General Services (Facility Design), Parks and Recreation (landscape architects), Planning (Long Range, Current, Environmental) Transportation (project managers), Utilities (development review staff) and Development Services (Matrix staff).
- Conducted internal workshop for Program Staff and Development Review staff from all Permittees on Hydromodification Management on January 28, 2009 and provided preliminary information of HMP pilot study.

Conference Presentations

- Conducted a presentation of the City's Development Standards and a field tour of the North Natomas Basins for the "California Nonpoint Source Conference, Demonstrating Nonpoint Source Solutions" on October 25, 2001.
- Participated in the Water Board's "Conducting Audits of Municipal Storm Water Programs" workshop by presenting information on the City's new development stormwater quality requirements and review process in March 2004.

Special Studies

- Conducted an Oil/Water Separator Study at the Northside Subdivision. The study was planned in 1993, and monitoring began in 1994/95 rainy season.
- Conducted stormwater settling tests during the 1993/94 and 1994/95 wet season to determine the settling rates of solids, metals and other parameters associated with Sacramento urban runoff.
- Completed the NDMP Stormwater Control Measure Study Work Plan in 1995/96, which included a literature review of effectiveness data on all control measures included in the draft January 1995 Volume 5 of the City/County Drainage Manual, and suggested BMP studies to be conducted in the Sacramento area.
- Conducted NDMP Inlet/In-line Control Measure Study from 1996-1999. Four storms were monitored for a Tiechert Stormwater Interceptor and a Fossil Filter catch basin insert in 1997/98, and five storm events were monitored for the Stormwater Interceptor in 1998/99. The results were summarized in the Inlet/In-line Control Measure Study Report 1998-99, dated October 1999.
- Conducted a Detention Basin Study (Brown Road Detention Basin) to evaluate the performance of dry extended stormwater detention basins in removing urban runoff pollutants. The study collected samples from 18 storm events from 1997 through 2001. The study concluded that the basin is substantially effective in reducing concentrations of many important stormwater pollutants in the solid/particulate form, but is less effective at reducing dissolved constituents and bacteria. Total suspended solids and total copper, lead and zinc showed statistically significant reduction between the inlet and outlet of the basin. The full report is included in the 2001/2002 Annual Monitoring Report (December 1, 2002).
- Conducted NDMP Control Measure Literature Review Update in 1997/98. The update included gathering information on vegetated control measure studies, new information from the 1996 Literature Review's "Ongoing Studies List," and recommended vegetation for vegetated swales and filter strips.

- Conducted a Landscape Control Measure Study (Vegetated Swale), which was initiated in 1997. Two storm events were monitored at the Sacramento Municipal Utility District (SMUD) parking lot facility in 1998/99, and a summary report was completed entitled NDMP Vegetated Landscape Control Measure Study Report 1998/99 (dated October 1999). Effluent sampling was difficult at the SMUD facility because the vegetated swale system effectively reduced run-off through infiltration. A new site was selected at an office building on Expo Parkway. Eleven storm events were monitored from late 1999 through May 2002. The final report is included in the 2001/2002 Annual Monitoring Report (December 1, 2002).
- Completed the Investigation of Structural Control Measures for New Development Final Report in November 1999. This study obtained and evaluated the performance data of 14 new development proprietary control devices and four public domain measures. The objective of this study was to identify both control measures considered acceptable for installation in the Sacramento area and information needs. An update of the initial study, including the original 14 manufacturers and 17 new manufacturers, was initiated in 2001. A draft report was prepared, including a peer review of the report by an independent consultant. Updated procedures and approved several devices in 2003 and 2005.
- Allowed the installation of several proprietary devices in 1999/00 that needed additional performance data and required the developer to conduct monitoring studies.
- Began dry weather sampling of North Natomas Basin Nos. 4, 5, 6, and 7a in September 1999. Dry weather grab samples were collected in September 1999; July, August, September and October 2000; April, June and August 2001; and March and June 2002. Wet weather grab samples were collected at Basin 7a on January 10 and 25, February 17, March 4, and April 6, 2001; and March 6, 9 and 22, 2002.
- Completed the Wet Water Quality Detention Basin Effectiveness Study Work Plan in September 2003.
- Completed the Erosion Potential Study in December 2004.

Public Education and Outreach Element Accomplishments

Outreach to General Public and Target Sectors

- Initiated Volunteer Storm Drain Stenciling program in 1993. Approximately 1,000 storm drain inlets are stenciled each year with a "No Dumping – Flows to River" message in semi-permanent (12-18 months) water-based spray paint.
- Conducted biannual public opinions since 1994 to determine the effectiveness of outreach activities.
- Attended public events since 1993. Provided an educational booth at local community events for distribution of materials and an interactive demonstration on stormwater pollution prevention.
- Developed and implemented Community Action Grant Program, which has been ongoing since 1996. Four to six grants each year have been awarded to local schools, agencies, associations, or clubs for promoting the protection of local waterways through stormwater pollution prevention.
- Conducted Pesticide Use Public Opinion Survey in 1997, providing baseline for pesticide toxicity control outreach evaluation.
- Provided permanent stormwater pollution prevention exhibits for the Sacramento and Folsom Zoos in 1997.
- Initiated partnership with the Sacramento Zoo in 1999, which included water quality curriculum in the Zoo's classroom outreach and Zoomobile programs.
- Installed permanent stormwater playground at the Sacramento Zoo in 1999 and added to the playground in 2003.
- Developed Stormwater website in 1998.
- Conducted multimedia outreach campaign using recognizable mascot "Sammy Salmon" to deliver water pollution prevention key messages since 1998.
- Provided multiethnic outreach through electronic and print media since 1998.
- Developed and implemented the CWBP Program for two industries, carpet cleaners and landscapers, since 1998. Added mobile pressure washers to CWBP in 2003.
- Created and placed electronic stormwater model on display in various public buildings throughout the year since 1997.
- Developed Water Wise Pest Control program in 2000 to decrease pesticide toxicity in local waterways. The program is a partnership with the University of California (UC) IPM program and UC Extension Master Gardener Program and is funded through a grant from CALFED.
- Joined state-wide IPM program, 'Our Water, Our World' in 2005.
- Awarded an U.S. Environmental Protection Agency (EPA) grant in 2001.
- Partnered with the California Integrated Waste Management Board and other City departments on a public outreach program to reduce stormwater and greenwaste pollution and increase water conservation in North Natomas.

Outreach to Schools

- Assisted in development and implementation of stormwater curriculum (Splash Program) based on math and science for middle school and high school children to foster environmental awareness since 1999.
- Developed and implemented Stormwater Classroom Presentations to elementary school students since 1999. Presentations introduced the water cycle, aquatic food chain, and concept of environmental stewardship. Expanded program from 600 students in 1999 to over 6,000 students by 2003.
- Worked with the Sacramento Theatre Company to produce regional water conservation/ water quality musical production performed at public festivals and 75 schools during the spring of 2003.

Outreach to Public Officials and Municipal Operations

- Received City Council recognition in the form of proclamations presented to businesses and agencies that have done an outstanding job promoting water quality protection since 1998.
- Actively participated annually in National Pollution Prevention Week.

Outreach Involving Statewide Regional Activities

- Actively participated in the California Stormwater Quality Association Public Information and Public Participation committee.
- Was instrumental in developing the Central Valley Stormwater Public Outreach Group in 1999-2000, a professional network focused on stormwater issues unique to this area.
- Provided City staff who served as co-chair for the Public Outreach Committee of the California Regional Environmental Education Community Network, Capital Region from 1999-2000.
- Represented the California Stormwater Quality Association Public Information and Public Participation Committee at the EPA Consumer Labeling Initiative Committee's "Read the Label First" campaign conference call meetings in 2000.
- Shared information on the development and implementation of City of Sacramento Stormwater outreach programs at meetings of the California Stormwater Quality Association, California Water Environment Association, California Interagency Education Network, Sacramento Valley Broadcasters Association, and the 1999 California YMCA Youth in Legislature Symposium, and to numerous Phase II communities in northern California.

Watershed Stewardship Element Accomplishments

- Developed the 1988 Laguna and Jacinto Creek stream restoration project, which included incorporation of wetlands in channel features and vernal pools in overbanks.
- Developed the1999 Jacinto Creek Planning Area Project, which included channel enhancements, re-establishment of vegetation, and wet detention basin water quality features.
- Developed the 1999 Royal Oaks Drain project, which provided water quality features and enhanced existing wetland.
- Completed design of Hagginwood Creek detention basin project in 2000, which includes stream restoration and incorporation of water quality features.
- Provided funding opportunities for citizen monitoring, training and school adopt-a-creek activities from 1997 to present through the City of Sacramento Stormwater Management Program's Community Action Grant Program. Several creeks clean-up, restoration and educational efforts have been sponsored to date.
- Continued development and implementation of the Splash Program for water pollution prevention, geared for grades 5-12.
- Participated in community events since 1993, including sponsorship of the Sacramento Urban Creeks Council's Creek Week.
- Serve on the Board of Trustees of the Sacramento River Watershed Program since 2008.
- Participated through the Department of Utilities in City of Sacramento planning activities. The department works with various City departments to encourage inclusion of water quality features when feasible. Projects considered include creek restoration and development of water features for flood control.
- Began Arcade Creek Watershed Management Program with numerous other City, County, state, and regional entities. Organized watershed management stakeholders group in 2001. Completed Arcade Creek feasibility study and Arcade Creek Watershed Management Plan in 2003. Received State Prop 50 grant in 2004 for additional watershed work, including construction of a wetland-filtration detention basin.

Title 13 PUBLIC SERVICES

Chapter 13.16 STORMWATER MANAGEMENT AND DISCHARGE CONTROL

13.16.010 Title.

This chapter shall be known as the Stormwater Management and Discharge Control Code. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.101)

13.16.020 Purpose and intent.

The purpose of this chapter is to protect and promote the health, safety and general welfare of the citizens of the city by controlling nonstormwater discharges to the stormwater conveyance system, by eliminating discharges to the stormwater conveyance system from- spills, dumping, or disposal of materials other than stormwater, and by reducing pollutants in urban stormwater discharges to the maximum extent practicable. This chapter is intended to assist in the protection and enhancement of the water quality of watercourses, water bodies, and wetlands in a manner pursuant to and consistent with the Federal Water Pollution Control Act (Clean Water Act, 33 U.S.C. Section 1251 et seq.), Porter-Cologne Water Quality Control Act (California Water Code Section 13000 et seq.) and National Pollutant Discharge Elimination System (NPDES) Permit No. CAS082597, as such permit is amended and/or renewed. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.102)

13.16.030 Definitions.

A. The following words, when used in this chapter, shall have the following meanings:

"Basin plan" means the water quality control plan for Basin 5A and SB, adopted by the Regional Water Quality Control Board, Central Valley Region in July 1975, and all subsequent amendments.

"Best management practices" means schedules of activities, prohibitions of practices, general good housekeeping practices, pollution prevention and education practices, maintenance procedures, and other management practices to prevent or reduce to the maximum extent practicable the discharge of pollutants directly or indirectly to waters of the United States. Best management practices also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, and drainage from raw materials storage.

"City" means the city of Sacramento.

"City manager" means the city manager of the city, or his or her authorized designee.

"Commercial and industrial facilities" means commercial and industrial facilities regulated pursuant to the Commercial/Industrial Program requirements specified in Section C.9 of NPDES Permit No. CA5082597.

“Construction general permit” means the General Permit for Stormwater Discharges Associated with Construction Activities issued and administered by the State of California in accordance with applicable provisions of the Federal Clean Water Act and the Porter-Cologne Water Quality Control Act.

“County stormwater ordinance” means the County of Sacramento’s Stormwater Management and Discharge Control Code, set forth in Chapter 15.12 of the Sacramento County Code, and all subsequent amendments.

“Development” means the construction, building or placement of any structure or portion thereof, or any excavation or grading.

“Director” means the director of the city department of utilities or his or her authorized designee.

“Employee training program” means a documented employee training program that a business may be required to implement pursuant to a stormwater pollution prevention plan for the purpose of educating its employees on methods of reducing discharge of pollutants to the stormwater conveyance system.

“Enforcement agency” means the city department of utilities or any other city department authorized to enforce compliance with this chapter. If the city council and the governing body of another public agency enter into an agreement authorizing that agency to administer and/or enforce some or all of the provisions of this chapter, “enforcement agency” also shall mean the agency designated in the agreement as the agency responsible for administering and enforcing the provisions of this chapter, as provided in the agreement.

“Enforcement official” means the director or any employee or agent of the city authorized to enforce compliance with this chapter. If the city council and the governing body of another public agency enter into an agreement authorizing that agency to administer and/or enforce some or all of the provisions of this chapter, “enforcement official” also shall mean the authorized official(s) of the agency designated in the agreement as the agency responsible for administering and enforcing the provisions of this chapter, as provided in the agreement.

“Illegal discharge” means any discharge to the stormwater conveyance system that violates this chapter, or is prohibited by federal, state, or local laws, or which degrades the quality of receiving waters in violation of any plan standard.

“Industrial general permit” means the General Permit for Stormwater Discharges Associated with Industrial Activities issued and administered by the State of California in accordance with applicable provisions of the Federal Clean Water Act and the Porter-Cologne Water Quality Control Act.

“NPDES permit” means a National Pollution Discharge Elimination System permit issued by the Regional Water Quality Control Board or the State Water Resources Control Board pursuant to Division 7, Chapter 5.5 of the California Water Code (commencing with Section 13370) to control discharges from point sources to waters of the United States.

“Noncommercial vehicle washing” means the washing and/or rinsing of passenger vehicles on private property that is not being conducted as a commercial enterprise.

“Nonstormwater discharge” means any discharge to the stormwater conveyance system that is not entirely composed of stormwater.

“Order 2002-0206” means Regional Water Quality Control Board, Central Valley Region Order No. R5-2002-0206, which constitutes NPDES Permit No. CAS082597, together with all amendments and renewals, on file in the office of the city clerk.

“Person” means any person, firm, corporation, partnership, business, public agency, or any other public or private entity.

“Plan standard” means any or all applicable requirements of the basin plan or any other water quality control standard or requirement approved by the Regional Water Quality Control Board, Central Valley Region, the State Water Resources Control Board or the federal Environmental Protection Agency that applies to any of the receiving waters.

“Pollutant” means any contaminant that can degrade the quality of the receiving waters in violation of any plan standard.

“Premises” means any building, lot, parcel, land or portion of land whether improved or unimproved.

“Receiving waters” means surface bodies of water as described in Order 2002-0206, including creeks and rivers, that serve as discharge points for the stormwater conveyance system.

“Stormwater” means surface runoff and drainage associated with storm events that is free of pollutants to the maximum extent practicable.

“Stormwater conveyance system” means those artificial and natural facilities within the city, whether publicly or privately owned, by which stormwater may be conveyed to a watercourse or waters of the United States, including any roads with drainage systems, streets, catch basins, natural and artificial channels, aqueducts, stream beds, gullies, curbs, gutters, ditches, open fields, parking lots, impervious surfaces used for parking, and natural and artificial channels or storm drains. “Stormwater conveyance system” does not include any facilities that convey stormwater to the city’s combined sewer system that collects and conveys both sanitary sewage and stormwater and surface runoff for treatment in accordance with applicable sewage treatment requirements, and that is regulated by Chapter 13.08 of this code in accordance with the provisions of a separate NPDES permit issued to the city for the combined sewer system.

“Stormwater pollution prevention plan” means a document that describes the best management practices to be implemented by the owner or operator of a business to eliminate prohibited nonstormwater discharges and/or reduce to the maximum extent practicable pollutant discharges to the stormwater conveyance system.

“Unauthorized connection” means any physical connection to the stormwater conveyance system that is not authorized by the city and the Regional Water Quality Control Board, Central Valley Region.

"Watercourse" means any natural stream, whether flowing continuously or not, that is fed from permanent or natural sources, and includes, without limitation rivers, creeks, runs, and rivulets.

B. Any term(s) defined in the Federal Clean Water Act, as amended, and/or defined in the regulations for the stormwater discharge permitting program issued by the Environmental Protection Agency, as amended, and that are not specifically defined in subsection A of this section shall, when used in this chapter, have the same meaning as set forth in such act or regulations. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.103)

13.16.040 Conflicts with other laws.

In the event of any conflict between this chapter and any federal or state law, regulation, order, or permit, the requirement that establishes the higher standard for public health or safety shall govern. Nothing in this chapter shall preclude enforcement of any other applicable law, regulation, order, or permit. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.104)

13.16.050 Discharge of nonstormwater prohibited.

Except as provided in Section 13.16.060 of this chapter, it is unlawful for any person to make or cause to be made any nonstormwater discharge. Notwithstanding the exemptions provided by subsections A and B of Section 13.16.060 of this chapter, if the Regional Water Quality Control Board or the enforcement official determines that any otherwise exempt discharge causes or significantly contributes to violations of any plan standard, or conveys significant quantities of pollutants to any receiving waters, or is a nuisance or poses a risk to public health or safety, it is unlawful for any person to make or cause to be made such discharge to the stormwater conveyance system. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.105)

13.16.060 Exceptions to discharge prohibition.

Subject to the authority granted to the Regional Water Quality Control Board and the enforcement official in Section 13.16.050 of this chapter, the following discharges to the stormwater conveyance system are exempt from the prohibition set forth in Section 13.16.050 of this chapter.

A. Any discharge or connection regulated under a NPDES permit issued to the discharger and administered by the state of California pursuant to Division 7, Chapter 5.5 of the California Water Code, provided that the discharger is in compliance with all requirements of the permit and all other applicable laws and regulations.

B. Discharges from the following activities that do not cause or contribute to the violation of any plan standard:

1. Potable water line flushing and other discharges from potable water sources;

2. Landscape irrigation and lawn watering;

3. Rising ground waters or springs;

4. Passive foundation and footing drains;

5. Water from crawl space pumps and basement pumps;

6. Air conditioning condensate;

7. Noncommercial vehicle washing;

8. Natural flows from riparian habitats and wetlands;

9. Dechlorinated swimming pool discharges that do not contain biocides or other chemicals, excluding filter backwash water;

10. Flows from fire suppression activities, including fire hydrant flows;

11. Diverted stream flows;

12. Uncontaminated ground water infiltration to separate storm sewers; and

13. Potable water used to wash sediment from streets and parking lots associated with construction sites that have been issued a street washing certification by the Department of Utilities and have implemented required best management practices.

C. Any discharge that the enforcement official, the local health officer, or the Regional Water Quality Control Board determines in writing is necessary for the protection of the public health and safety.

D. Any discharge caused by flooding or other natural disaster that could not have been reasonably foreseen or mitigated in advance by the discharger, as determined by the enforcement official. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.106)

13.16.070 Groundwater discharges.

Discharges of pumped groundwater not subject to a NPDES permit may be permitted to discharge to the stormwater conveyance system upon written approval from the city and in compliance with conditions of approval set forth by the city. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.107)

13.16.080 Discharge in violation of permit.

It is unlawful and a violation of this chapter for any person to make or cause any discharge to the stormwater conveyance system that results in or contributes to a violation of Order 2002-0206. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.108)

13.16.090 Illicit connections prohibited.

It is unlawful and a violation of this chapter for any person to establish, use, or maintain any unauthorized connection. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.109)

13.16.100 Concealment and abetting.

It is unlawful and a violation of this chapter to cause, permit, aid, abet or conceal a violation of any provision of this chapter. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.101)

13.16.110 Acts potentially resulting in violation of Federal Clean Water Act and/or Porter-Cologne Act.

Any person who violates any provision of this chapter or any provision of any permit issued pursuant to this chapter or any cease and desist order, prohibition, or effluent limitation, or who discharges waste or wastewater that contains pollutants, may also be in violation of the Federal Clean Water Act (33 U.S.C. 1251 et seq.) and/or Porter-Cologne Water Quality Control Act (California Water Code Section 13000 et seq.) and may be subject to the sanctions and remedies of those acts including civil and criminal penalties. The provisions or enforcement of this chapter shall not affect or limit in any way the applicability of those acts nor the enforcement of any sanctions, remedies or penalties under those acts. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.111)

13.16.120 Reduction of pollutants in stormwater.

Any person engaged in activities that may result in pollutants entering the stormwater conveyance system shall, to the maximum extent practicable, undertake the measures set forth below to reduce the risk of nonstormwater discharge and/or pollutant discharge.

A. Business Related Activities.

1. Stormwater Pollution Prevention Plan. The enforcement official may require any business in the city engaged in activities that may result in a nonstormwater discharge to develop and implement a stormwater pollution prevention plan, that must include an employee training program. Business activities that may require a stormwater pollution prevention plan include, but are not limited to, maintenance, storage, manufacturing, assembly, equipment operations, vehicle loading or fueling, and cleanup procedures that are carried out partially or wholly outdoors.

2. Coordination with Hazardous Materials Release Response Plans and Inventory. Any business for which a hazardous materials release response plan and inventory are required under Chapter 6.95 (commencing with Section 25500) of Division 20 of the California Health and Safety Code, shall include in that plan provisions demonstrating compliance with this chapter, and requiring the release of pollutants to be reduced to the maximum extent practicable.

3. Coordination with Hazardous Waste Generator Contingency Plan and Emergency Procedures. Any business for which a hazardous waste generator contingency plan and emergency procedures are required pursuant to California Code of Regulations, Title 22, Sections 66265.51 to 66265.56, shall include in that plan provisions demonstrating compliance with this chapter, and requiring the release of pollutants to be reduced to the maximum extent practicable.

4. Any person conducting business or industrial activities in the city shall prevent pollutants from entering the stormwater conveyance system and shall comply with all applicable federal, state and local laws, ordinances or regulations.

B. Development.

1. The enforcement official may establish and impose such controls as the enforcement official determines to be appropriate to minimize the long-term, post-construction discharge of stormwater pollutants from new development or modifications to existing development. Controls may include source control measures to prevent pollution of stormwater and/or treatment controls designed to remove pollutants from stormwater.

2. Any person conducting development in the city shall prevent pollutants from entering the stormwater conveyance system and shall comply with all applicable federal, state and local laws, ordinances or regulations, including but not limited to the City Grading, Erosion and Sediment Control Ordinance set forth in Chapter 15.88 of this code.

C. Compliance with General Permits. Any person conducting business, industrial, construction or development activities that are subject to a general stormwater permit issued by the United States Environmental Protection Agency, the State Water Resources Control Board, the Regional Water Quality Control Board, Central Valley Region or the city of Sacramento, including the construction general permit and the industrial general permit, shall comply with all requirements of such permit. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.112)

13.16.130 Compliance with best management practices.

Every person undertaking any activity or use of a premises that may cause or contribute to stormwater pollution or contamination, illegal discharges, or nonstormwater discharges shall: (1) comply with best management practices guidelines or pollution control requirements established or imposed by the enforcement official; and (2) properly operate and maintain any treatment control device or other measures utilized on the premises to prevent or reduce, to the maximum extent practicable, stormwater pollution or contamination, illegal discharges or nonstormwater discharges, as required by the enforcement official. (Ord. 2004-042 § 1 (part))

13.16.140 Containment and notification of spills.

Any person owning or occupying a premises who has knowledge of any release of pollutants or prohibited nonstormwater discharge from the premises that might enter the stormwater conveyance system, other than a release or discharge that is permitted by this

chapter, shall immediately take all reasonable action to contain and abate the release of any pollutants or prohibited nonstormwater discharge, and shall notify the enforcement agency as soon as reasonably possible of the release of any pollutants or prohibited nonstormwater discharge. (Ord. 2004-042 § 1 (part))

13.16.150 Commercial and industrial facilities—Inspection and enforcement by Sacramento County.

A. The city and Sacramento County are co-permittees under NPDES Permit No. CA5082597. The permit requires regular compliance inspections and enforcement at certain commercial and industrial facilities as defined by the permit. Sacramento County operates an inspection, investigation and enforcement program that enforces compliance with environmental and water quality requirements by commercial and industrial facilities located within the County.

B. Under Article 11, Section 8 of the California Constitution, and applicable provisions of the city and Sacramento County Charters, the city and Sacramento County may enter into agreements for Sacramento County to perform specified municipal functions within the city.

C. To provide for effective and efficient administration and enforcement of this chapter with respect to commercial and industrial facilities located on premises within the city that discharge to the stormwater conveyance system, and to ensure compliance with Order 2002-0206, the city council and the Sacramento County Board of Supervisors may enter into an agreement or agreements for Sacramento County to administer and enforce the provisions of this chapter with respect to these commercial and industrial facilities, by including these commercial and industrial facilities in Sacramento County's commercial and industrial compliance program. If the city council and the Sacramento County Board of Supervisors enter into such an agreement or agreements:

1. Sacramento County and its authorized official(s) and employee(s) shall enforce the provisions of this chapter as they apply to commercial and industrial facilities located on premises within the city that discharge to the stormwater conveyance system, in accordance with the provisions of the agreement(s); and

2. Sacramento County, and its authorized official(s) and employee(s), shall be authorized to take any action that may be taken by the "enforcement agency" and "enforcement official," respectively, with respect to these commercial and industrial facilities, in accordance with the provisions of this chapter and the agreement(s); and

3. Sacramento County may establish and collect from these commercial and industrial facilities such fees as may be necessary to cover the actual costs incurred by Sacramento County to include facilities in its commercial and industrial compliance program, provided that the fees are established and collected uniformly within and outside of the city, and in accordance with the provisions of the agreement(s) and all applicable legal requirements. (Ord. 2004-042 § 1 (part))

13.16.160 Inspection authority.

Whenever necessary to make an inspection of any building or premises to enforce any of the provisions of this chapter, or whenever an authorized enforcement official has reasonable cause to believe that there exists in any building or upon any premises any condition that constitutes a violation of this chapter, the enforcement official may enter such building or premises at all reasonable times to perform an inspection, as well as any of the other activities authorized by this section. Any request for entry shall state that the property owner or occupant has the right to refuse entry and if entry is refused, entry may be made upon issuance of a judicial order. If the owner or occupant refuses entry after this request has been made, the enforcement official is empowered to seek authorization from any court of competent jurisdiction for such entry. The enforcement official may request a judicial order authorizing and/or compelling the performance of some or all of the activities authorized by this section.

During any inspection, the enforcement official may collect samples as necessary in order to implement and enforce the provisions of this chapter. This authority shall include the right to require the installation of sampling and metering devices on private property, or to require the person owning or occupying the premises to supply samples.

During any inspection, the enforcement official may require the person owning or occupying the premises to provide any and all records relating to any potential stormwater contamination, illegal discharge, nonstormwater discharge or other violation of this chapter, for review and copying.

The enforcement official shall identify buildings or premises for inspection based upon such reasonable selection processes as the enforcement official determines to be necessary to carry out the objectives of this chapter, including but not limited to: random sampling; sampling in areas with evidence of stormwater contamination, illegal discharge, or nonstormwater discharge to the stormwater conveyance system; and similar factors. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.101)

13.16.170 Monitoring, analysis and reporting authority.

Whenever an authorized enforcement official has reasonable cause to believe that there may exist on any premises a condition that constitutes a violation of this chapter, the enforcement official may require monitoring, analysis and/or reporting of discharges from the premises to the stormwater conveyance system, by serving a written notice of such requirement(s) on the owner of the premises or on the operator of a facility or activity on the premises. The cost of complying with these requirements shall be borne by the owner of the premises or the operator of the facility or activity for which monitoring, analysis and/or reporting has been required, to the extent permitted by law. (Ord. 2004-042 § 1 (part))

13.16.180 Enforcement.

In addition to the exercise of enforcement powers authorized or provided elsewhere in this code, this chapter may be enforced by any of the means set forth in this section.

A. Abatement.

1. Any discharge or condition violating any of the provisions of this chapter is a threat to the public health, safety and welfare and constitutes a public nuisance.

2. The enforcement official may commence and carry out proceedings for the abatement of any discharge or condition violating any provision of this chapter, in accordance with the provisions of Articles V and VI of Chapter 8.04 of this code, commencing with Section 8.04.110 of this code. Such actions or decisions of the enforcement official shall be subject to appeal as provided for in Article V and Article VI of Chapter 8.04 of this code. The notice and order issued by the enforcement official under Section 8.04.110 of this code may require the owner and/or occupant of the subject premises to take any or all of the following actions:

i. Submit and implement a plan approved by the enforcement official for the correction and prevention of the discharge or condition violating any provision of this chapter;

ii. Cease and desist all activities that may cause or contribute to any discharge or condition violating any provision of this chapter;

iii. Clean up any release of pollutants causing or resulting from the violation of any provision of this chapter;

iv. Mitigate any circumstances that may cause or contribute to any discharge or condition violating any provision of this chapter; and

v. Adopt and implement best management practices and/or a stormwater pollution prevention plan approved by the enforcement official.

3. If any violation of this chapter constitutes a seasonal and recurrent nuisance, the enforcement official shall so declare in the notice and order issued pursuant to subsection 2, above. Thereafter, the owner or occupant of the subject premises shall abate such seasonal and recurrent nuisance every year without the necessity of any further notice and order. If at any time the nuisance is not abated as required herein, the enforcement official may summarily abate the condition in accordance with the provisions of Article VII of Chapter 8.04 of this code, commencing with Section 8.04.330 of this code.

4. When, in the opinion of the enforcement official, any discharge from any source to the stormwater conveyance system causes or threatens to cause a condition that presents an imminent hazard to the public health, safety, or welfare, or the environment, or a violation of a NPDES permit, the enforcement official may issue a notice requiring the owner or occupant of the premises where the discharge is occurring to immediately abate the discharge. In any case where the discharge is not immediately abated, or for any reason the owner or occupant of the subject premises does not receive the notice, or the enforcement official determines that time constraints are such that abatement must occur without providing the notice, the enforcement official may summarily abate the condition in accordance with the provisions of Article VII of Chapter 8.04 of this code, commencing with Section 8.04.330 of this code.

5. The owner of any premises in the city from which is made a discharge in violation of this chapter, and any person making or causing to be made the discharge, if different from the owner, shall be jointly and severally liable for the costs incurred by the city for any abatement, clean-up or restoration, including any related inspection and

testing costs, arising from the discharge, and the cost therefor shall be invoiced to the owner of the premises. If the invoice is not paid within sixty (60) days, the enforcement official may commence proceedings for recovery of these costs in accordance with the provisions of Article VIII of Chapter 8.04 of this code, commencing with Section 8.04.370 of this code.

B. Civil Actions.

In addition to any other remedies or penalties provided in this chapter, any violation of this chapter may be enforced by civil action brought by the city attorney. In any such action, the city may seek, as appropriate, any or all available equitable and legal remedies, including but not limited to:

1. A temporary and/or permanent injunction;

2. Assessment of the violator for the costs of any investigation, inspection, testing or monitoring related to the violation, and for the reasonable costs of preparing and bringing legal action under this subsection, including attorney fees, whether for in-house or outside counsel;

3. Costs incurred in removing, correcting, abating, cleaning up, or terminating the adverse effects resulting from the violation;

4. Compensatory damages for damage, loss or destruction to water quality, wildlife, fish and aquatic life, or public health and safety;

5. Payment or reimbursement of any governmental fines or penalties imposed on the city as a result of the violation;

6. Civil penalties imposed either on a daily basis or a per gallon basis, but not both, for any discharge of nonstormwater to the stormwater conveyance system violating any provision of this chapter. Civil penalties imposed on a daily basis shall not exceed five thousand dollars ($5,000.00) for each day or portion of a day that the discharge occurs, and civil penalties imposed on a per gallon basis shall not exceed ten dollars ($10.00) for each gallon of the discharge. The amount of civil penalties imposed shall be determined by taking into consideration some or all of the following factors: the nature, circumstances, extent, and gravity of the discharge, whether the discharge is susceptible to cleanup or abatement, the degree of toxicity of the discharge, and, with respect to the violator, the ability to pay, the effect on its ability to continue in business, any voluntary cleanup efforts undertaken, any prior history of violations, the degree of culpability, the economic benefit or savings, if any, resulting from the violation, and such other matters as justice may require.

C. Enforcement by Sacramento County. If the city council and the Sacramento County Board of Supervisors enter into an agreement for Sacramento County to administer and enforce the provisions of this chapter with respect to commercial and industrial facilities located on premises within the city that discharge to the stormwater conveyance system, pursuant to Section 13.16.150 of this chapter, any administrative or civil enforcement by Sacramento County of any provision of this Chapter with respect to such facilities shall be governed by and conducted pursuant to Chapter 15.12 of the Sacramento County Code, and the provisions of subsections A and B of this section shall not apply.

D. Criminal Violations.

1. Any violation of this article shall be punishable as a misdemeanor.

2. The enforcement official shall have and is vested with the authority to arrest or cite and release any person who violates any section of this chapter in the manner provided by the California Penal Code for the arrest or release on citation of misdemeanors or infractions as described by Chapters 5, 5(c), and 5(d) of Title 3, Part 2 of the California Penal Code, including Section 853.6 (as the same may hereafter be amended). It is the intent of the city council that the immunities prescribed in Section 836.5 of the California Penal Code be applicable to public officers or employees acting in the course and scope of employment pursuant to this chapter.

E. Administrative Penalties. In addition to any other remedy or penalty set forth in this chapter or this code, administrative penalties may be imposed pursuant to applicable provisions of Title 1 of this code against any responsible party, whether owner, lessee, sublessor, sublessee or occupant of any premises in violation of any of the provisions of this chapter. Imposition, enforcement, collection and administrative review of administrative penalties imposed shall be conducted pursuant to Title I of this code.

F. Remedies and Penalties Cumulative. The foregoing remedies and penalties are in addition to and do not supersede or limit any and all other remedies and penalties, civil or criminal, including any remedies or penalties authorized for violations of the Federal Clean Water Act or Porter-Cologne Water Quality Control Act. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.118)

13.16.190 Remedies not exclusive.

The remedies provided for in this chapter shall be cumulative and not exclusive. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.119)

13.16.200 Appeal.

A. If a decision or action of the enforcement official is not subject to an appeal procedure under any other provision of this chapter or code, any person who is affected by the enforcement official’s decision or action may appeal the decision or action to the city manager within ten (10) days following the effective date of the decision or action, by filing a written appeal with the city manager. Upon receipt of such appeal, the city manager may request a report and recommendation from the authorized enforcement official and shall set the matter for an informal hearing at the earliest practical date. Not less than seven days prior to the date of hearing, the city manager shall provide written notice of the hearing to the person appealing the decision or action of the enforcement official. At the hearing, the appellant may be represented by any person of appellant’s choice. The city manager shall hear any additional evidence presented by the appellant or the enforcement official, and may reject, affirm or modify the enforcement official’s decision. The city manager’s decision shall be the city’s final administrative determination of the matter.

B. If the city council and the Sacramento County Board of Supervisors have approved an agreement for Sacramento County to administer and enforce the provisions of this chapter with respect to commercial and industrial facilities located on premises within the city that discharge to the stormwater conveyance system, pursuant to Section 13.16.150 of this chapter, any appeal of any action taken by Sacramento County or its officers or employees with respect to such facilities shall be governed by and conducted pursuant to the Sacramento County Code, and the provisions of this section shall not apply. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.120)

13.16.210 Disclaimer of liability.

The degree of protection required by this chapter is considered reasonable for regulatory purposes and is based on scientific, engineering, and other relevant technical considerations. The standards set forth herein are minimum standards and this chapter does not imply that compliance will ensure that there will be no unauthorized discharge of pollutants into the waters of the United States. This chapter shall not create liability on the part of the city or Sacramento County, nor their respective officers and employees, for any damages that result from reliance on the code or any administrative decision lawfully made thereunder. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.121)

13.16.220 City or county authority.

Except for decisions required to be made by the City Council and/or the Sacramento County Board of Supervisors, the enforcement official is authorized to make any decision on behalf of the city or Sacramento County, as applicable, required or called for by this chapter. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.122)

13.16.230 Judicial review.

The provisions of California Code of Civil Procedure Section 1094.5 and Section 1094.6 are applicable to judicial review of city or Sacramento County decisions pursuant to this chapter. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.1231)

Title 15 BUILDINGS AND CONSTRUCTION

Chapter 15.88 GRADING, EROSION AND SEDIMENT CONTROL

Article I General Provisions and Requirements

15.88.010 Title.

This chapter shall be known as the grading, erosion, and sediment control ordinance of the city of Sacramento, and shall be referred to herein as the "grading ordinance." (Prior code § 9.31.1501)

15.88.020 Purpose.

The grading ordinance is enacted for the purpose of regulating grading on property within the city limits of the city to safeguard life, limb, health, property and the public welfare; to avoid pollution of watercourses with nutrients, sediments, or other materials generated or caused by surface water runoff; to comply with the city's national pollution discharge elimination system (NPDES) Permit No. CA0082597, provision D2, issued by the California regional water quality control board; and to ensure that the intended use of a graded site within the city limits is consistent with the city general plan, any specific plans adopted thereto and all applicable city ordinances and regulations. The grading ordinance is intended to control all aspects of grading operations within the city limits of the city. (Prior code § 9.31.1502)

15.88.030 Scope.

The grading ordinance sets forth rules and regulations to control land disturbances, landfill, soil storage, pollution, and erosion and sedimentation resulting from construction activities. The grading ordinance establishes procedures for issuance, administration and enforcement of permits for such activities. Any grading within the city limits of the city shall conform to provisions of the grading ordinance and other applicable provisions of the city code, including but not limited to, the latest edition of the city standard specifications for public works construction, Sacramento city/county drainage manual, and city manual of standards and improvement standards.

The director shall adopt a manual of standards entitled "Administrative and Technical Procedures Manual for Grading, Erosion, and Sediment Control" setting forth the administrative procedures and technical requirements necessary to implement the provisions of the grading ordinance. The director shall have the authority to change, update or revise this manual as necessary at his or her sole discretion, to implement the provisions of the grading ordinance. (Prior code § 9.31.1503)

15.88.040 Administration.

The grading ordinance shall be administered for the city by the department of utilities through the building permit process, improvement plan process or capital improvement project process, as applicable. (Ord. 2001-014 § 2: prior code § 9.31.1504)

15.88.050 Definitions.

Unless the particular provision or the context otherwise requires, wherever the following terms are used in the grading ordinance, they shall have the meaning ascribed to them in this section:

"Applicant" means any person seeking or receiving grading approval, in accordance with the terms of the grading ordinance, to perform grading after the issuance of a building permit or the approval of improvement plans, or to commence grading prior to such issuance or approval.

"Best management practices" means any program, technology, technique, process, siting criteria, operating method, measure or device which controls, prevents, removes or reduces pollution, erosion, and sediment transport, including but not limited to any best management practices required or implemented under the city's Stormwater Management and Discharge Control Code, set forth in Chapter 13.16.

"City council" means city council of the city of Sacramento.

"Civil engineer" means a professional engineer registered as a civil engineer by the state of California.

"Compaction" means the increase of density of a soil or rock fill by mechanical means.

"Cut (excavation)" means the removal of naturally occurring earth materials by manual or mechanical means, and the conditions resulting therefrom.

"Director" means director of the department of utilities of the city of Sacramento, or his or her authorized designees.

"Drainage waters" means surface waters which collect, or are accumulated, on the ground and which, by means of drainage ways or water courses, flow off the surface to larger rivers, streams, or lakes. Such waters shall include, but are not limited to, natural precipitation and irrigation waters.

“Drainage way” means a depression in the earth’s surface such as a swale, ravine, gully, slough, draw, hollow, or ditch in which surface water collects for drainage.

“Earth material” means any rock, natural soil or fill and/or any combination thereof.

“Embankment (fill)” means the deposit of soil, rock or other materials placed by artificial means and the conditions resulting therefrom.

“Encroachment permit” means a written permit issued by the department of public works authorizing certain work within a publicly maintained right-of-way.

“Engineering geologist” means a registered geologist certified as an engineering geologist by the state of California.

“Erosion” means the washing or wearing away and transportation of earth material as a result of the movement of wind, water, or ice.

“Erosion and sediment control plan (ESC plan)” consists of a set of best management practices or equivalent measures designed to control surface runoff and erosion, retain sediment on a particular site and prevent pollution of site runoff during the period beginning when any preconstruction- or construction-related grading or soil storage first occurs, until all final improvements and permanent structures are completed.

“Excavation (cut)” means the removal of naturally occurring earth materials by manual or mechanical means, and the conditions resulting therefrom.

“Existing grade” means the elevation of the ground surface at a given point prior to excavating or filling.

“Fill (embankment)” means the deposit of soil, rock or other materials placed by artificial means and the conditions resulting therefrom.

“Finish grade” means the final grade of the site after excavating or filling which conforms to the approved final grading plan. The finish grade is also the grade at the top of a paved surface.

“Geologic hazard” means any condition in naturally occurring earth materials which may endanger life, health or property.

“Geotechnical engineer” means a civil engineer registered by the state of California who is qualified in the field of soil mechanics and soil engineering and has the authority to use the title “soil engineer.”

“Grade” means the vertical location of the ground surface.

“Grading” means any land excavation or filling or combination thereof, or the removal, plowing under or burial of vegetative groundcover.

“Grading plan” means a plan prepared in accordance with this chapter showing grading and related work.

“Manual of standards” means a compilation of administrative procedures, technical standards and design specifications adopted by the city of Sacramento for controlling construction-related grading, surface runoff, erosion and sedimentation. This manual of standards shall be titled “Administrative and Technical Procedures Manual for Grading and Erosion and Sediment Control.”

“Owner” means the legal owner of the property where the grading work is to be done, as shown on the latest equalized assessment roll in the office of the county assessor.

“Parcel (lot)” means the land described as a lot or parcel in a recorded deed or shown as a lot or parcel on a subdivision map or parcel map on file in the Sacramento County recorder’s office.

“Permit” means either a building permit or a separate grading permit.

“Person” means any person, firm, corporation, or public agency whether principal, agent, employee, or otherwise.

“Post construction erosion and sediment control plan (PC plan)” means consists of a set of best management practices or equivalent measures designed to control surface runoff and erosion and to retain sediment on a particular site after all final structures and permanent improvements have been erected or installed.

“Preliminary grading plan” means a plan that shows the proposed grading work in relation to the existing site prepared and submitted with the application for a grading permit.

“Rainy season” means the period of the year during which there is a substantial risk of rainfall. For the purpose of this chapter, the rainy season is defined as from October 1st to April 30th, inclusive.

“Rough grade” means the stage at which the grade approximately conforms to the approved plan.

“Sediment” means any material transported or deposited by water, including soil debris or other foreign matter.

“Site” means any lot or parcel of land or combination of contiguous lots or parcels of land, whether held separately or joined together in common ownership or occupancy, where grading is to be performed or has been performed.

“Slope” means an inclined ground surface the inclination of which may be expressed as the ratio of horizontal distance to vertical distance.

“Soil” means all earth material of any origin that overlies bedrock and may include the decomposed zone of bedrock which can be excavated readily by mechanical equipment.

“Vegetation” means plant life or total plant cover of an area.

“Watercourse” means any natural or manmade channel in which water flows continuously or intermittently in a definite direction and course, or which is used for the holding, delay or storage of waters, or which functions at any time to convey or store stormwater runoff. (Ord. 2003-058 §§ 1—2; prior code § 9.31.1505)

15.88.060 Grading approval required.

Except for the specific exemptions listed hereinafter, no person shall do or permit to be done any grading on any site in the of the city without first obtaining approval of such grading from the director in accordance with the provisions of the grading ordinance. (Prior code § 9.31.1506)

15.88.070 Exemptions.

The following grading may be done without obtaining grading approval unless grading approval is required in mitigation monitoring agreements or other conditions of project approval. Exemption from the grading approval requirement shall not be deemed as permission to violate any other provision of this chapter.

A. Minor construction projects which meet all of the following requirements:

1. The volume of material graded is less than fifty (50) cubic yards,

2. The depth of cuts and fills is less than two feet,

3. Any drainageway is not blocked or obstructed and its stormwater carrying capacities are not modified,

4. Slopes are less than ten percent and are not left in an unstable or erodible condition;

B. Single family residential lots less than one-half acre that are not part of a larger common plan and residential infill projects less than one-half acre which also meet the requirements of subsection A of this section;

C. Excavations in connection with a swimming pool authorized by a valid building permit;

D. Grading necessary for agricultural operations unless the failure of any cut or fill created by such grading could endanger any structure intended for human or animal occupancy or any public road, or could obstruct any watercourse or drainageway;

E. Exploratory excavations of less than three hundred fifty (350) cubic yards under the supervision of a geotechnical engineer;

F. Routine cemetery excavations and fills;

G. Performance of emergency work necessary to protect life or property when an urgent necessity therefor arises. The person performing such emergency work shall notify the director promptly of the problem and work required;

H. An excavation below finished grade for basements and footings of a building authorized by a valid building permit;

I. Refuse disposal sites controlled by Title 23, Chapter 15, of the California Code of Regulations;

J. The repair and maintenance of levees for river and local drainage control performed by a governmental agency. (Prior code § 9.31.1507)

15.88.080 Grading approval.

Grading approval may be issued by the director in connection with the issuance of a building permit or the approval of improvement plans, or where grading is commenced prior to such issuance or approval, through the issuance of a separate grading permit. (Prior code § 9.31.1508)

15.88.090 Conditions of grading approval.

A. No grading shall be approved unless the project conforms with the city's general plan, any adopted specific or community plans, and applicable city ordinances, including the zoning ordinance and the subdivision ordinance.

B. Where the California Environmental Quality Act (CEQA) requires the preparation and approval of environmental documents concerning a project which will result in grading for which a grading permit is required under this chapter, no grading shall be approved until all CEQA requirements have been met, including but not limited

to mitigation measures relating to protection of threatened and endangered species under applicable federal and state endangered species laws. Where the land proposed to be graded is located within the North Natomas Community Plan Area or the South Natomas Community Plan Area, grading permits may be issued, provided that the conditions contained in Section 15.88.091 are satisfied.

C. Where a proposed grading project requires the filing of a tentative map or the intended use requires approval of a discretionary zoning permit or variance, grading may also require approval from the city planning and building department.

D. Work shall be performed in accordance with the provisions of the grading ordinance and the applicable criteria set forth in the manual of standards.

E. Grading approval shall be limited to work shown on the grading plans as approved by the director. The director may impose any condition deemed necessary to protect the health, safety, and welfare of the public, to prevent the creation of a hazard to public or private property, and/or to assure proper completion of the grading, including but not limited to the following:

1. Mitigation of adverse environmental impacts as disclosed by any environmental document findings, including but not limited to those matters specified in subsection B of this section;

2. Improvement of any existing grading to comply with the standards of the grading ordinance;

3. Requirements for fencing or other protection of grading which would otherwise be hazardous;

4. Requirements for dust, erosion, sediment and noise control, hours of operation and season of work, access roads and haul routes;

5. Requirements for safeguarding watercourses, whether natural or manmade, from excessive deposition of sediment or debris. In no case shall deposition of sediment or debris cause an exceedance of applicable water quality standards;

6. Assurance that the land area in which grading is proposed and for which habitable structures are proposed is not subject to hazards of land slippage or significant settlement or erosion and that the hazards of flooding can be eliminated or adequately reduced;

7. Requirements for safeguarding existing water wells. (Ord. 2001-021 § 1; Ord. 2001-014 § 3: prior code § 9.31.1509)

15.88.091 Requirements for development projects in North and South Natomas.

The city manager is authorized to issue grading permits within the North Natomas Community Plan Area and the South Natomas Community Plan Area only if the city manager finds that the applicant meets all the requirements of subsections A, B, C and D of this section.

A. The applicant has paid to the city (in addition to the "catch-up fee" required by Ordinance No. 2002-018) the full amount of the habitat-conservation fees that have been assessed by the city pursuant to the April 2003 Natomas Basin Habitat Conservation Plan and are then in effect (HCP Fees), including the entire amount and all elements of any increased HCP fees adopted by the Natomas Basin Conservancy ("NBC") and by the city pursuant to a validly enacted ordinance or resolution. The city anticipates receiving an adopted fee increase proposal from the NBC for consideration and adoption. The city shall not issue any grading permit until such time as the entire amount of, and all elements of, the anticipated HCP fee increase become effective or the city has otherwise secured from the applicant a written and unconditional agreement to pay the entire amount of, and all elements of, the increased HCP fees. All HCP fee increases will be included within the obligations to be covered by the agreement required under subsection D of this section.

B. If the applicant prepaid its HCP fees in an amount less than the HCP fees in effect when the grading permit is issued, the applicant has paid a catch-up fee in accordance with Ordinance No. 2002-018 and has paid an amount equal to its fair share of the amount of any HCP fee increase, on a per-acre basis, as reasonably determined by the city.

C. In lieu of the land-acquisition component of any HCP fee required to be paid under subsections A and B of this section, the applicant has transferred to the city or to the NBC fee title or a conservation easement in perpetuity for mitigation land, at the ratio of 0.5 acre of mitigation land for each acre for which the city issues a grading permit, and the applicant has paid other components of the applicable fees. If the number of acres transferred by an applicant to the city or to NBC exceeds the number of acres required to comply with the 0.5:1 mitigation formula set forth in the April 2003 Natomas Basin Habitat Conservation Plan (NBHCP), the city shall grant the applicant a credit against the land-acquisition component of any HCP fee to be paid in the future or, at the applicant's option, the city (either directly or through the NBC) shall pay the applicant, in cash, an agreed-upon amount not to exceed the fair market value of the excess acres of land transferred to the city or to NBC.

D. The applicant has executed an agreement, in a form acceptable to and approved by the city attorney, that requires the applicant and its successors in interest to do the following:

1. Comply with all provisions of the NBHCP;

2. Comply with the Incidental Take Permit and the State Incidental Take Authorization issued in conjunction with the NBHCP;

3. Pay all applicable fee increases and additions, whether adopted by the city before or within six months after issuance of the grading permit (but an applicant who has been specifically and expressly asked by the city manager or designee to pay HCP fees earlier than the date of issuance of a grading permit, and who in fact makes the requested early payment, shall not be subject to the "catch up" provisions of this clause); and

4. Release, defend, and fully indemnify the city and its officers, employees, and agents from and against all costs and damages, including attorney's fees, that may arise in connection with the city's issuance of a grading permit to the applicant, including but not limited to claims (procedural or substantive) that relate to HCP fee increases adopted by the city and arise under California's Mitigation Fee Act (title 7, division 1 of the Government Code, at chapters 6, 7, 8, and 9). (Ord. 2003-031 § 1: Ord. 2002-023 § 1; Ord. 2001-021 § 2)

15.88.100 Liability.

Neither issuance of grading approval under the provisions of the grading ordinance nor compliance with the provisions hereof or with any conditions imposed in a permit issued hereunder shall relieve any person from responsibility for damage to any person or property or impose any liability upon the city for damage to any person or property. (Prior code § 9.31.1510)

15.88.110 Scope of approval.

The issuance of grading approval shall not be construed as an approval of any action or condition constituting a violation of the provisions of the grading ordinance or of any other applicable laws, ordinances, rules or regulations. (Prior code § 9.31.1511)

15.88.120 Water obstruction.

No person shall do or permit to be done any grading which may obstruct, impede, or interfere with the natural flow of storm waters, whether such waters are unconfined upon the surface of the land or confined within land depressions, natural drainage ways, unimproved channels, watercourses, improved ditches, channels or conduits, in such manner as to cause flooding where it would not otherwise occur, aggravate any existing flooding condition or cause accelerated erosion except where said grading is in

accordance with all applicable laws including, but not limited to, the provisions of the grading ordinance. (Prior code § 9.31.1512)

15.88.130 Levee work.

No person shall excavate or remove any material from or otherwise alter any levee adjacent to any river, creek, bay, or local drainage control channel, without prior approval of the governmental agency or agencies responsible for the operation and/or maintenance of the levee. (Prior code § 9.31.1513)

15.88.140 Construction in public right-of-ways.

No person shall perform any grading work within the right-of-way of a public road or street, or within a public easement, without prior written approval of the director, and without obtaining a city encroachment permit. (Prior code § 9.31.1514)

15.88.150 Hazards.

Whenever the director determines that any grading on private property constitutes a condition which could endanger persons or property, or could adversely affect the safety, use or stability of adjacent property, or an overhead or underground utility, or any public way, watercourse or drainage channel, or could adversely affect the water quality of any water bodies or watercourses, the owner of the property upon which the condition is located, or other person or agent in possession or control of said property, upon receipt of notice in writing from the director, shall, within the period specified therein, stop all work. The director may require the submission of plans, soil or geological reports, detailed construction recommendations, drainage study or other engineering data prior to and in connection with any work or activity proposed or required to correct such condition. (Prior code § 9.31.1515)

15.88.160 Not retroactive.

The provisions of the grading ordinance shall not apply to planned or existing construction for which all previously necessary permits and approvals were obtained prior to the effective date of the ordinance codified in this chapter. (Prior code § 9.31.1516)

Article II Application for Grading Approval

15.88.170 Filing of application for grading approval—Permit.

Applications for permits shall be obtained from and filed with the department of planning and development, building inspections division. Each application shall include a plan checking fee, the preliminary or final grading plans and a statement of the intended use of the site. Only one application and permit is allowed for grading work to be done on a site. The director shall determine whether the application is complete in accordance with provisions of Article III of this chapter herein and may require additional information from the applicant before accepting the application as complete. The applicant shall be notified within ten (10) working days if the application is deemed incomplete, and of the requirements for completing the application. (Prior code § 9.32.1601)

15.88.180 Improvement plans in lieu of application for permit.

Where a subdivision improvement plan is being processed in conjunction with either an approved tentative, parcel, or final map; or a site plan is being processed in accordance with the provisions of this code, such plan shall also be considered as an application for grading approval. Such plans shall be reviewed and approved, conditionally approved or denied in accordance with the standards and requirements set forth in the grading ordinance and other applicable city specifications. If an improvement plan or site plan is approved, then a separate grading permit shall not be required. Approval of the improvement plans constitutes approval of the grading work intended. (Prior code § 9.32.1602)

15.88.190 Grading prior to issuance of building permit or approval of improvement plans.

Applicants for a permit to allow grading prior to issuance of a building permit or approval of improvement plans shall meet the following requirements:

A. Preliminary grading plan shall be submitted for review and approval by the director. This plan shall conform to the requirements of the grading ordinance and any applicable conditions placed on the project as a result of any formal discretionary permit process. The applicant shall acknowledge that any additional grading or revisions to work necessitated by conflicts discovered during the improvement plan check or subsequent construction will be corrected at the applicant’s expense.

B. Both erosion and sediment control plans in accordance with provisions of Article III of this chapter, plans and specifications, of the grading ordinance shall be submitted for review and approval by the director.

C. A winterization certification shall be submitted for review and approval by the director in accordance with Section 15.88.270 of this chapter.

D. Plan check and inspection fee deposit shall be required in the amount of the full plan check fee applicable at the time of submittal in accordance with Section 15.88.310 of this chapter.

E. No grading permit shall be issued until all applicable CEQA requirements have been met. (Prior code § 9.32.1603)

15.88.200 Referral to other public agencies.

The director may refer the application to other interested public agencies for their recommendations. (Prior code § 9.32.1604)

15.88.210 Permission of other agencies or owners.

No application for grading approval shall relieve the applicant of responsibility for securing other permits or approvals, including but not limited to those specified in Section 15.88.090, subsection B, required for work which is regulated by any other department or other public agency, or for obtaining any easements or authorization for grading on property not owned by the applicant. Proof of applicable public agency permits may be required prior to issuance of grading approval. (Ord. 2001-014 § 4: prior code § 9.32.1605)

Article III Plans and Specifications

15.88.220 Application—Plans.

Five complete sets of plans, as determined by the director, including but not limited to, profiles, cross-sections, topographic maps, erosion and sediment control plans, and accompanying specifications shall be submitted to the director with each application for grading approval or when otherwise required by the director for enforcement of any provision of this chapter. At the time of application, the applicant may provide preliminary grading plans. Prior to the issuance of grading approval, the applicant must furnish final grading plans and all erosion and sediment control plans. Preliminary grading plans with appropriate changes and additions thereto may be accepted as final grading plans. When the final grading plans and other required documents have been approved, grading approval will be issued by the director. The work shall be done in strict compliance with the approved plans and specifications which shall not be changed

or altered except in accordance with the provisions of this chapter. (Prior code § 9.33.1701)

15.88.230 Preliminary grading plans.

Preliminary grading plans provide for review and determination of grading requirements prior to approval of final plans and issuance of grading approval. Precise design at this stage is not required. The plans shall be clearly and legibly drawn and entitled “preliminary grading plan,” and shall contain a statement of the purpose of the proposed grading, and shall include all of the information required in the Manual of Standards, Chapter 2, Section 2. (Prior code § 9.33.1702)

15.88.240 Final grading plans.

Final grading plans and specifications shall be prepared and signed by a registered civil engineer, except as otherwise provided herein. In addition to all requirements for preliminary grading plans, the final plans shall include the information required in the Manual of Standards, Chapter 2, Section 2. The director may waive the requirement that all plans and specifications be prepared and signed by a registered civil engineer if the grading would not endanger the public health, safety, or welfare as determined by the director and would not involve or require any of the following:

A. Cuts and fills with a combined total of three hundred fifty (350) cubic yards or more;

B. An access road serving five or more existing or proposed residences;

C. A cut or fill that is located so as to cause unduly increased pressure or reduce support upon adjacent structure of property;

D. The construction of any drainage or sediment control structures, culverts, or facilities or alteration of any existing drainage course;

E. The creation or aggravation of an unstable slope condition. (Prior code § 9.33.1703)

15.88.250 Erosion and sediment control plans (ESC plan).

An ESC plan shall be prepared for all projects to control surface runoff and erosion and to retain sediment on a particular site and prevent pollution of site runoff during the

period beginning when any preconstruction- or construction-related grading or soil storage first occurs, until all final improvements and permanent structures are complete. The ESC plan shall be prepared and submitted concurrently with the final grading plan. The ESC plan may be incorporated on the same plan sheet as the final grading plan unless it makes the sheet cluttered, or it may be submitted on a clean separate sheet. The separate sheet shall be drawn clearly and legibly and entitled “erosion and sediment control plan,” shall contain a statement of the purpose of the proposed best management practices to be used, and shall include all of the information required and contained in the Manual of Standards, Chapter 2, Section 3. (Ord. 2003-058 § 3; prior code § 9.33.1704)

15.88.260 Postconstruction erosion and sediment control plan (PC plan).

The PC plan shall be prepared for all projects to control surface runoff and erosion and retain sediment on a particular site after all planned final improvements and/or structures have been installed or erected. The PC plan shall be prepared and submitted concurrently with the final grading plan. The PC plan shall be drawn clearly and legibly, and entitled “postconstruction erosion and sediment control plan.” The PC plan shall contain a statement of the purpose of the proposed best management practices to be used to secure the project after completion, and shall include all of the information required and contained in the Manual of Standards, Chapter 2, Section 4. (Prior code § 9.33.1705)

15.88.270 Winterization certification.

A winterization certification shall be submitted no later than September 15th for all projects where any construction will occur between October 1st and April 30th. Construction that will occur solely in the summer months, between May 1st and September 30th will not be required to submit a winterization certification. The winterization certification shall consist of a written statement or descriptive plan sheet from the owner certifying that the project under construction is prepared for an event which will stop construction, such as rain or snow, that all ESC plan best management practices are in place and operating correctly, that housekeeping practices are maintained and that the site can be left or abandoned safely for an extended period of time during the rainy season without causing any erosion and sediment control problems. If a winterization certification is required and has not been submitted and approved prior to September 16th, the grading approval will be suspended until a winterization certification is submitted and approval obtained. Refer to the Manual of Standards, Chapter 4, Section 5, for additional information regarding winterization certification. (Prior code § 9.33.1706)

15.88.280 Modification of approved plans.

Any modifications of an approved final plan shall be submitted in writing to the director, who shall approve or deny such modification in his or her sole discretion. All necessary soils and geological information and design details shall accompany any proposed modification. Any modification shall be compatible with all subdivision map or land use requirements. (Prior code § 9.33.1707)

15.88.290 General design standards.

Any activities performed under the authority of the grading ordinance, including but not limited to grading, excavation, soil storage, soil transportation, erosion and sediment control measures, shall conform to the general design standards set forth in the Manual of Standards, Chapter 3. (Prior code § 9.33.1708)

Article IV Permit Requirements

15.88.300 General.

The director shall issue grading approval if final grading plans satisfy the provisions of the grading ordinance and the Manual of Standards. The director shall identify the provision, requirement, or condition which has not yet been met or performed by the applicant in the event the issuance of grading approval is denied. (Prior code § 9.34.1801)

15.88.310 Fees.

A. The applicant shall pay a fee to cover the city's costs of reviewing plans, specifications, reports and other materials related to grading approval and performing all engineering services, field investigations, inspections, routine laboratory tests of materials and compaction or other work or services in connection with the issuance of grading approval or to determine or enforce compliance with any requirement or provision set forth in this chapter or in Chapter 13.16.

B. The fee or fees required by subsection A shall be established from time to time by resolution of the city council and shall be paid to the director either before grading approval is issued or before the issuance of a building permit, or both in accordance with the fee schedule adopted by resolution of the city council. The director may charge additional fees in any case where the city incurs costs that are not covered by the initial fee payment(s).

C. If grading work is done in violation of the grading ordinance or does not comply with the terms and conditions of a grading approval issued for such grading, the violator is required to pay the city for all costs actually incurred by the city to inspect or

investigate such violation and to perform inspection and plan checking of work required to correct the violation. (Ord. 2003-058 § 4; prior code § 9.34.1802)

15.88.320 Progress report.

Applicant shall submit periodic progress reports on specified calendar dates and at commencement and completion of specified grading and erosion and sediment control operations. The dates upon which such reports are required and their content shall be as required by the director in the grading approval. (Prior code § 9.34.1803)

15.88.330 Submit record construction drawings.

The applicant shall submit to the director record construction drawings of the final grading plan and erosion and sediment control plans following completion of grading operations. (Prior code § 9.34.1804)

15.88.340 Performance of work—Inspection.

The director may inspect any work done pursuant to the grading ordinance at any time during the course of construction. No person shall be deemed to have complied with the grading ordinance until a final inspection of the work has been made by the director. As a condition of any grading approval, the applicant shall provide the city a right-of-entry and reasonable access, in accordance with Section 15.88.470 of this chapter, to the site during the performance of all work and for a minimum period of one year after acceptance by the director of all improvements pursuant to the grading ordinance. (Prior code § 9.34.1805)

15.88.350 Location of property lines.

Prior to any grading work or related activities, the owner must flag all property corners of the parcel of land to be graded. If the property corners are unknown, or whenever the location of a property line or easement or the title thereto is disputed during the application process or during a grading operation, a survey by a licensed land surveyor or civil engineer or other resolution of the title dispute, all at the expense of the applicant, may be required by the director. (Prior code § 9.34.1806)

15.88.360 Other responsibilities of applicant.

A. Protection of Utilities. The applicant shall be responsible for the prevention of damage to any public utilities or services.

B. Protection of Adjacent Property. The applicant shall be responsible for the prevention of damage to adjacent property. No person(s) shall excavate on land that is so close to the property line as to endanger any adjoining public street, sidewalk, alley, structure or other public or private property or easement without supporting and protecting such property from any damage which might otherwise result.

C. Advance Notice. The applicant shall notify the director at least twenty-four (24) hours prior to the start of work.

D. Erosion and Sediment Control. It shall be the sole responsibility of the applicant to prevent discharge of sediment from the site, in quantities greater than before the grading occurred, to any watercourse, drainage system, or adjacent property.

E. Compliance with Stormwater Management and Discharge Control Code. At all times during the preconstruction and construction of any project for which grading approval is issued until all final improvements and permanent structures are complete, the applicant shall fully comply with all applicable requirements of the city's Stormwater Management and Discharge Control Code, set forth in Chapter 13.16. (Ord. 2003-058 § 5; prior code § 9.34.1807)

15.88.370 Time limits.

All the work required by the permit or grading approval shall be completed within the time limits specified in the permit or approval. If the work cannot be completed within the specified time, a request for an extension of time setting forth the reasons for the requested extension shall be presented in writing to the director no later than thirty (30) days prior to the expiration of the permit or approval. The director shall in his or her sole discretion approve or deny such request. The director may require a new application and fees depending on the time between the expiration date and the extension request, revisions in city regulations, and/or changed circumstances in the immediate area. (Prior code § 9.34.1808)

15.88.380 Transfer of grading approval.

No approval or permit issued under the grading ordinance may be transferred or assigned in any manner whatsoever, without the express written consent of the director. (Prior code § 9.34.1809)

15.88.390 Improvement security required.

A. As a condition for the issuance of grading approval, the director may require the deposit of an improvement security in an amount deemed sufficient by him or her to assure faithful performance of the grading work in the event of default on the part of the applicant. Said security shall be in a form acceptable to the city.

B. In the case of subdivisions, the improvement security shall remain in effect until final inspections have been made and all grading work and subdivision improvements have been accepted by the city.

C. For projects other than subdivisions, the improvement security shall remain in effect until final inspections have been made and all grading work has been accepted by the director.

D. In addition to the improvement security, the director may also require the deposit of maintenance security in an amount deemed sufficient by him or her to guarantee and maintain the grading work performed, to assure the proper functioning of drainage systems and adequate erosion and sedimentation control. Said maintenance security shall be in a form acceptable to the city and shall remain in effect for a period of one year after the date of acceptance of the improvements or grading work, as designated in subsections B and C of this section, or such other periods of time as required by the director.

E. Any deposit required by the director pursuant to this title shall be payable to the city.

F. Upon failure to complete the work, failure to comply with all of the terms of the grading ordinance, or failure of the completed site to function properly to provide proper drainage or erosion and sedimentation control, the city may do the required work, or cause it to be done and collect from the applicant or surety all costs incurred thereto, including administrative and inspection costs. Any unused portion of a deposit shall be refunded to the applicant after deduction by the city of the cost of the work. (Prior code § 9.34.1810)

15.88.400 Appeals.

Appeals of any decision made pursuant to the grading ordinance shall be made to the construction codes advisory and appeals board in writing, setting forth the specific grounds therefor. Such appeals shall be heard and determined in accordance with the procedures set forth in Chapter 2.48 of this code. (Prior code § 9.34.1811)

Article V Enforcement

15.88.410 Enforcement official.

The director shall enforce the provisions of the grading ordinance. (Prior code § 9.35.1901)

15.88.420 Suspension and revocation of grading approval.

The director may suspend or revoke grading approval for good cause. In the event that a suspension or revocation is appealed to the construction codes advisory and appeals board, no work shall be performed pending appeal except as expressly authorized, in writing, by the director. (Prior code § 9.35.1902)

15.88.430 Stop work order.

A. Whenever any work is being done in violation of the provisions of the grading ordinance or any other applicable law, ordinance, rule or regulation, the director may order the work stopped by serving written notice of such violation on any persons engaged in, doing, or causing such work to be done. Any such person shall forthwith stop such work until authorized by the director to proceed with the work. If there are no persons present on the premises, the notice shall be posted in a conspicuous place. The notice shall state the nature of the violation. Any person violating a stop work order shall be guilty of an infraction.

B. Upon receipt of or knowledge of the existence of such stop work notice, the person performing the work shall:

1. Stop work immediately; and

2. Within twenty-four (24) hours, provide the director with a list of remedies which can be immediately undertaken to bring the work into compliance with this title; and

3. Within twenty-four (24) hours after acceptance of such remedies by the director, undertake at the violator’s expense, such action as is necessary to bring the work into compliance with this title.

4. If engineering work is required to identify and define the proper course of action, as determined by the director, such work shall be provided by the violator at no cost to the city. (Prior code § 9.35.1903)

15.88.440 Abatement of unlawfully created conditions.

A. Any condition in violation of the grading ordinance is declared to be a public nuisance, subject to abatement in accordance with Title 8 of this code. In the event that the director determines that a violation has created a condition which is of such a nature to be imminently dangerous to the public health, safety or welfare, such condition may be abated in accordance with the summary abatement procedures set forth at Chapter 8.04, et seq. of this code.

The following conditions are declared to constitute an imminently dangerous condition:

1. When a violation has altered natural drainage patterns and has caused flooding to any downstream or upstream property; or

2. When a violation results in a condition which creates a drainage alteration such that upstream or downstream property may be flooded when weather conditions change and the owner, lessee, or licensee of the property on which the violation exists cannot be found; or

3. When a violation results in a hazard, requiring immediate correction for the preservation of the public health, safety, or welfare; or

4. When a violation results in a discharge or release of significant amounts of sediment which causes or threatens to cause flooding, property damage, or unsafe conditions.

B. The costs incurred by city to abate any nuisance caused by a violation of the grading ordinance shall be assessed against the subject property as a lien or made a personal obligation to the owner of the property as provided in Chapter 8.04, et seq. of this code. Such costs may include, but shall not be limited to, the following:

1. Engineering and design costs;

2. Contractor service bills or public employee wages at cost;

3. Administrative overhead and supervision based on ten (10) percent of all other costs incurred;

4. Interest which shall accrue and be billed at the rate of ten (10) percent of all unpaid amounts from the date of billing;

5. Attorney fees and costs.

C. The abatement procedures set forth in this section are cumulative and in addition to any other rights or remedies which are or may be available to city to correct or cause to

be corrected any violation of the grading ordinance, or to abate a condition which is otherwise a public nuisance. (Prior code § 9.35.1904)

15.88.450 Infraction.

Any person violating any provision of the grading ordinance shall be guilty of an infraction. (Prior code § 9.35.1905)

15.88.460 Nonexclusive remedies.

The remedies provided herein are not exclusive, and are in addition to any other remedy or penalty provided by law for violation of the grading ordinance. (Prior code § 9.35.1906)

15.88.470 Right of entry.

Whenever necessary to enforce the provisions of the grading ordinance, the director may enter the premises at all reasonable times to the extent authorized by law to perform any duty imposed by the grading ordinance. If such entry is refused, the director shall have recourse to every remedy provided by law to secure entry. (Prior code § 9.35.1907)

Statement of Legal Authority

Introduction

This Statement is provided pursuant to the Waste Discharge Requirements for the Cities of Citrus Heights, Elk Grove, Folsom, Galt, Rancho Cordova and Sacramento, and the County of Sacramento, for Storm Water Discharges from Municipal Separate Storm Sewer Systems in Sacramento County, NPDES No. CAS082597, Order No. R5-2008-0142, issued by the California Regional Water Quality Control Board Central Valley Region on September 11, 2008 (hereafter referred to as the "Order"). Section D.6. of the Order provides as follows:

> 6. *Each Permittee shall provide to the Executive Officer a statement certified by its chief legal counsel that it has adequate legal authority to implement and enforce each of the requirements contained in 40 CFR 122.26(d)(2)(i)(A-F) and this Order, including any modifications thereto in effect when the certified statement is provided. This statement shall be included in Permittees' revised SQIP(s), which shall describe the following:*
>
> a. *Citation of urban runoff related ordinances adopted by the Permittees and the reasons they are enforceable;*
>
> b. *Progressive enforcement policy and how it will be effectively implemented;*
>
> c. *Identification of the local administrative and legal procedures available to mandate compliance with urban runoff related ordinances and therefore with the conditions of this Order;*

d. Description of how these ordinances are implemented and how enforcement actions under these ordinances may be appealed; and

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions.

f. Description of the Permittee's storm water management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities.

The following Statement is provided to comply with this requirement, with respect to the City of Sacramento ("City"):

Statement of Legal Authority

a. Citation of urban runoff related ordinances adopted by the Permittee and the reasons they are enforceable:

The primary City ordinance that regulates urban runoff that discharges to the City's MS4 is the City's Stormwater Management and Discharge Control Code, set forth at Chapter 13.16 of the Sacramento City Code. A copy of this ordinance is attached to this Statement as **Exhibit A**.

Another City ordinance that regulates urban runoff and therefore indirectly regulates discharges to the MS4 is the City's Grading, Erosion and Sediment Control Ordinance, set forth at Chapter 15.88 of the Sacramento City Code. A copy of this ordinance is attached to this Statement as **Exhibit B**.

The foregoing ordinances are enforceable because they were duly adopted by the Sacramento City Council and constitute valid municipal enactments that may be enforced by the City pursuant to the City's powers as a charter municipality, as described in section 10 of the Sacramento City Charter:

§ 10 General powers.

The city shall have the right and power to make and enforce all the laws and regulations in respect to municipal affairs, subject only to the restrictions and limitations provided in this Charter; provided that nothing herein shall be construed to prevent or restrict the city from exercising or consenting to, and the city is

hereby authorized to exercise, any and all rights, powers and privileges heretofore or hereafter granted or prescribed by the general laws of the state including those specifically applicable to general law cities; provided, also that where the general laws of the state provide a procedure for the carrying out and the enforcement of any rights or powers belonging to the city, said procedure may be followed unless a different procedure is provided or required by the Charter, ordinance or resolution.

b. Progressive enforcement policy and how it will be effectively implemented:

The City's Stormwater Management and Discharge Control Code (Exhibit A) can be enforced through the issuance of administrative penalties pursuant to the provisions of the City's administrative penalty ordinance set forth in City Code section 1.28.010, subsection D (copy attached to this Statement as **Exhibit C**). The City's progressive enforcement policy for the issuance of administrative penalties is described in the Policy for Determining Administrative Penalties for Prohibited Non-Stormwater Discharges attached to this Statement as **Exhibit D**. This policy is effectively implemented by City employees authorized to enforce compliance with the Stormwater Management and Discharge Control Code.

c. Identification of the local administrative and legal procedures available to mandate compliance with urban runoff related ordinances and therefore with the conditions of this Order:

The local administrative and legal procedures available to mandate compliance with the City's Stormwater Management and Discharge Control Code are set forth in Chapter 13.16 of the Sacramento City Code (Exhibit A). The procedures available to mandate compliance with the City's Grading, Erosion and Sediment Control Ordinance are set forth in Chapter 15.88 of the Sacramento City Code (Exhibit B). In addition, administrative penalties may be imposed for violations of the Stormwater Management and Discharge Control Code and the Grading, Erosion and Sediment Control Ordinance pursuant to the City's administrative penalty ordinance (Exhibit C).

d. Description of how these ordinances are implemented and how enforcement actions under these ordinances may be appealed:

The procedures available to mandate compliance with the City's Stormwater Management and Discharge Control Code are implemented by the City "enforcement official," defined in the code as the City's Director of Utilities or any employee or agent of the City authorized to enforce compliance with the Code. In addition, some enforcement actions may involve the participation of other City staff or departments, such as the City Attorney's Office. Procedures for appealing enforcement actions under the City's Stormwater Management and Discharge Control Code are set forth in City Code section 13.16.200 (included in Exhibit A).

The Stormwater Management and Discharge Control Code also provides that if the Sacramento City Council and the governing body of another public agency enter into an agreement authorizing that agency to administer and/or enforce some or all of the provisions of the Code, "enforcement official" also shall mean the authorized official(s) of the agency designated in the agreement as the agency responsible for administering and enforcing the Code, as provided in the agreement. The City has entered into such an agreement with Sacramento County authorizing Sacramento County to administer and enforce the provisions of the City's Stormwater Management and Discharge Control Code with respect to commercial and industrial facilities located in the City. Administrative or civil enforcement actions taken by Sacramento County with respect to such facilities are governed by and conducted pursuant to the County's Stormwater Ordinance, set forth in Chapter 15.12 of the Sacramento County Code, attached to this Statement as **Exhibit E**. Procedures for appealing Sacramento County enforcement actions are set forth in Sacramento County Code section 15.12.540 (included in Exhibit E).

The City's Grading, Erosion and Sediment Control Ordinance is administered for the City by the Department of Utilities through the building permit process, improvement plan process or capital improvement project process, as applicable. (*See* City Code section 15.88.040, included in Exhibit B.) The Director of the Utilities Department or his or her authorized designees are responsible for implementing the enforcement provisions of the ordinance, which are set forth in Article V of City Code Chapter 15.88, beginning with City Code section 15.88.410 (included in Exhibit B). Procedures for appealing any decision made pursuant to the ordinance are set forth in City Code section 15.88.400 (included in Exhibit B), and Chapter 2.48 of the City Code (copy attached to this Statement as **Exhibit F**).

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions.

The City's administrative enforcement powers under the City's Stormwater Management and Discharge Control Code are described in City Code section 13.16.180 (included in Exhibit A). These powers include the implementation of administrative procedures to abate any discharge or condition violating the Code, which are undertaken pursuant to City Code section 13.16.180(A), and Articles V through VIII of Chapter 8.04 of the City Code (copy attached to this Statement as **Exhibit G**), and the imposition of administrative penalties pursuant to the City's administrative penalty ordinance (Exhibit C). City Code section 13.16.180 also authorizes the commencement of civil actions seeking various remedies, and grants arrest and citation authority to any authorized enforcement official.

The City's administrative enforcement powers under the City's Grading, Erosion and Sediment Control Ordinance are set forth in Article V of City Code Chapter 15.88, beginning with City Code section 15.88.410 (included in Exhibit B). The powers include the suspension or revocation of grading approval, the issuance of stop work orders and the abatement of unlawfully created conditions, as described therein. The City also may impose administrative

penalties for violations of the Grading, Erosion and Sediment Control Ordinance, pursuant to the City's administrative penalty ordinance (Exhibit C).

f. Description of the Permittee's storm water management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities:

The City's storm water management structure, including a summary of the communication and coordination between affected departments, is described in the City's Stormwater Quality Improvement Plan (see, e.g., Chapter 4, Section 4.2).

EXHIBIT A

Chapter 13.16 STORMWATER MANAGEMENT AND DISCHARGE CONTROL

13.16.010 Title.

This chapter shall be known as the Stormwater Management and Discharge Control Code. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.101)

13.16.020 Purpose and intent.

The purpose of this chapter is to protect and promote the health, safety and general welfare of the citizens of the city by controlling nonstormwater discharges to the stormwater conveyance system, by eliminating discharges to the stormwater conveyance system from- spills, dumping, or disposal of materials other than stormwater, and by reducing pollutants in urban stormwater discharges to the maximum extent practicable. This chapter is intended to assist in the protection and enhancement of the water quality of watercourses, water bodies, and wetlands in a manner pursuant to and consistent with the Federal Water Pollution Control Act (Clean Water Act, 33 U.S.C. Section 1251 et seq.), Porter-Cologne Water Quality Control Act (California Water Code Section 13000 et seq.) and National Pollutant Discharge Elimination System (NPDES) Permit No. CAS082597, as such permit is amended and/or renewed. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.102)

13.16.030 Definitions.

A. The following words, when used in this chapter, shall have the following meanings:

"Basin plan" means the water quality control plan for Basin 5A and SB, adopted by the Regional Water Quality Control Board, Central Valley Region in July 1975, and all subsequent amendments.

"Best management practices" means schedules of activities, prohibitions of practices, general good housekeeping practices, pollution prevention and education practices, maintenance procedures, and other management practices to prevent or reduce to the maximum extent practicable the discharge of pollutants directly or indirectly to waters of the United States. Best management practices also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, and drainage from raw materials storage.

"City" means the city of Sacramento.

"City manager" means the city manager of the city, or his or her authorized designee.

"Commercial and industrial facilities" means commercial and industrial facilities regulated pursuant to the Commercial/Industrial Program requirements specified in Section C.9 of NPDES Permit No. CA5082597.

"Construction general permit" means the General Permit for Stormwater Discharges Associated with Construction Activities issued and administered by the State of California in accordance with applicable provisions of the Federal Clean Water Act and the Porter-Cologne Water Quality Control Act.

"County stormwater ordinance" means the County of Sacramento's Stormwater Management and Discharge Control Code, set forth in Chapter 15.12 of the Sacramento County Code, and all subsequent amendments.

"Development" means the construction, building or placement of any structure or portion thereof, or any excavation or grading.

"Director" means the director of the city department of utilities or his or her authorized designee.

"Employee training program" means a documented employee training program that a business may be required to implement pursuant to a stormwater pollution prevention plan for the purpose of educating its employees on methods of reducing discharge of pollutants to the stormwater conveyance system.

"Enforcement agency" means the city department of utilities or any other city department authorized to enforce compliance with this chapter. If the city council and the governing body of another public agency enter into an agreement authorizing that agency to administer and/or enforce some or all of the provisions of this chapter, "enforcement agency" also shall mean the agency designated in the agreement as the agency responsible for administering and enforcing the provisions of this chapter, as provided in the agreement.

"Enforcement official" means the director or any employee or agent of the city authorized to enforce compliance with this chapter. If the city council and the governing body of another public agency enter into an agreement authorizing that agency to administer and/or enforce some or all of the provisions of this chapter, "enforcement official" also shall mean the authorized official(s) of the agency designated in the agreement as the agency responsible for administering and enforcing the provisions of this chapter, as provided in the agreement.

"Illegal discharge" means any discharge to the stormwater conveyance system that violates this chapter, or is prohibited by federal, state, or local laws, or which degrades the quality of receiving waters in violation of any plan standard.

"Industrial general permit" means the General Permit for Stormwater Discharges Associated with Industrial Activities issued and administered by the State of California in accordance with applicable provisions of the Federal Clean Water Act and the Porter-Cologne Water Quality Control Act.

"NPDES permit" means a National Pollution Discharge Elimination System permit issued by the Regional Water Quality Control Board or the State Water Resources Control Board pursuant to Division 7, Chapter 5.5 of the California Water Code (commencing with Section 13370) to control discharges from point sources to waters of the United States.

"Noncommercial vehicle washing" means the washing and/or rinsing of passenger vehicles on private property that is not being conducted as a commercial enterprise.

"Nonstormwater discharge" means any discharge to the stormwater conveyance system that is not entirely composed of stormwater.

"Order 2002-0206" means Regional Water Quality Control Board, Central Valley Region Order No. R5-2002-0206, which constitutes NPDES Permit No. CAS082597, together with all amendments and renewals, on file in the office of the city clerk.

"Person" means any person, firm, corporation, partnership, business, public agency, or any other public or private entity.

"Plan standard" means any or all applicable requirements of the basin plan or any other water quality control standard or requirement approved by the Regional Water Quality Control Board, Central Valley Region, the State Water Resources Control Board or the federal Environmental Protection Agency that applies to any of the receiving waters.

"Pollutant" means any contaminant that can degrade the quality of the receiving waters in violation of any plan standard.

"Premises" means any building, lot, parcel, land or portion of land whether improved or unimproved.

"Receiving waters" means surface bodies of water as described in Order 2002-0206, including creeks and rivers, that serve as discharge points for the stormwater conveyance system.

"Stormwater" means surface runoff and drainage associated with storm events that is free of pollutants to the maximum extent practicable.

"Stormwater conveyance system" means those artificial and natural facilities within the city, whether publicly or privately owned, by which stormwater may be conveyed to a watercourse or waters of the United States, including any roads with drainage systems, streets, catch basins, natural and artificial channels, aqueducts, stream beds, gullies, curbs, gutters, ditches, open fields, parking lots, impervious surfaces used for parking, and natural and artificial channels or storm drains. "Stormwater conveyance system" does not include any facilities that convey stormwater to the city's combined sewer system that collects and conveys both sanitary sewage and stormwater and surface runoff for treatment in accordance with applicable sewage treatment requirements, and that is regulated by Chapter 13.08 of this code in accordance with the provisions of a separate NPDES permit issued to the city for the combined sewer system.

"Stormwater pollution prevention plan" means a document that describes the best management practices to be implemented by the owner or operator of a business to eliminate prohibited nonstormwater discharges and/or reduce to the maximum extent practicable pollutant discharges to the stormwater conveyance system.

"Unauthorized connection" means any physical connection to the stormwater conveyance system that is not authorized by the city and the Regional Water Quality Control Board, Central Valley Region.

"Watercourse" means any natural stream, whether flowing continuously or not, that is fed from permanent or natural sources, and includes, without limitation rivers, creeks, runs, and rivulets.

B. Any term(s) defined in the Federal Clean Water Act, as amended, and/or defined in the regulations for the stormwater discharge permitting program issued by the Environmental Protection Agency, as amended, and that are not specifically defined in subsection A of this section shall, when used in this chapter, have the same meaning as set forth in such act or regulations. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.103)

13.16.040 Conflicts with other laws.

In the event of any conflict between this chapter and any federal or state law, regulation, order, or permit, the requirement that establishes the higher standard for public health or safety shall govern. Nothing in this chapter shall preclude enforcement of any other applicable law, regulation, order, or permit. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.104)

13.16.050 Discharge of nonstormwater prohibited.

Except as provided in Section 13.16.060 of this chapter, it is unlawful for any person to make or cause to be made any nonstormwater discharge. Notwithstanding the exemptions provided by subsections A and B of Section 13.16.060 of this chapter, if the Regional Water Quality Control Board or the enforcement official determines that any otherwise exempt discharge causes or significantly contributes to violations of any plan standard, or conveys significant quantities of pollutants to any receiving waters, or is a nuisance or poses a risk to public health or safety, it is unlawful for any person to make or cause to be made such discharge to the stormwater conveyance system. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.105)

13.16.060 Exceptions to discharge prohibition.

Subject to the authority granted to the Regional Water Quality Control Board and the enforcement official in Section 13.16.050 of this chapter, the following discharges to the stormwater conveyance system are exempt from the prohibition set forth in Section 13.16.050 of this chapter.

A. Any discharge or connection regulated under a NPDES permit issued to the discharger and administered by the state of California pursuant to Division 7, Chapter 5.5 of the California Water Code, provided that the

discharger is in compliance with all requirements of the permit and all other applicable laws and regulations.

B. Discharges from the following activities that do not cause or contribute to the violation of any plan standard:

1. Potable water line flushing and other discharges from potable water sources;
2. Landscape irrigation and lawn watering;
3. Rising ground waters or springs;
4. Passive foundation and footing drains;
5. Water from crawl space pumps and basement pumps;
6. Air conditioning condensate;
7. Noncommercial vehicle washing;
8. Natural flows from riparian habitats and wetlands;
9. Dechlorinated swimming pool discharges that do not contain biocides or other chemicals, excluding filter backwash water;
10. Flows from fire suppression activities, including fire hydrant flows;
11. Diverted stream flows;
12. Uncontaminated ground water infiltration to separate storm sewers; and
13. Potable water used to wash sediment from streets and parking lots associated with construction sites that have been issued a street washing certification by the Department of Utilities and have implemented required best management practices.

C. Any discharge that the enforcement official, the local health officer, or the Regional Water Quality Control Board determines in writing is necessary for the protection of the public health and safety.

D. Any discharge caused by flooding or other natural disaster that could not have been reasonably foreseen or mitigated in advance by the discharger, as determined by the enforcement official. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.106)

13.16.070 Groundwater discharges.

Discharges of pumped groundwater not subject to a NPDES permit may be permitted to discharge to the stormwater conveyance system upon written approval from the city and in compliance with conditions of approval set forth by the city. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.107)

13.16.080 Discharge in violation of permit.

It is unlawful and a violation of this chapter for any person to make or cause any discharge to the stormwater conveyance system that results in or contributes to a violation of Order 2002-0206. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.108)

13.16.090 Illicit connections prohibited.

It is unlawful and a violation of this chapter for any person to establish, use, or maintain any unauthorized connection. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.109)

13.16.100 Concealment and abetting.

It is unlawful and a violation of this chapter to cause, permit, aid, abet or conceal a violation of any provision of this chapter. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.101)

13.16.110 Acts potentially resulting in violation of Federal Clean Water Act and/or Porter-Cologne Act.

Any person who violates any provision of this chapter or any provision of any permit issued pursuant to this chapter or any cease and desist order, prohibition, or effluent limitation, or who discharges waste or wastewater that contains pollutants, may also be in violation of the Federal Clean Water Act (33 U.S.C. 1251 et seq.) and/or Porter-Cologne Water Quality Control Act (California Water Code Section 13000 et seq.) and may be subject to the sanctions and remedies of those acts including civil and criminal penalties. The provisions or enforcement of this chapter shall not affect or limit in any way the applicability of those acts nor the enforcement of any sanctions, remedies or penalties under those acts. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.111)

13.16.120 Reduction of pollutants in stormwater.

Any person engaged in activities that may result in pollutants entering the stormwater conveyance system shall, to the maximum extent practicable, undertake the measures set forth below to reduce the risk of nonstormwater discharge and/or pollutant discharge.

A. Business Related Activities.

1. Stormwater Pollution Prevention Plan. The enforcement official may require any business in the city engaged in activities that may result in a nonstormwater discharge to develop and implement a stormwater pollution prevention plan, that must include an employee training program. Business activities that may require a stormwater pollution prevention plan include, but are not limited to, maintenance, storage, manufacturing, assembly, equipment operations, vehicle loading or fueling, and cleanup procedures that are carried out partially or wholly outdoors.

2. Coordination with Hazardous Materials Release Response Plans and Inventory. Any business for which a hazardous materials release response plan and inventory are required under Chapter 6.95 (commencing with Section 25500) of Division 20 of the California Health and Safety Code, shall include in that plan provisions demonstrating compliance with this chapter, and requiring the release of pollutants to be reduced to the maximum extent practicable.

3. Coordination with Hazardous Waste Generator Contingency Plan and Emergency Procedures. Any business for which a hazardous waste generator contingency plan and emergency procedures are required pursuant to California Code of Regulations, Title 22, Sections 66265.51 to 66265.56, shall include in that plan provisions demonstrating compliance with this chapter, and requiring the release of pollutants to be reduced to the maximum extent practicable.

4. Any person conducting business or industrial activities in the city shall prevent pollutants from entering the stormwater conveyance system and shall comply with all applicable federal, state and local laws, ordinances or regulations.

B. Development.

1. The enforcement official may establish and impose such controls as the enforcement official determines to be appropriate to minimize the long-term, post-construction discharge of stormwater pollutants from new development or modifications to existing development. Controls may include source control measures to prevent pollution of stormwater and/or treatment controls designed to remove pollutants from stormwater.

2. Any person conducting development in the city shall prevent pollutants from entering the stormwater conveyance system and shall comply with all applicable federal, state and local laws, ordinances or regulations, including but not limited to the City Grading, Erosion and Sediment Control Ordinance set forth in Chapter 15.88 of this code.

C. Compliance with General Permits. Any person conducting business, industrial, construction or development activities that are subject to a general stormwater permit issued by the United States Environmental Protection Agency, the State Water Resources Control Board, the Regional Water Quality Control Board, Central Valley Region or the city of Sacramento, including the construction general permit and the industrial general permit, shall comply with all requirements of such permit. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.112)

13.16.130 Compliance with best management practices.

Every person undertaking any activity or use of a premises that may cause or contribute to stormwater pollution or contamination, illegal discharges, or nonstormwater discharges shall: (1) comply with best management practices guidelines or pollution control requirements established or imposed by the enforcement official; and (2) properly operate and maintain any treatment control device or other measures utilized on the premises to prevent or reduce, to the maximum extent practicable, stormwater pollution or contamination, illegal discharges or nonstormwater discharges, as required by the enforcement official. (Ord. 2004-042 § 1 (part))

13.16.140 Containment and notification of spills.

Any person owning or occupying a premises who has knowledge of any release of pollutants or prohibited nonstormwater discharge from the premises that might enter the stormwater conveyance system, other than a release or discharge that is permitted by this chapter, shall immediately take all reasonable action to contain and abate the release of any pollutants or prohibited nonstormwater discharge, and shall notify the enforcement agency as soon as reasonably possible of the release of any pollutants or prohibited nonstormwater discharge. (Ord. 2004-042 § 1 (part))

13.16.150 Commercial and industrial facilities—Inspection and enforcement by Sacramento County.

A. The city and Sacramento County are co-permittees under NPDES Permit No. CA5082597. The permit requires regular compliance inspections and enforcement at certain commercial and industrial facilities as defined by the permit. Sacramento County operates an inspection, investigation and enforcement program that enforces compliance with environmental and water quality requirements by commercial and industrial facilities located within the County.

B. Under Article 11, Section 8 of the California Constitution, and applicable provisions of the city and Sacramento County Charters, the city and Sacramento County may enter into agreements for Sacramento County to perform specified municipal functions within the city.

C. To provide for effective and efficient administration and enforcement of this chapter with respect to commercial and industrial facilities located on premises within the city that discharge to the stormwater conveyance system, and to ensure compliance with Order 2002-0206, the city council and the Sacramento County Board of Supervisors may enter into an agreement or agreements for Sacramento County to administer and enforce the provisions of this chapter with respect to these commercial and industrial facilities, by including these commercial and industrial facilities in Sacramento County's commercial and industrial compliance program. If the city council and the Sacramento County Board of Supervisors enter into such an agreement or

agreements:

1. Sacramento County and its authorized official(s) and employee(s) shall enforce the provisions of this chapter as they apply to commercial and industrial facilities located on premises within the city that discharge to the stormwater conveyance system, in accordance with the provisions of the agreement(s); and

2. Sacramento County, and its authorized official(s) and employee(s), shall be authorized to take any action that may be taken by the "enforcement agency" and "enforcement official," respectively, with respect to these commercial and industrial facilities, in accordance with the provisions of this chapter and the agreement(s); and

3. Sacramento County may establish and collect from these commercial and industrial facilities such fees as may be necessary to cover the actual costs incurred by Sacramento County to include facilities in its commercial and industrial compliance program, provided that the fees are established and collected uniformly within and outside of the city, and in accordance with the provisions of the agreement(s) and all applicable legal requirements. (Ord. 2004-042 § 1 (part))

13.16.160 Inspection authority.

Whenever necessary to make an inspection of any building or premises to enforce any of the provisions of this chapter, or whenever an authorized enforcement official has reasonable cause to believe that there exists in any building or upon any premises any condition that constitutes a violation of this chapter, the enforcement official may enter such building or premises at all reasonable times to perform an inspection, as well as any of the other activities authorized by this section. Any request for entry shall state that the property owner or occupant has the right to refuse entry and if entry is refused, entry may be made upon issuance of a judicial order. If the owner or occupant refuses entry after this request has been made, the enforcement official is empowered to seek authorization from any court of competent jurisdiction for such entry. The enforcement official may request a judicial order authorizing and/or compelling the performance of some or all of the activities authorized by this section.

During any inspection, the enforcement official may collect samples as necessary in order to implement and enforce the provisions of this chapter. This authority shall include the right to require the installation of sampling and metering devices on private property, or to require the person owning or occupying the premises to supply samples.

During any inspection, the enforcement official may require the person owning or occupying the premises to provide any and all records relating to any potential stormwater contamination, illegal discharge, nonstormwater discharge or other violation of this chapter, for review and copying.

The enforcement official shall identify buildings or premises for inspection based upon such reasonable selection processes as the enforcement official determines to be necessary to carry out the objectives of this chapter, including but not limited to: random sampling; sampling in areas with evidence of stormwater contamination, illegal discharge, or nonstormwater discharge to the stormwater conveyance system; and similar factors. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.101)

13.16.170 Monitoring, analysis and reporting authority.

Whenever an authorized enforcement official has reasonable cause to believe that there may exist on any premises a condition that constitutes a violation of this chapter, the enforcement official may require monitoring, analysis and/or reporting of discharges from the premises to the stormwater conveyance system, by serving a written notice of such requirement(s) on the owner of the premises or on the operator of a facility or activity on the premises. The cost of complying with these requirements shall be borne by the owner of the premises or the

operator of the facility or activity for which monitoring, analysis and/or reporting has been required, to the extent permitted by law. (Ord. 2004-042 § 1 (part))

13.16.180 Enforcement.

In addition to the exercise of enforcement powers authorized or provided elsewhere in this code, this chapter may be enforced by any of the means set forth in this section.

A. Abatement.

1. Any discharge or condition violating any of the provisions of this chapter is a threat to the public health, safety and welfare and constitutes a public nuisance.

2. The enforcement official may commence and carry out proceedings for the abatement of any discharge or condition violating any provision of this chapter, in accordance with the provisions of Articles V and VI of Chapter 8.04 of this code, commencing with Section 8.04.110 of this code. Such actions or decisions of the enforcement official shall be subject to appeal as provided for in Article V and Article VI of Chapter 8.04 of this code. The notice and order issued by the enforcement official under Section 8.04.110 of this code may require the owner and/or occupant of the subject premises to take any or all of the following actions:

i. Submit and implement a plan approved by the enforcement official for the correction and prevention of the discharge or condition violating any provision of this chapter;

ii. Cease and desist all activities that may cause or contribute to any discharge or condition violating any provision of this chapter;

iii. Clean up any release of pollutants causing or resulting from the violation of any provision of this chapter;

iv. Mitigate any circumstances that may cause or contribute to any discharge or condition violating any provision of this chapter; and

v. Adopt and implement best management practices and/or a stormwater pollution prevention plan approved by the enforcement official.

3. If any violation of this chapter constitutes a seasonal and recurrent nuisance, the enforcement official shall so declare in the notice and order issued pursuant to subsection 2, above. Thereafter, the owner or occupant of the subject premises shall abate such seasonal and recurrent nuisance every year without the necessity of any further notice and order. If at any time the nuisance is not abated as required herein, the enforcement official may summarily abate the condition in accordance with the provisions of Article VII of Chapter 8.04 of this code, commencing with Section 8.04.330 of this code.

4. When, in the opinion of the enforcement official, any discharge from any source to the stormwater conveyance system causes or threatens to cause a condition that presents an imminent hazard to the public health, safety, or welfare, or the environment, or a violation of a NPDES permit, the enforcement official may issue a notice requiring the owner or occupant of the premises where the discharge is occurring to immediately abate the discharge. In any case where the discharge is not immediately abated, or for any reason the owner or occupant of the subject premises does not receive the notice, or the enforcement official determines that time constraints are such that abatement must occur without providing the notice, the enforcement official may summarily abate the condition in accordance with the provisions of Article VII of Chapter 8.04 of this code, commencing with Section 8.04.330 of this code.

5. The owner of any premises in the city from which is made a discharge in violation of this chapter, and any person making or causing to be made the discharge, if different from the owner, shall be jointly and severally liable for the costs incurred by the city for any abatement, clean-up or restoration, including any related inspection and testing costs, arising from the discharge, and the cost therefor shall be invoiced to the owner of

the premises. If the invoice is not paid within sixty (60) days, the enforcement official may commence proceedings for recovery of these costs in accordance with the provisions of Article VIII of Chapter 8.04 of this code, commencing with Section 8.04.370 of this code.

B. Civil Actions.

In addition to any other remedies or penalties provided in this chapter, any violation of this chapter may be enforced by civil action brought by the city attorney. In any such action, the city may seek, as appropriate, any or all available equitable and legal remedies, including but not limited to:

1. A temporary and/or permanent injunction;

2. Assessment of the violator for the costs of any investigation, inspection, testing or monitoring related to the violation, and for the reasonable costs of preparing and bringing legal action under this subsection, including attorney fees, whether for in-house or outside counsel;

3. Costs incurred in removing, correcting, abating, cleaning up, or terminating the adverse effects resulting from the violation;

4. Compensatory damages for damage, loss or destruction to water quality, wildlife, fish and aquatic life, or public health and safety;

5. Payment or reimbursement of any governmental fines or penalties imposed on the city as a result of the violation;

6. Civil penalties imposed either on a daily basis or a per gallon basis, but not both, for any discharge of nonstormwater to the stormwater conveyance system violating any provision of this chapter. Civil penalties imposed on a daily basis shall not exceed five thousand dollars ($5,000.00) for each day or portion of a day that the discharge occurs, and civil penalties imposed on a per gallon basis shall not exceed ten dollars ($10.00) for each gallon of the discharge. The amount of civil penalties imposed shall be determined by taking into consideration some or all of the following factors: the nature, circumstances, extent, and gravity of the discharge, whether the discharge is susceptible to cleanup or abatement, the degree of toxicity of the discharge, and, with respect to the violator, the ability to pay, the effect on its ability to continue in business, any voluntary cleanup efforts undertaken, any prior history of violations, the degree of culpability, the economic benefit or savings, if any, resulting from the violation, and such other matters as justice may require.

C. Enforcement by Sacramento County. If the city council and the Sacramento County Board of Supervisors enter into an agreement for Sacramento County to administer and enforce the provisions of this chapter with respect to commercial and industrial facilities located on premises within the city that discharge to the stormwater conveyance system, pursuant to Section 13.16.150 of this chapter, any administrative or civil enforcement by Sacramento County of any provision of this Chapter with respect to such facilities shall be governed by and conducted pursuant to Chapter 15.12 of the Sacramento County Code, and the provisions of subsections A and B of this section shall not apply.

D. Criminal Violations.

1. Any violation of this article shall be punishable as a misdemeanor.

2. The enforcement official shall have and is vested with the authority to arrest or cite and release any person who violates any section of this chapter in the manner provided by the California Penal Code for the arrest or release on citation of misdemeanors or infractions as described by Chapters 5, 5(c), and 5(d) of Title 3, Part 2 of the California Penal Code, including Section 853.6 (as the same may hereafter be amended). It is the intent of the city council that the immunities prescribed in Section 836.5 of the California Penal Code be applicable to public officers or employees acting in the course and scope of employment pursuant to this chapter.

E. Administrative Penalties. In addition to any other remedy or penalty set forth in this chapter or this code, administrative penalties may be imposed pursuant to applicable provisions of Title 1 of this code against any

responsible party, whether owner, lessee, sublessor, sublessee or occupant of any premises in violation of any of the provisions of this chapter. Imposition, enforcement, collection and administrative review of administrative penalties imposed shall be conducted pursuant to Title I of this code.

F. Remedies and Penalties Cumulative. The foregoing remedies and penalties are in addition to and do not supersede or limit any and all other remedies and penalties, civil or criminal, including any remedies or penalties authorized for violations of the Federal Clean Water Act or Porter-Cologne Water Quality Control Act. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.118)

13.16.190 Remedies not exclusive.

The remedies provided for in this chapter shall be cumulative and not exclusive. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.119)

13.16.200 Appeal.

A. If a decision or action of the enforcement official is not subject to an appeal procedure under any other provision of this chapter or code, any person who is affected by the enforcement official's decision or action may appeal the decision or action to the city manager within ten (10) days following the effective date of the decision or action, by filing a written appeal with the city manager. Upon receipt of such appeal, the city manager may request a report and recommendation from the authorized enforcement official and shall set the matter for an informal hearing at the earliest practical date. Not less than seven days prior to the date of hearing, the city manager shall provide written notice of the hearing to the person appealing the decision or action of the enforcement official. At the hearing, the appellant may be represented by any person of appellant's choice. The city manager shall hear any additional evidence presented by the appellant or the enforcement official, and may reject, affirm or modify the enforcement official's decision. The city manager's decision shall be the city's final administrative determination of the matter.

B. If the city council and the Sacramento County Board of Supervisors have approved an agreement for Sacramento County to administer and enforce the provisions of this chapter with respect to commercial and industrial facilities located on premises within the city that discharge to the stormwater conveyance system, pursuant to Section 13.16.150 of this chapter, any appeal of any action taken by Sacramento County or its officers or employees with respect to such facilities shall be governed by and conducted pursuant to the Sacramento County Code, and the provisions of this section shall not apply. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.120)

13.16.210 Disclaimer of liability.

The degree of protection required by this chapter is considered reasonable for regulatory purposes and is based on scientific, engineering, and other relevant technical considerations. The standards set forth herein are minimum standards and this chapter does not imply that compliance will ensure that there will be no unauthorized discharge of pollutants into the waters of the United States. This chapter shall not create liability on the part of the city or Sacramento County, nor their respective officers and employees, for any damages that result from reliance on the code or any administrative decision lawfully made thereunder. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.121)

13.16.220 City or county authority.

Except for decisions required to be made by the City Council and/or the Sacramento County Board of

Supervisors, the enforcement official is authorized to make any decision on behalf of the city or Sacramento County, as applicable, required or called for by this chapter. (Ord. 2004-042 § 1 (part): Ord. 98-007 § 1 (part): prior code § 87.01.122)

13.16.230 Judicial review.

The provisions of California Code of Civil Procedure Section 1094.5 and Section 1094.6 are applicable to judicial review of city or Sacramento County decisions pursuant to this chapter. (Ord. 2004-042 § 1 (part); Ord. 98-007 § 1 (part): prior code § 87.01.1231)

EXHIBIT B

Chapter 15.88 GRADING, EROSION AND SEDIMENT CONTROL

Article I General Provisions and Requirements

15.88.010 Title.

This chapter shall be known as the grading, erosion, and sediment control ordinance of the city of Sacramento, and shall be referred to herein as the "grading ordinance." (Prior code § 9.31.1501)

15.88.020 Purpose.

The grading ordinance is enacted for the purpose of regulating grading on property within the city limits of the city to safeguard life, limb, health, property and the public welfare; to avoid pollution of watercourses with nutrients, sediments, or other materials generated or caused by surface water runoff; to comply with the city's national pollution discharge elimination system (NPDES) Permit No. CA0082597, provision D2, issued by the California regional water quality control board; and to ensure that the intended use of a graded site within the city limits is consistent with the city general plan, any specific plans adopted thereto and all applicable city ordinances and regulations. The grading ordinance is intended to control all aspects of grading operations within the city limits of the city. (Prior code § 9.31.1502)

15.88.030 Scope.

The grading ordinance sets forth rules and regulations to control land disturbances, landfill, soil storage, pollution, and erosion and sedimentation resulting from construction activities. The grading ordinance establishes procedures for issuance, administration and enforcement of permits for such activities. Any grading within the city limits of the city shall conform to provisions of the grading ordinance and other applicable provisions of the city code, including but not limited to, the latest edition of the city standard specifications for public works construction, Sacramento city/county drainage manual, and city manual of standards and improvement standards.

The director shall adopt a manual of standards entitled "Administrative and Technical Procedures Manual for Grading, Erosion, and Sediment Control" setting forth the administrative procedures and technical requirements necessary to implement the provisions of the grading ordinance. The director shall have the authority to change, update or revise this manual as necessary at his or her sole discretion, to implement the provisions of the grading ordinance. (Prior code § 9.31.1503)

15.88.040 Administration.

The grading ordinance shall be administered for the city by the department of utilities through the building permit process, improvement plan process or capital improvement project process, as applicable. (Ord. 2001-014 § 2: prior code § 9.31.1504)

15.88.050 Definitions.

Unless the particular provision or the context otherwise requires, wherever the following terms are used in the

grading ordinance, they shall have the meaning ascribed to them in this section:

"Applicant" means any person seeking or receiving grading approval, in accordance with the terms of the grading ordinance, to perform grading after the issuance of a building permit or the approval of improvement plans, or to commence grading prior to such issuance or approval.

"Best management practices" means any program, technology, technique, process, siting criteria, operating method, measure or device which controls, prevents, removes or reduces pollution, erosion, and sediment transport, including but not limited to any best management practices required or implemented under the city's Stormwater Management and Discharge Control Code, set forth in Chapter 13.16.

"City council" means city council of the city of Sacramento.

"Civil engineer" means a professional engineer registered as a civil engineer by the state of California.

"Compaction" means the increase of density of a soil or rock fill by mechanical means.

"Cut (excavation)" means the removal of naturally occurring earth materials by manual or mechanical means, and the conditions resulting therefrom.

"Director" means director of the department of utilities of the city of Sacramento, or his or her authorized designees.

"Drainage waters" means surface waters which collect, or are accumulated, on the ground and which, by means of drainage ways or water courses, flow off the surface to larger rivers, streams, or lakes. Such waters shall include, but are not limited to, natural precipitation and irrigation waters.

"Drainage way" means a depression in the earth's surface such as a swale, ravine, gully, slough, draw, hollow, or ditch in which surface water collects for drainage.

"Earth material" means any rock, natural soil or fill and/or any combination thereof.

"Embankment (fill)" means the deposit of soil, rock or other materials placed by artificial means and the conditions resulting therefrom.

"Encroachment permit" means a written permit issued by the department of public works authorizing certain work within a publicly maintained right-of-way.

"Engineering geologist" means a registered geologist certified as an engineering geologist by the state of California.

"Erosion" means the washing or wearing away and transportation of earth material as a result of the movement of wind, water, or ice.

"Erosion and sediment control plan (ESC plan)" consists of a set of best management practices or equivalent measures designed to control surface runoff and erosion, retain sediment on a particular site and prevent pollution of site runoff during the period beginning when any preconstruction- or construction-related grading or soil storage first occurs, until all final improvements and permanent structures are completed.

"Excavation (cut)" means the removal of naturally occurring earth materials by manual or mechanical means, and the conditions resulting therefrom.

"Existing grade" means the elevation of the ground surface at a given point prior to excavating or filling.

"Fill (embankment)" means the deposit of soil, rock or other materials placed by artificial means and the conditions resulting therefrom.

"Finish grade" means the final grade of the site after excavating or filling which conforms to the approved final grading plan. The finish grade is also the grade at the top of a paved surface.

"Geologic hazard" means any condition in naturally occurring earth materials which may endanger life, health or property.

"Geotechnical engineer" means a civil engineer registered by the state of California who is qualified in the field of soil mechanics and soil engineering and has the authority to use the title "soil engineer."

"Grade" means the vertical location of the ground surface.

"Grading" means any land excavation or filling or combination thereof, or the removal, plowing under or burial of vegetative groundcover.

"Grading plan" means a plan prepared in accordance with this chapter showing grading and related work.

"Manual of standards" means a compilation of administrative procedures, technical standards and design specifications adopted by the city of Sacramento for controlling construction-related grading, surface runoff, erosion and sedimentation. This manual of standards shall be titled "Administrative and Technical Procedures Manual for Grading and Erosion and Sediment Control."

"Owner" means the legal owner of the property where the grading work is to be done, as shown on the latest equalized assessment roll in the office of the county assessor.

"Parcel (lot)" means the land described as a lot or parcel in a recorded deed or shown as a lot or parcel on a subdivision map or parcel map on file in the Sacramento County recorder's office.

"Permit" means either a building permit or a separate grading permit.

"Person" means any person, firm, corporation, or public agency whether principal, agent, employee, or otherwise.

"Post construction erosion and sediment control plan (PC plan)" means consists of a set of best management practices or equivalent measures designed to control surface runoff and erosion and to retain sediment on a particular site after all final structures and permanent improvements have been erected or installed.

"Preliminary grading plan" means a plan that shows the proposed grading work in relation to the existing site prepared and submitted with the application for a grading permit.

"Rainy season" means the period of the year during which there is a substantial risk of rainfall. For the purpose of this chapter, the rainy season is defined as from October 1st to April 30th, inclusive.

"Rough grade" means the stage at which the grade approximately conforms to the approved plan.

"Sediment" means any material transported or deposited by water, including soil debris or other foreign matter.

"Site" means any lot or parcel of land or combination of contiguous lots or parcels of land, whether held separately or joined together in common ownership or occupancy, where grading is to be performed or has been performed.

"Slope" means an inclined ground surface the inclination of which may be expressed as the ratio of horizontal distance to vertical distance.

"Soil" means all earth material of any origin that overlies bedrock and may include the decomposed zone of bedrock which can be excavated readily by mechanical equipment.

"Vegetation" means plant life or total plant cover of an area.

"Watercourse" means any natural or manmade channel in which water flows continuously or intermittently in a definite direction and course, or which is used for the holding, delay or storage of waters, or which functions at any time to convey or store stormwater runoff. (Ord. 2003-058 §§ 1—2; prior code § 9.31.1505)

15.88.060 Grading approval required.

Except for the specific exemptions listed hereinafter, no person shall do or permit to be done any grading on any site in the of the city without first obtaining approval of such grading from the director in accordance with

the provisions of the grading ordinance. (Prior code § 9.31.1506)

15.88.070 Exemptions.

The following grading may be done without obtaining grading approval unless grading approval is required in mitigation monitoring agreements or other conditions of project approval. Exemption from the grading approval requirement shall not be deemed as permission to violate any other provision of this chapter.

A. Minor construction projects which meet all of the following requirements:

1. The volume of material graded is less than fifty (50) cubic yards,

2. The depth of cuts and fills is less than two feet,

3. Any drainageway is not blocked or obstructed and its stormwater carrying capacities are not modified,

4. Slopes are less than ten percent and are not left in an unstable or erodible condition;

B. Single family residential lots less than one-half acre that are not part of a larger common plan and residential infill projects less than one-half acre which also meet the requirements of subsection A of this section;

C. Excavations in connection with a swimming pool authorized by a valid building permit;

D. Grading necessary for agricultural operations unless the failure of any cut or fill created by such grading could endanger any structure intended for human or animal occupancy or any public road, or could obstruct any watercourse or drainageway;

E. Exploratory excavations of less than three hundred fifty (350) cubic yards under the supervision of a geotechnical engineer;

F. Routine cemetery excavations and fills;

G. Performance of emergency work necessary to protect life or property when an urgent necessity therefor arises. The person performing such emergency work shall notify the director promptly of the problem and work required;

H. An excavation below finished grade for basements and footings of a building authorized by a valid building permit;

I. Refuse disposal sites controlled by Title 23, Chapter 15, of the California Code of Regulations;

J. The repair and maintenance of levees for river and local drainage control performed by a governmental agency. (Prior code § 9.31.1507)

15.88.080 Grading approval.

Grading approval may be issued by the director in connection with the issuance of a building permit or the approval of improvement plans, or where grading is commenced prior to such issuance or approval, through the issuance of a separate grading permit. (Prior code § 9.31.1508)

15.88.090 Conditions of grading approval.

A. No grading shall be approved unless the project conforms with the city's general plan, any adopted specific or community plans, and applicable city ordinances, including the zoning ordinance and the subdivision ordinance.

B. Where the California Environmental Quality Act (CEQA) requires the preparation and approval of environmental documents concerning a project which will result in grading for which a grading permit is

required under this chapter, no grading shall be approved until all CEQA requirements have been met, including but not limited to mitigation measures relating to protection of threatened and endangered species under applicable federal and state endangered species laws. Where the land proposed to be graded is located within the North Natomas Community Plan Area or the South Natomas Community Plan Area, grading permits may be issued, provided that the conditions contained in Section 15.88.091 are satisfied.

C. Where a proposed grading project requires the filing of a tentative map or the intended use requires approval of a discretionary zoning permit or variance, grading may also require approval from the city planning and building department.

D. Work shall be performed in accordance with the provisions of the grading ordinance and the applicable criteria set forth in the manual of standards.

E. Grading approval shall be limited to work shown on the grading plans as approved by the director. The director may impose any condition deemed necessary to protect the health, safety, and welfare of the public, to prevent the creation of a hazard to public or private property, and/or to assure proper completion of the grading, including but not limited to the following:

1. Mitigation of adverse environmental impacts as disclosed by any environmental document findings, including but not limited to those matters specified in subsection B of this section;

2. Improvement of any existing grading to comply with the standards of the grading ordinance;

3. Requirements for fencing or other protection of grading which would otherwise be hazardous;

4. Requirements for dust, erosion, sediment and noise control, hours of operation and season of work, access roads and haul routes;

5. Requirements for safeguarding watercourses, whether natural or manmade, from excessive deposition of sediment or debris. In no case shall deposition of sediment or debris cause an exceedance of applicable water quality standards;

6. Assurance that the land area in which grading is proposed and for which habitable structures are proposed is not subject to hazards of land slippage or significant settlement or erosion and that the hazards of flooding can be eliminated or adequately reduced;

7. Requirements for safeguarding existing water wells. (Ord. 2001-021 § 1; Ord. 2001-014 § 3: prior code § 9.31.1509)

15.88.091 Requirements for development projects in North and South Natomas.

The city manager is authorized to issue grading permits within the North Natomas Community Plan Area and the South Natomas Community Plan Area only if the city manager finds that the applicant meets all the requirements of subsections A, B, C and D of this section.

A. The applicant has paid to the city (in addition to the "catch-up fee" required by Ordinance No. 2002-018) the full amount of the habitat-conservation fees that have been assessed by the city pursuant to the April 2003 Natomas Basin Habitat Conservation Plan and are then in effect (HCP Fees), including the entire amount and all elements of any increased HCP fees adopted by the Natomas Basin Conservancy ("NBC") and by the city pursuant to a validly enacted ordinance or resolution. The city anticipates receiving an adopted fee increase proposal from the NBC for consideration and adoption. The city shall not issue any grading permit until such time as the entire amount of, and all elements of, the anticipated HCP fee increase become effective or the city has otherwise secured from the applicant a written and unconditional agreement to pay the entire amount of, and all elements of, the increased HCP fees. All HCP fee increases will be included within the obligations to be covered by the agreement required under subsection D of this section.

B. If the applicant prepaid its HCP fees in an amount less than the HCP fees in effect when the grading permit is issued, the applicant has paid a catch-up fee in accordance with Ordinance No. 2002-018 and has paid an amount equal to its fair share of the amount of any HCP fee increase, on a per-acre basis, as reasonably determined by the city.

C. In lieu of the land-acquisition component of any HCP fee required to be paid under subsections A and B of this section, the applicant has transferred to the city or to the NBC fee title or a conservation easement in perpetuity for mitigation land, at the ratio of 0.5 acre of mitigation land for each acre for which the city issues a grading permit, and the applicant has paid other components of the applicable fees. If the number of acres transferred by an applicant to the city or to NBC exceeds the number of acres required to comply with the 0.5:1 mitigation formula set forth in the April 2003 Natomas Basin Habitat Conservation Plan (NBHCP), the city shall grant the applicant a credit against the land-acquisition component of any HCP fee to be paid in the future or, at the applicant's option, the city (either directly or through the NBC) shall pay the applicant, in cash, an agreed-upon amount not to exceed the fair market value of the excess acres of land transferred to the city or to NBC.

D. The applicant has executed an agreement, in a form acceptable to and approved by the city attorney, that requires the applicant and its successors in interest to do the following:

1. Comply with all provisions of the NBHCP;

2. Comply with the Incidental Take Permit and the State Incidental Take Authorization issued in conjunction with the NBHCP;

3. Pay all applicable fee increases and additions, whether adopted by the city before or within six months after issuance of the grading permit (but an applicant who has been specifically and expressly asked by the city manager or designee to pay HCP fees earlier than the date of issuance of a grading permit, and who in fact makes the requested early payment, shall not be subject to the "catch up" provisions of this clause); and

4. Release, defend, and fully indemnify the city and its officers, employees, and agents from and against all costs and damages, including attorney's fees, that may arise in connection with the city's issuance of a grading permit to the applicant, including but not limited to claims (procedural or substantive) that relate to HCP fee increases adopted by the city and arise under California's Mitigation Fee Act (title 7, division 1 of the Government Code, at chapters 6, 7, 8, and 9). (Ord. 2003-031 § 1: Ord. 2002-023 § 1; Ord. 2001-021 § 2)

15.88.100 Liability.

Neither issuance of grading approval under the provisions of the grading ordinance nor compliance with the provisions hereof or with any conditions imposed in a permit issued hereunder shall relieve any person from responsibility for damage to any person or property or impose any liability upon the city for damage to any person or property. (Prior code § 9.31.1510)

15.88.110 Scope of approval.

The issuance of grading approval shall not be construed as an approval of any action or condition constituting a violation of the provisions of the grading ordinance or of any other applicable laws, ordinances, rules or regulations. (Prior code § 9.31.1511)

15.88.120 Water obstruction.

No person shall do or permit to be done any grading which may obstruct, impede, or interfere with the natural flow of storm waters, whether such waters are unconfined upon the surface of the land or confined within land depressions, natural drainage ways, unimproved channels, watercourses, improved ditches, channels or conduits,

in such manner as to cause flooding where it would not otherwise occur, aggravate any existing flooding condition or cause accelerated erosion except where said grading is in accordance with all applicable laws including, but not limited to, the provisions of the grading ordinance. (Prior code § 9.31.1512)

15.88.130 Levee work.

No person shall excavate or remove any material from or otherwise alter any levee adjacent to any river, creek, bay, or local drainage control channel, without prior approval of the governmental agency or agencies responsible for the operation and/or maintenance of the levee. (Prior code § 9.31.1513)

15.88.140 Construction in public right-of-ways.

No person shall perform any grading work within the right-of-way of a public road or street, or within a public easement, without prior written approval of the director, and without obtaining a city encroachment permit. (Prior code § 9.31.1514)

15.88.150 Hazards.

Whenever the director determines that any grading on private property constitutes a condition which could endanger persons or property, or could adversely affect the safety, use or stability of adjacent property, or an overhead or underground utility, or any public way, watercourse or drainage channel, or could adversely affect the water quality of any water bodies or watercourses, the owner of the property upon which the condition is located, or other person or agent in possession or control of said property, upon receipt of notice in writing from the director, shall, within the period specified therein, stop all work. The director may require the submission of plans, soil or geological reports, detailed construction recommendations, drainage study or other engineering data prior to and in connection with any work or activity proposed or required to correct such condition. (Prior code § 9.31.1515)

15.88.160 Not retroactive.

The provisions of the grading ordinance shall not apply to planned or existing construction for which all previously necessary permits and approvals were obtained prior to the effective date of the ordinance codified in this chapter. (Prior code § 9.31.1516)

Article II Application for Grading Approval

15.88.170 Filing of application for grading approval—Permit.

Applications for permits shall be obtained from and filed with the department of planning and development, building inspections division. Each application shall include a plan checking fee, the preliminary or final grading plans and a statement of the intended use of the site. Only one application and permit is allowed for grading work to be done on a site. The director shall determine whether the application is complete in accordance with provisions of Article III of this chapter herein and may require additional information from the applicant before accepting the application as complete. The applicant shall be notified within ten (10) working days if the application is deemed incomplete, and of the requirements for completing the application. (Prior code § 9.32.1601)

15.88.180 Improvement plans in lieu of application for permit.

Where a subdivision improvement plan is being processed in conjunction with either an approved tentative, parcel, or final map; or a site plan is being processed in accordance with the provisions of this code, such plan shall also be considered as an application for grading approval. Such plans shall be reviewed and approved, conditionally approved or denied in accordance with the standards and requirements set forth in the grading ordinance and other applicable city specifications. If an improvement plan or site plan is approved, then a separate grading permit shall not be required. Approval of the improvement plans constitutes approval of the grading work intended. (Prior code § 9.32.1602)

15.88.190 Grading prior to issuance of building permit or approval of improvement plans.

Applicants for a permit to allow grading prior to issuance of a building permit or approval of improvement plans shall meet the following requirements:

A. Preliminary grading plan shall be submitted for review and approval by the director. This plan shall conform to the requirements of the grading ordinance and any applicable conditions placed on the project as a result of any formal discretionary permit process. The applicant shall acknowledge that any additional grading or revisions to work necessitated by conflicts discovered during the improvement plan check or subsequent construction will be corrected at the applicant's expense.

B. Both erosion and sediment control plans in accordance with provisions of Article III of this chapter, plans and specifications, of the grading ordinance shall be submitted for review and approval by the director.

C. A winterization certification shall be submitted for review and approval by the director in accordance with Section 15.88.270 of this chapter.

D. Plan check and inspection fee deposit shall be required in the amount of the full plan check fee applicable at the time of submittal in accordance with Section 15.88.310 of this chapter.

E. No grading permit shall be issued until all applicable CEQA requirements have been met. (Prior code § 9.32.1603)

15.88.200 Referral to other public agencies.

The director may refer the application to other interested public agencies for their recommendations. (Prior code § 9.32.1604)

15.88.210 Permission of other agencies or owners.

No application for grading approval shall relieve the applicant of responsibility for securing other permits or approvals, including but not limited to those specified in Section 15.88.090, subsection B, required for work which is regulated by any other department or other public agency, or for obtaining any easements or authorization for grading on property not owned by the applicant. Proof of applicable public agency permits may be required prior to issuance of grading approval. (Ord. 2001-014 § 4: prior code § 9.32.1605)

Article III Plans and Specifications

15.88.220 Application—Plans.

Five complete sets of plans, as determined by the director, including but not limited to, profiles, cross-sections, topographic maps, erosion and sediment control plans, and accompanying specifications shall be

submitted to the director with each application for grading approval or when otherwise required by the director for enforcement of any provision of this chapter. At the time of application, the applicant may provide preliminary grading plans. Prior to the issuance of grading approval, the applicant must furnish final grading plans and all erosion and sediment control plans. Preliminary grading plans with appropriate changes and additions thereto may be accepted as final grading plans. When the final grading plans and other required documents have been approved, grading approval will be issued by the director. The work shall be done in strict compliance with the approved plans and specifications which shall not be changed or altered except in accordance with the provisions of this chapter. (Prior code § 9.33.1701)

15.88.230 Preliminary grading plans.

Preliminary grading plans provide for review and determination of grading requirements prior to approval of final plans and issuance of grading approval. Precise design at this stage is not required. The plans shall be clearly and legibly drawn and entitled "preliminary grading plan," and shall contain a statement of the purpose of the proposed grading, and shall include all of the information required in the Manual of Standards, Chapter 2, Section 2. (Prior code § 9.33.1702)

15.88.240 Final grading plans.

Final grading plans and specifications shall be prepared and signed by a registered civil engineer, except as otherwise provided herein. In addition to all requirements for preliminary grading plans, the final plans shall include the information required in the Manual of Standards, Chapter 2, Section 2. The director may waive the requirement that all plans and specifications be prepared and signed by a registered civil engineer if the grading would not endanger the public health, safety, or welfare as determined by the director and would not involve or require any of the following:

A. Cuts and fills with a combined total of three hundred fifty (350) cubic yards or more;

B. An access road serving five or more existing or proposed residences;

C. A cut or fill that is located so as to cause unduly increased pressure or reduce support upon adjacent structure of property;

D. The construction of any drainage or sediment control structures, culverts, or facilities or alteration of any existing drainage course;

E. The creation or aggravation of an unstable slope condition. (Prior code § 9.33.1703)

15.88.250 Erosion and sediment control plans (ESC plan).

An ESC plan shall be prepared for all projects to control surface runoff and erosion and to retain sediment on a particular site and prevent pollution of site runoff during the period beginning when any preconstruction- or construction-related grading or soil storage first occurs, until all final improvements and permanent structures are complete. The ESC plan shall be prepared and submitted concurrently with the final grading plan. The ESC plan may be incorporated on the same plan sheet as the final grading plan unless it makes the sheet cluttered, or it may be submitted on a clean separate sheet. The separate sheet shall be drawn clearly and legibly and entitled "erosion and sediment control plan," shall contain a statement of the purpose of the proposed best management practices to be used, and shall include all of the information required and contained in the Manual of Standards, Chapter 2, Section 3. (Ord. 2003-058 § 3; prior code § 9.33.1704)

15.88.260 Postconstruction erosion and sediment control plan (PC plan).

The PC plan shall be prepared for all projects to control surface runoff and erosion and retain sediment on a particular site after all planned final improvements and/or structures have been installed or erected. The PC plan shall be prepared and submitted concurrently with the final grading plan. The PC plan shall be drawn clearly and legibly, and entitled "postconstruction erosion and sediment control plan." The PC plan shall contain a statement of the purpose of the proposed best management practices to be used to secure the project after completion, and shall include all of the information required and contained in the Manual of Standards, Chapter 2, Section 4. (Prior code § 9.33.1705)

15.88.270 Winterization certification.

A winterization certification shall be submitted no later than September 15th for all projects where any construction will occur between October 1st and April 30th. Construction that will occur solely in the summer months, between May 1st and September 30th will not be required to submit a winterization certification. The winterization certification shall consist of a written statement or descriptive plan sheet from the owner certifying that the project under construction is prepared for an event which will stop construction, such as rain or snow, that all ESC plan best management practices are in place and operating correctly, that housekeeping practices are maintained and that the site can be left or abandoned safely for an extended period of time during the rainy season without causing any erosion and sediment control problems. If a winterization certification is required and has not been submitted and approved prior to September 16th, the grading approval will be suspended until a winterization certification is submitted and approval obtained. Refer to the Manual of Standards, Chapter 4, Section 5, for additional information regarding winterization certification. (Prior code § 9.33.1706)

15.88.280 Modification of approved plans.

Any modifications of an approved final plan shall be submitted in writing to the director, who shall approve or deny such modification in his or her sole discretion. All necessary soils and geological information and design details shall accompany any proposed modification. Any modification shall be compatible with all subdivision map or land use requirements. (Prior code § 9.33.1707)

15.88.290 General design standards.

Any activities performed under the authority of the grading ordinance, including but not limited to grading, excavation, soil storage, soil transportation, erosion and sediment control measures, shall conform to the general design standards set forth in the Manual of Standards, Chapter 3. (Prior code § 9.33.1708)

Article IV Permit Requirements

15.88.300 General.

The director shall issue grading approval if final grading plans satisfy the provisions of the grading ordinance and the Manual of Standards. The director shall identify the provision, requirement, or condition which has not yet been met or performed by the applicant in the event the issuance of grading approval is denied. (Prior code § 9.34.1801)

15.88.310 Fees.

A. The applicant shall pay a fee to cover the city's costs of reviewing plans, specifications, reports and other materials related to grading approval and performing all engineering services, field investigations,

inspections, routine laboratory tests of materials and compaction or other work or services in connection with the issuance of grading approval or to determine or enforce compliance with any requirement or provision set forth in this chapter or in Chapter 13.16.

B. The fee or fees required by subsection A shall be established from time to time by resolution of the city council and shall be paid to the director either before grading approval is issued or before the issuance of a building permit, or both in accordance with the fee schedule adopted by resolution of the city council. The director may charge additional fees in any case where the city incurs costs that are not covered by the initial fee payment(s).

C. If grading work is done in violation of the grading ordinance or does not comply with the terms and conditions of a grading approval issued for such grading, the violator is required to pay the city for all costs actually incurred by the city to inspect or investigate such violation and to perform inspection and plan checking of work required to correct the violation. (Ord. 2003-058 § 4; prior code § 9.34.1802)

15.88.320 Progress report.

Applicant shall submit periodic progress reports on specified calendar dates and at commencement and completion of specified grading and erosion and sediment control operations. The dates upon which such reports are required and their content shall be as required by the director in the grading approval. (Prior code § 9.34.1803)

15.88.330 Submit record construction drawings.

The applicant shall submit to the director record construction drawings of the final grading plan and erosion and sediment control plans following completion of grading operations. (Prior code § 9.34.1804)

15.88.340 Performance of work—Inspection.

The director may inspect any work done pursuant to the grading ordinance at any time during the course of construction. No person shall be deemed to have complied with the grading ordinance until a final inspection of the work has been made by the director. As a condition of any grading approval, the applicant shall provide the city a right-of-entry and reasonable access, in accordance with Section 15.88.470 of this chapter, to the site during the performance of all work and for a minimum period of one year after acceptance by the director of all improvements pursuant to the grading ordinance. (Prior code § 9.34.1805)

15.88.350 Location of property lines.

Prior to any grading work or related activities, the owner must flag all property corners of the parcel of land to be graded. If the property corners are unknown, or whenever the location of a property line or easement or the title thereto is disputed during the application process or during a grading operation, a survey by a licensed land surveyor or civil engineer or other resolution of the title dispute, all at the expense of the applicant, may be required by the director. (Prior code § 9.34.1806)

15.88.360 Other responsibilities of applicant.

A. Protection of Utilities. The applicant shall be responsible for the prevention of damage to any public utilities or services.

B. Protection of Adjacent Property. The applicant shall be responsible for the prevention of damage to adjacent property. No person(s) shall excavate on land that is so close to the property line as to endanger any adjoining public street, sidewalk, alley, structure or other public or private property or easement without supporting and protecting such property from any damage which might otherwise result.

C. Advance Notice. The applicant shall notify the director at least twenty-four (24) hours prior to the start of work.

D. Erosion and Sediment Control. It shall be the sole responsibility of the applicant to prevent discharge of sediment from the site, in quantities greater than before the grading occurred, to any watercourse, drainage system, or adjacent property.

E. Compliance with Stormwater Management and Discharge Control Code. At all times during the preconstruction and construction of any project for which grading approval is issued until all final improvements and permanent structures are complete, the applicant shall fully comply with all applicable requirements of the city's Stormwater Management and Discharge Control Code, set forth in Chapter 13.16. (Ord. 2003-058 § 5; prior code § 9.34.1807)

15.88.370 Time limits.

All the work required by the permit or grading approval shall be completed within the time limits specified in the permit or approval. If the work cannot be completed within the specified time, a request for an extension of time setting forth the reasons for the requested extension shall be presented in writing to the director no later than thirty (30) days prior to the expiration of the permit or approval. The director shall in his or her sole discretion approve or deny such request. The director may require a new application and fees depending on the time between the expiration date and the extension request, revisions in city regulations, and/or changed circumstances in the immediate area. (Prior code § 9.34.1808)

15.88.380 Transfer of grading approval.

No approval or permit issued under the grading ordinance may be transferred or assigned in any manner whatsoever, without the express written consent of the director. (Prior code § 9.34.1809)

15.88.390 Improvement security required.

A. As a condition for the issuance of grading approval, the director may require the deposit of an improvement security in an amount deemed sufficient by him or her to assure faithful performance of the grading work in the event of default on the part of the applicant. Said security shall be in a form acceptable to the city.

B. In the case of subdivisions, the improvement security shall remain in effect until final inspections have been made and all grading work and subdivision improvements have been accepted by the city.

C. For projects other than subdivisions, the improvement security shall remain in effect until final inspections have been made and all grading work has been accepted by the director.

D. In addition to the improvement security, the director may also require the deposit of maintenance security in an amount deemed sufficient by him or her to guarantee and maintain the grading work performed, to assure the proper functioning of drainage systems and adequate erosion and sedimentation control. Said maintenance security shall be in a form acceptable to the city and shall remain in effect for a period of one year after the date of acceptance of the improvements or grading work, as designated in subsections B and C of this section, or such other periods of time as required by the director.

E. Any deposit required by the director pursuant to this title shall be payable to the city.

F. Upon failure to complete the work, failure to comply with all of the terms of the grading ordinance, or failure of the completed site to function properly to provide proper drainage or erosion and sedimentation control, the city may do the required work, or cause it to be done and collect from the applicant or surety all costs incurred thereto, including administrative and inspection costs. Any unused portion of a deposit shall be refunded to the applicant after deduction by the city of the cost of the work. (Prior code § 9.34.1810)

15.88.400 Appeals.

Appeals of any decision made pursuant to the grading ordinance shall be made to the construction codes advisory and appeals board in writing, setting forth the specific grounds therefor. Such appeals shall be heard and determined in accordance with the procedures set forth in Chapter 2.48 of this code. (Prior code § 9.34.1811)

Article V Enforcement

15.88.410 Enforcement official.

The director shall enforce the provisions of the grading ordinance. (Prior code § 9.35.1901)

15.88.420 Suspension and revocation of grading approval.

The director may suspend or revoke grading approval for good cause. In the event that a suspension or revocation is appealed to the construction codes advisory and appeals board, no work shall be performed pending appeal except as expressly authorized, in writing, by the director. (Prior code § 9.35.1902)

15.88.430 Stop work order.

A. Whenever any work is being done in violation of the provisions of the grading ordinance or any other applicable law, ordinance, rule or regulation, the director may order the work stopped by serving written notice of such violation on any persons engaged in, doing, or causing such work to be done. Any such person shall forthwith stop such work until authorized by the director to proceed with the work. If there are no persons present on the premises, the notice shall be posted in a conspicuous place. The notice shall state the nature of the violation. Any person violating a stop work order shall be guilty of an infraction.

B. Upon receipt of or knowledge of the existence of such stop work notice, the person performing the work shall:

1. Stop work immediately; and

2. Within twenty-four (24) hours, provide the director with a list of remedies which can be immediately undertaken to bring the work into compliance with this title; and

3. Within twenty-four (24) hours after acceptance of such remedies by the director, undertake at the violator's expense, such action as is necessary to bring the work into compliance with this title.

4. If engineering work is required to identify and define the proper course of action, as determined by the director, such work shall be provided by the violator at no cost to the city. (Prior code § 9.35.1903)

15.88.440 Abatement of unlawfully created conditions.

A. Any condition in violation of the grading ordinance is declared to be a public nuisance, subject to

abatement in accordance with Title 8 of this code. In the event that the director determines that a violation has created a condition which is of such a nature to be imminently dangerous to the public health, safety or welfare, such condition may be abated in accordance with the summary abatement procedures set forth at Chapter 8.04, et seq. of this code.

The following conditions are declared to constitute an imminently dangerous condition:

1. When a violation has altered natural drainage patterns and has caused flooding to any downstream or upstream property; or

2. When a violation results in a condition which creates a drainage alteration such that upstream or downstream property may be flooded when weather conditions change and the owner, lessee, or licensee of the property on which the violation exists cannot be found; or

3. When a violation results in a hazard, requiring immediate correction for the preservation of the public health, safety, or welfare; or

4. When a violation results in a discharge or release of significant amounts of sediment which causes or threatens to cause flooding, property damage, or unsafe conditions.

B. The costs incurred by city to abate any nuisance caused by a violation of the grading ordinance shall be assessed against the subject property as a lien or made a personal obligation to the owner of the property as provided in Chapter 8.04, et seq. of this code. Such costs may include, but shall not be limited to, the following:

1. Engineering and design costs;

2. Contractor service bills or public employee wages at cost;

3. Administrative overhead and supervision based on ten (10) percent of all other costs incurred;

4. Interest which shall accrue and be billed at the rate of ten (10) percent of all unpaid amounts from the date of billing;

5. Attorney fees and costs.

C. The abatement procedures set forth in this section are cumulative and in addition to any other rights or remedies which are or may be available to city to correct or cause to be corrected any violation of the grading ordinance, or to abate a condition which is otherwise a public nuisance. (Prior code § 9.35.1904)

15.88.450 Infraction.

Any person violating any provision of the grading ordinance shall be guilty of an infraction. (Prior code § 9.35.1905)

15.88.460 Nonexclusive remedies.

The remedies provided herein are not exclusive, and are in addition to any other remedy or penalty provided by law for violation of the grading ordinance. (Prior code § 9.35.1906)

15.88.470 Right of entry.

Whenever necessary to enforce the provisions of the grading ordinance, the director may enter the premises at all reasonable times to the extent authorized by law to perform any duty imposed by the grading ordinance. If such entry is refused, the director shall have recourse to every remedy provided by law to secure entry. (Prior code § 9.35.1907)

EXHIBIT C

1.28.010 General penalty—Continuing violations—Imposition of administrative penalties.

A. Criminal Sanctions. Criminal sanctions for violations of mandatory provisions of this code shall be as set forth in Sections 1.28.020 and 1.28.030 and elsewhere in this code.

B. Civil Actions. The city attorney may bring an action in a court of competent jurisdiction to enjoin a violation of any provision of this code or any other ordinance of the city, or to enforce administrative penalties imposed.

C. Administrative Penalties.

1. The purpose of this subsection relating to administrative penalties is to provide alternative remedies to address acts or omissions set forth in subsection (C)(2) of this section. Violations may be corrected, abated or addressed in a number of ways. It is the intent of this subsection to provide the city with additional remedies to correct violations and, where necessary, to penalize violators for failure to comply with city codes and ordinances. The city council hereby finds and determines that enforcement of this code, other ordinances adopted by the city, conditions on entitlements and terms of city agreements are matters of local concern and serve important public purposes. Consistent with its powers as a charter city, the city adopts this administrative penalty provision in order to achieve the following goals:

a. To protect the public health, safety and welfare of the city;

b. To provide for an administrative process that has objective criteria for the imposition of penalties and provides for a fair process to appeal the imposition of administrative penalties;

c. To provide a method to penalize responsible parties who fail or refuse to comply with provisions of this code, ordinances, agreements, or conditions on entitlements in the city;

d. To minimize the expense and delay where the sole remedy is to pursue responsible parties in the civil or criminal justice system.

The city council establishes an administrative penalty procedure. All final administrative orders made pursuant to the procedures set forth in this subsection shall be subject to review only as provided in California Code of Civil Procedure Sections 1094.5 and 1094.6. Should any court of competent jurisdiction determine that the city must provide an appeal of any final administrative order in a manner other than set forth in Sections 1094.5 and 1094.6, then it is the intent of the city council that the administrative penalty process remain as provided herein and to provide that any appeal which is timely requested follow the procedures set forth in Government Code Section 53069.4.

2. Imposition of Administrative Penalties. In addition to criminal sanctions and other remedies set forth in this code, the city may impose administrative penalties for any of the acts or omissions set forth in this subsection. Administrative penalties shall be imposed, enforced, collected and reviewed in compliance with the provisions of this section. Administrative penalties may be imposed for any of the following acts or omissions:

a. All violations of this code;

b. All violations of the city charter and other codes or ordinances adopted by the city, including but not limited to the zoning ordinance;

c. All violations of uniform codes adopted by the city;

d. Failing to comply with any order issued by a commission, board, hearing officer or examiner or other

body appointed by the city council and authorized to issue orders, including, but not limited to, the planning commission, the housing code advisory and appeals board, the design commission, the preservation commission, the design director, the preservation director and the zoning administrator;

e. Failing to comply with any condition or requirement imposed on or by any entitlement, permit, contract or environmental document issued or approved by the city.

3. Alternative Remedy. Nothing in this subsection shall prevent the city from using one or more other remedies to address violations. When the violation upon which the administrative penalty is based pertains to building, plumbing, electrical, structural or zoning provisions, the responsible party shall be provided a reasonable period of time to correct the violation prior to imposition of the administrative penalty, except in those cases in which there is an immediate danger to health or safety.

4. Definitions. For purposes of this chapter, the term "responsible party" shall refer to any person, business, company or entity, and the parent or legal guardian of any person under the age of eighteen (18) years, who has done any act for which an administrative penalty may be imposed.

D. Imposition of Administrative Penalties.

1. Notice. Where the city has determined that any responsible party has violated this code or other provisions as set forth in subsection (C)(2) of this section, the city may commence an administrative proceeding to impose administrative penalties. Any department in the city responsible for enforcement of codes or ordinances may initiate administrative penalty proceedings. To commence such proceedings, the department head or designee shall issue an order imposing administrative penalties. The order shall contain:

a. The name and address of the responsible party in violation. If the administrative penalty results from events occurring on, or the status or condition of, property, the order shall also contain the address of the property;

b. A statement from the city official responsible for issuing the order of the acts or conditions which violate this code or other provisions as set forth in subsections (C)(2) of this section and the specific code or provisions which have been violated;

c. The amount of the administrative penalty the city imposes for the violation;

d. A statement that the responsible party in violation may appeal the imposition of the administrative penalty within twenty (20) days of the date the order is served;

e. A statement that if the responsible party fails to request an appeal of the imposition of the administrative penalty, the order imposing the penalty shall be final;

f. A statement that any responsible party upon whom a final administrative penalty has been imposed may seek review of the order imposing the penalty pursuant to California Code of Civil Procedures Sections 1094.5 and 1094.6.

2. Service of Administrative Penalty Order.

a. Persons Entitled to Service. The administrative penalty order shall be served upon the responsible party in violation. The failure of the city official issuing the order to serve any person required herein to be served shall not invalidate any proceedings hereunder as to any other person duly served or relieve any such person from any duty or obligation imposed on him or her.

b. If the violation is the result of a condition existing on property in the city and the city proposes to impose a lien on the property, one copy of the administrative penalty order shall also be served on each of the following if known to the city official issuing the order or disclosed from official public records: (a) the holder of any mortgage or deed of trust or other lien or encumbrance of record; and (b) the owner or holder of any lease of record. The failure of the city official issuing the order to serve any person required herein to be served shall not

invalidate any proceedings hereunder as to any other person duly served or relieve any such person from any duty or obligation imposed on him or her.

c. Method of Service. Service of an administrative penalty order may be made upon all persons entitled thereto either by personal delivery or by certified mail, return receipt requested. Service on any owner in violation is deemed complete when it is served at the address listed by the owner on the latest equalized assessment roll of Sacramento County, or as known to the city official issuing the order. In lieu of personally serving the responsible party by personal delivery or certified mail, service of the administrative penalty order and any amended or supplemental order may be made as follows:

i. In the event that service by certified return receipt mail cannot be effected or the recipient cannot be personally served, service may be made by substituted service. Substituted service may be accomplished as follows:

(A) By leaving a copy during usual business hours in the recipient's business with the person who is apparently in charge, and by thereafter mailing by first-class mail a copy to the recipient at the address where the copy was left;

(B) By leaving a copy at the recipient's dwelling or usual place of abode, in the presence of a competent member of the household, and thereafter mailing by first-class mail a copy to the recipient at the address where the copy was left.

ii. In the event the violation results from an event occurring on, or a condition existing on, property in the city and the recipient cannot be served by certified return receipt mail or cannot be personally served and has a property manager or rental agency overseeing the premises, substituted service may be made as set forth in subsection (D)(2)(c)(i)(A) of this section upon the property manager or rental agency.

iii. If the responsible party resides or has his, her or its business address out of state and service cannot be effected by certified return receipt mail, then service may be made by first-class mail.

iv. In the event the violation relates to a condition on a property in the city, substituted service may be effected by posting the property with the administrative penalty order and mailing a copy of the order to the responsible party in violation, at the address of the property on which the violation has occurred or is occurring.

v. If the responsible party in violation or other person entitled to service cannot be located or service cannot be effected as set forth in this section, service may be made by publication in a Sacramento newspaper of general circulation which is most likely to give actual notice to the owner. Service shall be deemed sufficient when it is accomplished pursuant to Government Code Section 6063.

The failure of any person to receive such administrative penalty order shall not affect the validity of any proceedings taken under this section against any other responsible party. Service by certified mail in the manner herein provided shall be effective on the date of mailing.

3. Amount of Administrative Penalty. Unless the city council has by resolution or by ordinance adopted a separate and distinct administrative penalty for the particular violation, the amount of the administrative penalty to be imposed shall be set by the department head or his or her designee responsible for issuing the administrative penalty order. Each day a violation continues or occurs constitutes a separate violation. Unless otherwise provided in this code, administrative penalties may be imposed in any amount not less than one hundred dollars ($100.00) nor more than twenty-five thousand dollars ($25,000.00) per violation. In determining the amount of the administrative penalty to be imposed, the city official shall consider factors including but not limited to the seriousness of the violation, the responsible party's efforts to correct the violation, the injury/damage, if any, suffered by any member of the public, any instances in which the responsible party has been in violation of the same or similar code provisions in the previous three years, the amount of city staff time which was expended investigating or addressing the violation, and the amount of administrative penalties which have been imposed in similar situations. The amount of the administrative penalty shall be set according to the

following schedule:

a. Level A violations are violations that present a substantial probability that death or serious physical harm to the public at large or person(s) would result therefrom. Level A violations shall be subject to an administrative penalty of five thousand dollars ($5,000.00) to twenty-five thousand dollars ($25,000.00);

b. Level B violations are violations that either (1) present the threat, but not substantial probability, that serious physical harm to the public at large or person(s) would result therefrom; or (2) present circumstances that are likely to cause and/or do cause serious harm to public or private property; or (3) present a conscious and willful disregard of (i) a hearing examiner's order or orders, or (ii) orders or notices of violation issued by any agency or commission authorized to issue such orders or notices. Level B violations shall be subject to an administrative penalty of two thousand five hundred dollars ($2,500.00) to four thousand nine hundred ninety-nine dollars and ninety-nine cents ($4,999.99);

c. Level C violations are violations that present circumstances that either (1) are likely to cause and/or do cause harm to public or private property; or (2) show repeated or continuous noncompliance with (i) a hearing examiner's order or orders, or (ii) orders or notices of violation issued by any agency or commission authorized to issue such orders or notices. Level C violations shall be subject to an administrative penalty of one thousand dollars ($1,000.00) to two thousand four hundred ninety-nine dollars and ninety-nine cents ($2,499.99);

d. Level D violations are violations other than Level A, B, or C violations. Level D violations shall be subject to an administrative penalty of one hundred dollars ($100.00) to nine hundred dollars and ninety-nine cents ($999.99).

4. Administrative Hearing Appeal.

a. Notice of Appeal. Any responsible party upon whom an administrative penalty has been imposed may appeal the administrative penalty by filing with the office of the city clerk a written notice of appeal within twenty (20) calendar days of service of the administrative penalty order. The written notice of appeal shall contain:

i. A brief statement setting forth the interest the appealing party has in the matter relating to the imposition of the penalty;

ii. A brief statement, in ordinary and concise language, of the material facts which the appellant claims support his, her or its contention that no administrative penalty should be imposed or that an administrative penalty of a different amount is warranted; and

iii. An address at which the appellant agrees notice of any additional proceeding or an order relating to the imposition of the administrative penalty may be received by first class mail.

b. Payment of Appeal Fee. Any responsible party appealing the imposition of an administrative penalty shall be required to pay to the city clerk, at the time the written notice of appeal is filed, an appeal fee as herein provided. The appeal fee is intended to cover the costs, expenses and city employees' time incurred by the city in processing, preparation for, and hearing of the appeal, and shall be refunded to the appellant if the hearing examiner determines that imposition of the penalty is not warranted or is not in the interest of justice. No notice of appeal is valid unless accompanied by the appeal fee, unless otherwise waived pursuant to Section 1.24.100 of this code. In the event an appeal fee is waived and the violation results in a lien against the appellant's property, the appeal fee which was waived shall be added to the amount of the lien. The appeal fee shall be:

i. Level A violation, five hundred dollars ($500.00);

ii. Level B violation, two hundred fifty dollars ($250.00);

iii. Level C violation, one hundred dollars ($100.00);

iv. Level D violation, fifty dollars ($50.00).

c. Hearing Examiner. The administrative penalty appeal shall be heard by a hearing examiner appointed by the city council to hear administrative appeals. The hearing examiner shall not be a city employee.

d. Setting Administrative Penalty Appeal Hearing. The administrative penalty appeal hearing shall be set by the city clerk or his or her designee, and notice of the appeal hearing shall be sent to the appellant by first class mail at the address provided with the written notice of appeal. The hearing shall be held no sooner than twenty (20) days after the notice of appeal is filed. Notice of the appeal hearing shall be mailed to the appellant at least fifteen (15) days before the hearing date.

e. Conduct of the Administrative Penalty Appeal Hearing.

i. Testimony at the Hearing. At the time set for the administrative penalty appeal hearing the hearing examiner shall proceed to hear testimony from the representative of the city, the appellant and any other competent persons with respect to imposition of an administrative penalty.

ii. Record of Oral Evidence at Hearing. The proceedings at the hearing shall be reported by a tape recording. Either party may provide a certified shorthand reporter to maintain a record of the proceedings at the requesting party's own expense.

iii. Continuances. The hearing examiner may, upon request of the appellant or the city, or upon his or her own motion, grant continuances from time to time for good cause shown.

iv. Oaths—Certification. The hearing examiner shall administer the oath or affirmation.

v. Evidence Rules. Government Code Section 11513, subsections (a), (b) and (c), as it exists on the effective date of the ordinance codified in this section, these provisions, or as hereafter amended, shall apply to all administrative penalty hearings.

vi. Rights of Parties.

(A) Parties may represent themselves, or be represented by any person of their choice.

(B) If a party does not proficiently speak or understand the English language, he or she may provide an interpreter, at that party's own cost, to translate for the party. An interpreter shall not have had any personal involvement in the issues of the case prior to the hearing.

vii. Official Notice. In reaching a decision, official notice may be taken, either before or after submission of the case for decision, of any fact which may be judicially noticed by the courts of this state or which may appear in any of the official records of the city or county, or any of their departments.

viii. Inspection of Premises.

(A) In the case of a violation related to real property in the city, the hearing examiner may inspect the property prior to, during, or after the hearing, provided that:

(1) Notice of the inspection shall be given to the parties before the inspection is made;

(2) The parties consent and are given an opportunity to be present during the inspection; and

(3) Upon completion of the inspection, the hearing examiner shall state for the record during the hearing, or file a written statement after the hearing for inclusion in the hearing record, the material facts observed and the conclusion drawn therefrom.

(B) Each party then shall have a right to rebut or explain the matters so stated by the hearing examiner either for the record during the hearing or by filing a written statement after the hearing for inclusion in the hearing record.

(C) Notice to the parties, or the owner(s)' consent to inspect the property is not required if the property can be inspected from areas to which the general public has access or with permission of other persons authorized to provide access to the property and/or buildings located on the property.

(D) Subpoenas. The hearing examiner shall have the authority to issue subpoenas compelling witnesses to appear and provide testimony or subpoena duces tecum compelling witnesses to produce documents. The hearing examiner shall issue a subpoena only upon a showing of reasonable necessity by the requesting party. Failure of either party to comply with any subpoena may be considered by the hearing examiner in making his/her decision regarding the imposition of administrative penalties.

f. Imposition of the Administrative Penalty—Form and Contents of Decision—Finality of Decision.

i. Factors in Hearing Examiner's Decision. The hearing examiner may affirm the administrative penalty imposed by the city, reduce the penalty to a lower amount within the charged level of violation, reduce the level of violation and reduce the penalty to an amount within the new level of violation, or find that imposition of the penalty is not warranted or is not in the interest of justice. The hearing examiner shall have the discretion to impose a lower, but not a higher, level of violation and/or penalty amount. In making his or her decision regarding the administrative penalty, the hearing examiner shall consider evidence presented by all witnesses, the seriousness of the violation, the responsible party's efforts to correct the violation, the injury or damage, if any, suffered by any member of the public, any instances in which the responsible party has been in violation of the same or similar code provisions in the previous three years, and the amount of city staff time which was expended investigating and addressing the violation.

ii. Hearing Examiner's Decision. The decision of the hearing examiner shall be issued within thirty (30) days of the hearing, shall be in writing, and shall contain findings of fact and a determination of the issues presented. The decision shall require the administrative penalty to be paid within twenty-five (25) calendar days of the date of service of the decision. The decision shall inform the responsible party that if the administrative penalty is not paid within the time specified, it may be made a personal obligation of the responsible party, and if applicable may also be made a lien against the property on which the violation occurred, and may be made a special assessment collected at the same time and in the same manner as ordinary secured property taxes are collected. The hearing examiner's decision shall also inform the responsible party that any judicial review of the hearing examiner's decision shall be pursuant to California Code of Civil Procedure Sections 1094.5 and 1094.6.

iii. Service of the Hearing Examiner's Decision. Upon issuance of the decision, the city shall serve a copy on the appellant by first class mail to the address provided by appellant in the written notice of appeal. The hearing examiner's decision shall be deemed served two days after the date it is mailed to the address provided by the appellant.

iv. Any judicial action taken to set aside, annul or vacate the decision of the hearing examiner shall be filed in the manner and within the time provided in California Code of Civil Procedure Sections 1094.5 and 1094.6.

g. Payment and Collection of the Administrative Penalty.

i. Any responsible party upon whom an administrative penalty has been imposed shall pay the administrative penalty within twenty-five (25) days after service of a final order or decision of a hearing examiner. The city may take the actions set forth in this subsection to collect the unpaid penalty.

ii. Attorney's Fees and Costs. In the event a civil action is commenced to collect the administrative penalty, the city shall be entitled to recover reasonable attorney's fees and all costs associated with collection of the penalty. Costs include, but are not limited to, staff time incurred in the collection of the penalty and those costs set forth in Code of Civil Procedure Section 1033.5.

iii. Interest on Administrative Penalties. An administrative penalty shall accrue interest at the same annual rate as any civil judgment. Interest shall accrue commencing on the twenty-sixth day following service of a final order or the hearing officer's decision.

iv. Liens. The amount of the unpaid administrative penalty, plus interest, plus any other costs as provided in this section, may be made a lien on the real property on which the violation occurred.

(A) Notice shall be given to the responsible party prior to the recordation of the lien, and shall be served in

the same manner as a summons in a civil action pursuant to Article 3 (commencing with Section 415.10) of Chapter 4 of Title 5 of Part 2 of the Code of Civil Procedure.

(B) The lien shall attach when the city manager or his or her designee records a lien listing delinquent unpaid administrative penalties with the county recorder's office. The lien shall specify the amount of the lien, the date of the final administrative decision, the street address, legal description, and assessor's parcel number of the parcel on which the lien is imposed, and the name and address of the record owner of the parcel.

(C) In the event that the lien is discharged, released, or satisfied, either through payment or foreclosure, notice of the discharge containing the information specified in subsection (D)(4)(g)(iv)(B) of this section shall be recorded by the city clerk.

(D) The lien may be foreclosed at any time by an action brought by the city for a money judgment. As part of the foreclosure action, the city may recover reasonable attorneys' fees and costs, including but not limited to costs incurred for processing and recording of the lien and providing notice to the property owner.

v. Special Assessments. The amount of the unpaid administrative penalty, plus interest, plus any other costs as provided in this section, may be made a special assessment against the real property on which the violation occurred. The procedure established by the city council to specially assess delinquent utility billings shall be used to specially assess unpaid administrative penalties.

vi. Other Enforcement Procedures. The city may take such other actions as are allowed for enforcement of a civil judgment as provided for pursuant to the Enforcement of Judgments Law, California Code of Civil Procedure Sections 680.010 et seq. (Ord. 2006-065 § 3; Ord. 2005-038 § 2; Ord. 2001-046 § 2 (part); Ord. 98-038 § 1: Ord. 97-065 § 1; prior code § 1.01.070)

EXHIBIT D

City of Sacramento
Department of Utilities

Policy For Determining Administrative Penalties For Prohibited Non-Stormwater Discharges

Section 13.16.050 of the Sacramento City Code prohibits the discharge of non-stormwater that enters the City's storm drain system. City Code section 13.16.150 authorizes various enforcement actions for violations of section 13.16.050, including the imposition of administrative penalties. Administrative penalties for violations of section 13.16.050 are imposed pursuant to the City's administrative penalty ordinance, Sacramento City Code section 1.28.010. This ordinance provides the following guidance for determining administrative penalty amounts:

> ***Amount of Administrative Penalty.*** *Unless the city council has by resolution or by ordinance adopted a separate and distinct administrative penalty for the particular violation, the amount of the administrative penalty to be imposed shall be set by the department head or his or her designee responsible for issuing the administrative penalty order. Each day a violation continues or occurs constitutes a separate violation. Unless otherwise provided in this code, administrative penalties may be imposed in any amount not less than one hundred dollars ($100.00) nor more than twenty-five thousand dollars ($25,000.00) per violation. In determining the amount of the administrative penalty to be imposed, the city official shall consider factors including but not limited to the seriousness of the violation, the responsible party's efforts to correct the violation, the injury/damage, if any, suffered by any member of the public, any instances in which the responsible party has been in violation of the same or similar code provisions in the previous three years, the amount of city staff time which was expended investigating or addressing the violation, and the amount of administrative penalties which have been imposed in similar situations. The amount of the administrative penalty shall be set according to the following schedule:*
>
> *a.* *Level A violations are violations that present a substantial probability that death or serious physical harm to the public at large or person(s) would result therefrom. Level A violations shall be subject to an administrative penalty of five thousand dollars ($5,000.00) to twenty-five thousand dollars ($25,000.00);*
>
> *b.* *Level B violations are violations that either (1) present the threat, but not substantial probability, that serious physical harm to the public at large or person(s) would result therefrom; or (2) present circumstances that are likely to cause and/or do cause serious harm to public or private property; or (3) present a conscious and willful disregard of (i) a hearing examiner's order or orders, or (ii) orders or notices of violation issued by any agency or commission authorized to issue such orders or notices. Level B violations shall be subject to an administrative penalty of two thousand five hundred dollars ($2,500.00) to four thousand nine hundred ninety-nine dollars and ninety-nine cents ($4,999.99);*

c. *Level C violations are violations that present circumstances that either (1) are likely to cause and/or do cause harm to public or private property; or (2) show repeated or continuous noncompliance with (i) a hearing examiner's order or orders, or (ii) orders or notices of violation issued by any agency or commission authorized to issue such orders or notices. Level C violations shall be subject to an administrative penalty of one thousand dollars ($1,000.00) to two thousand four hundred ninety-nine dollars and ninety-nine cents ($2,499.99);*

d. *Level D violations are violations other than Level A, B, or C violations. Level D violations shall be subject to an administrative penalty of one hundred dollars ($100.00) to nine hundred dollars and ninety-nine cents ($999.99).*

Based on the above criteria, the following guidelines are established for determining administrative penalty amounts for prohibited non-stormwater discharges.

Residential/Private Citizen

Non-hazardous non-stormwater discharges

Non-hazardous materials include dirt/gravel/sand, vegetation, gray water, food waste, chlorinated pool water, detergents, etc.

First Violation:

Issuance of a notice of violation, cease and desist order and/or notice to clean and abate, but no imposition of administrative penalties, unless the City enforcement official determines that the responsible party was grossly negligent, failed to contain and clean up the prohibited material within the time frame prescribed by the City, attempted to mislead the City with incorrect information and/or refused to comply with the City's enforcement action(s).

Second Violation:

Minimum penalty of $100, not to exceed $999.99 (Level D). This also may be imposed for a first violation under the circumstances described above. Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Subsequent Violations:

If the City enforcement official has imposed an administrative penalty on the same responsible party for a violation of City Code Section 13.16.050 within the preceding three years, the maximum administrative penalty for subsequent violations of City Code Section 13.16.050 may be increased to $2,499.99. The circumstances of the subsequent violations need not be similar to those of the previous violation(s). The maximum administrative penalty for subsequent violations may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. Determination of the penalty amount within these ranges will be made based on consideration of the factors set forth above.

Multiple Days:

Each day a violation continues or occurs can be charged as a separate violation.

Hazardous non-stormwater discharges

Hazardous materials include oils, fuels, latex, oil or water based paint, stucco or concrete waste/wastewater, sewage, antifreeze, paint thinners, herbicides, pesticides, pool chemicals, cleaners, solvents, acids, etc.

First Violation:

Minimum penalty of $200, not to exceed $2,499.99 (Level C or D) for the first prohibited non-stormwater discharge identified as a hazardous material. Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Subsequent Violations

If the City enforcement official has imposed an administrative penalty on the same responsible party for a prohibited hazardous non-stormwater discharge within the preceding three years, the maximum administrative penalty for subsequent prohibited hazardous non-stormwater discharges may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. The circumstances of the subsequent violations need not be similar to those of the prior violation(s). Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Multiple Days:

Each day a violation continues or occurs can be charged as a separate violation.

Business

Non-hazardous non-stormwater discharges

First Violation:

Issuance of a notice of violation, cease and desist order and/or notice to clean and abate, but no imposition of administrative penalties, unless the City enforcement official determines that the responsible party was grossly negligent, failed to contain and clean up the prohibited material within the time frame prescribed by the City, attempted to mislead the City with incorrect information and/or refused to comply with the City's enforcement action(s).

Second Violation:

Minimum penalty of $250, not to exceed $2,499.99 (Level C or D). This also may be imposed for a first violation under the circumstances described above. Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Subsequent Violations:

If the City enforcement official has imposed an administrative penalty on the same responsible party for a violation of City Code Section 13.16.050 within the preceding three years, the maximum administrative penalty for subsequent violations of City Code Section 13.16.050 may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. The circumstances of the subsequent violations need not be similar to those of the previous violation(s). Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Multiple Days:

Each day a violation continues or occurs can be charged as a separate violation.

BMPs:

The responsible party may, upon approval by the City enforcement official, apply the administrative penalty amount toward the purchase of structural BMP's to eliminate any reasonable possibility of a future prohibited non-storm water discharge.

Hazardous non-stormwater discharges

First Violation:

Minimum penalty of $500, not to exceed $2,499.99 (Level C or D) for the first prohibited non-stormwater discharge identified as a hazardous material. The maximum administrative penalty may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. Determination of the penalty amount within these ranges will be made based on consideration of the factors set forth above.

Subsequent Violations

If the City enforcement official has imposed an administrative penalty on the same responsible party for a prohibited hazardous non-stormwater discharge within the preceding three years, the maximum administrative penalty for subsequent prohibited hazardous non-stormwater discharges may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. The circumstances of the subsequent violations need not be similar to those of the prior violation(s). Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Multiple Days:

Each day a violation continues or occurs can be charged as a separate violation.

BMPs:

The responsible party may, upon approval by the City enforcement official, apply the administrative penalty amount toward the purchase of structural BMP's to eliminate any reasonable possibility of a future prohibited non-storm water discharge.

Administrative Penalties of $5,000 or More

Administrative penalties of $5000 or more, up to a maximum amount of $25,000, may be imposed under circumstances meeting the criteria set forth above for Level A violations.

Other Enforcement Actions; Cost Recovery

The imposition of administrative penalties for violations of City Code Section 13.16.050 shall not prevent the City or any other authorized agency from exercising any additional enforcement authority authorized or provided in any law or regulation, including without limitation any or all of the actions authorized by City Code Section 13.16.150. The imposition of administrative penalties shall be in addition to the recovery of costs incurred by the City in cleaning up and abating a violation, or the recovery of costs granted to the City after prevailing in an administrative, civil or criminal proceeding initiated under Chapter 13.16 of the City Code.

EXHIBIT E

TITLE 15 WATER AND SEWERS*

Chapter 15.12 STORMWATER MANAGEMENT AND DISCHARGE CONTROL

Article 1 General Provisions

15.12.105 Title.

15.12.110 Findings.

15.12.120 Purpose and Intent.

15.12.130 Definitions.

15.12.135 Construction.

15.12.140 Applicability.

15.12.150 Regulatory Consistency.

15.12.160 Compliance Disclaimer.

15.12.170 Severability.

15.12.180 Administration.

15.12.190 Disclaimer of Liability.

Article 2 Prohibited Discharges

15.12.200 Prohibited Non-Stormwater Discharge.

15.12.210 Exceptions To Non-Stormwater Discharge Prohibition.

15.12.220 Exception to Otherwise Applicable Exemptions.

15.12.230 Prohibited Stormwater Discharges.

15.12.240 Prohibited Conditions.

15.12.250 Negligence or Intent Not Required.

Article 3 Reduction of Pollutants in Stormwater

15.12.300 General Requirements for Best Management Practices.

15.12.302 Significant Industrial Activities.

15.12.305 County Stormwater Permit.

15.12.310 Containment and Notification of Spills.

15.12.320 Specified Performance Requirements for Industrial Activities.

15.12.322 Construction Sites With Building Permits.

15.12.325 Post Construction Requirements for New Development and Significant Redevelopment.

15.12.327 BMP Maintenance Requirements.

15.12.330 Administrative Rules and Regulations.

Article 4 Inspection and Monitoring

15.12.400 Scope of Inspections.

15.12.430 Monitoring Requirements for Industrial Facilities.

15.12.435 Reporting Requirements.

15.12.438 Confidentiality of Information.

15.12.440 Record Retention.

15.12.450 Fees.

Article 5 Enforcement

15.12.500 Enforcement at Construction Sites with Building Permits.

15.12.505 Notice of Violation.

15.12.520 Cease and Desist Orders.

15.12.525 Enforcement Actions—Content.

15.12.530 Delivery of Notice.

15.12.540 Administrative Appeals.

15.12.543 Conduct of Administrative Hearings—Generally.

15.12.545 Form and Contents of Decision—Finality of Decision.

15.12.548 Procedures for Collection of Administrative Civil Penalty.

15.12.549 Actions Not Prohibited.

15.12.550 Nuisance and Abatement.

15.12.555 Enforcement Policy.

15.12.560 Administrative Civil Penalties.

15.12.570 Criminal Penalties.

15.12.580 Miscellaneous Enforcement Provisions.

Article 6 Recovery of Cost Abatement

15.12.600 Costs of Abatement—Confirmation.

15.12.610 Costs—Assessments.

15.12.620 Treble Costs.

15.12.630 Hearing of Protests.

15.12.640 Assessment for Summary Abatement.

15.12.650 Time for Contest of Assessment.

15.12.660 Filing Copy of Report With County Auditor.

Article 1 General Provisions

15.12.105 Title.

This Chapter shall be known as the "stormwater Ordinance." (SCC 1280 § 2 (part), 2004)

15.12.110 Findings.

a. The Federal Clean Water Act provides for the regulation and reduction of pollutants discharged into the Waters of the United States by extending National Pollutant Discharge Elimination System (NPDES) requirements to stormwater and urban runoff discharge into the County storm drain system.
b. The State Water Resources Control Board ("State Board") is the State water pollution control agency for all purposes of the Clean Water Act pursuant to Section 13160 of the California Water Code. The State Board is authorized by the United States Environmental Protection Agency to administer the NPDES program within the State. The Porter-Cologne Water Quality Control Act (Water Code section 13000 et seq.) provides authority for the State NPDES program, including provisions to issue NPDES Permits and Waste Discharge Requirements to regulate discharges of stormwater to waters of the State.
c. Stormwater flows from individual properties to the County storm drain system and then ultimately to the waters of the State.
d. The County is a co-permittee under the Waste Discharge Requirements for County of Sacramento and cities of Citrus Heights, Elk Grove, Folsom, Galt, and Sacramento, Storm Water Discharges from Municipal Separate Storm Sewer Systems Sacramento County (Order No. R5-2002-0206), dated December 6, 2002, which also serves as a National Pollutant Discharge Elimination System Permit under the Federal Clean Water Act (NPDES No. CAS082597). As a co-permittee, the County is required to possess the necessary legal authority, and to implement appropriate procedures, to regulate the entry of pollutants and non-stormwater discharges into and from the County storm drain system.
e. The County's Municipal Stormwater Permit requires the County effectively to prohibit non-stormwater discharges from the unincorporated urbanized area of the County into the County storm drain system except as otherwise permitted by federal law.
f. Non-stormwater discharges and stormwater pollutants that are discharged directly to waters of the State without passing through the County storm drain system are not subject to the requirements of the Municipal Stormwater Permit. However, such discharges have the potential

to degrade water quality and impact the quality of life for the people of the County. Regulation of such discharges by the County provides benefits to its people and protects the local environment.
g. The Board finds in this regard that the provisions of this Chapter are necessary to provide the County with the legal authority necessary to implement and otherwise comply with the requirements of its Municipal Stormwater Permit and to protect the waters of the State for the benefit of its people and the environment. (SCC 1295 § 1, 2005: SCC 1280 § 2 (part), 2004)

15.12.120 Purpose and Intent.

a. This Chapter is adopted pursuant to Article XI, Section 7 of the California Constitution which authorizes the County to exercise its police power to protect and promote the public health, safety and general welfare. While stormwater runoff is one step in the natural cycle of water, human activities, including, but not limited to, agriculture, construction, manufacturing and the operation of an urban infrastructure, may result in undesirable discharges of pollutants and certain sediments. Such discharges may accumulate in local drainage channels and waterways and eventually may be deposited in the natural surface waters. The purpose of this Chapter is to protect and enhance the watercourses within the unincorporated area of the County, by controlling the contribution of urban pollutants to stormwater runoff which enters the County storm drain system in a manner consistent with the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and Municipal discharge Permit No. CAS082597, and by controlling pollutants that are discharged directly to natural surface waters.
b. It is the intent of the Board in adopting this Chapter to provide the County with the legal authority to accomplish the following goals:
1. To benefit the people and environment of the County by protecting water quality in waters of the State;
2. To reduce the discharge of pollutants in stormwater to the maximum extent practicable, whether those discharges are made to the County storm drain system, or directly to natural surface waters;
3. To effectively prohibit Non-stormwater discharges into the County storm drain system or to natural surface waters;
4. To comply with the requirements of the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and NPDES Municipal Storm Water Discharge Permit #CAS082597 as they apply to the discharge of pollutants into and from the County storm drain system;
5. To fully implement the County's stormwater Quality Improvement Plan;
6. To protect the physical integrity and function of the County storm drain system from the effects of pollutants and materials other than stormwater;
7. To prevent the contamination of groundwater as a result of pollution migration from the County storm drain system;
8. To promote cost effective management and beneficial use of sediments in the County storm drain system;
9. To protect the health and safety of maintenance personnel and the public who may be exposed to pollutants in the County storm drain system or in natural surface waters;
10. To provide for the recovery of regulatory costs incurred by the County in the implementation of this Chapter or its stormwater Quality Improvement Plan, including, but not limited to, enforcement activities, compliance assistance, inspections, investigations, sampling and monitoring; and
11. To establish appropriate enforcement procedures and penalties for violations of the provisions of this Chapter. (SCC 1280 § 2 (part), 2004)

15.12.130 Definitions.

Any term(s) defined in the Federal Clean Water Act, as amended, and/or defined in the regulations for the stormwater discharge permitting program issued by the Environmental Protection Agency, as amended, and which are not specifically defined in this Chapter shall, when used in this Chapter, have the same meaning as set forth in said act or regulation.
As used in this Chapter, the following words and phrases shall have the meanings set forth below unless the context clearly indicates otherwise.
a. "Administrator" means the Administrator of the County of Sacramento's Municipal Services Agency and his or her designees.

b. "Best management practices" or BMPs means schedules of activities, prohibition of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce to the maximum extent practicable the discharge of pollutants to the County storm drain system or directly or indirectly to natural surface waters. BMPs shall also be defined to include structural controls, treatment controls, source controls, training requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, and drainage from raw materials storage.
c. "Board" means the Board of Supervisors of the County of Sacramento.
d. "County" means the County of Sacramento.
e. "County stormwater permit" means a permit issued to industries by the County to establish requirements intended to eliminate Non-stormwater discharges and control, reduce, or eliminate pollutants in stormwater.
f. "County storm drain system" means those public man-made facilities within the unincorporated area of the County which are owned, operated, maintained or controlled by the County by which stormwater may be conveyed to natural surface waters, including, but not limited to, any roads with drainage systems, municipal streets, catch basins, water quality basins, detention basins, constructed wetlands, artificial channels, aqueducts, curbs, gutters, ditches, sumps, pumping stations, storm drain inlets, and storm drains.
g. "Director of Water Resources" means the Director of the County's Department of Water Resources, and his or her designees.
h. "Discharge" means the release or placement of any material into the County storm drain system or natural surface waters, including, but not limited to, stormwater, wastewater, pollutants, solid materials, liquids, hazardous waste, raw materials, debris, litter or any other substance.
i. "Discharger" means any person who discharges, or causes to discharge, either directly or indirectly, stormwater or any other material into the County storm drain system or to natural surface waters.
j. "Illicit connection" means any physical connection to the County storm drain system or natural surface waters which is not expressly authorized by the County.
k. "Implementing agency" means the agency or department designated by the Administrator to enforce the provisions of this Chapter with respect to a particular site, facility or industry category.
l. "Industry" or "industrial activity" means any service, business, enterprise, or any other activity conducted by any person for the purpose of monetary or other compensation, or in support of or promotion of such activity. This term shall also mean any similar activity conducted by a non-profit corporation as defined by the State of California.
m. "Material" means any substance, including, but not limited to, raw materials, finished products, garbage and debris, lawn clippings, leaves and other vegetation, biological and fecal waste, sediment and sludge, oil and grease, gasoline, paints, solvents, cleaners and any fluid or solid containing chemicals.
n. "Municipal Stormwater Permit" means NPDES Permit #CAS082597, including any amendments thereto or successor permit, issued by the Regional Board to the County and the cities of Citrus Heights, Elk Grove, Folsom, Galt, Rancho Cordova, and Sacramento.
o. "National Pollution Discharge Elimination System Permit" or "NPDES Permit" means a permit issued by either the Regional Board, the State Water Resources Control Board pursuant to Chapter 5.5 (commencing with Section 13370) of Division 7 of the Water Code, or the United States Environmental Protection Agency to control discharges from point sources to natural surface waters.
p. "Natural surface water" means creeks, natural ponds or lakes, wetlands, the Sacramento River, American River, Cosumnes River, Mokelumne River, Lake Natoma, or navigable waters of the delta and shall include any waters of the United States contained within the boundaries of the State. Natural surface water does not mean any wet or dry detention basin, constructed wetland, stormwater treatment facility, artificial lake or pond or other man-made body of water.
q. "Non-stormwater discharge" means any discharge to the County storm drain system or directly to natural surface waters which did not originate as surface runoff and drainage from storm events and snow melt, but essentially resulted from human activities, or materials or processes under a persons control. Non-stormwater discharges include but are not limited to discharges of: (1) water that has been used by a person for any purpose such as cleaning, rinsing, cooling, irrigation, aquaculture, recreation, cooking, and industrial processes; (2) water or wastewater that originates or flows from equipment, valves, piping, hoses, containers, tanks, or other man-made apparatus; or (3) any discharge of materials or wastes other than water.
r. "Person" means any natural person as well as any corporation, partnership, public agency,

trust, estate, cooperative association, joint venture, business entity or other similar entity, or the agent, employee or representative of any of the above.
s. "Pollutant" means any contaminant or other substance which, as determined by the Administrator, is discharged or has a reasonable potential to be discharged in sufficient quantities or concentrations to cause exceedance of receiving water limitations, or otherwise cause a violation of the Municipal Stormwater Permit. Pollutant may include, but is not limited to, solid waste, sewage, garbage, medical waste, wrecked or discarded equipment, radioactive material, dredged soil, rock, sand, industrial waste, feces, fecal coliform, fecal streptococcus, enterococcus, volatile organic carbon, surfactants, oil and grease, petroleum hydrocarbon, organic solvents, metals, phenols, pesticides, nutrients, suspended or settleable solids, materials causing an increase in biochemical or chemical oxygen or total organic carbon, substances which alter pH, and those pollutants defined in Section 1362(6) of the Federal Clean Water Act.
t. "Potential discharger" means any person who by nature of the enterprise, activity or industry in which such person is engaged, or by the use, possession or ownership of specified types of building, facility, equipment, or materials, is determined by the Administrator to generate or have the capacity to generate pollutants, wastes, or wastewater which have significant potential to be discharged to the County storm drain system or directly to any natural surface waters.
u. "Premises" means any building, lot, parcel or land, or portion thereof, whether improved or unimproved.
v. "Prohibited non-stormwater discharge" means any non-stormwater discharge to the County storm drain system or directly to natural surface waters, which is not otherwise specifically authorized by this Chapter, the Regional Board, State or Federal law, or an NPDES Permit.
w. "Prohibited non-stormwater discharge installation" means any structure or equipment installed at a person's premises that is not directly connected to the County drain system, but nonetheless is intended or serves to discharge or convey a prohibited non-stormwater discharge to the County storm drain system or waters of the State.
x. "Receiving water limitations" is as defined and listed in Section B.1. of the Municipal Stormwater Permit or any successor document.
y. "Receiving waters" means surface bodies of water, as defined by the Municipal Stormwater Permit, including, but not limited to, creeks and rivers, which serve as discharge points for the County storm drain system.
z. "Regional Board" means the California Regional Water Quality Control Board, Central Valley Region.
aa. "Significant industrial activity" means any industrial activity, individual industrial facility, or class of industrial facilities which is determined by the Administrator to discharge or have the potential to discharge pollutants into stormwater, or non-stormwater in quantities or concentrations which may cause exceedance of receiving water limitations, or for which a requirement has been imposed by the state or federal government on the County to conduct stormwater regulatory activities focused on the facility or activity.
bb. "Significant redevelopment" means the creation or addition of at least five thousand (5,000) square feet of impervious surfaces on an already developed site. Significant redevelopment includes, but is not limited to expansion of a building footprint, or replacement of a structure; replacement of impervious surface that is not part of a routine maintenance activity; and land-disturbing activities related to structural or impervious surfaces.
cc. "Specified performance requirements" means standards adopted by the County that define required conditions or results regarding the elimination of non-stormwater discharges or the control of pollutants in stormwater from specified sources.
dd. "State Construction General Permit" means the State Water Resources Control Board's Order No. 99-08 – DWQ, National Pollutant Discharge Elimination System (NPDES) General Permit No. CAS000002 Waste Discharge Requirements (WDRS) for discharges of Storm Water Runoff Associated With Construction Activity, and any successor documents.
ee. "State Industrial General Permit" means the State Water Resources Control Board's "Water Quality Order No. 97-03-DWQ, National Pollutant Discharge Elimination System General Permit No. CAS000001, Waste Discharge Requirements for Discharges of Storm Water Associated With Industrial Activities Excluding Construction Activities" and any successor documents.
ff. "Stormwater" means surface runoff and drainage resulting from storm events and snow melt, including surface runoff and drainage that contains pollutants as a result of contact with man-made or natural sources.
gg. "Threatened prohibited non-stormwater discharge" means any condition or activity which does not currently result in a prohibited non-stormwater discharge but is nevertheless determined by the Administrator to be a condition which results in a substantial likelihood of a future

prohibited non-stormwater discharge;
hh. "Unmitigated stormwater pollutant source" means any existing condition that if left unmitigated is reasonably likely, as determined by the Administrator, to result in a discharge of pollutants in stormwater that will cause or contribute to an exceedance of receiving water limitations, harm or interfere with the County storm drain system, or otherwise pose a threat to public health and safety.
ii. "Waters of the United States" has the same meaning as set forth in Part 122.2 of Title 40 of the Code of Federal Regulations or any successor provision. (SCC 1295 § 2, 2005: SCC 1280 § 2 (part), 2004)

15.12.135 Construction.

The provisions of this Chapter shall be construed to assure consistency with the requirements of the Federal Clean Water Act and any acts amendatory thereof or supplementary thereto, applicable implementing regulations, and NPDES Permit # CAS082597 and any amendment, revision or re-issuance thereof. In the event of a conflict between this Chapter and any federal or state law, regulation, order or permit, the requirement which establishes the higher standard for public health and safety shall govern. (SCC 1280 § 2 (part), 2004)

15.12.140 Applicability.

The provisions of this Chapter shall be applicable to all dischargers and potential dischargers located within the unincorporated area of the County and all dischargers or potential dischargers that discharge either directly or indirectly into the County storm drain system. This Chapter shall also apply, within the unincorporated area of the County, to stormwater and Non-stormwater discharges made directly to natural surface waters. This Chapter shall not be applicable to discharges occurring outside the unincorporated area of the County.
This Chapter shall apply to facilities subject to the State Construction General Permit; the pollutant control provisions of the County Erosion and Sediment Control Ordinance, County Grading permit, or a Building Permit; or any other instrument of the County that establishes pollutant control provisions for construction sites. However, compliance with the requirements of these permits and the Erosion and Sediment Control Ordinance shall constitute compliance with this Chapter.
This Chapter shall not apply to activities conducted by or facilities operated by the State of California or by agencies of the Federal Government. (SCC 1280 § 2 (part), 2004)

15.12.150 Regulatory Consistency.

The provisions of this Chapter shall take precedence over and are controlling with respect to any conflicting or inconsistent provisions in this Code. (SCC 1280 § 2 (part), 2004)

15.12.160 Compliance Disclaimer.

Compliance by any person with the provisions of this Chapter shall not preclude the need to comply with other local, state or federal statutory or regulatory requirements relating to the control of pollutant discharges or protection of stormwater quality, or both. (SCC 1280 § 2 (part), 2004)

15.12.170 Severability.

If any section, subsection, subdivision, paragraph, sentence, clause or phrase of this Chapter is for any reason held to be invalid or unconstitutional by a decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases of this Chapter. The Board hereby declares that it would have adopted this Chapter and each section, subsection, subdivision, paragraph, sentence, clause or phrase thereof without regard to whether any other section,

subsection, subdivision, paragraph, sentence, clause or phrase of this Chapter would subsequently be declared to be invalid or unconstitutional. (SCC 1280 § 2 (part), 2004)

15.12.180 Administration.

Except as otherwise provided herein, the authority to implement this Chapter is vested in the Administrator who shall be responsible for the administration, implementation and enforcement of the provisions of this Chapter. Unless otherwise specified herein, any powers granted to or duties imposed upon the Administrator may be delegated by the Administrator to other County employees or, upon the approval of the Board, to employees of other public agencies. (SCC 1280 § 2 (part), 2004)

15.12.190 Disclaimer of Liability.

The degree of protection required by this Chapter is considered reasonable for regulatory purposes and is based on scientific, engineering and other relevant technical considerations. The standards set forth herein are minimum standards and this Chapter does not imply that compliance will ensure that there will be no unauthorized discharge of pollutants into natural surface waters. This Chapter shall not create liability on the part of the County or any officer or employee thereof for any damages that result from reliance on this Chapter or any administrative decision lawfully made there under. (SCC 1280 § 2 (part), 2004)

Article 2 Prohibited Discharges

15.12.200 Prohibited Non-Stormwater Discharge.

Except as provided in Section 15.12.210, it shall be unlawful for any person to make or cause to be made any Non-stormwater discharge into the County storm drain system or directly to natural surface waters. (SCC 1280 § 2 (part), 2004)

15.12.210 Exceptions To Non-Stormwater Discharge Prohibition.

The following discharges to the County storm drain system are exempt from the otherwise applicable discharge prohibition set forth in Section 15.12.200:
a. Any discharge regulated under a NPDES Permit issued to the discharger, and administered by the State pursuant to Chapter 5.5 of Division 7 of the Water Code, provided that any such discharge is in compliance with all requirements of the NPDES Permit and all other applicable laws and regulations.
b. Any discharge from any of the following activities provided that any such discharge does not cause or contribute to the violation of any receiving water limitation as determined by the Administrator:
1. Water line flushing;
2. Landscape irrigation;
3. Diverted stream flows;
4. Rising ground waters;
5. Uncontaminated ground water infiltration [as defined in 40 CFR 35.2005(20)] to separate storm sewers;
6. Uncontaminated pumped ground water;
7. discharges from potable water sources;
8. Foundation drains;
9. Air conditioning condensate;
10. Uncontaminated irrigation water;
11. Springs;
12. Water from crawl space pumps;
13. Footing drains;
14. Lawn watering;

15. Individual residential car washing;
16. Flows from riparian habitats and wetlands;
17. Dechlorinated swimming pool discharges; or
18. discharges or flows from emergency fire fighting activities.
c. Any discharges which the Administrator, the County Health Officer or the Regional Board determines in writing are necessary for the protection of public health or safety.
d. Additional categories of non-stormwater discharges which do not cause or contribute to the violation of any receiving water limitation may be excepted from the otherwise applicable prohibition by the Administrator upon approval of the Executive Officer of the Regional Board, as provided in the Municipal Stormwater Permit, or any successor permit. (SCC 1280 § 2 (part), 2004)

15.12.220 Exception to Otherwise Applicable Exemptions.

Notwithstanding the exemptions provided for in Section 15.12.210 above, if the Regional Board or the Administrator determines that a discharge which is otherwise exempt from the prohibition on discharges causes or significantly contributes to the violation of any receiving water limitation or results in the conveyance of significant quantities of pollutants to natural surface waters, or is otherwise a danger to public health or safety, the Administrator may give written notice to the owner or operator of the facility that the discharge exception shall not apply to the discharge at issue following expiration of the thirty (30) day period commencing upon delivery of the notice. Upon expiration of such thirty (30) day period, any such discharge shall be unlawful. Upon finding that any continuance of the discharge poses an immediate significant threat to the environment or to public health and safety, the Administrator may waive the thirty day waiting period and require immediate cessation of the discharge. (SCC 1280 § 2 (part), 2004)

15.12.230 Prohibited Stormwater Discharges.

It shall be unlawful for any person to discharge, or cause to be discharged, any stormwater or material to the County storm drain system which results in, or contributes to a violation of a receiving water limitation or a violation of the Municipal Stormwater Permit. (SCC 1280 § 2 (part), 2004)

15.12.240 Prohibited Conditions.

a. In the interest of preventing prohibited discharges from occurring, it shall be unlawful for any person to maintain, or cause to be maintained, any of the following conditions:
1. Unmitigated stormwater pollution source;
2. Threatened prohibited non-stormwater discharge;
3. Prohibited non-stormwater discharge installation; or
4. Illicit connection.
b. Illicit connections shall be subject to removal and abatement by the County pursuant to this Chapter and Title 16 of this Code.
c. The prohibition set forth in subsection (a)(4) above shall apply to illicit connections in existence at the time that this Chapter becomes effective. Upon the effective date of this Chapter, any person who maintains an illicit connection shall have thirty (30) days from the effective date of this Chapter to disconnect and discontinue use of such connection. Notwithstanding the provisions of this section, any person who maintains an illicit connection, as defined in Section 15.12.130, may apply to the County for a Sacramento County Water Agency Permit to continue the connection subject to applicable County standards. No permit shall be issued for any connection or any physical facility or apparatus that is installed, intended, serves, or is known to convey a prohibited discharge to the County storm drain system or waters of the State. (SCC 1295 § 3, 2005: SCC 1280 § 2 (part), 2004)

15.12.250 Negligence or Intent Not Required.

A violation of the provisions of this Article shall occur irrespective of the negligence or intent of

the violator to construct, maintain, operate or utilize an illicit connection or to cause, allow or facilitate any prohibited discharge. (SCC 1280 § 2 (part), 2004)

Article 3 Reduction of Pollutants in Stormwater

15.12.300 General Requirements for Best Management Practices.

Any person engaged in activities which may result in pollutants entering the stormwater conveyance system shall, to the maximum extent practicable, undertake BMPs to reduce the risk of Non-stormwater discharge and/or pollutant discharge. (SCC 1280 § 2 (part), 2004)

15.12.302 Significant Industrial Activities.

a. The Administrator may designate as significant industrial activities those industrial activities or facilities which are identified as potentially significant sources of discharges of pollutants to the County storm drain system. A significant industrial activity may occur at stationary facilities or as a mobile activity that takes place at various job sites.
b. Industries for which the Municipal Stormwater Permit specifies that the County shall conduct routine inspections, or which are listed in Municipal Stormwater Permit provision 9 ii c, are hereby designated as significant industrial activities.
c. Notwithstanding subsection (b) of this section, food establishments, as defined in the Section 113780 of the State of California Health and Safety Code, shall not be designated as significant industrial activities.
d. Significant industrial activity designations that apply only to individual facilities may be made by the Administrator and are subject to appeal under section 15.12.540 of this Chapter.
e. Significant industrial activity designations made by the Administrator pursuant to subsection (a) of this section that apply to classes of activities or facilities shall be subject to the requirements of Section 15.12.330 of this Chapter governing the adoption of regulations. (SCC 1295 § 4, 2005: SCC 1280 § 2 (part), 2004)

15.12.305 County Stormwater Permit.

a. The Administrator may require the owner or operator of a significant industrial activity to obtain a County stormwater permit, which may establish any provisions necessary for the implementation of this Chapter, effective control of stormwater pollutants and non-stormwater discharges, and compliance with the Municipal Stormwater Permit. Provisions may include but are not limited to applicable specified performance requirements; and reporting, documentation, training, and monitoring requirements.
b. Notwithstanding subsection (a) of this Section, food establishments, as defined in the State of California Health and Safety Code Section 113780, and industrial facilities required to obtain coverage under the State Industrial General Permit shall not be required to obtain a County stormwater permit.
c. The County stormwater permit shall describe the aspects of business to which it applies, which may include but are not limited to areas, equipment, buildings, industrial processes, or activities of the business.
d. Any person who continues to own or operate a significant industrial activity without obtaining a County stormwater permit if required by the Administrator, shall be in violation of this Chapter.
e. The Administrator may establish permit fees, according to the provisions of Section 15.12.450 of this Chapter, to fund the County's costs associated with regulating the permitted activity, including but not limited to administration, inspection, enforcement, compliance assistance, and outreach
f. The Administrator may revoke a County stormwater permit for significant violations of this Chapter. Prior to issuance or revocation of any permit, the Administrator shall establish, as part of the enforcement policy required by Section 15.12.555, written policy regarding permit administration, including timelines and criteria for permit revocation and permit reinstatement. Permit revocation and reinstatement decisions by the Administrator shall be subject to appeal under Section 15.12.540 of this Chapter. (SCC 1280 § 2 (part), 2004)

15.12.310 Containment and Notification of Spills.

a. Any person owning or occupying a premises, or conducting any activity, that has knowledge of any non-stormwater discharge or threatened prohibited discharge, from the premises or activity to the County stormwater conveyance system shall immediately take all reasonable action to contain and otherwise minimize any such discharge.
b. The Administrator may designate individual facilities or types of industries where the owner or operator of the Industry shall be required to notify the Administrator or the implementing agency within twenty-four (24) hours of the discovery of an actual discharge into the County stormwater conveyance system.
c. For any discharge subject to the reporting requirements of the State of California Water Code sections 13271 and 13272, notification in compliance therewith shall constitute sufficient notification for the purposes of this Section. (SCC 1295 § 5, 2005: SCC 1280 § 2 (part), 2004)

15.12.320 Specified Performance Requirements for Industrial Activities.

a. The Administrator may establish specified performance requirements for significant industrial activities that are intended to apply to a class or classes of industries. Such requirements shall be subject to the provisions for adoption of regulations under Section 15.12.330 of this Chapter.
b. The Administrator may impose specified performance requirements that apply to single facilities. Such requirements shall be subject to appeal under Section 15.12.540 of this Chapter.
c. Any facility that it is in compliance with its State or Federal NPDES Permit for stormwater discharges for that facility shall be deemed to have met the requirements of Section 15.12.300, except that any specified performance requirements applicable to such facilities shall also be met. (SCC 1280 § 2 (part), 2004)

15.12.322 Construction Sites With Building Permits.

Any person owning or operating a construction site for which a building permit has been issued shall implement BMPs to control the discharge of pollutants to the maximum extent practicable, and eliminate non-stormwater discharges that are not in compliance with an NPDES Permit. (SCC 1280 § 2 (part), 2004)

15.12.325 Post Construction Requirements for New Development and Significant Redevelopment.

a. The Administrator shall be authorized to establish specified performance requirements and requirements for BMPs as appropriate to minimize the long-term, post construction discharge of stormwater pollutants from new development or significant redevelopment, to implement the development standards plan, and to comply with the requirements associated with development standards in the Municipal Stormwater Permit, including but not limited to Provisions 16 through 26. The requirements for new development or redevelopment may include but are not limited to performance standards, source control BMPs, treatment BMPs, structural BMPs, operational BMPs, building material specifications or limitations, site design requirements, signage and marking, and associated maintenance programs or schedules.
b. Requirements established pursuant to subsection (a) of this section may be included in development standards, building codes, building permits, conditions of development, or any other appropriate instrument administered by the County. (SCC 1280 § 2 (part), 2004)

15.12.327 BMP Maintenance Requirements.

The Administrator may require a property owner to establish, document, and conduct a maintenance program, subject to approval, for any BMP or to ensure continued compliance with specified performance requirements. This requirement may apply to BMPs required by the County or BMPs that were voluntarily installed. Such a maintenance program may be required when the Administrator determines that proper maintenance is necessary to protect public safety,

health, infrastructure, or the environment, or to otherwise meet the purposes of this Chapter. Maintenance requirements established pursuant to this subsection must be appropriate for the site conditions and design of BMPs. (SCC 1295 § 6, 2005: SCC 1280 § 2 (part), 2004)

15.12.330 Administrative Rules and Regulations.

a. The Administrator shall have the authority to promulgate regulations for the implementation of this Chapter. Prior to the Administrator's initiation of any proposed regulations, the Administrator shall submit a public input plan to the Board for its approval. The public input plan approved by the Board shall be generally applicable to the promulgation of regulations by the Administrator.
b. All regulations promulgated by the Administrator shall be consistent with the provisions of this Chapter. Any such regulations, or amendments thereof, shall be filed with the Clerk of the Board. The Clerk shall cause announcement of said rules or regulations to be published in a newspaper of general circulation within ten calendar days. Such announcements shall provide a reasonable summary of the content of the rule. In addition, the Administrator shall make a reasonable effort to identify, notify, and provide copies to any industries which are specifically designated by the Administrator as subject to a rule or regulation. However, neither the failure of the Administrator to provide such notice nor the failure to receive individual notice shall exempt an industry from that rule or regulation. No regulations promulgated by the Administrator or amendments thereof, shall be enforced or become effective until thirty (30) calendar days following the date on which notification of the regulations are published.
c. Any person who asserts that he or she is aggrieved by the terms or application of a regulation issued pursuant to this section may appeal the issuance of such regulation by filing a written notice of appeal with the Clerk of the Board. The notice of appeal shall specifically identify the regulation or regulations from which the appeal is taken and the reasons for the appeal. Upon receipt of such notice, the Clerk of the Board shall schedule the appeal for a public hearing by the Board. At the conclusion of the public hearing the Board shall be vested with jurisdiction to deny the appeal or to rescind or modify the regulation. The Board's determination in this regard shall be final.
d. Any regulation from which an appeal is filed prior to its effective date shall not become effective until the date of a determination by the Board of the appeal. Any regulation from which an appeal is filed on or subsequent to the effective date thereof shall remain in full force and effect during the pendency of the appeal, and any decision which rescinds or modifies the regulation shall apply prospectively. (SCC 1280 § 2 (part), 2004)

Article 4 Inspection and Monitoring

15.12.400 Scope of Inspections.

a. Prior to commencing any inspection authorized pursuant to this Chapter, the Administrator shall obtain the consent of the owner or occupant of the premises, an inspection warrant or a criminal search warrant.
b. The Administrator may conduct inspections related to purposes of implementing this Chapter on private or public property. Inspections shall be based upon such reasonable selection processes as may be deemed necessary to carry out the objectives of this Chapter, including, but not limited to, compliance with requirements of the Municipal Stormwater Permit, visual evidence, complaints received, knowledge or physical evidence of industrial activities or other pollutant sources, random sampling, sampling in areas with evidence of stormwater contamination, illicit connections, discharge of non-stormwater to the County storm drain system or similar factors.
c. The Administrator may enter upon private property to investigate the source of any discharge to any public street, inlet, gutter, storm drain or the County storm drain system.
d. The Administrator may enter upon private property for the purpose of verifying compliance with the provisions of this Chapter, including, but not limited to, the following:
1. Identifying products produced, processes conducted, chemicals used and materials stored on or contained within the property;
2. Identifying point(s) of discharge of all wastewater, process water systems, pollutants and other discharges from the property;
3. Investigating the drainage patterns of the premises, including natural and graded slopes, and

artificial conveyance systems;
4. Establishing the location of all points of discharge from the property, whether by surface run-off or through a storm drain system;
5. Locating any prohibited condition, illicit connection, or the source of any prohibited discharge; and
6. Evaluating implementation of BMPs.
e. For purposes of verifying compliance with the provisions of this Chapter, the Administrator may inspect any vehicle, truck, trailer, tank truck or other mobile equipment, or any stationary equipment, which may reasonably be believed to be used by the business for business-related activities and to be associated with industrial sources of pollutants or with non-stormwater discharges.
f. The Administrator may inspect and copy all records of the owner or occupant of any premises relating to chemicals or processes presently or previously occurring on-site, including materials and/or chemical inventories, facilities maps or schematics or diagrams, material safety data sheets, hazardous waste manifests, business plans, pollution prevention plans, state general permits, monitoring program plans or any other records relating to illicit connections, prohibited discharges or the potential discharge of pollutants to the County storm drain system. In addition, the Administrator may require the owner or occupant to furnish, within a reasonable time period, copies of all such records.
g. The Administrator may inspect, sample and test any area runoff, soils area (including any groundwater testing), process discharge, materials within any waste storage area (including any container contents), and/or treatment system discharge for the purpose of determining the potential for the contribution of pollutants to the County storm drain system. The Administrator may investigate the integrity and layout of all storm drain and sanitary sewer systems or other pipelines on the premises using appropriate tests, including, but not limited to, smoke and dye tests or video surveys. The Administrator may take photographs or video tape, make measurements or drawings, and create any other record reasonably necessary to document conditions on the premises.
h. The Administrator may erect and maintain monitoring and sampling devices for the purpose of measuring any discharge or potential source of discharge to the County storm drain system.
(SCC 1295 § 7, 2005: SCC 1280 § 2 (part), 2004)

15.12.430 Monitoring Requirements for Industrial Facilities.

a. The Administrator may require industries, at their own expense, to conduct and report monitoring of stormwater and non-stormwater discharges from their facilities and operations, for purposes necessary for the implementation of this Chapter or compliance with the Municipal Stormwater Permit. The goals of monitoring may include but are not limited to characterization of known and potential pollutant sources, pollutant content of discharges, and BMP effectiveness. Required forms of monitoring may include but are not limited to toxicity, flow, and analysis of pollutant concentrations.
b. The Administrator may designate specific monitoring requirements and/or require the discharger or potential discharger to submit a monitoring plan that describes specific monitoring requirements. Specific monitoring requirements may include sampling points, sampling times or deadlines, analysis and sampling methods, frequencies, storm event criteria, and other specifications necessary to ensure timely, adequate, accurate, and representative monitoring;
c. The discharger or potential discharger shall ensure that the integrity of the sample is protected at all times, including collection, handling, splitting, transport, and storage. Deliberate tampering with or altering of a sample shall be a violation of this Chapter.
d. The Administrator may specify information that must be documented in association with any sampling and monitoring event. At a minimum, unless otherwise allowed by the Administrator, the discharger or potential discharger shall record and maintain the following information for each sampling event:
1. The date, exact place, method and time of sampling;
2. The name, title, and employer of the person or persons taking the samples;
3. Sample preservation used;
4. The dates analyses were performed;
5. Sample chain of custody forms;
6. Who performed the analyses;
7. Analytical methods used, including detection limits;

8. Quality assurance and quality control documentation;
9. Laboratory reports of analytical results;
10. Any unusual observations or conditions noted during sample acquisition or analysis.
e. Any information submitted pursuant to this section shall be subject to the approval of the Administrator and the Administrator may require additional information if the Administrator determines the information submitted is incomplete or insufficient. (SCC 1280 § 2 (part), 2004)

15.12.435 Reporting Requirements.

a. The Administrator may require any person to report information for purposes related to the purpose and intent of this Chapter. Required information may include but is not limited to the following: characterization of industrial activities; compliance with this Chapter, compliance with a County stormwater permit; compliance with State General Permit requirements; compliance with the County stormwater Ordinance; compliance with administrative enforcement orders or other enforcement actions; discharge monitoring; training; and BMP implementation, effectiveness, and maintenance.
b. The Administrator may require information to be submitted on an as needed basis, or according to a specific schedule as specified in a County stormwater permit.
c. The Administrator may require submitted information to be compiled, summarized, analyzed or organized in a reasonable manner that facilitates its interpretation or other use. As necessary to facilitate the use of information, the Administrator may also specify the medium and format of required submittals.
d. Failure to provide information in a timely manner as required by the Administrator, or knowingly or negligently concealing, destroying, or providing false information shall be a violation of this Chapter. (SCC 1295 § 8, 2005: SCC 1280 § 2 (part), 2004)

15.12.438 Confidentiality of Information.

a. Information and data on a discharger or potential discharger obtained from inspections, reports, questionnaires, applications, permits, monitoring programs, records, or any other form of submittal to the County shall be available to the public or other governmental agency without notification unless the discharger or potential discharger specifically requests confidentiality as to any portion thereof and is able to demonstrate to the satisfaction of the Administrator that the release of such information would divulge information, processes or methods of production entitled to protection as trade secrets of the discharger or potential discharger. Stormwater and non-stormwater discharge constituents and characteristics will not be recognized as confidential information, and effluent data shall be available to the public without restriction.
b. When requested by a discharger or potential discharger furnishing information to the County, and agreed to by the Administrator, the portions of that information which might disclose trade secrets or secret processes shall not be made available for inspection by the public but shall be made available to the County and other governmental agencies for uses related to the ordinance codified in this Chapter, the National Pollutant Discharge Elimination System (NPDES) and/or the pretreatment program, and enforcement of other environmental regulatory programs. Those portions of the information shall also be available for use by the state or any state agency in judicial review or enforcement proceedings involving the discharger or potential discharger furnishing the information.
c. Information and data requested from a discharger or potential discharger which the discharger or potential discharger believes to be proprietary and the release of which to the public would substantially impair the operations or business interests of the discharger or potential discharger, may alternatively be provided to the County for its review at the facility of the discharger or potential discharger rather than provided to the County for its keeping, at the discretion of the County. The burden will be on the discharger or potential discharger to demonstrate to the satisfaction of the County that such information is proprietary and that this alternative procedure is necessary or appropriate and will not prevent the County from properly carrying out the objectives of this Chapter
d. In the event access to or disclosure of any such confidential or proprietary information is requested pursuant to an action brought under federal or state laws, the County shall have the option, in its sole discretion, of defending itself in such action or requiring the discharger or potential discharger to provide a defense. If the County makes written tender upon a discharger

or potential discharger to defend such an action with counsel acceptable to County and such discharger or potential discharger does not appear in and assume the defense of such action within the time specified in the tender, the County shall be free to disclose the information to the party making request therefore. In any event, the discharger or potential discharger shall be liable to the County in defending such action and for any judgment rendered against the County in such action. Payment of all such amounts shall be made by the discharger or potential discharger within thirty (30) days of billing by the County. (SCC 1295 § 9, 2005: SCC 1280 § 2 (part), 2004)

15.12.440 Record Retention.

Any reports, data, or other records and documentation required by the Administrator of a discharger to be collected or submitted for characterizing discharges, demonstrating compliance with this Chapter, or otherwise related to the purposes of this Chapter, shall be retained at the discharger's premises and made readily available to the Administrator for a period of not less than three years. (SCC 1295 § 10, 2005)

15.12.450 Fees.

The Administrator shall collect such fees as may be established by the Board to provide for the recovery of regulatory costs, including routine inspections and other regulatory functions associated with this Chapter. Any such fees shall be established by resolution of the Board. Failure to pay required fees within the time period set in policy established by the Administrator shall be a violation of this Chapter. There shall be no fee assessed to appeal the determination that a person conducts any significant industrial activity. (SCC 1280 § 2 (part), 2004)

Article 5 Enforcement

15.12.500 Enforcement at Construction Sites with Building Permits.

Any person found to be in violation of any provision of this Chapter in connection with activities subject to a building permit issued pursuant to Title 16 of the Sacramento County Code, shall be subject to the enforcement provisions of both this Chapter and Title 16. (SCC 1295 § 11, 2005: SCC 1280 § 2 (part), 2004)

15.12.505 Notice of Violation.

The Administrator may issue a notice of violation to any person found to be in violation of a provision of this Chapter, including any regulation, permit, information request, order, variance, or other requirement that the Administrator is authorized to enforce or implement pursuant to this Chapter. (SCC 1280 § 2 (part), 2004)

15.12.520 Cease and Desist Orders.

a. Any violation of this Chapter in which the Administrator also determines that the violation constitutes an immediate threat to public health or safety, including by way of illustration and not limitation, significant harm to human or aquatic life or to the County storm drain system or natural surface waters, may result in an order to immediately cease and desist all activities causing such immediate threat.
b. A cease and desist order shall direct the owner or occupant of any premises subject to this Chapter, or any person named therein which is subject to this Chapter, to immediately discontinue all or specified prohibited conditions or discharges to the County storm drain system, natural surface waters, or otherwise, until such time as abatement actions sufficient in the determination of the Administrator have been satisfactorily effected and so confirmed by written amendment to said cease and desist order.
c. Any cease and desist order may be appealed pursuant to the administrative appeals process

of this Chapter; provided, however, the effect of the cease and desist order shall remain in effect pending final determination thereof. Nothing shall limit the Administrator's authority to continue enforcement actions under a pending cease and desist order, including modifying a cease and desist order consistent with the purpose and intent of this Chapter.
d. Any cease and desist order shall be cumulative with all of the remedies in this Chapter and as provided by law.
e. A cease and desist order shall inform the discharger of the Administrator's authority and intent to conduct abatement of the violation or threatened violation according to Section 15.12.550, if the discharger fails to comply with the requirements of the order within the specified time frame.
f. If the discharger fails to comply with a cease and desist order within the time specified in the order, the Administrator may conduct abatement of the violation according to Section 15.12.550.
g. Nothing in this section requires the Administrator to issue a cease and desist order before conducting summary abatement as provided under Section 15.12.550. (SCC 1295 § 12, 2005: SCC 1280 § 2 (part), 2004)

15.12.525 Enforcement Actions—Content.

a. In addition to any other content, a notice of violation, or a cease and desist order shall contain the following elements:
1. A statement of the Administrator's findings that indicates a violation has occurred.
2. A citation of the provision of this Chapter that has been violated.
3. A date by which any person must be in compliance with this Chapter, or a date by which an action plan must be submitted by the person to propose a means and time frame by which to correct violations. The Administrator may extend the compliance date when good cause exists for such an extension.
4. Notification that continued non-compliance may result in additional enforcement action being taken against the business, facility, or any responsible persons.
5. Notification that the County may recover any costs incurred by the County as a result of the violation.
6. Notification that a violation of this Chapter may result in an administrative civil penalty of up to five thousand dollars ($5,000.00) per violation for each day that the violation occurs, or in criminal penalties.
7. Notification that the recipient has a right to a hearing on the matter as set forth in Section 15.12.540 of this Chapter, to determine the enforcement of any administrative civil penalty sought by the Administrator, or to appeal any findings or required corrective actions established by the Administrator.
8. Notification of hearing dates, appeal deadlines, and procedures for requesting a hearing established according to Section 15.12.540 of this Chapter.
b. In addition to any other content, a notice of violation, or a cease and desist order, or a notice of administrative civil penalty may establish required corrective actions, including the following:
1. Terms, conditions, and requirements reasonably related to the provisions of this Chapter, including the following:
A. Cessation of illicit discharges.
B. Correction of prohibited conditions.
C. A requirement for submittal of a written action plan for achieving and maintaining compliance with this Chapter. The Administrator may require the action plan to address specific items, including the following:
i. Specific time schedules for compliance;
ii. Description of BMPs that will be implemented for containment, cleanup, removal, storage, or proper disposal of any material having the potential to contribute pollutants to stormwater runoff;
iii. Identification of persons responsible for compliance with this Chapter.
D. Reporting requirements to demonstrate ongoing compliance.
2. A requirement that the person receiving same shall submit written certification to the Administrator that the necessary corrective actions have been completed. As appropriate for the type of correction action taken, the notice of violation may require documentation that substantiates the certification, including but not limited to receipts, contracts, or photographs.
3. Any other terms or conditions reasonably calculated to prevent additional or on-going violations of this Chapter.
c. A notice of violation, a cease and desist order, or a notice of administrative civil penalty may be issued separately or in combination with another notice or order for the same violations or set of

related violations. (SCC 1295 § 13, 2005: SCC 1280 § 2 (part), 2004)

15.12.530 Delivery of Notice.

Any notice of violation, cease and desist order, permit revocation, notice of administrative civil penalty or other enforcement action pursuant to the requirements of this Chapter shall be subject to the following requirements:
a. Delivery shall be deemed complete upon either personal delivery to the recipient or by deposit in the U.S. Mail postage pre-paid for first class delivery.
b. Where the recipient of the notice or order is the owner of the premises, the address for notice or order shall be the address from the most recently issued equalized assessment roll for the premises.
c. Where the owner or occupant of any premises cannot be located after reasonable efforts of the Administrator, the notice or order shall be deemed delivered after posting on the premises for a period of ten (10) business days. (SCC 1295 § 14, 2005: SCC 1280 § 2 (part), 2004)

15.12.540 Administrative Appeals.

a. Administrative hearings and appeals under this Chapter shall be to a Hearing Officer appointed pursuant to Government Code section 27720 et seq. Each Hearing Officer shall also meet the requirements of Government Code section 11425.30 and any other applicable restriction.
b. Any person served with a notice or order pursuant to this Chapter shall be provided an opportunity for a hearing prior to enforcement of an administrative civil penalty; or to appeal required corrective actions or the Administrator's findings of a violation of this Chapter.
1. Appeal Hearing. If a notice of violation or a cease and desist order is issued, but not concurrently with a notice of administrative civil penalty, the person who receives it shall be afforded an opportunity for a hearing to appeal the Administrator's findings or required corrective actions in the manner described in the following subsections:
A. To appeal the Administrator's findings, required corrective actions, or any provision of a notice or order, the person shall file a written request for hearing. The filing period for a request for hearing shall be set in written policy by the Department issuing the notice or order adopted pursuant to 15.12.330, but shall in no case be less than fifteen (15) calendar days. Any notice or order shall notify the recipient of the specific date by which the notice must be filed. The request for hearing shall be filed with the party issuing the notice or order at the address so designated on the notice and must be accompanied by payment of the Hearing Officer fee, established and amended from time to time by the Administrator based upon actual expense. If the person filing a request for hearing prevails on appeal, then the Hearing Officer fee will be refunded by the Administrator. A request for hearing shall be deemed filed within the filing period if it is postmarked within that period. If a request for hearing is not filed within the proscribed filing period, the notice, order or other action or determination by the Administrator shall become final.
B. Except as provided in subsection (b)(1)(C) of this section, within ninety (90) calendar days of receipt of the request for hearing by the Administrator, the hearing shall be scheduled by the Administrator with a Hearing Officer designated by the Administrator, who shall conduct the hearing in accordance with Chapter 4.5 (commencing with Section 11400) of Part 1 of Division 3 of Title 2 of the Government Code, and the Administrator shall have all the authority granted to an agency by those provisions. Except as provided in subsection (b)(1)(C) of this section, the Hearing Officer shall issue a decision within sixty (60) calendar days after the completion of any hearing conducted pursuant to this section.
C. When a cease and desist order is issued pursuant to this Chapter, the hearing shall be scheduled by the Administrator with a Hearing Officer within fifteen (15) calendar days of receipt by the Administrator of the request for hearing. The Hearing Officer shall issue a decision within fifteen (15) calendar days after the completion of any hearing conducted pursuant to this subsection.
2. Administrative Civil Penalty Hearing. If the Administrator issues a notice of administrative civil penalty, prior to enforcement of any penalty, the person receiving the notice shall be afforded an opportunity for a hearing. The notice shall establish a time, date and place for the hearing before a Hearing Officer, as follows.
A. The date for the hearing which shall be no less than thirty (30) calendar days and no more than ninety (90) days from the date of the notice, except that if the notice is issued concurrently

with a cease and desist order, the hearing date shall be no more than forty-five (45) days from the date of the notice.
B. Alternative dates for the hearing may be established by mutual consent of the person and the Administrator, or as ordered by the Hearing Officer.
3. Combined Hearing. An appeal hearing may be consolidated with a hearing for an administrative civil penalty, as follows:
A. If a notice of administrative civil penalty is issued concurrently with a notice of violation or cease and desist order for the same violation or a related set of violations, and if the person files a request for hearing, according to the procedures established in subsection (b)(1)(A) of this Section, the appeal hearing shall be conducted in conjunction with the administrative civil penalty hearing.
B. If a notice of administrative civil penalty is not issued concurrently with a notice of violation or cease and desist order, but is issued within a reasonably close period of time for the same violation or a related set of violations, and if the person receiving the notice or order files a request for hearing according to the procedures established in subsection (b)(1)(A) of this Section, the appeal hearing may be conducted in conjunction with the administrative civil penalty hearing, at the discretion of the Hearing Officer.
4. Recovery of Hearing Costs. The Administrator may recover the costs incurred by the County for hearings as follows:
A. Cost for Appeal Hearing. For appeal hearings, the provisions of Section 15.12.450 notwithstanding, the Administrator shall set a standard fee to be paid by the person at the time that the request for hearing is filed. The purpose of the fee is to recover the County's costs, or portion thereof, for the Hearing Officer. If the person filing a request for hearing prevails on appeal, then the hearing officer fee will be refunded by the Administrator. In addition, by order of the hearing officer, the County may be awarded its costs, including hearing officer fees above and beyond the standard fee, staff time, and attorneys' fees, in defending against an unsuccessful appeal brought without substantial merit, which costs may be charged jointly and severally against the appellants and recovered as costs of enforcement as provided herein. Such an award must be based upon a finding supported by a preponderance of the evidence that the appeal was without substantial merit or was taken for the sole purpose of delay.
B. Costs for Administrative Civil Penalty Hearing. If the County prevails in seeking an administrative civil penalty, by order of the hearing officer, the County may be awarded costs incurred while seeking the penalty, including hearing officer fees, staff time, and attorneys' fees.
5. If the Administrator finds that a violation(s) may pose an imminent and substantial endangerment to the public health or safety or the environment, any required corrective action established by a notice or order issued under this Chapter that are intended to correct such violations, shall take effect upon issuance, regardless of the filing of a request for hearing.
c. Administrative hearings for matters concerning this Chapter shall be conducted according to Sections 15.12.540 through 15.12.548 hereof. (SCC 1295 § 15, 2005: SCC 1280 § 2 (part), 2004)

15.12.543 Conduct of Administrative Hearings—Generally.

a. General. At the time set for hearing, the Hearing Officer shall state what the prima facie case is, what the burden of proof is, and what the range of penalties is. The Hearing Examiner shall proceed to hear the testimony of the Administrator, the person, and other competent persons respecting the circumstances of the violation, and other relevant facts concerning the matter. The Hearing Officer shall follow the rules of procedure for conducting hearings established by this Code.
b. Record of Oral Evidence at Hearing. A record of the entire hearing proceedings shall be made by either a certified court reporter or any other means of permanent recording determined to be appropriate by the Hearing Officer. A transcript of the proceedings shall be made available to all parties upon request and upon payment of the fee prescribed therefore. Such fees may be established and revised from time-to-time by the Administrator.
c. Continuances. The Hearing Officer may, upon request of the person, a party in interest, or the Administrator, grant continuances from time to time for good cause shown, or upon his/her own motion. Any continuance granted shall in no way diminish the responsibility of the person and/or parties in interest for maintaining the premises, nor affect other requirements of this Chapter regarding time for challenging any decisions made or actions taken.
d. Oaths—Certification. The Hearing Officer or certified shorthand reporter shall administer the

oath or affirmation.
e. Evidence Rules. Government Code of the State of California, Section 11513, as presently written, or hereinafter amended, shall apply to hearings conducted under this Chapter.
f. Rights of Parties. Each party may represent themselves, or be represented by anyone of their choice. Each party may appear at the hearing and offer evidence in this matter and cross examine witnesses.
g. Official Notice. In reaching a decision, official notice may be taken, either before or after submission of the case for decision, of any fact which may be judicially noticed by the courts of this state.
f. Inspection of Premises. The Hearing Officer may inspect the premises involved in the hearing prior to, during or after the hearing, provided that:
1. Notice of such inspection shall be given to the parties before the inspection is made;
2. The parties are given an opportunity to be present during the inspection;
3. The Hearing Officer shall state for the record during the hearing, or file a written statement after the hearing for inclusion in the hearing record, upon completion of the inspection, the material facts observed and the conclusion drawn therefrom; and
4. Each party then shall have a right to rebut or explain the matters so stated by the Hearing Officer either for the record during the hearing or by filing a written statement after the hearing for inclusion in the hearing record.
g. Burden of Proof. The burden of proof in hearings held pursuant to this Chapter shall be as follows:
1. In the case of any notice or order, the Administrator shall bear the burden of proof, by a preponderance of evidence, to show that a violation of this Chapter has occurred.
2. In the case of a notice of administrative civil penalty, the Administrator shall bear the burden of proof, by a preponderance of evidence, to show that a penalty should be assessed.
3. In the case of an appeal regarding the occurrence of a violation, or of required corrective actions, the appellant shall bear the burden of proof, by clear and convincing evidence, to show cause for amending or rejecting all or part of the corrective actions or requirements imposed by the Administrator by a notice or order. (SCC 1295 § 16, 2005)

15.12.545 Form and Contents of Decision—Finality of Decision.

a. Following the hearing, the hearing officer shall issue an order in writing no later than thirty (30) days from the date of the hearing, unless the time is waived by the parties. The order shall contain findings of fact and rationale appropriate to the violation and result, and a resolution of the essential issues raised, including the following:
1. Confirmation or denial of the occurrence of violations of this Chapter that are alleged by the Administrator;
2. Confirmation or rejection of any administrative civil penalty sought by the Administrator, and establishment of the monetary amount of any administrative civil penalty to be enforced.
3. Confirmation, amendment, or rejection of required corrective actions related to compliance with this Chapter that are imposed by the Administrator, but only if those requirements are appealed by the person.
b. The Hearing Officer's order concerning any administrative civil penalty shall be guided by factors including, but not limited to the following: the danger or harm to public health and safety or the environment created by the violation; actions by the person to prevent, correct, or conceal the violation; negligence; intent; recidivism; and any economic benefit associated with non-compliance.
c. The Hearing Officer's order shall uphold required corrective actions if the person fails to show clear and convincing evidence that the required corrective actions are unreasonable or unnecessary for achieving or demonstrating ongoing compliance with this Chapter. The Hearing Officer's order may amend, or reject required corrective actions, provided that compliance with this Chapter will be achieved. The Hearing Officer's order shall not address required corrective actions unless the person files a request for hearing according to the procedures established in Section 15.12.540(b)(1)(A) of this Chapter.
d. The Hearing Officer's order shall inform the person of the following:
1. If the violation is not corrected, or if any required corrective actions are not met within the time (s) required, that the violation may be abated by the County, without further notice or consent of the person or any party in interest, in such manner as may be ordered by the Hearing Officer, and the expense thereof, including all costs of enforcement, incurred by the County as a result of

the person's failure to comply, shall be recoverable by the County, and may be made a lien on the subject premises pursuant to the provisions of Government Code Section 25845. Additionally, upon entry of a second or subsequent order within a two-year period finding that the person is responsible for a condition that may be abated in accordance with this Chapter and Government Code Section 25845, or any successor provision thereto, except for conditions abated pursuant to Section 17980 of the Health and Safety Code, the Hearing Officer may order the person to pay treble the costs of abatement pursuant to Government Code Section 25845.5, or any successor provision thereto.
2. The time and manner by which a person may file a challenge to the Hearing Officer's order is governed by Government Code Section 53069.4, or any successor provision thereto.
3. Failure to comply with the Hearing Officer's order shall constitute a misdemeanor and is subject to additional enforcement action, including criminal penalties and additional civil and administrative penalties.
e. The order issued by the Hearing Officer pursuant to this Section shall be effective upon issuance. A copy of the order shall be delivered by the Hearing Officer in accordance with Section 15.12.530.
f. Preparation of a record of the administrative proceeding shall be governed by the provisions of Sacramento County Code, Chapter 1.06, as presently written or hereinafter amended.
g. The provisions of Sacramento County Code, Chapter 1.06 notwithstanding, any challenge to the order of the Hearing Officer concerning any appeal or administrative civil penalty shall be governed by Government Code Section 53069.4, or any successor provision thereto. Service of the notice of appeal authorized by Government Code Section 53069.4 on the County shall be served upon the Clerk of the Board.
h. After any notice or order made pursuant to this Chapter shall have become final, no person to whom any such order is directed shall fail, neglect or refuse to obey such order. The Administrator may pursue, through County Counsel or the District Attorney, appropriate judicial action against any person who fails to comply with any such notice or order, including charging that person with a misdemeanor offense. (SCC 1295 § 17, 2005)

15.12.548 Procedures for Collection of Administrative Civil Penalty.

a. The administrative penalty shall be due and payable within thirty (30) days after the Hearing Officer's decision is issued. If the penalty is not timely paid, the County may pursue all reasonable and legal means in collecting those sums authorized and due.
b. All administrative civil penalties collected from actions brought pursuant to this Chapter shall be paid to the County department(s) enforcing this Chapter, and shall be deposited into a special account that shall be expended to fund the activities of the department to implement the applicable provisions of this Chapter. (SCC 1295 § 18, 2005)

15.12.549 Actions Not Prohibited.

This Chapter does not do any of the following:
a. Otherwise affect the authority of the Administrator to take any other action authorized by any other provision of law.
b. Restrict the power of a city attorney, district attorney, or the Attorney General to bring, in the name of the people of California, any criminal proceeding otherwise authorized by law.
c. Prevent the Administrator from cooperating with, or participating in, proceeding specified in subsection 15.12.549(b). (SCC 1295 § 19, 2005)

15.12.550 Nuisance and Abatement.

a. Any condition in violation of the provisions of this Chapter, including, but not limited to, the maintenance or use of any illicit connection or the occurrence of any prohibited discharge, is declared and deemed to be a public nuisance.
b. At the request of the Administrator, the County may seek a court order to enjoin or abate the nuisance, or both. Prior to seeking any court order to enjoin or abate a nuisance or threatened nuisance, the Administrator shall issue a cease and desist order to the owner and occupant, if any, of the Premises where the nuisance or threatened nuisance is occurring.

c. At the request of the Administrator, the County may seek an abatement warrant or other appropriate judicial authorization to enter the Premises where any nuisance or threatened nuisance is occurring and to abate the condition and restore the area.
d. In the event the nuisance constitutes an imminent danger to public safety or the environment, the Administrator may enter the premises from which the nuisance emanates, abate the nuisance and restore any property affected by the nuisance without prior notice to or consent from the owner or occupant thereof and without judicial warrant.
1. An imminent danger shall include, but is not limited to, exigent circumstances created by the dispersal of pollutants, where such pollutants present a significant and immediate threat to the public health and safety or the environment.
2. Notwithstanding the authority of the County to conduct an emergency abatement action, an administrative hearing pursuant to Section 15.12.540 shall follow the emergency abatement action. (SCC 1280 § 2 (part), 2004)

15.12.555 Enforcement Policy.

In the interest of achieving consistent enforcement of this Chapter, and in recognition of the need to have enforcement policy adapted to the structure and practices of various implementing agencies, each implementing agency that is delegated enforcement responsibility pursuant to this Chapter by the Administrator or the Board shall submit, to the Director of Water Resources, a draft written enforcement policy. Each such enforcement policy need only address those enforcement duties assigned to the implementing agency. Each policy shall address, if included in the delegated duties, guidelines for: the issuance of notices of violation, issuance of cease and desist orders, County stormwater permit administration, abatement, compliance deadlines, filing periods for administrative appeals, and imposition of administrative civil penalties. Enforcement policies shall take into consideration such factors as the nature, circumstances, extent, and gravity of the violation, and the violator's past and present efforts to comply. Upon approval by the Director of Water Resources, the enforcement policy shall be deemed adopted by the implementing agency who shall use such policy to achieve consistent enforcement standards by said implementing agency. Any amendments to an enforcement policy must be submitted to the Director of Water Resources for approval. (SCC 1295 § 20, 2005: SCC 1280 § 2 (part), 2004)

15.12.560 Administrative Civil Penalties.

a. In addition to any other remedies provided by this Chapter, the person may be subject to an administrative civil penalty of up to five thousand dollars ($5,000.00) per day for each violation of this Chapter. In seeking imposition of an administrative civil penalty, the Administrator shall commence the procedure by issuing a notice of administrative civil penalty, which shall be served and proof of service shall be made in the same manner as provided in Section 15.12.530 of this Chapter.
b. The notice of administrative civil penalty shall state that the recipient has a right to a hearing as set forth in Section 15.12.540 of this Chapter.
c. Procedures concerning notice, conduct of the hearing, and service shall be as provided in Section 15.12.540 of this Chapter.
d. Subsections 15.12.560(a), (b), and (c) notwithstanding, the Administrator may establish a schedule of fines which, if adopted by the Board, and as it may be amended from time to time by the Board, shall become appended to this Chapter. The schedule of fines shall define specific violations for which an administrative civil penalty shall apply, and shall assign a specific monetary penalty to be assessed for each violation included in the schedule of fines. When the Administrator has found that such violation has occurred and has issued an appropriate notice or order pursuant to this Chapter, the administrative civil penalty shall be enforceable without further action being required. Any person receiving such a schedule of fines penalty shall be entitled to appeal the Administrator's findings giving rise to such penalty pursuant to the procedure established in Section 15.12.540 of this Chapter. (SCC 1295 § 21, 2005: SCC 1280 § 2 (part), 2004)

15.12.570 Criminal Penalties.

a. Any person who violates any provision of this Chapter, undertakes to conceal any violation of this Chapter, continues any violation of this Chapter after notice thereof, fails to or fails to comply with a specified compliance requirement or a provision of a County stormwater permit, shall be guilty of a misdemeanor and upon conviction thereof be fined not more than one thousand dollars ($1,000.00) or imprisoned for not more than six months in the County Jail, or both.
b. Each day in which a violation occurs and each separate failure to comply with either a separate provision of this Chapter, a notice of violation, a cease and desist order, or failure to comply with specified compliance requirements or a provision of a County stormwater permit, shall constitute a separate violation of this Chapter punishable by fines or sentences in accordance herewith.
c. The Administrator may authorize specifically designated County employees to issue citations for misdemeanor violations of this Chapter pursuant to Penal Code Section 836.5. (SCC 1295 § 22, 2005: SCC 1280 § 2 (part), 2004)

15.12.580 Miscellaneous Enforcement Provisions.

a. Each and every remedy available for the enforcement of this Chapter shall be non-exclusive and it is within the discretion of the Administrator to seek cumulative remedies.
b. The Administrator may request the County to file a civil action in a court of competent jurisdiction seeking an injunction against any threatened or continuing non-compliance with the provisions of this Chapter. Any temporary, preliminary or permanent injunction issued pursuant to this subsection may include an order for reimbursement to the County of all costs incurred in enforcing this Chapter, including, but not limited to, costs of inspection, investigation and monitoring, the costs of abatement undertaken at the expense of the County, costs relating to the restoration of the environment and any other costs or expenses authorized by law.
c. The Administrator may request the County to file an action for civil damages in a court of competent jurisdiction seeking recovery of any of the following:
1. All costs incurred in the enforcement of this Chapter, including, but not limited to, costs relating to investigation, sampling, monitoring, inspection, administrative expenses, all other expenses authorized by law and consequential damages.
2. All costs incurred in mitigating harm to the environment or reducing the threat to human health.
3. Damages for irreparable harm to the environment.
d. The County is authorized to file actions for civil damages resulting from any trespass or nuisance occurring on public property or to the County storm drain system from any violation of this Chapter where such violation has caused damage, contamination or harm to the environment, public property or the County storm drain system.
e. The remedies available to the County pursuant to the provisions of this Chapter shall not limit the right of the County or any law enforcement agency to seek any other legal or equitable remedy that may be available to it.
f. Each day in which a violation occurs and each separate failure to comply with specified compliance requirements or provision of a County stormwater permit, a separate provision of this Chapter, an Administrative enforcement order, or a cease and desist order shall constitute a separate violation of this Chapter punishable by civil, criminal and administrative penalties in accordance with this Chapter. (SCC 1295 § 23, 2005: SCC 1280 § 2 (part), 2004)

Article 6 Recovery of Cost Abatement

15.12.600 Costs of Abatement—Confirmation.

a. When proceedings under this Chapter result in the correction of a violation of this Chapter or in a final determination that a violation exists subsequent to the date specified in any notice issued pursuant to the provisions of this Chapter, the costs of such proceedings incurred by the County may be assessed against the property. Such costs may include, but are not limited to, those incurred in inspecting property, publication, mailing and posting of notices, conducting hearings, processing appeals and pursuing any judicial action. It is the purpose of this section to allow the assessment against property of costs of proceedings if a violation is corrected in any manner.
b. The Administrator shall keep an account of the administrative and other costs of abatement, and shall submit to the Board for confirmation an itemized written report showing such costs and

their proposed assessment to the respective properties. The report shall be filed with the Clerk of the Board not later than fifteen (15) calendar days in advance of the confirmation hearing required below.

c. Upon receipt of the report, the Clerk of the Board shall schedule a public hearing to receive protests and confirm the report. A statement of the proposed assessment and notice of the time, date and place of the hearing, together with reference to the report on file with the Clerk, shall be mailed to the owner or owners of each parcel of property proposed to be assessed shown on the last equalized assessment roll available on the date of mailing of the notice or any other address or addresses ascertained to be more accurate. Such notice shall be mailed not later than fifteen (15) calendar days in advance of the hearing. Notice of the time, date and place of the public hearing by the Board shall be published once in a newspaper of general circulation published with the County.

With respect to each property proposed to be assessed for which the name or the owner or owners is not shown on the last equalized assessment roll or no address for an owner is shown on the last equalized assessment roll, the notice shall show the name or names of the owner or owners, if such name or names are shown on the last equalized assessment roll, the assessor's parcel number, the street address of the property, if the property has an address and the address is known to the Administrator, the name of the street or road upon which such property abuts, if the property abuts upon a street or road, the amount of the proposed assessment and reference to the report on file with the Clerk. Such publication shall be made not later than fifteen (15) calendar days in advance of the hearing.

d. At the time fixed for receiving and considering the report, the Board shall conduct a public hearing and shall receive and consider any objections from members of the general public or property owners liable to be assessed for the abatement. Written protests or objections shall specify the date, hour and description of the subject property under hearing. The Board may continue the hearing and delegate to the Administrator or his designee the responsibility of hearing individual protests and submitting a recommendation with respect thereto; provided that the Board provides an opportunity for individual consideration of each project upon receipt of the recommendation by the Administrator. The Board may modify the report if it is deemed necessary. The Board shall then confirm the report by motion or resolution. (SCC 1280 § 2 (part), 2004)

15.12.610 Costs—Assessments.

a. If the costs as confirmed are not paid within thirty (30) days of the date of mailing of the notice or date of publication pursuant to Section 15.12.600 of this chapter, such costs shall be assessed against the parcel of land pursuant to Section 25845 of the Government Code, and shall be transmitted to the Tax Collector for collection and shall be subject to the same penalties and the same procedures and sale in case of delinquency as provided for ad valorem taxes.

b. If subsequent to the mailing of the notice of violation and prior to transmittal of the notice of unpaid costs to the Tax Collector for collection as set forth in subsection (a) of this section, the property subject to the notice of violation is sold, or title otherwise transferred to a bona fide purchaser, said costs shall be the responsibility of the owner of record as of the date said notice of violation was placed in the United States postal system or posted on the property.

c. In addition to assessing the unpaid costs as provided in subsection (a) of this section, the Tax Collector or his designated representative may pursue any remedy provided by law for collection of the unpaid costs. (SCC 1280 § 2 (part), 2004)

15.12.620 Treble Costs.

Pursuant to Government Code Section 25845.5, upon entry of a second or subsequent civil or criminal judgment within a two year period finding that an owner is responsible for a condition in violation of this Chapter that may be abated pursuant to Government Code Section 25845, a court may order the owner to pay treble the costs of abatement. (SCC 1280 § 2 (part), 2004)

15.12.630 Hearing of Protests.

Upon the day and hour fixed for the hearing, the Board shall hear and pass upon the report of the

Administrator together with any such protests or objections. The Board may make such revision, correction or modification of the report or the charge as it may deem just; and in the event the Board is satisfied with correctness of the charge, the report of the Administrator (as submitted or as revised, corrected or modified) together with the charge, shall be confirmed or rejected. The decision of the Board on the report and the charge and on all objections or protests shall be final and conclusive. (SCC 1280 § 2 (part), 2004)

15.12.640 Assessment for Summary Abatement.

Where the charge to be made is the result of summary abatement pursuant to Section 15.12.550 (d), the Board may determine whether or not the action to abate was proper, and may confirm the charge or not as it may deem proper. (SCC 1295 § 24, 2005: SCC 1280 § 2 (part), 2004)

15.12.650 Time for Contest of Assessment.

The validity of any assessment made under the provisions of this Chapter shall not be contested in any action or proceeding unless the same is commenced within thirty (30) days after the assessment is ordered to be placed upon the assessment roll as provided herein. (SCC 1280 § 2 (part), 2004)

15.12.660 Filing Copy of Report With County Auditor.

A certified copy of the assessment shall be filed with the County Auditor on or before August 1. The descriptions of the parcels reported shall be those used for the same parcels on the map books of the County Assessor for the current year. (SCC 1280 § 2 (part), 2004)

EXHIBIT F

Chapter 2.48 BUILDING AND FIRE CODE ADVISORY AND APPEALS BOARD

2.48.010 Board established.

The city of Sacramento building and fire code advisory and appeals board is hereby established. (Ord. 2006-041 § 3 (part))

2.48.020 Definitions.

As used in this chapter, the following words and phrases shall have the meaning given them in this section, unless the context clearly requires otherwise:

"City" means the city of Sacramento.

"City council" means the city council of the city of Sacramento.

"Board" means the building and fire code advisory and appeals board.

"Mayor" means the mayor of the city of Sacramento. (Ord. 2006-041 § 3 (part))

2.48.030 Powers and duties of board.

A. The board is established for the purpose of determining the suitability of alternate materials and methods of construction and providing reasonable interpretations of the following codes, as they are currently written or as they may be amended in the future:

1. 2001 California Building Code;
2. 2001 California Fire Code.

The board's powers and duties shall extend to any code or codes duly adopted by the California Building Standards Commission that supersedes the 2001 California Building and Fire Codes.

B. The board may approve the use of any material, alternate design or method of construction not specifically prescribed by the applicable codes enumerated in this section, provided the board finds that the proposed design is satisfactory and complies with the provisions of the applicable codes and that the material, method or work offered is, for the purpose intended, at least the equivalent of that prescribed in the applicable codes in suitability, strength, effectiveness, fire resistance, durability, safety, and sanitation. The board shall require that sufficient evidence or proof be submitted to substantiate any claims that may be made regarding its use.

C. The board shall have no authority relative to interpretation of the administrative provisions of these codes nor shall the board be empowered to waive requirements of these codes. any cost for tests or research required by the board to substantiate the claim of any appellant shall be the sole responsibility of the appellant. (Ord. 2006-041 § 3 (part))

2.48.040 Board membership.

The board shall consist of five members appointed by the mayor with the approval of the city council, subject to the following requirements:

A. One member shall be a real estate developer who has completed at least two projects in California in the five years preceding appointment; each project must have a total valuation in excess of five million dollars ($5,000,000.00);

B. One member shall be a California licensed general building contractor who has been a primary general contractor on construction projects in the City during the two years immediately preceding appointment;

C. One member shall be a California registered architect who has been licensed and has practiced in California for at least three years immediately preceding appointment;

D. One member shall be a California registered structural engineer who has been licensed and has practiced in California for at least three years immediately preceding appointment;

E. One member shall be a California licensed fire protection engineer who has been licensed and has practiced in California for at least three years immediately preceding appointment. (Ord. 2006-041 § 3 (part))

2.48.050 Term of office.

Members of the board shall serve a term of three years. In order to establish staggered terms, the initial appointments of members shall include two members for a one-year term, two members for a two-year term, and one member for a three-year term, as determined by the city clerk based on the drawing of lots. No member shall serve more than two consecutive terms. In the event a vacancy occurs during the term of any member, the mayor shall appoint, with the approval of the city council, a successor to serve the unexpired term, subject to the requirements set forth in Section 2.48.040. A member shall hold office until his or her successor has been appointed. A successor appointed to complete an unexpired term shall be eligible to serve up to two consecutive terms in addition to the unexpired term. (Ord. 2006-041 § 3 (part))

2.48.060 Conflict of interest and financial disclosure statements.

The provisions of Article III of Chapter 2.16 of this code governing conflicts of interest of board and commission members shall apply to members of the board. In addition, all appointees to the board shall be required to file statements disclosing financial interests pursuant to a conflict of interest code adopted for the board. (Ord. 2006-041 § 3 (part))

2.48.070 Chairperson and organization of the board.

At its first meeting, and annually thereafter, the board shall elect a board chairperson and a vice-chairperson, each of whom shall hold office at the pleasure of the board. During any absence of the chairperson from a meeting of the board, the vice-chairperson shall be the acting chairperson until the chairperson returns. When there is a vacancy in the office of chairperson or vice chairperson, the board shall fill that office from among its members. Staff support to the board shall be provided by one or more city employees designated by the city manager. (Ord. 2006-041 § 3 (part))

2.48.080 Board meetings.

The board shall establish a time and place for regular meetings to be held not less than once each month. The meetings shall be noticed and held in accordance with the provisions of the Ralph M. Brown Act (Government Code section 54950 et seq.). The board shall have the authority to notice and hold special meetings in the manner specified by the Ralph M. Brown Act. (Ord. 2006-041 § 3 (part))

2.48.090 Rules and regulations.

The board shall adopt reasonable rules and regulations for conducting its business and shall render all decisions and findings in writing to the appellant with a copy to the building official. (Ord. 2006-041 § 3 (part))

2.48.100 Quorum—Voting.

The quorum required for the board to conduct business shall be three members. The affirmative vote of a majority of the members present and eligible to vote shall be necessary to approve any item. (Ord. 2006-041 § 3 (part))

2.48.110 Review by building official.

A. The building official shall establish policies and procedures that provide for building official review of staff-level decisions regarding the use of any material, alternate design or method of construction not specifically prescribed in the California Building Code or the California Fire Code. These policies and procedures shall require the building official to provide a written decision within ten (10) calendar days of the filing of a completed request for building official review. A copy of the decision shall be delivered to the appellant personally or sent to him or her by certified mail, postage prepaid, return receipt requested. Requests for building official review shall be submitted on a form prescribed by the building official. Any person aggrieved by the building official's decision may appeal therefrom to the board as provided in Section 2.48.120(A).

B. At any time within ten (10) calendar days of the filing of a completed request for building official review, the building official may refer the request to the board for determination. In such a case, a hearing before the board shall be scheduled and conducted as set forth in Section 2.48.130.

C. In the event the building official does not issue a written decision or refer a request to the board within ten (10) calendar days of the filing of a completed request for building official review, the staff-level decision shall become a final decision from which any aggrieved person may appeal to the board as provided in Section 2.48.120(A). The staff-level decision shall be deemed final on the eleventh calendar day following the filing of the completed request for review; provided, however, if the eleventh calendar day falls on a Saturday, Sunday, or legal holiday, the decision shall be deemed made on the next following business day. (Ord. 2006-041 § 3 (part))

2.48.120 Appeals to board.

A. Any person aggrieved by the decision of the building official issued pursuant to Section 2.48.110(A) or a staff-level decision that becomes a final decision pursuant to Section 2.48.110(C) may appeal therefrom to the board at any time within ten (10) calendar days after receiving notice of the building official's decision or after the staff-level decision becomes final pursuant to Section 2.48.110(C). Such an appeal is taken by filing notice of appeal with the building official on a form provided by, and available from, the building official and payment of a fee as established by resolution of the city council. All supporting documents must be submitted with the form at the time the appeal is filed. Upon receipt of any appeal file and the appeal fee pursuant to this section, a hearing before the board shall be scheduled and conducted as set forth in Section 2.48.130.

B. Notwithstanding subsection A of this section, no person shall be allowed to appeal a staff-level decision regarding the use of any material, alternate design or method of construction not specifically prescribed in the California Building Code or the California Fire Code to the board unless (1) the person submitted a completed request for building official review as required by Section 2.48.110(A) and (2) the building official failed to either provide a written decision or refer the request to the board within ten (10) calendar days of the filing of the completed request for review.

C. Failure to properly file a written appeal as required under subsection A of this section will constitute a waiver of all right to an appeal hearing before the board, and the decision of the building official or the staff-level decision will be final. Failure to properly and timely appeal pursuant to subsection A of this section also shall constitute a failure to exhaust administrative remedies and a bar to any judicial action pertaining to the staff-level decision or decision of the building official.

D. Notwithstanding any other provision of this chapter, the board does not have jurisdiction to hear appeals of decisions relating to access for physically handicapped persons to public facilities and accommodations. Any staff-level decision that becomes a final decision pursuant to Section 2.48.110(C) or decision of the building official relating to access for physically handicapped persons to public facilities and accommodations shall be appealed to the joint city/county disabilities appeals board pursuant to Chapter 2.52 of the Sacramento City Code rather than the board. (Ord. 2006-041 § 3 (part))

2.48.130 Hearings.

In the event the building official refers a request to the board pursuant to Section 2.48.110(B), or upon receipt of any appeal filed and the appeal fee pursuant to Section 2.48.120, the building official shall calendar it for hearing as follows:

A. If the building official refers the request to the board, or if the appeal is received by the building official, not later than fifteen (15) calendar days prior to the next regular meeting of the board, it shall be calendared for hearing at said meeting.

B. If the building official refers the request to the board, or if the appeal is received by the building official, on a date less than fifteen (15) calendar days prior to the next regular meeting of the board, it shall be calendared for hearing at the next subsequent meeting of the board.

The building official shall not later than ten (10) calendar days prior to the hearing give notice of the time, place, and subject matter of the hearing to the person filing the appeal and each member of the board. The hearing shall be conducted according to the rules and regulations adopted by the board. The board shall render all decisions and findings in writing. A copy of the decision shall be delivered to the appellant personally or sent to him or her by certified mail, postage prepaid, return receipt requested. (Ord. 2006-041 § 3 (part))

2.48.140 Appeals to city council.

A. Any person aggrieved by the decision rendered by the board in an appeal hearing held pursuant to Section 2.48.130, may appeal the decision to the city council in accordance with Chapter 1.24. The appeal shall be made by filing a written notice thereof with the city clerk not later than ten (10) calendar days after receiving notice of the decision of the board. The city council shall hold a hearing on the appeal and its decision thereon shall be final. Instead of hearing the appeal, the city council may refer the matter to a hearing examiner pursuant to Chapter 1.24, in which case the hearing examiner's decision shall be final.

B. Failure to properly file a written appeal of the decision of the board within ten (10) calendar days of the decision will constitute a waiver of all right to an appeal hearing before the city council, and the board's decision will be final. Failure to properly and timely appeal the board's decision also shall constitute a failure to exhaust administrative remedies and a bar to any judicial action pertaining to the board's decision. (Ord. 2006-041 § 3 (part))

2.48.150 Compensation.

Pursuant to City Charter Section 29, the compensation commission shall establish the compensation members

of the board receive for attending board meetings. (Ord. 2006-041 § 3 (part))

2.48.160 General requirements.

Unless specifically provided otherwise in this chapter, the general requirements set forth in Chapter 2.40 of this code, governing the appointment of board and commission members, attendance at board and commission meetings, voting, term limits and removal, shall apply to the board. A member is subject to removal for good cause, neglect of duty or misconduct as provided in City Charter Section 232. (Ord. 2006-041 § 3 (part))

EXHIBIT G

I. Any condition in violation of the city fire code, set forth in Title 15 of this code;

J. Any condition recognized in law or in equity as constituting a public nuisance;

K. The maintenance of the exterior of any vacant or unoccupied building or the interior of any such building which is readily visible from any public street or adjacent parcel of property in a state of unsightliness so as to constitute a blighted condition detrimental to the property values in the neighborhood or otherwise detrimental to the public welfare;

L. Any condition in violation of Chapter 18.12 of this code (employer transportation systems management for the city of Sacramento);

M. Any unimproved real property which has become a dumping ground for litter, garbage, junk, debris, or discarded vehicles, vehicle parts and/or vehicle hulks, and which real property has been subject to abatement action on one or more occasions by the city;

N. Any illegal activity occurring on the property which is detrimental to the life, health, safety and welfare of the residents, neighbors or public. For purposes of this chapter, illegal activity is defined as any violation of state or federal law, rules or regulations, or local ordinance.

Once proceedings have been commenced pursuant to this title to declare a building or property to be a public nuisance under this subsection, no such building or property shall be deemed to be in compliance with this title solely because such building or property thereafter becomes occupied. (Ord. 2001-046 § 3 (part); Ord. 2000-017 § 5(a), (b); prior code § 61.04.401)

Article V Abatement Generally

8.04.110 Nuisance abatement.

Whenever the department head has inspected or caused to be inspected any premises and has found and determined that such premises are in violation of this code, he or she may commence proceedings to cause abatement of the nuisance as provided herein. (Prior code § 61.05.501)

8.04.120 Commencement of nuisance abatement proceedings—Issuance of notice and order.

To commence nuisance abatement proceedings, the department head shall issue a notice of violation and order to

abate (notice and order) directed to the record owner(s) of the premises. The notice and order shall contain:

A. The street address and/or such other description as is required to identify the premises;

B. A statement specifying the conditions which constitute the nuisance and declaring such conditions to be a public nuisance pursuant to Section 8.04.100 of this chapter;

C. A statement of the action required to be taken to eliminate the public nuisance;

D. A statement ordering the owner to abate the nuisance prior to a set date;

E. A statement advising that any person having any record title or legal interest in the premises may appeal the notice and order provided that the appeal is made in writing as provided in Section 8.04.170 of this chapter;

F. A statement that the appeal request must be in writing and filed with the department head within thirty (30) days of service of the notice and order;

G. A statement that failure to appeal the notice and order will constitute a waiver of all right to an administrative hearing and will be a final determination of the matter;

H. If the city intends to seek attorney's fees pursuant to Section 38773.5 of the Government Code, a

statement that the city intends to seek and recover attorney's fees. (Prior code § 61.05.502)

8.04.130 Fees imposed.

A fee shall be imposed on the owner of any property for which a notice and order is issued pursuant to this section. The fee shall be calculated to recover the total city cost of inspections and enforcement and shall be set by resolution of the city council. An additional fee which shall be set by resolution of the city council shall be imposed on the owner of the property at the conclusion of any matter in which a notice and order has been issued. This termination fee shall be calculated to recover the cost of closing the file, removing or placing liens, and other associated administrative costs. The fees imposed pursuant to this section shall be due and owing regardless of whether the public nuisance is eliminated in response to the notice and order. No fees shall be due and owing if an appeal is filed and the appeal is sustained. All fees shall be a personal obligation of the owner and a lien upon the property and are due and payable within thirty (30) days of issuance of the notice and order or closing of the file respectively; provided that if an appeal is filed, the fees shall be due and payable upon a final decision on the appeal. Any fee not paid within that time shall be collected pursuant to the procedure set forth in Chapter 8.96 of this code. (Prior code § 61.05.503)

8.04.140 Notice and order—Service generally.

The notice and order, and any amended or supplemental notice and order, shall be served upon the record owner and posted on the property; and one copy thereof shall be served on each of the following if known to the department head or disclosed from official public records: the holder of any mortgage or deed of trust or other lien or encumbrance of record; the owner or holder of any lease of record; and the holder of any other estate or legal interest of record in or to the building or the land on which it is located. The failure of the department head to serve any person required herein to be served shall not invalidate any proceedings hereunder as to any other person duly served or relieve any such person from any duty or obligation imposed by the provisions of this section. (Prior code § 61.05.504)

8.04.150 Method of service.

Service of the notice and order may be made upon all persons entitled thereto in the manner described in Section 1.04.100 of this code. Service may be made upon the record owner at his or her or their address as it appears on the latest equalized assessment roll of Sacramento County, or as known to the department head. (Ord. 2006-070 § 2: Ord. 2004-008 § 22; prior code § 61.05.505)

8.04.160 Proof of service of notice and order.

Proof of service of the notice and order shall be certified by written declaration under penalty of perjury executed by the person effecting service, declaring the time, date and manner in which service was made. The declaration, together with any receipt returned in acknowledgment of receipt by certified mail shall be made part of the department's permanent record. (Prior code § 61.05.506)

8.04.170 Appeal.

A. Form of Appeal. Any person having any record title or legal interest in the premises may appeal from any notice and order of the department head under this title by filing at the office of the department head within thirty (30) days from the date of service of such notice and order, a written appeal containing:

1. A brief statement setting forth the legal interest of each of the appellants in the premises involved in the notice and order;

2. A brief statement in ordinary and concise language of the specific order or action protested, together with any material facts claimed to support the contentions of the appellant;

3. A brief statement in ordinary and concise language of the relief sought, and the reasons why it is claimed the protested order or action should be reversed, modified, or otherwise set aside;

4. The signatures of all parties named as appellants and their official mailing addresses, with statements from each appellant that each agrees to accept service of the written notice of the time and place of the appeal hearing and the decision of the hearing examiner at such address;

5. The verification (by declaration under penalty of perjury) of at least one appellant as to the truth of the matters stated in the appeal.

B. Processing of Appeal. Upon receipt of any appeal filed and the appeal fee pursuant to this section, the department head shall transmit said appeal to the secretary of the hearing examiner who shall calendar it for hearing as follows:

1. If the appeal is received by the department head not later than fifteen (15) days prior to the next regular appeal hearing, it shall be calendared for hearing at said meeting.

2. If the appeal is received by the department head on a date less than fifteen (15) days prior to the next appeal hearing, it shall be calendared for the next subsequent appeal hearing.

C. Noticing Appeal for Hearing. Written notice of the time and place of the hearing shall be given at least ten (10) calendar days prior to the date of the hearing to each appellant by the secretary of the hearing examiner either by causing a copy of such notice to be delivered to the appellant personally or by mailing a copy thereof, postage prepaid, addressed to the appellant at his or her address shown on the appeal.

D. Appeal Fee. The department may collect and require an appeal fee to be paid at the time the written appeal notice is filed. The appeal fee shall be set by resolution of the city council. The fee shall be calculated to recover the total city costs incurred in the appeal including, but not limited to, staff time to process and handle the appeal, hearing examiner compensation, preparation and service of notices and staff appearance in the appeal hearing. No appeal shall proceed without payment of the fee at the time the appeal is filed provided that the department head may waive or defer the appeal fee upon written request for good cause shown. Good cause may include severe economic hardship, significant attempts to comply with the notice and order, and other factors indicating good faith attempts to comply.

E. Effect of Failure to Appeal. Failure of any person to file a timely appeal in accordance with the provisions of this section shall constitute an irrevocable waiver of the right to an administrative hearing and a final adjudication of the notice and order, or any portion thereof.

F. Only those matters or issues specifically raised by the appellant in the appeal notice shall be considered in the hearing of the appeal.

G. Staying of Order Under Appeal. Enforcement of any notice and order of the department head issued under this title shall be stayed during the pendency of an appeal therefrom which is properly and timely filed. (Prior code § 61.05.507)

8.04.180 Hearings—Generally.

At the time set for hearing, the hearing examiner shall proceed to hear the testimony of the department head, the owner, and other competent persons respecting the condition of the premises, and other relevant facts concerning the matter. (Prior code § 61.05.508)

8.04.190 Record of oral evidence at hearing.

A. The proceedings at the hearing shall be electronically recorded. Either party may provide a certified shorthand reporter to maintain a record of the proceedings at the party's own expense.

B. Preparation of a record of the proceeding shall be governed by California Code of Civil Procedure Section 1094.6, as presently written or hereinafter amended. (Prior code § 61.05.509)

8.04.200 Continuances.

The hearing examiner may, upon request of the owner of the premises or upon request of the department head, grant continuances from time to time for good cause shown, or upon his or her own motion. (Prior code § 61.05.510)

8.04.210 Oaths—Certification.

The hearing examiner or designee shall administer the oath or affirmation. (Prior code § 61.05.511)

8.04.220 Evidence rules.

Government Code of the State of California, Section 11513, subsections (a), (b) and (c), as presently written or hereinafter amended, shall apply to hearings under this title. (Prior code § 61.05.512)

8.04.230 Rights of parties.

A. Each party may represent themselves, or be represented by anyone of their choice.

B. If a party does not proficiently speak or understand the English language, he or she may provide an interpreter, at the party's own cost, to translate for the party. An interpreter shall not have had any involvement in the issues of the case prior to the hearing. (Prior code § 61.05.513)

8.04.240 Official notice.

In reaching a decision, official notice may be taken, either before or after submission of the case for decision, of any fact which may be judicially noticed by the courts of this state or which may appear in any of the official records of the city or any of its departments. (Prior code § 61.05.514)

8.04.250 Inspection of premises.

A. The hearing examiner may inspect the premises involved in the hearing prior to, during or after the hearing, provided that:

1. Notice of such inspection shall be given to the parties before the inspection is made;

2. The parties are given an opportunity to be present during the inspection; and

3. The hearing examiner shall state for the record during the hearing, or file a written statement after the hearing for inclusion in the hearing record, upon completion of the inspection, the material facts observed and the conclusion drawn therefrom.

B. Attorney's Fees. Pursuant to Section 38773.5 of the Government Code, in any proceeding brought to enforce any order, the prevailing party shall be entitled to recover attorney's fees, provided that, pursuant to Section 38773.5, attorney's fees shall only be available in those proceedings in which the city has provided notice at the commencement of such proceedings that it intends to seek and recover attorney's fees. (Ord. 2000-017 § 4(a)(18); prior code § 61.07.702)

8.04.300 Failure to complete work.

A. Whenever the required abatement is not completed within the time so specified in the order, the department head may, in addition to any other remedy herein provided, cause the nuisance to be abated, so as to put the premises in such a condition that no violation of this code exists thereon.

B. The cost of such abatement shall be assessed against the property as a lien or made a personal obligation of the owner thereof as provided in Article VIII of this chapter. (Prior code § 61.07.703)

8.04.310 Extension of date for completion.

A. Upon receipt of an application from the person required to conform to the order by a date fixed in the order, and an agreement by such person that he or she will comply with the order if allowed additional time, the department head may, in his or her discretion, grant an extension of time, not to exceed an additional one hundred twenty (120) days, within which to complete such abatement, if the department head determines that such an extension of time will not create or perpetuate a situation imminently dangerous to life or property.

B. The authority of the department head to extend time is limited to the physical abatement of the nuisance or for such other purposes as may be reasonably required by the circumstances of the case, but such extension will not in any way affect or extend the time to appeal the order. (Prior code § 61.07.704)

8.04.320 Interference with work prohibited.

No person shall obstruct, impede or interfere with any officer, employee, contractor or authorized representative of the city, or with any person who owns or holds any estate or interest in any premises on which a nuisance exists and which must be abated under the provisions of this code, whenever such officer, employee, contractor or authorized representative of the city, or person having an interest or estate in such premises is engaged in the work of abating any nuisance as required by the provisions of this code, or in performing any necessary act preliminary to or incidental to such work authorized or directed pursuant to this code. (Prior code § 61.07.705)

Article VII Summary Abatement

8.04.330 Dangerous condition.

If, in the opinion of the department head, there exists a condition on any premises which is of such a nature as to be imminently dangerous to the public health, safety or welfare, which, if not abated according to the procedures of this code, would, during the pendency of the proceedings, subject the public to potential harm of a serious nature, the same may be abated forthwith without compliance with the provisions of this code. Abatement may include, but is not limited to boarding of windows, doors and other openings to city specifications, removal of junk and debris, and securing the perimeter of the property with fencing, gates or barricades (to prevent further occurrences of the nuisance activity). (Prior code § 61.09.901)

8.04.350 Lien or personal obligation.

The cost of abatement including all administrative

costs of any action taken hereunder shall be assessed against the subject premises as a lien or made a personal obligation to the owner or both a personal obligation and a lien as provided in Article VIII of this chapter. (Prior code § 61.09.903)

8.04.360 Summary abatement of graffiti.

A. The city council finds that proliferation of graffiti, especially gang-related graffiti, presents an imminent danger to the public safety and welfare. Law enforcement officials and other experts agree that immediate removal of gang-related graffiti is necessary to reduce the risk of violent and other criminal activities associated with gangs and gang territories. The presence of graffiti which is not abated immediately encourages the creation of additional graffiti, resulting in neighborhood blight and increased costs of abatement.

B. Notwithstanding the provisions of Section 8.04.340 of this chapter, the department head or his or her designee is authorized to summarily abate gang-related graffiti. The abatement may be undertaken by city staff or by outside contractors.

For purposes of this section only, "gang-related graffiti" shall be defined as graffiti, as that term is defined in Section 8.24.020 of this title, which is placed on private or public property by either of the following: (1) a criminal street gang as that term is defined by Penal Code Section 186.22; or (2) any ongoing organization, association, or group of three or more persons, whether formal or informal, having as one of its primary activities the commission of graffiti activity, which has a common name(s) or common identifying sign(s) or symbol(s), and whose members individually or collectively engage in or have engaged in a pattern of graffiti activity.

C. The expense of abatement may be assessed against a minor responsible for creating the graffiti nuisance and the parents or guardians who have custody and control of the minor, or any other person responsible for creating the graffiti nuisance, pursuant to the procedures in Chapter 8.24 of this title. (Ord. 2000-041 § 4: Ord. 97-073 § 1: prior code § 61.09.904)

Article VIII. Recovery of Cost of Abatement

8.04.370 Property owner's liability for cost of abatement.

Every owner of property within the city is liable to the city for the cost of abatement of a public nuisance located on his or her premises conducted pursuant to Article VI of this chapter. (Prior code § 61.10.1000)

8.04.380 Account of expense—Filing of report—Contents.

A. The department head shall keep an itemized account of the expense incurred by the city in abating nuisances under the provisions of this code including all administrative costs. Upon the completion of the work of abatement, such department head shall prepare and file with the city clerk a report specifying the work done, the itemized and total cost of the work, a description of the real property at which the work was performed, and the names and addresses of the persons entitled to notice pursuant to Section 8.04.150 of this chapter.

B. The department head shall cause notice to be given to the Department of Motor Vehicles within five days after the date of removal identifying the vehicle(s) or parts thereof and any evidence of registration

available, including, but not limited to, registration certificates or title or license plates.

C. In the event the hearing examiner finds, pursuant to sworn statement of the owner of any premises or otherwise, that a vehicle which is ordered abated was placed on the premises without the consent of the owner, who did not later acquiesce to its presence on such premises, then the hearing examiner shall certify the finding to the department head, who shall not allocate the cost of the removal of such vehicle to the owner of the premises in the report filed with the city clerk. (Prior code § 61.10.1001)

8.04.390 Report transmitted to delinquency lien hearing officer.

Upon receipt of the report prepared pursuant to Section 8.04.380 of this chapter, the city clerk shall transmit it to a delinquency lien hearing officer appointed by the city manager for consideration. The delinquency lien hearing officer shall fix a schedule for hearing the report, and any protests or objections thereto. The department head shall cause notice of the hearing scheduled before the delinquency lien hearing officer to be mailed at least thirty (30) days prior to the date of the scheduled hearing to the address of the owner as shown on the last equalized assessment roll or such other address of the owner as may be known to the department head. The notice shall state that all protests or objections shall be filed in accordance with section 8.04.400 of this chapter. (Ord. 2006-071 § 1: prior code § 61.10.1002)

8.04.400 Making of protests and objections.

Any owner of affected property may file a written protest or objection with the Code Enforcement Department at least ten (10) days before the date specified in the notice given pursuant to Section 8.04.390 of this chapter. Each written protest or objection must contain a description of the property and the grounds of the protest or objection. The Code Enforcement Department shall endorse on every such protest or objection the date it was received. The Code Enforcement Department shall present such protests or objections to the delinquency lien hearing officer at the time set for the hearing, and no other protests or objections shall be considered. Any protests or objections not filed in writing at least ten (10) days prior to the date set for the hearing, and for which City staff is not prepared to address, shall be continued to the date of a future hearing for consideration by the delinquency lien hearing officer. (Ord. 2006-071 § 2: prior code § 61.10.1003)

8.04.410 Hearing of protests.

Upon the day and hour fixed for the hearing the delinquency lien hearing officer shall hear and pass upon the report of the department head together with any such protests or objections. The delinquency lien hearing officer shall follow, as nearly as practicable, those procedures that the city council would have followed if it had conducted the hearing. The delinquency lien hearing officer may make such revision, correction or modification of the report or the charge as he or she may deem just, and shall submit the report to the city clerk to be transmitted to the city council. The city clerk shall also send the results of the hearing to the objecting owners by first class mail, and shall include the date and time of the public hearing to be held by the city council in accordance with Section 8.04.430(A) of this chapter. The decision of the delinquency lien hearing officer on the report and on all objections or protests shall be final and conclusive. (Prior code § 61.10.1004)

8.04.420 Nature of protests to be heard.

A. Except as provided in subsection B of this section, the protests heard by the delinquency lien hearing officer pursuant to Section 8.04.410 of this chapter shall relate only to the charge to be made for abatement, and no protest concerning the action of the department head or the hearing examiner in ordering the abatement of the

nuisance shall be heard at this time.

B. Where the charge to be made is the result of summary abatement pursuant to Section 8.04.330 of this chapter, the delinquency lien hearing officer may determine whether or not the action to abate was proper, and may modify the charge or not as he or she may deem proper. (Prior code § 61.10.1005)

8.04.430 Personal obligation, lien, or special assessment.

A. Upon receipt of the delinquency lien hearing officer's report, the city council shall schedule a public hearing at which it shall confirm, reject or modify the report and determine the costs of abatement. The public hearing shall be limited to the issue of whether the hearing before the delinquency lien hearing officer was conducted in accordance with applicable city ordinances. Only those owners who file an objection or protest and appear before the delinquency lien hearing officer shall be permitted to protest at the city council hearing.

B. Upon taking action under subsection A, the city council may order that the costs of abatement be made a personal obligation of the property owner and either a nuisance abatement lien or a special assessment against the property.

C. If an action or proceeding is commenced to recover the costs, the prevailing party shall be entitled to recover reasonable attorneys' fees, provided that, pursuant to California Government Code section 38773.5, attorneys' fees shall only be available where the city has elected, at the commencement of such action or proceeding, to seek recovery of its own attorneys' fees. In no action or proceeding shall an award of attorneys' fees to a prevailing party exceed the amount of reasonable attorneys' fees incurred by the city in the action or proceeding.

D. A nuisance abatement lien may be recorded and enforced against the property pursuant to the provisions of California Government Code section 38773.1. A nuisance abatement lien may be foreclosed by an action brought by the city for a money judgment. As part of the foreclosure action, the city may recover reasonable attorneys' fees and costs including, but not limited to, costs incurred for processing and recording the lien and providing notice to the property owner.

E. As an alternative to a nuisance abatement lien, the costs of abatement may be made a special assessment against the property. The special assessment may be collected at the same time and in the same manner as ordinary municipal taxes and shall be subject to the same penalties and procedures, including the sale of the property in case of delinquency, as provided for ordinary municipal taxes. The special assessment shall continue until the assessment and all interest and penalties due and payable thereon have been paid. All laws applicable to the levy, collection and enforcement of municipal taxes shall be applicable to the special assessment. (Ord. 2006-047 § 1: prior code § 61.10.1006)

8.04.440 Time for contest of assessment.

The validity of any assessment made under the provisions of this chapter shall not be contested in any action or proceeding unless the same is commenced within thirty (30) days after the assessment is confirmed by the city council. (Ord. 2000-017 § 4(a)(19); prior code § 61.10.1007)

8.04.450 Filing copy of report with county auditor.

A certified copy of the assessment shall be filed with the county auditor on or before August 1st. The descriptions of the parcels reported shall be those used for the same parcels on the map books of the county assessor for the current year. (Prior code § 61.10.1008)

City Clerk's Copy

COUNTY OF SACRAMENTO AGREEMENT NO. # _____

AGREEMENT

THIS AGREEMENT is made and entered into as of this 4th day of December, 2003, between the COUNTY OF SACRAMENTO, a political subdivision of the State of California, hereinafter referred to as "COUNTY", and the CITY OF SACRAMENTO, a charter municipal corporation (hereinafter referred to as "CITY").

RECITALS

WHEREAS, in 1987 Congress amended Section 402 of the Federal Clean Water Act to require the United States Environmental Protection Agency ("EPA") to promulgate regulations for permits for stormwater discharges; and

WHEREAS, the regulations are designed to control pollutants associated with stormwater discharges through the use of the National Pollutant Discharge Elimination System ("NPDES") permit system which allows the lawful discharge of stormwater into the waters of the United States; and

WHEREAS, the EPA has delegated to the State of California the authority to issue NPDES permits; and

WHEREAS, the California Regional Water Quality Control Board, Central Valley Region ("Regional Board") has been charged by the California State Water Resources Control Board with the responsibility to issue NPDES permits within the Central Valley Region; and

WHEREAS, on December 6, 2002, the Regional Board adopted a NPDES stormwater permit No. CAS0082597, Order No. R5-2002-0206, (hereinafter referred to as "Permit") for the County of Sacramento and the Cities of Citrus Heights, Elk Grove, Folsom, Galt, and Sacramento (PERMITTEES); and

WHEREAS, the PERMITTEES must comply with the Permit, its successor Permit, and other stormwater compliance documents subject to modification by the Regional Board; and

WHEREAS, the CITY is responsible for overseeing regulatory compliance with the Permit for areas within it jurisdiction; and

WHEREAS, the CITY has adopted a Stormwater Ordinance set forth at Chapter 13.16 of the Sacramento City Code to prohibit the discharge of pollutants to the CITY's municipal stormwater conveyance system; and

CITY
AGREEMENT NO. 2003-221

WHEREAS, Provision C.9 of the Permit includes the requirement to track, inspect and ensure compliance with the Stormwater Ordinance at industrial and commercial facilities; and

WHEREAS, COUNTY Environmental Management Department, as both the State designated Certified Unified Program Agency (CUPA) and Environmental Health Agency for Sacramento County, is currently tracking, conducting inspections and otherwise regulating, pursuant to Chapter 6.11, Division 20 and Chapter 4, Division 104 of the Health and Safety Code, the majority of the commercial and industrial facilities that are subject to compliance with the Stormwater Ordinance; and

WHEREAS, CITY has determined that the cost to track, inspect and ensure stormwater compliance at commercial and industrial facilities is such that it would be more economical, feasible, and of greater benefit to the regulated business community to utilize the services of COUNTY to fulfill the commercial/industrial stormwater program requirements of the Permit; and

WHEREAS, Article 11, section 8 of the California Constitution provides that a county may agree with a city within its borders to performed specified municipal functions, if provided by their respective charters, and the City and County Charters allow the City Council and the Board of Supervisors, respectively, to enter into agreements for the performance of municipal functions by the County; and

WHEREAS, to the extent that amendments to the CITY's Stormwater Ordinance are needed to authorize COUNTY to administer and enforce the Stormwater Ordinance for such commercial and industrial facilities, CITY staff intends to develop and recommend such amendments to the City Council; and

WHEREAS, COUNTY and CITY desire to enter into this Agreement on the terms and conditions set forth herein.

NOW, THEREFORE, in consideration of the mutual promises hereinafter set forth, the parties hereto agree as follows:

I. SCOPE OF SERVICES

COUNTY shall provide services in the amount, type and manner described in Exhibit "A", which is attached hereto and incorporated herein.

CITY shall provide services in the amount, type and manner described in Exhibit "B", which is attached hereto and incorporated herein.

CITY
AGREEMENT NO. 2003-221

II. COST SHARE

Each party shall be responsible for the costs of implementing their respective services as described in Exhibits "A" and "B".

III. TERM

This Agreement shall be effective and commence as of the date first written above and shall end on June 30, 2010, unless sooner terminated as provided herein.

IV. NOTICE

Any notice, demand, request, consent, or approval that either party hereto may or is required to give the other pursuant to this Agreement shall be in writing and shall be either personally delivered or sent by certified mail-return receipt requested, addressed as follows:

TO COUNTY	TO CITY
DIRECTOR Sacramento County Environmental Management Department 8475 Jackson Road, Suite 230 Sacramento, CA 95826	Director of Utilities Department of Utilities City of Sacramento 1395 35th Avenue Sacramento, CA 95822

Either party may change the address to which subsequent notice and/or other communications can be sent by giving written notice designating a change of address to the other party, which shall be effective upon receipt. Notice shall be deemed effective on the date of receipt.

V. COMPLIANCE WITH LAWS

CITY and COUNTY and their respective officers and employees shall observe and comply with all applicable Federal, State, County and City laws, regulations and ordinances, including but not limited to laws, regulations and ordinances governing conflict of interest.

VI. EMPLOYMENT STATUS OF PERSONNEL

1. Any persons employed by COUNTY for the performance of services pursuant to this Agreement shall remain employees of COUNTY, shall at all times be under the direction and control of the COUNTY, and shall not be considered employees of the CITY. All persons employed

CITY AGREEMENT NO. 2003-221

by the COUNTY to perform services pursuant to this Agreement shall be entitled solely to the rights and privileges afforded to COUNTY employees and shall not be entitled, as a result of providing services hereunder, to any additional rights or privileges that may be afforded to CITY employees.

2. For the purpose of performing the services provided for in this Agreement, and for the purpose of giving official status to the performance thereof where necessary, every COUNTY officer and employee engaged in the performance of any service hereunder shall be deemed to be an agent of the CITY while performing such services for CITY, provided that such services are within the scope of this Agreement, are purely municipal functions and are performed as authorized by the Sacramento City Code. Notwithstanding the agency relationship established by this subsection, the CITY shall not be liable for any act or omission of any COUNTY officer or employee.

3. CITY shall not be liable for the payment of any salaries, wages, compensation or other benefits to any COUNTY employee performing services pursuant to this Agreement, or for compensation or indemnity to any COUNTY employee for injury or sickness arising out of his or her employment with the COUNTY and providing services pursuant to this Agreement.

4. COUNTY hereby indemnifies and holds CITY harmless from any and all claims that may be made against CITY based on any contention by any third party that an employer-employee relationship exists by reason of this Agreement.

VII. SHARE OF LIABILITIES

Notwithstanding any provision hereof to the contrary, if the Regional Board or other regulatory agency imposes penalties on the CITY, or any third party files a lawsuit against the CITY, based on any violation of the Permit by CITY, and such violation is related to any activities performed by either party under this Agreement, each party shall be responsible for the costs of such penalties or third party lawsuits to the extent that such penalties or lawsuits arise from activities performed or required to be performed by that party, its officers, directors, agents, employees, and volunteers, under this Agreement.

VIII. INDEMNIFICATION

City shall defend, indemnify and hold harmless County, its Board of Supervisors, officers, directors, agents, employees and volunteers from and against all demands, claims, actions, liabilities, losses, damages, and costs, including reasonable attorneys' fees, arising out of or resulting from the

CITY AGREEMENT NO. 2003-221

performance of the Agreement, caused in whole or in part by the negligent or intentional acts or omissions of City officers, directors, agents, and employees (including its volunteers and students).

County shall defend, indemnify, and hold harmless City, its City Council, officers, directors, agents, employees, and volunteers from and against all demands, claims, actions, liabilities, losses, damages and costs, including reasonable attorneys' fees, arising out of or resulting from the performance of the Agreement, caused in whole or in part by the negligent or intentional acts or omissions of County's Board of Supervisors, officers, directors, agents, and employees (including its volunteers and students).

It is the intention of County and City that the provisions of this paragraph be interpreted to impose on each party responsibility to the other for the acts and omissions of their respective officers, directors, agents, employees, volunteers and students, County's Board of Supervisors, and City's City Council. It is also the intention of County and City that, where comparative fault is determined to have been contributory, principles of comparative fault will be followed and each party shall bear the proportionate cost of any damage attributable to the fault of that party, its officers, directors, agents, employees, volunteers and students, County's Board of Supervisors and City's City Council.

IX. SUBCONTRACTS, ASSIGNMENT

1. Any subcontracting will be subject to all applicable provisions of this Agreement. Subcontracting services delivered under this Agreement shall not in any way relieve COUNTY of any duty or responsibility under this Agreement and COUNTY shall remain primarily obligated for the performance of all services.

2. This Agreement is not assignable by COUNTY in whole or in part, without the prior written consent of CITY.

X. AMENDMENT AND WAIVER

Except as provided herein, no alteration, amendment, variation, or waiver of the terms of this Agreement shall be valid unless made in writing and signed by both parties. Waiver by either party of any default, breach or condition precedent shall not be construed as a waiver of any other default, breach or condition precedent, or any other right hereunder.

XI. INTERPRETATION

This Agreement shall be deemed to have been prepared equally by both of the parties, and the Agreement and its individual provisions shall not be

CITY AGREEMENT NO. 2003-221

construed or interpreted more favorably for one party on the basis that the other party prepared it.

XII. TERMINATION

Either party may terminate this Agreement upon one hundred and eighty (180) days written notice to the other party. Notice shall be deemed served on the date of mailing.

XIII. PRIOR AGREEMENTS

This Agreement constitutes the entire contract between COUNTY and CITY regarding the subject matter of this Agreement. Any prior agreements, whether oral or written, between COUNTY and CITY regarding the subject matter of this Agreement are hereby terminated effective immediately upon full execution of this Agreement.

IN WITNESS WHEREOF, the parties hereto have caused this Agreement to be duly executed as of the day and year first written above.

CITY AGREEMENT NO. _____

EXHIBIT A to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY," and
the CITY OF SACRAMENTO, hereafter referred to as "CITY"

I. SCOPE OF SERVICES

COUNTY DESCRIPTION OF SERVICES

COUNTY will work within a cooperative relationship with CITY and provide the following services:

1. Administer and enforce CITY's Stormwater Ordinance with respect to commercial and industrial facilities within the CITY.

A. COUNTY will administer and enforce CITY's Stormwater Ordinance with respect to commercial and industrial facilities within the incorporated CITY area, to the extent that COUNTY administration and enforcement is authorized by the Stormwater Ordinance or any amendments thereto adopted by the Sacramento City Council.

2. Provide inspections at commercial and industrial facilities within the incorporated CITY area as required by California Regional Water Quality Control Board Order # R5-2002-0206 (Permit) consistent with applicable provisions of the Stormwater Ordinance.

A. COUNTY will complete a stormwater compliance inspection at each eligible commercial and industrial facility at least once every three years.

B. COUNTY will, in coordination with CITY, develop inspection form(s) to be used by COUNTY personnel.

C. COUNTY will develop protocols to complete required area survey activities to ensure that new facilities are incorporated into the stormwater inspection and enforcement program and will provide, at a minimum, annual updates of database.

D. COUNTY will distribute at the time of inspection any educational materials provided by CITY for such distribution.

2003-221
CITY
AGREEMENT NO.

3. Provide follow-up inspection and progressive enforcement protocols, including a written enforcement policy, consistent with the requirements of the Permit and applicable provisions of the Stormwater Ordinance.

A. In coordination with CITY, COUNTY will develop and, as needed, modify those protocols, to ensure compliance with the Permit

B. COUNTY will provide enforcement assistance, as requested, by the Regional Board.

4. Provide a funding mechanism for commercial and industrial facility stormwater compliance inspection program.

A. COUNTY will quantify necessary COUNTY resources required to achieve compliance with the Permit as it applies to inspection, enforcement, and other related activities for commercial and industrial facilities.

B. COUNTY will develop and present to the Sacramento County Board of Supervisors a proposed resolution and/or ordinance that authorizes COUNTY to recover program costs resulting from the expenditure of resources required for program implementation. Such a resolution and/or ordinance will include a fee schedule detailing annual fees for all facilities included in the commercial and industrial stormwater compliance program.

5. Provide support for presentations before the Sacramento City Council and other groups or individuals.

If requested, COUNTY will assist in the presentation of stormwater related issues before the City Council and any other groups or individuals.

6. Provide Adequate Industry Notification.

COUNTY, along with CITY, will conduct workshops and other outreach efforts to inform the regulated community of pending fee and significant compliance issues.

7. Provide for additional staff and training.

A. COUNTY will develop a work plan documenting additional staff required for the commercial and industrial stormwater compliance program implementation.

B. COUNTY will arrange for and secure needed staff training.

CITY AGREEMENT NO. 2003-221

8. Develop adequate record-keeping and notification system.

A. COUNTY will review record keeping and notification requirements required by the Permit and incorporate these requirements into its existing record keeping and outside agency reporting protocols.

B. COUNTY will make the necessary additions and/or adjustments to its existing database to comply with data management requirements contained in the Permit.

9. Appointment of a Senior Level Manager as liaison to CITY for coordination with the commercial and industrial stormwater compliance program.

COUNTY will designate a senior level position to oversee all stormwater program activities and act as the primary liaison with CITY.

10. Provide for complaint response.

A. COUNTY will develop a methodology that outlines how complaints should be categorized and the appropriate level of response that is required in response to complaints for those industries within COUNTY's inspection jurisdiction.

B. COUNTY, along with CITY, will work directly with the Regional Board to develop and modify this proposed methodology, as needed, to ensure Permit compliance.

11. Provide for reporting and documentation.

Not later than August 1st of each year, COUNTY will provide CITY any inspection/enforcement/complaint data or documentation needed by CITY to achieve compliance with reporting requirements contained in the Permit. This will include at a minimum:

- Number of businesses/facilities inspected
- Number of enforcement actions taken, including the amount of fines or monies assessed and collected
- Number of complaints referred to COUNTY by the Regional Board
- Total number of complaint responses by COUNTY
- Enforcement assistance provided to the Regional Board
- Inspection or complaint response records for specific facilities requested by CITY on an as needed basis.

CITY AGREEMENT NO. 2003-221

12. Provide for progress evaluation.

A. COUNTY and CITY shall meet on a quarterly basis for program updates and coordination purposes. COUNTY and CITY will meet semi-annually to evaluate program effectiveness.

B. As with its other regulatory programs, COUNTY will prepare required records or documentation relating to the storm water program for the purpose of a financial review or analysis by the City of Sacramento and County Auditor(s).

CITY
AGREEMENT NO. 2003-221

EXHIBIT B to Agreement
between the COUNTY OF SACRAMENTO,
hereafter referred to as "COUNTY," and
the CITY OF SACRAMENTO, hereafter referred to as "CITY"

I. CITY DESCRIPTION OF SERVICES

Consistent with applicable provisions of the Sacramento City Charter and City Code, CITY will work within a cooperative relationship with COUNTY and provide the following services:

1. Assist in the specification of the commercial and industrial facilities to be inspected, as defined by California Regional Water Quality Control Board Order # R5-2002-0206 (Permit).

CITY will work with COUNTY to develop an inclusive inventory of commercial and industrial facilities that are subject to inspections, enforcement, and other associated activities, as defined by the Permit.

2. Provide support for presentations before the Sacramento County Board of Supervisors and other groups or individuals.

If requested by COUNTY, CITY will assist in the presentation of stormwater related issues before the Board of Supervisors and any other groups or individuals.

3. Modification of Local Storm Water Ordinance.

CITY staff will develop and present to the City Council proposed amendments to CITY's existing Stormwater Ordinance to include authorization for COUNTY to implement the storm water compliance program for commercial and industrial facilities. If approved by the City Council, such amendments shall to the extent necessary authorize COUNTY to:

- Conduct all necessary inspections or re-inspections of regulated facilities within the incorporated CITY area.
- Take any necessary enforcement actions as authorized by the City Code and consistent with a CITY approved enforcement plan.
- Investigate and follow-up referred complaints at eligible facilities.
- Establish and collect fees necessary to recover program implementation costs.

CITY AGREEMENT NO. 2003-221

4. Provide Adequate Industry Notification.

CITY will develop initial industry notification and educational materials and, when requested by the COUNTY, will participate with County in workshops and other outreach efforts to inform the regulated community of pending fee and significant compliance issues.

5. Assist in staff training.

If requested by COUNTY, CITY will provide assistance in developing staff training modules and materials. CITY will also assist, if requested, in the development of a work plan documenting additional staff required for the implementation of the commercial and industrial stormwater compliance program.

6. Appointment of a Senior Level Manager, or a Senior Level Manager's designated representative, as liaison to COUNTY for coordination with the commercial and industrial stormwater compliance program.

CITY will appoint a senior level manager or identify a senior level manager designee to oversee the commercial and industrial facility stormwater program activities and act as the primary liaison with COUNTY.

7. Provide for complaint response.

CITY will be responsible for complaint response for those industries in the CITY that are not specified by the Permit or the Regional Board to be included in the commercial and industrial inspection program.

8. Reporting and documentation requirements.

CITY will work with COUNTY to develop specific report format(s) including necessary data elements needed to comply with reporting requirements contained in the Permit.

9. Other Additional Services.

CITY shall develop and provide to COUNTY, educational outreach materials to be distributed during commercial and industrial inspections.

RESOLUTION NO. 2003-856

ADOPTED BY THE SACRAMENTO CITY COUNCIL

ON DATE OF DEC 0 9 2003

RESOLUTION AUTHORIZING COOPERATIVE AGREEMENT BETWEEN CITY OF SACRAMENTO AND COUNTY OF SACRAMENTO FOR PERFORMANCE OF STORM WATER ORDINANCE COMPLIANCE INSPECTIONS AT INDUSTRIAL AND COMMERCIAL FACILITIES

BE IT RESOLVED BY THE SACRAMENTO CITY COUNCIL THAT:

WHEREAS, the EPA has delegated to the State of California the authority to issue NPDES permits; and

WHEREAS, the California Regional Water Quality Control Board, Central Valley Region ("Regional Board") has been charged by the California State Water Resources Control Board with the responsibility to issue NPDES permits within the Central Valley Region; and

WHEREAS, on December 6, 2002, the Regional Board adopted a NPDES stormwater permit No. CAS0082597, Order No. R5-2002-0206 (Permit) for the County of Sacramento and the Cities of Citrus Heights, Elk Grove, Folsom, Galt, and Sacramento (Permittees); and

WHEREAS, the Permittees must comply with the Permit, its successor Permit, and other stormwater compliance documents subject to modification by the Regional Board; and

WHEREAS, the City of Sacramento (Sacramento) is responsible for overseeing regulatory compliance with the Permit for areas within its jurisdiction; and

WHEREAS, Sacramento and Sacramento County(County) wish to jointly participate in conducting storm water inspections at industrial and commercial facilities for the purpose of complying with the Permit; and

WHEREAS, a cooperative effort between Sacramento and County would be beneficial to the region by strengthening regional partnerships to enhance the quality of life.

FOR CITY CLERK USE ONLY

RESOLUTION NO.: 2003-856

DATE ADOPTED: DEC 0 9 2003

NOW, THEREFORE, BE IT RESOLVED BY THE SACRAMENTO CITY COUNCIL THAT:

The City Manager is hereby authorized to enter into a Cooperative Agreement with the County of Sacramento for the performance of storm water inspections at industrial and commercial facilities located in the City that are specified within the Permit.

Section 16

WATER QUALITY CONTROL

16-1 GROUND WATER DISCHARGES

Contractor shall be responsible for the control, removal, and disposal of any groundwater that may be encountered in the course of excavating and backfilling trenches, placing pipe, or constructing any other improvements associated with the project. Unless approved in writing by the Engineer, groundwater and/or water from trench dewatering shall be free of sediment and other construction materials before entering the City sewer or storm drain system. A dewatering plan, including a water de-sedimentation plan, shall be submitted to the Engineer for approval prior to any pumping or discharging of water to the City storm drain system.

Issues which require the regulation of groundwater discharges include: influence on existing or unknown contaminate plumes, exceeding sewer and drainage capacity, excessive demands on facility infrastructure, pumping costs, and maintenance worker safety.

It is the responsibility of the contractor to verify that groundwater is free of contamination through a regular monitoring program.

All Groundwater discharges within the City of Sacramento must be arranged through the Water Quality Section of the Department of Utilities, (916)808-1400, 1395 35th Avenue, Sacramento CA 95822.

DISCHARGE TO SEWER SYSTEM

If 25,000 gallons of water per day, or more, is discharged to the City's Combined Sewer/Stormwater System, or Separate Sewer System, Contractor will be required to obtain a discharge permit from the Sacramento County Regional Sanitation District Industrial Waste Section (916-875-6470). The City will reimburse Contractor for fees paid to the County to obtain a discharge permit, but Contractor shall be responsible to pay any fines levied if Contractor does not comply with the permit requirements. Discharges of 25,000 gallons of water, or more, also require a Memorandum of Understanding (MOU) with the City of Sacramento. See www.sacstormwater .org for MOU language. Fees will be waived for City sponsored projects. Contractor should allow 2-3 weeks for MOU process.

All new groundwater discharges to the City of Sacramento's combined or Separated Sewers must be regulated and monitored by the Department of

Utilities (refer City Council Resolution #92-439) Groundwater discharges to the City's sewer system are defined as follows:

1. Construction dewatering discharges
2. Treated or untreated contaminated groundwater cleanup discharges
3. Uncontaminated groundwater discharges

Currently, two types of groundwater discharges to the combined and separate sewer system are recognized by the Department of Utilities, which are: limited discharges and long-term discharges. These types of discharges are described as follows:

1. "Limited discharges"

Limited discharges are short groundwater discharges of 7-days duration or less and must be approved through the Department of Utilities by an acceptance letter.

2. "Long-term discharges"

Long term discharges are groundwater discharges of greater duration than 7-days. Long-term discharges must be approved through the Department of Utilities and the City Clerk through the MOU process.

DISCHARGES TO THE STORM DRAINAGE SYSTEM

Any groundwater discharges to the separate storm drainage system must be secured with an individual National Pollutant Discharge Elimination System (NPDES) permit from the California Regional Water Quality Control Board (Water Board) and an MOU from the City. The NPDES permit must be received prior to the City issuing an MOU to discharge to the City's storm drainage system.

If discharge is either four months or less in duration or the average dry weather discharge does not exceed 0.25 MGD, then the discharge can be covered under the General NPDES Permit for Dewatering and other Low Threat Discharges to Surface Waters. A Notice of Intent and filling fee must be filed with the Water Board for each project. Receiving water limitations are included in the permit.

16-2 WATER QUALITY CONTROL

These requirements consist of regulations contained in the National Pollution Discharge Elimination System (NPDES) Municipal Stormwater Permit issued to the City.

Contractor shall comply with all City and County of Sacramento air pollution control rules, regulations, ordinances, and statutes which apply to any work performed pursuant to the contract, including any air pollution control rules, regulations, ordinances, and statutes, specified in the Government Code. Contractor shall be responsible for the control of dust within the limits of the project at all times including weekends and holidays in addition to normal working days. Contractor shall take whatever steps are necessary or required by the Engineer to eliminate the nuisance of blowing dust without causing sediment, debris or litter to enter the City storm drain system.

16-3 EROSION, SEDIMENT, AND POLLUTION CONTROL

Contractor shall be responsible for controlling erosion and sedimentation within the limits of the project at all times during the course of construction including evenings, weekends and holidays in addition to normal working days. Contractor shall prevent sediment and construction debris from entering the City storm drain system.

Contractor shall provide the following erosion, sediment, and pollution control Best Management Practices (BMPs) when and where applicable:

Contractor shall place Filter Bags in and Gravel bags around any storm drain inlets which receive runoff from the limits of the construction zone, including storage and staging areas. Alternative storm drain inlet protection BMPs may be used with approval of the Engineer. (See Section 38, drawings Q-20 and Q-30)

Contractor shall cover piles of material and/or place gravel berms (or approved equal) around material piles as required to prevent migration of material to gutters or storm drains.

Contractor shall keep gutter flowlines unimpeded and free of soil, debris and construction materials at all times.

Contractor shall stabilized construction entrance at any soil to concrete/asphalt interface used by Contractor vehicles and equipment in accordance with Section 38, drawing Q-10.

Contractor shall place silt fences, fiber rolls or approved equal at any soil to concrete/asphalt interface at which soil may be washed onto the concrete/asphalt in accordance with Section 38, drawings Q-40 and Q-50.

Wash water, slurry and sediment from concrete or asphalt saw-cutting operations shall not be allowed to enter the City storm drain system, but

instead must be collected and disposed of, by Contractor, in a manner approved by the Engineer.

Contractor is required to implement, at a minimum, the following housekeeping practices:

Site Cleanup:

Contractor shall be responsible for the control of dust, mud and debris resulting from Contractor's operations within the limits of the project at all times including weekends and holidays in addition to normal working hours. Contractor shall take whatever steps are necessary or required by the Engineer and daily clean up throughout the project shall be required as Contractor progresses with the work.

Daily or as needed, all paved areas within the limits of the project shall be cleaned and free of sediments, asphalt, concrete and any other construction debris. Contractor shall not clean sediment and debris from the street by using water to wash down streets. The streets shall only be washed after the streets have been thoroughly swept and/or vacuumed and inlet protection has been placed at all storm drain inlets to catch any remaining sediments from the streets.

Spillage of earth, gravel, concrete, asphalt, or other materials resulting from hauling operations along or across any public traveled way shall be removed immediately by Contractor at their expense. If site is not kept sufficiently clean, the City will take measures to clean it and subtract the cost thereof from payments owing the Contractor.

Solid Waste Management:

Contractor shall maintain a clean construction site. Contractor shall provide designated areas for waste collection. The waste collection areas shall be leak-proof containers with lids or covers. Site trash shall be collected daily and placed in the disposal containers. Contractor shall make arrangements for regular waste collection. Contractor shall also regularly inspect the waste disposal areas to determine if potential pollutant discharges exist.

Hazardous Material Storage and Delivery Area:

Contractor shall provide one central hazardous material storage and delivery area (HMSDA) for the duration of the project. Examples of hazardous materials include pesticides and herbicides; fertilizers; detergents; petroleum products; acids; lime; glues; paint; solvents and curing compounds. This area shall be protected such that polluted runoff will not be allowed to leave the

HMSDA site. Contractor shall regularly inspect the HMSDA site to ensure that any hazardous or non-hazardous materials have not spilled.

Concrete Waste Management:

Contractor shall arrange for concrete wastes to be disposed of off-site or in one designated on-site area. Concrete wastes, including left-over concrete and material from washing out the concrete truck, shall not be disposed or washed into the storm drain system. A designated on-site concrete waste containment area shall be provided. The site shall be bermed and lined to keep concrete waste from leaving the containment area. The dried concrete waste shall be removed and disposed of properly by Contractor at their expense.

Spill Prevention and Control:

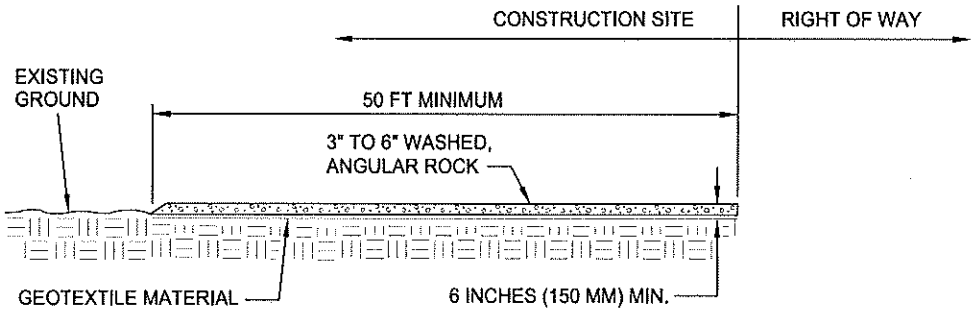
Contractor shall be responsible for instructing employees and sub-contractors about preventing spills of hazardous materials such as equipment fuel, and about controlling spills if they occur. Proper spill control and cleanup materials and procedures shall be kept on site near the storage and equipment fueling areas and updated as materials change on site. Contractor is strictly responsible for the prevention, clean-up and consequences of any hazardous materials spills.

Throughout the duration of the project Contractor shall inspect and maintain, in effective condition, all erosion, sediment, and pollution control BMPs before and after each storm event and as needed. Contractor shall immediately correct or replace any ineffective BMPs.

More information about control measures and housekeeping practices can be obtained by referring to the City of Sacramento's Administrative and Technical Procedures Manual for Grading, Erosion and Sediment Control available at 1395 35th Avenue, Sacramento, CA 95822.

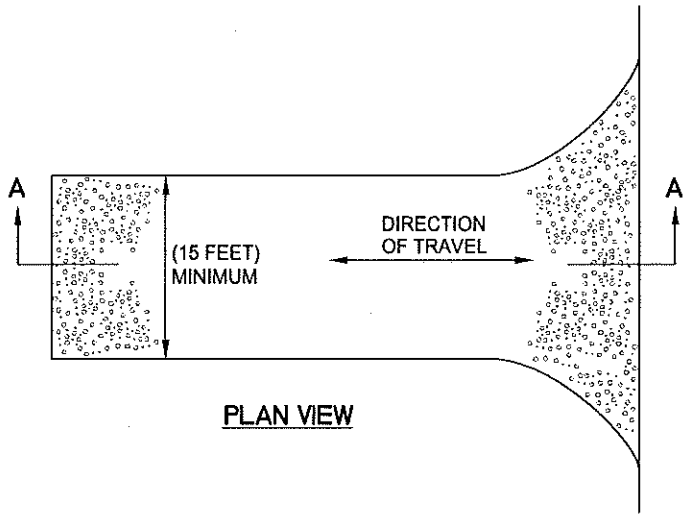
Contractor shall prepare and submit an erosion, sediment and pollution control plan (ESC Plan) to the Engineer for review. The submittal shall include a description of all erosion, sediment and pollution control BMPs proposed to be used to prevent sediment and other sources of pollution from entering the City storm drain system as well as a site plan showing their placement. The ESC Plan shall be submitted a minimum of 48 hours prior to start of the work. **Contractor shalll not begin work until an accepted ESC Plan is on file with the Engineer.** The erosion, sediment and pollution control plan shall be updated as necessary and re-submitted to the Engineer.

16-4 ENFORCEMENT



Per City Code Sections 15.88, 13.16 and 1.28, Contractor shall be subject to Notice of Violations (NOVs) resulting in possible Stop Work Orders and Administrative Penalties of up to $4,999 per day for non-compliance of this section of the Special Provisions.

Per the State's Porter Cologne Water Quality Act, Contractor shall also be subject to inspection by Staff from the Central Valley Regional Water Quality Control Board who have the authority to issue Notices of Violation (NOVs) and Penalties of up to $10,000 per day for non-compliance. Contractor shall be liable for any fines issued to the project by the State or Federal Government for NPDES non-compliance due to Contractor negligence.



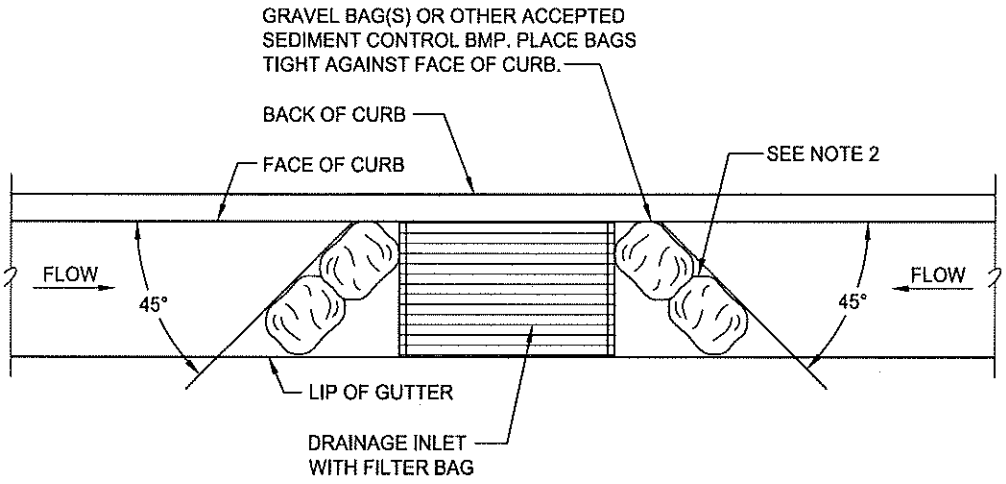
The City reserves the right to take corrective action and withhold the City's costs for corrective action from progress payments or final payment in accordance with Section 7, Retention of Sums Charged against Contractor, of the Agreement. Any fines, including third-party claims, levied against the Agency as a result of Contractor's non-compliance are Contractor's sole responsibility and will be withheld from progress payments or final payment in accordance with Section 7, Retention of Sums Charged against Contractor, of the Agreement.

16-5 PAYMENT

There will be no separate payment for Water Quality Control and the cost therefore shall be considered included in whatever item Contractor deems appropriate.

SECTION A-A

PLAN VIEW



NOTES:

1. STABILIZED CONSTRUCTION ENTRANCE SHALL BE CONSTRUCTED OF 3" TO 6" WASHED, ANGULAR ROCK. MATERIAL SHALL BE PLACED TO A MINIMUM THICKNESS OF 6 INCHES.
2. LENGTH OF ENTRANCE SHALL BE A MINIMUM OF 50 FEET. WIDTH SHALL BE A MIN. OF 15 FT OR GREATER IF NECESSARY TO COVER ALL VEHICULAR INGRESS AND EGRESS. PROVIDE AMPLE TURNING RADII.
3. THE ENTRANCE SHALL BE KEPT IN GOOD CONDITION BY OCCASIONAL TOP DRESSING WITH MATERIAL AS SPECIFIED IN NOTE 1.
4. ACCESSES SHALL BE INSPECTED WEEKLY DURING PERIODS OF HEAVY USAGE, MONTHLY DURING NORMAL USAGE, AND AFTER EACH RAINFALL, WITH MAINTENANCE PROVIDED AS NECESSARY. PERIODIC TOP DRESSING SHALL BE DONE AS NEEDED.

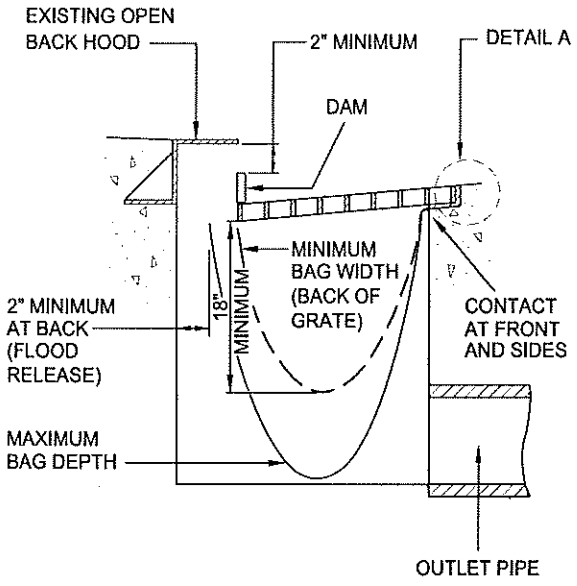
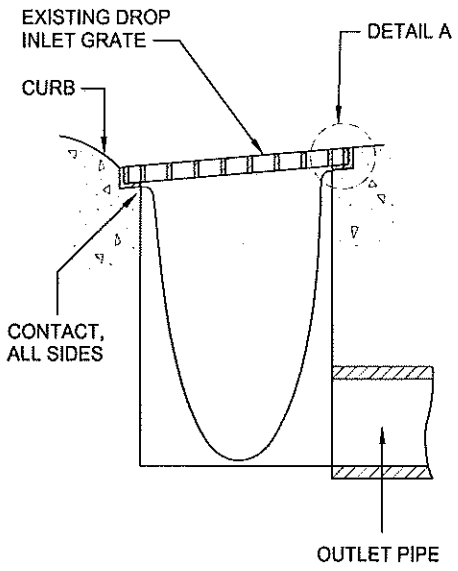
NOTES:

1.- SEDIMENT TRAPPED UPSTREAM OF SEDIMENT CONTROL BMP SHALL BE REMOVED WEEKLY AND PRIOR TO A RAINFALL EVENT.

2.- PLACE BMP'S TIGHTLY TOGETHER AT JOINTS TO PREVENT OR MINIMIZE SEEPAGE AT JOINTS.



3.- INLET SEDIMENT CONTROL MUST BE INSPECTED WEEKLY AND AFTER EACH STORM, AND REPAIRED OR REPLACED AS NEEDED.



4.- INLET SEDIMENT CONTROL IS REQUIRED FOR ALL DI's IN ADDITION TO A STORM DRAIN INLET FILTER BAG.

REV.	DATE	DESCRIPTION

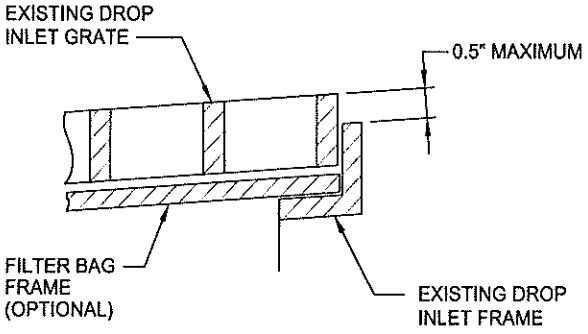
CITY OF SACRAMENTO DEPARTMENT OF UTILITIES	INLET SEDIMENT CONTROL	APPR'D BY: DBT NO SCALE DATE: MAY 2007 DWG. NO. Q - 20

R:\Utilstds\City_Std_Details\Wtr_Quality_Details\Q_20_InletSedimentControl.DWG

NOTES:

1.- THE MAXIMUM DRAINAGE AREA PER FILTER SHALL BE NO MORE THAN 2 ACRES.

2.- THE FILTER BAG SHALL BE MANUFACTURED FROM UV RESISTANT POLYPROPYLENE, NYLON, POLYESTER, OR ETHYLENE FABRIC WITH A MINIMUM TENSILE STRENGTH OF 50 LBS PER LINEAL FOOT, AN EQUIVALENT OPENING SIZE NOT GREATER THAN 20 SIEVE AND WITH A MINIMUM FLOW RATE OF 40 GALLONS/MINUTE/SQ FT.



3.- THE FILTER BAG MAY BE SUSPENDED FROM OR HELD IN PLACE BY THE EXISTING INLET GRATE (OR OTHER APPROVED METHOD), PROVIDING NO MODIFICATION OR DAMAGE SHALL BE DONE TO THE INLET GRATE OR FRAME. THE INLET GRATE SHALL NOT BE CAUSED TO REST MORE THAN 0.5" ABOVE THE INLET FRAME (SEE DETAIL A).

4.- THE FILTER BAG MAY EXTEND TO THE BOTTOM OF THE INLET BOX PROVIDED THE OUTLET PIPE IS UNOBSTRUCTED.

5.- FLOWS SHALL NOT BE ALLOWED TO BYPASS THE BAG. THE BAG OR ITS FRAME SHALL CATCH FLOWS AT ALL SIDES OF THE INLET, EXCEPT AS SHOWN FOR FLOOD RELEASE.

6.- INLET FILTER BAGS SHALL BE INSPECTED WEEKLY AND AFTER EACH RAINFALL DURING THE WET SEASON AND MONTHLY DURING THE DRY SEASON. SEDIMENT AND DEBRIS SHALL BE REMOVED BEFORE ACCUMULATIONS HAVE REACHED ONE THIRD THE DEPTH OF THE BAG. BAGS SHALL BE REPAIRED OR REPLACED AS SOON AS DAMAGE OCCURS.

7.- THIS DETAIL IS SCHEMATIC AND MUST BE ADJUSTED FOR DIFFERENT DI TYPES.

PLAN

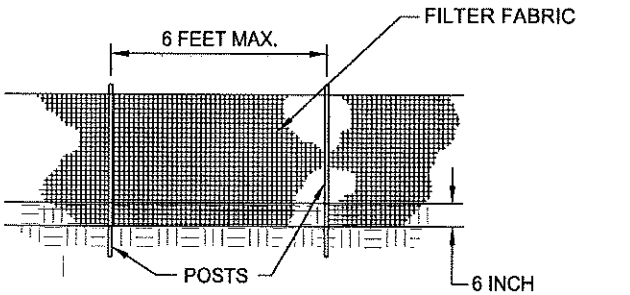
NOTES:

1.- CONSTRUCT THE LENGTH OF EACH REACH SO THAT THE CHANGE IN BASE ELEVATION ALONG THE REACH DOES NOT EXCEED 1/3 THE HEIGHT OF THE LINEAR BARRIER. IN NO CASE SHALL THE REACH LENGTH EXCEED 150M.

2.- THE LAST 8 FT. OF FENCE SHALL BE TURNED UP SLOPE.

3.- OVERLAP STAKES, AND FOLD FENCE FABRIC TO AROUND EACH STAKE ONE FULL TURN.

4.- FOR END STAKE CONDITION FOLD FENCE FABRIC AROUND (2) STAKES (1) FULL TURN AND SECURE WITH (4) STAPLES.



NOTES:

1. SILT FENCE SHALL BE CONSTRUCTED LONG ENOUGH TO EXTEND ACROSS THE EXPECTED FLOW PATH.
2. FILTER FABRIC SHALL BE PROPYLENE, NYLON, POLYESTER OR ETHYLENE YARN WITH A MINIMUM TENSILE STRENGTH OF 50 LBS. PER LINEAR FOOT AT 20 PERCENT MAXIMUM ELONGATION AND CONTAINING ULTRAVIOLET INHIBITORS. FILTER FABRIC SHALL RETAIN A MINIMUM OF 85% OF THE SOIL, BY WEIGHT, BASED ON SIEVE ANALYSIS, BUT IS NOT FINER THAN AN EQUIVALENT OPENING SIZE OF 70. WHEN STANDARD STRENGTH FABRIC IS USED, A WIRE MESH SUPPORT SHALL BE SECURELY FASTENED TO THE UPSLOPE SIDE OF POSTS.
3. SUPPORT POSTS SHALL BE A MINIMUM 3.5' LONG 2"x4" WOOD POSTS OR 'T' SECTION FENCE POSTS DRIVEN A MINIMUM OF 18 INCHES INTO THE GROUND. POSTS SHALL BE SPACED A MAXIMUM OF 6 FEET APART. FABRIC SHALL BE SECURELY FASTENED TO POSTS WITH 1 INCH STAPLES OR 16 GAUGE WIRE TIES SPACED A MAXIMUM OF 6 INCHES APART.
4. A 12 INCH FABRIC TRENCH SHALL BE EXCAVATED ALONG THE UPHILL SIDE OF SILT FENCE POSTS. THE BOTTOM EDGE OF THE FABRIC SHALL EXTEND TO AND ACROSS THE BOTTOM OF THE TRENCH. THE TRENCH SHALL BE BACKFILLED TO 4 INCHES ABOVE GROUND AND COMPACTED TO BURY AND SECURE THE BOTTOM OF THE FILTER FABRIC.
5. CONTRACTER SHALL MAKE INSPECTIONS WEEKLY DURING THE WET SEASON, MONTHLY DURING THE DRY SEASON AND IMMEDIATELY AFTER EACH RAINFALL TO DETERMINE IF REPAIRS AND SEDIMENT REMOVAL IS REQUIRED. SEDIMENT SHALL BE REMOVED BEFORE IT HAS REACHED ONE THIRD THE HEIGHT OF THE FILTER FABRIC.

Administrative Penalty Guidelines
For Prohibited Non-Stormwater Discharges

Section 13.16.050 of the Sacramento City Code prohibits the discharge of non-stormwater that enters the City's storm drain system. City Code section 13.16.150 authorizes various enforcement actions for violations of section 13.16.050, including the imposition of administrative penalties. Administrative penalties for violations of section 13.16.050 are imposed pursuant to the City's general administrative penalty ordinance, Sacramento City Code section 1.28.010. This ordinance provides the following guidance for determining administrative penalty amounts:

> ***Amount of Administrative Penalty.*** *Unless the city council has by resolution or by ordinance adopted a separate and distinct administrative penalty for the particular violation, the amount of the administrative penalty to be imposed shall be set by the department head or his or her designee responsible for issuing the administrative penalty order. Each day a violation continues or occurs constitutes a separate violation. Unless otherwise provided in this code, administrative penalties may be imposed in any amount not less than one hundred dollars ($100.00) nor more than twenty-five thousand dollars ($25,000.00) per violation. In determining the amount of the administrative penalty to be imposed, the city official shall consider factors including but not limited to the seriousness of the violation, the responsible party's efforts to correct the violation, the injury/damage, if any, suffered by any member of the public, any instances in which the responsible party has been in violation of the same or similar code provisions in the previous three years, the amount of city staff time which was expended investigating or addressing the violation, and the amount of administrative penalties which have been imposed in similar situations. The amount of the administrative penalty shall be set according to the following schedule:*
>
> *a. Level A violations are violations that present a substantial probability that death or serious physical harm to the public at large or person(s) would result therefrom. Level A violations shall be subject to an administrative penalty of five thousand dollars ($5,000.00) to twenty-five thousand dollars ($25,000.00);*
>
> *b. Level B violations are violations that either (1) present the threat, but not substantial probability, that serious physical harm to the public at large or person(s) would result therefrom; or (2) present circumstances that are likely to cause and/or do cause serious harm to public or private property; or (3) present a conscious and willful disregard of (i) a hearing examiner's order or orders, or (ii) orders or notices of violation issued by any agency or commission authorized to issue such orders or notices. Level B violations shall be subject to an administrative penalty of two thousand five hundred dollars ($2,500.00) to four thousand nine hundred ninety-nine dollars and ninety-nine cents ($4,999.99);*

c. Level C violations are violations that present circumstances that either (1) are likely to cause and/or do cause harm to public or private property; or (2) show repeated or continuous noncompliance with (i) a hearing examiner's order or orders, or (ii) orders or notices of violation issued by any agency or commission authorized to issue such orders or notices. Level C violations shall be subject to an administrative penalty of one thousand dollars ($1,000.00) to two thousand four hundred ninety-nine dollars and ninety-nine cents ($2,499.99);

d. Level D violations are violations other than Level A, B, or C violations. Level D violations shall be subject to an administrative penalty of one hundred dollars ($100.00) to nine hundred dollars and ninety-nine cents ($999.99).

Based on the above criteria, the following guidelines are established for determining administrative penalty amounts for prohibited non-stormwater discharges.

Residential/Private Citizen

Non-hazardous non-stormwater discharges

Non-hazardous materials include dirt/gravel/sand, vegetation, gray water, food waste, chlorinated pool water, detergents, etc.

First Violation:

Issuance of a notice of violation, cease and desist order and/or notice to clean and abate, but no imposition of administrative penalties, unless the City enforcement official determines that the responsible party was grossly negligent, failed to contain and clean up the prohibited material within the time frame prescribed by the City, attempted to mislead the City with incorrect information and/or refused to comply with the City's enforcement action(s).

Second Violation:

Minimum penalty of $100, not to exceed $999.99 (Level D). This also may be imposed for a first violation under the circumstances described above. Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Subsequent Violations:

If the City enforcement official has imposed an administrative penalty on the same responsible party for a violation of City Code Section 13.16.050 within the preceding three years, the maximum administrative penalty for subsequent violations of City Code Section 13.16.050 may be increased to $2,499.99. The circumstances of the subsequent violations need not be similar to those of the previous violation(s). The maximum administrative penalty for subsequent violations may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. Determination of the penalty amount within these ranges will be made based on consideration of the factors set forth above.

Multiple Days:

Each day a violation continues or occurs can be charged as a separate violation.

Hazardous non-stormwater discharges

Hazardous materials include oils, fuels, latex, oil or water based paint, stucco or concrete waste/wastewater, sewage, antifreeze, paint thinners, herbicides, pesticides, pool chemicals, cleaners, solvents, acids, etc.

First Violation:

Minimum penalty of $200, not to exceed $2,499.99 (Level C or D) for the first prohibited non-stormwater discharge identified as a hazardous material. Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Subsequent Violations

If the City enforcement official has imposed an administrative penalty on the same responsible party for a prohibited hazardous non-stormwater discharge within the preceding three years, the maximum administrative penalty for subsequent prohibited hazardous non-stormwater discharges may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. The circumstances of the subsequent violations need not be similar to those of the prior violation(s). Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Multiple Days:

Each day a violation continues or occurs can be charged as a separate violation.

Business

Non-hazardous non-stormwater discharges

First Violation:

Issuance of a notice of violation, cease and desist order and/or notice to clean and abate, but no imposition of administrative penalties, unless the City enforcement official determines that the responsible party was grossly negligent, failed to contain and clean up the prohibited material within the time frame prescribed by the City, attempted to mislead the City with incorrect information and/or refused to comply with the City's enforcement action(s).

Second Violation:

Minimum penalty of $250, not to exceed $2,499.99 (Level C or D). This also may be imposed for a first violation under the circumstances described above. Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Subsequent Violations:

If the City enforcement official has imposed an administrative penalty on the same responsible party for a violation of City Code Section 13.16.050 within the preceding three years, the maximum administrative penalty for subsequent violations of City Code Section 13.16.050 may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. The circumstances of the subsequent violations need not be similar to those of the previous violation(s). Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Multiple Days:

Each day a violation continues or occurs can be charged as a separate violation.

BMPs:

The responsible party may, upon approval by the City enforcement official, apply the administrative penalty amount toward the purchase of structural BMP's to eliminate any reasonable possibility of a future prohibited non-storm water discharge.

Hazardous non-stormwater discharges

First Violation:

Minimum penalty of $500, not to exceed $2,499.99 (Level C or D) for the first prohibited non-stormwater discharge identified as a hazardous material. The maximum administrative penalty may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. Determination of the penalty amount within these ranges will be made based on consideration of the factors set forth above.

Subsequent Violations

If the City enforcement official has imposed an administrative penalty on the same responsible party for a prohibited hazardous non-stormwater discharge within the preceding three years, the maximum administrative penalty for subsequent prohibited hazardous non-stormwater discharges may be increased to $4,999.99 if the criteria set forth above for Level B violations are met. The circumstances of the subsequent violations need not be similar to those of the prior violation(s). Determination of the penalty amount within this range will be made based on consideration of the factors set forth above.

Multiple Days:

Each day a violation continues or occurs can be charged as a separate violation.

BMPs:

The responsible party may, upon approval by the City enforcement official, apply the administrative penalty amount toward the purchase of structural BMP's to eliminate any reasonable possibility of a future prohibited non-storm water discharge.

Administrative Penalties of $5,000 or More

Administrative penalties of $5000 or more, up to a maximum amount of $25,000, may be imposed under circumstances meeting the criteria set forth above for Level A violations.

Other Enforcement Actions; Cost Recovery

The imposition of administrative penalties for violations of City Code Section 13.16.050 shall not prevent the City or any other authorized agency from exercising any additional enforcement authority authorized or provided in any law or regulation, including without limitation any or all of the actions authorized by City Code Section 13.16.150. The imposition of administrative penalties shall be in addition to the recovery of costs incurred by the City in cleaning up and abating a violation, or the recovery of costs granted to the City after prevailing in an administrative, civil or criminal proceeding initiated under Chapter 13.16 of the City Code.

Department of Utilities

Sewer Overflow Emergency Response Plan

SECTION I: INTRODUCTION

Department of Utilities

Sewer Overflow Emergency Response Plan

SECTION I: INTRODUCTION

INTRODUCTION

The City of Sacramento's Department of Utilities has developed this comprehensive incident response plan to be implemented in the event of an overflow from the City operated Sanitary Sewer System or Combined Sewer System. This document includes operational procedures which are to be followed in the event the overflow occurs in a residence or business, on a City street, or in/or towards a waters of the State. It includes mobilization of City resources to mitigate the effect of the incident; detailed instructions to ensure proper notification of City, County, Regional, State and Federal regulatory agencies; and provides the appropriate forms to facilitate incident documentation.

A release of raw sewage is considered a hazardous material (HazMat) incident if it meets any of the following criteria:

- exceeds 1,000 gallons and is overflowing in a residence/business
- exceeds 1,000 gallons and is overflowing into a street
- any amount of overflow flowing into or towards waters of the State.

Hazardous Materials are defined as any material that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or environment. An overflow/spill is defined as any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment, unless permitted or authorized by a regulatory agency.

PURPOSE AND SCOPE

The purpose of this Plan is to improve communication regarding a sewage overflow within the City of Sacramento as well as with outside agencies. It is intended to provide timely notification to responsible agencies and organizations. It provides a framework to activate resources, mitigate the long and short-term affects of the situation and to ensure appropriate clean-up activities. It provides for appropriate and complete notification of regulatory agencies as well as written documentation for reporting and cost recovery.

This Response Plan dovetails with the Department of Utilities Multi-Hazard Disaster Plan, the Sacramento Operational Area Plan, the City of Sacramento's Multi-Hazard Disaster

Plan, and the *City of Sacramento Fire Department Hazmat Emergency Response Plan*, revised March 1997.

RESPONSIBILITIES

Appropriate response to a sewage spill or overflow requires cooperation and coordination between the Department of Utilities, other City Departments, and Sacramento County.

The following sections detail the roles and responsibilities of the Department of Utilities, the City Fire Department, and the Water Quality Division of the Sacramento County Public Works Agency.

County of Sacramento – Public Works Agency, Water Quality Division

The Sacramento County Public Works Agency, Water Quality Division maintains 335 miles of sewage lines within the Sacramento City Limits (Refer to the Sewer Basins Map on page 10). In the event of a sewer system overflow in this portion of the City, Sacramento County personnel will respond to the call. If the spill exceeds 1,000 gallons or is flowing into/towards waters of the state, County of Sacramento will notify the City Operator. The City Operator will forward the information to the Sewer Collection Supervisor and Drainage Supervisor for action and coordination (See Section III).

Fire Department (Incident Command)

The Fire Department will assume the role of City Incident Commander for any overflows 1,000 gallons or more to a street, business or residence, or **any** overflow into/towards waters of the State. In the course of their duties as the Incident Commander, the Fire Department has enforcement capabilities for clean-up of an overflow incident caused by a private party.

The Fire Department, when dispatched to the scene of a sewer system overflow, will activate their *City of Sacramento Hazardous Materials Emergency Response Plan*. Under the Plan they will call a *Level I*, *Level II*, or *Level III* resource response.

Level I Incident (Known as a Level I Hazmat Incident (HMI))

Spills, leaks, ruptures, damaged containers, and/or fires involving hazardous materials which can be contained, extinguished, and/or abated utilizing equipment, supplies, and resources immediately available to the first responders (F.R.O.) of the fire department having jurisdiction, and;

The incident can properly be handled by fire department personnel whose qualifications are limited to and do not exceed the scope of training explained in SARA TITLE III (OSHA), Title 29 CFR Section 1910 with reference to FIRST RESPONDER, and as a minimum are trained

to *First Responder Operational* (F.R.O.) in accordance with National Fire Protection Association Standard #472, and;
Hazardous materials incident which may require the removal and excavation of civilians within the perimeter of incident scene isolation, and; Hazardous materials incident which does not exceed the necessity to utilize standard structural/flammable liquid protective equipment immediately available to the first responder.

Level II Incident (Known as a Level II HMI)

A hazardous materials incident which may require the use of any kind of specialized protective equipment, tool, or knowledge not available to and beyond the scope of the first responder of the agency having jurisdiction, and/or;

A hazardous materials incident which can only by identified, tested, sampled, contained, extinguished, and/or abated utilizing the expertise and resources of the Sacramento Fire Department Hazardous Materials Response Team, and/or;

A hazardous materials incident which may require the removal and evacuation of civilians within the area of the fire department having jurisdiction which may encompass several buildings, and/or;

Fires involving hazardous materials that, due to the complexities of the chemical involved, are permitted to burn for a controlled period of time or are allowed to consume themselves or which may require special extinguishing techniques and objectives, and/or;

The incident can only be properly handled by fire department personnel whose qualifications meet or exceed the scope of training explained in SARA TITLE III (OSHA), Title 29 CFS Section 1910 with reference to HAZARDOUS MATERIALS SPECIALIST, and as a minimum are trained to *Hazardous Materials Technician/Specialist* (H.M.T./H.M.S.) in accordance with National Fire Protection Association Standard #472.

Level III Incident (Known as a Level III HMI)

Hazardous materials incident which, in the opinion of the Incident Commander of the agency having jurisdiction, or the Officer of the Sacramento Fire Department Hazardous Materials Response Team (HMRT), requires at least two Sacramento Fire Department Hazardous Materials Response Teams on scene, and/or;

The Sacramento Fire Department De-Con Team is required on scene for HMRT incident support, and/or civilians or personnel have become contaminated, and/or;

Hazardous materials incident can only be contained and/or abated only by utilizing the highly specialized equipment, services, or supplies available from special municipal, environmental, and industrial response personnel who are in support of the activities of the HMRT. Such equipment, techniques, and qualified personnel are in excess of or are in addition to those available from the on-scene HMRT, and/or;

Fires involving hazardous materials that are allowed to burn due to the ineffectiveness or dangers of the use of any kind of extinguishing agent, or the unavailability of the proper

extinguishing agent, or the material is highly reactive, water-reactive, or may be prone to sudden polymerization; and/or there is a real threat of large container failure or an explosion, detonation, BLEVE (Boiling Liquid Expanding Vapor Explosion), or container failure has already occurred, and/or;

Hazardous materials incident which requires evacuation of civilians from a large geographical area, or evaluation has extended across jurisdictional boundaries; and/or there are serious civilian injuries and/or death as a result of the hazardous materials incident, and/or;

The hazardous materials incident has become one of a multi-agency involvement.

Fire Department – Response to a Hazardous Material Incident

Fire Department emergency response to a hazardous material spill activates the Incident Command System. Under this system, five (5) sections can be activated. They are:

1. Incident Commander
   The Incident Command's responsibility is the overall management of the incident. On most incidents the command activity is carried out by a single Incident Commander.

2. Operations Section Chief
   The Operations Section Chief is responsible for the management of all operations directly applicable to the primary mission. The Operation Section Chief activates and supervises organization elements in accordance with the Incident Action Plan and directs its execution. The Operations Chief also directs the preparation of unit operational plans, requests or releases resources, makes expedient changes to the Incident Action Plan as necessary, and reports such to the Incident Commander.

3. Logistics Section Chief
   The Logistics Section Chief is responsible for providing facilities, services, and material in support of the incident. The Section Chief participates in development and implementation of the Incident Action Plan.

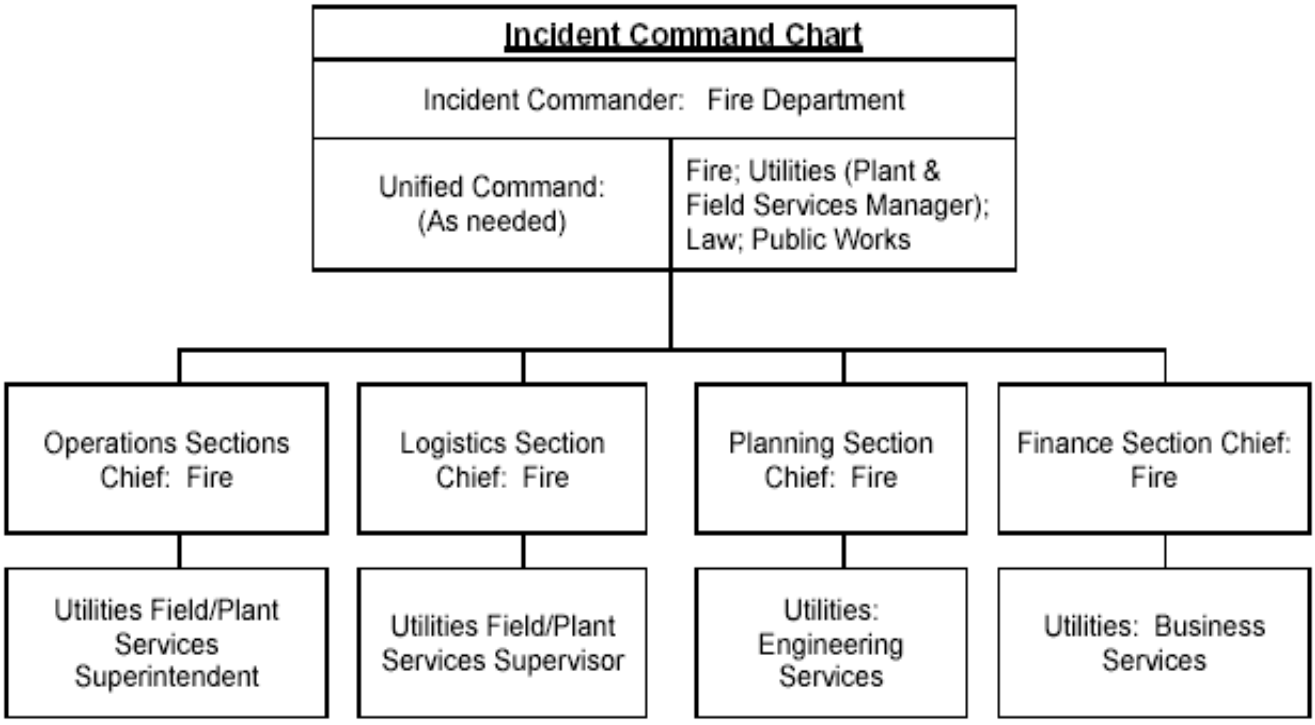
4. Planning Section Chief
   The Planning Section Chief is responsible for the collection, evaluation, dissemination, and use of information about the development of the incident and status of resources. Information is needed to 1) understand the current situation, 2) predict probable course of incident events, and 3) prepare alternative strategies and control operations for the incident.

5. Financial Section Chief
   The role of the Financial Section Chief is to supervise the financial support, response and recovery for the incident, and activate necessary accounting procedures.

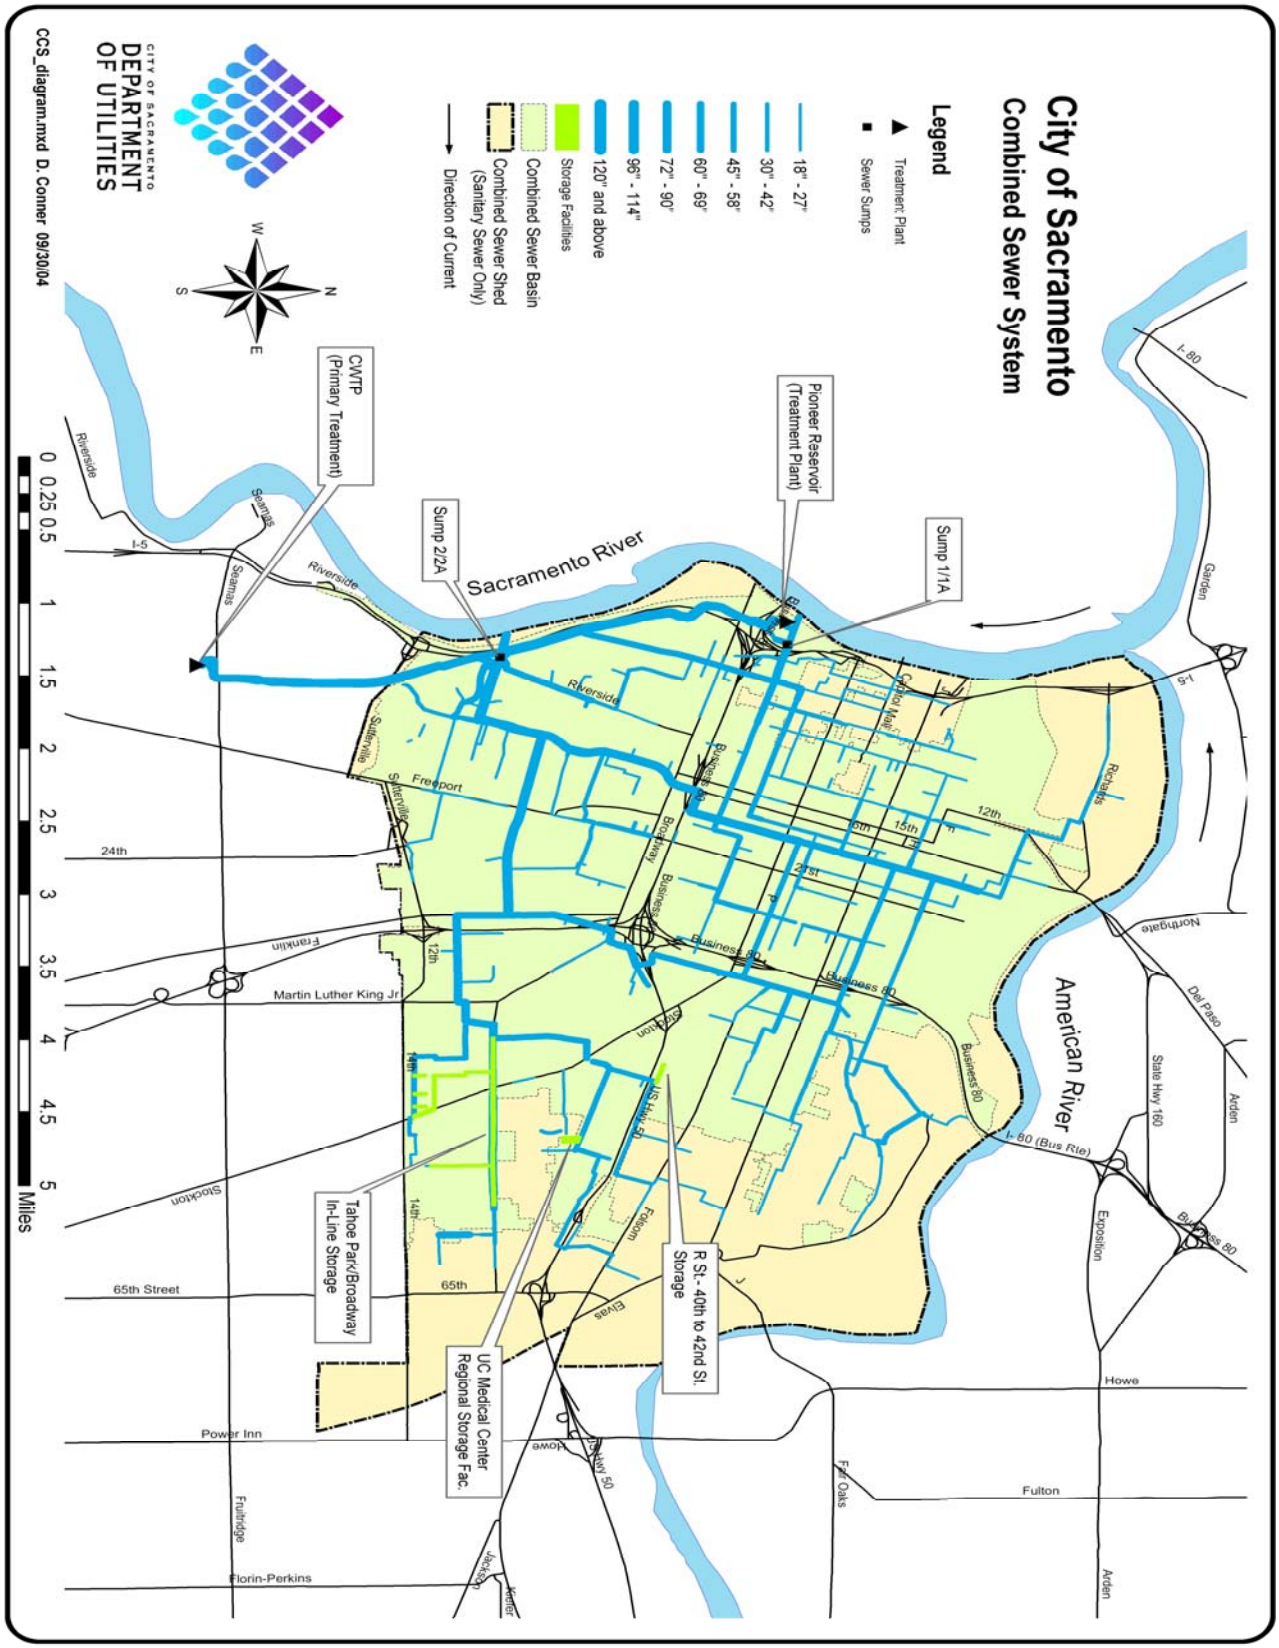
Utilities Department – Response to a Hazardous Material Incident:

Field/Plant Services Division personnel will respond to all reports of sewage overflows in any location of the City of Sacramento, including rivers, canals, streams, the combined system, plants, and discharges contained in the appropriate NPDES permits.

They will ensure notification has been made to the Fire Department any time the spill is considered a hazardous nature incident, exceeds 1,000 gallons, or is traveling into or towards waters of the State.



1. Unified Command:
   Field Services Division Manager, Plant Services Division Manager, or Designees will participate in the role of Unified Commander and will report to the Incident Commander from the Fire Department.



2. Operations Section:
   Sewer System Superintendent or Plant Services Superintendent will report to the Operations Section Chief from the Fire Department. This person is responsible for continual updates of situation information and technical system operation considerations. This section will brief all incoming department personnel responding to the incident.

3. Planning Section:
   The Engineering Services Division will assure department planning functions. If needed, they will be dispatched to the scene and report to the Fire Planning Section Chief. In any event, this group will prepare and submit an overflow report on spills 1,000 gallons or greater to the Regional Water Quality Control Board. They will also provide technical support to reporting divisions and departments.

4. Finance Section (Business Services Division):
   This division of the Department of Utilities will collect necessary cost information and establish cost centers for future reporting and financial tracking.

5. Logistics Section:
   Field Services or Plant Services personnel will be assigned to the logistics section on an as needed basis which will be determined by Unified Command. This group will procure necessary supplies and services to assist in the containment and clean-up operations.

Department of Utilities

Sewer Overflow Emergency Response Plan

SECTION II: PROCEDURE

NOTIFICATION OF INCIDENT

The Department of Utilities' City Operator is notified by Department personnel, the City's 911 Emergency System, or by other City personnel or outside agencies. Once notified, the actions outlined beginning on page 16 will be implemented.

EVALUATE AND ESTIMATE

The Sewer Collection Field Crew will evaluate the incident and attempt to estimate the volume of overflow.

LOCATION OF OVERFLOW:

The location of the overflow will determine which actions and notifications will have to be made. Location is separated into three categories:

- Residence or Business (see page 15)
- Streets (see page 18)
- Waters of the State – into or towards (see page 21). Waters of the State include any surface water or groundwater, including saline waters, within the boundaries of the state. Under this definition, this category includes all ditches, canals, streams, or rivers.

RESPONSE/ACTIONS

Response and notification vary depending upon the locations and/or amount of overflow. Primary response begins with the Sewer Collection Supervisor who dispatches a field crew for initial size-up of the incident. All appropriate notification calls will be made and trigger the response from within the Department of Utilities.

The Sewer Collection Superintendent shall ensure that the Fire Department is notified of the incident. The Fire Department shall be called to respond in the following situations:

- 1,000 gallons or more flowing into a business or residence
- 1,000 gallons or more flowing into the street
- **Any amount of overflow** into or towards waters of the State

SEWER OVERFLOWS INTO RESIDENCE/BUSINESS

911 Dispatch
- ❑ Notify Regional Fire Communications

Regional Fire Communications Center
- ❑ Notify City Operator (Dept. of General Services)

City Operator (Dept. of General Services)
- ❑ Complete Sewer Overflow/Spill Notification Form, see page 26
  - ➢ identify and document caller
  - ➢ request nature of overflow
  - ➢ determine start time of overflow, if possible
- ❑ During business hours, notify Sewer Collection Supervisor. If Supervisor cannot be reached, notify the Sewer Collection Superintendent.
- ❑ After hours, notify the On-Call Sewer Collection Supervisor

Sewer Collection Supervisor
- ❑ Dispatch field crew to scene
- ❑ Notify Drainage Collection Superintendent or On-Call Supervisor
- ❑ Notify City of Sacramento's Risk Management Office or Contractor
- ❑ Notify Control 12 to dispatch Plant Services personnel if the overflow enters into a drop inlet
- ❑ Photograph the incident
- ❑ Document the incident
  - ♦ Sewer Overflow Notification Checklist, see page 27
  - ♦ City of Sacramento's Incident/Loss Report, see page 38
- ❑ Initiate clean-up procedures

Sewer Collection Field Crew
- ❑ Proceed to location of overflow
- ❑ Determine Responsibility – property owner or City
- ❑ If the overflow is the City's responsibility
  - ♦ Relieve
  - ♦ Contain
  - ♦ Clean-up

Sewer Collection Superintendent/Designee
- ❑ Complete Sewer Overflow Notification Checklist, if necessary, see page 27
- ❑ Review incident documentation
- ❑ Send Incident/Loss Report to Risk Management

FOR SEWER OVERFLOWS IN RESIDENCE/BUSINESS WHICH ARE 1,000 GALLONS OR GREATER, ALSO COMPLETE THE FOLLOWING PROCEDURES.

Sacramento County Water Quality

- ❑ Notify City Operator (Dept. of General Services)

City Operator (Dept. of General Services)

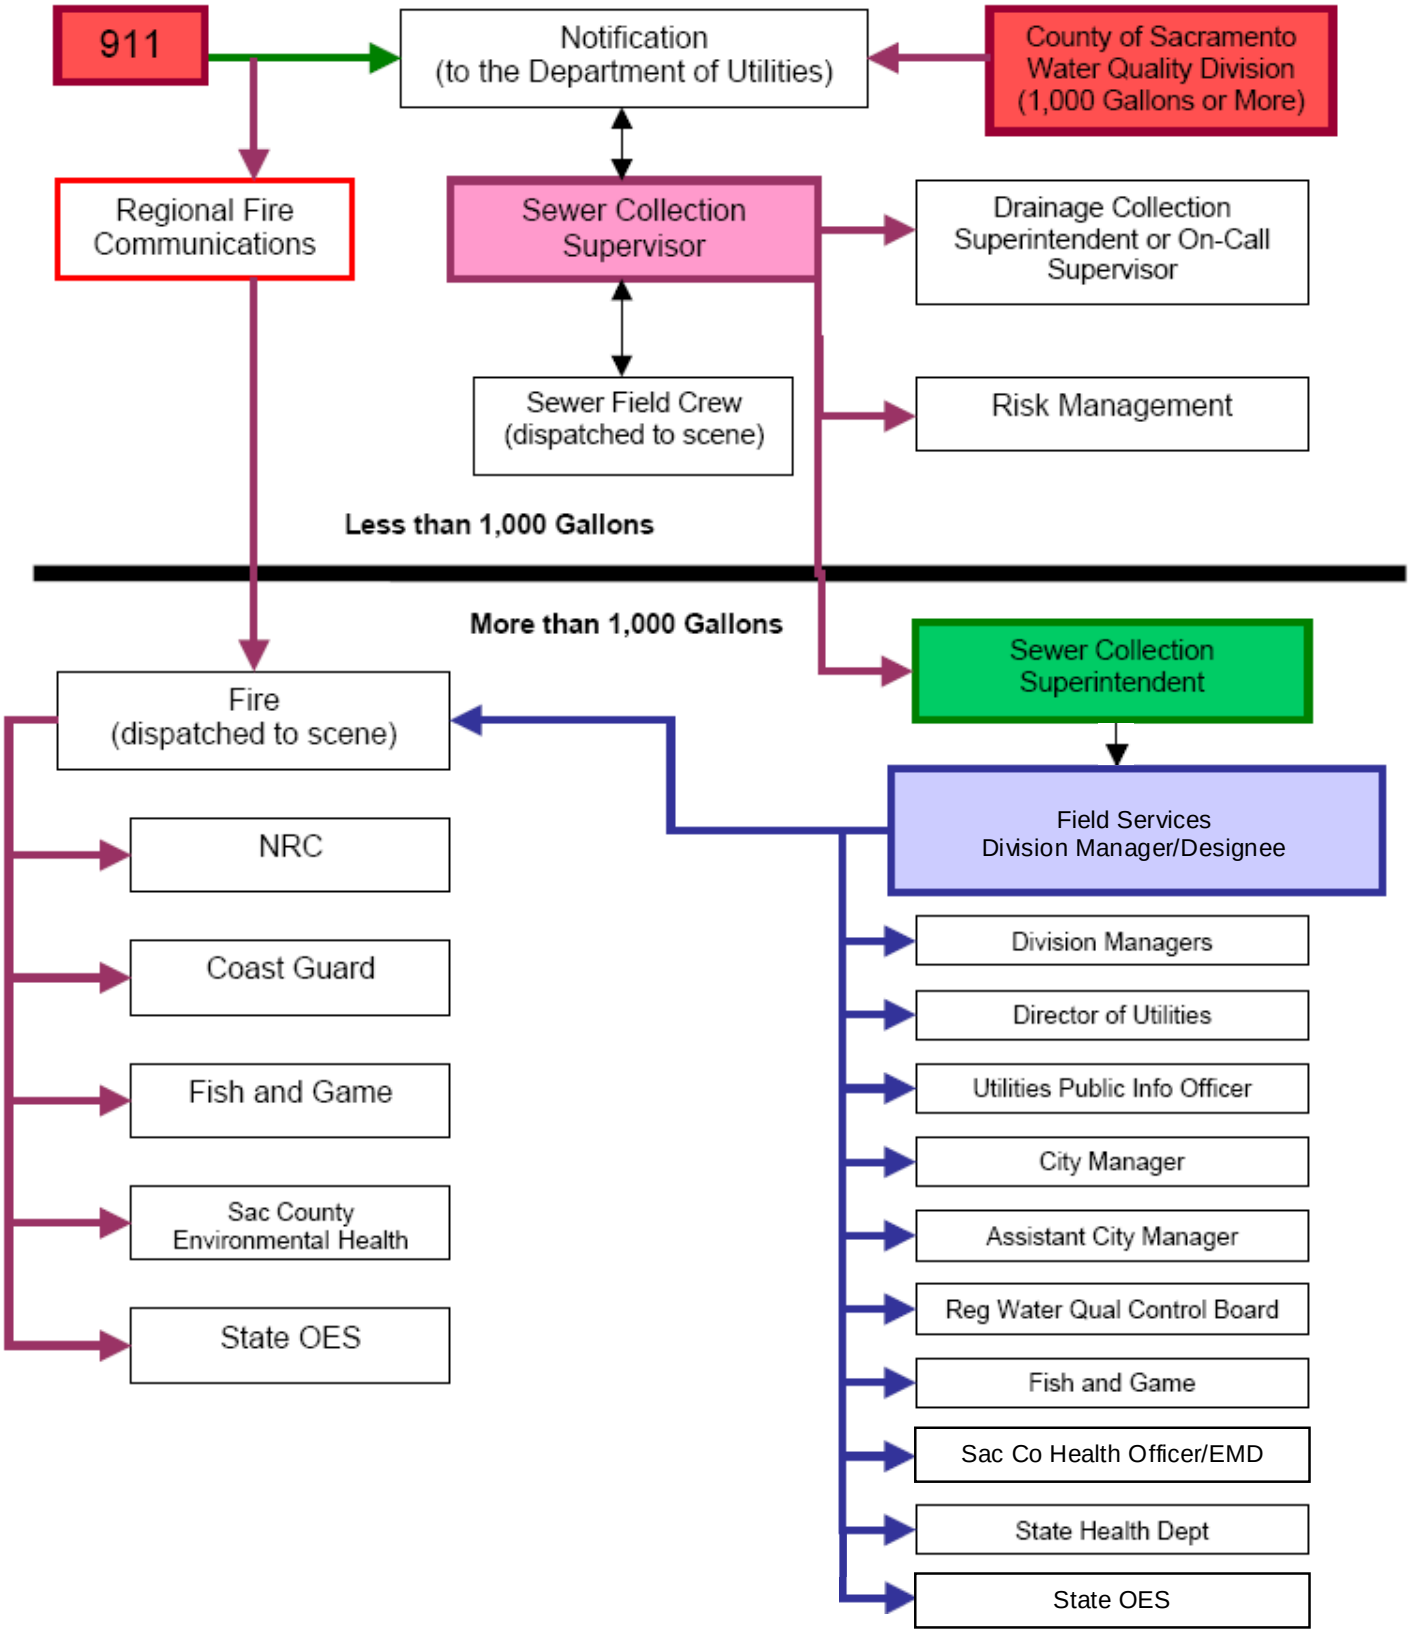
- ❑ Ensure Fire Department is notified
- ❑ If spill occurs in County maintained lines, notify Sewer Collection and Drainage Collection Supervisors

Sewer Collection Supervisor

- ❑ Notify Sewer Collection Superintendent
- ❑ Ensure Fire Department has been notified and is en route to scene to activate hazardous material command structure

Sewer Collection Superintendent

- ❑ Notify Field Services Division Manager/Designee or the Plant Services Division Manager/Designee
- ❑ Complete Sewer Overflow Notification Checklist, if necessary, see page 27



Field Services Division or Plant Services Division Manager/Designee

- ❑ The Field Services Division Manager/Designee or Plant Services Division Manager/Designee will coordinate to notify the following:
  - Division Managers
  - Director of Utilities
  - Department of Utilities Public Information Officer
  - City Manager
  - Assistant City Manager
  - Regional Water Quality Control Board
  - State Department of Fish and Game
  - Sacramento County Health Officer
  - State Department of Health Services
- ❑ Complete Sewer Overflow Notification Checklist, see page 27

Engineering Services Division, Water Quality Section

- ❑ Prepare and submit an overflow report to Regional Water Quality Control Board within 72 hours of incident

Notification Flow Chart
Sewer Overflow into a Residence or Business

SEWER OVERFLOWS INTO STREETS

911 Dispatch
- ❑ Notify Regional Fire Communications

Regional Fire Communications Center
- ❑ Notify City Operator (Dept. of General Services)

City Operator (Dept. of General Services)
- ❑ Complete Sewer Overflow/Spill Notification Form, see page 26
  - identify and document caller
  - request nature of overflow
  - determine start time of overflow, if possible
- ❑ During business hours, notify Sewer Collection Supervisor. If Supervisor cannot be reached, notify the Sewer Collection Superintendent.
- ❑ After hours, notify the On-Call Sewer Collection Supervisor

Sewer Collection Supervisor
- ❑ Notify Drainage Collection Superintendent or On-Call Supervisor
- ❑ Notify Plant Services Division personnel
- ❑ Photograph the incident
- ❑ Document the incident
  - Sewer Overflow Notification Checklist, see page 27
  - City of Sacramento's Incident/Loss Report, see page 28
- ❑ If the street(s) is unsafe, notify the City Operator and ask them to notify the Streets Division of the situation

Sewer Collection Field Crew
- ❑ Proceed to location of spill
- ❑ Relieve
- ❑ Contain
- ❑ Clean-up

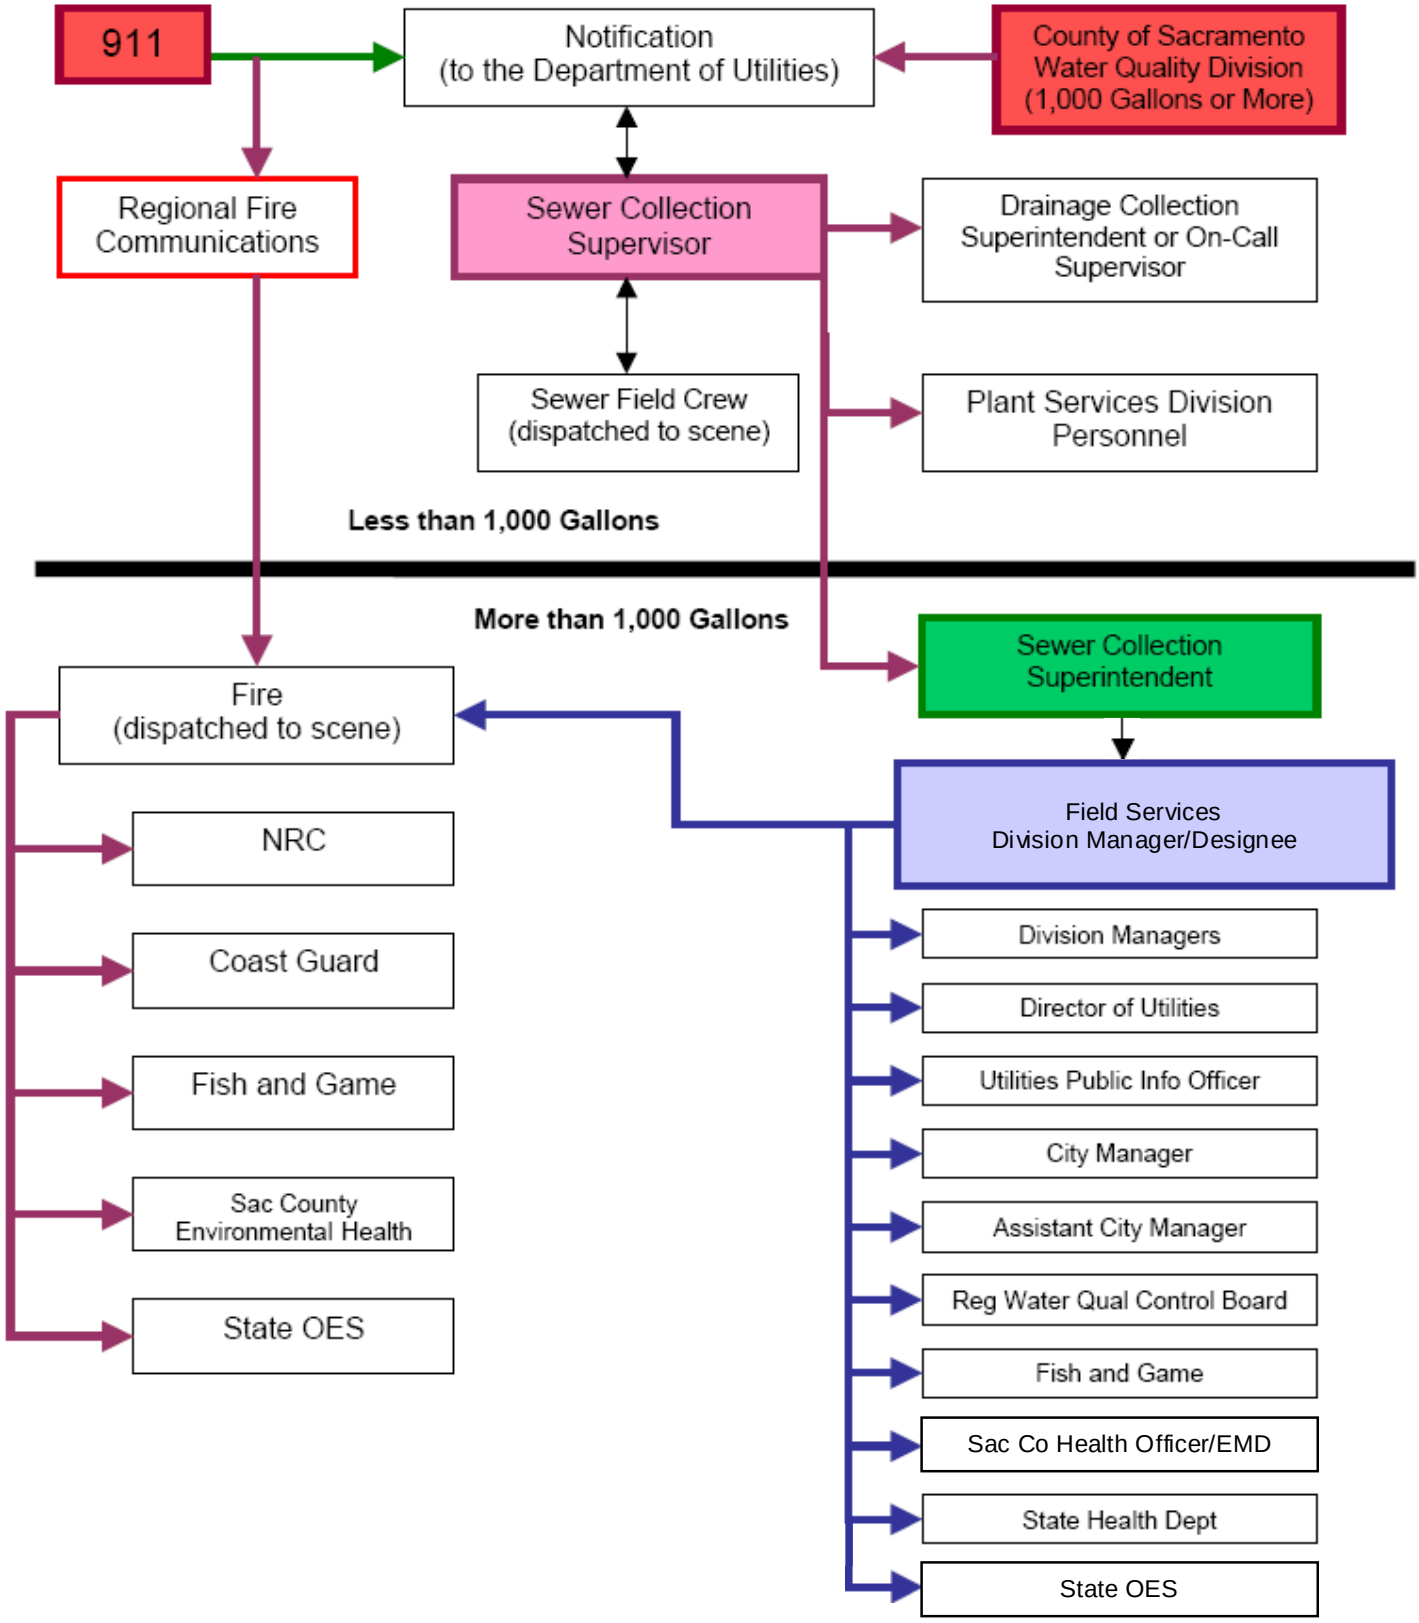
Sewer Collection Superintendent/Designee
- ❑ Complete Sewer Overflow Notification Checklist, if necessary, see page 27
- ❑ Review incident documentation
- ❑ Send Incident/Loss Report to Risk Management
- ❑ Forward copy of Incident/Loss Report and field report to Engineering Services Division's Water Quality Section

Plant Services Division Superintendent or On-Call Supervisor
- ❑ Determine if any plants are causing or being affected by the overflow. If so,
  - isolate the plant and shut it down
  - document and prepare field report
  - forward copy of field report to Engineering Services Division's Water Quality Section within 24 hours of incident

FOR SEWER OVERFLOWS INTO STREETS WHICH ARE 1,000 GALLONS OR GREATER INTO STREETS ALSO COMPLETE THE FOLLOWING PROCEDURES.

Sacramento County Water Quality
- ❑ Notify City Operator (Dept. of General Services)

City Operator (Dept. of General Services)
- ❑ Ensure Fire Department is notified
- ❑ If spill occurs in County maintained lines, notify Sewer Collection and Drainage Collection Supervisors



Sewer Collection Supervisor
- ❑ Notify Sewer Collection Superintendent
- ❑ Ensure Fire Department has been notified and is en route or on scene to activate hazardous material incident command structure

Sewer Collection Superintendent
- ❑ Notify Field Services Division Manager/Designee or the Plant Services Division Manager/Designee
- ❑ Complete Sewer Overflow Notification Checklist, if necessary, see page 27

Field Services Division or Plant Services Division Manager/Designee
- ❑ The Field Services Division Manager/Designee or Plant Services Division Manager/Designee will coordinate to notify the following:
  - Division Managers
  - Director of Utilities
  - Department of Utilities Public Information Officer
  - City Manager
  - Assistant City Manager
  - Regional Water Quality Control Board
  - State Department of Fish and Game
  - Sacramento County Health Officer
  - State Department of Health Services
- ❑ Complete Sewer Overflow Notification Checklist, see page 27

Engineering Services Division, Water Quality Section
- ❑ Prepare and submit an overflow report to Regional Water Quality Control Board within 72 hours of incident

Notification Flow Chart
Sewer Overflow into the Street

SEWER OVERFLOW FLOWING INTO OR EXPECTED TO ENTER WATERS OF THE STATE

911 Dispatch
- ❑ Notify Regional Fire Communications

Sacramento County Water Quality
- ❑ Notify City Operator (Dept. of General Services)

Regional Fire Communications Center
- ❑ Notify City Operator (Dept. of General Services)

City Operator (Dept. of General Services)
- ❑ Ensure Fire Department has been notified
- ❑ If spill occurs in County maintained lines, notify Sewer Collection and Drainage Collection Supervisors
- ❑ Complete Sewer Overflow/Spill Notification Form, see page 26
    - identify and document caller
    - request nature of overflow
    - determine start time of overflow, if possible
- ❑ During business hours, notify Sewer Collection Supervisor. If Supervisor cannot be reached, notify the Sewer Collection Superintendent.
- ❑ After hours, notify the On-Call Sewer Collection Supervisor

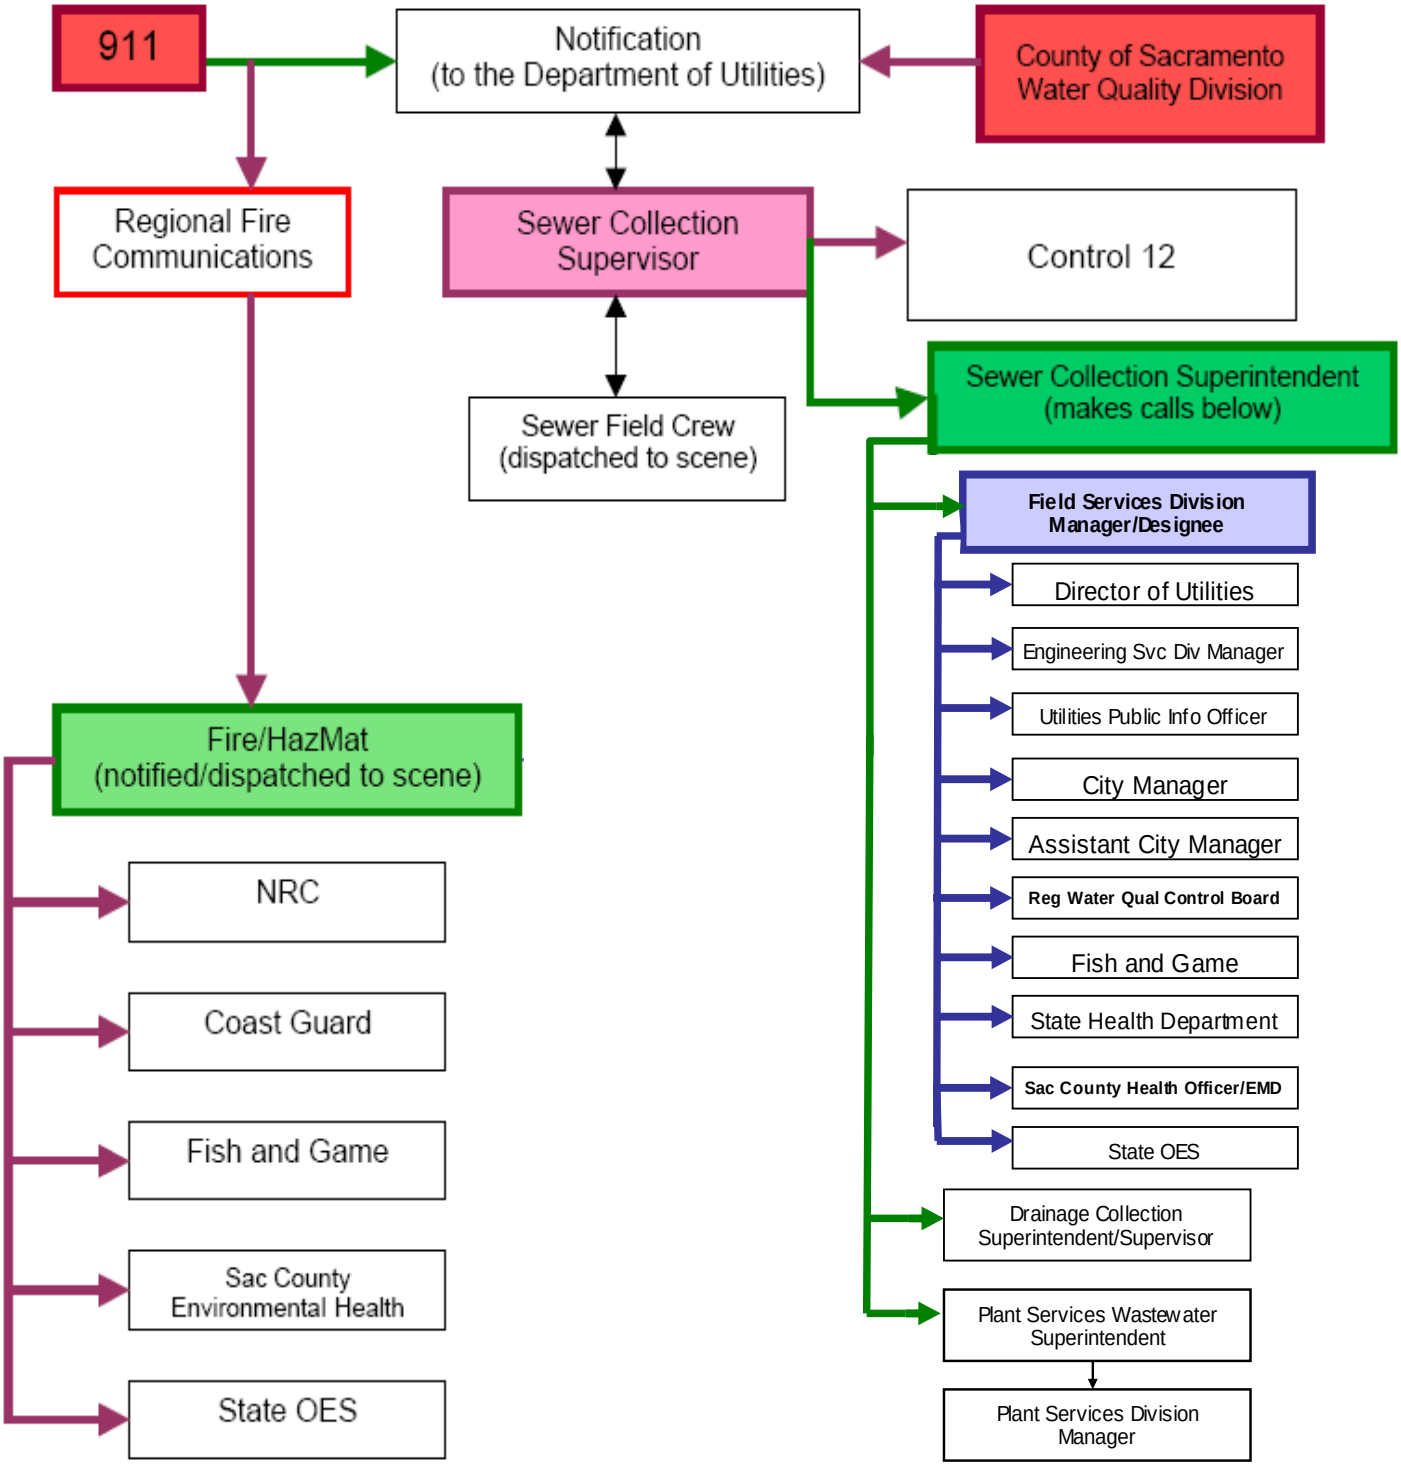
Sewer Collection Supervisor
- ❑ Ensure Fire Department has been notified and is en route or is on scene to activate hazardous materials command structure
- ❑ Notify Plant Services Division Manager
- ❑ Notify Sewer Collection Superintendent
- ❑ Notify Drainage Collection Superintendent or On-Call Supervisor
- ❑ Notify Plant Services Wastewater Superintendent or On-Call Supervisor
- ❑ Photograph the incident
- ❑ Document the incident
    - Complete Sewer Overflow Notification Checklist, see page 27

Sewer Collection Superintendent
- ❑ Notify Field Services Division Manager

Sewer Collection Field Crew
- ❑ Immediately notify Supervisor
- ❑ If possible, relieve, contain, and clean-up

Plant Services Division Wastewater Superintendent or On-Call Supervisor
- ❑ Notify Plant Services Division Manager
- ❑ Determine if any plants are causing or being affected by the overflow. If so,
    - isolate the plant and shut it down
    - document and prepare field report

- forward copy of field report to Engineering Services Division's Water Quality Section within 24 hours of incident
- communicate findings to Sewer Collection Superintendent or On-Call Supervisor and Plant Services Division Manager



Field Services Division or Plant Services Division Manager/Designee

- ❑ The Field Services Division Manager/Designee or Plant Services Division Manager/Designee will coordinate to notify the following:
  - Director of Utilities
  - Engineering Services Division Manager
  - Department of Utilities Public Information Officer
  - City Manager
  - Assistant City Manager
  - Regional Water Quality Control Board
  - State Department of Fish and Game
  - State Department of Health Services
  - Environmental Management Division (EMD)/Sacramento County Health Officer
  - Office of Emergency Services (OES)
- ❑ Complete Sewer Overflow Notification Checklist, see page 27

Engineering Services Division, Water Quality Section

- ❑ Prepare and submit an overflow report to Regional Water Quality Control Board within 72 hours of incident

City of Sacramento Incident/Loss Report

CLAIM NO.

	Risk Mgt.	Org. Number	Dept./Division
INSTRUCTIONS FOR FORM COMPLETION --	Use Only		

SECTION I (Front)	Whenever a third party (public) sustains physical injury while on City property, property damage and/or it appears that the City may be liable, not caused by City-owned vehicle.
SECTION II (Back)	Whenever damage or loss involves City property (i.e., Fire, theft of inventoried equipment, money or securities vandalism – facilities, property, and equipment).

SECTION 1

IMPORTANT!	1.	Call Police 264-5471 advising City involvement.
	2.	Keep calm and assist third party.
	3.	Do not admit fault.
	4.	Get name of injured Party and/or owner of damaged property.
	5.	Carefully examine accident.
	6.	Do not talk to anyone about the accident, except: Your Supervisor, the Police, or City Adjuster.
	7.	If applicable, complete this section of Incident/Loss Report and distribute as required (below) within 24 hours.

NOTE! In case there appears to be serious injuries, or extensive property damage, telephone the City's Safety Officer at 264-5278.
(After normal work hours, call Police 264-5471.)

II. Wet Weather Combined System Overflow Response SOP
Revised 10/26/05

For notification list, see p. 27 of this manual

Level A

- Wet weather event;
- Less than (<) 1000 gallons
- Did/will ***not*** enter waters of the state
- Presents no exposure hazard to the public
    1. Secure the site
    2. Relieve the stoppage
    3. Begin clean-up
    4. Notify Regional Water Quality Control Board within 30 days

Level B

- Wet weather event
- Less than (<) 1,000 gallons;
- Did/will ***not*** enter waters of the State;
- ***High risk of public exposure (schools, daycare, malls, etc.);***
    1. Use chain of command to notify County Environmental Management Department (County EMD)
    2. Secure the site to minimize public exposure, including notifying signs at the site
    3. Post additional exposure notices as directed
    4. Relieve the stoppage
    5. Begin clean-up
    6. Notify Regional Water Quality Control Board (RWQCB) within 30 days

Level C

- Wet weather event
- Greater than (>) 1,000 gallons; **or**
- Spill entered waters of the State
    1. Use chain of command to contact County EMD and other required agencies, including verbally notifying RWQCB within 24 hours and in writing within 5 days
    2. Secure the site to minimize public exposure, including notifying signs at the site
    3. Post additional exposure notices as directed
    4. Relieve the stoppage
    5. Begin clean-up

Level D

- Catastrophic wet weather event, defined as:
- Very high risk of public exposure; and
- Widespread street flooding affecting multiple homes, businesses, one or more schools, day cares, at risk
    1. Use chain of command to contact County Health Officer/County EMD and other required agencies, including verbally notifying RWQCB within 24 hours and in writing within 5 days
    2. Secure the site to minimize public exposure, including notifying signs at the site
    3. Post additional exposure notices as directed
    4. Relieve the stoppage
    5. Begin clean-up

III. Sanitary Sewer Overflow (SSO) Response SOP

Revised 11/9/05

For notification list, see p. 27 of this manual

When responding to an SSO, determine the event level and take immediate action.

Level A

- Less than (<) 1,000 gallons;
- Did/will **not** enter waters of the State;
- Presents no exposure hazard to the public
    5. Secure the site
    6. Relieve the stoppage
    7. Begin clean-up
    8. No notification outside Department of Utilities

Level B

- Less than (<) 1,000 gallons;
- Did/will **not** enter waters of the State;
- **High risk of public exposure (schools, daycare, malls, etc.);**
    7. Use chain of command to notify County Environmental Management Department (County EMD)
    8. Secure the site to minimize public exposure, including notifying signs at site
    9. Post additional exposure notices as directed
    10. Relieve the stoppage
    11. Begin clean-up

Level C

- Greater than (>) 1,000 gallons; or
- Entered waters of the State; or
- High risk of public exposure (schools, daycare, malls, etc.);
    6. Use chain of command to contact County EMD, RWQCB, and other required agencies
    7. Secure the site to minimize public exposure, including notifying signs at site
    8. Post additional exposure notices as directed
    9. Relieve the stoppage
    10. Begin clean-up

Level D

- Catastrophic event, defined as:
- Very high risk of public exposure; and
- Widespread street flooding affecting multiple homes, businesses, one or more schools, day cares, at risk
    1. Use chain of command to contact County Health Officer, County EMD, RWQCB, and other required agencies
    2. Secure the site to minimize public exposure, including notifying signs at site
    3. Post additional exposure notices as directed
    4. Relieve the stoppage
    5. Begin clean-up

IV. Wet Weather CSO and SSO SOP

1. All personnel responding to CSO's and SSO's will carry digital camera, exposure notices, barricades, caution tape, and traffic cones.

2. All personnel responding to CSO's and SSO's will photo document the event.

3. Wastewater Collection personnel will determine if an event is a CSO by the presence of debris (i.e. Fecal matter, toilet paper, condoms, etc.) or witnessing water exiting the combined system. If these conditions are not present, the event will be deemed a system surcharge and monitored for change.

4. The following formula will be used to calculate the volume (in gallons) of a CSO:

   L' X W' X D' X 7.48 = volume in gallons

5. Volume of SSO's will be determined by the on-site Supervisor using the gpm x duration = volume formula.

6. Methods to be used to secure the site may include:
   A. Restricting vehicle traffic using responding equipment, redirecting traffic using traffic cones, street closures, or with the assistance of the Police Department
   B. Restricting pedestrian traffic using caution tape and barricades

V. SSO/CSO Training SOP

1. Review SSO and CSO Response Checklists *(see p. 33)*. Be sure everyone understands the difference and the steps to be taken with each.
2. Review the CSO/Surcharge Decision Tree *(see p. 36)*. Be sure everyone knows the difference between an outflow and a surcharged condition.
3. Review the Wet Weather CSO and SSO Standard Operating Procedure *(see p. 34)*. Be sure everyone understands their responsibilities and equipment they must have at hand.
   Stress the importance of photo documenting the overflow or outflow, securing the site, and calculating the volume of the overflow or outflow.
4. To explain the formula to calculate volume of the overflow or outflow, use the following example:

L' x W' x D' x 7.48 = Volume of spill

(Length in feet times width in feet times depth in feet times the constant of 7.48 gallons per cubic foot equals volume of the overflow or outflow. To make the calculation a bit easier, we will use .1 to equal one inch.)

Substituting 200 for L, 4 for W, .1 for D, the equation will be:

200 x 4 x .1 x 7.48 = Volume
800 x .1 x 7.48 = Volume
80 x 7.48 = Volume
598.4 gallons = Volume of overflow or outflow

(Calculators will be available for this calculation!)

Review this information until everyone understands their duties and responsibilities, and can perform the calculation.

VI. CSO/Surcharge Decision Tree

For notification list, see p. 27 of this manual

Is sewer debris present?
OR
Is water flowing from the system?

NO

↓

Photo document event
Continue to monitor

YES

↓

Photo document event

↓

Estimate volume

↓

Determine spill level from checklist

↓

Notify Superintendent (Notify F.S. Mgr if unable to contact Supt.)

↓

Superintendent to notify County EMD/Health, RWQCB, F.S. Mgr

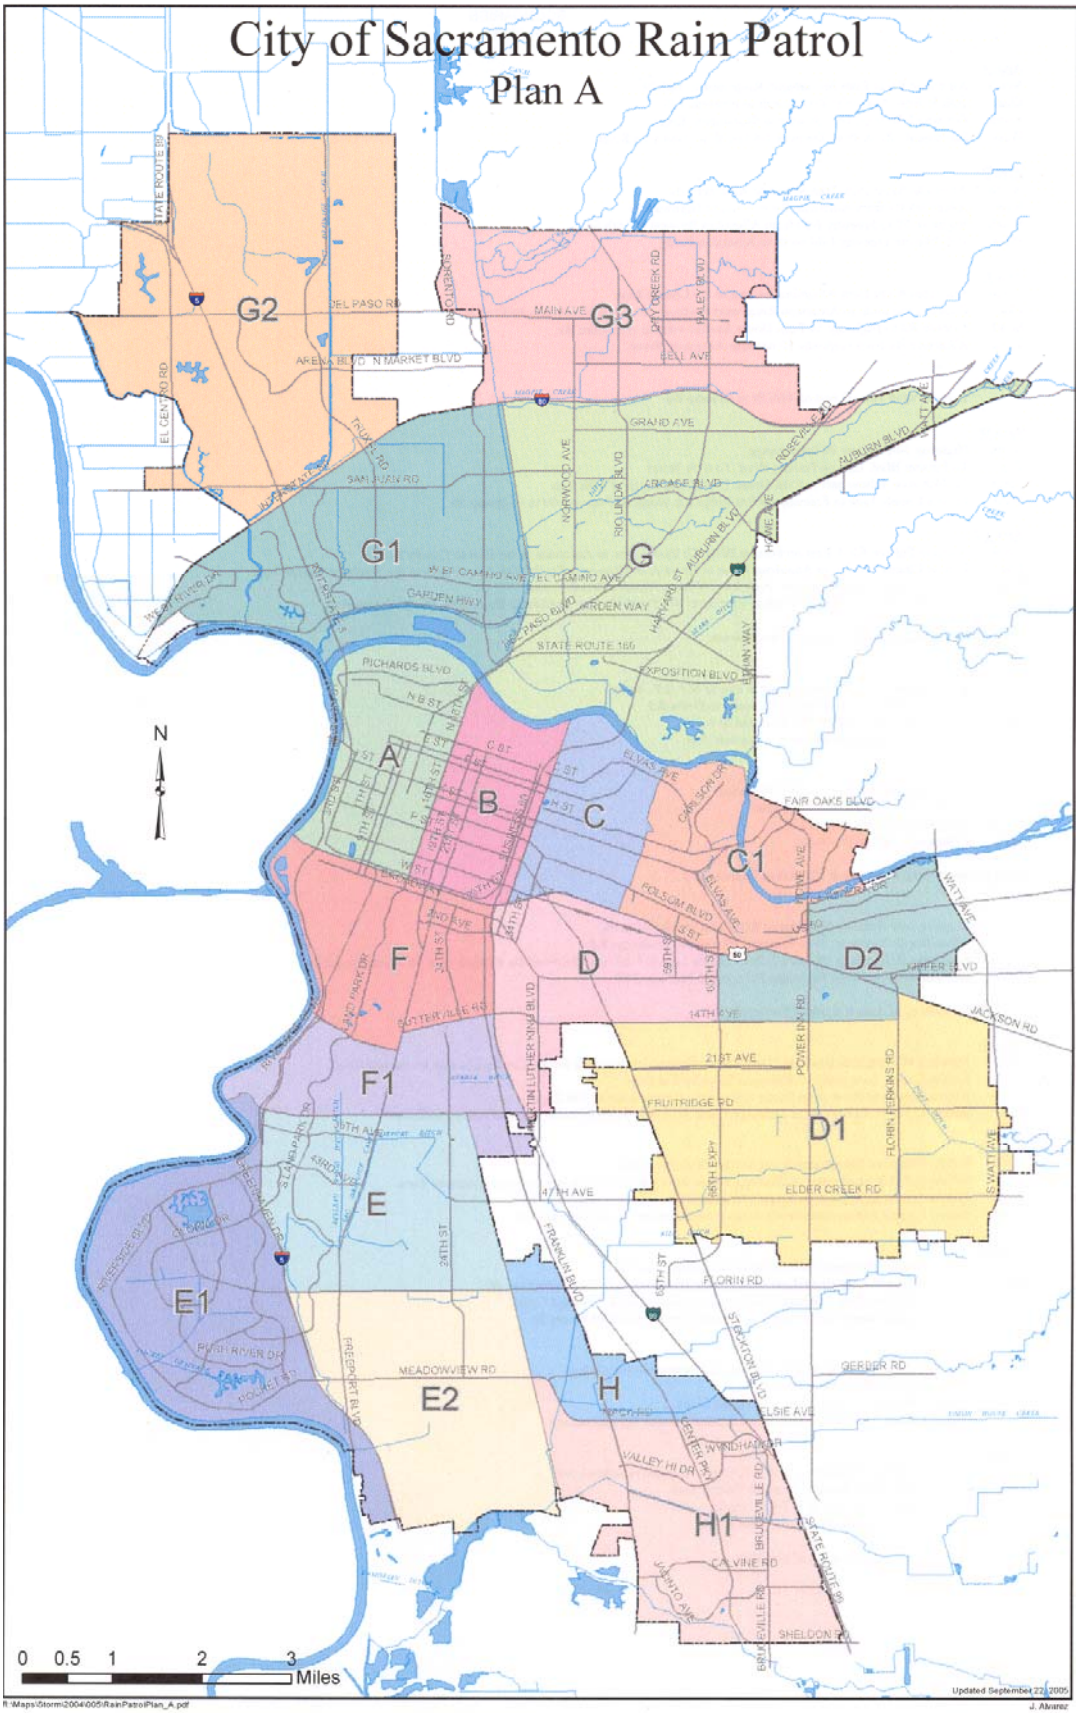
↓

Supervisor to secure site and complete appropriate level check list steps

VII. Rain Patrol SOP

The Drainage Collection Section is responsible for the implementation of rain patrols. Depending on the amount of rainfall, one of two patrolling plans will be implemented. When appropriate, the Wastewater Collection Section assists Drainage Collection with Rain Patrol. Drainage Collection is responsible for the separated system and Wastewater Collection for the combined system.

Patrolling Plans
During the winter months, the Field Services Division is prepared to implement one or two Rain Patrol Plans for the collection system. The Drainage Collection Section decides whether to implement **Plan A** or **Plan B** based upon the current weather conditions.



- **Plan A:** Minor Rain Event Where Rainfall Is ½ Inch Or Less in One Hour.

  Plan A is a modified rain patrol plan in which approximately 12 Wastewater Collection personnel (in two-person crews) participate. While using this plan, the City is divided into 17-18 large areas, of which Wastewater Collection is responsible for 6. These sections correspond to A, B, C, D, D2, and F (*see Plan "A" map on the following page).* Generally, one crew is dispatched per area, although additional crews may be assigned depending on the incident, including crews responsible for specific pieces of equipment.

- **Plan B:** Large Rain Event Where Rainfall Is ½ Inch Or More in One Hour.

  When implementing **Plan B**, the City is split into 36 separate areas, of which Wastewater Collection is responsible for 14. These are Areas 1-6, 9-12, and 14-17 (*see Plan "B" map on p. 39)*. Approximately 93 Field Services personnel (Drainage Collection, Water Distribution, and Wastewater Collection) participate in this plan, including roughly 34 personnel from Wastewater Collection (2-person crews).

  The same consideration that is used during the minor rain event is also used to decide when, where and how many crews will be dispatched. In this phase, approximately 40 personnel are drawn from the Water Distribution Section and Public Works' Streets Division.

BOUNDARIES PLAN A

Area A
North: American River from Sacramento River east to 16th St.
East: 16th St. from American River south to Freeway I-80.
South: Freeway I-80 from 16th St. west to Sacramento River.
West: Sacramento River from Freeway I-80 north to American River.

Area B
North: American River from 16th St. east to Alhambra Bv.
East: Alhambra Bv. From American River south to Highway 50.
South: Highway 50 to Freeway I-80 from Alhambra Bv. West to 16th St.
West: 16th St. from Freeway I-80 north to American River.

Area C
North: American River from Alhambra Bv. East to the County Line.
East: County Line south to American River west to Howe Ave. then south to Jackson Rd.
South: Jackson Rd. to Highway 50 from Howe Ave. west to Alhambra Bv.
West: Alhambra Bv. from Highway 50 north to American River.

Area C1
Everything in Area C east of 48th St. to Coloma Rd.

Area D
North: Highway 50/Freeway 99 interchange.
East: To Folsom Blvd. East on Folsom Blvd. to 65th St.
South: To 14th Ave. follow east to 65th St. Everything north of 14th Ave.
West: Follow County Line to Freeway 99/Fruitridge Rd. North on Freeway 99 to Highway 50.

Area D2
North: North to Folsom Blvd. East on Folsom Blvd. To Howe Ave. to American River East to County Line.
East: Follow County Line from American River at Howe Ave. Change to South Watt Ave., South to the Southern County Line.
South: Follow County Line from South Watt Ave. West to Western County Line.
West: Follow Western County Line South to 14th Ave. West on 14th Ave. to 65th St. Everything North of 14th Ave.

Area D1
Everything in Area D south of 14th Ave.

Area E
North: Fruitridge Rd from Sacramento River east to U.P.R.R. tracks.
East: U.P.R.R. tracks from Fruitridge Rd south to Florin Rd.
South: Follow Florin Rd. from U.P.R.R. tracks to I-5.
West: Follow I-5 from Florin Rd. north to Seamas Ave.

Area E2
North: Florin Rd. from I-5 east to U.P.R.R. tracks.
East: U.P.R.R. tracks south to County Line.
South: Follow County Line west to I-5.
West: Follow I-5 north to Florin Rd.

Area E1

Everything in Area E & E2 west of Freeway I-5.

Area F

North: Freeway I-80 from the Sacramento River east to Alhambra Bv.
East: Alhambra Bv/Highway 50 to Freeway 99 south to Fruitridge Rd.
Fruitridge Rd/Freeway 99 south follow County Line to Fruitridge Rd/Franklin Bv. then west on Fruitridge Rd. to
West: Sacramento River from Fruitridge Rd. north to Freeway I-80.

Area F1

Everything in Area F south of Sutterville Rd.

Area G

North: Follow I-80 from East Drainage Canal east to County Line and then follow County Line east to Auburn Blvd.
East: Follow County Line south to American River by Cal Expo.
South: Follow American River from Route 160 west to County Line by Cal Expo.
West: Follow U.P.R.R. tracks east of Drainage Canal from I-80 south to Route 160 and American River.

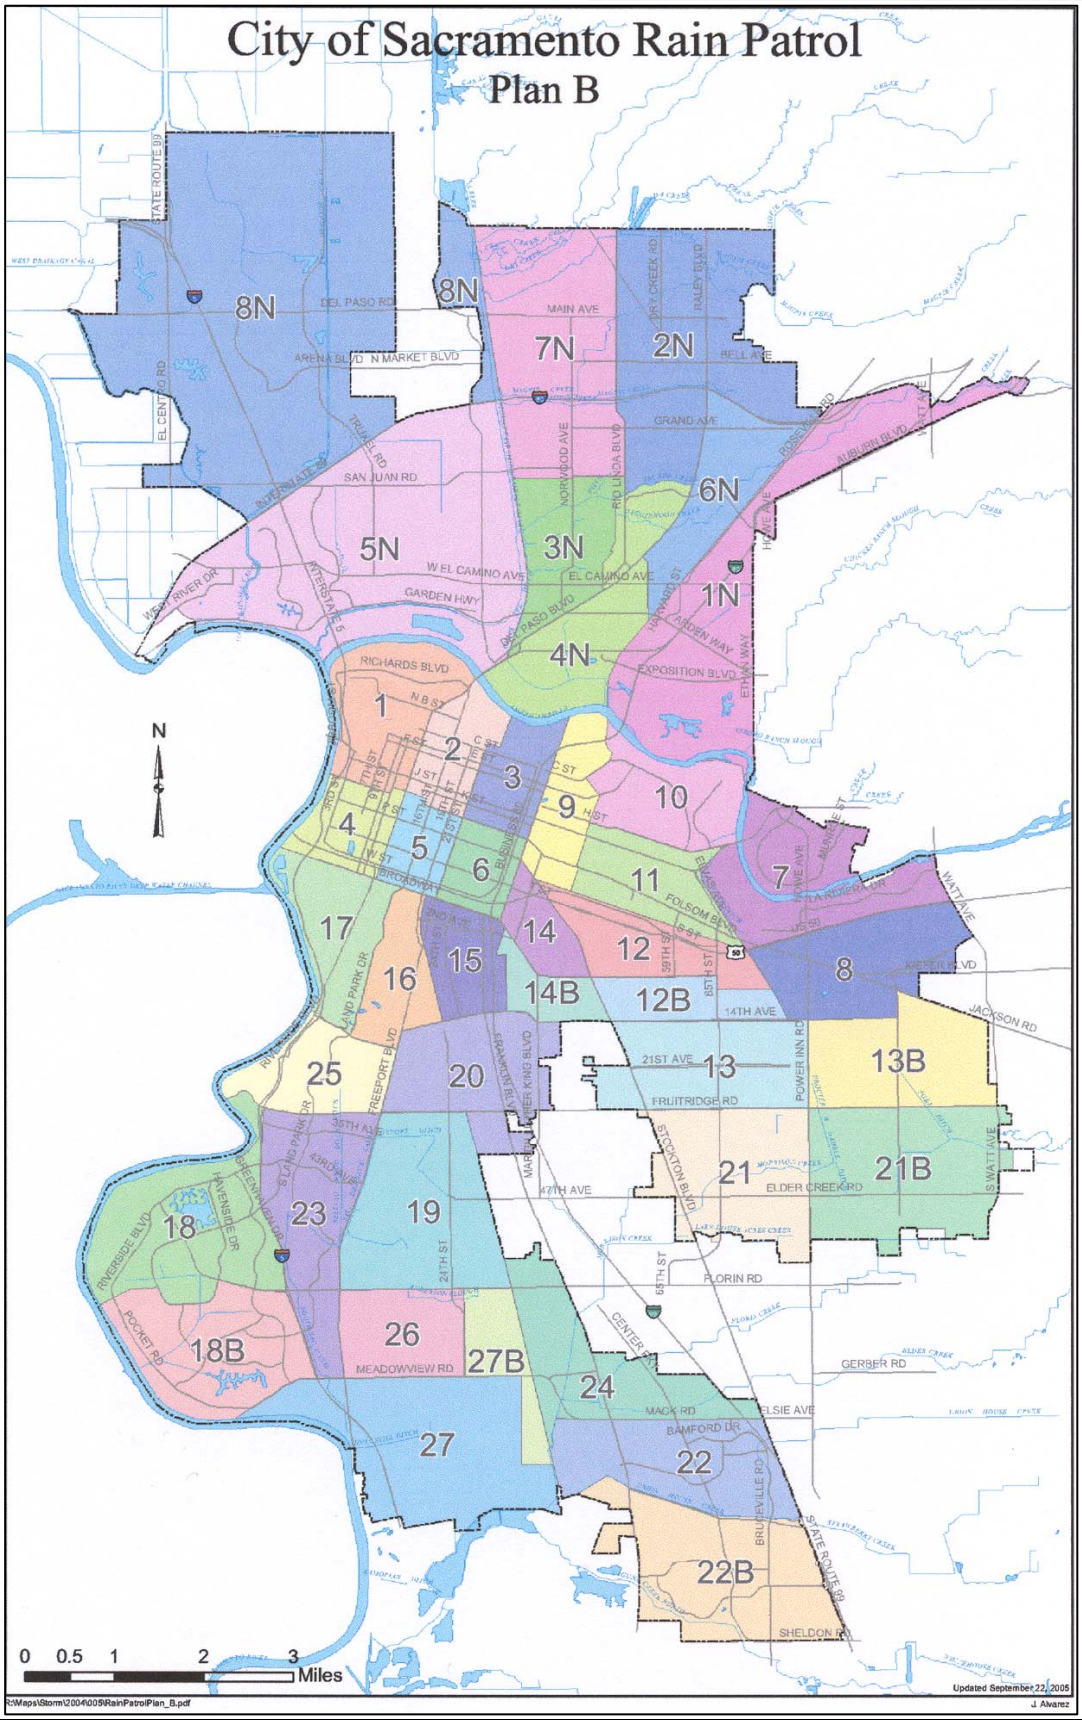
Area G1

North: Follow I-80 from Sacramento River to East Drainage Canal.
East: Follow U.P.R.R. tracks east of Drainage Canal from I-80 south to Route 160 and American River.
South: Follow American River from Route 160 west to Sacramento River.
West: Follow County Line on Sacramento River from American River north to I-80.

Area G2

North: Follow County Line from State Route 99 to eastern County Line.
East: From northern County Line follow west of East Main Drainage Canal south to I-80.
South: Follow I-80 from East Drainage Canal west to County Line at Drainage Canal.
West: Follow County Line from I-80 north to northern County Line on Elkhorn Bv.

Area G3



North: Follow County Line from Sorento Rd. east to County Line (Patrol Rd).
East: Follow County Line south to I-80.
South: Follow I-80 west to County Line (Northgate Blvd.)
West: Follow County Line north to East Levee Rd. and Sorento Rd. Intersection.

Area H

North: Follow County Line east from U.P.R.R. tracks to eastern County Line.
East: Follow County Line south to southern County Line.
South: Follow County Line west to U.P.R.R. tracks.
West: Follow U.P.R.R. tracks north to County Line.

Area H1

Everything in Area H south of Mack Rd.

BOUNDARIES PLAN B

Area 1
North: American River from Sacramento River to North 12th St.
West: Sacramento River from Capitol Bridge N to American River Junction.
South: Capitol Mall from Capitol Bridge E to 10th St. N to L St. E to 12th St.
East: 12th St. from N St. to American River.

Area 2
North: American River from North 12th St. to point N of the river N of 25th St.
West: 12th St. from N St. to American River.
South: L St. from 12th St. E to 15th St. S to Capitol Av E to 21st St. then N to the American River.
East: 21st St – Capitol Av N to R.R. W down R.R. tracks to 25th St then N to the American River.

Area 3
North: 21st St. at R.R. tracks E to 23rd St then N to American River E to a point on the American River N of Alhambra Bv
West: 21st St. from the Capitol Av N to R.R. W down R.R. tracks to 25th St. then N to the American River.
South: 21st St. and Capitol Av E to Alhambra Bv
East: Capitol Av N on Alhambra Bv straight to a point on the American River.

Area 4
North: Capitol Mall from Capitol Bridge E to 10th St. N to L St. E to 12th St.
West: Sacramento River from Capitol Mall S to a straight point off Brdwy.
South: Point on Sacramento River E on Brdwy to Riverside Bv N on 11th St. to W St. E to 12th St.
East: 12th from N St. S to W St. W to 11th St. S to Brdwy.

Area 5
North: L St. from 12th St. E to 15th St. S to Capitol Av E to 21st St.
West: 12th St. from N St. S to W St. W to 11th St. S to Brdwy.
South: Brdwy. from 11th E to 21st St.
East: 21st St from Capitol Av S to Brdwy.

Area 6
North: 21st St. and Capitol Av E to Alhambra Bv.
West: 21st St. from Capitol Av S to Brdwy.
South: Brdwy from 21st St E to Alhambra Bv.
East: Alhambra Bv from Brdwy N to Capitol Av

Area 7
North: H St. from S.P.R.R. tracks E to American River. Up the river to County Line. E to Watt Av.
West: S.P.R.R. tracks from H St. S to Hwy 50.
South: Hwy 50 from S.P.R.R. tracks to Watt Av.
East: Watt Av. from Hwy 50 N to County Line.

Area 8
North: Hwy 50 from S.P.R.R. tracks to Watt Av.
West: S.P.R.R. tracks from Hwy 50 S to 14th Av.
South: 14th Av from S.P.R.R. tracks E to Florin Perkins Rd. N to Jackson Rd. E to County Line.
East: County Line from Jackson Rd N to Hwy 50.

Area 8N
North: Follow County Line from State Route 99 to eastern County Line.

West: Follow County Line from I-80 north to northern County Line on Elkhorn Bv.
South: From County Line north of I-80 to East Drainage Canal.
East: From northern County Line follow west of East Main Drainage Canal south to I-80.

Area 9
North: American River from a point N of Alhambra Bv. E to S.P.R.R. tracks.
West: Alhambra Bv from a point on the American River S to Stockton Bv.
South: Stockton Bv from Alhambra to R.R. tracks then E to 39th St.
East: 39th St from R.R. tracks N to C St. E to S.P.R.R.

Area 10
North: American River from S.P.R.R. tracks W of FreeWy I-80 E on river to H St.
West: S.P.R.R. tracks from American River S to C St. then on 39th St. S to H St.
South: H St. from 39th St. E to H St. Bridge over the American River.
East: American River from S.P.R.R. tracks W of FreeWy I-80 E on river to H St.

Area 11
North: H St. from 39th St. E to R.R. tracks E of Elvas Av.
West: 39th St from H St. S to Light Rail R.R. tracks.
South: Light Rail R.R. tracks from 39th St E to S.P.R.R. tracks E of Elvas Av.
East: S.P.R.R. tracks from H St. S to Light Rail R.R. tracks.

Area 12
North: Light Rail R.R. tracks from Stockton Bv E to S.P.R.R. tracks E of Elvas Av.
West: Stockton Bv from Light Rail R.R. tracks S to Brdwy.
South: Brdwy from Stockton Bv E to 65th Expressway then S to San Joaquin St. E on San Joaquin St to S.P.R.R. tracks.
East: S.P.R.R. tracks from Light Rail R.R. tracks S to San Joaquin St.

Area 12B
North: Brdwy from Stockton Bv E to 65th Expressway then S to San Joaquin St. E on San Joaquin St to S.P.R.R. tracks.
West: Stockton Bv from Brdwy S to 14th Av.
South: 14th Av from Stockton Bv E to S.P.R.R. tracks.
East: S.P.R.R. tracks from San Joaquin St. S to 14th Av.

Area 13
North: 14th Av from Stockton Bv to Power Inn Rd.
West: Stockton Bv from 14th Av S to the County Line W along County Line then S along County Line to Fruitridge Rd and 53rd St.
South: Fruitridge Rd from 53rd St. E to Power Inn Rd.
East: Power Inn Rd. from 14th Av S to Fruitridge Rd.

Area 13B
North: 14th Av from S.P.R.R. tracks E to Florin Perkins Rd. N to Jackson Rd. E to County Line.
West: Power Inn Rd. from 14th Av S to Fruitridge Rd.
South: Fruitridge Rd from Power Inn Rd E to South Watt Av.
East: County Line from Jackson Rd S to Fruitridge Rd.

Area 14
North: Stockton Bv from Alhambra Bv S to Brdwy.
West: Alhambra Bv from Stockton Bv S to Brdwy.
South: Brdwy from Alhambra Bv S then E to Stockton Bv.
East: Stockton Bv from Alhambra Bv S to Brdwy.

Area 14B
North: Brdwy from Alhambra Bv S then E to Stockton Bv.
West: 32nd from Brdwy S to Marshall Wy. E on Marshall Wy to 33rd St. S on 33rd St to 16th Av.
South: 14th Av from 33rd St E to County Line to Stockton Bv.
East: Stockton Bv from Brdwy S to 14th Av.

Area 15
North: Brdwy from U.P.R.R. tracks E to Alhambra Bv.
West: U.P.R.R. tracks from Brdwy S to Sutterville Rd.
South: Sutterville Rd from U.P.R.R. tracks E, changes into 12th Av, to 33rd St.
East: 32nd St from Brdwy S to Marshall Wy. E on Marshall Wy to 33rd St. S on 33rd St to 12th Av.

Area 16
North: Brdwy from 16th St E to U.P.R.R. tracks.
West: Land Park Dr from Brdwy S to Sutterville Rd.
South: Sutterville Rd from Land Park Dr E to Freeport Bv. N on Freeport Bv E on Sutterville Rd to U.P.R.R. tracks.
East: U.P.R.R. tracks from Brdwy S to Sutterville Rd.

Area 17
North: Point on Sacramento River E on Brdwy to Land Park Dr (16th St).
West: Sacramento River from Brdwy S to Sutterville Rd.
South: Point on Sacramento River E on Sutterville Rd. to Land Park Dr.
East: Land Park Dr. from Brdwy S to Sutterville Rd.

Area 18
North: Seamas Av from Freeway I-5 W on Seamas Av to the Sacramento River.
West: Sacramento River from Seamas Av S to Portinao Circle.
South: Florin Rd from Freeway I-5 W on Florin Rd to Havenside Dr. S on Havenside Dr, changes to Gloria Dr, to Rivergate Wy. W on Rivergate Wy to Sacramento River.
East: Freeway I-5 from Seamas Av S to Florin Rd.

Area 18B
North: Florin Rd. from Freeway I-5 W on Florin Rd to Havenside Dr. S on Havenside Dr, changes to Gloria Dr, to Rivergate Wy. W on Rivergate Wy to to Sacramento River.
West: Sacramento River from Portinao Circle S to Pocket Rd at Freeway I-5.
South: Sacramento River from Portinao Circle S to Pocket Rd at Freeway I-5.
East: Freeway I-5 from Pocket Rd N to Florin Rd.

Area 19
North: Fruitridge Rd from Freeport Bv E to U.P.R.R. tracks.
West: Freeport Bv from Fruitridge Rd S to Florin Rd.
South: Florin Rd from Freeport Bv E to U.P.R.R. tracks.
East: U.P.R.R. tracks from Florin Rd N to Fruitridge Rd.

Area 20
North: Sutterville Rd from Freeport Bv E, changes to 12th Av, to County Line by 40th St.
West: Freeport Bv from Sutterville Rd S to Fruitridge Rd.
South: Fruitridge Rd from Freeport Bv E to U.P.R.R. tracks. S on tracks to County Line at Campbell Soup then E on County Line to 39th Av at Freeway I-99.
East: County Line from 14th Av S to 39th Av.

Area 21
North: Fruitridge Rd from County Line at 53rd St E to Power Inn Rd.

West: County Line from Fruitridge Rd S to 47th Av.
South: County Line from 47th Av E to Power Inn Rd.
East: Power Inn Rd from County Line at Cantina Circle N to Fruitridge Rd.

Area 21B
North: Fruitridge Rd from Power Inn Rd E to County Line at South Watt Av.
West: Power Inn Rd from Fruitridge Rd S to County Line.
South: County Line from Power Inn Rd E to Elk Grove Rd and Florin Rd.
East: County Line from Elder Creek Rd N to Fruitridge Rd.

Area 22
North: Mack Rd from Morrison Creek at U.P.R.R. tracks N to Mack Rd then E to Stockton Rd.
West: U.P.R.R. tracks from Morrison Creek S to Union House Creek.
South: Union House Creek from U.P.R.R. tracks to Strawberry Creek E to County Line at Freeway I-99.
East: County Line from Strawberry Creek N to Mack Rd.

Area 22B
North: Union House Creek from U.P.R.R. tracks E to Strawberry Creek E to County Line.
West: County Line.
South: County Line.
East: County Line.

Area 23
North: Seamas Av from Freeway I-5 E, changes to Fruitridge Rd, to Freeport Bv.
West: Freeway I-5 from Seamas Av S to Pocket Rd.
South: Pocket Rd from Freeway I-5 E to Freeport Bv.
East: Freeport Bv from Pocket Rd N to Fruitridge Rd.

Area 24
North: County Line from U.P.R.R. tracks E to 52nd Av S and E to Stockton Bv.
West: U.P.R.R. tracks from Nancy Lake S to Morrison Creek.
South: Mack Rd from Morrison Creek E to Stockton Bv.
East: County Line from U.P.R.R. tracks E to 52nd Av S and E to Stockton Bv.

Area 25
North: Sutterville Rd from Sacramento River E to Freeport Bv.
West: Sacramento River from Sutterville Rd S to Seamas Av.
South: Seamas Av, changes to Fruitridge Rd, from Sacramento River to Freeport Bv.
East: Fruitridge Bv from Sutterville Rd S to Fruitridge Rd.

Area 26
North: Florin Rd from Freeport Bv E to 25th St.
West: Freeport Bv from Florin Rd S to Meadowview Rd.
South: Meadowview Rd from Freeport Bv E to 24th St.
East: 25th St from Meadowview Rd N to 25th St to Florin Rd.

Area 27
North: Pocket Rd to Meadowview Rd from 7942 Pocket Rd P.L, Sacramento River, E to 3250 Meadowview Rd, Nation Guard Armory.
West: Sacramento River from 7942 Pocket Rd P.L. S to Stonecrest Av, County Line.
South: County Line from Freeport Bv E to W.P.R.R. tracks.
East: County Line at W.P.R.R. tracks N to a point S of Detroit Bv W to Meadowview Rd, Nation Guard Amory.

Area 27B
North: Florin Rd from 25th St E to W.P.R.R. tracks.
West: 25th St from Florin Rd to 24th St S to Meadowview Rd.
South: 25th St from Florin Rd to 24th St S to Meadowview Rd.
East: W.P.R.R. tracks from Florin Rd S to end of Detroit Bv.

Area 1N
North: County Line from S.P.R.R. tracks E to County Line.
West: S.P.R.R. tracks from County Line S to American River.
South: American River from S.P.R.R. tracks to County Line.
East: County Line from American River N.

Area 2N
North: Ascot Av from Rio Linda Bv to County Line (Patro Road)
West: Rio Linda Bv from Ascot Av south to Arcade Creek
South: Arcade Creek E of Rio Linda Bv to Marysville Bv. N on Marysville Bv to Freeway I-80 E to County Line.
East: County Line from Freeway I-80 north to Ascot Av.

Area 3N
North: Ford Rd from U.P.R.R. tracks E to Rio Linda Bv.
West: U.P.R.R. tracks from Ford Rd S to Del Paso Bv.
South: Del Paso Bv from U.P.R.R. tracks E to Oakmont St.
East: Oakmont St N from Del Paso Bv to Traction Av. Northeast on Traction Av to Eleanor Av. W to Altos Av then N to Arcade Creek. E to Rio Linda Bv then N to Ford Rd.

Area 4N
North: Arcade Creek from Altos E to Marysville Rd.
West: From Arcade Creek S on Altos Av to Eleanor Av. E on Eleanor Av to Traction Av then S to Oakmont St. S to Del Paso Bv then SW to American River.
South: American River from Del Paso Bv E to S.P.R.R. tracks.
East: S.P.R.R. tracks at American River N to Lexington St. N on Lexington St to Glenrose Av W to Del Paso Bv, changes to Marysville Bv, to Arcade Creek.

Area 5N
North: Freeway I-80 from U.P.R.R. tracks W to County Line by the Sacramento River.
West: Freeway I-80 from U.P.R.R. tracks W to County Line by the Sacramento River.
South: County Line on Freeway I-80 to Sacramento River to American River then E on American River to Del Paso Bv.
East: Del Paso Bv at American River E to U.P.R.R. tracks N to Freeway I-80.

Area 6N
North: Freeway I-80 from S.P.R.R. tracks W to Marysville Bv.
West: Marysville Bv S from Freeway I-80 to Del Paso Bv to Eleanor Av. SE to Lexington St S to S.P.R.R. tracks.
South: Marysville Bv S from Freeway I-80 to Del Paso Bv to Eleanor Av. SE to Lexington St S to S.P.R.R. tracks.
East: S.P.R.R. tracks from Freeway I-80 to Lexington St.

Area 7N
North: Follow northern County Line from U.P.R.R. tracks to Rose Street.
West: East of East Drainage Canal from northern County Line south to Ford Road.
South: Ford Rd from U.P.R.R. tracks (on East Drainage Canal) East to Rio Linda Bv.
East: Rio Linda Bv from Ford Rd North to Ascot Ave

PATROLLING

The Department of Utilities has various patrolling responsibilities during the rainy season which is normally from October through May. These Patrolling responsibilities include levee patrol, rain patrol, pumping plant patrol and combined sewer system patrol.

General Information

The following sections outline rain patrol responsibilities for the Field Services Division and the Plant Services Division. These responsibilities include the stormwater drainage collection system, pumping plants and the combined sewer system service area.

Drainage Collection System Patrol

Field Services Division
During the winter months, the Field Services Division is prepared to implement one or two Rain Patrol Plans for the collection system. The Drainage Collection Section decides whether to implement Plan A or Plan B (see definitions on p. 37) based upon the current weather conditions.

The Field Services Division Rain Patrol Crews will be dispatched into areas from Building 19. Lists of personnel who are qualified for Rain Patrol duty are located at 5730 24th Street, Building 19.

Initial set up of the Rain Patrol plans will be the responsibility of the Drainage Collection Superintendent. Supervisors from the Drainage Collection Division and the Wastewater Collection Division are trained to implement this plan. The Plant Services Division Manger is responsible for the implementation of the Plant Services Patrol Duty.

During off-duty hours, the City Operator will notify the Drainage Collection Section's On-Call Supervisor as trouble calls are received. The On-Call Supervisor has the responsibility to initiate the rain patrol plans and notifies WWC on-call Supervisor.

After the plans are implemented, the North and South Area Supervisors will survey large drainage problems and ditches in their respective areas. Depending on rainfall and reported flooding incidents, additional rain patrol crews may be dispatched.

Plant Services Division
During the winter months, the Plant Services Division is prepared to implement its Rain Patrol Plan for the Sewer and Drainage Pumping Stations. Its rain patrol plan is implemented whenever weather conditions and/or telemetry systems or flow conditions at Sump 1, Sump 1A and Sump 2 dictate. The City is broken down into 123 storm basins which collect the water and feed it to some 98 pumping plants.

Combined System Patrol

Rain Patrol crews patrolling the combined sewer system will keep the Drainage Collection Superintendent informed of major street flooding and what streets are closed. The Drainage Collection Superintendent will keep the Streets Division Manager informed of the conditions. If the Drainage Collection CP or UOC is activated, the rain patrol crews will keep the Operations Section Chief informed of street flooding and of the overall situation. The Operations Section Chief will in turn keep the Incident Commander informed.

Incoming emergency calls referred by the City Operator will be answered by experienced staff at the Drainage Collection CP, located at 5730 24th Street, Building 19.

DEPARTMENT OF UTILITIES

REVIEW OF CITY OF SACRAMENTO PUBLIC VEHICLE MAINTENANCE FACILITIES, MATERIAL STORAGE FACILITIES, AND CORPORATION YARDS

In 2004, a review of City facilities was conducted in order to determine which additional City facilities should prepare and implement Stormwater Pollution Prevention Plans (SWPPPs). This review was conducted as the first step in satisfying the Stormwater NPDES Permit Provision 10. c. i. that states:

> "Each Permittee shall prepare and implement SWPPPs for public vehicle maintenance facilities, material storage facilities, and corporation yards having the potential to discharge pollutants to the MS4 and/or waters of the state. This requirement shall only apply to those facilities not already covered under the General Industrial Permit."

This report addresses this specific permit provision with respect to the need to implement SWPPPs. Other BMPs are implemented by the City to address other municipal facilities and activities that are not addressed by this permit provision.

The conduct of the work in performing the review is described below followed by a summary of results. A master table is attached, which comprehensively summarizes the results of the review. Also attached are descriptive notes on several individual facilities that provide additional information on those facilities. Facility locations are shown on an attached map.

CONDUCT OF THE WORK

The work was principally conducted by Jeanne Wallberg of Archibald & Wallberg Consultants and reviewed by Delia Garrison of the City of Sacramento Department of Utilities. The work consisted of the following steps:

Compiled a comprehensive list of facilities for review. Several sources of information were used in compiling the list including: (1) a list of all City owned properties, (2) individual lists of Public Works Department, Department of Utilities, and Convention and Culture Department facilities, and (3) a list of City facilities with fuel storage onsite. These individual lists were culled for potential vehicle maintenance, materials storage, and corporation yards based on title description. For example, properties described as office buildings or parking lots were not selected.

Sorted the list by drainage. Facilities in areas that drain to the MS4 or to a creek or river were separated from facilities within the combined sewer system (CSS). For information purposes, facilities within the CSS are shown on the attached master table along with some information collected on those facilities. However, since these facilities do not discharge to the MS4 or waters of the state, it was judged that they do not require a SWPPP.

Evaluated the facilities in areas that drain to the MS4 or to a creek or river for the potential to discharge pollutants. This best professional judgment evaluation was based on ascertaining the nature of operations and materials at the facility with respect to potential exposure to runoff, i.e. what activities/storage is done inside or in areas with sanitary sewer drainage versus what is done outside. Information was obtained from phone contacts and/or site visits: facilities where site visits were conducted are noted on the master table. Storage and operations at some facilities was judged benign, insignificant, or protected from storm drain system: no SWPPP is recommended for these facilities. Facilities with potential to discharge pollutants were categorized as: (1) recommended to develop and implement a SWPPP, or (2) no SWPPP recommended if certain modifications to some operational practices are made, or where the potential exposure is solely spill related and a Spill Prevention Control and Countermeasure Plans or Hazardous Materials Plans covers that area of potential exposure.

SUMMARY OF RESULTS

A SWPPP is recommended for the new North Area Corporation Yard and for the 35th Avenue Combined Wastewater Treatment Plant site. A SWPPP is not recommended for several other facilities where:

- Sole exposure is spills and the facility has or will have a spill response plan in 2004.
- The facility has a spill response plan. There are some other types of exposure, however, these could be addressed through changes in operations.
- Materials/chemical storage is benign, insignificant, and/or protected from storm drain system. Vehicle maintenance activities are protected from the storm drain system.

A summary of results is provided in Table 1.

Table 1. Summary of Results (a)

Facility	Review Result
North Area Corporation Yard	SWPPP is needed and will be completed before 2004/05 rain season. (b, c) Other corporation yards in MS4 have SWPPPs.
Combined Wastewater Treatment Plant – 35th Avenue site	Although limited industrial outside activity at this site, wastewater treatment plants fall categorically under the stormwater regulations. A SWPPP will be proposed. (b, d)
Miller Park Marina Haggin Oaks Golf Complex Bing Maloney Golf Complex	These facilities have spill response plans. No SWPPP is recommended if certain modifications to some operational practices are made. (b)
Fire stations with fuel storage Sumps with fuel storage	No SWPPP is recommended - SWPPP would be duplication of spill response plan. (b)

Facility	Review Result
Water treatment plants Police garage facilities Old Sacramento storage building and trash enclosure Park and Softball complex storage buildings Chemical storage at pools Bartley Cavanaugh Golf Course	No SWPPP is recommended - materials/chemical storage is benign, insignificant, and/or protected from storm drain system. Vehicle maintenance, where applicable, is protected from storm drain system.
Police Annex Fleet Maintenance Shop Eleanor Yard Garage	No SWPPP is recommended. Facilities will close in summer 2004.
Sacramento Army Depot	Leased business park - is not a City operation.

(a) See attached master table and (for some facilities) individual review forms for more information.
(b) Spill response plans will be provided to Regional Water Quality Control Board, as requested.
(c) City Safety Officer will develop the SWPPP and file a Notice of Intent for Coverage under the State General Industrial Permit.
(d) The City Wastewater Superintendent will address and incorporate a SWPPP into the upcoming wastewater discharge NPDES Permit renewal application (NPDES Permit Number CA0079111).

Stormwater Program staff will track the development of a SWPPP for the new North Area Corp Yard and the combined wastewater treatment plant, will track that all spill response plans are developed, as planned (this pertains to sumps and fire stations), and will conduct follow-up site visits at the Miller Park Marina, the Haggin Oaks Golf Complex, and the Bing Maloney Golf Complex to ascertain whether the staff have been able to make recommended changes. If not, SWPPPs may need to be developed for these facilities.

In addition, Stormwater Program staff will continue implementing other municipal program BMPs intended to reduce potential pollutant discharges from City facilities and activities not specifically addressed by this permit provision (10.C.i.). Other BMPs include training of municipal staff, revision of facility lease language where necessary, revision of special use permits where necessary, review of pesticide use and application procedures, and review of good housekeeping procedures.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: Combined Wastewater Treatment Plant

Address: 1391 35th Avenue
Contact Name and Title: Dave Phillips, Wastewater Superintendent
Phone Number: 916-808-5652
Contact Name and Title: Bruce Baker, Supervising Plant Operator
Phone Number: 916-808-5651

Nature of the Operation: Wastewater retention and treatment facility for combined sewer system.
The Combined Wastewater Treatment Plant is part of the City of Sacramento Department of Utilities.
Stormwater runoff from selected areas of the Combined Wastewater Treatment Plant discharges to the Sacramento River via Sump 104. Runoff to the storm drain is principally from areas such as roofs, parking lots, and landscaped areas. There is also some runoff from areas used for outdoor maintenance and storage of large pieces of equipment.

Relevant Activities

Chemical Storage –

There is outside tank storage of sodium hypochlorite and sodium bisulfite. These tanks are surrounded by berms rated to contain the full contents of a tank. Oil storage is in double walled tanks. The plant has a Spill Control and Countermeasure Plan that covers response to chemical spills.

Vehicle Maintenance/Corps Yard Activities –

There is no vehicle maintenance onsite. There is pump and equipment maintenance, most of which is conducted inside, under cover. Some outside maintenance is done on large pieces of equipment. There is a cleaning rack for equipment – the cleaning rack area is not bermed but does drain to the sanitary sewer. The cleaning rack was not in use, so its effectiveness in containing the wash water to the sanitary system drain was not observed.

Other –

When in use, the three bays of rectangular clarifiers release wastewater back to the sanitary sewer system. Under certain storm conditions, the discharge is treated and directed to the Sacramento River – this discharge is covered under NPDES Permit No. CA0079111, Regional Board Order No. 5-01-258.

A March 11, 2003 site inspection made by a Regional Board contractor, Tetra Tech, pursuant to this NPDES permit, reported that the physical condition of the site showed evidence of good housekeeping practices and maintenance.

Recommendation

The areas that discharge to the storm drain system are mostly limited to non-industrial uses. The principal exception is that some outside maintenance is conducted on large equipment. Although the activities in areas that discharge to the storm drain system appear to be quite limited, this is a type of facility that is specified as requiring coverage under the State General Industrial Stormwater Permit. Therefore, it is recommended that the need for a SWPPP to address storm drainage exposure and pollution prevention be specifically discussed with Regional Board staff and addressed and incorporated, as appropriate, into the existing NPDES Permit, which is approaching its renewal period.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: Sacramento Marina
Address: 2710 Ramp Way
Contact Name and Title: Michelle Heppner, Marina Manager
Frank Malaki
Phone Number: 916-264-5712

Nature of the Operation: Provide boating amenities including berthing, launching, fueling, and pumpout facilities. No boat maintenance services are provided.
The Sacramento Marina is part of the City of Sacramento Department of Convention, Culture and Leisure
The Sacramento Marina is located on an off-stream basin of the Sacramento River. Drainage from the docks, slips, fueling and pumpout dock, and launch ramp is directly into the river.

Relevant Activities

Fueling and Pumpout –

Fuel and pumpout lines between the dock and onshore storage tanks are double-sleeved. A third sleeve was also on the lines but was not completely connected and water tight.

Materials Storage –

Storage of chemicals is inside – either at the administration building or at the fuel dock.

Spill Management –

The Marina has a Consolidated Contingency Plan that lists emergency spill response procedures for Marina employees. The Plan specifies that employee training is conducted for new hires and annually for all Marina staff. The Marina contracts spill cleanup to Ramos Environmental. Typical spill management techniques are to contain a spill with booms and then deploy absorbent pads.

Recommendations

The potential for contamination at the Marina is principally with respect to the potential for spills. Since the Marina has a Plan that contains spill response and cleanup procedures, a separate Stormwater Pollution Prevention Plan is not recommended. It is recommended that the Marina ensure that the Plan is kept up to date and that the employee training is conducted as described in the Plan. It is further recommended that the Marina keep the third sleeve on the fuel and pumpout lines connected and water tight.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: Haggin Oaks Golf Complex
Address: 3645 Fulton Avenue
Contact Name and Title: Sam Samuelson, Golf Course Superintendent
Phone Number: 916-277-6034

Nature of the Operation: Arcade Creek and Alistair MacKenzie 18-hole golf courses. The Haggin Oaks Golf Complex is part of the City of Sacramento Capital City Golf. Stormwater runoff from the Haggin Oaks Golf Complex discharges to Arcade Creek.

Relevant Activities

Chemical Storage –

Pesticide storage is inside in a dedicated raised bed trailer. This trailer has a grated floor providing secondary containment for any pesticides that spill inside the trailer. Cleaning procedures for the under-grate area are not known. Mixing of pesticides and loading into the spray rig is done inside under cover.

Fertilizer storage is inside – bagged fertilizer is stored on pallets. The floor is swept, not hosed.

Janitorial supplies are stored inside.

Drummed oil is stored inside – there is a poly spill pallet providing secondary containment under the drums.

There are two aboveground fuel tanks, one owned by the City and one by Morton Golf – these tanks are double-walled and inspected monthly.

The golf course has a fertigation system that provides a means for tank injection of fertilizers into the irrigation system. This system is used when establishing a course, but is not used for ongoing maintenance. The fertigation system now stands empty.

Vehicle Maintenance –

Maintenance and washing of turf maintenance equipment is conducted by the City of Sacramento. Golf cart maintenance and washing is not under the direct control of the City of Sacramento; it is part of the golf operation that is leased as a concession to Morton Golf.

Turf maintenance equipment – Most maintenance activities are conducted under cover, inside a maintenance building. Some maintenance is done outside on large equipment. Oil and fluid drippings are picked up with absorbents. The floor of the maintenance building is periodically swept, but is not hosed down.

There is a wash rack, under cover, that drains to the sanitary sewer system. This has a filter system that clogs due to grass clippings. Most vehicle wash off is to cleanse grass and mud. Therefore, the wash rack is infrequently used and equipment washing is done in two turfed "swale" areas on the course. A new self-contained wash rack is under consideration.

Golf carts – Cart maintenance (battery operated carts) is done outside. The City is currently discussing additional facilities so these maintenance operations would be under cover. Cart washing is also done outside. Cart storage and cart supplies are under cover in a cart barn.

Spill Response –

City staff receives annual training on pesticide use, fuel spills and dispensing, and shop cleanliness.

There are spill kits with absorbent materials, mats to seal drains, and other spill response supplies.

A newly completed (1/15/04) Spill Prevention Control and Countermeasure (SPCC) Plan was prepared for the Haggin Oaks Golf Complex by Kennedy/Jenks Consultants.

Recommendation

The potential for stormwater contamination at this facility is mostly associated with the potential for spills, which is addressed through secondary containment/double walled tanks, procedures outlined in the SPCC Plan, employee training, and the availability of spill kits. Vehicle wash off is a relatively benign activity consisting of hosing mud and grass clippings off vehicles onto turfed areas on the course. There are three recommendations for additional measures that should be developed and implemented, namely: (1) cleaning procedures for the pesticide trailer, (2) cleanup of the ground surface (as necessary) following outside maintenance activities, and (3) arranging the training schedule so that training for the specific activities listed above occurs coincident with the onset of the rain season as much as is possible.

A Stormwater Pollution Prevention Plan is not recommended if the above three recommendations are addressed and incorporated into existing procedures.

It is preferable, as the City budget allows, to provide facilities so that all vehicle maintenance (large equipment and golf carts) can be done under cover and to provide functioning wash racks.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: Bing Maloney Golf Complex
Address: 6801 Freeport Blvd.
Contact Name and Title: Shane Howe, Golf Course Superintendent
Phone Number: 916-433-6354

Nature of the Operation: Bing Maloney 18-hole and executive 9-hole golf courses. The Bing Maloney Golf Complex is part of the City of Sacramento Capital City Golf. Stormwater runoff from the Bing Maloney Golf Complex is mostly sheet runoff that eventually discharges to the MS4.

Relevant Activities

Chemical Storage –

Pesticide storage is inside in a dedicated raised bed trailer. This trailer has a grated floor providing secondary containment for any pesticides that spill inside the trailer. Cleaning procedures for the under-grate area are not known. Mixing of pesticides and loading into the spray rig is done inside under cover. Mixing of pesticides and loading into the spray rig is done outside. A new self-contained wash rack is under consideration. If installed, pesticide mixing will be done in the wash rack. The spray rig is stored inside.

Fertilizer storage is inside – bagged fertilizer is stored on pallets. The floor is swept, not hosed.

Janitorial supplies are stored inside.

Drummed oil is stored inside – there is a poly spill pallet providing secondary containment under the drums.

There are two aboveground fuel tanks – these tanks are double-walled and inspected monthly.

Vehicle Maintenance –

Maintenance and washing of turf maintenance equipment is conducted by the City of Sacramento. Golf cart maintenance and washing is not under the direct control of the City of Sacramento; it is part of the golf operation that is leased as a concession to Morton Golf.

Turf maintenance equipment – Most maintenance activities are conducted under cover, inside a maintenance building. Some maintenance is done outside – on the larger machines. Oil and fluid drippings are picked up with absorbents. The floor of the maintenance building is periodically swept, but is not hosed down.

There is no wash rack. Therefore, equipment washing is done in a turfed area on the course. Most vehicle wash off is to cleanse grass and mud. A new self-contained wash rack is under consideration.

Golf carts – Cart maintenance (gas powered carts) is done inside. The City is currently discussing conversion to battery operated carts and additional cart facilities. Cart washing is also done outside. Cart storage is mostly outside.

Spill Response –

City staff receives annual training on pesticide use, fuel spills and dispensing, and shop cleanliness.

There are spill kits with absorbent materials, mats to seal drains, and other spill response supplies.

A newly completed (1/15/04) Spill Prevention Control and Countermeasure (SPCC) Plan was prepared for the Haggin Oaks Golf Complex by Kennedy/Jenks Consultants.

Recommendation

The potential for stormwater contamination at this facility is mostly associated with the potential for spills, which is addressed through secondary containment/double walled tanks, procedures outlined in the SPCC Plan, employee training, and the availability of spill kits. Vehicle wash off is a relatively benign activity consisting of hosing mud and grass clippings off vehicles onto turfed areas on the course. There are four recommendations for additional measures that should be developed and implemented, namely: (1) providing an inside space for mixing and loading of the pesticide spray rig, (2) cleaning procedures for the pesticide trailer, (3) cleanup of the ground surface (as necessary) following outside maintenance activities, and (4) arranging the training schedule so that training for the specific activities listed above occurs coincident with the onset of the rain season as much as is possible.

A Stormwater Pollution Prevention Plan is not recommended if the above four recommendations are addressed and incorporated into existing procedures.

It is preferable, as the City budget allows, to provide facilities so that all vehicle maintenance (large equipment) can be done under cover and to provide a wash rack.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: Bartley Cavanaugh Golf Course
Address: Freeport Blvd
Contact Name and Title: Campbell Turner, Golf Course Superintendent
Phone Number: 916-433-6297

Nature of the Operation: Bartley Cavanaugh 18-hole golf course.
The Bartley Cavanaugh Golf Course is part of the City of Sacramento Capital City Golf. Stormwater runoff from the Bartley Cavanaugh Golf Course discharges to a drainage ditch on the north side of the facility. Eventual discharge is to the Sacramento River.

Relevant Activities

Chemical Storage –

Pesticide storage is inside in a dedicated room. This room is bermed – any pesticides that spill are contained within the berm. Cleaning procedures for the floor include sweeping and pick up or pickup with absorbents – no hosing is done. Mixing of pesticides and loading into the spray rig is done under the wash rack cover.

Fertilizer storage is inside – bagged fertilizer is stored on pallets. The floor is swept, not hosed.

Janitorial supplies are stored inside.

Drummed oil is stored inside on poly spill pallets. There are spill kits with absorbent materials to pick up spills and drips. This building drains to the septic system.

There is a single aboveground fuel tank – this tank has secondary containment.

The golf course has a fertigation system that provides a means for tank injection of fertilizers into the irrigation system. This system is used when establishing a course, but is not used for ongoing maintenance. The fertigation system now stands empty.

Vehicle Maintenance –

Maintenance and washing of turf maintenance equipment is conducted by the City of Sacramento. Golf cart maintenance is not under the direct control of the City of Sacramento; it is part of the golf operation that is leased as a concession to Morton Golf.

Turf maintenance equipment – Maintenance activities are conducted under cover, inside a maintenance building. Oil and fluid drippings are picked up with absorbents. The floor of the maintenance building is periodically swept, but is not hosed down. This building drains to the septic system.
There is a wash rack, under cover, that drains to the septic system. Wash off of heavy grass clippings and mud is done outside in a turfed area.

Golf carts – Cart maintenance (battery operated carts) is done inside. Cart storage and cart supplies are under cover.

Current Training –

City staff receives annual training on pesticide use, fuel spills and dispensing, and shop cleanliness.

The septic tank is set to alarm before it reaches capacity.

Recommendation

No Stormwater Pollution Prevention Plan is necessary.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: Kinney Police Facility
Address: 3550 Marysville Blvd.
Contact Name and Title: James Chapman, Equipment Maintenance Supervisor
Phone Number: 916-566-6477

Nature of the Operation: Maintain City police vehicles.
The Kinney Police Facility garage is part of the City of Sacramento Department of Public Works.
Stormwater runoff from the Kinney Police facility discharges to the MS4.

Relevant Activities

Chemical Storage –

Fuel storage is in underground tanks. The fueling station is under cover.

Oil, batteries, and other chemicals used in vehicle maintenance are stored inside.

Vehicle Maintenance –

Vehicle maintenance is done inside. Occasionally, vehicles too large to fit inside are serviced just outside the bay door. The vehicle maintenance building and immediate area drains to an oil water separator and then to the sanitary sewer.

The wash rack drains to the sanitary sewer.

There are spill kits onsite and spill response is discussed at quarterly safety meetings.

Recommendation

No Stormwater Pollution Prevention Plan is necessary.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: Rooney Police Facility
Address: 5303 Franklin Blvd.
Contact Name and Title: Robert Olsen, Equipment Maintenance Supervisor
Phone Number: 916-277-6010

Nature of the Operation: Maintain City police vehicles.
The Rooney Police Facility garage is part of the City of Sacramento Department of Public Works.
Stormwater runoff from the Rooney Police facility discharges to the MS4.

Relevant Activities

Chemical Storage –

Fuel storage is in underground tanks. The fueling station is under cover.

Oil, batteries, and other chemicals used in vehicle maintenance are stored inside.

Vehicle Maintenance –

Vehicle maintenance is done inside. Occasionally, vehicles too large to fit inside are serviced just outside the bay door. The vehicle maintenance building and immediate area drains to an oil water separator and then to the sanitary sewer.

The wash rack drains to the sanitary sewer.

There are spill kits onsite and spill response is discussed at quarterly safety meetings.

Recommendation

No Stormwater Pollution Prevention Plan is necessary.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: E. A. Fairbairn Water Treatment Plant

Address: 7501 College Town Drive
Contact Name and Title: Stephen Willey, Plant Supervisor - Operations
Phone Number: 916-808-7406

Nature of the Operation: Conventional water treatment plant.
The E. A. Fairbairn Water Treatment Plant is part of the City of Sacramento Department of Utilities.
Stormwater runoff from the E. A. Fairbairn River Water Treatment Plant discharges to the City of Sacramento storm drainage system (Sump 91) and thence to the American River.

Relevant Activities

Chemical Storage –

> The E. A. Fairbairn Water Treatment Plant is currently under construction to complete a plant expansion project. Construction is expected to be completed by the end of 2004 or early 2005. The construction includes new chemical storage buildings for inside storage of all chemicals. The inside storage areas will have containment areas and/or drainage to the sanitary sewer. The plant has an Emergency Management Plan that covers response to hazardous materials spills.
>
> Runoff to the storm drain will be from areas such as roofs, parking lots, and landscaped areas.

Recommendation

No Stormwater Pollution Prevention Plan is necessary.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: Sacramento River Water Treatment Plant

Address: 1 Water Street
Contact Name and Title: Stephen Willey, Plant Supervisor - Operations
Phone Number: 916-808-7406

Nature of the Operation: Conventional water treatment plant.
The Sacramento River Water Treatment Plant is part of the City of Sacramento Department of Utilities.
Stormwater runoff from the Sacramento River Water Treatment Plant discharges to the Sacramento River.

Relevant Activities

Chemical Storage –

There is a dedicated chemical storage building that houses chlorine, fluoride, and other chemicals inside. The inside storage areas have containment and/or drainage to the sanitary sewer system. There is outside tank storage of caustic soda, polymer, and lime. These tanks are surrounded by berms and containment areas. The plant has an Emergency Management Plan that covers response to hazardous materials spills.

Runoff to the storm drain is from areas such as roofs, parking lots, and landscaped areas.

Recommendation

No Stormwater Pollution Prevention Plan is necessary.

CITY OF SACRAMENTO FACILITIES - STORMWATER REVIEW FORM

Facility Name: City Pools and Fountains
Address: various – see master list for pools, fountain locations are listed below

Contact Name and Title: Greg Narrowmore, Community Recreation Services and Aquatics Division Superintendent
Phone Number: 916-277-6095

Nature of the Operation: Disinfection and pH control of City pools and fountains
The Community Recreation Services and Aquatics Division is part of the City of Sacramento Department of Parks and Recreation.
Some City pools and fountains are in the storm drainage system area and some are in the combined sewer system area – see master table for pool locations.

Relevant Activities

Chemical Storage –

For disinfection, the City uses either liquid sodium hypochlorite or liquid or gaseous chlorine. For pH control, liquid muratic acid or liquid sodium hydroxide are used. Two to three carboys of liquid chemicals are delivered and placed by an outside vendor on containment pallets that are rated to contain up to 55 gallons of liquid. The different chemicals are stored separately on different pallets. One pool location (the Meadowview pool) has bulk storage onsite – this bulk storage is within a secondary containment area. Where chlorine gas is used, the cylinders are housed inside.

The City is in the process of revising its Risk Management Plan for the pool chemicals. This plan addresses potential contaminant pathways to the storm drain system. The area around the pools and chemical storage areas drains to the sanitary sewer.

At areas where there are public fountains (Caesar Chavez Park, Fremont Park, and Gardenland), the chemicals are located in covered and sealed units. These units have secondary containment.

Note: When drained for O&M, pool water is discharged to the sanitary sewer system.

Recommendation

No Stormwater Pollution Prevention Plan is necessary.

1.0 INTRODUCTION

The National Pollution Discharge Elimination System (NPDES) Storm Water Permit, administered by the Central Valley Regional Water Quality Control Board (Water Board), requires the City of Sacramento to regulate urban runoff entering into the storm drainage system and local waterways. The purpose of the permit is to protect water quality by reducing the amount of pollutants in the storm water from various urban land uses and activities. There are numerous programs being implemented by the City's Stormwater Quality Improvement Program (Stormwater Program) including those that minimize storm water pollution from new developments, construction sites, and industrial facilities. The City of Sacramento has obtained a General NPDES permit which covers the majority of the City's municipal activities and facilities, but section 402(p) of the Federal clean Water Act requires landfills (both open and closed) to obtain separate coverage. On March 19, 2004, the City Landfill facility obtained a State Industrial Storm Water General Permit, NPDES Order Number R5-2004-0039, from the California Regional Water Quality Control Board, Central Valley Region.

1.1 Purpose of the Storm Water Pollution Prevention Plan (SWPPP)

The SWPPP provides an extensive evaluation of the Landfill for potential activities that may result in storm-water-pollutant runoff. The SWPPP is intended to serve as a blue print for implementation of best management practices (BMPs) to control pollutants within the site's runoff. All paved areas where the corporation yard and the western portion of the pervious areas drain into the combined sewer/stormwater system; furthermore, the south west portion of the pervious area drains to the south were it is retained in a detention pond for sedimentation prior to discharging into the combined sewer/stormwater system. Additionally, the south eastern portion of the pervious area drains to a retention pond located in the furthest, south east corner of the landfill where the runoff infiltrates into the soil. The activities and potential pollutants from within these areas are generally discussed in the SWPPP, but no BMP implementation practices are required under this SWPPP since runoff from these locations do not impact local water bodies; however, discharges into the combined system are mitigated so as to not impact any existing agreements with the Sacramento Regional Sanitation District where wastewater from this facility is treated prior to discharging into the Sacramento River. This SWPPP will be kept on the premises and updated as needed to reflect actual procedures. The Stormwater Program staff will also have a copy of this SWPPP.

1.2 Storm Water Audit at the Landfill

A storm water audit was conducted at the 28th St. Landfill by Stormwater Staff from the Department of Utilities/Engineering Services; audit personnel include, Connie Perkins, Associate Civil Engineer, and Roxanne Livingston, Assistant Civil Engineer. The audit addressed the following areas: activities performed at the corporation yard, materials used and stored inside and outside, equipment and vehicles stored inside and outside, cleaning areas and wash racks, landfill activities, and general comments.

1.3 Responsible Staff

The SWPPP requires identifying personnel to oversee the implementation of any measures to reduce pollution and to modify the SWPPP as necessary over time. The Landfill staff will be responsible for implementing and maintaining storm water BMPs.

1.4 Updating the SWPPP

AT LEAST ONCE PER PERMIT TERM

The SWPPP will be updated on a regular basis to reflect changes in activities that may adversely affect or improve storm water runoff. Any changes to the SWPPP shall include John Olesen, Senior Landfill Engineering Technician, and Stormwater Program Staff. Other Landfill Managers and Safety Office staff can also be involved with updates to the SWPPP.

2.0 SITE LOCATION, GENERAL ENVIRONS, AND ACTIVITIES

The City of Sacramento owns and operates the 28th Street Landfill, a closed Class III landfill, located at the northern end of 28th Street in downtown Sacramento. This chapter contains background information about the landfill, surroundings, and all activities and material storage observed during the site audit.

2.1 Background Information about the 28th St. Landfill

Prior to closure, the landfill was permitted to accept up to 1,200 tons of waste per day. It was estimated that actual waste acceptance was approximately 600 tons of waste per day with the facility operating 5 ½ days per week. The total capacity of the landfill, at final closure, was estimated to be 6,514,000 cubic yards. It is assumed that this applies only to the known waste disposal operations in Waste Management Units (WMU)s A and B.

The landfill was used for disposal of non-hazardous residential, commercial and industrial wastes, primarily collected by the City of Sacramento waste collection services. Most of the waste comes from residential refuse collection vehicles, yard waste collection operations, street sweeping, and other miscellaneous City activities. No commercial haulers or self-haul vehicles are allowed to dispose at the site. Since the beginning of fill operations at this site, the waste stream has been uniform in nature and composition. This has resulted in a very homogenous cross-section for wastes throughout the landfill.

Hazardous wastes and liquid wastes have never been knowingly accepted at the landfill. However, typical early (pre-1980s) disposal procedures did not routinely check incoming wastes closely for liquids and/or hazardous wastes. In addition, all municipal wastes contain some portion of household hazardous wastes, mixed in with the non-hazardous garbage, including used oils, paints, lead-acid batteries, pesticides, etc. An assessment conducted in 1985 of the types and quantities of household hazardous waste in materials accepted at the facility found that less than 0.12% of the total waste stream was categorize as household hazardous waste.

The disposal areas consist of two classified landfill units, and three older, unclassified fill areas. Descriptions of these disposal areas are as follows:

Classified Units

- A 79.5-acre area known as WMU A. This area was filled from 1971 until 1986. This cell was constructed without a base liner or leachate collection system, which were not required by regulations at the time. A final cover system was installed in phases and was completed in 1997. The cover consists of one foot of intermediate cover soil over the waste materials, overlain by two feet of concrete and asphalt rubble, overlain by one foot of low-permeability clay, overlain by a one-foot vegetative soil layer.

- A 27.5-acre area, known as WMU B. This area was filled from 1986 until 1994. This cell was constructed with a base liner and leachate collection and removal system. The base liner consists of 1.5 feet of compacted soil/bentonite mix with a maximum permeability of $1x10^{-7}$ cm/s, overlain by an additional 1.5 feet of native compacted soil with permeability ranging between $1x10^{-5}$ and $1x10^{-7}$ cm/s. A final cover system was completed at WMU B in September 1997. The final cover profile is identical to that described above for WMU A.

Unclassified Disposal Areas (filled during the period 1963 through 1971)

- Area A: Approximately 12.5-acre, unpaved area west of 28th Street was graded to a minimum 3% slope and covered with, from top to bottom, two-feet of soil cover, 6 inches of asphalt street grindings, two-feet of concrete and asphalt rubble, and 6 inches of soil cover.

- Area B: Approximately 10-acres west of 28th Street was covered with, from top to bottom, 3 inches of asphalt concrete (to provide an all weather surface and prevent infiltration of water), 6 inches of asphalt street grindings, two-feet of concrete and asphalt rubble, and one-foot of soil paved with asphalt concrete.

- Area C: Approximately 16 paved acres north of 28th Street was covered in the same manner as the 10-acre section listed above.

As part of closure, the landfill was graded to prevent ponding of water, and a drainage system was installed. Areas of differential settlement are periodically re-graded to maintain proper drainage. Landfill runoff drains by sheet flow over the side slopes and is routed through V-ditches that are lined with low permeability clay and extends to detention basins before the surface runoff leaves the site. The detention basin in the northeast corner discharges into the American River, and the southwest detention basin discharges to the combined sewer system. Locations of these detention basins are shown in Appendix B. The cover and drainage improvements act to prevent or minimize the infiltration of water into waste.

2.2 General Nature of Facility Activities

The vicinity north of 28th Street is now one of the City's corporation yards and is used for:

- Storage; both indoor and outdoor
- Vehicle parking
- Vehicle & Equipment Washing
- Preventative maintenance of City vehicles
- Facility offices

The City Department of Parks and Recreation has also developed small portions of this area as the Sutter's Landing Park which includes such activities as:

- Pedestrian/bike trails
- Paved parking
- Picnic areas
- Skate-park area.

The former compost area and uncovered area west of 28th Street are not currently being used. Many areas of the landfill are now controlled by the City Department of Parks and Recreation, which is considering the areas for incorporation into Sutter's Landing Park.

The City Department of Utilities, Solid Waste Division performs various activities to mitigate pollutants from the covered landfill from impacting the environment. These activities include:

- Pumping of groundwater from groundwater extraction wells
- Pumping and monitoring of leachate from a leachate collection and recovery system
- Monitoring of groundwater from nineteen water quality monitoring wells
- Operation and maintenance of a landfill gas collection system

2.3 Map of General Area

A map of 28th St. Landfill and the immediate surroundings is shown in Appendix B. The City landfill occupies 172 acres and is approximately 15% impervious. The general environs include: the American River to the north; Capital City Freeway to the south; Southern Pacific Railroad tracks to the east; and industrial properties to the west. The site also includes approximately 18 acres of non-filled areas including levees and a buffer area between the landfill and the American River, a storm water retention area east of the landfill, and buffer areas adjacent to the Southern Pacific Railroad tracks east of the landfill.

2.4 Facility Layout and Specific Activities

The location of buildings, storage areas, and pervious areas are shown on the Site Map in Appendix B, and the associated activities are described below. The approximate location is noted in parenthesis based on grid annotation shown along the border of the Site Map.

Building A (E-6) is used for preventative maintenance for light-fleet vehicle and equipment, storage space, offices for Landfill Operations, staff locker room and rest rooms. Maintenance activities include: oil and fluid changes, tire rotation and replacement, and light replacements to vehicles and equipment. Examples of maintained equipment include: Go4s, lawnmowers, light-fleet vehicles, and ambulances. There are four rooms within this building used for storage: Head Start stores school-type supplies; Parks and Recreation stores aquatic supplies, some fertilizers, and miscellaneous park/playground equipment; Solid Waste stores equipment for landfill operations including pesticides and pesticide application equipment.

Building B (E/F-6) has indoor storage of miscellaneous office supplies. There is also an attached, outdoor storage area used to temporarily store miscellaneous building supplies as well as some temporary parking of light, mechanized equipment.

Building C (F/G-6/7) has been converted to a partially enclosed skate park. All runoff from within this building flow to the storm drain drop inlets located off the east end of building C. The storm drain discharges into the combined system.

The following storage areas are paved with asphalt or concrete:

Storage Area 1 (E-7) is managed by Parks and Recreation and is located along the northern edge and the northwest corner of the corporation yard. The northwest corner location contains rock, sand and soil stockpiles that Parks uses for playgrounds and park landscaping. The northern edge contains empty garbage and recycling cans used at parks or for special events.

Storage Area 2 (E-6) is also managed by Parks and Recreation, and is located along the western edge of Building A, there are wood pallets and empty five-gallon chlorine buckets.

Storage Area 3 (F-7) is managed Solid Waste and is along a section of the northern edge of the corporation yard. Solid Waste temporarily stores illegally dumped items, and roll-away garbage bins. There are also some miscellaneous wood, plastic, and metal items stored along the fence near the old bailer building (now the skate park).

The following areas are on a pervious surface:

Storage Area 4 (B/D-4) is managed by Solid Waste. This is a soil storage area within Unclassified Disposal Area A, and is used for maintaining the proper elevations of the landfill.

Hazardous Material Storage Area 1 (E-6) The city landfill possesses an above ground 1,000 gallon recycled oil storage tank, and is located off the west end of building A.

Hazardous Material Storage Area 2 (Fueling Area) (F-6) The diesel and unleaded fueling station is located off the east end of building A. There is a 4000 gallon diesel tank and a 2000 gasoline tank. The fueling area is uncovered, placed on a flat concrete pad, and equipped with an emergency shutoff switch and a spill kit; furthermore, the runoff form this location enters the combined sewer system.

The following sections are parking areas at the Corporation Yard:

Parking Area 1 (G-6/7) is managed by the Department of Parks and Recreation, and is located to the east of Building C. This parking is for the parking for Sutter's Landing Park activities.

Parking Area 2 (E/F-6) is located in front of Buildings A and B, and is staff parking for both Landfill staff and Fleet Management staff.

Parking Area 3 (F-6) is east of Building A and is used for employee parking. There is also large equipment that uses the parking area behind Building A. Surface runoff from all of these parking areas drains to the combined sewer system.

The following features and activities performed at this site are described but are not identified in Appendix B.

Groundwater extraction wells The purpose of the wells is to draw trace substance which have migrated off site back on site at the south property line and to maintain a slight gradient of fresh water near the property line to prevent further migration of groundwater from the landfill. Once the migration of trace substances has been controlled groundwater pumping will be reduced.

Leachate collection and recovery system was installed over WMU B's compacted liner. The collection piping drains to a collection sump/pump station at the west end of WMU B which is equipped with two 150-gallon per minute (gpm) pumps (one serving as back-up). The leachate pumps operate using a float control system, which ensures the sump is emptied when liquids accumulate to a pre-set level. Leachate is pumped out into the City of Sacramento's combined storm water/sanitary sewer system. The leachate quality is monitored on a regular basis.

Water Quality Monitoring Wells (19) are located at the landfill. The groundwater elevation is monitored once a month at each well and three wells are sampled monthly. All nineteen wells are sampled on a quarterly basis. The objectives of the monitoring wells are to track cleanup progress and ensure that groundwater contamination is not spreading further off-site.

Landfill gas collection system includes 100 interior extraction wells—82 interior extraction wells at WMU A and 18 at WMU B—and 66 perimeter extraction wells for migration control purposes. The interior extraction wells extend into the refuse mass to depths ranging from approximately 40 to 60 feet below ground surface, and the perimeter extraction wells are installed in a soil levee/berm along the southern fill perimeter. The Interior extraction wells within WMU A are under a lease agreement with Gas Recovery Systems, Incorporated (GRS) which captures the landfill gas for use as an alternate energy source. Landfill gas extracted from the perimeter system is combined with excess gas from WMU A and WMU B (i.e. landfill gas that is not used for cogeneration) and combusted in one of two ground flares maintained by GRS and the City. The location of the gas recovery system lies within the drainage area discharging to the combined sewer system.

2.5 Description of Storm Drainage System

The drainage system for the 28th St. Landfill is shown on the Site Map in Appendix B. The storm drain system at the landfill consists of open channels, detention basins, and storm drain piping. The storm and sewer systems are separate systems, but all sewer and most drainage discharges into the combined system at the intersection of 28th Street and E Street. For the purpose of this SWPPP, all piping systems for the site will be referred to as the combined sewer/stormwater system. Surface runoff that doesn't discharge into the combined sewer/stormwater system eventually discharges into the American River through a culvert, or is absorbed and evaporated by the Retention Pond. The map in Appendix B shows the drainage sheds and is summarized below.

- All paved areas and the western portion of the pervious areas drain into the combined sewer/stormwater system.
- The south west portions of the pervious area drains to the south were it is retained in a detention pond for sedimentation before discharging into the combined sewer/stormwater system.
- The north central portion drains north to a 12 inch CMP which discharges into a vegetated buffer strip adjacent to the American River.
- The north eastern portion of the landfill drains to the east where it is collected in a combined flood control/water quality detention basin that discharges into the American River.
- The south eastern portion of the pervious area drains to a retention pond located in the furthest, south east corner of the landfill where the runoff infiltrates into the soil.

Non-stormwater discharges from various operations at this site also contribute to the discharge flows into the combined sewer/stormwater, and these flows include:

- Groundwater from production wells.
- Leachate from WMU B (when sufficient amount of runoff present for sump pump to turn on which only occurs during heavy rain events).

- Condensate from methane recovery system.

2.6 Past Significant Spills and Leaks

There have been no known spill events experienced at the Landfill while it has been closed. Typically, the only areas of concern for spills would be on impervious surfaces which can impact storm water drainage systems and local water bodies. The fleet maintenance shop and fueling areas practice good housekeeping and spill response techniques to protect spills from entering the combined system. However, there has been record of the migration of landfill gas, and elevated levels of ammonia in soil found along the American River and south of the landfill near the Capital City Freeway. As a result, a passive landfill gas collection trench east of the active site was constructed to intercept any landfill gas migrating in that direction. In addition to controlling migration of combustible gases, the system serves as a corrective action measure to help prevent migration of gas-borne contaminants, principally volatile organic compounds (VOCs) that could otherwise migrate to groundwater.

3.0 DESCRIPTION OF POTENTIAL SOURCES OF POLLUTION

The following sections describe the potential pollutants and pollutant sources to storm water discharge at the City landfill. The site was designed and is operated in a manner that minimizes potential pollutants to the environment. For example, wet land detention basins were designed to treat runoff before it is discharged into the river. There is also a buffer strip between the discharge location and the American River. As described in greater detail in Section 4 of this Plan, management practices and employee training are utilized to the greatest extent possible to ensure that potential discharge of pollutants to storm water are minimized.

The following section describes the potential pollutants present at the facility and the estimated annual quantities of these pollutants in storm water.

3.1 Pervious Portion of Landfill Discharging to American River

The stormwater runoff discharged to the American River at the two locations shown in Appendix B is currently being monitored, and is limited to surface runoff from the landfill cover and access roads. Potential pollutants would be sediment and possibly some metals and herbicides bound to the sediments.

4.0 STEPS TO REDUCE NON-STORM WATER DISCHARGES

This section of the SWPPP describes the management and operating procedures utilized at the City landfill to control potential pollutants and minimize their possible impacts to storm water. The section includes discussions of structural source controls and facility management practices.

4.1 What are Best Management Practices?

Source Control

Storm water regulations state that BMPs are to be implemented in order to reduce the contamination, or potential for contamination, of storm water to the "maximum extent practicable" (MEP). The most effective, and usually least costly, BMPs are source control measures; for example, regular sweeping around the material bins and storage areas, and closing lids on dumpsters. More expensive source controls, like constructing a permanent cover over material storage areas, are most the most effective.

Treatment Controls

Treatment BMPs, such as storm water interceptors and detention basins are less desirable than source controls for two reasons: 1) they are more cost and maintenance intensive and 2) treatment means that the storm water has already become polluted. As demonstrated by this SWPPP, some treatment BMPs are probably unavoidable because of the nature of the activities at the CWTP; however, the SWPPP attempts to optimize the use of source controls.

4.2 Treatment Controls

4.2.1 Detention Basins

Detention Basin A is a wet detention basin designed for a 100-year, 24-hour precipitation conditions was constructed to retain runoff from the north eastern corner of the landfill before discharging into the American River, and is shown in Appendix B. The design incorporated water quality concerns by retaining the runoff to allow solids to settle. The sediment accumulated in the detention basin is removed on a routine basis.

Detention Basin B, as shown in Appendix B, has been constructed for the runoff flowing to the south west corner of the landfill; furthermore, it is similar in design to the north-east detention basin. Since discharging from this detention basin to the American River is not feasible, the runoff form this detention basin is discharged into the combine system.

4.2.2 Clay Liner

Once the landfill reached maximum capacity, a two foot thick base cover (rock and dirt) was placed over the final lift of refuse followed by a one foot clay cap and a one foot of cover soil. The clay cap reduces percolation down through the refuse and into the groundwater and leachate collection system. Consequently, surface runoff from the capped areas is usually increased. The detention basins discussed above were designed to control runoff from a large portion of the landfill. By preventing percolation, pollutants associated with the buried refuse are kept from commingling with the runoff.

4.2.3 Retention Pond

The Retention Pond is located in the south east corner of the landfill just north of Capitol City Freeway and just west of the Union Pacific Railroad. Surface runoff from a portion of the pervious area within WMU B collects within this retention pond where the runoff infiltrates into the soil.

4.3 Source Control

4.3.1 Erosion Control

A two foot layer of top soil is placed over the clay liner to promote the growth of vegetation. The landfill was seeded for vegetation once the top soil is placed; moreover, the vegetation selected requires minimum irrigation and maintenance needs. By covering bare land, soil erosion will be kept to a minimum and total suspended solids discharged to the river will be reduced. Additionally, these capped sections of the landfill are monitored and maintained to promote runoff and to prevent ponding.

4.3.2 Sump at Maintenance Facility – Drains to Sewer System

A sump was constructed in the wash rack, and is designed to settle out solids and other refuse before the waste water is discharged into the sanitary sewer system.

4.3.3 Training

Training sessions in the form of field visits and/or meetings will be conducted by Stormwater staff as needed. The goal of the training sessions will be to address BMP concerns and weed abatement practices.

5.0 MONITORING AND RECORD KEEPING

City Landfill personnel maintains a surface water monitoring program that complies with the General Industrial Storm Water Permit, ORDER NO. R5-2004-0039. A written Sample Collection and Analysis Plan (sampling plan) that complies with the Permit requirements and has been developed and is included as Appendix A. This written sampling plan identifies monitoring locations, constituents to sample, quality control/quality assurance of sample and sampling protocols. The sampling results will be reviewed as needed to evaluate implementation and effectiveness of BMPs (erosion control inspections vegetated slopes and detention basin inspections). The monitoring for the Landfill will include visual observations of the facility (i.e., vegetated slopes and surface water drainage structures), and storm water sample collection for analysis. These two components of monitoring are outlined below:

5.1 Visual Observations

5.1.1 Facility Inspection

Annually, prior to the anticipated rainy season, but no later than **15 September**, the Municipal Operations staff person from the Department of Utilities Stormwater Section and/or the Landfill staff will assess the north-eastern detention basin for damage.

Any necessary erosion control measures shall be implemented by 15 November; additionally, any construction, maintenance, or repairs of storm water management measures designed to prevent erosion or flooding of the facility and to prevent surface drainage from contacting or percolating through wastes shall also be completed by **15 November**.

5.1.2 Storm Events

Landfill staff will inspect the detention basin and drainage ditches for damage within 7 days following major storm events. Necessary interim repairs will be completed within 10 days of the inspection and permanent repairs are to be completed when feasible.

5.2 Monitoring of Storm Water

Landfill personnel will conduct monitoring at the specified sites when runoff from the facility has combined to form a definable runoff stream; moreover, adequate flow volume must be available for sample collection. See the Sample Collection and Analysis Plan contained within Appendix A.

5.3 Results of Water Quality Data Collected

A review of the water quality data for the landfill was conducted by Larry Walker and Associates (LWA) in November, 2007. Sampling data was prepared by the landfill staff, and consisted of raw data along with a statistical summary of that data. LWA reported that the data are generally within the expected range. The review of this data also revealed the need for a review of sampling procedures and analytical methods. The City has been evaluating the analytical methods, and has established QA/QC methods to be implemented (see Appendix A for the proposed QA/QC measures to be implemented).

5.4 Estimate of Annual Quantities of Potential Pollutants in Storm Water Runoff

Since QA/QC analysis for the data quality was not performed, it was not possible to draw definitive conclusions on the estimation of pollutant loads contained within the Landfill's storm-water runoff. Utilizing the given data and the professional judgment of the reviewer, average annual loads were calculated and are summarized as follows:

Estimated 28th Street Landfill Runoff Annual Average Load

Constituent	Concentration Units	Average Concentration	Average Annual Load	Load Units
Ag, dissolved	µg/L	3.3	56.8	grams
Al, dissolved	µg/L	909	15,645	grams
As, dissolved	µg/L	552	9,501	grams
Ba, dissolved	µg/L	66.9	1,151	grams
Be, dissolved	µg/L	1.9	32.7	grams
Cd, dissolved	µg/L	2.5	43.0	grams
CN, dissolved	µg/L	4.3	74.0	grams
Co, dissolved	µg/L	5.8	99.8	grams
Cr VI, dissolved	µg/L	4.1	70.6	grams
Cr, dissolved	µg/L	18.3	315.0	grams
Cu, dissolved	µg/L	14.2	244.4	grams
Hg, dissolved	µg/L	0.0667	1.1	grams
Mn, dissolved	µg/L	104.2	1,793	grams
Ni, dissolved	µg/L	1,045	17,986	grams
Pb, dissolved	µg/L	87.4	1,504	grams
Sb, dissolved	µg/L	18.3	315.0	grams
Se, dissolved	µg/L	314	5,404	grams
Sn, dissolved	µg/L	38.7	666.1	grams
Tl, dissolved	µg/L	84.1	1,447	grams
V, dissolved	µg/L	9.2	158.3	grams
Zn, dissolved	µg/L	193	3,322	grams
Chloride	mg/L	10.5	181	kilograms
COD	mg/L	79.6	1,370	kilograms
Nitrate	mg/L	1.43	24.6	kilograms
TDS	mg/L	254	4,372	kilograms
TSS	mg/L	39.7	683	kilograms
TOC	mg/L	23.62	407	kilograms

5.5 Record Keeping

Landfill staff retains records of all inspection and monitoring activities as dictated by Permit requirements. In addition to surface water monitoring and visual inspections, Landfill staff collects records for additional Permit requirements not associated with this SWPPP. The surface water monitoring records are included with all other records retained. Annual and semiannual reports for all monitoring activities are generated and submitted to the Regional Water Quality Control Board.

APPENDIX A

Storm Water Sample Collection
and
Analysis Plan

City of Sacramento's 28th Street Landfill
Storm Water Sample Collection and Analysis Plan

Objectives

The objectives of this storm water monitoring program developed for the City of Sacramento's closed Landfill is to ensure that all storm water discharges are in compliance with permit requirements of WDR Order No. R5-2004-0039. Since the majority of the runoff from this facility discharges to the combined sewer system, and only a portion of the capped landfill discharges to the American River, the potential pollutant load is minimized to sediment transported from the vegetated topography and any additional pollutants that could be bound to that sediment (i.e., metals, herbicides, etc.). This monitoring program includes: sample collection procedures; sample preservation information and shipment procedures; Sample quality assurance/quality control (QA/QC) procedures; and Chain of Custody control.

Sample Collection Procedures

Sampling Sites

Storm water sample collections are performed at the landfill's northern detention basin outfall to the American River, and the 12-inch corrugated metal pipe, which drains about 20% of the landfill area to the American River. The 12-inch pipe is slightly northeast and upstream of the landfill, and the detention basin outfall is located slightly northwest and downstream of the landfill. These two sampling locations are indicative of the quality and quantity of sheet flow runoff from this portion of the Landfill and are not commingled with runoff from surrounding areas. Locations of the sample sites are identified on the in Appendix B. Samples are collected and analyzed for the monitoring parameters in accordance with the frequency specified in Table I and methods specified in Table II.

Sample Identification and Labeling

Sample bottles and identification labels are supplied by the contracted lab, Calscience. The lab labels each of the various types of sample-collection bottles with the appropriate constituents to be analyzed for, and the sampling personnel only need to fill in the date and time on the labels.

Sample Collection

Storm water samples are collected after the first storm of the rainy season that produces significant flow and one other time during the wet season. Sampling is conducted during or shortly after storm events or when water is flowing in the drains. One set of grab samples will be taken at each site during each event. It is desired that these grab samples be collected during peak flow; however, due to the difficulty in predicting the time of peak flow, grab sampling during peak flow may be problematic. Once samples are

collected, samples must immediately be placed on ice and remain in ice until transferred to analytical laboratory.

Clean Sample Handling

"Clean sampling" techniques are required in the collection and handling of water samples in a way that does not result in contamination, loss, nor change in the chemical form of the analytes of interest. In order to reduce potential contamination, sample collection personnel will adhere to the following rules while collecting stormwater samples:

- No smoking while collecting samples.
- Never sample near a running vehicle. Do not park vehicles in immediate sample collection area (even non-running vehicles).
- Avoid allowing rainwater to drip from rain gear into sample bottles.
- Do not eat or drink during sample collection.
- Do not breath, sneeze or cough in the direction of an open sample bottle.
- Wear clean gloves when handling bailer, bottles, and caps.

Sampling Chain of Custody

All sample custody and transfer procedures will be based on EPA recommended procedures for documenting sample collection and handling processes. Samplers will adhere to proper custody and documentation procedures for all sampling activities. Chain of custody forms will be used to document the relevant information for each sample bottle and the transfer of bottles to the laboratory. Fill out chain of custody forms prior to each event leaving only the date and time of sample collection blank. Date the time of sample collection will be completed prior to transporting samples to the lab.

Transport to Lab

The primary method of sample delivery is for the samplers to deliver the samples to the lab directly. The contracted lab for these surface water samples is Calscience Environmental Laboratories, Inc. located at 7440 Lincoln Way, Garden Grove, CA 92841-1427

Sample Quality Assurance/Quality Control (QA/QC) Procedures

Quality assurance is the program that assures the reliability of the data, and quality control is the daily activities conducted to meet data quality goals. The importance of a QA/QC program is to increase reliability, credibility, and defensibility of data and decisions made based on the data. QA/QC samples will be collected to evaluate the consistency of sample collection and analyses. The following quality control samples may be analyzed during one of the monitoring events.

- Matrix Spike/Duplicate
- Field Duplicate

Matrix Spike/Duplicate (MS/MSD) give an indication of matrix interference, and laboratories are required to perform these at a frequency of 10%. MS/MSD samples are collected by obtaining additional sample volume; for example, if collecting a 1L volume for the sample then additional1L is required for the MS and 1L for the MSD. The MS/MSD samples should have the same label designation as the sample itself and also marked as a MS/MSD.

Field Duplicate samples are collected by filling two bottles with the same sample and giving the field duplicate a fictitious name and collection time. The fictitious name and location shall be recorded in the field notes by the sampler.

TABLE I

SURFACE WATER MONITORING PROGRAM

Parameter	Units	Frequency
Field Parameters		
Temperature winter[1]	°C	Twice each
Electrical Conductivity winter[1]	µmhos/cm	Twice each
pH winter[1]	pH units	Twice each

1.0 INTRODUCTION

The National Pollution Discharge Elimination System (NPDES) Storm Water Permit, administered by the Central Valley Regional Water Quality Control Board (Water Board), requires the City of Sacramento to regulate urban runoff entering into the storm drainage system and local waterways. The purpose of the permit is to protect water quality by reducing the amount of pollutants in the storm water from various urban land uses and activities. There are numerous programs being implemented by the City's Stormwater Quality Improvement Program (Stormwater Program) including those that minimize storm water pollution from new developments, construction sites, commercial and industrial facilities, and municipal activities.

To address potential pollutants entering the drainage system from public facilities containing material storage, vehicle/equipment maintenance, and vehicle/equipment washing activities, the City of Sacramento will implement pollution prevention measures as described within a Facility Pollution Prevention Plan (FPPP).

1.1 Purpose of the Facility Pollution Prevention Plan (FPPP)

The FPPP provides an extensive evaluation of Sacramento River Water Treatment Plant for potential activities that may result in storm-water-pollutant runoff and offers solutions to the problems presented. The FPPP is intended to serve as a blue print for implementation of best management practices (BMPs) to control pollutants within the site's runoff to the maximum extent practicable. The individual(s) responsible for the implementation of the FPPP will be identified, and Stormwater Program staff will inspect the facility annually to ensure proper BMP implementation.

1.2 Storm Water Audit at Sacramento River Water Treatment Plant

A storm water audit was conducted at Sacramento River Water Treatment Plant by Stormwater Program staff from the Department of Utilities/Engineering Services on October 22, 2008. The audit addressed the following areas: activities performed at the site, materials used and stored inside and outside, equipment and vehicles stored inside and outside, spill clean-up equipment, drainage system, and general comments.

1.3 Updating the FPPP

Initially, FPPPs will be updated annually during the first three years of implementation in order to address challenges and transitions. After the first three year period, updating will occur on an as needed basis (at least once per permit term) to reflect changes in activities that may adversely affect or improve storm water runoff. Any changes to the FPPP shall include the individual responsible for FPPP implementation (see cover), and Stormwater Program staff. The individual responsible for FPPP implementation shall review and request modifications to this FPPP from Stormwater Program staff as necessary to maintain conformance with actual practices and site layout.

2.0 DESCRIPTION OF SITE AND POTENTIAL SOURCES OF POLLUTION

Chapter Two contains: general information collected during the site audit, a description of NPDES regulated activities, and identification of potential pollution sources.

2.1 General Nature of Facility Activities

This facility is a conventional water treatment plant. Pre-treatment includes pre-chlorination, grit removal, coagulation flocculation and sedimentation. The water is then filtered and disinfected a second time. Post-treatment includes pH adjustment and fluoridation. A list of specific activities includes, but is not limited to:

- Pumping raw surface water from the Sacramento River for the purpose of municipal drinking water treatment
- Removing solids from the surface water
- Handling (drying and disposing of) water treatment plant residual solids
- Cleaning filtration system backwash water or filter wash water
- Storage of chemicals used to treat water
- Treatment of the water with chemicals
- Storage of treated water
- Maintenance of equipment
- Metal fabrication and machining activities for the purpose of maintenance of water treatment plant equipment and facilities
- Laboratory testing of water and related chemicals
- Administration

2.2 Facility Layout and Specific Activities

A map delineating the location of structures and their immediate surroundings, including drainage, landscaping, and storage areas are shown in Appendix A. Sacramento River Water Treatment Plant covers approximately 40 acres, and is approximately 70% impervious. Over 40% of the site collects and generally contains rain water in the normal water treatment process. Almost 60% is normally piped directly to the Sacramento or American River.

The following describes structures found at this location:

5 MG Filtered Water Storage (Reservoir 1) (G/7) This is the original underground structure where the treated water is stored and released into the City water distribution system. Diluted spent lime is transferred from the reservoir to the Sludge Lagoons. This structure also includes high lift pump stations.

9.5 MG Filtered Water Storage (Reservoir 2) (J/8) This is an above-ground structure where the treated water is stored and released into the City water distribution system. Diluted spent lime is

transferred from the reservoir to the Sludge Lagoons during triennial maintenance operations of the reservoir.

C/T Tank & Clearwell (Reservoir 3) (K/8) This is a 2.8 million gallon, split structure. The CT Basin is an underground portion of the structure where water is sent following filtration prior to going into Reservoirs 1 and 2. Chlorine is added to the water in the C/T Tank. Reservoir 3, the Clearwell, is the above-ground portion which also stores water prior to being released into the distribution system. Lime is added to the water in the Clearwell to adjust pH levels.

Alum and Caustic Soda Storage (G-H/2) See Hazardous Material Storage Area 6.

Boat Storage (H/6) Boats used for inspection and maintenance of the intake structure and collection of water monitoring samples are stored in this building.

Chemical Building (K-L/6-7) See Hazardous Material Storage Area 1.

Chemical Trench (Not shown on the site map) This is an entirely underground trench that is used to carry all chemical lines, electrical conduits, compressed air, utility water, sample lines, and the drain pipes for the drain water off of the Caustic Soda Storage and the Alum Storage containment areas. The trench begins in the Operations Building, heads west to the New 1 – 8 Filters, into the Chemical Building, then works its' way south and west towards the Grit Basin area, and ends in the basement of the Coagulation Building. There are two sump areas, each with two pumps, for pumping spills that occur within the trench. The sump pumps discharges into the Plant Drain System which then flows into the FWW Lagoons. The Chemical Trench sumps are equipped with alarms and controlled by a Supervisory Control and Data Acquisition (SCADA) system for quick response to detected leaks and any pump failures within the trench.

Coagulation Building (G/2) See Hazardous Material Storage Area 5.

Electrical Building (F/7) See Outdoor Storage Area 3.

Filters (H-L/6) This includes the Old 1-8, Old 9-16, and New 1-8 filters and associated buildings. These structures filter the water from the Sedimentation Basins prior to chemical adjustments. Particles removed by the filters are transferred to the FWW Lagoons.

Filter Wash Water (FWW) Lagoons 1 & 2 (N/4-5) These structures were constructed of reinforced concrete (which has inherently low permeability), and constructed below grade with concrete walls extending above ground to prevent the contents from overflowing. The lagoons were designed to operate at a freeboard level designated by regulations (currently two feet), and levels are , at a minimum, visually monitored daily by staff gauges. Decant pumps automatically divert dewatered supernatant to the Flash Mix. Dilute alum residuals generated from the filter backwashing process is discharged to the FWW Lagoons for settling, decanting and solar drying. After the supernatant is decanted and the residuals begin to dry, it is mixed in the lagoon with a front-end loader to facilitate

drying. Best Management Practices (BMPs) are implemented to prevent track-out or migration of residual solids after mixing or loading/hauling operations (See BMP Summary Table in Chapter 3).

Flocculation/Sedimentation Basins (F-K/4) This includes the Basin 1, 2, and 3 Flocculation/Sedimentation Basins. The Flocculation/Sedimentation Basins are reinforced concrete structures where raw water conveyed from the Grit Basin is further treated. Sedimentation Basin 1 is covered, and the remaining basins are uncovered. Adding liquid aluminum sulfate (alum) and slow mixing to the treatment process allows for flocculation and sedimentation of suspended solids; this process creates an environment where suspended particles will stick together and sink. The flocculation and sedimentation process will remove only those particles that can settle within the detention time of the sedimentation basins; therefore, the water will then flow by gravity through the filters to further reduce the amount of suspended solids. Residuals are withdrawn from the bottom of basins 2 and 3, and sent to the Sludge Lagoons for drying and disposal. To remove residuals from Basin 1, the basin is emptied and manually cleaned; the residuals and waste water from basin one is sent to the sludge lagoons.

General Storage Building (F/6) This building stores pipes, fittings, valves, meters, and other miscellaneous plant parts and equipment. This building is directly connected to the High Service Pump Station.

Generator (F/6) This is the location of the backup generator that supplies electricity to the plant in the event of a power outage.

Grit Basin/Flash Mix Flow Split Structure (H-J/2) The Grit Basin is an above ground concrete structure. Water from the river is sent into this basin which is used to settle grit, sand and sediments. Approximately four to twenty cubic yards of solids are generated in the Grit Basin per week. At a point just prior to the Grit Basin, a pre-chlorination chlorine solution is introduced at a dose of 1.0 to 2.5 ppm (parts per million). After passing through the Grit Basin, water moves to the flash mixer, and into the plant. Residual waste from the Grit Basin is loaded into trucks and transported to the Sludge Lagoons. The truck loading area is covered and slopes to a drain that discharges to the sewer system.

Alum, chlorine, polymer, and caustic soda is added to the water in the Flash Mix portion of this structure, All chemical dosing procedures are based on the amount of incoming water being pumped. Water recycled from other parts of the process is also sent to the Flash Mix structure.

Head House (G/6) Contains a .25 MG storage of potable water for backwashing Old Filters 1-16. This structure also contains office spaces for City staff, a break room, locker facilities, and miscellaneous storage of process pumps, piping and equipment utilized for support of the water treatment process and for operation of Old Filters 1-16.

High Service Pump Station (HSPS) (F/6) This building houses the primary pumps that deliver

treated water from the reservoirs into the distribution system. The east and west sides of this building include general storage, lockers and a restroom for staff use. A flammable liquid cabinet is located inside the building near the northeast corner that provides containment for paint and primer stored therein.

Intake Structure (A/2) This structure stands in the Sacramento River and pumps water from the river directing it to the grit basin to begin the treatment process. All associated drainage associated with the intake structure goes directly to the Sacramento River, and runoff from the associated plaza flows into the storm drain system which discharges into the American River.

Machine Shop (F/7) Activities in this building include metal fabrication and welding. The purpose is to build the parts used throughout the facility. Welding and metal-fabrication equipment and associated supplies are utilized within this building. See Hazardous Material Storage 5 for hazardous materials stored in this building. Hosing of the pavement outside the machine shop was observed during the inspection, which runs-off along the surface to Bercut Drive and the public drainage system. Such discharges flow into a porous roadside ditch adjacent to Bercut Drive for several hundred feet before discharging into a drain inlet. The vegetated, roadside ditch provides filtration and infiltration for flows generated from rinsing activities performed in front of the Machine Shop, and such flows may infiltrate prior to entering underground drain pipes.

Oil Room (H-6) See Hazardous Material Storage Area 2.

Operations Building (L/6) This building is the primary location where plant operations are monitored and controlled. Primary uses include offices, control rooms, testing labs, conference/training rooms, and general administration. There is miscellaneous storage of plant parts in the basement of the Operations Building.

Sludge Lagoons 1, 2, 3 & 4 (K-M/4-5 & L-M/7-8) Sludge Lagoons 1, 2, and 3 are constructed and monitored similarly to the FWW Lagoons. Alum residuals from the Flocculation/Sedimentation Basins, and spent lime from Reservoirs 1, 2, and 3, are pumped to the Sludge Lagoons. The lagoons are dewatered using a top weir gate dewatering system, and decant is pumped and recycled into the Flash Mixer. Plumbing for discharge to the sanitary sewer system and to the drainage system exits, but the valve to the storm drainage system has been chained and locked to prevent accidental release to the storm drain system. Similar to the FWW Lagoons, residual solids are solar dried and mixed within the lagoons. Management of solids will be consistent with that mentioned in the above FWW Lagoons description.

Sludge Lagoon 4 is an earthen basin that was constructed above grade with 8-foot berms and 2.5 feet of freeboard. Similar to lagoons 1, 2, and 3, a top-weir-gate system is utilized for dewatering decant that is pumped and recycled in the Flash Mixer or discharged into the sanitary sewer. This basin is used for temporary storage of residuals that been removed from Sludge Lagoons 1, 2, and 3. The sludge may or may not be free-draining when transferred, and completes the drying process here

before being removed to an off-site landfill.

Sludge and FWW Lagoon Pump Station (M/5) This is the location that houses the Sludge Return (SLR) pumps, Sludge Decant (SLD) pumps, Wash Water Return (WWR) pumps, Wash Water Decant (WWD) pumps, Plant Drain pumps, and Storm Drain pumps. The purpose of these pumps are to take decant from sludge and recycle into the FWW, to take decant and recycle from FWW to the Flash Mix or sewer, to take flows from the plant drain system to the FWW Lagoons, and to take flows in the storm drain system to the Stormwater Swale.

South Barn Storage (K/2-3) This building houses miscellaneous equipment and supplies including portable pumps, hoses, compressors, paint (in flammable material cabinet on pallet), weed eaters, de-chlorination tablets, and chlorination granules.

Well Storage (F/6) This building houses well pumps and appurtenances.

The following section describes Hazardous Material Storage:

Hazardous Materials Storage Area 1 (L/6-7) is the Chemical Building. Inside this concrete building are storage tanks and associate pumping and piping equipment for chlorine gas, anionc and nonionic polymers, fluoride, caustic soda, and lime.. A Water Production Emergency Management Plan has been prepared for response to minor and major incidents. This building is divided into separate sections to accommodate each of the chemicals. Each section is equipped with particular precautionary measure for containment and alarms in case of a leak Potential leaks and spills primarily occur within the containment area from storage tanks and associated pumping and piping of the individual chemical sections. Generally, the individual containment areas consist of a concrete pad tapered to flow to either a drain inlet that discharges to the Plant Drain System or a sump which hold the spill until properly disposed. The Plant Drain system has pumps which discharge flows from the Plant Drain System back into the FWW Lagoons where the WWR pumps decant water from the FWW Lagoons and pumps flow back to the Flash Mix structure.

<u>Chlorine:</u>

One-ton cylinders of gaseous chlorine are stored and used at this WTP; twelve cylinders are on-line or standby and stored on scales, and another twelve one-ton cylinders are stored on trunions. The danger of leaks is the most likely during change out of cylinders, a faulty or compromised gasket, or improperly placed connections These types of leaks are rare and normally considered minor; however, a chlorine gas leak from these types of incidents can have a severe effect on local air quality, but may not necessarily impact water quality. The chlorine-storage area is equipped with an emergency chlorine scrubber and gas sensors. A red light attached to the outside of the building will illuminate and an audible horn will sound when a chlorine-gas leak is detected. The sensors will sound the alarm when a concentration of 1 ppm is detected, and the scrubber will be activated when a concentration of 2 ppm is detected. Also stored in the Chemical Building are 150-pound-chlorine cylinders (max of 14) used for numerous ground-water wells city wide. A Risk Management Plan

for Chlorine Handling has been implemented, and staff is trained annually.

Polymer:
There is a 750-gallon mixing tank, a 750-gallon ageing tank, 3 metering pumps and associated piping within a concrete secondary-containment structure. The mixing and aging tanks have floats that will sound an alarm if the fluid level rises above normal operating levels. The polymer tanks are equipped with an overflow pipe which will accommodate some overflow. In the event overflow exceeds the capacity of the overflow pipe, wet polymer will flow into the containment area. There are drains within the containment area which takes flow into the Plant Drain System.

Fluoride:
There are two fluoride 6000 gal. tanks, 2 metering pumps and associated piping within a concrete secondary-containment structure. The tanks are equipped with an electronic level and alarming system. The system is comprised of a light on the exterior of the building that illuminates and an alarm is sent to SCADA when the tank level exceeds normal operating levels. In the event of a leak, a float in the sump of the secondary-containment area sends an alarm to SCADA. There are no drains within the fluoride-containment area. Small leaks will be mechanically pumped by the operators and disposed of properly. In the event that there is a large spill, a trucking operation contracted with the City will respond to collect and transport the spill for proper disposal.

Caustic Soda:
The chlorine scrubber system has a 2 thousand gallon caustic soda storage reservoir. The entire system is within a concrete secondary-containment structure. The chlorine scrubber neutralizes chlorine gas leaks generated from the chlorine storage area, chlorinator room and the chlorinator repair shop. This scrubber section is not equipped with a leak detection system, but the containment area was designed for the total volume of the storage reservoir. Small leaks will be mechanically pumped by the operators and disposed of properly. In the event that there is a large spill, a trucking operation contracted with the City will respond to collect and transport the spill for proper disposal. The caustic soda section of the building is visually inspected once per shift.

Lime:
Another section of the Chemical Building consists of two 100,000 pound storage containers for lime. The lime is stored as powder, but then is slaked into a liquid form. There is no secondary-containment structure in this section of the building. Powder or liquid spills are hosed into the floor drains which discharges into the Plant Drain System. Large dry spills are swept up and disposed of properly. The lime section of the building is visually inspected once per shift.

Hazardous Materials Storage Area 2 (H-6) is known as the Oil Room. This room will contain several 55-gallon portable drums of: industrial oil, hydraulic oil, Engine oil, and gear compound. All new and used oil products for the site will be stored inside this building atop secondary containment pallets. Mobile drums are transported to and from other areas of the site as needed using mobile carts equipped with their own secondary containment. A spill kit is present.

Hazardous Materials Storage Area 3 (F/7) This storage area is located within the Machine shop. Hazardous materials stored in this building include gear lube, oxygen, compressed air, gold gas, propane, carbon dioxide, acetylene, and argon. The gasses are used for welding and metal fabrication.

Hazardous Materials Storage Area 4 (F/6) This is an Aboveground Storage Tank (AST) that was designed with double-walled containment. This tank stores fuel for a large diesel generator used primarily for emergency situations (power outages) so that the plant can continue to distribute water. The tank has a 6000-gallon capacity and usually contains less than 4000 gallons. There is a dispensing hose connected to the tank and can be used for daily refueling; however, it is not expected to be used for daily refueling. Occasionally, for rotating of fuel, the tank will be used for fueling of equipment.

Hazardous Materials Storage Area 5 (G/2) This is the Coagulation Building. Inside this concrete building are storage tanks and associate pumping and piping equipment for cationic polymer, alum, and Caustic Soda. Similar to the Chemical Building, this building is also separated into sections to accommodate each of the chemicals. Each section is equipped with particular precautionary measures for containment and alarms in case of a leak. Potential for leaks and spills primarily occurs within the associated pump and piping of the individual chemical sections. The individual containment areas consist of a concrete pad tapered to flow to a floor drain. Spill discharge to an attached outdoor containment area that can be pumped to the sewer. This outside containment area can hold several thousand gallons of spilled material and rain that falls directly into the containment area. Spilled liquid within the outside containment area is tested for pH prior to pumping into the sewer system. If the pH indicates that the spill is not appropriate for the sewer system, a contracted trucking operation will collect and properly dispose of the spill.

Aluminum sulfate:
Commonly referred to as alum. The alum-storage area consists of a 500-gallon day tank, three pumps and associated piping within a containment area. In the event of a spill wet alum will flow into the containment area. There are drains within the containment area which takes flow into the outside containment area.

Cationic Polymer:
There are several 250 gal. carboys, pumps, two 750 gal. mixing tanks, two 750 gal. aging tanks and associated piping within the containment area. The mixing and aging tanks have floats that will sound an alarm if the fluid level rises above normal operating levels. The polymer tanks are equipped with an overflow pipe which will accommodate some overflow. In the event overflow exceeds the capacity of the overflow pipe, wet polymer will flow into the containment area. There are drains within the containment area which takes flow into the outside containment area.

Caustic Soda:
Sodium hydroxide, commonly know as caustic soda, is used to adjust pH of the water. Adjustment of pH is necessary for the protection of the pipes within the plant and distribution system. <<further description>> Caustic soda inside the Coagulation Building is stored within 500-gallon day tanks<<containment area/precautionary measure description>>

Hazardous Materials Storage Area 6 (G-H/2) includes 5 large Alum and 2 Caustic Soda Tanks. Accidental spills and rainfall landing directly on the surrounding concrete pad is collected by drains that flow to the Coagulation Building's outside containment area. Spills from this location into the outside containment area handled the same as described in above.

The following outdoor storage areas are paved with asphalt or concrete:

Storage Area 1 (K/3-5) Is an outdoor storage area used for temporary storage of various pipes, fittings, wood and other general items. Items are stored all along the easterly edge of the Flocculation/Sedimentation Basins, and plant managers would like to not use this area for storage.

Storage Area 2 (F/6, J/6, L/6) Three locations where general refuse dumpsters are stored. The G/6 location is temporary, and will be removed shortly.

Storage Area 3 (F/7) Is used for storage of electrical equipment. The upper level houses the exposed plant transformer. The lower level provides covered storage for general electrical equipment. Scrap metal bins are stored uncovered immediately east of this storage structure.

Storage Area 5 (F/6) This storage area is covered. It is used to store small portable generators and a Bobcat immediately east of the well pump storage building.

The following section describes the parking lots at this facility:

Parking Area 1 (M-N/5-7) This parking area is used for employee and city vehicles as well as visitor parking. There are additional parking areas for City vehicles throughout the facility.

The following section describes the pervious areas of the facility:

Landscaped Areas:

Landscaped areas throughout the site include various grasses, trees, cobbles and shrubbery. Vegetation management is performed by contracted services operating under the maintenance provisions specified in the Landscape Maintenance Services General Specifications and Provisions. This document was updated in September 2008, and included Integrated Pest Management (IPM)

provisions for pest and vegetative management. The IPM program is intended to assure the quality and beauty of the facilities landscaping utilizing best horticultural/biological practices and least-toxic methods to facilitate a healthy landscape.

2.3 Description of Storm Drainage System

The site's storm drainage run-off flows to three different systems: The Sacramento/American Rivers, the plant drain system, and the public sanitary sewer system.

Sacramento & American River Runoff

The portion of the site that normally flows to the rivers totals over 22 acres,

- Approximately 3 acres along the westerly side of the site flows directly to Bercut drive where it runs northerly along the surface of a vegetated strip until it eventually combines with the freeway drainage system and gets pumped into Sump 111 which discharges into the American River just upstream of the confluence with the Sacramento River,
- About one acre, including a storm-water swale at the southwest corner, of the site is collected by drains connected to the up-stream end of a 30" pipe that discharges directly to the Sacramento River,
- About one-quarter acre located near the easterly entrance flows directly to the public drainage system in North "B" Street that eventually discharges to the American River,
- Half an acre or so along the north and northeast sides appears to flow through adjacent lots, and then to the aforementioned public drainage system,
- Over 7 acres in the central northern portion of the site flows to "The Moat", which surrounds the 9.5 MG water storage tank. The Moat is pumped into the site's primary storm drainage system, which includes another 10 +/- acres along the central eastern and southern portions of the site,
- That 17 acres flows to a sump at the northeast corner of Sludge Lagoon No. 3 where it is pumped to the aforementioned storm-water swale near the southwest corner of the site, which drains to the Sacramento River. In the event of a spill that contaminates the drainage in this 17 acre shed, the pumped flow can be redirected to the FWW Lagoons along with the plant drain system.

Plant Drain System Runoff

About 17 acres of storm runoff is collected by the various processes in the plant. Some of this collected rain water is treated in the normal treatment process. The remainder flows to the plant drain system. The plant drain system also collects flows from the chemical trench and inside buildings with interior drains that don't otherwise flow directly to the sewer.

The plant drain system normally pumps to the FWW Lagoons, but flows from the plant drainage system may be re-directed to the site's storm drainage system in an emergency. In such an event plant drain flows would discharge to the noted pond at the southwest corner of the site and then to the Sacramento River via the noted 30" pipe.

Public Sewer System Runoff

A couple small outdoor areas such as the Alum/Caustic Soda Storage and the Coagulation Building's outdoor containment areas discharge to the sanitary sewer system. The total area of storm water discharging to the public sewer includes about 0.1 acres.

2.4 Summary Table of Common Materials Used and Stored On-Site

Material	Purpose	Location	Likelihood of contact with storm water		
			High	Med	Low
Chlorine Gas	Treatment of the water (water disinfection)	Hazardous Material Storage Area 1 (Chemical Building), supernatant water and treated water			X
Compressed Air (nitrogen and oxygen)	Machine shop activities	Throughout the Plant			X
Acetylene, Argon, Carbon Dioxide, Oxygen, & Gold Gas (Argon & $C0_2$ mixture)	Welding and cutting	Hazardous Material Storage Area 3 (Machine Shop)			X
Propane Gas	Forklift operation	Hazardous Materials Storage Area 3 (Machine Shop)			X
Hydrofluorosilic Acid and	Treatment of the water (water additive)	Hazardous Materials Storage Area 1 (Chemical Building)		X	
Lime	Treatment of the water (pH adjustment)	Hazardous Materials Storage Area 1 (Chemical Building) and lagoons		X	
Polymer	Treatment of the water (Aides in flocculation)	Hazardous Material Storage Area 1 (Chemical Building), Coagulation Building, and the lagoons		X	
Aluminum Sulphate (Alum)	Treatment of the water (aides in flocculation and filtration)	Hazardous Materials Storage Area 6 and Coagulation Building		X	
Sodium Hydroxide Solution (Caustic Soda)	Treatment of the water (chlorine adjustment)	Hazardous Material Storage Area 6, Coagulation Building, and the Chemical Building		X	
Polyaluminum Hydroxychloride (Multi component polymer blend)	Treatment of the water (aides in flocculation and coagulation)	Hazardous Materials Storage Area 5 (Coagulation Building)		X	
Various Oil Products (engine oil, industrial oil, hydraulic oil, etc.)	Equipment operation	Hazardous Material Storage Area 2 (Oil Room)		X	
Waste oil	Equipment operation	Hazardous Material Storage Area 2 (Oil Room)		X	
Gear Lube	Equipment operation	Hazardous Material Storage Area 2 (Machine Shop)		X	

Diesel	Fuel for the generator and loader	Hazardous Material Storage Area 4		X	
Steel	WTP equipment repair & maintenance	Machine Shop and Outdoor Storage Areas 3, 4, & 6	X		
Misc. Metals	WTP equipment repair & maintenance	Outdoor Storage Areas 1 and 4	X		
PVC glue	Miscellaneous WTP maintenance	Machine Shop			X
Wood	Miscellaneous WTP maintenance	Outdoor Storage Areas 1 and 6	X		

2.5 Preliminary List of Pollutants that may be found in Storm Water Runoff

Pollutant	Common Sources/Uses
pH	Elevated pH may result from masonry/concrete wastes, caustic soda, or lime releasing into drainage collection system. Low pH can result from a chlorine, fluoride or liquid aluminum sulfate spill releasing into the drainage collection system, or improper handling of battery acids.
Nutrients (compounds that contain nitrogen, phosphorous and potassium)	Detergents from vehicle & equipment washing and steam cleaning. Dumping of janitorial wastewater. Over irrigation of fertilized landscape.
Oil, Grease, Petroleum & Hydrocarbons	Vehicle & equipment parking, fueling, washing, steam cleaning, and repair. Outdoor loading & unloading of materials, and waste handling & disposal.
Bacteria	Waste handling & disposal (Dumpsters)
Metals (problematic metals dissolved in water include chromium, copper, lead, and Zinc. Other metals specific to water treatment processes include lead, manganese, molybdenum, silver, and thallium)	Vehicle & equipment parking, outdoor loading & unloading of materials, and waste handling & disposal. Mostly associated with motor vehicles, including direct atmospheric deposition from exhaust emissions, dripping or improperly transferred oil and lubricants, tire wear, brake lining wear and degradation of pavement. Other metals associated with the water treatment plant are derived from accidental discharges during solids handling /transport, mechanical failure of decant system (equipment, piping, and pumps), or overflow of the lagoons.
Sediment (Total Suspended Solids/Total Dissolved Solids)	Vehicle & equipment washing and steam cleaning, exposed landscaped areas, accidental discharge from drying lagoons, and accumulated debris within parking areas
Oxygen-Demanding Substances (Organic compounds)	Vehicle & equipment washing and steam cleaning, and waste handling & disposal. Generally occurs from improperly discarded wash water, litter and garbage, and leaking garbage bins.
Synthetic Organics (Adhesives, cleaners, sealants, solvents, etc.)	Vehicle & equipment fueling, washing, steam cleaning, and repairs. Outdoor loading & unloading of materials, and waste handling & disposal.
Gross Pollutants (trash, debris, floatables)	Outdoor loading & unloading of materials, and waste handling & disposal.

3.0 STEPS TO REDUCE NON-STORM WATER DISCHARGES

This section takes a look at the existing measures being implemented, either by design or coincidence that are preventing or reducing storm water pollution. Based on the existing measures and the priority pollutant sources identified in the above section, new Best Management Practices (BMPs) are identified and an implementation schedule is established.

3.1 Implementation Schedule

All non-structural BMPs (those that do not involve any major construction) should be implemented as soon as possible after approving this plan. Any structural BMPs should be evaluated and budgeted for in the following fiscal years.

3.2 BMP Summary Table

The following table provides a summary of the existing and new BMPs and indicates the schedule of implementation.

BMP	PRIORITY	CURRENT BMPS	NEW BMPS	IMPLEMENTATION SCHEDULE		
				FY 09	FY 10	FY 11
Good Housekeeping Practices (storage, use, and cleanup):						
Areas are kept clean and organized. Remove accumulated debris in a timely fashion, and sweep indoor work areas regularly.	2	X				
Avoid hosing down outside work areas discharging to the drainage system.	2	X				
Keep parking areas free from trash and debris.	2	X				
Dispose of used fluids, wash water, sweepings, and other debris properly.	1	X				
Proper Storage of Hazardous Materials/ Wastes - Covered and /or Secondary Containment	1	X				
Dispose of all waste materials according to applicable laws and regulations.	2	X				
Keep janitorial and maintenance oriented chemicals in their original containers, and keep them well labeled.	2	X				
Discard janitorial oriented wash water to the sanitary sewer.	1	X				
Check dumpsters on a regular basis for leaks, and keep lids closed during the rain season (October 1 – May 1).	2		X	X		
Indoor and Outdoor storage containers are checked for damage or leaks on a monthly basis.	2	X				
Ensure storm drain stenciling/markings are installed and legible.	3		X		X	
Clean targeted storm drain inlets & leads once prior to the rain season.	2		X			

BMP	PRIORITY	CURRENT BMPS	NEW BMPS	IMPLEMENTATION SCHEDULE		
				FY 09	FY 10	FY 11
Facility and Equipment						
Switch to low-toxic chemicals for facility maintenance when possible.	3	X				
Minimize use of solvents. Clean parts without using solvents whenever possible.	2	X				
Prohibit the discharge of wastes, including supernatant water and residuals/sludge, to surface waters or drainage collection system.	1	X				
Operate all systems and equipment to optimize the quality of the waste discharged to the lagoons.	2	X				
All treatment, storage, and disposal facilities are designed, constructed, operated, and maintained to prevent inundation or washout due to floods with a 100-year return frequency.	3	X				
All lagoons maintain regulated freeboard levels to prevent overflow, and visual monitoring of staff gauges is performed to ensure freeboard levels are maintained.	1	X				
The concrete liner of each pond and lagoon is inspected at least once per year for cracking, spalling or other damage.	2	X				
Equipment is properly maintained to reduce the potential for negative environmental impacts.	2	X				
Whenever visible tracking occurs on the roadway between sludge lagoon areas, a street sweeper is brought in to clean debris to prevent it from entering the storm drain	2	X				
The front loader is hosed down in lagoons to minimize tracking.	3	X				
Security Measures						
Facility is fenced and equipped with a security gate and security cameras.	2	X				
Maintenance and storage areas are locked when not in use	3	X				
Master flow and drain valve locks so that they remain in the closed position during non-operating or non-standby status.	3	X				
Starter control on the pump associated with the diesel AST is locked and in the "off" position and accessible only to authorized personnel when fuel pump is in a non-operating or non-standby status.	3	X				
Only authorized personnel can gain access to fuel dispenser	3	X				

BMP	PRIORITY	CURRENT BMPS	NEW BMPS	IMPLEMENTATION SCHEDULE		
				FY 09	FY 10	FY 11
Spill Prevention						
Hazardous Materials Plan for inventoried materials in place.	3	X				
Spill Prevention Control and Countermeasure Plan in place, and addresses petroleum products handled and stored on site.	3	X				
Waste Discharge Requirements (WDR) for residuals management in place, and associated waste management plans developed or under development.	3	X				
Spill control material (e.g., sorbent pads, flexible mats for sealing drains, and brooms) are available, and staff knows how to properly contain and cleanup a spill.	1		X	X		
Implement best management practices associated with the Spill Prevention Control and Countermeasure Plan (hydrocarbons):						
Oil delivery contractors and waste oil removal contractors have their delivery procedures and spill response plans on file with the City, and attached to the SPCC.	3		X		X	
Tank-filling operations are normally conducted during daylight hours, and the driver remains with the truck during the entire loading/unloading operation.	1	X				
Aboveground Storage Tank (AST) is double-walled and meets secondary containment requirements.	1	X				
AST are visually inspected weekly.	2	X				
Periodically test the AST for integrity with not more than two years between tests or when material repairs are completed.	3	X				
Aboveground valves and gauges (fuel dispenser) are visually observed monthly.	3	X				
Oil storage units are kept in good condition, and inspected regularly.	2	X				
Any indication of deterioration or leakage that may cause a spill or accumulation of fuel or oil inside the containment areas will be reported to appropriate personnel.	1	X				
Implement best management practices as described in the Water Production Emergency Management Plan to prevent hazardous-materials releases resulting from internal operations at the plant:						
Fluoride system is designed with secondary.	3	X				
Chlorine-gas storage area is equipped with a leak detector, a leak indicator light outside the building, and an audible alarm sounds a horn. Small, localized release of chlorine gas may also be detected by physical observations including seeing, smelling, or hearing. A Risk Management Plan for Handling Chlorine gas is also implemented.	3	X				
Loading operator and plant staff are present during connection and pumping operations of lime into tanks via internal plumbing into top of tanks inside the Chemical Building. Truck-loading location and connection located outside of building.	2	X				
Section of Chemical Building where lime is stored contains a dust collection system for powdered lime.	3	X				

BMP	PRIORITY	CURRENT BMPS	NEW BMPS	IMPLEMENTATION SCHEDULE		
				FY 09	FY 10	FY 11
Implement best management practices associated with the Accidental Discharge Plan required by the WDR:						
BMPs (gravel bags, sand bags, straw bails, wattles, and inlet covers) are readily available and staff is trained on proper installation, inspection and maintenance of these BMPs.	1		X	X		
Residual lagoons will be inspected weekly during the rain season for any type of potential accidental spills from the lagoon areas that may impact the drainage collection system, and the lagoons and temporary storage locations will be inspected monthly during the dry months.	1		X		X	
Lagoon areas will be inspected daily for tracking or accidental spills during hauling operations.	2		X	X		
Residual hauling routes are to be swept after hauling has been completed.	1		X	X		
Most loading activities occur inside the lagoons.	1	X				
Mud-laden loader is washed inside a lagoon to minimize tracking on roadways.	1	X				
Solids loaded into truck beds are packed flat by the loader so that solids are at least 3-4 inches below the highest point of the truck-bed sidewall to prevent material from spilling out. If available, solids with higher moisture content are packed on the top layer of drier solids to prevent dust from occurring during transport.	2	X				
Select drain inlets will be vactored annually (each November).	2		X		X	
To ensure decant-water is always adequately controlled within the plant's containment areas, there is on-site Plant Operations staff monitoring the decant process 24 hrs/day. Plant staff utilizes SCADA controls and operating system which will alarm when a problem is detected.	1	X				
Plant staff visually inspects (using video inspection if necessary) decant equipment periodically.	2	X				
24-hour, on-call maintenance staff are available to fix equipment, piping, and pumps when necessary.	3	X				
The backwash process of the filters only proceeds when the FWW Lagoons are at a level of at most two feet (current regulated level) under the highest overflow elevation.	2	X				
Annual maintenance reviews and inspections of the lagoon decant equipment, piping, and pumps established under the City's Computerized Maintenance Management System (CMMS)	3	X				

BMP	PRIORITY	CURRENT BMPS	NEW BMPS	IMPLEMENTATION SCHEDULE		
				FY 09	FY 10	FY 11
Spill Control and Cleanup						
Implement containment and cleanup practices associated with the Spill Prevention Control and Countermeasure Plan (Hydrocarbons):						
Upon discovery of a spill staff should immediately take appropriate steps to stop the discharge.	1	X				
Apply absorbent material to surface of the liquid, reapplying until all liquid is absorbed.	1	X				
Use cones, tape or signs as needed to isolate spill from human and vehicular contact.	1	X				
Cleanup absorbent material with stiff brooms and shovels and place in approved waste containers.	2	X				
For large spills, call for assistance from the cleanup company which has a formal agreement with the facility as necessary.	2	X				
After completion of cleanup, contaminated absorbents and personal protective equipment will be containerized for transport and disposal in accordance with local, state and federal regulations.	2	X				
Implement containment and cleanup practices as described in the Water Production Emergency Management Plan for hazardous materials releases resulting from internal operations at the plant:						
Emergency response to unexpected release of chlorine gas is only performed by certified, trained employees.	3	X				
Small spills of fluoride can either be allowed to evaporate or can be rinsed down with water.	3	X				
Large spills within the secondary containment structure of the fluoride tanks will need be pumped out and disposed of properly.	2	X				
Small spills occurring within Feed Building will be pumped out into plastic drums and disposed of appropriately.	2	X				
Implement containment and cleanup practices associated with the Accidental Discharge Plan required by the WDR:						
BMPs in place (weighted wattles, staked wattles, inlet covers and gravel bags) to prevent solids from entering the drainage system.	1	X				
Small residual spills are handled with shovels, brooms and/or a sweeper truck.	1	X				
Large residual spills are handled with the loader, shovels, brooms, and a sweeper truck. The spilled residuals are then returned into a truck, lagoon, or storage pile.	1	X				
In the event of a decant-water discharge into the drainage system, Plant Operations will stop the decant process and call maintenance staff to facilitate immediate repairs.	1	X				
After a decant-water-discharge event, any solids remaining in the gutters after filtering through gravel bags and wattles will be removed using a combination of a loader, shovels, brooms, and sweeper trucks (whichever is most appropriate for the clean-up efforts). The solids material will be returned to the functioning lagoon.	1	X				

BMP	PRIORITY	CURRENT BMPS	NEW BMPS	IMPLEMENTATION SCHEDULE		
				FY 09	FY 10	FY 11
Training						
Continually expand knowledge of Best Management Practices	2	X				
Training on FPPP	3	X				
Stormwater Program Training	3	X				
Annual SPCC and precautionary measure training	3	X

Section 1: SPCC Plan Review – 40 CFR 112

In accordance with 40 CFR 112.5(b), a review and evaluation of this Spill Prevention Control and Countermeasure Plan (SPCC Plan) is conducted at least once every five years. A registered professional engineer, in accordance with Section 112.3(d), shall certify all substantive technical amendments to the plan. Evidence of these reviews and applicable certifications is recorded in the table below. (Note: Administrative modifications are made, as appropriate, to ensure the accuracy of plan information in response to modifications in the assignment of personnel or contact information [e.g., telephone numbers]).

Date	Reason for Review	SPCC Coordinator's Name and Initials	Professional Engineer's Name and Initials

Contact Telephone Number: 916 808-3105

Facility Description: The Sacramento River Water Treatment Plant is a drinking water treatment facility. This treatment plant, located northwest of the City's downtown area and near the confluence of the American and Sacramento Rivers, is a conventional treatment process, denoted by chemical coagulation, flocculation, sedimentation, filtration, and disinfection. The original plant was placed in operation in 1924.

a. **Facility Operations**
The treatment plant is a 24-hour operation, which takes raw water from the Sacramento River and processes it in to drinking water. The plant is capable of delivering up to 160 million gallons per day.

b. **Facility Storage**
The treatment plant has one above ground storage tank containing diesel oil. This tank is fuel storage for the large diesel generator. It is located just north of the pump house. The tank has a 6000-gallon capacity and usually contains less than 4000 gallons. It is double walled and provides 100 percent containment. There is a dispensing hose connected to the tank and can be use to refuel

equipment; however, it is not expected to be used for daily refueling. Occasionally, for rotation of fuel, the tank will be used for fueling of equipment. The generator is for emergencies and only for use during power outages. Water must continue to be supplied to the citizens of the City of Sacramento even in emergency situations.

c. **Drainage Pathway and Distance to Navigable Waters**
The Sacramento Water Treatment Plant is located one half mile east of the Sacramento River and one mile south of the American River. The Sacramento Water Treatment Plant is separated from the Sacramento River by the Interstate 5 freeway.

The only option for a spill to get to the rivers is via the storm drains. There are five storm drainage inlets located near the diesel tank. The three to the north gravity feed to Bercut Drive. The two to the south are further away from the tank (about 40 yards) and are less likely to be involved if there was a spill. Therefore, in the unlikely event of a catastrophic release, all storm drains will be protected, either by sandbags, plastic or some other way.

List of Aboveground Storage Tanks:

Tank I.D.	Volume (gallons)	Contents
Generator fuel tank	6000	Diesel
55 gal drums	550	oil
Total Volume:	6550	

Section 4: Spill History – 40 CFR 112.4(a)

The Sacramento River Plant has experienced no known spill event, as defined in 40 CFR 112.1(b).

Section 5: Potential Discharges – 40 CFR 112.7(b)

Source	Type of Failure	Volume	Rate	Direction of Flow	Containment
Diesel storage	Rupture of primary containment; leakage.	6000	Rate of flow will vary.	Flow will move to the west and north on Bercut.	Oil absorbent booms will be placed around the spill area and pumped into drums. Mats will be used to seal storm drains.
Primary truck loading operations.	Leakage at hose connection.	Capacity of recovery truck: 6,500 gallons (max)	Rate will vary depending on delivery system and pumping capacity.	Flow will move to the west and north on Bercut.	Curbs, gutters and street grade provide containment when drain inlet mats are in place.
Oil storage room.	Barrels rupture or tip over.	A maximum of 10 drums of 55 gallons each.	About 1 gallon per minute.	All directions. Floor is level.	Drums are stored atop portable secondary containment vessels.

Section 6: Containment and Diversionary Structures -40 CFR 112.7(c) and (d)

Secondary containment and diversionary structures at Sacramento River Water Treatment Plant are described in Table 1. ASTs are double-walled tanks and meet the secondary containment requirement. In addition to visual inspections, the facility will periodically test the ASTs for integrity (40 CFR 112.8(c)(6)). Test shall occur not more than two years between tests or when material repairs are completed.

A spill of 110 gallons or less at this facility would generally be contained within the paved facility boundary and would require implementation of cleanup measures. Spill control material (e.g., sorbent pads, flexible mats for sealing drains, and brooms) are available at the facility in a spill response kit.

A demonstration of impracticality in accordance with 40CFR 112.7(d) is not applicable.

7.1 Facility Drainage – 40 CFR 112.8(b)(1)

7.1.1 Facility Drainage Systems from Diked Areas

Storm water flows by sheet flow, into various Stormwater drainage inlets located in and around areas of the facility. Potential pollutants (oil, unleaded gasoline and diesel) are accumulated and would flow, by sheet flow, into drainage inlets to the City's storm water collection system if unchecked.

7.1.2 Final Discharge of Drainage

Stormwater sheet flows enter various Stormwater drainage inlets located in and around areas of the facility. Potential pollutants (oil, unleaded gasoline and diesel) are accumulated and would flow, by sheet flow, into drainage inlets to the City's combined sanitary sewer collection system.

7.1.3 Facility Drainage Systems and Equipment

Washwater generated during equipment cleaning activities flows to a sump equipped with an oil/water separator. Washwater enters the oil/water separator prior to discharging to the City's combined sewer collection system. Stormwater gravity flows to Bercut Drive, where it enters the City's storm water collection system.

7.2 Bulk Storage Tanks – 40 CFR 112.8(c)(2)

7.2.1 Material and Construction

Fuel and oil storage ASTs located onsite are described in Table 1. This table includes the storage content, size, materials or construction, and fail-safe engineering features of each tank onsite.

All tanks reportedly are constructed according to American Petroleum Institute, American Society for Testing and Materials, or Underwriters Laboratory specifications. Tank materials and construction reportedly are compatible with the stored products at the temperature and pressure at which storage occurs.

7.2.2 Secondary Containment

Secondary containment for each tank is described in Table 1. All of the ASTs are double-walled tanks constructed in accordance with nationally accepted industry standards.

7.2.3 Drainage of Stormwater

Stormwater runoff discharges off the roof of the buildings and from direct surface deposition onsite. Stormwater sheet flows to the drop inlets located throughout the facility. Runoff from the ground also discharges to drop inlets discharging to the City's storm collection system.

7.2.4 Underground Storage Tanks

Underground storage tanks are not located at the facility.

7.2.5 Partially Buried Storage Tanks

Partially buried storage tanks are not located at the facility.

7.2.6 Aboveground Storage Tanks

Visual inspections of the tanks will be performed weekly during normal activities at the facility. Aboveground valves and gauges will be visually observed monthly. Any indication of deterioration or leakage that may cause a spill or accumulation of fuel or oil inside the containment areas will be reported to appropriate personnel. A documented inspection of the tanks and secondary containment systems will be completed monthly. Tank inspections and any corrective action work orders will be tracked using AST inspection forms. Completed inspection forms will be kept in the facility's office files and retained for at least three years.

In addition to visual inspection, the facility will periodically test the ASTs for integrity. Testing shall occur with not more than two years between tests or when material repairs are completed.

7.2.7 Heating Coils

Tanks equipped with heating coils are not located at the facility.

7.2.8 Fail-Safe Engineering

The generator fuel storage tank is equipped with gauges to determine the fill levels and to detect leaks between the inner and outer walls. Float gages are located at the top of the tank to indicate fluid levels.

7.2.9 Visible Oil Leaks

If visible oil leaks from tank seams, gaskets, rivets and bolts are observed that may cause significant accumulation of oil in containment areas, any oil will be promptly cleaned and leaks will be investigated and corrected.

7.2.10 Mobile or Portable Oil Storage Tanks

Fifty-five gallon drums containing oil, lubricants or anti-freeze are stored at the facility in the oil storage building (Figure 1). If a leak were to occur, the spill would be contained by the secondary containment pallets first, and the buildings secondary containment curbs second. Spilled product would be removed by using a portable pump and/or absorbent materials.

7.3 Facility Tank Car and Tank Truck Loading/Unloading – 40 CFR 112.7(h)

Tank truck loading/unloading procedures meet the minimum requirements and regulations of the U.S. Department of Transportation. The driver remains with the truck during the entire loading/unloading operation.

The primary tank truck loading/unloading area is located at the tank. The area is paved and drains to drop inlets. These inlets will be sealed with rubber mats during transfer operations.

Signs will be posted reminding drivers not to overfill or "top off" their tanks and to prevent vehicles from departing before complete disconnection of flexible or fixed transfer lines. Additionally, drains and outlets on tank trucks are checked for leakage before loading/unloading or departure.

7.4 Inspections and Records – 40 CFR 112.7(e)

Inspections are conducted on a monthly schedule in accordance with written procedures developed for this facility. Completed forms are to be maintained by Maintenance Personnel for at least three years.

7.5 Security – 40 112.7(g)

The facility is equipped with the following security measures:

- The entire facility is fully fenced and the entrance gates are locked when not in use.
- Tank-filling operations are normally conducted during daylight hours and maintenance staff periodically inspects oil storage and fueling areas.
- Master flow and drain valves have locks so that they remain in the closed position during non-operating or non-standby status.
- Starter controls on each pump are locked and in the "off" position and accessible only to authorized personnel when pump is in a non-operating or non-standby status.

7.6 Personnel, Training and Spill Prevention Procedures – 40 CFR 112.7(f)

The facility has determined that Operations and Maintenance will be accountable for oil spill prevention. The designated person is Steve Willey.

The SPCC Plan will be included in the Operations/Maintenance Training Program. A training sign-off sheet for attendance of this training will be included at the completion of every training session. Records of training will be kept in the division's "Training Tracker Software".

Once a year, training will include the SPCC Plan and will provide training in known spill events or failures, malfunctioning components, and recently developed precautionary measures.

Section 8: Spill Contingency Plan

8.1 Authorities and Responsibilities

The following discussion defines the authorities and responsibilities of personnel as they pertain specifically to spills and associated emergencies.

8.1.1 Primary Emergency Coordinator

The Primary Emergency Coordinator is Steve Willey. The Primary Emergency Coordinator is responsible for coordinating emergency response measures at the facility. The Primary Emergency Coordinator is familiar with the facility's contingency plan, operations and activities at the facility, the location of records for the facility and the facility layout. This person has the authority to commit resources needed to carry out the contingency plan and the responsibility to respond to the emergencies as described in this SPCC Plan.

8.1.2 Alternate Emergency Coordinators

In the event of an emergency in which the Primary Emergency Coordinator is not available, Mary Krizanosky, assumes the role of Alternate Emergency Coordinator. The Alternate Emergency Coordinator will coordinate with the Primary Emergency Coordinator or act in their behalf. The Alternate Emergency Coordinator is familiar with the facility's contingency plan, operations and activities at the facility, the location of records for the facility and the facility layout. This individual also has the authority to commit the resources needed to carry out the contingency plan and the responsibility to respond to the emergency as described in the SPCC Plan.

8.1.3 Employee at the Scene

Employees are instructed to call the Primary Emergency Coordinator, or the Alternate Emergency Coordinator, when a spill is observed and take preventive measures to control the spread of spilled material.

8.2 Response Procedures for Spills

8.2.1 Notification

Upon discovery of an oil spill, the Emergency Coordinator is to be notified. The Emergency Coordinator will contact the Emergency Response Contractor, and the appropriate government agencies, when it is a non-contained reportable spill of 42 gallons or more. Spills are not reportable if they occur within an impervious surface or are otherwise contained. The Emergency Coordinator will prepare written reports required by the agencies.

8.2.2 Evaluation and Initiation of Action

The Emergency Coordinator must gather as much information as possible to assess the magnitude and severity of the spill in order to initiate appropriate cleanup actions and provide required information to the response contractor. The Emergency Coordinator should perform the following:

1. Upon discovery of a spill, attempt to keep the situation from worsening by:

   a. Contacting a second person to assist.

   b. Immediately stopping the source of the discharge. This may involve:

      - Shutting off equipment or pumps;
      - Plugging a hole in operating equipment or a tank; or
      - Closing a valve.

   c. The following containment techniques should only be performed by personnel who are appropriately trained:

      - Prevent discharge into storm drains by sealing off with drain covers, absorbent socks and /or granular absorbent material.
      - Apply absorbent to the surface of the liquid and reapply until liquid is absorbed.

2. Attend to any injured personnel. Administer First Aid if you have been trained and certified in First Aid. Otherwise, call an ambulance or paramedic.

3. Assess the possible immediate hazard to human health and take appropriate actions:

   a. Isolate spill from human and vehicular contact by using cones, tape and posting signs. Instruct personnel not involved with the cleanup operation to leave the area.

   b. If the emergency threatens the health or safety of personnel, instruct employees to evacuate and contact the supervisor/manager and safety coordinator immediately.

   c. If the emergency threatens human health outside the facility boundaries, or the spilled quantity is greater than 42 gallons, Emergency Coordinator must notify local authorities. The State Office of Emergency Services and the local emergency assistance organizations (listed in Sections 8.2 and 8.3) are to be notified.

4. Brief emergency response personnel on the nature and quantity of spilled material.

5. Implement prompt cleanup and disposal actions to remove the spilled substance, as well as contaminated soil or other materials.

8.2.3 Cleanup and Disposal

1. Cleanup

   Cleanup efforts must be undertaken to restore the affected area to its pre-spill condition.

   For small spills, which may be encountered during fuel transfer or normal maintenance operations, absorbent socks will be used to contain the spill, and granular absorbent will be applied and reapplied until there is enough to absorb the liquid. This material will be picked up with stiff brooms and shovels and be placed in approved waste containers for disposal in accordance with applicable regulations.

   For larger spills, the Emergency Coordinator will call for the assistance of the cleanup company that has a formal agreement with the facility. The cleanup company will be directed to remove free product from catch basins or containment areas utilizing pumps, booms, and absorbent pads as appropriate.

2. Disposal

   After completion of cleanup, contaminated absorbents and personal protective equipment will be containerized for transportation and disposal in accordance with local, state and federal regulations.

8.2.4 Documentation

Reportable spills grater than 42 gallons will be documented. The following facts about the spill will be recorded:

1. Location of the incident;
2. Time, date and duration (hours) of spill;
3. Source(s) of spill;
4. Description and quantity of product spilled;
5. Cause(s) of spill, including a failure analysis of system in which the failure occurred;
6. Resources affected or threatened by the spill; and
7. Description and status of cleanup efforts.

8.3 Cleanup/Disposal Resources

The following local authorities will be called for assistance, if needed, during and emergency:

Local Agency	Telephone No.
Ambulance/Paramedics	911
Fire Department	911 or (916) 433-1300
Police	911 or (916) 264-5471
Hospital – **UCD Medical Center**	911 or (916) 734-2011

City of Sacramento
Operational Policy for
Integrated Pest and Vegetation Management

BACKGROUND

The Central Valley Regional Water Quality Control Board recently approved a Pesticide Plan to be implemented by the City of Sacramento (City) as required by the municipal stormwater National Pollutant Discharge Elimination System (NPDES) Permit No. CAS082597. The Pesticide Plan is a comprehensive plan with a goal to reduce the discharge of pesticides from municipal stormwater systems to urban creeks within Sacramento County to the maximum extent practicable. It was decided that the best way to minimize the water quality risks associated with pesticides was to promote Integrated Pest Management (IPM), and to ensure that the pesticides' benefits to society outweigh their potential risks to human and environmental health. The control of pests in urban environments is shifting away from routine applications of chemicals to the utilization of a balanced approach consisting of physical/mechanical, cultural, biological, and chemical controls. Moreover, these controls focus primarily on an environmentally compatible, economically feasible approach to manage pest populations under acceptable levels. All pesticide management activities performed by City staff and City contracted services are to be in compliance with the NPDES Permit requirements, the Pesticide Plan and the City's internal pesticide use policies

The City owns and maintains various types of municipal land use areas and facilities each requiring varying levels of maintenance. Departments within the City provide landscape and vegetation management services for: approximately 2000 acres of park spaces, including all trees within the parks, park strips, and right-of-ways; vegetation management along 65 miles of drainage channels, 25 miles of levees, and approximately 233 acres of detention basin areas, including several miles of roadside ditches and alleys; and community spaces including 699 acres of golf courses, 44 acres at the Historic City Cemetery, 16.5 acres within the Zoo and Fairytale Town, and several acres of landscaped areas around community buildings. In addition to vegetation management, the City also oversees structural pest management at approximately 120 public facilities. All City Departments involved with pest management are organized into Divisions and Sections each having responsibilities for specific management areas.

POLICY STATEMENT

The purpose of this Operational Policy (hereafter referred to as policy) is to direct all operations within the City that manage pests or vegetation on City lands, including waterways, buffer zones, rights-of-way, developed landscapes, lawns and turf, natural open spaces, weed management areas, detention basins, easements, and structures. The policy is intended to provide a common basis for pest and vegetation management by the City that will address public health, safety, economic, legal and/or aesthetic requirements. The policy applies to internal City operations plus contracted services, but not to the residents or businesses of the City.

The City and all of its departments and functions, including contracted services, shall make pest management decisions consistent with the principles of IPM. The overall goal of the City's IPM Program is to implement pest-control measures that emphasize the reduction of pesticide usage and its associated risks at City owned and maintained property.

IPM PROGRAM

IPM program implementation is the function of various departments within the City. The individual departments, divisions, and sections within the City that control pests or manage vegetation shall develop and implement a written integrated pest management program consistent with this policy and tailored to the needs of each division/section's within each department. The IPM program may contain, but is not limited to:

1. General approaches to be used to implement the IPM policy.
2. Identify staff member(s) responsible for program implementation.
3. Planning, design and maintenance standards consistent with the IPM approach for facilities, structures, landscapes, rights-of-way, and bodies of water.
4. Pest tolerances (injury and action levels).
5. Typical pest management strategies for common sites or pests.
6. Weed abatement control plans.
7. Specific pesticide limitations.
8. Acquaint City workers and City contracted services with the IPM approach and new best management practices (BMPs) as they become known.
9. Monitoring, record-keeping and effectiveness evaluation strategies.

Where feasible, the division/section shall consider practices that include the following guidelines:

1. Establish an IPM Implementation Plan for each pest.
2. Monitoring (inspection procedures to monitor pest population levels).
3. Treatment and threshold levels for each site based on how much biological, aesthetic, or economic damage each site can tolerate.
4. Determine corrective actions when the established action threshold is reached.
5. Determine the most effective treatment time based on pest biology/physiology and other variables such as weather, seasonal changes in wildlife use, and local conditions.
6. Identify and evaluate conditions that encourage pest problems.
7. Design building remodels and construction specifications to reduce or eliminate pest habitats.
8. Modify management practices such as control measures when applicable.
9. Monitor treatment to evaluate effectiveness.
10. Establish and maintain an accurate record-keeping system to catalog monitoring information and to document and evaluate effectiveness of pest management procedures.

11. Evaluate the effectiveness of the IPM Program and make adjustments as needed.
12. Conduct an on-going education program for staff and contracted employees.
13. Use low risk, low concentration type pesticides when possible.
14. Use preventative applications when known pest pressures are recognized to avoid high rate corrective applications.

These guidelines are a companion to the IPM policy and describe in greater detail what constitutes an IPM approach. As new research and implementation experience evolves, these guidelines will be revised. The purpose of these guidelines is to offer consistent and constructive advice to the City's departments as the IPM Implementation Plans are being developed. Each plan shall contain general implementation steps as well as specific maintenance standards and IPM strategies.

IPM MANAGEMENT

The City has established a Pesticide Advisory Committee (PAC) that is responsible for the development of the IPM implementation program and monitoring. The PAC includes representatives from each department/division responsible for pest or vegetation management. IPM experts will be consulted to develop, review, refine, or implement IPM Program elements.

The IPM program promotes learning and adapting based on experience. This process is known as adaptive management. Periodic review and/ or extreme situations may result in the need for modifications and additions to this policy and/or the City's IPM program over time.

The PAC will meet periodically to evaluate progress and experiences in implementing the City's IPM policy. The PAC requirements shall include, but are not limited to:

1. Meeting no less than two times per year.
2. Annual evaluation of pest management practices of all departments with regards to the pesticide plan and policy and NPDES Permit changes.
3. Establishing pest management decisions based on the best science and data available.
4. Ensuring that any decisions and positions taken are understood by affected departments.
5. Clearly communicating any decisions, guidelines and actions in a manner that facilitates informed review by all affected departments.
6. Working together to address transition challenges.
7. Assisting departments in developing strategies, funding, and resources to make the IPM program successful.
8. Exploring creative, common-sense approaches for achieving transitions to least-toxic pest control.
9. Suggesting revisions to the City's IPM program.

B. BID INSTRUCTIONS AND REQUIREMENTS

No Bid Is In Legal Form Unless the Following Instructions Are Fully Complied With

1. **Additional Copies.** VENDORS ARE REQUIRED TO SUBMIT AN ORIGINAL BID AND _1_ ADDITIONAL COPY OF THIS BID, INCLUDING ALL REQUIRED ATTACHMENTS SUCH AS BROCHURES AND CATALOGS, TO THE CITY CLERK ON THE DATE AND AT THE TIME AND LOCATION SPECIFIED ON THE COVER SHEET. FAILURE TO DO SO MAY CAUSE YOUR BID TO BE REJECTED.

2. **Bid Forms. Bid must be submitted on these printed forms and sealed in an appropriate envelope or package.**

   a. To obtain an electronic version of this bid go to Procurement's website at www.pwsacramento.com/bids.

   b. Bids will be opened, in public, in the City Clerk's Hearing Room, 915 "I" Street, Second Floor, Sacramento, CA, at or after 2:00 P.M., October 17, 2007 .

   (Note: Bids must be submitted prior to 2:00 P.M. on the above date)

   c. All bids shall be clearly and distinctly written without erasure or modification, and properly signed by an authorized party, who shall indicate the capacity in which the signature is executed.

3. **Alternate Bids.** Alternate bids are invalid unless invited and covered by the specifications.

4. **Bid Security.** Bid Security is: [ ] Required [X] Not Required

   If required, bid security approved by the City must accompany the bid, in the amount of ___ % of the total amount of the bid. Bid security can be in the form of a cashier's check, certified check, or a bid bond from a surety company authorized to do business in the State of California. Bid securities will be returned to all except the three lowest Bidders within ten days after the opening of bids. The bid security of the two unsuccessful Contractors will be returned after the successful Contractor has executed the contract. Bid security of the successful Contractor will be returned when the contract is signed and all other contract award requirements have been met.

5. **Interest in More Than One Bid.** No bidder shall be interested in more than one bid (submit more than one bid for this solicitation) as provided by City Code Section 3.56.130(D).

6. **Rejection of Bids.** The right to reject any and all bids is reserved by the City, in its absolute discretion.

7. **Right to Waive.** The City reserves the right to waive any informalities or minor irregularities, as determined in its sole discretion, in connection with bids received.

8. **City Code.** All provisions of Chapter 3.56 of the City Code are applicable to any bid submitted or contract awarded.

9. **Equipment.** If equipment is bid, it shall be the newest and latest model in current production. Used, re-manufactured, shopworn, demonstrator, prototype or discontinued models are not acceptable unless otherwise stipulated by the City.

10. **Faithful Performance Bond.** A faithful performance bond is: [ ] Required [X] Not Required

    If required, the successful bidder must submit a performance bond in a form approved by the City Attorney, in the amount of _____.

11. **Payment Discounts.** Payment discounts offered for payment in less than twenty (20) days will not be considered as a basis of award. Payment discounts offered for payment in twenty (20) or more days will be subtracted from the total bid price for the purposes of bid evaluation. Any payment discount offered by the successful bidder will be accepted by the City of Sacramento, whether or not it was considered as a basis of award.

12. **Mandatory Pre-Bid Conference.** If a mandatory Pre-Bid Conference is indicated on the Invitation for Bid, all bidders are required to attend the conference. **Failure to attend this conference will result in rejection of your bid.** If a mandatory Pre-Bid Conference is indicated on the Invitation for Bid, bid packages will be made available only through the time and date of the conference. Subsequent addenda, if applicable, will be furnished only to those bidders who attended the Mandatory Pre-Bid Conference.

13. **Bid Inquiries.** Questions regarding this bid should be referred to:

General Questions:	Technical Questions:
Procurement Services Division	Facilities Management Division
Attention: Marc Robles	Attention: Gary Holm
Email: mrobles@cityofsacramento.org	Email: gholm@cityofsacramento.org
(916) 808-6240	(916) 808-6321

These inquiries must be submitted at least 10 days prior to the bid opening date. Any interpretations by the City will be made in the form of a written amendment. The receipt of such an amendment must be acknowledged in accordance with the directions on the amendment. Oral explanations or instructions given before the award of the contract will not be binding.

14. **Bid Evaluation.** In determining the amount bid by each bidder, the City shall disregard mathematical errors in addition, subtraction, multiplication and division that appear obvious on the face of the Bid. When such a mathematical error appears on the face of the Bid, the City shall have the right to correct such error and to compute the total amount bid by the bidder on the basis of the corrected figure or figures.

When an item price is required to be set forth in the Bid, and the total for the item set forth separately does not agree with a figure which is derived by multiplying the item price times the City's estimate of the quantity to be provided or performed for said item, the item price shall prevail over the sum set forth as the total for the item unless, in the sole discretion of the City, such a procedure would be inconsistent with the intent of the bid process. The total paid for each such item of work shall be based upon the item price and not the total price.

Should the Bid contain only a total price for the item and the item price is omitted, the City shall determine the item price by dividing the total price for the item by City's estimate of the estimated quantities to be provided or performed.

If the Bid contains neither the item price nor the total price for the item, then it shall be deemed incomplete and the Bid shall be disregarded.

15. **Determination of Lowest Responsible Bidder.** Sacramento City Code '3.56.020 provides that the lowest responsible bidder shall be determined as follows:

a. In determining whether a bidder is responsible, consideration shall be given to: (i) the quality and performance of the supplies to be provided by the bidder; (ii) the ability, capacity and skill of the bidder to perform the contract or effectuate the transaction; (iii) the ability of the bidder to perform the contract or effectuate the transaction within the time specified, without delay; (iv) the character, integrity, reputation, judgment, experience and efficiency of the bidder; (v) the quality of the bidder's performance on previous purchases by, or contracts with, the City; (vi) the ability of the bidder to provide future maintenance, repair parts and services for the supplies provided.

b. Based on the information provided in the bids, the City Council or the City Manager, as the case may be, shall identify those bids that are subject at the time of bid opening to the City's local sales or use tax under the provisions of Part 1.5 of Division 2 of the California Revenue and Taxation Code and Chapter 3.24 of the City Code. The lowest responsible bidder shall be determined after the amount of local sales or use tax that would be received by the City is deducted from such bids. This deduction shall be in addition to the application of any bid price preferences authorized by subsection c, below.

c. The City Council may by resolution, from time to time, adopt programs or procedures for providing bid price preferences, including but not limited to, preferences to promote the participation and utilization of small business enterprises, energy conservation and sustainability in the City's contracting for supplies and

nonprofessional services. The lowest responsible bidder shall be the responsible bidder whose bid price is the lowest after all bid prices are calculated to include any such preferences. The calculation of such preferences shall be in addition to any deduction of sales or use tax required by subsection b, above.

16. **Pre-Award Conference.** The apparent lowest responsible bidder may be required to attend a pre-award conference at a mutually acceptable time at which requirements of the Contract will be reviewed. At that time, samples of forms, reports etc., will be submitted by the Contractor for final approval.

17. **Award by Item or Group.** The City reserves the right to make separate awards for any item or category/group of items to the lowest responsible bidders for such items or category/groups of items.

18. **Multiple Awards.** The City reserves the right to make multiple awards in order to provide for back-up, to insure continuity of supply if meeting the City's **requirements** within an acceptable time period exceeds the capacity or capability of the primary contractor(s).

19. **Contract Award.** Within thirty (30) days after the bid opening a contract will be awarded by the City to the lowest responsible bidder, subject to the right of the City to reject all bids or waive informalities or minor irregularities, as it may deem proper. The time for awarding a contract may be extended in the sole discretion of the City, if required to evaluate bids or for such other purposes as the City may determine, unless the Bidder objects to such extension in writing with his/her bid.

SUBJECT TO PARAGRAPH 7 ABOVE, THE CITY CANNOT ACCEPT A BID FAILING TO COMPLY WITH ANY OF THE ABOVE REQUIREMENTS.

C. BID SIGNATURE PAGE

BID NO. B081181018

FOR SERVICES/SUPPLIES: Integrated Pest Management Services

To the City of Sacramento:

The undersigned bidder (hereafter referred to as the "bidder" or the "Contractor") submits the attached bid, and certifies as follows: that the only persons or parties interested in this bid as principals are those named herein as bidder; that this bid is made without collusion with any other person, firm, or corporation; that in submitting this bid the bidder has examined all of the Contract Documents identified below; that the bidder proposes and agrees that if this bid is accepted, the bidder will execute and fully perform the contract for which bids are called; that the bidder shall perform all the work and/or furnish all the materials specified in the Contract Documents, in the manner and time therein prescribed, and according to the requirements as therein set forth; and that the bidder shall take in full payment therefore, the prices set forth in the attached Pricing Schedule.

CONTRACT DOCUMENTS

Performance of and payment for the contract for which bids are called shall be subject to all terms and conditions of the Invitation for Bid, the Bid Instructions and Requirements, the Bid, the Pricing Schedule(s), the Items Requiring Bidder Response, the Required Submittals, the General Conditions, and any Addenda, Amendments, Special Provisions, Specifications, Plans, or other requirements applicable to performance of the work and/or furnishing the materials specified herein. Such documents referred to herein as the "Contract Documents", are fully incorporated herein by this reference and are collectively referred to as the "Contract". By submitting this Bid, the Contractor agrees to fully perform each and every provision of the Contract, provided that City awards the Contract to the Contractor, and provided further that City shall have no obligation hereunder unless and until such award is made. Contractor shall not make any changes to this form without City's written approval, and any changes made without such approval shall be void.

E. EQUAL BENEFITS ORDINANCE (EBO) REQUIREMENTS

REQUIREMENTS OF THE NON-DISCRIMINATION IN EMPLOYEE BENEFITS CODE

INTRODUCTION

The Sacramento Non-Discrimination In Employee Benefits Code (the "Ordinance"), codified as Sacramento City Code Chapter 3.54, prohibits City contractors from discriminating in the provision of employee benefits between employees with spouses and employees with domestic partners, and between the spouses and domestic partners of employees.

APPLICATION

The provisions of the Ordinance apply to any contract or agreement (as defined below), between a Contractor and the City of Sacramento, in an amount exceeding $25,000.00. The Ordinance applies to that portion of a contractor's operations that occur: (i) within the City of Sacramento; (ii) on real property outside the City of Sacramento if the property is owned by the City or if the City has a right to occupy the property; or (iii) at any location where a significant amount of work related to a City contract is being performed.

The Ordinance does not apply: to subcontractors or subcontracts of any Contractor or contractors; to transactions entered into pursuant to cooperative purchasing agreements approved by the Sacramento City Council; to legal contracts of other governmental jurisdictions or public agencies without separate competitive bidding by the City; where the requirements of the ordinance will violate or are inconsistent with the terms or conditions of a grant, subvention or agreement with a public agency or the instructions of an authorized representative of any such agency with respect to any such grant, subvention or agreement; to permits for excavation or street construction; or to agreements for the use of City right-of-way where a contracting utility has the power of eminent domain.

DEFINITIONS

As set forth in the Ordinance, the following definitions apply:

"Contract" means an agreement for public works or improvements to be performed, or for goods or services to be purchased or grants to be provided, at the expense of the City or to be paid out of moneys deposited in the treasury or out of the trust money under the control or collected by the City. "Contract" also means a written agreement for the exclusive use ("exclusive use" means the right to use or occupy real property to the exclusion of others, other than the right reserved by the fee owner) or occupancy of real property for a term exceeding 29 days in any calendar year, whether by singular or cumulative instrument, (i) for the operation or use by others of real property owned or controlled by the City for the operation of a business, social, or other establishment or organization, including leases, concessions, franchises and easements, or (ii) for the City's use or occupancy of real property owned by others, including leases, concessions, franchises and easements.

"Contract" shall not include: a revocable at-will use or encroachment permit for the use of or encroachment on City property regardless of the ultimate duration of such permit; excavation, street construction or street use permits; agreements for the use of City right-of-way where a contracting utility has the power of eminent domain; or agreements governing the use of City property that constitute a public forum for activities that are primarily for the purpose of espousing or advocating causes or ideas and that are generally protected by the First Amendment to the United States Constitution or that are primarily recreational in nature.

"Contractor" means any person or persons, firm partnership or corporation, company, or combination thereof, that enters into a Contract with the City. "Contractor" does not include a public entity.

"Domestic Partner" means any person who has a currently registered domestic partnership with a governmental entity pursuant to state or local law authorizing the registration.

"Employee Benefits" means bereavement leave; disability, life, and other types of insurance; family medical leave; health benefits; membership or membership discounts; moving expenses; pension and retirement benefits; vacation; travel benefits; and any other benefit given to employees. "Employee benefits" shall not include benefits to the extent that the application of the requirements of this chapter to such benefits may be preempted by federal or state.

CONTRACTOR'S OBLIGATION TO PROVIDE THE CITY WITH DOCUMENTATION AND INFORMATION

Contractor shall provide the City with documentation and information verifying its compliance with the requirements of the Ordinance within ten (10) days of receipt of a request from the City. Contractors shall keep accurate payroll records, showing, for each City Contract, the employee's name, address, Social Security number, work classification, straight time pay rate, overtime pay rate, overtime hours worked, status and exemptions, and benefits for each day and pay period that the employee works on the City Contract. Each request for payroll records shall be accompanied by an affidavit to be completed and returned by the Contractor, as stated, attesting that the information contained in the payroll records is true and correct, and that the Contractor has complied with the requirements of the Ordinance. A violation of the Ordinance or noncompliance with the requirements of the Ordinance shall constitute a breach of contract.

EMPLOYER COMPLIANCE CERTIFICATE AND NOTICE REQUIREMENTS

(a) All contractors seeking a Contract subject to the Ordinance shall submit a completed Declaration of Compliance Form, signed by an authorized representative, with each proposal, bid or application. The Declaration of Compliance shall be made a part of the executed contract, and will be made available for public inspection and copying during regular business hours.

(b) The Contractor shall give each existing employee working directing on a City contract and (at the time of hire), each new employee, a copy of the notification provided as Attachment "A."

(c) Contractor shall post, in a place visible to all employees, a copy of the notice provided as Attachment "B."

ATTACHMENT A

YOUR RIGHTS UNDER THE CITY OF SACRAMENTO'S NON-DISCRIMINATION IN EMPLOYEE BENEFITS CODE

On ..... (date), your employer (the "Employer") entered into a contract with the City of Sacramento (the "City") for ..... (contract details), and as a condition of that contract, agreed to abide by the requirements of the City's Non-Discrimination In Employee Benefits Code (Sacramento City Code Section 3.54).

The Ordinance does not require the Employer to provide employee benefits. The Ordinance does require that if certain employee benefits are provided by the Employer, that those benefits be provided without discrimination between employees with spouses and employees with domestic partners, and without discrimination between the spouse or domestic partner of employee's.

The Ordinance covers any employee working on the specific contract referenced above, but only for the period of time while those employees are actually working on this specific contract.

The included employee benefits are:

- Bereavement leave
- Disability, life and other types of insurance
- Family medical leave
- Health benefits
- Membership or membership discounts
- Moving expenses
- Pension and retirement benefits
- Vacation
- Travel benefits
- Any other benefits given to employees

(Employee Benefits does not include benefits that may be preempted by federal or state law.)

If you feel you have been discriminated or retaliated against by your employer in the terms and conditions of your application for employment, or in your employment, or in the application of these employee benefits, because of your status as an applicant or as an employee protected by the Ordinance, or because you reported a violation of the Ordinance, and after having exhausted all remedies with your employer,

You May . . .

- Submit a written complaint to the City of Sacramento, Procurement Services Division, containing the details of the alleged violation. The address is:

  City of Sacramento
  Procurement Services Division
  915 I Street, 2nd Floor
  Sacramento, CA 95814

- Bring an action in the appropriate division of the Superior Court of the State of California against the Employer and obtain the following remedies:
  - Reinstatement, injunctive relief, compensatory damages and punitive damages
  - Reasonable attorney's fees and costs

ATTACHMENT B

YOUR RIGHTS UNDER THE CITY OF SACRAMENTO'S NON-DISCRIMINATION IN EMPLOYEE BENEFITS BY CITY CONTRACTORS ORDINANCE

If your employer provides employee benefits, they must be provided to those employees working on a City of Sacramento contract without discriminating between employees with spouses and employees with domestic partners.

The included employee benefits are:

- Bereavement leave
- Disability, life and other types of insurance
- Family medical leave
- Health benefits
- Membership or membership discounts
- Moving expenses
- Pension and retirement benefits
- Vacation
- Travel benefits
- Any other benefits given to employees

If you feel you have been discriminated against by your employer . . .

You May . . .

O Submit a written complaint to the City of Sacramento, Procurement Services Division, containing the details of the alleged violation. The address is:

City of Sacramento
Procurement Services Division
915 I St., 2nd Floor
Sacramento, CA 95814

O Bring an action in the appropriate division of the Superior Court of the State of California against the employer and obtain reinstatement, injunctive relief, compensatory damages, punitive damages and reasonable attorney's fees and costs.

Discrimination and Retaliation Prohibited.

If you feel you have been discriminated or retaliated against by your employer in the terms and conditions of your application for employment, or in your employment, because of your status as an applicant or as an employee protected by the Ordinance, or because you reported a violation of this Ordinance.

You May Also . . .

Submit a written complaint to the City of Sacramento, Procurement Services Division, at the same address, containing the details of the alleged violation.

F. LIVING WAGE ORDINANCE (LWO) REQUIREMENTS

LIVING WAGE ORDINANCE

The Living Wage Ordinance (LWO) requires certain firms that enter into contracts to provide certain services to or for the City, to pay a specified minimum level of compensation to their employees for time spent performing any work on the City contract. The LWO also applies to certain subcontractors.

The LWO applies to contracts entered into, amended, renewed or extended at the City's discretion.

Contracts and Contractors Covered by the LWO

Determining whether the LWO applies to a specific City contract, contractor or subcontractor, depends on whether the contract, contractor and/or subcontractor meet the criteria specified in the LWO for contract type, contract amount, contractor size (# of employees), subcontract amount and subcontractor size (# of employees). These criteria are summarized below.

Contract Type

The LWO applies only to contracts for Nonprofessional Services. Under the LWO, this includes contracts for any services of a nonprofessional character, including but not limited to tree trimming services, repair services for motor vehicles and office equipment, vehicle towing, and security services.

The LWO does not apply to: (1) Incidental services, such as delivery, installation or maintenance, that are provided under contracts for the purchase or lease of equipment, supplies, or other personal property; (2) contracts that are subject to City, state, or federal prevailing-wage requirements; (3) contracts for professional services (including but not limited to services rendered by engineers, architects, auditors, banks, consultants, actuaries and attorneys); and (4) contracts with nonprofit corporations that are organized under section 501 of the Internal Revenue Code and have fewer than 100 employees, whether full or part time.

Contract Amount

The LWO applies to contracts entered into or amended after the LWO Effective Date that provide compensation from the City of $100,000 or more. In addition, the LWO applies to a contract entered into or amended after the LWO Effective Date that, by itself, does not reach this amount, if the aggregate value of that contract and of any other Nonprofessional Services contracts covered by the LWO that the City has awarded to the same person or firm within the previous 12 months, is $100,000 or more. **IT IS THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE WHETHER THIS AGGREGATE VALUE IS $100,000 OR MORE, AND TO NOTIFY THE CITY IN WRITING WHENEVER THIS IS THE CASE.**

Contractor Size

The LWO only applies to a contractor that has at least 25 employees, working either full or part time. The number of employees that a contractor has is determined by adding the contractor's employees and the employees of any other person or entity deemed to be a "Related Person" under the LWO.[1]

Subcontract Amount

The LWO applies to a subcontractor providing services under a covered contract if the amount of the subcontract is at least 25 % of the contract amount, without regard to the number of employees the subcontractor has.

Subcontractor Size

The LWO also applies to a subcontractor providing services under a covered contract if the subcontractor has at least 25 employees, working either full or part time, whether or not the amount of the subcontract is at least 25 % of the contract amount.

Payment of Living Wage to Covered Employees

If a contractor or subcontractor meets the criteria specified in the LWO for contract type, contract amount, contractor size, subcontract amount and/or subcontractor size, the contractor or subcontractor is deemed to be a "Covered Employer" under the LWO. The LWO requires a Covered Employer to provide specified minimum compensation to its employees who perform work directly related to the City contract (these employees are called "Covered Employees" under the LWO), for all hours the Covered Employees perform under the City contract.[2]

The minimum compensation required is as follows:

a. If health benefits are provided to Covered Employees and the Covered Employer's contribution for the benefits is at least $1.50 for each hour, then the rates are as follows:

(a) During 2004, $9.00 per hour.
(b) During 2005, the greater of $9.33 an hour or $9.00 adjusted by the increase in the Consumer Price Index for All Urban Consumers, San Francisco-Oakland-San Jose area (1982-1984=100) from January 1, 2004, through December 31, 2004.

---

1 The LWO provides that a person or entity is a Related Person when any of the following circumstances exists:

(1) The person or entity and the contractor are both corporations, and (i) share a majority of members of their governing boards, or (ii) have two or more officers in common, or (iii) are controlled by the same majority shareholder or shareholders (control means more than 50% of the corporation's voting power), or (iv) are in a parent-subsidiary relationship (such a relationship exists when one corporation directly or indirectly owns shares possessing more than 50% of another corporation's voting power); or

(2) The person or entity otherwise controls and directs, or is controlled and directed by, the contractor, as determined by the City Manager.

2 A Covered Employee includes full-time, part-time, contingent, contract and temporary employees, but does not include: (1) individuals who participate in job-training-and-education programs that have, as their express purpose, the provision of basic job skills and education to participants, with the goal of earning a high-school-equivalency diploma and education to participants, with the goal of earning a high-school-equivalency diploma and permanent employment; (2) student interns; (3) individuals participating in specialized-training programs; and (4) an employee whose term and conditions of employment are governed by a bona fide collective-bargaining agreement containing an express waiver of the LWO.

(c) During 2006, the greater of $9.67 an hour or $9.00 adjusted by the increase in the Consumer Price Index for All Urban Consumers, San Francisco-Oakland-San Jose area (1982-1984=100) from January 1, 2004, through December 31, 2005.

(d) During 2007, the greater of $10.00 an hour or $9.00 adjusted by the increase in the Consumer Price Index for All Urban Consumers, San Francisco-Oakland-San Jose area (1982-1984=100) from January 1, 2004, through December 31, 2006.

b. If health benefits are not provided to Covered Employees or if health benefits are provided but the Covered Employer's contribution for the benefits is less than $1.50 for each hour, then the rates are as follows:

(a) During 2004, $10.50 per hour.

(b) During 2005, the greater of $10.87 an hour or $10.50 adjusted by the increase in the Consumer Price Index for All Urban Consumers, San Francisco-Oakland-San Jose area (1982-1984=100) from January 1, 2004, through December 31, 2004.

(c) During 2006, the greater of $11.17 an hour or $10.50 adjusted by the increase in the Consumer Price Index for All Urban Consumers, San Francisco-Oakland-San Jose area (1982-1984=100) from January 1, 2004, through December 31, 2005.

(d) During 2007, the greater of $11.50 an hour or $10.50 adjusted by the increase in the Consumer Price Index for All Urban Consumers, San Francisco-Oakland-San Jose area (1982-1984=100) from January 1, 2004, through December 31, 2006.

Notification to Covered Employees

The LWO requires a Covered Employer to give each existing employee and (at the time of hire) each new employee a copy of the following written notification:

> **This company may enter into a contract to perform services for the City of Sacramento. If you work on such a contract, then you are entitled to be paid a living wage for each hour so worked. In 2004, the living wage is $9.00 an hour with health benefits and $10.50 an hour without health benefits. In 2005, the living wage is at least $9.33 an hour with health benefits and $10.87 an hour without health benefits. In 2006, the living wage is at least $9.67 an hour with health benefits and $11.17 an hour without health benefits. And in 2007, the living wage is at least $10.00 an hour with health benefits and $11.50 an hour without health benefits. For more information, see chapter 3.58 of the Sacramento City Code, which can be viewed at www.cityofsacramento.org.**

The LWO requires the above notification to be provided in each language spoken by 10% or more of the Covered Employer's workforce.

The LWO also requires a Covered Employer to inform all employees who earn less than $12 an hour of their possible right to the federal Earned Income Credit (EIC), and to make available to those employees any forms required to secure advance EIC payments from the Covered Employer.

Subcontractor Compliance

A contractor is responsible for requiring all of its subcontractors who are covered by these requirements to comply with the provisions of the LWO, by including these requirements in all subcontracts covered by the LWO.

Other Provisions of the LWO

Use of Funds Paid Under City Contracts

Under the LWO, Covered Employers may not directly use City funds to persuade Covered Employees to support or oppose unionization, and Covered Employers may not directly use City funds to schedule or hold meetings related to union representation during the Covered Employees' working hours. These restrictions do not apply to expenditures made during good-faith collective bargaining or to expenditures required under bona fide collective-bargaining agreements.

No Reduction in Non-Wage Benefits

Under the LWO, Covered Employers may not fund any wage increases required by the LWO, nor shall Covered Employers otherwise respond to the enactment of the LWO, by reducing the health, insurance, pension, vacation, or other non-wage benefits of any of their employees.

No Retaliation

The LWO prohibits a Covered Employer from taking any adverse action against a Covered Employee because the Covered Employee does any of the following: (1) exercises or asserts his or her rights under the LWO; (2) informs or assists other Covered Employees concerning their rights and the Covered Employer's obligations under the LWO; (3) complains about the Covered Employer's failure to comply with the LWO; or (4) seeks to enforce the LWO.

No Reduction in Collective-Bargaining Wage Rates

The LWO does not require or authorize any Covered Employer to reduce wages set by a collective-bargaining agreement or required under any prevailing-wage law.

Violations and Monitoring

The LWO provides that any violation of the LWO by a City contractor constitutes a material breach of the contract, and authorizes the City to terminate the contract and pursue all available legal and equitable remedies. In order to monitor compliance, the LWO authorizes the City to require Covered Employers to verify their compliance with the LWO by submitting certified payroll records to the City, and to take such other steps as may be necessary for the City to determine whether the requirements of the LWO have been satisfied.

The LWO also includes provisions authorizing an employee or interested person to file a judicial action against a contractor or subcontractor for violation of the LWO.

Declaration of Compliance

To assure compliance with the LWO, any person or entity entering into a contract to provide Nonprofessional Services to or for the City, is required to provide the City with a signed Declaration of Compliance in the form attached hereto, prior to the City's execution of the contract. The Declaration of Compliance shall be signed by a duly authorized representative of the person or entity entering into the contract, and, when accepted by the City, shall constitute part of the contract.

Additional Information

For a complete description of LWO provisions, refer to the LWO codified at Sacramento City Code Chapter 3.58. The Sacramento City Code is available on the internet at www.cityofsacramento.org. For more information on the LWO requirements and the City's LWO program, contact Procurement Services Department, (916) 808-6240.

SECTION II
CONTRACT DOCUMENTS

A. GENERAL CONDITIONS

1. **Independent Contractor.**

A. It is understood and agreed that CONTRACTOR (including CONTRACTOR's employees) is an independent contractor and that no relationship of employer-employee exists between the parties hereto for any purpose whatsoever. Neither CONTRACTOR nor CONTRACTOR's assigned personnel shall be entitled to any benefits payable to employees of CITY. CITY is not required to make any deductions or withholdings from the compensation payable to CONTRACTOR under the provisions of this Agreement, and CONTRACTOR shall be issued a Form 1099 for its services hereunder. As an independent contractor, CONTRACTOR hereby agrees to indemnify and hold CITY harmless from any and all claims that may be made against CITY based upon any contention by any of CONTRACTOR's employees or by any third party, including but not limited to any state or federal agency, that an employer-employee relationship or a substitute therefor exists for any purpose whatsoever by reason of this Agreement or by reason of the nature and/or performance of any Services under this Agreement. (As used in this Exhibit D, the term "Services" shall include both Services and Additional Services as such terms are defined elsewhere in this Agreement.)

B. It is further understood and agreed by the parties hereto that CONTRACTOR, in the performance of its obligations hereunder, is subject to the control and direction of CITY as to the designation of tasks to be performed and the results to be accomplished under this Agreement, but not as to the means, methods, or sequence used by CONTRACTOR for accomplishing such results. To the extent that CONTRACTOR obtains permission to, and does, use CITY facilities, space, equipment or support services in the performance of this Agreement, this use shall be at the CONTRACTOR's sole discretion based on the CONTRACTOR's determination that such use will promote CONTRACTOR's efficiency and effectiveness. Except as may be specifically provided elsewhere in this Agreement, the CITY does not require that CONTRACTOR use CITY facilities, equipment or support services or work in CITY locations in the performance of this Agreement.

C. If, in the performance of this Agreement, any third persons are employed by CONTRACTOR, such persons shall be entirely and exclusively under the direction, supervision, and control of CONTRACTOR. Except as may be specifically provided elsewhere in this Agreement, all terms of employment, including hours, wages, working conditions, discipline, hiring, and discharging, or any other terms of employment or requirements of law, shall be determined by CONTRACTOR. It is further understood and agreed that CONTRACTOR shall issue W-2 or 1099 Forms for income and employment tax purposes, for all of CONTRACTOR's assigned personnel and subcontractors.

D. The provisions of this Section 1 shall survive any expiration or termination of this Agreement. Nothing in this Agreement shall be construed to create an exclusive relationship between CITY and CONTRACTOR. CONTRACTOR may represent, perform services for, or be employed by such additional persons or companies as CONTRACTOR sees fit provided that CONTRACTOR does not violate the provisions of Section 5, below.

2. **Licenses; Permits, Etc.** CONTRACTOR represents and warrants that CONTRACTOR has all licenses, permits, City Business Operations Tax Certificate, qualifications, and approvals of whatsoever nature that are legally required for CONTRACTOR to practice its profession or provide any services under the Agreement. CONTRACTOR represents and warrants that CONTRACTOR shall, at its sole cost and expense, keep in effect or obtain at all times during the term of this Agreement any licenses,

permits, and approvals that are legally required for CONTRACTOR to practice its profession or provide such Services. Without limiting the generality of the foregoing, if CONTRACTOR is an out-of-state corporation, CONTRACTOR warrants and represents that it possesses a valid certificate of qualification to transact business in the State of California issued by the California Secretary of State pursuant to Section 2105 of the California Corporations Code.

3. **Time.** CONTRACTOR shall devote such time and effort to the performance of Services pursuant to this Agreement as is necessary for the satisfactory and timely performance of CONTRACTOR's obligations under this Agreement. Neither party shall be considered in default of this Agreement, to the extent that party's performance is prevented or delayed by any cause, present or future, that is beyond the reasonable control of that party.

4. **CONTRACTOR Not Agent.** Except as CITY may specify in writing, CONTRACTOR and CONTRACTOR's personnel shall have no authority, express or implied, to act on behalf of CITY in any capacity whatsoever as an agent. CONTRACTOR and CONTRACTOR's personnel shall have no authority, express or implied, to bind CITY to any obligations whatsoever.

5. **Conflicts of Interest.** CONTRACTOR covenants that neither it, nor any officer or principal of its firm, has or shall acquire any interest, directly or indirectly, that would conflict in any manner with the interests of CITY or that would in any way hinder CONTRACTOR's performance of Services under this Agreement. CONTRACTOR further covenants that in the performance of this Agreement, no person having any such interest shall be employed by it as an officer, employee, agent or subcontractor, without the written consent of CITY. CONTRACTOR agrees to avoid conflicts of interest, or the appearance of any conflicts of interest with the interests of CITY at all times during the performance of this Agreement. If CONTRACTOR is or employs a former officer or employee of the CITY, CONTRACTOR and any such employee(s) shall comply with the provisions of Sacramento City Code Section 2.16.090 pertaining to appearances before the City Council or any CITY department, board, commission or committee.

6. **Confidentiality of CITY Information.** During performance of this Agreement, CONTRACTOR may gain access to and use CITY information regarding inventions, machinery, products, prices, apparatus, costs, discounts, future plans, business affairs, governmental affairs, processes, trade secrets, technical matters, systems, facilities, customer lists, product design, copyright, data, and other vital information (hereafter collectively referred to as "City Information") that are valuable, special and unique assets of the CITY. CONTRACTOR agrees to protect all City Information and treat it as strictly confidential, and further agrees that CONTRACTOR shall not at any time, either directly or indirectly, divulge, disclose or communicate in any manner any City Information to any third party without the prior written consent of CITY. In addition, CONTRACTOR shall comply with all CITY policies governing the use of the CITY network and technology systems, as set forth in applicable provisions of the City of Sacramento Administrative Policy Instructions # 30. A violation by CONTRACTOR of this Section 6 shall be a material violation of this Agreement and shall justify legal and/or equitable relief.

7. **CONTRACTOR Information.**

A. CITY shall have full ownership and control, including ownership of any copyrights, of all information prepared, produced, or provided by CONTRACTOR pursuant to this Agreement. In this Agreement, the term "information" shall be construed to mean and include: any and all work product, submittals, reports, plans, specifications, and other deliverables consisting of documents, writings, handwritings, typewriting, printing, photostatting, photographing, computer models, and any other computerized data and every other means of recording any form of information, communications, or representation, including letters, works, pictures, drawings, sounds, or symbols, or any combination thereof. CONTRACTOR shall not be responsible for any unauthorized modification or use of such information for other than its intended purpose by CITY.

B. CONTRACTOR shall fully defend, indemnify and hold harmless CITY, its officers and employees, and each and every one of them, from and against any and all claims, actions, lawsuits or other proceedings alleging that all or any part of the information prepared, produced, or provided by CONTRACTOR pursuant to this Agreement infringes upon any third party's trademark, trade name, copyright, patent or other intellectual property rights. CITY shall make reasonable efforts to notify CONTRACTOR not later than ten (10) days after CITY is served with any such claim, action, lawsuit or other proceeding, provided that CITY's failure to provide such notice within such time period shall not relieve CONTRACTOR of its obligations hereunder, which shall survive any termination or expiration of this Agreement.

C. All proprietary and other information received from CONTRACTOR by CITY, whether received in connection with CONTRACTOR's proposal to CITY or in connection with any Services performed by CONTRACTOR, will be disclosed upon receipt of a request for disclosure, pursuant to the California Public Records Act; provided, however, that, if any information is set apart and clearly marked "trade secret" when it is provided to CITY, CITY shall give notice to CONTRACTOR of any request for the disclosure of such information. The CONTRACTOR shall then have five (5) days from the date it receives such notice to enter into an agreement with the CITY, satisfactory to the City Attorney, providing for the defense of, and complete indemnification and reimbursement for all costs (including plaintiff's attorney fees) incurred by CITY in any legal action to compel the disclosure of such information under the California Public Records Act. The CONTRACTOR shall have sole responsibility for defense of the actual "trade secret" designation of such information.

D. The parties understand and agree that any failure by CONTRACTOR to respond to the notice provided by CITY and/or to enter into an agreement with CITY, in accordance with the provisions of subsection C, above, shall constitute a complete waiver by CONTRACTOR of any rights regarding the information designated "trade secret" by CONTRACTOR, and such information shall be disclosed by CITY pursuant to applicable procedures required by the Public Records Act.

8. **Standard of Performance.** CONTRACTOR shall perform all Services required pursuant to this Agreement in the manner and according to the standards currently observed by a competent practitioner of CONTRACTOR's profession in California. All products of whatsoever nature that CONTRACTOR delivers to CITY pursuant to this Agreement shall be prepared in a professional manner and conform to the standards of quality normally observed by a person currently practicing in CONTRACTOR's profession, and shall be provided in accordance with any schedule of performance specified in Exhibit A. CONTRACTOR shall assign only competent personnel to perform Services pursuant to this Agreement. CONTRACTOR shall notify CITY in writing of any changes in CONTRACTOR's staff assigned to perform the Services required under this Agreement, prior to any such performance. In the event that CITY, at any time during the term of this Agreement, desires the removal of any person assigned by CONTRACTOR to perform Services pursuant to this Agreement, because CITY, in its sole discretion, determines that such person is not performing in accordance with the standards required herein, CONTRACTOR shall remove such person immediately upon receiving notice from CITY of the desire of CITY for the removal of such person.

9. **Term; Suspension; Termination.**

A. This Agreement shall become effective on the date that it is approved by both parties, set forth on the first page of the Agreement, and shall continue in effect until both parties have fully performed their respective obligations under this Agreement, unless sooner terminated as provided herein.

B. CITY shall have the right at any time to temporarily suspend CONTRACTOR's performance

hereunder, in whole or in part, by giving a written notice of suspension to CONTRACTOR. If CITY gives such notice of suspension, CONTRACTOR shall immediately suspend its activities under this Agreement, as specified in such notice.

C. CITY shall have the right to terminate this Agreement at any time by giving a written notice of termination to CONTRACTOR. If CITY gives such notice of termination, CONTRACTOR shall immediately cease rendering Services pursuant to this Agreement. If CITY terminates this Agreement:

(1) CONTRACTOR shall, not later than five days after such notice of termination, deliver to CITY copies of all information prepared pursuant to this Agreement.

(2) CITY shall pay CONTRACTOR the reasonable value of Services rendered by CONTRACTOR prior to termination; provided, however, CITY shall not in any manner be liable for lost profits that might have been made by CONTRACTOR had the Agreement not been terminated or had CONTRACTOR completed the Services required by this Agreement. In this regard, CONTRACTOR shall furnish to CITY such financial information as in the judgment of the CITY is necessary for CITY to determine the reasonable value of the Services render by CONTRACTOR. The foregoing is cumulative and does not affect any right or remedy that CITY may have in law or equity.

10. Indemnity.

A. Indemnity: CONTRACTOR shall indemnify and save harmless, CITY, its officers and employees, and each and every one of them, from and against all actions, damages, costs, liability, claims, demands, losses, judgments, penalties, costs and expenses of every type and description, including, but not limited to, any fees and/or costs reasonable incurred by CITY's staff attorneys or outside attorneys and any fees and expenses incurred in enforcing this provision (hereafter collectively referred to as "Liabilities"), to the extent such Liabilities are caused by or arise from any negligent act or omission, recklessness or willful misconduct of CONTRACTOR, its subcontractors or agents, and their respective officers and employees, in connection with the performance or nonperformance of this Agreement, whether or not (i) such Liabilities also are caused in part by the passive negligence of the CITY, its officers or employees, (ii) the CITY, its officers or employees reviewed, accepted or approved any service or work product performed or provided by the CONTRACTOR, or (iii) such Liabilities are litigated, settled or reduced to judgment.

B. Obligation to Defend: CONTRACTOR shall, upon CITY's request, defend at CONTRACTOR's sole cost any action, claim, suit, cause of action or portion thereof that asserts or alleges Liabilities caused by or arising from any negligent act or omission, recklessness or willful misconduct of CONTRACTOR, its subcontractors or agents, and their respective officers and employees, in connection with the performance or nonperformance of this Agreement, whether such action, claim, suit, cause of action or portion thereof is well founded or not.

C. Insurance Policies; Intellectual Property Claims: Except as may be expressly provided in this Section 10, the existence or acceptance by CITY of any of the insurance policies or coverages described in this Agreement shall not affect or limit any of CITY's rights under this Section 10, nor shall the limits of such insurance limit the liability of CONTRACTOR hereunder. This Section 10 shall not apply to any intellectual property claims, actions, lawsuits or other proceedings subject to the provisions of Section 7.B., above. The provisions of this Section 10 shall survive any expiration or termination of this Agreement.

11. Insurance Requirements. During the entire term of this Agreement, CONTRACTOR shall maintain the insurance coverage described in this Section 11.

Full compensation for all premiums that CONTRACTOR is required to pay for the insurance coverage described herein shall be included in the compensation specified for the Services provided by CONTRACTOR under this Agreement. No additional compensation will be provided for CONTRACTOR's insurance premiums.

It is understood and agreed by the CONTRACTOR that its liability to the CITY shall not in any way be limited to or affected by the amount of insurance coverage required or carried by the CONTRACTOR in connection with this Agreement.

A. Minimum Scope & Limits of Insurance Coverage

(1) Commercial General Liability Insurance, providing coverage at least as broad as ISO CGL Form 00 01 on an occurrence basis for bodily injury, including death, of one or more persons, property damage and personal injury, with limits of not less than one million dollars ($1,000,000) per occurrence. The policy shall provide contractual liability and products and completed operations coverage for the term of the policy.

(2) Automobile Liability Insurance providing coverage at least as broad as ISO Form CA 00 01 on an occurrence basis for bodily injury, including death, of one or more persons, property damage and personal injury, with limits of not less than one million dollars ($1,000,000) per occurrence. The policy shall provide coverage for owned, non-owned and/or hired autos as appropriate to the operations of the CONTRACTOR.

No automobile liability insurance shall be required if CONTRACTOR completes the following certification:

"I certify that a motor vehicle will not be used in the performance of any work or services under this agreement." _____ (CONTRACTOR initials)

(3) Workers' Compensation Insurance with statutory limits, and Employers' Liability Insurance with limits of not less than one million dollars ($1,000,000). The Worker's Compensation policy shall include a waiver of subrogation for contracts involving construction or maintenance, or if required by the CITY by selecting the option below:

__X__ Workers' Compensation waiver of subrogation in favor of the City is required for all work performed by the CONTRACTOR.

No Workers' Compensation insurance shall be required if CONTRACTOR completes the following certification:

"I certify that my business has no employees, and that I do not employ anyone. I am exempt from the legal requirements to provide Workers' Compensation insurance." _____ (CONTRACTOR initials)

B. Additional Insured Coverage

(1) Commercial General Liability Insurance: The CITY, its officials, employees and volunteers shall be covered by policy terms or endorsement as additional insureds as respects general liability arising out of activities performed by or on behalf of CONTRACTOR, products and completed operations of CONTRACTOR, and premises owned, leased or used by CONTRACTOR. The general liability additional insured endorsement must be signed by an authorized representative of the insurance carrier for contracts involving construction or maintenance, or if required by the CITY by selecting the option below:

__X__ Additional insured endorsement must be signed by an authorized representative of the insurance carrier.

If the policy includes a blanket additional insured endorsement or contractual additional insured coverage, the above signature requirement may be fulfilled by submitting that document with a signed declaration page referencing the blanket endorsement or policy form.

(2) Automobile Liability Insurance: The CITY, its officials, employees and volunteers shall be covered by policy terms or endorsement as additional insureds as respects auto liability.

C. Other Insurance Provisions

The policies are to contain, or be endorsed to contain, the following provisions:

(1) CONTRACTOR's insurance coverage shall be primary insurance as respects CITY, its officials, employees and volunteers. Any insurance or self-insurance maintained by CITY, its officials, employees or volunteers shall be in excess of CONTRACTOR's insurance and shall not contribute with it.

(2) Any failure to comply with reporting provisions of the policies shall not affect coverage provided to CITY, its officials, employees or volunteers.

(3) Coverage shall state that CONTRACTOR's insurance shall apply separately to each insured against whom claim is made or suit is brought, except with respect to the limits of the insurer's liability.

(4) CITY will be provided with thirty (30) days written notice of cancellation or material change in the policy language or terms.

D. Acceptability of Insurance

Insurance shall be placed with insurers with a Bests' rating of not less than A:V. Self-insured retentions, policy terms or other variations that do not comply with the requirements of this Section 11 must be declared to and approved by the CITY Risk Management Division in writing prior to execution of this Agreement.

E. Verification of Coverage

(1) CONTRACTOR shall furnish CITY with certificates and required endorsements evidencing the insurance required. The certificates and endorsements shall be forwarded to the CITY representative named in Exhibit A. Copies of policies shall be delivered to the CITY on demand. Certificates of insurance shall be signed by an authorized representative of the insurance carrier.

(2) The CITY may withdraw its offer of contract or cancel this Agreement if the certificates of insurance and endorsements required have not been provided prior to execution of this Agreement. The CITY may withhold payments to CONTRACTOR and/or cancel the Agreement if the insurance is canceled or CONTRACTOR otherwise ceases to be insured as required herein.

F. Subcontractors

CONTRACTOR shall require and verify that all subcontractors maintain insurance coverage that meets the minimum scope and limits of insurance coverage specified in subsection A, above.

12. **Equal Employment Opportunity.** During the performance of this Agreement, CONTRACTOR, for itself, its assignees and successors in interest, agrees as follows:

A. Compliance With Regulations: CONTRACTOR shall comply with the Executive Order 11246 entitled "Equal Opportunity in Federal Employment", as amended by Executive Order 11375 and 12086, and as supplemented in Department of Labor regulations (41 CFR Chapter 60), hereinafter collectively referred to as the "Regulations".

B. Nondiscrimination: CONTRACTOR, with regards to the work performed by it after award and prior to completion of the work pursuant to this Agreement, shall not discriminate on the ground of race, color, religion, sex, national origin, age, marital status, physical handicap or sexual orientation in selection and retention of subcontractors, including procurement of materials and leases of equipment. CONTRACTOR shall not participate either directly or indirectly in discrimination prohibited by the Regulations.

C. Solicitations for Subcontractors, Including Procurement of Materials and Equipment: In all solicitations either by competitive bidding or negotiations made by CONTRACTOR for work to be performed under any subcontract, including all procurement of materials or equipment, each potential subcontractor or supplier shall be notified by CONTRACTOR of CONTRACTOR's obligation under this Agreement and the Regulations relative to nondiscrimination on the ground of race, color, religion, sex, national origin, age, marital status, physical handicap or sexual orientation.

D. Information and Reports: CONTRACTOR shall provide all information and reports required by the Regulations, or by any orders or instructions issued pursuant thereto, and shall permit access to its books, records, accounts, other sources of information and its facilities as may be determined by the CITY to be pertinent to ascertain compliance with such Regulations, orders and instructions. Where any information required of CONTRACTOR is in the exclusive possession of another who fails or refuses to furnish this information, CONTRACTOR shall so certify to the CITY, and shall set forth what efforts it has made to obtain the information.

E. Sanctions for Noncompliance: In the event of noncompliance by CONTRACTOR with the nondiscrimination provisions of this Agreement, the CITY shall impose such sanctions as it may determine to be appropriate including, but not limited to:

(1) Withholding of payments to CONTRACTOR under this Agreement until CONTRACTOR complies;

(2) Cancellation, termination, or suspension of the Agreement, in whole or in part.

F. Incorporation of Provisions: CONTRACTOR shall include the provisions of subsections A through E, above, in every subcontract, including procurement of materials and leases of equipment, unless exempted by the Regulations, or by any order or instructions issued pursuant thereto. CONTRACTOR shall take such action with respect to any subcontract or procurement as the CITY may direct as a means of enforcing such provisions including sanctions for noncompliance; provided, however, that in the event CONTRACTOR becomes involved in, or is threatened with, litigation with a subcontractor or supplier as a result of such direction, CONTRACTOR may request CITY to enter such litigation to protect the interests of CITY.

13. **Entire Agreement.** This document, including all Exhibits, contains the entire agreement between the parties and supersedes whatever oral or written understanding they may have had prior to the execution of this Agreement. No alteration to the terms of this Agreement shall be valid unless approved in writing by CONTRACTOR, and by CITY, in accordance with applicable provisions of the Sacramento City Code.

14. **Severability.** If any portion of this Agreement or the application thereof to any person or circumstance shall be held invalid or unenforceable, the remainder of this Agreement shall not be affected thereby and shall be enforced to the greatest extent permitted by law.

15. **Waiver.** Neither CITY acceptance of, or payment for, any Service or Additional Service performed by CONTRACTOR, nor any waiver by either party of any default, breach or condition precedent, shall be construed as a waiver of any provision of this Agreement, nor as a waiver of any other default, breach or condition precedent or any other right hereunder.

16. **Enforcement of Agreement.** This Agreement shall be governed, construed and enforced in accordance with the laws of the State of California. Venue of any litigation arising out of or connected with this Agreement shall lie exclusively in the state trial court or Federal District Court located in Sacramento County in the State of California, and the parties consent to jurisdiction over their persons and over the subject matter of any such litigation in such courts, and consent to service of process issued by such courts.

17. **Assignment Prohibited.** The expertise and experience of CONTRACTOR are material considerations for this Agreement. CITY has a strong interest in the qualifications and capability of the persons and entities who will fulfill the obligations imposed on CONTRACTOR under this Agreement. In recognition of this interest, CONTRACTOR shall not assign any right or obligation pursuant to this Agreement without the written consent of the CITY. Any attempted or purported assignment without CITY's written consent shall be void and of no effect.

18. **Binding Effect.** This Agreement shall be binding on the heirs, executors, administrators, successors and assigns of the parties, subject to the provisions of Section 17, above.

SECTION II – CONTRACT DOCUMENTS

B. SPECIAL PROVISIONS

SCOPE

The Contractor shall demonstrate an understanding of the concept of IPM principles and practices of pest control; furthermore, the Contractor must be able to identify important pests and describe life cycles, habits, and conditions that affect populations of those pests. The implementation of management practices in an IPM program is not based on the routine application of pesticides, but on monitoring and inspecting for pests, modifying structures, improving sanitation, and changing personnel practices that can contribute to pest problems. Pest control is achieved in an IPM program by emphasizing pest prevention and making informed, accurate decisions as to when control measures are needed and the type of control measures to be used.

The City of Sacramento will be requiring structural pest control applicators to be fully IPM Certified, or in the process of achieving certification, by a certifying agency such as EcoWise or equivalent. Contractors claiming to have comprehensive IPM services but are not IPM certified may be awarded a contract contingent upon the Contractors ability to demonstrate adequate knowledge and experience in IPM principles and practices. City representatives will determine if non-certified IPM practitioners contain adequate knowledge and skills to implement a comprehensive IPM program satisfactorily meeting the needs of the City; additionally, there must be at least one, City-approved IPM practitioner overseeing the implementation of the IPM program, and all technicians will be required to attend annual IPM training programs.

CONTRACT PERIOD

This agreement shall be effective for one year from the date of award by City Council.

CONTRACT EXTENSION

Any resultant contract may be extended on a year to year basis under the same terms and conditions at the City's discretion. However, in no case shall the renewal extend beyond 4 years from the date of award of the original contract.

PRICE ADJUSTMENT

No price changes are permitted during the first year of the contract. If the contract extends beyond one year, prices quoted may be made subject to adjustment. In the event of a price decline, the benefit of such lower prices shall be immediately extended to the City.

FACILITIES AND PESTS COVERED IN CONTRACT

The City facilities listed in the preceding Price Schedule will require either Comprehensive Integrated Pest Management (IPM) Services or Routine IPM Services. Designated facilities will receive comprehensive Pest Management Plans for pest control services, and remaining facilities are to receive Routine IPM services as needed; moreover, Comprehensive and Routine services shall include the control of all pests in and around facilities such as, but not necessarily be limited to: ants, fleas, stinging insects and nests, mites, mice, rats, roaches, spiders, birds, bats, and squirrels utilizing proper and safe use of least toxic pesticides.

Provisions for the more Comprehensive IPM services and provisions for Routine IPM services for pest control are indicated in the Technical Specifications.

TOTAL CHARGE PER YEAR

The contractor shall furnish all labor, materials, and equipment to implement the surveillance, trapping, and pesticide application aspects for a comprehensive IPM program in designated facilities. The contractor shall also make detailed, site-specific recommendations for structural and procedural modifications to achieve pest suppression for all listed facilities.

The price(s) bid is/are the total charge per month/year for each area listed in the Pricing Schedule and shall include all wages, payroll taxes, fringe benefits, insurance, transportation, equipment, materials, supplies, overhead and profit.

MODIFICATION OF CONTRACT

The City may order changes in the work herein required and may order extra work in connection with the performance of the contract and the Contractor may comply with such orders, except that:

A. If changes in requirements, reports, or materials are of such a nature as to increase or decrease the cost of any part of the work, the price fixed in the contract will be increased or decreased by such amount as the Contractor and the Procurement Services Manager may agree upon as the reasonable and proper allowance for the increase or decrease in the cost of work.

B. No order for any alteration, modification, or extra work which will increase or decrease the cost of the work shall be valid unless the resulting increase or decrease in price shall have been agreed upon in writing and approved by the Procurement Services Manager. No oral statement of any person whomsoever shall in any manner or degree modify or otherwise affect the terms of this contract, including the requirements of the specifications.

CONTRACT REPRESENTATIVES

During performance of the contract, the City will be represented by Malyssa Berry, telephone (916) 808-1242; Dennis Neillson for the Sacramento Public Library, telephone (916) 264-2820; and Allison Winebrenner for Fairytale Town (916) 264-7060. The City IPM Contact Person for IPM services will be Roxanne Livingston, telephone (916) 808-1458.

DEFAULT BY CONTRACTOR

In case of default by Contractor, the City reserves the right to procure the articles or services from other sources and to hold the Contractor responsible for any excess costs occasioned to the City thereby.

DRUG-FREE WORKPLACE POLICY

The City of Sacramento is committed to providing a safe workplace for its employees and citizens alike. An essential part of this commitment is keeping the work environment free from drugs. In 1989, to assist in the achievement of this end, the City established a Drug-Free Workplace Policy.

As a contractor doing business with the City, it is expected that your firm will also implement a drug-free policy that informs your employees of the dangers and prohibition of drug abuse and that you will join with the City in maintaining a drug-free workplace.

If, in the performance of work under this contract, any employee of the Contractor exhibits unacceptable behavior that may be related to use of drugs or alcohol, the City reserves the right to discuss the employee's behavior with the Contractor. If the unacceptable behavior persists, the City may require that the employee be removed from all work under this contract.

CONTINUED USE OF FACILITIES

The buildings involved in this project will continue to be occupied during the contract. Work will be performed in an orderly manner with minimum disturbance and inconvenience to the occupants. The Contractor shall confine and limit its personnel to only those areas required in performing the work. Contractor agrees to perform work as called for between the hours of 7 A.M. and 7 P.M. Work accomplished on weekends or legal holidays, if done at Contractor's option and authorized by City Representative, will be performed at no additional expense to the City.

MATERIAL SAFETY DATA SHEETS (MSDS)

It is mandatory for the service contractor to supply a MSDS for all chemicals used during the performance of this contract to the City Safety Office, 915 I Street, 4th Floor Sacramento, CA 95814. Also, at any time the content of a MSDS is revised, the Contractor will provide new information to same. For facilities containing a comprehensive Pest Management Plans, MSDS will be included within the Plan.

CONTRACT INTENT

Specifications contained within this Statement of Work are written with the intent to meet and comply with all requirements but the final certification to comply shall rest with the Contractor and not the City of Sacramento. Should requirements as specified not comply, the Contractor is required to re-figure and revise the specifications to meet all laws, rules and regulations where it applies, and the City of Sacramento is to be notified thereof.

DISMISSAL OF UNSATISFACTORY EMPLOYEES

The Contractor shall only furnish employees who are competent and skilled for work under this contract. If, in the opinion of the City, an employee of the Contractor is incompetent or disorderly, refuses to perform in accordance with the terms and conditions of the contract, threatens or uses abusive language while on City property, or is otherwise unsatisfactory, that employee shall be removed from all work under this contract.

PROTECTION OF EXISTING FACILITIES

Contractor shall take every precaution to protect all public and private property during the performance of this contract. Any damages caused by Contractor's personnel or equipment will be promptly repaired to the condition existing before the damage or be replaced. All such costs for such repairs or replacement shall be the sole responsibility of the Contractor.

C. TECHNICAL SPECIFICATIONS

General Provisions

1. The city reserves the right to add or delete locations according to its needs. Additional locations shall be quoted on the same cost basis as other locations. The City is not limited to purchasing all of its requirements from any contract resulting from this bid.

2. All work performed under this agreement shall be performed under the rules and regulations of the Structural Pest Control Act in effect at the time of performance.

3. All materials and workmanship shall be industry standard in every respect. All work shall be subject to general supervision and satisfaction of the City representative in change, who may exercise such control of the work as is required to safeguard the interests of the City.

4.Contractor shall plan and conduct the work in a manner that will safeguard all persons from injury and take all precautions required by applicable regulations of the State Department of Industrial Relations and OSHA

5. Contractor shall be licensed by the State of California Structural Pest Control Board and shall possess a valid structural pest control operator's license in branches I, II and III. Persons employed by the contractor to perform pest control services on this contract shall either be licensed by the same board and possess a field representative's license in the proper branch or be under the direct on-site supervision of an employee holding a valid field representative's license in the proper branch.

6. It is incumbent upon the contractor and those in its employ to be aware of the injurious nature of any pesticide used and to insure proper safeguards in the application of those pesticides. It is the responsibility of the contractor to secure any necessary use permits or licenses required for the use of any pesticides and to abide by any conditions set forth in those permits or licenses.

7. The date and time of regularly scheduled service shall, in advance of service, be as agreed upon between the contractor and the individual building manager/supervisor or, if none, the City representative. Service reports must be submitted to City Service Building Manager / Supervisor or designated employee when service is performed and a copy submitted with invoice. All invoices with the exception of Library and Fairytale Town should be mailed to:

City of Sacramento
5730 24th Street, Bldg. #1
Sacramento, CA 95822
Attn: Accounts Payable

The invoice for all the libraries, items 21-34, should be mailed to:

Central Library
828 I Street
Sacramento, CA 95814
Attn: Dennis Neillson

The invoice for Fairytale Town, item 88, should be mailed to:
Kathy Fleming
3901 Land Park Drive
Sacramento, CA 95822

10. Whenever, in the opinion of the City, the said service is not satisfactory, the contractor shall be advised of the reasons. If the contractor fails to correct the unsatisfactory conditions with ten (10) days, the City Purchasing Agency may declare this contract terminated and contract with another services supplier. It shall be understood and agreed that the contract may be terminated by either party to the contract upon thirty days notice in writing. In the event of unresolvable differences of service to be performed, the City may call upon the State of California Structural Pest Control Board or clarification.

11. Notwithstanding any provision to the contrary herein, City shall have no obligation to give more than two notices of unsatisfactory performance in any calendar year. In the event two such notices of unsatisfactory performance are given in any calendar year, and in the event that contractor(s) shall again fail to satisfactorily perform services pursuant to this contract, City may thereupon terminate this contract immediately.

Comprehensive Integrated Pest Management (IPM) Services

Background

The Central Valley Regional Water Quality Control Board recently approved a Pesticide Plan to be implemented by the City of Sacramento as required by the municipal storm water National Pollutant Discharge Elimination System (NPDES) Permit No. CAS082597. The Pesticide Plan is a comprehensive plan with a goal to reduce the discharge of pesticides from municipal storm water systems to urban creeks within Sacramento County to the maximum extent practicable. It was decided that the best way to minimize the water quality risks associated with pesticides was to promote Integrated Pest Management (IPM).

IPM is a relatively new concept in urban areas. Traditional structural pest control,as contracted by the City government in the past, was largely reactive to pest infestations and bases much of its response on the routine, scheduled spraying of pesticides. This spraying was often done in locations remote from the centers of pest populations with limited effectiveness in providing adequate control.

Conversely, IPM is a process, or planned program, for long-term pest suppression. The process is based on surveillance and the interpretation of data to estimate the pest population in a given area. This monitoring allows accurate decisions to be made on when control measures are needed, the type of control measure(s) selected, and the method of application. Control practices in an IPM program must extend beyond the application of pesticides to predominantly include structural and procedural modifications, which establish physical barriers to pests, and reduce the food, water, and harborage available to them.

The City of Sacramento is in the process of establishing IPM policies and procedures for its facilities and land use areas; consequently, the City is beginning to implement Pest Management Plans for designated facilities only, and will develop Plans for remaining facilities as budget allows and as a greater understanding of IPM services evolves.

1.0 GENERAL IPM PROGRAM REQUIREMENTS

This program incorporates the advantageous use of all appropriate control options including: education, habitat modification, sanitation, alteration of maintenance activities, trapping and chemical controls -- so that pests and the environment can be managed in such a way as to balance cost, benefits, public health, safety, and environmental quality through the cooperation of all concerned.

1.1 Routine IPM SERVICES

For facilities without Pest Management Plans, the Contractor shall also demonstrate an understanding of the concept of the IPM method of pest control. Routine IPM Services shall include the control of all pests in around the facilities based on monitoring and inspecting for such pests. Any structural modifications, sanitation improvements, and personnel practices observed that may be contributing to pest problems shall be reported to the Facility Liaison or the IPM Contact Person. Services shall be provided monthly to all Routine IPM Service sites.

General requirements of the IPM program shall include the following for each building specified in this contract:

1.2 Initial Site Assessment

A thorough, initial inspection shall be conducted during the first few months of the contract by the Contractor's entomologist (or experienced IPM technician) and the user Facility Liaison. The purpose of this initial inspection is for the contractor to evaluate the pest control needs of the premises and to discuss these needs with the Department.

The following specific points should be addressed:

a) Identification of problem areas in and around the building.

b) Identification of structural features or personnel practices that are contributing to pest infestations.

c) Discussion of the effectiveness of previous control efforts.

d) Facilitation of contractor access to all necessary areas. Access to building space shall be coordinated with the facility liaison.

e) Informing the contractor of any restrictions or special safety precautions.

1.3 Submission of Plan

Following the initial inspection, the contractor will develop a detailed Pest Management Plan and Service Schedule for each of the designated buildings. This written plan and schedule must be submitted to the user Department representative/Facility Liaison for approval prior to initiation. The plan and schedule should address any structural or operational changes, which might facilitate the pest management effort. In addition, the plan must identify the proposed primary pesticides and alternatives by California Environmental Protection Agency (EPA) accepted common name (generic name); the building; and rationale for each type of use. Proposed trapping, exclusion devices for pests, if any, should also be included. The plan should describe in detail the contractor's means for monitoring pest populations in and around the building.

Frequency of inspections and treatment by the contractor shall depend on the specific pest control needs of the premises. At the minimum, the inspections shall be done monthly. The following **guidelines** will help you to define your IPM Inspection Frequency for the designated facilities:

a) Food preparation, Storage & service areas (such as cafeteria) shall be monitored weekly (excluding vending machines, Break rooms, Employee Lunch Room and similar small food storage & service areas).

b) Employee lunchroom, Break Room (inclusive of Refrigerator, Microwave, Coffee Stations and similar devices and kitchenettes) shall be monitored at least two times per month.

c) Vending machines, Beverage Dispensing units, Water Dispensing Coolers and similar devices shall be monitored at least once per month.

d) Basements & Ground Floor shall be inspected at least once per month.

e) Washrooms, Pipe Chases, Elevator pits, Telephone & Electrical conduit chases, Mechanical Rooms, General Storage Rooms & structures of similar nature shall be inspected each alternate month (Arrange your schedule in such a way so that such areas are rotated, inspected & serviced as needed at least six times per year).

f) Interior landscape such as Atrium shall be inspected at least once per month. Potted plants in the offices, lobby etc. shall be inspected on need basis or upon request.

g) Exterior Grounds or Perimeter of the Building shall be visually inspected for the signs of arthropods, rodents, birds and other wild life at least once per month.

h) Exterior Bait Stations shall be inspected at least once per month or more frequent as needed in case of any problem encountered.

i) Trapped rodent shall be removed with in 24 hours or as requested by the user department representative.

j) If you encounter rodent, birds or any other wild life problem and intend to place traps (such as glue traps or mechanical traps), you must ensure to provide daily, weekly or biweekly follow up as needed until problem is solved. Traps shall be removed, once problem is over and you return to routine maintenance inspections.

k) Preventive placement of traps is suggested, only if you are in a position to monitor the same at least on weekly basis.

The plan and schedule shall be submitted not more than **ten (10) working days** following the initial inspection of the premises. The user Department will render a decision regarding the acceptability of the plan and schedule **within ten (10) working days** following receipt. The contractor shall be on-site to implement the plan and schedule within **five (5) working days** following notice of approval of the plan. If the plan is disapproved, the contractor shall have **three (3) working days** to submit a revised plan and schedule. The schedule may be amended by Contractor upon City Approval. In this initial phase of the IPM program, the City reserves the right to request amendments/revisions to the plan as a greater understanding of what level of IPM services the City is capable of achieving.

1.4 Monitoring and Inspection

A critical aspect of the Pest Management Plan shall be the establishment of a monitoring and inspection program to identify infested zones and allow an objective assessment of pest population levels.

Monitoring and inspection shall be continued throughout the duration of this contract. Where appropriate, glue traps (insect monitors) shall be employed to monitor cockroach populations in selected areas.

1.5 Structural Modifications

Unless otherwise stated in the project definition, structural modifications for pest suppression shall **not** be the responsibility of the contractor. The contractor shall make recommendations to the user department of what structural modifications can reasonably be accomplished. However, Contractor must provide adequate pest management even if structural modifications have not been accomplished as requested. Non compliance to the structural modification can be discussed with the Department Representative/Facility Liaison so that issues can be resolved to provide effective, efficient, economical IPM program.

1.6 Pesticide Treatment

As a general rule, application of pesticides in any area inside or outside the premises - i.e. in any room, closet, hallway, stairwell, court, driveway, planting bed, and similar locations - shall not occur unless inspections or monitoring indicate the presence of pests in that specific area and alternate IPM methods or measures (physical, cultural, mechanical, biological) fail to suppress the pest population. An actual specimen of an insect pest, or active signs of same, must be seen before pesticides are applied. A rodent dropping, burrow, or runway is sufficient to indicate the presence of rodents in an area.

Preventive treatments as applicable by California law & Regulations (Department of Pesticide Regulations) and or California Structural pest control Board, of inside and outside areas where inspections indicate a potential insect or rodent infestation are acceptable only on a case-by-case basis with approval from the user department. The contractor must indicate areas for the preventive treatment in the Pest Management Plan for the building and list the methods of application.

1.7 Record Keeping

The contractor shall be responsible for maintaining a complete and accurate pest management log for the designated facilities. Each of the designated buildings that contains a Pest Management Plan shall have its own binder, which will be kept in the user department designated office and maintained on each visit by the contractor and copies of all service receipts.

The Binder shall contain the following items:

a) A copy of the Pest Management Plan and Service Schedule for the building.

b) A copy of the current label and EPA registration number (California DPR Registration Number) for each pesticide used in the building or site, including the Material Safety Data Sheet. Pesticide labels are normally interpreted as including in-depth safety and use documentation.

c) Pest surveillance data sheets which record, in a systematic fashion, the number of pests or other indicators of pest population levels revealed by the contractor's monitoring program for the building: For example, number and location of cockroaches trapped by zone monitors, number and location of rodents trapped or carcasses removed, number and location of new rat burrows observed, degree of feeding in rodent bait stations, etc.

d) The location of all traps, trapping devices, and bait stations in or around the premises. This information can be in either tabular, list, or map format. However, map format is preferred.

e) The user department's work order or other requests to service log form. These forms will be supplied by the contractor and will be used to advise the contractor of routine service requests and to document the performance of all work. Upon completion of a service visit to the building, the contractor's representative performing the service shall complete, sign and date the log, and return it to the user department's office on the same or succeeding day of the performance of the service.

f) The contractor's Service Report forms, documenting arrival and departure time of the contractor's representative performing the service, and all information on pesticide application required by statute. These report forms may incorporate some or all of the past surveillance data required in item c) above.

g) A Pest Sighting Log for City staff to report any observed pest activity. During the technician's visit to the service site, they shall refer to the Pest Sighting Log for reports of pest activity. If there is a report in the log book, the technician shall contact the reporting person for more information if necessary and then proceed to identify:

The extent of the infestation.

The control options that are most appropriate to the specific location of pest(s)

The conditions conducive to the pest(s)

If the technician can treat the pest using a non-chemical method or make arrangements with the necessary building staff to do so. If necessary, the technician shall make a follow-up visit prior to the next monthly service to evaluate the effectiveness of the treatment.

1.8 Chemical Controls

Since this is an IPM contract, chemical controls shall be used primarily as a last resort and only after approval by the user department representative on a case-by-case basis.

1.9 IPM Contact Person and Facility Liaison

To provide the degree of oversight and consistency of services necessary for a successful IPM program, the City shall designate an IPM Contact Person for the City and a Facility Liaison for each of the designated facilities. These people should have the interest and capability to address pest management issues. The IPM Contact Person should participate in all decisions that may directly or indirectly affect pest management. A list of personnel designated as Facility liaisons should be provided to the Contractor by the City. The Contractor's pest management technician should meet with the facility liaison, upon initiation of the contract, and prior to performing pest management services. The Contractor and Facility Liaison will:

1. Identify and discuss specific problem areas in the facility;

2. Facilitate access to all management areas for that facility;

3. Identify and discuss building features or personnel practices that might contribute to pest infestations;

4. Discuss effectiveness of previous control efforts; and

5. Notify pest management personnel of any new restrictions or special safety precautions.

SECTION III
BIDDER RESPONSE DOCUMENTS

A. ITEMS REQUIRING BIDDER RESPONSE

NOTE: *Bidders must provide responses where indicated to the following items. Failure to provide a response to each of the items in this section may be grounds for rejection of bid.*

1. SBE/EBE FIVE PERCENT (5%) BID EVALUATION PREFERENCE

On February 9, 1999, the Sacramento City Council adopted an Emerging and Small Business Development program to provide enhanced opportunities for the participation of small business enterprises (SBEs) and emerging business enterprises (EBEs) in the City's contracting and procurement activities. Any bid or quotation submitted by a firm that is certified as a SBE by the City of Sacramento, or that is certified as an EBE by the City of Sacramento, will receive a five percent (5%) bid evaluation preference for the purpose of determining the lowest responsible bidder. If, after applying the 5% bid evaluation preference, the bid of an SBE/EBE firm receiving such preference is determined to be the lowest responsible bid, the award will be made for the actual amount bid. To receive this bid evaluation preference, a firm must be certified as a SBE or EBE at the time of bid opening. Questions regarding eligibility for SBE/EBE certification should be addressed to the City of Sacramento Procurement Division, at (916) 808-6747.

A. SMALL BUSINESS ENTERPRISE (SBE) CERTIFICATION

Is the firm submitting the bid certified by the City of Sacramento as a small business enterprise? Check the appropriate block below:

☒ **YES** –the firm submitting the bid is certified by the City of Sacramento as a small business enterprise.

☐ **NO** -the firm submitting the bid is not certified by the City of Sacramento as a small business enterprise.

If the response to the above is YES, provide the City of Sacramento Certification Number APP5000A30P.

B. EMERGING BUSINESS ENTERPRISE (EBE) CERTIFICATION

Is the firm submitting the bid certified by the City of Sacramento as an *emerging* business enterprise? Check the appropriate block below:

☒ **YES** - the firm submitting the bid is certified by the City of Sacramento as an emerging business enterprise.

☐ **NO** - the firm submitting the bid is not certified by the City of Sacramento as an emerging business enterprise.

If the response to the above is YES, provide the City of Sacramento Certification Number: APP5000A30P.

1. LOCAL BUSINESS SALES/USE TAX DEDUCTION

The Sacramento City Code requires the City to identify those bids that are subject to the City's local sales or use tax under the provisions of Part 1.5 of Division 2 of the California Revenue and Taxation Code and Chapter 3.24 of the Sacramento City Code. The lowest responsible bidder shall be determined after the amount of local sales or use tax that would be received by the City is deducted from such bids. The current rate at which such local sales or use tax is received by the City is one percent (1%). Therefore, in evaluating bids to determine the lowest responsible bidder, bids that are subject to this tax at the time of bid opening shall have an amount equal to one percent (1%) of the taxable total deducted from the bids. This deduction shall be in addition to the application of any bid price preferences or other deductions authorized by the City Code. Such deductions shall be made for bid evaluation purposes only. Contract awards shall be made at the actual bid amount.

In order to identify those bids that are subject to the City's local sales or use tax, all bidders shall respond to the following:

Subject: Emerging and Small Business Enterprise Certification

Congratulations! The City of Sacramento Office of Small Business Development (OSBD) has determined that your firm meets the criteria for certification under the **Emerging and Small Business Development Program (ESBD).**

Effective this day, your firm has been certified as a **Small Business Enterprise.** This certificate will expire **December 30, 2009.** It is your responsibility to notify this office, within thirty (30) days, of any change in certification status of your firm. Failure to do so will result in revocation of this certification issued by this office. The City's Office of Small Business Development reserves the right to review the certification at any time for purposes of certification compliance.

Your vendor code number is **APP5000A30P.** It may be used when working with any City of Sacramento procurement or contracting project. You must notify this office within (30) days if there is a change of ownership, business name, or address. It will also be your responsibility to contact our office prior to your expiration date for a recertification application.

Keep this letter as proof of ESBD certification. Thank you for joining the City of Sacramento ESBD Program family. If you have any questions about your certification, please call our new number **(916) 808-6747.**

Sincerely,

Trevor Walton
Program Specialist

Does the bidder have fixed offices or locally taxable distribution points within the boundaries of the City of Sacramento? X Yes; or ___ No

If the answer to Question #1 is "Yes":

1) Provide the address of the bidder's fixed offices or locally taxable distribution point(s):

4551 ORANGEGROVE AVENUE
SACRAMENTO, CA. 95841

Specify: fixed office location or distribution point(s): FIXED OFFICE LOCATION

2) Provide the bidder's current, valid City of Sacramento Business Operations Tax Certificate Number: 52973

3. PAYMENT DISCOUNT

Will you offer a prompt payment discount? Yes [X] or No [ ] (Net 30 days)

If Yes, the Payment Discount is 5 % for payment within 30 calendar days, which will be computed from the date service is complete and is accepted by the City, or the date a proper invoice is received, whichever is later.

PAYMENT DISCOUNTS SHALL BE CONSIDERED IN AWARDING THE CONTRACT AS SET FORTH IN THE "BID INSTRUCTIONS AND REQUIREMENTS", PARAGRAPH 11 (ENTITLED "PAYMENT DISCOUNTS").

SECTION III – BIDDER RESPONSE DOCUMENTS

B. ITEMS THAT MUST BE SUBMITTED BY SUCCESSFUL BIDDER PRIOR TO START OF CONTRACT

The following documents are required to be completed and submitted by the successful bidder prior to the award of contract of the contract:

1. CERTIFICATE OF INSURANCE

Successful bidders are REQUIRED to submit the necessary Certificate(s) of Insurance as called for in the General Conditions prior to award of the contract.

2. BUSINESS OPERATIONS TAX CERTIFICATE

Chapter 3.08 of the Sacramento City Code requires that anyone conducting business in the City of Sacramento obtain a **Business Operations Tax Certificate** and pay the applicable tax if necessary. Successful bidders will be REQUIRED to show compliance with this requirement prior to award of the contract.

To obtain information about the Business Operations Tax Certificate, contact the City of Sacramento, Revenue Division, 915 I Street, Room 1214, Sacramento, CA 95814, or telephone (916) 808-8500.

C. BID GUARANTEE

THIS SECTION IS NOT APPLICABLE TO THIS BID

D. PERFORMANCE BOND

THIS SECTION IS NOT APPLICABLE TO THIS BID

E. PAYMENT BOND

THIS SECTION IS NOT APPLICABLE TO THIS BID

F. DRUG FREE WORKPLACE POLICY AND AFFADAVIT

THIS SECTION IS NOT APPLICABLE TO THIS BID

b. In the event I am unable to provide a certain benefit, despite taking reasonable measures to do so, if I provide the employee with a cash equivalent, I will not be deemed to be discriminating in the application of that benefit.

c. If I provide employee benefits neither to employee's spouses nor to employee's domestic partners.

d. If I provide employee benefits to employees on a basis unrelated to marital or domestic partner status.

e. If I submit, to the Program Coordinator, written evidence of making reasonable efforts to end discrimination in employee benefits by implementing policies which are to be enacted before the first effective date after the first open enrollment process following the date the Contract is executed with the City.

I understand that any delay in the implementation of such policies may not exceed one (1) year from the date the Contract is executed with the City, and applies only to those employee benefits for which an open enrollment process is applicable.

f. Until administrative steps can be taken to incorporate, in the infrastructure, nondiscrimination in employee benefits

The time allotted for these administrative steps will apply only to those employee benefits for which administrative steps are necessary and may not exceed three (3) months from the date the Contract is executed with the City.

g. Until the expiration of a current collective bargaining agreement(s) where, in fact, employee benefits are governed by a collective bargaining agreement(s).

h. I take all reasonable measures to end discrimination in employee benefits by either requesting the union(s) involved agree to reopen the agreement(s) in order for me to take whatever steps are necessary to end discrimination in employee benefits or by my ending discrimination in employee benefits without reopening the collective bargaining agreement(s).

i. In the event I cannot end discrimination in employee benefits despite taking all reasonable measures to do so, I provide a cash equivalent to eligible employees for whom employee benefits (as listed previously), are not available.

Unless otherwise authorized in writing by the City Manager, I understand this cash equivalent must begin at the time the union(s) refuse to allow the collective bargaining agreement(s) to be reopened or no longer than three (3) months from the date the Contract is executed with the City.

6. I understand that failure to comply with the provisions of Section 5. (a) through 4. (i), above, will subject me to possible suspension and/or termination of this Contract for cause; repayment of any or all of the Contract amount disbursed by the City; debarment for future contracts until all penalties and restitution have been paid in full; deemed ineligible for future contracts for up to two (2) years; the imposition of a penalty, payable to the City, in the sum of $50.00 for each employee, for each calendar day during which the employee was discriminated against in violation of the provisions of the Ordinance.

7. I understand and do hereby agree to provide each current employee and, within ten (10) days of hire, each new employee, of their rights under the Ordinance. I further agree to maintain a copy of each such letter provided, in an appropriate file for possible inspection by an authorized representative of the

City. I also agree to prominently display a poster informing each employee of these rights.

8. I understand that I have the right to request an exemption to the benefit provisions of the Ordinance when such a request is submitted to the Procurement Services Division, in writing with sufficient justification for resolution, prior to contract award.

   I further understand that the City may request a waiver or exemption to the provisions or requirements of the Ordinance, when only one contractor is available to enter into a contract or agreement to occupy and use City property on terms and conditions established by the City; when sole source conditions exist for goods, services, public project or improvements and related construction services; when there are no responsive bidders to the EBO requirements and the contract is for essential goods or services; when emergency conditions with public health and safety implications exist; or when the contract is for specialized legal services if in the best interest of the City.

9. In consideration of the foregoing, I shall defend, indemnify and hold harmless, the City, its officers and employees, against any claims, actions, damages, costs (including reasonable attorney fees), or other liabilities of any kind arising from any violation of the City's Equal Benefits Requirements or of the Ordinance by me.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct, and that I am authorized to bind the Contractor to the provisions of this Declaration.

SECTION III – BIDDER RESPONSE DOCUMENTS

I. DECLARATION OF COMPLIANCE
Living Wage Ordinance

Name of Contractor: APPLIED PEST MANAGEMENT, INC / PARATEX TERMITE

Address: 4551 ORANGEGROVE AVE, SACRAMENTO, CA- 95841

The above named contractor ("Contractor") hereby declares and agrees as follows:

1. I have read and understand the Living Wage Requirements provided to me by the City of Sacramento ("City") in connection with the City's request for proposals or other solicitation for the performance of services under a City contract.

2. As a condition of receiving the City contract, I agree to fully comply with the Living Wage Requirements, as well as any additional requirements that may be specified in the City's Living Wage Ordinance codified at Chapter 3.58 of the Sacramento City Code (the "Ordinance"). If required by the Ordinance, I will pay not less than the minimum compensation specified in the Ordinance to my employees, for all time spent performing any work under my City contract.

3. If the amount of my City contract is less than $100,000, as a condition of receiving this contract I will notify the City in writing if the aggregate value of my City contract and of any other Nonprofessional Services contract(s) covered by the Ordinance that the City has awarded to me within the previous 12 months, is $100,000 or more.

4. I acknowledge and agree that the Living Wage Requirements, the Ordinance and this Declaration shall constitute part of my City contract, and that these provisions shall govern in the event of any conflict with any other provisions of the contract.

5. I further acknowledge and agree that any violation of the Living Wage Requirements or the Ordinance constitutes a material breach of my City contract, and that, if such a breach occurs, the City will be authorized to terminate the contact, and pursue all available legal and equitable remedies.

6. If requested by the City, I will promptly submit certified payroll records to the City, for myself and/or for my subcontractor(s), as requested by the City, and I will take any other steps as may be required by the City to determine whether my subcontractor(s) or I have complied with the Living Wage Requirements and the Ordinance.

7. I will require all of my subcontractors who are covered by these requirements to comply with the Living Wage Requirements and any additional requirements that may be specified in the Ordinance, and I will include these requirements in all subcontracts covered by the Ordinance.

8. I will defend, indemnify and hold harmless the City, its officers and employees against any claims, actions, damages, costs (including reasonable attorney fees) or other liabilities of any kind arising from any violation of the City's Living Wage Requirements or the Ordinance by me or by any subcontractor retained to perform work or provide services under my City contract.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct, and that I am authorized to bind the Contractor to the provisions of this Declaration.

RESOLUTION NO. 2007-862

Adopted by the Sacramento City Council

December 4, 2007

AWARD CONTRACT FOR INTEGRATED PEST MANAGEMENT SERVICES

BACKGROUND

A. The City of Sacramento has a requirement for pest management services for all City-owned and occupied buildings. The Department of General Services, Facilities Management Division, is responsible for delivering these services to their customers throughout the City.

B. In October 2007, the City issued a formal Invitation to Bid (B0811811018) for integrated pest management services and eight bidders responded. Two apparent low bidders, Ecolab and True Value Pest Control, were found to be non-responsive and rejected. The lowest responsive and responsible bidder was found to be Applied Pest Management, Inc.

BASED ON THE FACTS SET FORTH IN THE BACKGROUND, THE CITY COUNCIL RESOLVES AS FOLLOWS:

Section 1. Award a one-year contract with three one-year renewal options to Applied Pest Management, Inc., the lowest responsive and responsible bidder, for the purchase of integrated pest management services in an amount not to exceed $230,000.

Section 2. Authorize the City Manager or the City Manager's designee to execute the contract specified above and enter into such extension(s), provided that sufficient funds are available in the budget adopted for the applicable fiscal year(s).

Adopted by the City of Sacramento City Council on December 4, 2007 by the following vote:

Ayes: Councilmembers Cohn, Fong, Hammond, McCarty, Pannell, Sheedy, Tretheway, and Waters.

Noes: None.

Abstain: None.

Absent: Mayor Fargo.

Kevin McCarty, Vice-Mayor

Attest:

for Shirley Concolino, City Clerk

Additional Insured – Owners, Lessees or Contractors – Scheduled Person or Organization - CG 20 10 07 04

Policy Amendment (s) Commercial General Liability

Insured: Applied Pest Management, Inc. Policy Number: MZG80873313

Producer: ISU McNeil Insurance Agency, Inc. Policy Period: 05/01/07 TO 05/01/08

This endorsement modifies insurance provided under the following:

Commercial General Liability Coverage Part

Schedule:

Name of Additional Insured Person (s) or Organization (s)

City of Sacramento, Its Officials, Agents Employees & Volunteers

(If no entry appears above, information required to complete this endorsement will be shown in the Declarations as applicable to this endorsement.)

A. **Section II – Who is an Insured** is amended to include as an additional insured the person (s) or organization (s) shown in the Schedule, but only with respect to liability for **bodily injury, property damage** or **personal and advertising injury** caused, in whole or in part, by:

1. Your acts or omissions; or
2. The acts or omissions of those acting on your behalf;

In the performance of your ongoing operations for the additional insured (s) as the location (s) designated above.

B. With respect to the insurance afforded to these additional insureds, the following additional exclusions apply:

This insurance does not apply to **bodily injury** or **property damage** occurring after:

1. All work, including materials, parts or equipment furnished in connection with such work, on the project (other than service, maintenance or repairs) to be performed by or on behalf of the additional insured (s) at the location of the covered operations has been completed; or

2. That portion of **your work** out of which the injury or damage arises has been put to its intended use by any person or organization other than another contractor or subcontractor engaged in performing operations for a principal as a part of the same project.

Department of Transportation
Street Maintenance Services

Pavement Maintenance

Best Management Practices as applies to storm water protection

Practice:

It shall be the practice of the City of Sacramento Department of Transportation personnel involved in street maintenance to reduce to the maximum extent practicable the flow, migration, or spillage of contaminates, silt and other debris into the storm water drainage system.

Pavement Maintenance core services will conform to the following general practices and procedures;

1. Maintenance planning and scheduling will include consideration of potential impacts to stormwater quality. Due to the nature of paving operations, the scheduling of patching, resurfacing and surface sealing naturally corresponds with the dry weather seasons. Scheduling considerations of other core services shall include:
    a. Time of season
    b. Weather forecast
    c. Viability/ practicality of method
    d. Presence of downstream BMP's (i.e., pumping station, maintained drainage ditches)
    e. Materials being used

2. Storm drains in **applicable** work zones will be covered or blocked to prevent debris from entering the stormwater system during operations. During some paving operations, work is done in the center of a wide corridor which may not require inlet protection; in such circumstances, work will be monitored by the Supervisors to ensure equipment is in place to keep debris from paving operations out of the gutter and associated drain inlets.
    a. As part of the initial assessment of all jobs, the work zone and immediate area will be checked for possible points where debris may enter the storm drain system before work begins.
    b. Filter fabric is to be placed at drain inlets adjacent to work site and downstream inlets close to work area.
        i. **Remove inlet protection after job is complete or after water form emulsified oil sealants has drained or evaporated.**
    c. Although pollution potentials generated by paving operations are generally benign, drain inlet protection shall be evaluated in cases where:

i. There is a potential for water/irrigation line fracture
ii. There is the presence of "nuisance flows"
    1. Excessive water flowing off adjacent parcels into gutter.
    2. Irrigation flowing off nearby parcels into gutter.

d. Work sites that have been identified as having nuisance flows associated with them will require gravel bags or some other measure designed to filter turbid water generated from work-related sediment interacting with the nuisance flow.
    i. In the event of turbid water discharging in the gutter, the measure put in place shall be monitored to:
        1. Proper functioning of measure (i.e., adequate filtering of turbid flow prior to discharging into drain inlet).
        2. Ensure that there is no localized flooding at any intersection or street that may impact traffic.
        3. Ensure no turbid flows enter any downstream drain inlets.
    ii. If work is conducted on a relatively steep hill, additional gravel bags shall be placed **in the gutter** leading to the next downstream drain inlets in order to.

e. Where there is no practical method to cover or block off stormwater facilities, work shall be planned and conducted so as to minimize or exclude materials falling into the stormwater system
    i. All sediment and debris is contained within the work area by crews either sweeping or vacuuming.
    ii. Spoils may be used to block any flow in the gutter as long the downstream portion of the gutter is monitored for any turbid flows threatening to enter a storm drain, and that there is no localized flooding issues.

3. Materials from operations will be kept within the work zone at all times. Sides of work zone and gutters are kept clean so no loose debris associated with paving operations are left on the street or in the gutter.

4. All crews and supervisors will identify and cleanup (or schedule for cleanup) stormwater contaminates observed entering drain inlets during operations.

5. Supervisors will inspect and document work site's erosion and sediment control measures before, during, and after storm events and makes necessary corrections as is required.

6. Vehicles carry sand to absorb any spills of gas, oil, vehicle fluids or other liquid contaminates, and clean up debris shall be disposed of properly.
    a. Any diesel/release agent applied to paving equipment (Paver) to prevent asphalt from sticking shall be done over porous surfaces, contained within paving operations site, or absorbed with sand and swept up.

7. Selection of the most effective, low-toxic release agents applied to tool, boot, and equipment to keep asphalt from sticking.
    a. Application of oil is done over pervious surfaces or over asphalt mix (i.e., truck positions apron over the Paver prior to oil being sprayed onto the apron.

8. Materials, cut, dug, or otherwise displaced by operations will be removed.

9. Sawcutting operations performed by the paving crews shall occur during dry weather, and all slurry is to be contained and removed using an on-site vacuum.

10. At no time will the work area be washed down with water to clean up.

11. All Department of Transportation vehicles will conform with the Vehicle Code Section 23115 which states in part; No vehicle loaded with garbage, swill, cans, bottles, wastepaper, ashes, refuse, trash, or rubbish, or any other noisome, nauseous or offensive matter, or anything being transported to a dump site for disposal shall be driven or moved upon any highway unless the load is totally covered in a manner which will prevent the load or any part of the load form spilling or falling from the vehicle.

12. All vehicles and equipment leaking vehicle fluids will be reported to the repair shop.
    a. Catch drips from equipment that is not in use with pans or absorbent material placed under the machines.
    b. Dispose of collected material and absorbents properly.

Department of Transportation
Street Maintenance Services

In-Source Concrete Maintenance

Best Management Practices as applies to storm water protection

Practice:

It shall be the practice of the City of Sacramento Department of Transportation personnel involved in street maintenance to reduce to the maximum extent practicable the flow, migration, or spillage of contaminates, silt and other debris into the storm water drainage system.

In- Source Concrete Maintenance core services will conform to the following general practices and procedures;

1. Maintenance planning and scheduling will include consideration of potential impacts to stormwater quality. Scheduling considerations shall include:
    a. Time of season
    b. Weather forecast
    c. Viability of method

August 10, 2007

New Service
Voluntary Containerized Yard Waste Collection Service will begin on:
Thursday, August 30, 2007

Dear Sacramento Resident:

Your Councilmember, in conjunction with Solid Waste Services, has identified your community as having a heavy interest in the Voluntary Containerized Yard Waste Program. Residents that participate in the Voluntary Containerized Yard Waste Collection program will receive a 24% reduction on their garden refuse fee.

In addition to the weekly containerized service, the program also includes 8 loose-in-the-street collections. These occur as follows:

- Leaf Season: Twice per month during November and December
- Pruning Season: Last week of the month during February, May and October
- Christmas Trees: Second week of January

Your containerized yard waste collection service will begin on Thursday, August 30, 2007. Service is weekly and will be the same as your trash collection day. Residents that participate in the program will receive their last weekly loose-in-the-street collection on Tuesday, August 28, 2007.

While this is a voluntary program, residents must only use their container if they choose to participate in the program. Yard waste must not be placed on the street other than the above schedule. For residents that use a gardening service, please make sure they are aware of the program and have access to your container. You will begin to see containers delivered on August 26, 2007. Residents that do not wish to participate in the program can continue to place their yard waste loose-in-the-street.

Please contact Customer Service at (916) 808-5454 if you **DO NOT** want the container or if you have additional questions contact Doug Huston, Program Analyst, at (916) 808-4935.

Sincerely

Enrique Hernandez

RESOLUTION NO. 2004-691

ADOPTED BY THE SACRAMENTO CITY COUNCIL

ON DATE OF AUG 2 4 2004

RESOLUTION ADOPTING A VOLUNTARY CONTAINERIZED COLLECTION SERVICE PROGRAM FOR GARDEN REFUSE AND ADOPTING PROGRAM REGULATIONS

WHEREAS, pursuant to Article III of Chapter 13.10 of the Sacramento City Code, the City operates a garden refuse collection and disposal program. Under this program, the City periodically collects garden refuse deposited in City streets, disposes of the garden refuse and sweeps the City streets. The owners of properties fronting on streets where these services are provided are required to pay the lawn and garden service fee established by resolution of the City Council to cover the City's cost to provide these services; and

WHEREAS, on June 29, 2004, the City Council adopted Ordinance No. 2004-036 enacting City Code Section 13.10.475 that authorizes the City Council to adopt, by resolution, a voluntary containerized collection service program for garden refuse. Such a program would allow qualifying residential property owners in the city with an option to subscribe to containerized garden refuse collection and disposal service as an alternative to depositing garden refuse in city streets for collection, and such property owners would not be entitled to deposit garden refuse in the street for City collection except to the extent that the deposit of garden refuse in the street is authorized under the City's voluntary containerized collection service program. Under City Code Section 13.10.475, a property owner's decision whether to subscribe to the program is voluntary, and participation in the program is not required as a condition of owning residential property in the City; and

WHEREAS, City Code Section 13.10.475 authorizes the City's Integrated Waste General Manager to promulgate regulations for operation of a voluntary containerized collection service program, which shall become effective when adopted by City Council resolution, and requires customers who voluntarily subscribe to containerized garden refuse collection service to pay the rates, fees and charges established for this service by City Council resolution; and

WHEREAS, the fees for containerized collection of garden refuse, consisting of the fee for containerized lawn and garden service and the fee for street sweeping service, were established by City Council Resolution No. 2004-514 adopted on June 29, 2004; and

---

FOR CITY CLERK USE ONLY

RESOLUTION NO: 2004-69

DATE ADOPTED AUG 2 4 200

WHEREAS, pursuant to Section 13.10.475 of the Sacramento City Code, the City Council now desires to adopt a voluntary containerized collection service program for garden refuse and adopt the regulations for such program.

NOW, THEREFORE, BE IT RESOLVED BY THE COUNCIL OF THE CITY OF SACRAMENTO THAT:

1. The City Council hereby adopts a Voluntary Containerized Collection Service Program for garden refuse (hereafter referred to as the "Program"), pursuant to Section 13.10.475 of the Sacramento City Code. Under the Program, residential property owners in the City who qualify for the Program may voluntarily request to subscribe to containerized garden refuse collection service in accordance with the applicable provisions of City Code Chapter 13.10, the Program Regulations adopted by this resolution, and such administrative procedures as may be adopted by the City's Integrated Waste General Manager to implement the Program Regulations. Property owners who subscribe to the Program shall pay the fees established by City Council resolution for containerized lawn and garden service and street sweeping service.

2. The Program Regulations promulgated by the City's Integrated Waste General Manager and attached hereto as **Exhibit A**, are hereby adopted.

RESOLUTION NO: 2004-691

DATE ADOPTED: AUG 24 2004

PROGRAM REGULATIONS
VOLUNTARY CONTAINERIZED LAWN AND GARDEN COLLECTION PROGRAM

1. The collection schedule shall be weekly for voluntary containerized (96 gallon greenstone container) lawn and garden service and include bi-weekly collection of loose material during Leaf Season (months of November and December), Pruning Season (end of February and March), and Growth Season (end of month of April, and August).

2. Residents who participate in the voluntary containerized Lawn and Garden Collection Program must agree to subscribe to the service for a minimum of 5 years to fully recover program's capital costs.

3. Participants in the Voluntary Lawn and Garden collection program that place improper material in their lawn and garden collection container will be warned three times.

    a. 1st Warning – A notice will be placed on the container (stating that improper material was found in the green waste container) and the container will be dumped as garbage by a garbage truck (utility bill account will be noted).
    b. 2nd Warning – A notice will be placed on the container (stating that this is the second time improper material was placed in the container) the container will be dumped as garbage by a garbage truck and a Supervisor will try to make contact with the customer (utility bill account will be noted).
    c. 3rd Warning – A notice will be placed on the container, stating that the container was not dumped because it contains improper material. The container can be dumped as garbage by a garbage truck for a fee of $11.62 (which is the Additional 90 gallon garbage container charge established in Resolution 2004-514). In addition, a letter will be sent to the customer stating future occurrences of placement of improper materials in the Lawn and Garden container will result in an automatic charge of $11.62 per occurrence.

4. Upon the first anniversary date of participation in the program, residents will be eligible for a second lawn and garden collection container at a reduced rate, if such rate has been adopted in the annual Fee and Charges report adopted by Council resolution.

5. Residents wanting a second lawn and garden container before their one year anniversary date in the program, will be required to pay the containerized lawn and garden rate for a second container established in the Annual Fee and Charges report. The current rate approved by Council on June 29, 2004, Resolution 2004-514, is $13.15 (rate includes $7.15 for containerized service and $6.00 for service of second container.

RESOLUTION NO.: 2004-691

DATE ADOPTED: AUG 2 4 2004

RESOLUTION NO. 2004-514

ADOPTED BY THE SACRAMENTO CITY COUNCIL

ON DATE OF JUN 2 2 2004

RESOLUTION ADOPTING FINDINGS AND AMENDING THE CITY OF SACRAMENTO FEE AND CHARGE REPORT TO ESTABLISH ADJUSTED SOLID WASTE FEES AND CHARGES

BE IT RESOLVED BY THE COUNCIL OF THE CITY OF SACRAMENTO:

WHEREAS, Articles XIIIC and D of the California Constitution (Proposition 218) establish various procedures for the approval of local taxes, assessments and property-related service fees; and

WHEREAS, for the imposition or increase of water, sewer and refuse collection service fees that are "property-related fees" are within the meaning of Proposition 218, Proposition 218 requires that a notice describing the proposed fee or fee increase and establishing a date, time and location of a public hearing on the proposed fee or fee increase, be mailed to the record owner of each parcel subject to the proposed fee or fee increase; and

WHEREAS, at such hearing (held not less than 45 days after the notice is mailed), Proposition 218 requires the agency proposing such fee or fee increase to consider all protests filed against the proposed fee or fee increase, and prohibits the agency from approving the proposed fee or fee increase if written protests against the proposed fee or fee increase are presented by a majority of the owners of the affected parcels; and

WHEREAS, on April 16, 2004, the City mailed a notice to all owners of property subject to the City's refuse collection service fees, which notice: (i) described proposed adjustments, including decreases and increases, in these fees for all parcels; (ii) provided the date, time and location of the public hearing when these proposed fee adjustments would be considered for adoption by the City Council; and (iii) notified such owners of their right to file a written protest against the proposed fee increases and proposed new fee with the City Clerk at or before the time set for public hearing; and

WHEREAS, the City Council has held such public hearing, and has considered all protests against the proposed fee adjustments, including decreases and increases, as well as all testimony and other information presented by City staff and members of the public.

FOR CITY CLERK USE ONLY

RESOLUTION NO. 2004-514

DATE ADOPTED: JUN 2 2 2004

NOW, THEREFORE, BE IT RESOLVED BY THE COUNCIL OF THE CITY OF SACRAMENTO:

1. Based on the testimony and other information presented to it, the City Council hereby finds that as of the date and time of the public hearing on this matter:

   The number of written protests received by the City Clerk against the proposed rate increases in the City's solid waste (garbage, recycling, lawn and garden refuse and street sweeping) service fees, is less than a majority of the record owners of the parcels that will be subject to the proposed increased fees.

2. That, pursuant to Sections 13.10.100, 13.10.440, 13.10.450, 13.10.460 of the Sacramento City Code, the City of Sacramento Fee and Charge Report is hereby amended to include the solid waste service fees and charges attached hereto as Exhibit A to take effect for services billed on or after July 1, 2004, for fiscal year 2004-2005 fees and charges..

3. That based on the information presented to it and upon all information in the public record, and in compliance with Public Resources Code Section 21080(b)(8), the City Council finds that the adjusted and increased solid waste service fees are for the purpose of:

   a. Providing funds to meet operating expenses.

   b. Permitting the generation of necessary cash flow to finance maintenance of the solid waste collection system and meeting financial reserves requirements.

   c. Permitting the purchase of necessary equipment for the system.

   d. Being a source of funds for capital projects necessary to maintain the system.
