FOR CITY COUNCIL USE ONLY

RESOLUTION NO.: 2004-514

DATE ADOPTED: JUN 22 2004

ORDINANCE NO. 2004-036

ADOPTED BY THE SACRAMENTO CITY COUNCIL

ON THE DATE OF JUN 2 9 2004

AN ORDINANCE AMENDING SECTION 13.10.010 AND ARTICLE III OF CHAPTER 13.10 OF THE SACRAMENTO CITY CODE RELATING TO VOLUNTARY CONTAINERIZED COLLECTION OF GARDEN REFUSE

BE IT ENACTED BY THE COUNCIL OF THE CITY OF SACRAMENTO:

SECTION 1

The Sacramento City Council hereby finds and declares that:

1. Pursuant to Article III of Chapter 13.10 of the Sacramento City Code, the city operates a garden refuse collection and disposal program. Under this program, the city periodically collects garden refuse deposited in city streets, disposes of the garden refuse and sweeps the city streets. Owners of properties fronting on streets where these services are provided pay a fee to cover the city's cost to provide these services, as established by resolution of the city council.

2. On September 27, 1977, city voters approved Measure A, which adopted an ordinance to prohibit the city from requiring the mandatory containerization of yard and garden refuse in the city, unless this prohibition is repealed or amended by a vote of the majority of the electors of the city at any municipal election. The city's garden refuse collection and disposal program complies with Measure A.

3. The deposit and collection of garden refuse in city streets results in various impacts, including (i) damage to street pavement by the claw loaders used to collect garden refuse deposited in city streets, (ii) pooling of storm drainage blocked by garden refuse improperly deposited in storm gutters, (iii) potential traffic and safety impacts where garden refuse is deposited in bike lanes and/or on narrow streets, (iv) improper deposits of trash and other unauthorized materials on garden refuse piles, and (v) and visual and aesthetic impacts considered undesirable by many city residents. For these reasons, numerous city residents have requested that the city provide an option to subscribe to containerized garden refuse collection service as an alternative to depositing garden refuse in city streets for collection.

4. Measure A prohibits mandatory containerization, but does not prohibit the city from providing property owners in the city with an option to voluntarily subscribe to containerized garden refuse collection and disposal service as an alternative to depositing garden refuse in city streets for collection, because the property owner's decision to participate in such a program would be voluntary, and the city would not be mandating or requiring that anyone make this decision. Establishment of such a program would serve the public interest and promote the public health, safety and welfare, because participation in the program would reduce the undesirable impacts associated with the deposit and collection of garden refuse in city streets that are described above.

SECTION 2

The definition of "solid waste manager" in Section 13.10.010 of the Sacramento City Code is amended to read as follows:

Solid waste manager or manager means the integrated waste general manager of the city general services department.

SECTION 3

Article III of Chapter 13.10 of the Sacramento City Code is amended to read as follows:

Article III. Garden Refuse*

*Editors Note: Measure A adopted 09-27-77 provides that mandatory containerization of yard and garden refuse shall not be required in the city without a majority vote of the electors of the city of Sacramento at a municipal election.

13.10.350 Garden refuse defined.

As used in this article, the term "garden refuse" means leaves, grass cuttings and garden trimmings, weeds and roots from which all dirt has been removed, shrubbery and tree trimmings of which no single piece shall exceed thirty-six (36) inches in length, four inches in diameter or forty (40) pounds in weight.

13.10.360 Lawn and garden service defined.

As used in this article, the term "lawn and garden service" means the periodic collection by the city of garden refuse from city streets, the disposal of the garden refuse, and the periodic sweeping of those streets.

13.10.370 Property classification defined.

As used in this article, property is classified as follows:

A. Residential.

Single-family residences: each property where there is only one dwelling unit on one parcel of property which is used primarily for single-family purposes.

Two-family residences: each property used primarily for two-family residential purposes.

Multi-family residences: each property used primarily for residential purposes having more than two but less than fifty-one (51) dwelling units.

Multiple family residences containing more than fifty (50) dwelling units shall be considered as being property used primarily for nonresidential purposes.

B. Nonresidential. Each property used primarily for nonresidential purposes. For purposes of this article, any residential condominium, residential planned development, residential stock cooperative, or mobilehome park shall be classified as nonresidential property.

13.10.375 Voluntary containerized collection service defined.

As used in this article, the term "voluntary containerized collection service" means the periodic collection and disposal by the city of garden refuse placed in containers on city streets pursuant to section 13.10.475 of this code, and the periodic sweeping of those streets.

13.10.380 Legislative findings.

The city council finds and determines:

A. That the public health, safety and welfare of all the citizens of the city requires that the accumulation and disposal of garden refuse from properties within the city be handled in a manner producing the greatest good and least public inconvenience, cost and maintenance to the city and its citizens.

B. That depositing garden refuse in the streets in front of properties within the city for periodic collection, disposal and street sweeping by the city is a service afforded by the city which is of substantial benefit to owners of all

properties within the city to which the service is extended.

C. That the costs to the city in providing for the periodic collection, disposal of garden refuse from the streets in front of properties within the city, and sweeping of the streets should be collectively borne by the owners of the properties through the collection of a lawn and garden service fee.

D. That depositing garden refuse in the streets of the city for periodic collection and disposal by city forces should be limited and restricted to:

1. The owners of those residential properties with concrete curbs and gutters.
2. The owners of those residential properties without concrete curbs and gutters, who have requested the service, been approved by the director of public works, and have agreed to pay the required fee.
3. The owners of those nonresidential properties with concrete curbs and gutters who have requested the service and have agreed to pay the required fee based upon the amount deposited in the street.

E. That depositing garden refuse in the streets of the city in front of properties not provided the periodic garden refuse collection and disposal services by city forces is prohibited.

F. That street sweeping services are to be continued for, and charged to, all properties (residential and non-residential) having concrete curbs and gutters.

G. That the city manager, in order to promote the public health, safety and welfare, should have the authority to prohibit the placement of garden refuse in the streets and at curbside upon the occurrence of adverse environmental conditions. If the city manager determines that a prohibition on placement of garden refuse would facilitate effective drainage, storm water runoff, prevention of flooding, or other public interest, he or she should have the authority to accomplish the prohibition by publicly declaring that such adverse conditions have arisen.

13.10.390 Deposit of rubbish and waste matter on streets regulated.

It is unlawful and an infraction punishable by a fine not to exceed five hundred dollars ($500.00) for any person to deposit rubbish, waste matter, or garden refuse in the streets of the city in a manner other than that expressly authorized by this article.

13.10.400 Deposit of garden refuse authorized--Residential property.

A. Garden refuse produced on residential properties with concrete curbs and gutters may be deposited in the streets of the city at the times and in the manner prescribed by this article. Garden refuse from eligible residential property shall be placed in the street in front of and contiguous to the properties from which the garden refuse is removed. Any eligible residence on a corner parcel may place garden refuse in the street in front of or on the side of and contiguous to the property.

B. Service to Properties Without Concrete Curbs and Gutters.

1. Owners of residential properties without concrete curbs and gutters who wish to have periodic collection and disposal of garden refuse from the streets in front of their properties may petition the solid waste manager to have their property serviced. The solid waste manager will grant or deny the petition based on feasibility, cost, and efficiency requirements of the city. Any petition granted under this section will bind the property owner to continue the service for the remainder of time the property owner owns the property.
2. The solid waste manager will notify the property owner of the granting of the petition and of the irrevocability of the provision of service. Those owners of residential properties without concrete curbs and gutters whose petitions are approved by the solid waste manager under this section shall receive the service at the times and in the manner prescribed by this article for owners of residential properties with concrete curbs and gutters, or in such other manner as mandated by the solid waste manager.

C. Garden refuse produced on residential properties not provided garden refuse collection and disposal services by city forces shall not be deposited in the streets of the city.

D. No garden refuse shall at any time be placed for collection in a manner which shall:

1. Impede traffic or constitute a hazard to traffic;
2. Impede the flow of water through any drainage channel or in any manner impede the drainage of water; or
3. Be on or impede any public sidewalk or other public walkway. All garden refuse placed in the streets will be placed and maintained in as compact a pile as possible.

E. No garden refuse shall be placed for collection within a set of undulations.

F. The placement of garden refuse in the street or at curbside shall be

prohibited at the direction of the city manager if and when:

1. The city manager finds that such prohibition is reasonably necessary to facilitate effective storm drainage and runoff, to prevent flooding, to counteract adverse environmental conditions, or to promote other public interest;
2. The city manager issues a declaration of emergency specifying the condition or conditions necessitating such prohibition and describing the prohibited activities and the duration of the prohibition; and
3. The city manager distributes a press release containing the declaration of emergency to local broadcast media, the Sacramento Bee newspaper, and local radio stations.

In addition to the foregoing prohibition, garden refuse in the street or at curbside at the time the city manager makes a declaration of emergency as set forth herein shall be removed from the street and curbside so as not to impede the flow and drainage of water.

13.10.410 Maximum amount of deposit.

The maximum amount of garden refuse that may be deposited in the streets during a calendar week is as follows:

A. For single and two-family residential structures, two cubic yards;

B. For multi-family residential structures containing at least three dwelling units and not more than fifty (50) dwelling units, one cubic yard per dwelling unit.

13.10.420 Time of deposit.

Garden refuse may be deposited in the streets in front of residential properties within the city at any time.

13.10.430 Garden refuse from nonresidential properties.

No person shall deposit garden refuse from nonresidential properties in the streets of the city without first obtaining the prior written authorization of the solid waste manager. The failure of any person to obtain such written authorization shall not absolve him or her from liability for any fee assessed for collection of unauthorized deposits of garden refuse. The solid waste manager may refuse to authorize the deposit of garden refuse for collection if a determination is made by the solid waste manager that the property lacks concrete curbs and gutters, or that the collection by the city could be impractical, uneconomic, or otherwise create problems involving public health or safety. In authorizing the deposit in

city streets of garden refuse from nonresidential properties the solid waste manager shall specify the time, manner, and place of the deposit.

13.10.440 Lawn and garden service fee established--Residential properties.

It is found and determined that availability of the service allowing the deposit of garden refuse from residential properties in the streets of the city for the collection, disposal, and street sweeping by city forces is a benefit to the owners of all eligible residential properties within the city and such owners are made liable for the payment of the lawn and garden service fee imposed by this article irrespective of their actual use of city streets for deposit of garden refuse.

A. Except as provided otherwise in section 13.10.475 of this code, the fee shall be and is imposed on all properties within the city and on any newly constructed residence to commence at the beginning of the third full month after such newly constructed residence obtains garbage and water service.

B. The fee shall not exceed the cost of making available and providing the service, as determined by the solid waste manager, utilizing normal and reasonable accounting procedures, and taking into account the future needs of the division responsible for garden refuse collection.

13.10.450 Rate of fee--Residential properties.

Notwithstanding any provision of this code to the contrary, the rates, fees, and charges for residential purposes as established or provided for in this article shall hereafter be established by resolution of the city council. In establishing the rates, fees, and charges, the portion of the lawn and garden service fee attributable to street sweeping shall be separately set forth and established.

13.10.460 Rate of fee--Nonresidential property.

The lawn and garden service fee imposed upon depositing garden refuse in city streets from any nonresidential property, where authorized by the solid waste manager pursuant to Section 13.10.430 of this code, shall be based upon the approximate average monthly quantity of garden refuse so deposited from the property. All nonresidential properties shall be liable for the portion of the lawn and garden service fee attributable to street sweeping, as established from time to time in accordance with the provisions of this section.

The approximate average monthly quantity of garden refuse deposit shall be determined by the solid waste manager and may be revised from time to time to reflect actual approximate average quantities deposited in the city streets from the properties to which the service is provided. Any garden refuse placed for collection pursuant to this section shall be subject to the provisions of this article

specifying the time, manner and place for placement for collection of garden refuse from residential properties.

Notwithstanding any provision of this code to the contrary, the rates, fees, and charges established or provided for in this section shall hereafter be established by resolution of the city council. In establishing the rates, fees and charges, the portion of the lawn and garden service fee attributable to street sweeping shall be separately set forth and established.

13.10.470 Optional fee--Multi-family residential properties.

The owner of any residential property on which three or more dwelling units are located may elect to be charged the lawn and garden service fee as if it were being used primarily for nonresidential purposes for the sole purpose of establishing the rate to be paid for such property; provided, in no event shall any such election establish an exemption from the lawn and garden service fee. This election shall be filed with the solid waste manager on such form as may be prescribed by the solid waste manager and the election shall remain in effect until revoked in writing by the owner or the owner's successor in interest. Provided further that this election shall not exempt the owner from payment of the portion of the fee attributable to street sweeping, which portion shall be billed to and paid by the owner.

13.10.475 Establishment and operation of voluntary containerized collection service program

Notwithstanding any provision of this article to the contrary:

A. The city council may by resolution adopt or amend a voluntary containerized collection service program. Under such a program, residential customers who otherwise would be required to pay the lawn and garden service fee specified in section 13.10.440 of this code and who would otherwise deposit garden refuse in city streets would be allowed to request voluntary containerized collection service instead.

B. If the city council adopts a voluntary containerized collection service program, the solid waste manager shall have the authority to promulgate regulations (hereafter the "program regulations") as necessary to operate the program, which shall become effective when adopted by resolution of the city council. The solid waste manager may adopt administrative procedures to implement the program regulations adopted by city council resolution.

C. A residential customer who voluntarily requests containerized collection service and is authorized to receive such service in accordance with the program regulations and administrative procedures shall be allowed to

subscribe to the voluntary containerized collection service program in accordance with the terms, conditions and requirements of this chapter, the program regulations and the administrative procedures.

D. A residential customer who subscribes to the voluntary containerized collection service program shall not be charged the lawn and garden service fee specified in section 13.10.440, shall be required to place garden refuse in a container specified by the city for city collection, and shall not be entitled to deposit garden refuse in the street for city collection, except to the extent that the deposit of garden refuse in the street is expressly authorized under the program regulations.

E. Garden refuse containers shall be placed for collection in accordance with the provisions of section 13.10.190, unless different requirements are specified in the program regulations.

F. Residential customers who subscribe to the voluntary containerized collection service program shall pay the rates, fees and charges established by resolution of the city council. The voluntary containerized collection service program rates, fees, and charges shall include the street sweeping fee, but in establishing these rates, fees, and charges, the portion attributable to street sweeping shall be separately set forth and established. These rates, fees and charges shall not exceed the City's costs of providing the voluntary containerized collection service and street sweeping service.

13.10.480 Collection of fees.

The lawn and garden service fee and voluntary containerized collection service fee shall be billed and collected in accordance with the provisions of Chapter 13.12 of this code.

13.10.490 Neighborhood cleanup programs.

Rubbish and waste matter may be deposited in the city streets for collection and removal by city forces when such deposits are expressly authorized by the solid waste manager in connection with a neighborhood cleanup program. The time and manner of deposit, together with any limitation upon the nature and extent of materials to be deposited, shall be determined by the solid waste manager and shall be communicated to the neighborhood in which the program is to be conducted.

13.10.500 Bare lot and multiple use property classifications--Fees--Lawn and garden service fees--Lawn and garden service fee classification board.

A. Definition. For the purpose of this section only, the term residential

property shall mean and refer to residential property classified for the purposes of this article in a classification established by Section 13.10.370 of this article excluding multiple family dwelling units having more than fifty (50) dwelling units.

B. Application. Any owner of residential property may apply for reclassification of such property according to the procedures set forth in this section. Any such application shall be filed on forms provided by the city and shall be filed with the revenue division of the city.

C. Lawn and Garden Service Fee Classification Board. The lawn and garden service fee classification board shall be composed of two city employee members, one of whom shall be from the department of finance and one of whom shall be from the department of general services. The membership of the board shall be appointed by, and shall serve at the pleasure of, the city manager. The board shall process all applications under and make the classifications of property described by this section.

D. Classifications. In addition to the classifications established by Section 13.10.370(A) of this code, there shall be two additional classifications of residential property. These two classifications shall be:

Bare lot: the bare lot classification shall include only residential property which, by virtue of the fact that it has no vegetation outside the dwelling unit, will not produce any garden refuse. The term outside the dwelling unit means outside the surface of the exterior surfaces. The term exterior surfaces means those surfaces of the dwelling unit on the exterior perimeter through at least one of which persons customarily and reasonably enter or exit the dwelling unit.

Multiple use lot: the multiple use lot classification shall include only parcels of residential property on which different types of use occur (e.g., residential and commercial) such that two or more different lawn and garden service fees according to classification rather than rate are collected on the property. No property exceeding one-quarter acre shall be classified in this classification.

In no event shall classification in either of these classes qualify any property for any other classification or fee.

E. Fees. Any property classified in the bare lot classification shall pay the lawn and garden service fee imposed by this article of $0.00 per month. Any property classified in the multiple use lot classification shall pay the lawn and garden service fee imposed by this article equal to the single highest fee which would be imposed on any one structure located on the property according to the other classifications in this article. Such fee shall

be charged to the owner of the entire parcel of property.

F. Processing Applications and Classifications. The board shall process all applications for classification in the bare lot and multiple use lot classifications. Each application shall initially be referred to the department of general services which shall inspect the property and report the results of such inspection to the board. The board shall evaluate each application based on the information contained in such application and the department of general service report and shall determine the proper classification for each such property. In the event the board determines that the proper classification for such property is either the bare lot or the multiple use lot classification, regardless of the date such determination is made, the effective date of the classification shall be the date the application was submitted to the revenue division. In the event the lawn and garden service fee collected by the city after the effective date of the classification exceeds the fee prescribed by this article, such excess shall be refunded to the then owner of the property as shown on the records of the revenue division as of the date of the refund.

G. Notices and Hearings. In the event a property for which application for classifications is made pursuant to this section is not reclassified, notice shall be given to the applicant which shall briefly specify the reason for the decision of the board. Any applicant who receives such notice who desires to have the application reconsidered by the board may apply for a hearing before the board. Any such application must be filed with the revenue division within fifteen (15) calendar days of the date of the notice that the property was not reclassified. The board shall within thirty (30) calendar days after an application for hearing schedule a hearing upon ten (10) days written notice to the applicant. The applicant may be present at such hearing and may present any evidence relevant to the classification of the property. The board shall reevaluate the classification and shall classify the property in the classification which it shall deem proper in light of the application, the report of the department of general services and the evidence submitted by the applicant at the hearing. In considering the application on rehearing the board may obtain a supplemental inspection report from the department of general services. Written notice of the action of the board shall be given to the applicant and the classification established by the board shall be final except as herein otherwise provided.

H. Reclassification Upon Changed Circumstances. In the event the nature of any property classified in the bare lot or multiple use lot classifications changes such that it is no longer properly classified in such classification, the board may reclassify the property into an appropriate classification after written notice to the property owner and a reasonable opportunity to the property owner to be heard on such reclassification.

SECTION 4

Should any part of this ordinance be declared invalid by a court of competent jurisdiction, the remaining provisions of this ordinance shall remain in full force and effect.

DATE PASSED FOR PUBLICATION: JUN 2 2 2004

Yard Waste Collection

The City of Sacramento collects yard waste two ways:

Loose-in-the-Street Program

Yard Waste Collection is provided by the City of Sacramento Department of Utilities Solid Waste Services. Residents can place a single pile of yard waste, up to two cubic yards, in front of their homes for collection each week.

Please follow these guidelines:

- No more than two cubic yards of yard waste material (3'x3'x6' pile) per collection.
- Additional amounts of material may be picked up for an extra fee. Call in advance to get a quote at 916-808-5454.
- Place pile six feet from any obstruction (cars, boats, basketball hoops, etc.), away from the gutter and out of the bike lane.
- Keep unacceptable materials out of your yard waste pile.
- Please do not prune during leaf season (October through December)

Containerized Yard Waste Collection Program

More than 50,000 residents currently participate in the Containerized Yard Waste Collection Program. The program utilizes 96 gallon yard waste containers and includes loose-in-the-street collections during peak seasons. Collection is the same day as your trash and recycling.

Please see the back panel for the loose-in-the-street collection schedule for this program.

Please follow these guidelines:

- Place containers out for collection by 6:00 AM on the day of collection
- Place all containers at least three feet apart
- Place containers six feet from any obstruction (cars, boats, basketball hoops, etc.)
- Place containers on the street and not on the curb, sidewalk or in the bike lane.

Acceptable Materials:

- Leaves
- Grass Trimmings
- Tree and Shrub Prunings
- Christmas Trees
- Sod (with dirt removed)

Unacceptable Materials:

- Trash and Debris
- Pet Feces
- Excessive Amount of Dirt
- Lumber and Concrete.

Yard Waste Contamination Increases Disposal Costs!

Are You Composting?

Backyard composting allows you to recycle your yard clippings and fruit and vegetable scraps into a valuable soil amendment right in your own yard. Call 808-5454 to learn about FREE Backyard Composting Seminars offered by Solid Waste Services.

Containerized Yard Waste Program
Loose-in-the-Street
Collection Schedule

- **January** - collection second week
- **February** - collection last week
- **May** - collection last week
- **October** - collection last week
- **November and December** - collection every other week

Share This Schedule With Your Gardner!

Important Information About Leaf Season
(October - December)

- Almost 25% of the annual total of yard waste is collected during leaf season.
- Delays in collection can take place due to the large volume of leaves. Rain can also impact the collection schedule.
- During leaf season view our online map with the daily projected collection schedule www.cityofsacramento.org/utilities
- To reduce flooding, place leaves in the street away from the gutters and storm drains

1.0 SITE DESCRIPTION

Detention Basin 7B is a 10.5 acre conjunctive use basin located in the North Natomas area of Sacramento immediately south of San Juan Road and east of the West Drainage Canal. The basin serves a developing urban watershed of approximately 100 acres. The pond is a sinuous channel of open water which is crossed by a recreation path in two locations dividing the pond into three pieces. The largest pond segment contains a small island. Runoff that collects in Basin 7B flows north through a pipe under San Juan Road into Basin 7A. The primary land use in the watershed is single family residential and freeway commercial.

Basin 7B has been designed to meet the flood control requirements of the North Natomas area and to provide the regional storm water quality control measures for the watershed it serves. The detention basin area features a year-round permanent pond for water quality; inlet structures on both the east and west sides of the basin; and a forebay located immediately downstream of the west inlet. The water quality basin will be subject to frequent, short-term inundation in the winter months while during the dry season only the pond and shoreline will be wet. A paved recreational path runs around the rim of the basin and another path follows the shore of the pond to create another loop in the basin floor. The paths also serve as an access to the basin for maintenance vehicles.

Table 1: Basin 7B Design Parameters

Minimum Year Round WSE	Maximum Storage (Acre Ft)	10-Year Event WSE	100-Yr Event WSE	Basin Rim Elev	Liner Present	Acres	Watershed Acreage	Capacity of Avg Annual Rainfall
0.00	51.40	5.00	6.50	11.50	Yes	10.3	100.50	80%

2.0 BASIN OBJECTIVES

The management and maintenance objectives for Basin 7B are described below. These objectives are implemented through the management measures described under Section 5.0 below. While every effort will be made to manage the basin in a manner that supports the habitat and recreation values of the site, the primary purpose of the basin as a drainage facility will always be given precedent over these secondary functions. In urgent situations any means deemed necessary by the Department of Utilities to maintain the function and safety of the facility will be employed.

2.1 Flood Control

During large storm events, the basin is designed to fill to within 5 feet of the outer rim elevation (11.5') and store up to 51.4 acre-feet of storm runoff during a 100-year, 10-day storm. Summertime flows and flows from small and moderate storms stay within the meandering channel. The volume of vegetation and other material in the basin will be controlled to allow unimpeded flow through the channel and to maintain the basin's stormwater volume capacity.

Objective FC-A: Maintain basin flood control capacity to store up to 51.4 acre-feet of storm run-off during a 100-year, 10-day storm.

Objective FC-B: Minimize impedance of flow out of basin following storm events.

2.2 Water Quality

Based on the City's water quality design criteria, the basin provides a combination of extended dry and wet detention for 80% of the average annual stormwater runoff. The design residence time within the channel provides for water quality enhancement through sedimentation and biological uptake of stormwater pollutants. Excess sediment and debris will be periodically removed from the basin to retain the basin's capacity for trapping sediment. Water quality will also be enhanced by maintaining emergent vegetation for biological uptake, to the extent that this vegetation doesn't interfere with flood control objectives.

Objective WQ-A: Maintain basin sediment trapping capacity for water quality enhancement.

Objective WQ-B: Maintain aquatic vegetation for biological uptake to enhance water quality.

Objective WQ-C: Prevent water contamination that would result from spills, urban runoff, debris, and waste material entering the basin.

Objective WQ-D: Prevent erosion of basin banks and slopes that could result in excess sedimentation and water quality degradation in basin.

2.3 Vegetation/Wildlife Habitat

Basin 7B has suitable conditions for supporting wildlife species typically found in aquatic, freshwater marsh, woodland, and grassland habitats. Aquatic and freshwater marsh species that have been identified at Basin 7B include great blue heron and egret. Special status wildlife species that could occur in the aquatic and marsh habitat within Basin 7B include giant garter snake and tri-colored blackbird. Raptor and woodland passerine species (perching birds and songbirds such as jays, blackbirds, finches, warblers, and sparrows) could potentially nest in the wooded portions of the basin once established. Valley elderberry longhorn beetle could potentially occur where elderberry shrubs have been established on-site. Wildlife species observed at Basin 7B that are typical of open grassy areas include sparrow, black phoebe, and black-tailed jackrabbit. A wintering resident western burrowing owl, a special status species, was observed at Basin 7B. The open grassland habitat also provides potential upland habitat for giant garter snake and foraging habitat for western burrowing owl, and foraging habitat for raptors.

To the extent that flood control and water quality objectives are not compromised, the vegetation within Basin 7B will be maintained to maximize its value for native wildlife species. This will be accomplished through maintaining native plant species characteristic of native wildlife habitat, and through control of invasive non-native vegetation. The establishment of nuisance wildlife species such as Canada geese, pigeons, skunks, and raccoons will be minimized through maintenance of vegetation that provides minimal shelter and keeping the basin clear of trash that would attract such species. Seasonal and location constraints on particular maintenance activities will be established to avoid and minimize impacts to sensitive and special status wildlife species.

Objective WH-A: Maintain native vegetation compatible with physical conditions of each distinct habitat area to maximize wildlife value.

Objective WH-A1: Pond Edge (aquatic habitat within 5 feet of edge of pond). Reduce spread of cattails and algae, while encouraging growth of non-invasive freshwater marsh plants such as sedges and rushes, to the extent that such vegetation does not interfere with flood control objectives.

Objective WH-A2: Islands. Encourage growth of native riparian trees and shrubs (sycamores, willows, alders) to support raptors and native passerines.

Objective WH-A3: Basin Floor Trees. Encourage growth of native riparian trees (sycamores, willows, alders) to support raptors and native passerines. Trees should be arranged in dispersed groupings separated by a predominance of open grassland (see WH-A4 below) to emulate the naturally occurring patterns consistent with the pre-development character of the North Natomas area.

Objective WH-A4: Basin Floor Open Grassland Habitat. Encourage establishment of native grasses and forbs (non-woody plants such as annuals and perennials) on the basin floor to provide cover, forage, and nesting habitat.

Objective WH-A5: Upper Basin and Slopes Woodland Habitat (>10-year flood event area). Encourage growth of native woodland trees (oaks, sycamores) and shrubs interspersed with native grasses and forbs. This area will have more vertical structure than the basin floor but will still have significant areas of open grassland as is typical of the upland oak habitats in the area. Maintain snags for raptor perches.

Objective WH-B: Minimize establishment of nuisance animal species such as skunks, pigeons, starlings, and stray pets. A variety of management measures may be used including vegetation control, trash control, habitat modifications, leash laws, and wildlife relocation depending on the severity of the problem.

Objective WH-C: Minimize impacts to sensitive wildlife species such as migratory songbirds and raptors (including burrowing owl), giant garter snake, western pond turtle, and valley elderberry longhorn beetle during maintenance activities. Include specific seasonal constraints for particular types of activities.

Objective WH-D: Establish sufficient cover and density of native species to successfully compete with invasive weed species.

2.4 Public Use

Basin 7B will be accessible to the public for limited recreational and environmental educational activities. Additionally, the cooperation of the surrounding neighborhoods in policing and maintaining the basin will be encouraged and is considered a key management objective for the basin. Programs that involve the community in stewardship activities such as litter patrols, weed removal, or Neighborhood Watch will be fostered to help reduce vandalism, to assist in maintenance, and to provide early detection of maintenance problems.

A variety of passive recreation activities are supported by the Basin 7B design. A paved pathway meanders along the pond offering views to pedestrians and cyclists of birds and other wildlife on the open water habitat of the pond. Interpretive signage describes the basin features including the water quality and flood control functions and the various habitat opportunities provided by the diversity of vegetation. During periods of inundation, portions of the pathway will be under water and unavailable for recreation use. Active recreation activities, such as those requiring sports fields or permanent equipment, will not be allowed in Basin 7B due to conflicts with vegetation management goals, habitat preservation, and facility operations.

Basin 7B will be maintained to provide easy public access by keeping the paths and view points clean and free of obstacles. The aesthetic and educational value of the basin will be maximized by encouraging the establishment of vegetation adjacent to public access points that is aesthetically pleasing (e.g., shade plants, flowering plants, etc.) and that attracts wildlife of interest to the public (e.g., hummingbirds, butterflies, raptors, etc.), and by maintaining accurate interpretive signs to ensure they remain in place and free of vandalism.

Any vandalism or other undesirable activities that occur at Basin 7B will be reported to the City of Sacramento Police Department or other appropriate department for code enforcement.

Objective P-A: Maintain access to recreational trails.

Objective P-B: Establish and maintain an aesthetically pleasing landscape, especially in vicinity of trails.

Objective P-C: Encourage establishment of vegetation that attracts wildlife species favorable for viewing purposes, in the vicinity of trails.

Objective P-D: Provide educational amenities that increase community awareness of the basin's flood control and ecological values.

Objective P-E: Establish community stewardship programs to enhance community awareness, help reduce vandalism, assist in maintenance, and provide early detection of maintenance problems.

2.5 Fuel Load Management and Fire Control

As with all detention areas, strategic maintenance will be performed to prevent fire hazards such as the accumulation of flammable debris and vegetation.

Objective F-A: Maintain vegetative fuel load to minimize fire hazard.

Objective F-B: Prevent accumulation of flammable debris.

2.6 Maintenance

Design and operational parameters will be established for the pond and the surrounding area that will minimize maintenance costs as much as possible while still preserving the other basin objectives. Preferred maintenance practices will emphasize techniques and materials that limit the amount of labor, frequency, material costs and environmental impact. Banks and slopes within the basin will be monitored and re-vegetated or re-contoured where necessary to prevent erosion that might otherwise lead to costly maintenance problems. Maintenance access routes will be kept free of vegetation and other obstacles.

Objective M-A: Maintain native vegetation compatible with site conditions to minimize long-term maintenance needs and support other basin functions.

Objective M-B: Minimize erosion of slopes and banks.

Objective M-C: Utilize the most cost-effective and least environmentally harmful approach to maintenance issues.

Objective M-D: Keep maintenance roads and other access points clear of vegetation, debris, and other obstacles that would impede maintenance activity.

3.0 BASIN MANAGEMENT OVERVIEW

Adaptive basin management consists of three major elements: operations, maintenance, and monitoring. Operations include the various activities associated with controlling water flow and volume in the basin, such as turning pumps on and off, and closing inlets during sediment removal. Maintenance refers to all of the tasks required to keep the basin functioning properly according to its intended purposes of storm water management, habitat, and recreation. Monitoring encompasses those activities performed to evaluate how well the basin is functioning and to identify when operational or maintenance practices need to be modified. Adaptive management is achieved when all three of these components are integrated and respond to each other.

3.1 Management Priorities

It is important to establish maintenance priorities because the multifunctional objectives for the water quality feature at Basin 7B may present opportunities for maintenance conflicts. While every effort will be made to manage the basin in a manner that supports the habitat and recreation values of the site, the primary purpose of the basin as a drainage facility will always be given precedent over these secondary functions. In urgent situations any means deemed necessary by the Department of Utilities to maintain the function and safety of the facility will be employed.

All reasonable steps will be taken to conduct maintenance activities in a manner that will not unnecessarily disturb plants and animals within the basin area. Routine maintenance activities will be scheduled to avoid critical times for the various plant and animal species.

3.2 Adaptive Management Plan Review

Many factors, such as the eventual build-out of the surrounding neighborhoods, maturation of the vegetation, and seasonal considerations will contribute to changes in the function and conditions of the pond. Therefore, the maintenance practices employed in this basin are expected to evolve over time. Periodic review of maintenance activities will consider the results of regular monitoring and will include an assessment of the type, scope and frequency of activities. Should maintenance practices need to be modified the Basin Management Database will be updated to reflect changes in practices and contracting specifications revised accordingly.

3.3 Level of Maintenance

The maintenance goal of this plan is to establish design and operational parameters for the pond and the surrounding area that will minimize maintenance costs as much as possible while still preserving the basin objectives as described in Section 2 of this plan. Preferred maintenance practices will emphasize techniques and materials that limit the amount of labor, frequency and material costs.

3.4 Public Participation

The basin has been designed to be an important open space and recreation feature in the community. The cooperation of the surrounding neighborhoods in policing and maintaining the area will be encouraged and is considered a key component to the success of the area. Programs that involve the community in stewardship activities such as litter patrols, weed removal, or Neighborhood Watch will be fostered to help reduce maintenance, vandalism and to provide early detection of problems.

3.5 Maintenance Zones

In order to establish appropriate management procedures for the basin, maintenance zones have been identified based on considerations of vegetation, hydrology, topography, infrastructure improvements and anticipated uses. A management prescription has been developed for each zone that describes:

- The target condition of the zone,
- Types of management activities needed to maintain the target condition,
- Frequency of management activities
- Recommended monitoring activities
- Frequency of monitoring activities, and
- Performance standards.

4.0 KEY MAINTENANCE ISSUES

This Adaptive Management Plan is intended to provide guidance for the long-term maintenance and operations of Basin 7B. However, it is likely that certain maintenance considerations may arise in the future that cannot specifically be anticipated at present. A brief discussion of the key maintenance issues associated with the basin is provided in this section to establish a conceptual and policy framework to guide future modifications to this plan and operation of the basin.

4.1 Algae Control

While shoreline vegetation and algae blooms are expected within the ponds during certain times of the year, major outbreaks of either one can impede flows, cause pump station operation problems and create unacceptable nuisance conditions that must be controlled. One of the major components of this maintenance plan will be implementation of measures to prevent and eliminate problematic algae blooms. Algae blooms should be controlled through the use of the least environmentally damaging methods that will provide an effective treatment of the problem. Options include biological water quality enhancers, as well as pond dyes, which filter UV light to help further avoid algae blooms. Alternative methods are being researched and tested regularly and maintenance staff should make an effort to keep abreast of new approaches as they emerge. Removal of dead plant material is also an important aspect of controlling algae blooms because it helps to eliminate waste that can feed algae. Chemicals that are not selective and may harm other species, such as copper sulfate, should not be used.

4.2 Vegetation Management

Most of the plantings installed in the basin are native to the Central Valley. When non-native plantings fail, replacement with a native counterpart is recommended to help meet basin objectives. It is the intent of this plan to sequentially reduce maintenance of the basin vegetation as the area matures. However, for the first 3 to 5 years, maintenance and monitoring activities will be needed to ensure that a healthy native plant community develops. Aggressive maintenance may be necessary during the first few years to assure that non-native exotic species do not become established and compete with the desirable native species. Any maintenance prescriptions should address objectives for:

- Plant Vigor,
- Plant Cover,
- Species Diversity,
- Age Class,
- Replacement Species, and
- Invasives Removal.

4.3 Fuel Load Management and Fire Control

The proximity of Basin 7B to residential neighborhoods requires that precautions be taken to manage and prevent fire hazards such as the accumulation of flammable debris and vegetation. This is especially important since public access to the basin will be encouraged and it's possible that careless human activity such as throwing away a

cigarette or match could result in a significant fire. Maintenance equipment must also be properly maintained and operated to prevent sparks or spills of flammable materials.

4.4 Inlets

Runoff enters the pond through several inlets located at both the west and east sides of the basin. Maintenance issues associated with the inlets include keeping the inlets clear of obstructions that would impede flow, preventing wildlife from occupying the inlet structures during the dry months, removal of trash or other debris that accumulate, and assuring that the gates to close the inlets remains operational.

4.5 Pond Sediment Removal

One of the important water quality features of the basin is its capacity to trap sediment contained in stormwater and to prevent them from entering surface waters. Stormwater sediment is problematic for several reasons. They can contain elevated levels of metals, impede pump and culvert function, and may degrade habitat by raising water temperatures and clogging spawning gravels. Sediment is trapped either by settling or by adhering to plant tissue. The primary settling area is located just downstream of the western inlet to the basin. Sediment may also settle throughout the pond, where the pond is crossed by the recreational trail, and even in the upland areas of the basin in high water events. The pond will need to be emptied periodically to allow the removal of accumulated sediment in order to preserve capacity, and to keep the inlets and outfall operating properly.

4.6 Irrigation

Currently, there is not an irrigation system installed at this basin. In addition to normal precipitation and inundation from storm events, all plants and trees have been hand watered during the summer months. So far this has supplied sufficient water for the survival of all of the plants and grasses. Hand watering will continue for a several year establishment period. Should there be a need in the future for an irrigation system, such as in a drought year, one may be installed. The main maintenance issues associated with the irrigation system are proper operation and periodic inspection of system components, such as main lines, laterals, heads, emitters, and control valves.

If an irrigation system is installed, operation of the system needs to be adjusted over time to respond to the changing needs of the plants and soil moisture levels. Many of the native plants will need less water once they are established, and will be adversely impacted by excessive irrigation. This is especially true during the summer months since most native species are adapted to grow best in the wet winter, dry summer climate of the Sacramento region. Regular monitoring should occur to detect signs of either drought stress or excessive soil saturation, and irrigation delivery should be adjusted accordingly. This is especially important because the impermeable liner underlying the basin will reduce the soil's natural capacity for percolation. Consequently, some plant roots will actually have access to significant subsurface water at times when the top soil layers appear to be dry.

Monitoring should also include inspection of the irrigation system itself to make sure that components are in good working order and no line breaks or malfunctions are occurring.

4.7 Paved Paths

Public access through the basin is provided by a paved path around the rim of the basin and along the edge of the ponds in the bottom of the basin. The whole recreation path system connects to San Juan Road and to the adjacent neighborhood. The path system is an important feature because it allows residents to pass through the basin and enjoy close-up views of the plantings and wildlife habitat. It also provides an access path for maintenance equipment and personnel. Maintenance issues associated with the path system may include removal of weeds and debris from the path surface, checking for cracks, subsidence or heaving, and graffiti removal.

4.8 Signage

Interpretive signage will eventually be installed at Basin 7B. Monitoring should be conducted periodically to check the signs for vandalism, fading or discoloration caused by UV exposure, and for general wear or deterioration. The content of the signs should also be reviewed periodically to make sure the interpretive information accurately reflects the evolving vegetation and habitat conditions in the basin.

4.9 Hydrology

The proper functioning of Basin 7B is dependent on maintaining and adjusting water surface elevations (WSE) to provide adequate capacity for stormwater catchment, and desired vegetation and habitat conditions. When the pond is drained for sediment removal in the summer, emergent vegetation will begin to dry out and die back. Water levels should be restored as soon as possible and not more than two weeks later to insure the continued health of the emergent plants. During high volume storm events the water levels in the basin will overtop the pond and inundate the basin slopes. The plant species growing in this area can tolerate short, infrequent periods of inundation typically not lasting more than a day or two. Thus it will be important to pump the water from the basin as soon as possible to avoid drowning these plants.

4.10 Water Quality

The capacity of Basin 7B to enhance storm water quality is based on sediment settling and vegetative 'scrubbing', including the ability of plants to sequester pollutants contained in the water through uptake and adsorption into plant tissue, and the potential for plants to act as sediment trapping filters. Maintaining these functions in the basin depends on proper maintenance of the vegetation and the pond capacity as described above in 4.5.

4.11 Wildlife

Wildlife will be attracted to the various habitats that are evolving throughout Basin 7B. Appendix A includes a list of species that have already been observed. A special status species has been observed at Basin 7B and the potential also exists for other special status species to use the basin as habitat (Appendix B). While providing habitat opportunities for wildlife is an important objective of the basin management plan, the primary function of the basin is water quality enhancement. As wildlife become established, it will be necessary to monitor the species and number to make sure that they are not interfering with basin operations or creating a public safety issue. If special

status species do become established in the Basin, avoidance measures (Appendix B) will need to be observed to prevent impacts.

4.12 Nuisances and Public Uses

Basin 7B has been designed to accommodate the complementary objectives of water quality enhancement, public use and wildlife habitat. These uses may be compromised by certain factors such as vandalism, undesirable activities, or the establishment of invasive plants or nuisance wildlife species. The Department of Utilities will work with the Police Department to address issues related to code enforcement or public nuisance behaviors. Proper maintenance of the Basin that includes regular monitoring and management of vegetation and wildlife will be essential to early identification and correction of any related nuisances.

5.0 MAINTENANCE PRESCRIPTIONS

Basin 7B has been divided into seven separate maintenance zones based on a variety of factors including slope, topography, hydrology and anticipated uses. The seven zones (illustrated in Figure 1) are:

- Permanent Pond (1.91 acres)
- Inlets/Outfalls (0.15 acres)
- Islands (0.03 acres)
- Pond Edge (0.41 acres)
- Basin Floor (4.15 acres)
- Side Slopes (2.26 acres)
- Path/Maintenance Access Road (1.57 acres)

Maintenance prescriptions for each of these zones address the target condition of the area, the types of management activities needed to maintain the target condition, and frequency of management activities. Recommended monitoring activities are included as a type of maintenance activity to support the adaptive approach to basin management. Thus, as monitoring activities indicate the need for certain maintenance measures, those measures can be implemented immediately and in some cases by the same crew performing the monitoring. A set of general maintenance prescriptions has also been developed for the overall basin.

5.1 Permanent Pond

Target condition: Maintain target basin capacity with minimum year round water surface elevation at 0.0' contour and manage water quality to prevent nuisances such as odors, insects, and excessive algae blooms.

Activity	Frequency	Criteria
1a. Monitor and treat for algae blooms using appropriate biological, chemical or mechanical methods.	Monitor monthly and treat as needed based on monitoring observation.	Reduce presence of algae to 15% or less of pond surface.
1b. Conduct basic water quality screening.	Monthly	No negative conditions evident (Appendix F).
1c. Conduct comprehensive water quality monitoring.	Semi-annually	All constituents within target limits (Appendix E)
1d. Monitor pond maintenance access point and keep clear of obstructing vegetation.	Monitor quarterly and remove vegetation as needed.	Access point is clear of obstructions.
1e. Monitor and remove decomposed organic matter from basin.	Monitor semi-annually and remove organic matter as needed.	Basin is able to hold 100% of target capacity. Organic debris is not supporting algae blooms or creating other nuisances.
1f. Monitor and remove sediment from settling areas in basin.	Monitor quarterly and remove sediment as needed.	Settling areas have adequate capacity to hold anticipated sediment load until next maintenance period. Sediment level shall be at least 1 foot (0.3 m) below outlet elevation.
1g. Follow measures to minimize impacts to giant garter snake and tri-colored blackbird (Appendix B).	Necessary precautions for all maintenance/monitoring activities.	No adverse impact to special status species.

5.2 Inlets and Outfalls

Target condition: All inlets and outfalls shall be kept free of obstructions to flow and adequately armored as needed to prevent erosion.

Activity	Frequency	Criteria
2a. Monitor inlets and outfalls and remove obstructions such as vegetation and debris.	Monitor monthly during dry season and following major events during rainy season. Treat as needed based on monitoring observation.	Water flow shall not be impeded for an area of at least 20 feet from headwall.
2b. Monitor condition of inlet and outfall structures such as rock aprons, spillways and pipes for structural failure, undercutting and erosion and repair.	Monthly with repairs as needed.	No evidence of structural failure, erosion or undercutting.
2c. Follow measures to minimize impacts to giant garter snake and tri-colored blackbird (Appendix B).	Necessary precautions for all maintenance/monitoring activities.	No adverse impact to special status species.

5.3 Islands

Target condition: All islands will have well-established vegetation with structural diversity providing habitat refuge and nesting opportunities, and stable shoreline. Species will include emergents, native grasses, forbs (non-woody plants such as annuals and perennials), and trees.

Activity	Frequency	Criteria
3a. Monitor health of trees and herbaceous species on island. Address mortality or disease with replanting, or replacement with other species as appropriate.	Monthly with replanting to occur between September and February for trees or forbs, and year round for emergents.	100% of island surface is vegetated. Emergent species not more than 2' into pond or 3' above pond edge. Tree canopy over 75% of island surface.
3b. Monitor island perimeter for erosion. Identify cause of erosion and stabilize with bioengineered measures such as fiber blankets, additional planting, and regrading.	Monthly with repairs as needed.	Island perimeter stabilized with no evidence of erosion.
3c. Follow measures to minimize impacts to giant garter snake and tri-colored blackbird (Appendix B).	Necessary precautions for all maintenance/monitoring activities.	No adverse impact to special status species.

5.4 Pond Edge

Target condition: Maintain diverse mix of native sedges and rushes in limited area of pond and around perimeter of pond to support habitat for water fowl and other wildlife, enhance water quality treatment, and protect pond from encroachment that could create excess organic debris or impact pond capacity and conveyance.

Activity	Frequency	Criteria
4a. Monitor extent of emergent vegetation. Remove plants encroaching into pond or basin floor.	Monthly with removal as needed.	Emergents shall not become established more than 2' into pond or more than 3' outside of pond.
4b. Monitor health and distribution of emergent species. Add supplemental plantings as needed to maintain adequate cover and species diversity (*Juncus, Carex, Eleocaris sp*.) Limit spread of cattails (*Typha sp.*) to allow other species to become established.	Monthly with removal and replanting as needed.	Plants should provide a minimum of 80% cover in this area above water's edge, with no fewer than six native wetland plants established per square meter (6/m^2). Cattails should not represent more than 35% of the emergent cover.
4c. Follow measures to minimize impacts to giant garter snake (Appendix *)	Necessary precautions for all maintenance/monitoring activities.	No adverse impact to special status species.

5.5 Basin Floor

Target condition: Maintain diverse mix of predominantly native grasses with several isolated trees. The landscape should generally emulate the ecology of the local native grassland landscapes with species adapted to seasonal variations in weather including dry summers and regular but short periods of inundation in the winter. Appropriate plant species for this zone may need to be revisited if the ponds' water surface elevation is changed from the design elevation of 0.0'.

Activity	Frequency	Criteria
5a. Monitor for and remove all invasive plants as needed using manual and mechanical methods and selective application of herbicides (Appendix D).	Monthly for at least 1 year; reduce to every other month in year 2	Invasive species are not allowed to set seed. Less than 1% cover by invasive weeds.
5b. Monitor germination of native grass species on site. Catalog those that are well-adapted to conditions and reseed with these species in areas with poor germination.	Monthly for 3 years	Monthly logs maintained of monitoring observations. 100% cover of zone with native grass species in 4 years at density of at least 20 plants per square meter ($20/m^2$).
5c. Monitor condition of trees. Remove any that decline or die and replace with native species better suited to conditions.	Monthly for 2 years	Monthly logs maintained of monitoring observations and any tree removals/replacements.
5d. Mow grasses in July and October if conditions will permit, after staking all trees to be protected.	July and October annually	Set mowing level at not less than 3". Remove clippings if in excess of 4" of material. Direct mower throw away from water.
5e. Maintain temporary irrigation to trees until established (3 - 5 yrs.) Check heads, emitters, lines and controllers and replace any elements that are malfunctioning. Adjust watering schedule seasonally. Check for over spray and run-off.	Monthly	Irrigation system is supplying appropriate quantities of water to desired locations. No leaks or malfunctions.

5f. Follow measures to minimize impacts to giant garter snake, Swainson's hawk, valley elderberry longhorn beetle, and burrowing owl (Appendix B)	Necessary precautions for all maintenance/monitoring activities.	No adverse impact to special status species.

5.6 Basin Slopes

Target condition: Maintain mix of predominantly native grasses with dispersed trees. The basin slope landscape should generally emulate the ecology of the local native grassland landscapes with a predominance of grasses interspersed with scattered grouping of trees. The species should be adapted to seasonal variations in weather including dry summers and infrequent short periods of inundation in the winter.

Activity	Frequency	Criteria
6a. Monitor for and remove all invasive species as necessary using manual and mechanical methods and selective application of herbicides (Appendix D).	Monthly for at least 1 year; reduce to every other month in year 2	Invasive species are not allowed to set seed. Less than 1% cover by invasive weeds.
6b. Monitor germination of native grass species on site. Catalog those that are well-adapted to conditions and reseed with these species in areas with poor germination.	Monthly for 3 years	Monthly logs maintained of monitoring observations. 100% cover of zone with native grass species after 4 years at density of at least 20 plants per square meter ($20/m^2$).
6c. Monitor condition of trees. Remove any that decline or die and replace with native species better suited to conditions.	Monthly for 2 years	Monthly logs maintained of monitoring observations and any tree removals/ replacements.
6d. Mow grasses in July and October if conditions will permit, after staking all trees to be protected.	July and October annually	Set mowing level at not less than 3". Remove clippings if in excess of 4" of material. Direct mower throw away from water.
6e. Maintain temporary irrigation to trees until established (3 - 5 yrs.) Check heads, emitters, lines and controllers and replace any elements that are malfunctioning. Adjust watering schedule seasonally. Check for over spray and run-off.	Monthly	Irrigation system is supplying appropriate quantities of water to desired locations. No leaks or malfunctions.

6f. Follow measures to minimize impacts to giant garter snake, Swainson's hawk, valley elderberry longhorn beetle, and burrowing owl (Appendix B)	Necessary precautions for all maintenance/monitoring activities.	No adverse impact to special status species.

5.7 Path/Maintenance Access Roads

Target condition: Path/maintenance access roads and paths for pedestrians are to be clear of physical and visual obstructions, ADA accessible, and provide good visibility of the pond.

Activity	Frequency	Criteria
7a. Inspect and repair path/access road as necessary to maintain accessibility for pedestrians, bicycles, and wheelchairs. Inspect surface for settling, cracking, or heaving. Consider replacement with concrete if cost to maintain asphalt is excessive.	Monthly	Travel surface is maintained free of irregularities greater than 1/4" displacement.
7b. Keep path/access roads clean and free of debris, including trash and vegetation. Empty trash receptacles.	Weekly	Travel ways are not obstructed.
7c. Monitor adjacent vegetation to maintain sight lines throughout basin paths/access roads for public safety.	Monthly	Users of paths and access roads can clearly see approaching people and vehicles, and views of ponds.
7d. Inspect signs and replace or repair damaged or missing signs where necessary.	Monthly	Signs are legible and attractive.

5.8 General (all areas)

Activity	Frequency	Criteria
8a. Monitor and remove debris, trash and evidence of vandalism throughout entire basin (pond, path/access road, basin floor and slopes).	Weekly	Debris does not accumulate onsite and trash receptacles are not full.
8b. Monitor for violations and enforce ordinances such as leash law and illegal dumping ordinance.	Ongoing	Monitoring logs containing records of observations.
8c. Monitor for and be responsive to cleanup of spills and hazardous materials.	Ongoing	Monitoring logs containing records of observations.
8d. Implement community stewardship projects and activities.	Quarterly	4 announcements with outreach events in the community each year.
8e. Note presence of any nuisance wildlife species during spring survey and other site inspections (Appendix C).	Spring and ongoing	Monitoring logs containing records of observations.
8f. Perform general wildlife survey, especially noting any sensitive wildlife species, elderberry shrubs, and nesting raptors or other native bird species. Notify basin manager of sensitive species present.	Spring and Fall	Monitoring logs containing records of observations.
8g. Monitor for visible rills, gullies, or other signs of erosion forming throughout basin.	Ongoing	Monitoring logs containing records of observations.
8h. Monitor for evidence of qualitative water quality problems when on site for any maintenance activities and implement first screen quantitative monitoring as required. (Appendix F).	Ongoing	First screen quantitative monitoring will be triggered by presence of murky water, noxious odor, sudden increase in algae, or evidence of biological wastes in water.

Appendix A: Baseline Biological Assessment

1.0 Overview

A baseline field assessment of vegetation and overall conditions at Basin 7B was conducted in January, 2003. At the time of the assessment, a few vegetation management concerns were noted. The site appeared to be well maintained with relatively recent mowing of the side slopes. Generally 100% vegetative cover had been established across the entire basin.

2.0 Condition of Trees

Trees planted in the basin at the time of observation were generally consistent with species indicated on the proposed planting plan. All trees planted in the basin are native to Sacramento County. Trees were generally healthy.

3.0 Condition of Shrubs

Shrubs had been planted in the basin at the time of observation and most of the shrubs were performing well. All of the shrubs planted in the basin are native to the region. The health of the shrubs was generally good.

4.0 Condition of Herbaceous Layer

Basin 7B is dominated by non-native forbs and native grasses. Deer Grass (*Muhlenbergia rigens*) has been planted in large clumps on the side slopes and has been maintained well. In the lower terrace several low spots have begun filling in with vegetation growing in various clumps. Willows (*Salix*) and California cottonwood (*Populus fremontii*) seedlings are sprouting in these depressions. Ox tongue (*Picris echinoids*) and other invasive weeds were present in the center grass area. The herbaceous layer was not as well established in the central lower terrace. The emergent vegetation extended about 2' from the edge of the water and did not extend beyond the top lip of the main channel of water. The emergent vegetation was composed of a couple varieties of sedges (*Carex sp.*) and some cattails (*Typha latifolia*). Both were also observed growing around the inlets. The cattails do not appear to have been planted. There are still gaps in the emergent vegetation that was planted that have not filled in.

5.0 Wildlife Observed at the Basin

Wildlife species observed during the site survey at Basin 7B included the following:

- Sparrow
- Western Burrowing Owl
- Black-tailed Jackrabbit
- Black Phoebe
- Great Blue Heron
- Egret

There was a western burrowing owl observed in the southeast corner of the basin. The owl seemed to be living inside of a large concrete pipe. The burrowing owl is a species of special status.

6.0 Water Quality Observed at the Basin

The water was observed to be turbid in the basin. Odor was not detected in the basin. The presence of some algae was present in the water. Erosion did not appear to be a problem at this basin.

Appendix B: Special Status Species Protection Measures

1.0 Burrowing Owl (*Athene cunicularia*)

- Maintenance activities will avoid impacts to burrowing owls consistent with the Burrowing Owl Mitigation Guidelines adopted by CDFG. Specifically, do not disturb occupied burrows during the nesting season (February 1 through August 31) unless a qualified biologist approved by CDFG verifies through non-invasive measures that either: 1) the birds have not begun egg-laying and incubation; or 2) that juveniles from the occupied burrows are foraging independently and are capable of independent survival.

Burrowing Owl and Burrow

2.0 Giant Garter Snake *(Thamnophis gigas)*

- Restrict desilting and/or resloping of channels to after May 1 and before October 1 in any calendar year.
- Limit re-sloping of any channels to one side in any calendar year.
- If mowing vegetative cover on the top or inside of channel banks to the water line, or within 200 feet of open water, mow to not less than 6 inches in height measured from the ground.
- Limit activity involving habitat disturbance to the period between May 1 and September 30. This is the active period for giant garter snake and direct mortality is lessened, because snakes are expected to actively move and avoid danger.

- If aquatic habitat must be filled in or excavated between April 15 and September 30, the habitat should first be completely dewatered for at least 15 consecutive days prior to excavation or filling. Make sure dewatered habitat does not continue to support giant garter snake prey – if site cannot be completely dewatered, netting and salvaging of prey items may be necessary. This dewatering measure is also adequate to avoid direct harm of northwestern pond turtle.

- If giant garter snake is found in an area where it would be directly harmed by maintenance activities, cease such activity and allow snake to leave on its own. Notify FWS and biological monitor if snake remains in harm's way and activity must continue. Qualified biological monitor shall remain in the area to make sure snake is not harmed. Escape routes for giant garter snake should be determined in advance of undertaking the maintenance activity to allow the snake to leave on its own. If the snake does not leave on its own within 1 working day, consult further with FWS.

Giant Garter Snake

3.0 Swainson's Hawk *(Buteo swansoni)*

- Preserve valley oaks and other large trees wherever possible.

- Do not remove any trees containing raptor nests without first consulting with qualified biological monitor. If tree must be removed, biological monitor should determine whether nest is used by Swainson's hawk. Do not remove nest trees during Swainson's hawk breeding season (March 15 to September 15) unless absolutely necessary. If a Swainson's hawk nest tree is to be removed during the Swainson's hawk breeding season, the tree may not be removed until the biological monitor has determined that breeding is completed and no young are present, or, if young are present, until CDFG has determined that the young have fledged and are not longer dependent upon the nest tree.

Swainson's Hawk

4.0 Valley Elderberry Longhorn Beetle *(Democeros californicus dimorphus)*

- Avoiding planting elderberry shrubs (*Sambucus spp.)* in detention basins.
- Remove all shrubs with stems less than one inch in diameter at ground level.
- Avoid pruning or removing shrubs with stems at least one inch in diameter at ground level.

Elderberry Shrub w/Flowers and Fruit and Elderberry Longhorn Beetle

- Do not apply insecticides, herbicides, fertilizers, or other chemicals that might harm VELB or elderberry shrubs within 100 feet of any elderberry shrubs with stems at least one inch in diameter at ground level.

- Mowing within 100 feet of elderberry shrubs may occur during July through April. No mowing should occur within five (5) feet of elderberry stems. Mowing should be done in a way that avoids damaging plants (e.g., stripping away bark through careless use of equipment).

5.0 Tricolored Blackbird *(Agelaius tricolor)* and Migratory Bird Species

- Avoid removal or disturbance of emergent wetland vegetation or blackberry shrubs during tricolored blackbird breeding season (April through July).

- Avoid removal of any vegetation or structures with bird nests during avian breeding season (March 15 though July 31).

Tricolored Blackbird

Appendix C: Nuisance Wildlife Species

Certain wildlife species have the potential to become a nuisance due either to their unchecked capacity for predation of other desirable species, or because their presence is incompatible with the operation and anticipated human uses of the basin. Domestic species may also prey on other desirable wildlife species and their presence should be should be discouraged. Regular monitoring should be conducted to observe the presence of the following species and to control or eradicate their presence as needed.

	Management Approach *Nuisance Issues*
Skunk	Removal by City Animal Control • *Presence incompatible with recreation and adjacent residential land use*
Raccoons	Removal by City Animal Control if nuisance develops • *May become dependent on residential food sources such as garbage cans, animal food, etc.* • *Animals may become aggressive towards recreational users walking through basin trails and maintenance workers during breeding season*
Beaver	Removal by City Animal Control if nuisance develops and demolition of dens/dams if basin operation impaired • *May kill trees and shrubs in basin to get materials to build dams* • *Structures may impede basin operation*
Starlings	Remove nests occupied by starlings • *Will occupy nests of native species and prevent native species from reproducing*
Canada Geese	Maintain emergent vegetation to prevent unimpeded access to water. Encourage diverse forbs interspersed with turf areas to reduce food supply. • *May defoliate turf areas from excessive feeding* • *Droppings are incompatible with recreation uses* • *May become aggressive towards residents and maintenance workers.*
Voles, Rats and Other Rodents	Destroy burrows and removal by City Animal Control if nuisance develops. Provide protective cages on young seedlings. • *May destroy irrigation components by gnawing* • *May feed on roots and stems of young seedlings*
Cats	Removal by City Animal Control • *May harass wildlife*
Dogs	Removal by City Animal Control • *May harass wildlife, recreational users or maintenance staff.*
Mosquitoes	Control by Sacramento/Yolo Mosquito & Vector Control District if nuisance develops • *Vector for disease* • *Incompatible with recreation uses*

Appendix D: Invasive Plant Species

Common Name ***Latin Name***	**Management Approach** ***Nuisance Issues***	**Zones**						
		Permanent Pond	**Inlets/Outfalls**	**Island**	**Pond Edge**	**Basin Floor**	**Basin Slopes**	**Trails/Access Roads**
Mosquito Fern *Azolla sp.* 	Appropriate herbicide • *Impedes water flow* • *Clogs pumps*	■	■		■			
Bermuda Grass *Cynodon dactylon* 	Herbicide, manual removal and shading by other species • *Displaces native vegetation*			■		■	■	■

Common Name *Latin Name*	Management Approach *Nuisance Issues*	Zones						
		Permanent Pond	Inlets/Outfalls	Island	Pond Edge	Basin Floor	Basin Slopes	Trails/Access Roads
Black Locust *Robinia pseudoacacia* 	Mechanical removal, cutting root shoots repeatedly, herbicides • *Displaces native vegetation* • *Seeds, leaves and bark toxic to humans*			■		■	■	■
Dallis grass *Paspalum dilitatum* 	Manual removal and mowing before seed sets • *Displaces native species*			■		■	■	■
Eichhornia crassipes *Water Hyacinth* 	Mechanical removal and approved foliar spray • *Dominates waterways* • *Degrades open water habitat* • *Can clog pumps* • *Breeding habitat for mosquitoes* • *Displaces native species*	■	■		■			

Common Name *Latin Name*	Management Approach *Nuisance Issues*	Zones						
		Permanent Pond	Inlets/Outfalls	Island	Pond Edge	Basin Floor	Basin Slopes	Trails/Access Roads
Giant Reed *Arundo donax* 	Manual removal and approved herbicide • *Displaces native plants and associated wildlife* • *Reduces habitat* • *Fuel load fire hazard* • *Reduces basin capacity*	■	■	■	■			
Himalayan Blackberry *Rubus discolor* 	Manual removal of canes and roots and appropriate herbicide • *Competes with native species* • *Can limit access to water for wildlife* • *Limits access for maintenance* • *Limits recreation uses*			■		■	■	■
Water Primrose *Ludwigia peploides.* 	Mechanical removal and appropriate herbicide • *Displaces native species* • *Clogs waterways and pumps*	■	■		■			

Common Name *Latin Name*	Management Approach *Nuisance Issues*	Zones						
		Permanent Pond	Inlets/Outfalls	Island	Pond Edge	Basin Floor	Basin Slopes	Trails/Access Roads
Medusa Head Grass *Taeniatherum caput-medusae* 	Mowing before annual seed is set to prevent dispersal • *Competes with native species* • *Inhibits germination of native species* • *Fuel load fire danger*			■		■	■	■
Parrot's Feather *Myriophyllum aquatica* 	Mechanical removal preferred • Competes with native aquatic plants • Forms dense mats that can entirely cover open water • Can block pumps and water intakes • Provides optimal habitat for mosquitoes	■	■		■			
Bristly Ox-tongue *Picris echinoids* 	Manual removal and repeated mowing before seed sets • *Displaces native species*			■		■	■	■

Common Name *Latin Name*	Management Approach *Nuisance Issues*	Zones						
		Permanent Pond	Inlets/Outfalls	Island	Pond Edge	Basin Floor	Basin Slopes	Trails/Access Roads
Water Lettuce *Pistia stratiotes* 	Manual removal or appropriate herbicide • *Displaces native species* • *Damages habitat value of open water*	■	■		■			
Scotch Broom *Cystus scoparius* 	Manual removal and appropriate foliar spray • *Displaces native vegetation* • *Fuel load fire hazard*			■		■	■	■
Red Sesbania *Sesbania punicea* 	Manual removal at any time, but especially before seed sets • *Rapidly displaces native species*			■	■			

Common Name *Latin Name*	Management Approach *Nuisance Issues*	Zones						
		Permanent Pond	Inlets/Outfalls	Island	Pond Edge	Basin Floor	Basin Slopes	Trails/Access Roads
Cattails *Typha latifolia* 	Manual removal to limit spread and allow other natives to become established • *Competes with other natives* • *Decomposition of plants can reduce pond capacity*			■	■			
Yellow Star Thistle *Centaurea solstitialis* 	Mechanical removal with post-emergent herbicide. Important control times are late winter/early spring and mid-summer before seed sets. • *displaces native plants and animals* • *limits recreation use*					■	■	■

Appendix E: Water Quality Sampling Parameters

Bi-Annual (Summer/Winter) Sampling and Analysis with recommended EPA analysis method*
Alkalinity (Titration Method)
BOD (5-day)
D.O.
Fecal Coliform (Colilert-18 Quanti-Tray)
Nitrate (EPA 300.0 Ion Chromatography)
Oil and Grease
pH (field meter)
Phosphorus (amino acid, ascorbic acid and molybdovanadate methods)
TOC
Lead (GFAA)
Zinc (GFAA)
Copper (GFAA)
Temp (field meter)
pH (field meter)
Conductivity (field meter)
Turbidity (field neptholometer)
Organophosphorous Pesticides (EPA 8141A)

*First Flush sampling and analysis will not be done at this basin because the City already has adequate data on urban runoff water quality from other storm water monitoring efforts.

Appendix F: Water Quality Screening

On-going water quality screening should occur whenever staff or maintenance crews are on site for any activities such as vegetation monitoring or cleaning screens. Qualitative monitoring will consist of observing general character of water. If negative indicators are present, first screen quantitative monitoring procedures and corrective measures are to be implemented. Second screen quantitative monitoring measures should be implemented only if quantitative monitoring indicates problems and corrective measures do not work

Qualitative Monitoring	First Screen Quantitative Monitoring	Secondary Screen Quantitative Monitoring
Outflow is murky	Turbidity	If continued turbid, examine watershed for source of turbid water
Inflow is murky	Turbidity	If continued turbid, examine watershed for source of turbid water
Obvious signs of waste in basin	Enterococcus and *e. coli*	DNA Typing of bacteria to determine source (e.g. dog, duck, or human) – or perform a "watershed survey" to determine source (e.g. septic tanks, sewage spills, homeless camps, etc.)
Excessive Algal Growth	Nitrate and Phosphorous	With continued excess growth, examine upstream sources
Noxious Odor	Sample for Dissolved Oxygen at incremental depths	If low D.O. exists, sample for Nitrate, Nitrite, and Phosphorous or examine current nitrate and phosphorous results. If high, examine watershed for source.
Plant die-off or dead animals	Visual inspection for oil, filmy surface, foam, discoloration or odor	Sample for toxicants such as heavy metals or poisons

Appendix G: Plant Lists by Zone

Island

Trees	Latin	Common	Mature Size (ft.)	Native	Features
	Acer negundo	Box Elder	40H x 40W	Sacramento County	Tolerates seasonal wet soils/drought
	Fraxinus latifolia	Oregon Ash	60H x 40W	Sacramento County	Tolerates seasonal wet soils/drought
	Populus fremontii	Fremont Cottonwood	50H x 30W	Sacramento County	Tolerates seasonal wet soils/drought
	Salix gooddingii	Black Willow	40H x 40W	Sacramento County	Tolerates seasonal wet soils/drought
	Salix lasiolepis	Arroyo Willow	20H x 20W	Sacramento County	Native Tree, Tolerates seasonal wet soils/drought

Shrubs	Latin	Common	Mature Size (ft.)	Native	Features
	Cephalanthus occidentalis	Buttonbush	12H x 12W	Sacramento County	Tolerant of wet soils, flowers
	Vitis californica	California Wild Grape	Indefinite	Sacramento County	Tolerant of wet soils, wildlife value

Native Grass	Latin	Common	Mature Height (inches)	Native	Features
	Elymus glaucus	Blue Wild Rye	20-60	Sacramento County	Drought tolerant
	Leymus triticoides	Creeping Wild Rye	20-48	Sacramento County	Drought tolerant
	Melica californica	California Melic	20-40	Sacramento County	Drought tolerant
	Muhlenbergia rigens	Deer Grass	24-60	Sacramento County	Drought tolerant
	Nassella cernua	Nodding Stipa	15-35	Sacramento County	Drought tolerant
	Nassella pulchra	Purple Needlegrass	15-35	Sacramento County	Drought tolerant

Pond Edge

Trees	Latin	Common	Mature Size (ft.)	Native	Features
	Acer negundo	Box Elder	40H x 40W	Sacramento County	Tolerates seasonal wet soils/drought
	Fraxinus latifolia	Oregon Ash	60H x 40W	Sacramento County	Tolerates seasonal wet soils/drought
	Populus fremontii	Fremont Cottonwood	50H x 30W	Sacramento County	Tolerates seasonal wet soils/drought
	Salix gooddingii	Black Willow	40H x 40W	Sacramento County	Tolerates seasonal wet soils/drought
	Salix lasiolepis	Arroyo Willow	20H x 20W	Sacramento County	Tolerates seasonal wet soils/drought

Shrubs	Latin	Common	Mature Size (ft.)	Native	Features
	Cephalanthus occidentalis	Buttonbush	12H x 12W	Sacramento County	Tolerant of wet soils, flowers
	Vitis californica	California Wild Grape	Indefinite	Sacramento County	Tolerant of wet soils, wildlife value

Emergent Plants	Latin	Common	Mature Size (ft.)	Native	Features
	Carex barbarae	Santa Barbara Sedge	2-3	Sacramento County	Tolerant of wet soils, habitat value
	Carex praegracillis	Slender Sedge	2-3	California	Tolerant of wet soils, habitat value
	Equisetem hyemale	Common Scouring Rush	2-7	Sacramento County	Tolerant of wet soils, habitat value
	Juncus effuses 'Brunneus'	Common Rush	2-4	California	Tolerant of wet soils, habitat value
	Juncus xiphiodes	Flat-Bladed Rush	1-3	Sacramento County	Tolerant of wet soils, habitat value
	Scirpus acutus 'Occidentale'	Common Tule	5-13	Sacramento County	Tolerant of wet soils, habitat value

Basin Floor

Trees	Latin	Common	Mature Size (ft.)	Native	Features
	Acer negundo	Box Elder	50H x 40W	Sacramento County	Drought tolerant
	Alnus rhombifolia	White Alder	50H x 40W	Sacramento County	Drought tolerant
	Fraxinus latifolia	Oregon Ash	60H x 40W	Sacramento County	Drought tolerant
	Juglans californica hindsii	California Black Walnut	30H x 30W	Sacramento County	Drought tolerant
	Platunus racemosa	California Sycamore	50H x 30W	Sacramento County	Drought tolerant
	Populus fremontii	Fremont Cottonwood	50H x 30W	Sacramento County	Drought tolerant

Shrubs	Latin	Common	Mature Size (ft.)	Native	Features
	Baccharis salicifolia	Mulefat	10H x 6W	California	Drought tolerant, evergreen
	Cephalanthus occidentalis	Buttonbrush	12H x 12W	Sacramento County	Flowers
	Rosa californica	California Wild Rose	6H x 5W	Sacramento County	Flowers, drought tolerant
	Rubus ursinus	California Blackberry	Indefinite	Sacramento County	Wildlife value
	Vitus californica	California Wild Grape	Indefinite	Sacramento County	Wildlife value

Native Grass	Latin	Common	Mature Height (inches)	Native	Features
	Elymus glaucus	Blue Wild Rye	20-60	Sacramento County	Drought tolerant
	Leymus triticoides	Creeping Wild Rye	20-48	Sacramento County	Drought tolerant
	Melica californica	California Melic	20-40	Sacramento County	Drought tolerant
	Muhlenbergia rigens	Deer Grass	24-60	Sacramento County	Drought tolerant
	Nassella cernua	Nodding Stipa	15-35	Sacramento County	Drought tolerant
	Nassella pulchra	Purple Needlegrass	15-35	Sacramento County	Drought tolerant

Side Slopes

Trees	Latin	Common	Mature Size (ft.)	Native	Features
	Quercus kellogii	Blue Oak	40H x 50W	Sacramento County	Form, colorful foliage, drought tolerant
	Quercus lobata	Valley Oak	70H x 70W	Sacramento County	Form, drought tolerant
	Quercus wislizenii	Interior Live Oak	50H x 60W	Sacramento County	Evergreen, drought tolerant
	Umbellularia californica	California Bay Laurel	25H x 20W	California	Fragrant, evergreen, drought tolerant

Shrubs	Latin	Common	Mature Size (ft.)	Native	Features

Dear Mr. Winn:

On May 16, 2000, the Sacramento City Council authorized the execution of Resolution No.2000-239 approving Agreement No.2000-063 regarding Construction of Drainage Improvements, North Natomas Basin 8a.

Enclosed, for your records, is one fully certified copy of said resolution and agreement.

Sincerely,

Virginia K. Henry
Assistant City Clerk

RESOLUTION NO. 2000-239

ADOPTED BY THE SACRAMENTO CITY COUNCIL

ON DATE OF MAY 16 2000

A RESOLUTION ADOPTING THE FINDINGS RELATING TO THE ENVIRONMENTAL IMPACTS ASSOCIATED WITH APPROVAL THE NORTH NATOMAS DRAINAGE BASIN 8a DRAINAGE AGREEMENT, AND APPROVING THE DRAINAGE AGREEMENT

WHEREAS:

1. On May 20, 1997, the City Council adopted the North Natomas Comprehensive Drainage Plan, certified the adequacy of the Final Environmental Impact Report ("FEIR") prepared in connection with the Plan, adopted Findings of Fact and a Statement of Overriding Considerations, and approved a Mitigation Monitoring Plan; and

2. The drainage agreement for the North Natomas Basin 8a implements the Comprehensive Drainage Plan, by providing for the construction of the Basin 8a Common Drainage Facilities as identifies in the Basin 8a Drainage Master Plan; and

3. The Basin 8a Drainage Master Plan and the drainage agreement are consistent with the North Natomas Comprehensive Drainage Plan and provide complete drainage for properties located within this basin; and

4. All of the environmental impacts associated with this Master Plan and the drainage agreement, and the construction of the Common Facilities, were fully analyzed and considered in the FEIR; and

5. There are no changed circumstances which would require new or further environmental review; and

6. There is no need for further environmental review in order to approve the drainage agreement .

CITY CLERK, CITY OF SACRAMENTO

NOW, THEREFORE, BE IT RESOLVED BY THE COUNCIL OF THE CITY OF SACRAMENTO THAT:

1. The findings set forth above are true and correct.

2. Subject to the following conditions, the Basin 8a Drainage Agreement ("Agreement") is approved, and the City Manager is authorized to execute that agreement:

    a. No Final Master Parcel Map, Subdivision Map, or other map shall be recorded on the land subject to the Agreement, unless and until the provisions of Section 7 of the Agreement, relating to posting of security, have been fully satisfied.

    b. No person shall be permitted to occupy any structure located on the property subject to the Agreement unless and until the Landowner has formed a homeowner's association in accordance with the requirements of Section 2.B.(5) of the Agreement, and said association is in existence and in good standing.

    c. No bonds shall be issued in City of Sacramento North Natomas - Westlake Community Facilities District No. 2000-01, unless and until the community facilities district or similar financing mechanism has been fully and completely formed and is in existence, pursuant to Section 2.B.(6) of the Agreement .

    d. The Landowner shall execute and acquisition and shortfall agreement relating to City of Sacramento North Natomas - Westlake Community Facilities District No. 2000-01 prior to the approval of a Resolution of Formation relating to the said district.

City Council
Sacramento, California

Honorable Members in Session:

SUBJECT: ADOPTION OF A DRAINAGE AGREEMENT FOR THE CONSTRUCTION OF THE NORTH NATOMAS BASIN 8a COMMON DRAINAGE FACILITIES

LOCATION AND COUNCIL DISTRICT:

This drainage agreement includes all the North Natomas Basin 8a Common Drainage Facilities. (See attached map). Basin 8a is in Council District 1

RECOMMENDATION:

Staff recommends that the City Council authorize the City Manager and City Clerk to execute a drainage agreement between the City of Sacramento and Lennar Communities, requiring Lennar Communities to design, finance, and construct all facilities required for drainage pursuant to the North Natomas Comprehensive Drainage Plan.

CONTACT PERSON: Gary A. Reents, Engineering Services Manager, 264-1433
Andrew A. Hunt, Senior Engineer, 264-1408

FOR COUNCIL MEETING OF: May 16, 2000

SUMMARY

In May 1994 the City Council approved the revised North Natomas Community Plan and certified the Supplemental EIR. In May 1997 the City Council approved the North Natomas Comprehensive Drainage Plan for North Natomas and certified the project EIR. On October 26, 1999, the City Council approved the Westborough Planned Unit Development (P98-112) and ratified a Negative Declaration for the project. The Drainage Master Plan for Basin 8a has been accepted by the Department of Utilities, and the Drainage Agreement has been signed by the land owner. Staff recommends the City Council adopt the Drainage Agreement.

BACKGROUND INFORMATION

Basin 8a, one of the watersheds identified in the North Natomas Comprehensive Plan, is located in the North Natomas area west of Interstate 5. The proposed project will drain approximately 331 acres and is bounded on the south by Del Paso Boulevard, on the east by El Centro Road, on the north by Interstate 5 and on the west by the Sacramento City Boundary. All runoff within the Basin 8a area will be collected in pipes and drain to the Westborough Lake/Detention Basin and then into the West Drain Canal. The Basin 8a Common Drainage Facilities covered by this drainage agreement include the following improvements:

- Outfall weir structure to limit outflow from the lake to 33 cfs during storm events;
- Lake / Water Quality / Detention Basin to provide water quality and storm water detention for extreme rainfall events;
- Drainage Pipes to serve The Westborough Development and the EC property.
- Drainage pass through for area to east and north

The North Natomas Comprehensive Drainage Plan identified the necessary drainage improvements required to remove the area within Basin 8a from the 100-year flood plain. The proposed Basin 8a improvements satisfy the requirements to meet this goal.

The Basin 8a common drainage improvements covered by this drainage agreement, will be designed, financed, and constructed by Lennar Communities. All improvements will be constructed in accordance with plans and specifications approved by the City Department of Utilities, and will be subject to normal inspection by the City.

The drainage agreement is to ensure the provision of storm water drainage for the basin and is a requirement (Mitigation Measure 2) of the Mitigation Monitoring Plan. The agreement covers design and construction of the common drainage facilities associated with the Westborough

development, City review and inspection of the common drainage facilities, conveyance and dedication of the common drainage facilities to the City, and completion and acceptance of the common drainage facilities by the City. The drainage agreement also provides financial assurances that the drainage facilities will be completed.

FINANCIAL CONSIDERATIONS

Lennar Communities has agreed to pay all costs associated with the design and construction of the Basin 8a common drainage facilities covered in this drainage agreement. There is no cost to the City.

ENVIRONMENTAL DETERMINATION

The Planning Division has reviewed the project for compliance with the requirements of the California Environmental Quality Act (CEQA). The project is determined to fall within the scope of the North Natomas Comprehensive Drainage Plan Environmental Impact Report (EIR), adopted in May 1997 and the Negative Declaration (Negative Declaration) for the Westborough Project. The Westborough project has not changed appreciably since the environmental document was approved therefore no further environmental document is required. The Negative Declaration adequately describes the environmental effects of the proposed detention basin construction.

The Negative Declaration identified that the construction and operation of the detention basin will result in potentially significant impacts to wildlife, water quality and cultural resources. Mitigation measures to reduce these impacts to less than significant levels are specified in the Negative Declaration and are incorporated into the attached Mitigation Reporting Program for the construction of the detention basin. This analysis concludes that the proposed drainage agreement and construction of the detention of the basin will not result in new impacts or greater levels of impact than those identified in the Westborough Negative Declaration.

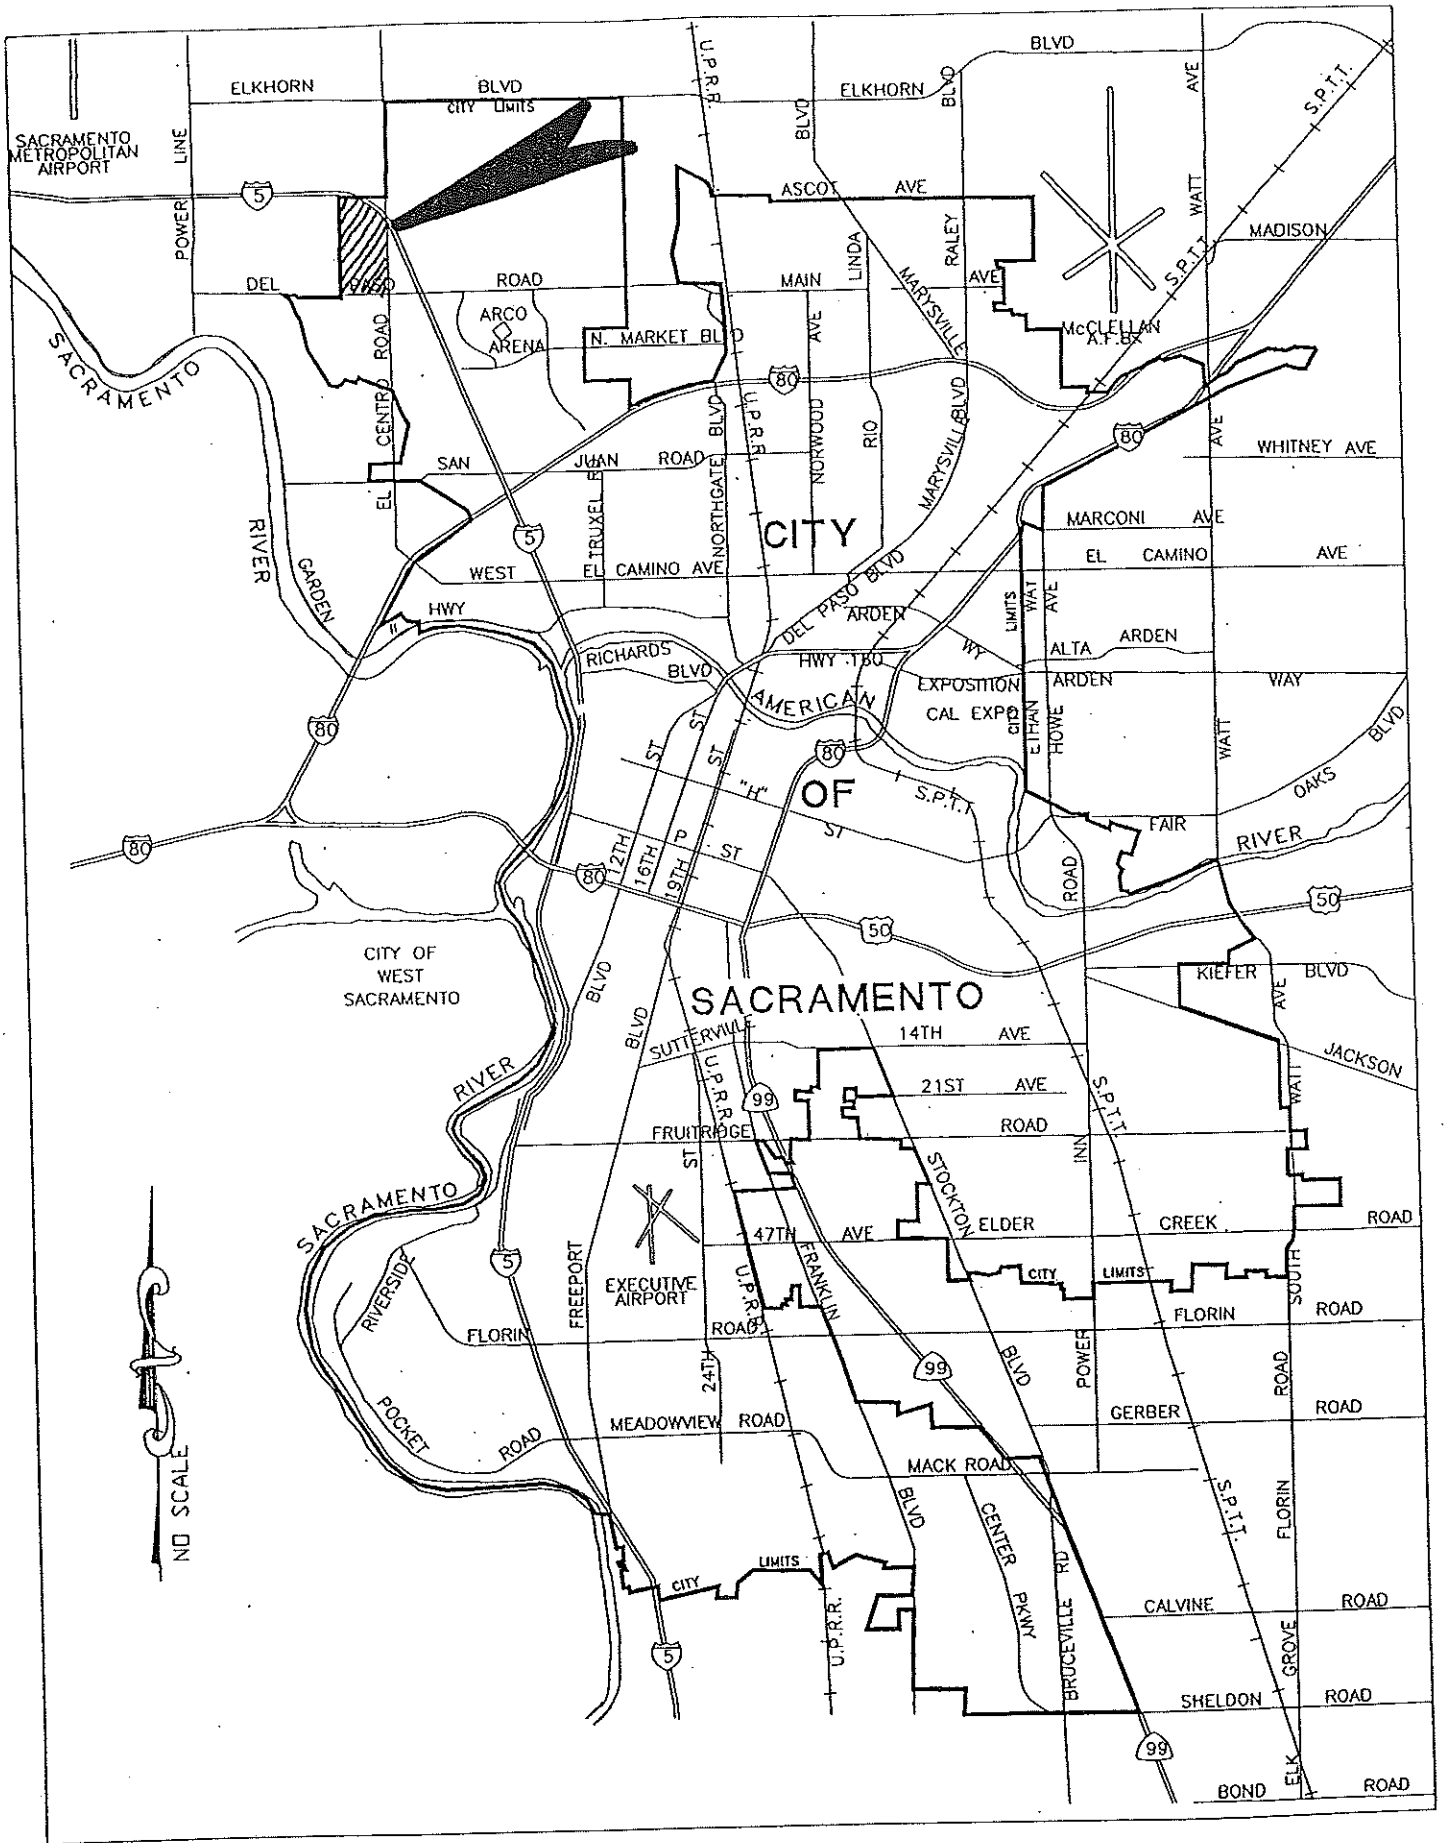
POLICY CONSIDERATIONS

The Drainage Agreement is consistent with the City Council's adoption of the North Natomas Comprehensive Drainage Plan and the goal of North Natomas Community Plan to promote development in North Natomas.

ESBD CONSIDERATIONS

Not applicable since no goods or services are being purchased.

Respectfully submitted,



Gary A. Reents
Engineering Services Manager

AGREEMENT FOR CONSTRUCTION OF DRAINAGE IMPROVEMENTS

THIS AGREEMENT, dated May 16, 2000, for purposes of identification, is made and entered into by and between the **CITY OF SACRAMENTO**, a charter city ("City"), and **WINNCREST NATOMAS LLC**, a Nevada limited liability company ("Landowner").

RECITALS

A. Landowner is the owner of property located in the City of Sacramento and identified as set forth in **Exhibit A**, attached hereto and incorporated herein by this reference (hereafter referred to as the "Landowner Property"). The Landowner Property is located within the area known and commonly referred to as "Drainage Basin 8A".

B. Landowner has received the following land use entitlements with respect to the Landowner Property from the City Planning Commission and/or the City Council ("Entitlements"):

Entitlement Issued	Date Issued	Resolution/Other No.
Tenatative Master parcel map("Tentative Master Parcel Map")	October 26, 1999	99-616
Tentative Subdivision Map ("Tentative Subdivision Map")	October 26, 1999	99-616
General Plan Amendment	October 26, 1999	99-613
Rezoning	October 26, 1999	Ord. 99-055
P.U.D. Designation	October 26, 1999	99-615
Community Plan Amendment	October 26, 1999	99-614
Development Agreement	October 26, 1999	Ord. 99-054

C. The conditions of approval for said entitlements and the project mitigation measures include conditions and requirements relating to drainage of the Landowner Property which must be satisfied prior to issuance of any building permit and/or prior to issuance of a certificate of occupancy or other permit or document allowing occupancy of any structure as to which a building permit was issued. Those conditions and requirements require the preparation and execution of a drainage agreement ensuring satisfaction of such drainage conditions for Landowner's development project. The text of the conditions and mitigation measures relating to drainage are as set forth in **Exhibit B**, attached hereto and incorporated herein by this reference.

D. The conditions and mitigation requirements described in Recital C (collectively the "Drainage Conditions") require the owners of the Landowner Property to design, finance and construct, subject to prior City approval, all facilities required for drainage pursuant to the North Natomas Comprehensive Drainage Plan, Basin 8A.

E. Landowner, or its successors, is wholly responsible for providing interim and long-term permanent drainage facilities serving the Landowner Property.

F. A master drainage plan for Basin 8A (the "Basin 8A Master Drainage Plan") has been submitted to City for approval, and has received technical approval from the City's Department of Utilities. If and to the extent that the Basin 8A Master Drainage Plan must also be approved by the Department of Neighborhood Services due to any planned co-use of the Drainage Facilities or any portion thereof as a City park, such approval has been received.

G. Landowner has submitted to the City the following documents (collectively, the "Drainage Plans") related to the design and construction of the drainage facilities required for the Landowner Property: (i) a drainage master plan entitled North Natomas Drainage Basin 8A Drainage Analysis, dated October, 1998 and prepared by Morton & Pitalo, Inc.; (ii) Phasing Study dated February 18, 2000, prepared by the Spink Corporation (the "Phasing Plan"), which is attached hereto as **Exhibit C** and incorporated herein by this reference; and (iii) improvement plans for Basin 8A, including cost estimates. The City has not yet approved the Drainage Plans; however, City has agreed to allow processing of this Agreement pending such approval with the express understanding and agreement of Landowner that the Drainage Plans must be approved in writing by City prior to commencement of construction of the Drainage Facilities.

H. Landowner has also submitted to the City that certain proposed final master parcel map for the Landowner Property which is entitled "Westborough" and datedFebruary, 2000 1998, prepared by The Spink Company (the "Final Master Parcel Map").

I. Landowner desires to enter into this Agreement in accordance with the Drainage Conditions so it can record the Final Master Parcel Map and proceed with development of the Landowner Property. Landowner is willing to construct the improvements (the "Drainage Facilities") shown on the Drainage Plans, entirely at

Landowner's expense, on the terms and conditions set forth herein. By constructing the Drainage Facilities, Landowner will have satisfied the Drainage Conditions insofar as they affect the Landowner Property. This is the Drainage Agreement required by the Drainage Conditions, and it implements rather than amends the Drainage Conditions.

J. Landowner has requested that City commence and complete proceedings for the establishment of a community facilities district to finance the design and acquistion from Landowner of the Drainage Facilities, and expenses incidental thereto. The terms and conditions upon which the City will form such a district, and upon which such a district will acquire the Drainage Facilities, will be set forth in a separate written agreement between the parties.

NOW, THEREFORE, on the basis of the facts set forth in Recitals A through J above, which the parties agree are accurate and are part of this Agreement, the parties hereby mutually agree as follows:

1. Design and Construction of Permanent Drainage Facilities.

A. Obligation to Construct. Subject to the terms and conditions specified herein and subject to the provisions of this Agreement relating to construction of phased and/or interim facilities, Landowner shall perform or cause to be performed, at Landowner's sole cost, all work necessary to construct the Drainage Facilities shown on the Drainage Plans, including without limitation the pipelines, pump stations, detention basins and other related improvements shown thereon.

(1) When constructed in accordance with the Drainage Plans, the Drainage Facilities will meet the Drainage Conditions, and all of the criteria set forth in the City of Sacramento's standard specifications issued by the Departments of Public Works and Utilities which were in effect at the time of final approval by City of the design of the Drainage Facilities, which standard specifications are specifically incorporated herein in full and made a part of this Agreement ("Standard Specifications").

(2) Where it is contemplated that City may form an acquisition district for the purpose of acquiring the Drainage Facilities, or some portion thereof, that portion of the Drainage Facilities which are to be acquired by said district shall be constructed as if they had been constructed as a city capital improvement project. In that regard, the construction procedures shall meet at least the following criteria, to the extent required by the applicable law governing the district and applicable city policies and procedures:

(a) Landowner shall require all contractors and subcontractors performing work on the Drainage Facilities to be acquired to pay prevailing wages, and Landowner shall employ competitive bidding procedures in accordance with applicable City policies and procedures; and

(b) All construction contracts relating to the Drainage

Facilities to be acquired shall provide that the progress and final payments called for therein shall be made only after the City has inspected the Drainage Facilities to be acquired and has approved the extent to which such improvements have been completed in relationship to the payments(s) being made.

B. Location of Drainage Facilities. The pipelines, pump stations, detention basins and related improvements constituting the Drainage Facilities shall be located as shown on the map attached hereto as **Exhibit D** and fully incorporated hereby by this reference, unless different locations are approved by City.

C. Costs. All design costs, engineering costs, and costs of plans and specifications, together with the entire cost of construction and any and all costs incurred to acquire any property rights necessary to construct the Drainage Facilities, shall be borne one hundred percent (100%) by Landowner.

2. Review and Inspection.

A. Plan Approval. The City has not yet approved the Drainage Plans; however, City has agreed to allow processing of this Agreement pending such approval with the express understanding and agreement of Landowner that the Drainage Plans must be approved in writing by City prior to commencement of construction of the Drainage Facilities.

B. Site Superintendent; City Project Manager. Landowner shall provide a site construction superintendent ("Site Superintendent") who will be on-site whenever work is being performed on the Drainage Facilities. The City shall provide a City project manager ("City Project Manager") who will be Landowner's point of contact with the City with respect to such construction, who will be on-site as necessary, and who will generally be available by telephone or otherwise at all reasonable times.

(1) The Site Superintendent shall have complete authority over the construction contractors and all subcontractors, with authority to order stoppage of work and minor changes to the work in order to comply with the Drainage Plans. The Site Superintendent may also, but need not have authority to order minor design changes to meet unanticipated field conditions, provided that the same are consistent with the Drainage Plans.

(2) The City Project Manager shall have complete authority over the City's construction inspectors, with authority to determine whether or not the work complies with the Drainage Plans. The City Project Manager may also, but need not have authority to approve minor design changes to meet unanticipated field conditions, provided that the same are consistent with the Drainage Plans.

(3) Les Hock is designated by Landowner as the Site Superintendent, until Landowner notifies the City Department of Utilities of his replacement. Bill Busath is designated by City as the City Project Manager, until City notifies Landowner

of his replacement.

C. Construction and Inspection. Landowner shall construct the Drainage Facilities in accordance with the Drainage Plans and any changes or revisions thereto approved by City. City shall be allowed to enter the Landowner Property to perform construction inspection whenever deemed necessary by City, provided that City Project Manager shall notify Landowner's Site Superintendent of any entry to and departure from the construction site by City inspectors when an inspection occurs during the normal working hours.

(1) Should a City inspector (the "Inspector") find any non-conformance or noncompliance with the Drainage Plans, the Inspector shall notify the City Project Manager and the Site Superintendent of such nonconformance or noncompliance, and the City Project Manager and the Site Superintendent shall jointly determine the nature of the corrective action to be taken. Corrective action taken pursuant to the agreement between the City Project Manager and the Site Superintendent shall be deemed to be in accordance with the Drainage Plans.

(2) If the City Project Manager and the Site Superintendent are unable to agree upon the corrective action to be taken, the City Project Manager may order that work on the nonconforming or noncomplying item(s) or area(s) be stopped. If the City Project Manager orders work to stop: (a) Landowner shall comply with all requirements of any stop work order and must obtain City's approval before work can resume on that item(s) or in that area(s); and (b) the City Project Manager, the Site Superintendent and such other representatives of City and Landowner as are necessary or appropriate to evaluate, discuss and resolve the situation, shall promptly meet and confer regarding the measures necessary to correct the nonconforming or noncomplying items(s) or area(s).

(3) Landowner, at its expense, shall make normal construction design review and support services available to City during the course of construction. The City's inspection fees shall include an amount necessary to compensate City for the services provided by the City Project Manager pursuant to this Agreement.

(4) Landowner intends to convey to City fee title to the property covered by the lake which will serve as both a detention basin, and a recreational amenity for Landowner's residential development. Such conveyance is subject to all of the terms and conditions of this Section 3. Additionally, Landowner will reserve to itself an easement for recreational and related uses. City shall have the right to approve the form of the reserved easement. In determining the value of the lake property for purposes of reimbursement (if applicable) through Community Facilities District #00-01, or such other mechanism as is selected in City's sole and exclusive discretion, the said easement shall be taken into account in the deliberations of the independent appraiser commissioned by City to appraise the lake property.

(5) Landowner and City have agreed upon the terms and

conditions of a Lake Management Plan ("Plan") for the lake/detention basin, which Plan *inter alia* specifies the parties' responsibilities and obligations relative to maintenance of the lake/detention basin and all of its facilities. Landowner shall undertake all required procedures to form a homeowners' association which will, in addition to its other duties, be fully responsible for satisfying Landowner's maintenance obligations under the Plan. No person shall be allowed to occupy any residence within the Property unless and until the homeowners' association has been fully formed and is in existence in good standing. The Lake Management Plan is attached hereto, marked **Exhibit H**, and is incorporated herein by this reference.

(6) It is City's intention to form, at Landowner's expense, an additional Community Facilities District or other similar comparable financing mechanism ("District") for the purpose of providing contingency funding for fulfillment of Landowner's and the homeowners' association's maintenance obligations under the Plan, in the event that there is a default in performance of such obligations. The District will provide for a zero tax, which in City's discretion may be escalated to a specified maximum tax in case of such a default. Landowner, for itself and its assigns, agrees to the formation of the District, and to execute all waivers and other documents required by City in connection with formation of the District, and to vote affirmatively on the issues of formation and the establishment of the tax rate and method of apportionment, which will be determined by an independent consultant selected by City, as well as the tax levy. The parties agree that no bonds will be issued in CFD #00-01 for purposes of reimbursement of Landowner's costs in constructing the Drainage Facilities, unless and until the District is formed and all proceedings have been finally approved for levy of the tax. City will diligently proceed with formation of the District.

(7) The parties further agree that a formal acquisition and shortfall agreement relating to CFD #00-01 shall be entered into prior to adopting a Resolution of Formation with respect to the District, in a form approved by the City Attorney, to be executed by Landowner and City.

D. Weekly Meetings. During the construction of the Drainage Facilities, appropriate representatives of each party shall meet on a weekly basis as needed to coordinate activities and keep all parties advised as to the status of the Drainage Facilities project.

3. Conveyance of Drainage Facilities, Dedication of Easements, As-Builts, Warranties.

A. Compliance with Standard Specifications; Warranty of Work. Except as otherwise specified herein, all matters relating to notices of completion, inspections for completion, correction of deficiencies, notices of correction of deficiencies, final inspections, testing, final approvals, conveyance of facilities to City, City acceptance of the Drainage Facilities, as-built construction specifications, drawings, plans and submittals, maintenance and repairs pending final acceptance by City, assignment of third-party warranties to City, and Landowner's warranty of the Drainage Facilities, shall be conducted and determined in accordance with City's Standard Specifications. With respect to warranties of work, the Standard Specifications generally require a one-year warranty dating from the date of acceptance of the work by City.

B. Conveyance of Drainage Facilities. Prior to, and as a condition precedent to acceptance by City of the completed Drainage Facilities, Landowner shall also irrevocably dedicate to City, at no cost to City, legal title to all of the completed Drainage Facilities including without limitation any and all easements on, over, under and across Landowner Property which are necessary for City to own, operate, gain access to, and maintain and repair all or any portion of the Drainage Facilities, except for the detention basin site, which detention basin site shall be irrevocably dedicated to City in fee, at no cost to City. Where the project requires acquisition of interests in real property on land other than the Landowner Property, Landowner shall acquire at Landowner's sole cost and expense all such interests and convey such interests to City in accordance with the provisions of this section. In the event that Landowner is unable to acquire such interests from the owners thereof after using reasonable business efforts in good faith, City agrees, to the extent permitted by law, to employ its legal authority to acquire such interests; provided, however, that Landowner shall be required to pay to City all costs of acquisition, including but not limited to attorney fees (whether for the City Attorney or City-selected outside counsel), court costs, appraisal costs, city staff costs, and other costs related to the acquisition procedures. City shall provide to Landowner an initial estimate of such costs, which Landowner shall pay within ten (10) days of notice by City of the cost estimate. In the event that actual costs exceed the estimate, City shall bill Landowner for the excess thereof on a quarterly basis, and Landowner shall pay any such billing within ten (10) days from receipt thereof. In the event that the costs are less than the estimate, City shall refund to Landowner the excess deposited with City within ten (10) days from the date on which the acquisition is completed. In the process of acquisition, City will use its best efforts to obtain rights to enter and construct the Drainage Facilities so as to expedite the construction schedule.

(1) The easements and detention basin site shall be conveyed to City subject only to "Permitted Encumbrances," as hereinafter defined. Landowner agrees and covenants to take any and all actions necessary to remove any and all encumbrances which do not constitute Permitted Encumbrances, prior to conveying the easements and detention basin to City.

(2) As used in this Agreement, the term "Permitted Encumbrances" means: (a) nondelinquent assessments or taxes for bonds issued by City or its nominee; (b) nondelinquent assessments by RD-1000; (c) nonexclusive easements for public facilities or utilities which do not interfere with or limit the rights to be conveyed to City hereunder, including easements for highways, streets, roads, ditches, canals, levees, sewer facilities, electrical facilities, gas facilities, telephone facilities and drainage facilities; (d) any improvement agreement, development agreement, reimbursement and warranty agreement, indemnification agreement, mitigation agreement, or agreement to participate in North Natomas Financing Plan, between any owner of the Landowner Property and City; and (e) such other encumbrances as the City may approve in writing.

(3) Notwithstanding their "Permitted Encumbrances" status, the City shall not be responsible for the payment of any tax or assessment, or fee or charge levied against the easements and detention basin (collectively, the "Flood Improvement Taxes and Assessments") by virtue of the City's acquisition thereof pursuant hereto, including but not limited to, the following: direct levy assessments of the Sacramento Area Flood Control Agency for the construction of presently existing flood control improvements benefitting the Landowner Property; and, special taxes under the presently existing Community Facilities District formed to fund the construction of additional flood control improvements benefitting the Landowner Property.

(a) Landowner shall pay all then-current installments of the Flood Improvement Taxes and Assessments at the time of conveyance, and Landowner or its successors in interest shall remain responsible for the payment of the future installments of the Flood Improvement Taxes and Assessments levied against the property affected by the City easements described in this Agreement.

(b) The City, upon the direction and express consent of Landowner, which are hereby given, shall use its best efforts to cause the Flood Improvement Taxes and Assessments affecting the detention basin to be reallocated in accordance with applicable law and the provisions of the relevant district. With respect to the components of the Flood Improvement Taxes and Assessments which originate from a district formed by City, City upon complete and proper application made by Landowner (including applicable fees), agrees to cause such reallocation to be completed, to the extent allowable by law and in accordance with the provisions of the relevant district. As to districts not formed by City, or as to City-formed districts where reallocation cannot be completed in accordance with applicable law and/or the provisions of the relevant district, if despite the City's best efforts, Flood Improvement Taxes and Assessments remain against the detention basin, Landowner and the City shall implement a reasonable alternative to assure that the City has no responsibility for the payment of the future installments of such Flood Improvement Taxes and Assessments.

4. Completion of Drainage Facilities; Interim Facilities; Home Construction; Satisfaction of Drainage Conditions.

A. Phasing of Facilities. Landowner may elect to install the Drainage Facilities in the phases described in **Exhibit C** (the "Phasing Plan") and has agreed to post security applicable to such phases in accordance with Section 7 below. The City has approved the Phasing Plan and the security described in Section 7. In the event that Landowner desires to modify the Phasing Plan, then the Drainage Facilities to be included within each modified phase, their location, the area to be served thereby, the timing for completion of such modified phases and the posting of any applicable security in accordance with Section 7 below shall be subject to the review and approval of the Director of the Department of Utilities, in the Director's absolute and sole discretion.

B. Interim Drainage Facilities. Landowner shall have the right, subject to the same City review and approval provisions as are set forth in subsection A above, to provide interim drainage facilities to serve the initial development of the Landowner Property until such time as the Drainage Facilities are completed and conveyed to City as provided herein. Such interim facilities may (by way of example) include temporary pumps to serve the initial development of the Landowner Property until permanent pumps are required hereunder in City's judgment. Provided that, if and when development of the Landowner Property reaches the level where the installation of the Drainage Facilities, or applicable portion thereof, is required, then City may require the completion of such Facilities, or portion thereof, as a condition to any further development of the Landowner Property. Nothing in this Agreement or in any other agreement between the parties, and no action on the part of City, its officers, employees or agents in approving such interim facilities shall be construed to create a waiver of any requirement that the Drainage Facilities be fully and completely installed by Landowner.

C. Building Permits and Certificates of Occupancy. The portions of the Drainage Conditions which limit the availability of building permits and the occupancy of structures may also be satisfied on a phase-by-phase basis, in accordance with this Section 4.C.

(1) Commencement of construction of the Drainage Facilities within a phase, as described in the Phasing Plan, shall entitle Landowner to obtain building permits for the maximum number of residences and other structures permitted within the building area ("Building Area") served by that phase of the Drainage Facilities, as such Building Area is also shown on the Phasing Plan. So long as Landowner is not in default under this Agreement, once the Drainage Facilities within a phase have been commenced, City shall not refuse or delay, on the basis of the Drainage Conditions, to issue building permits within the applicable Building Area or to inspect any residence or other structure for which a building permit has been issued.

(2) Once Landowner has completed construction of the Drainage Facilities in a phase, City shall not, on the basis of the Drainage Conditions, including

without limitation, any failure to construct subsequent phases of the Drainage Facilities, refuse or delay the issuance of a certificate of occupancy for any residence or other structure for which a building permit has been issued or to otherwise allow the occupancy of any such structure, from and after the date Landowner has completed construction of such phase of the Drainage Facilities, as evidenced by the City of Sacramento Department of Utilities' final inspection and approval, or such earlier date as approved by the Department of Utilities, in its discretion. City agrees to act in a timely fashion in providing final inspection and approval. Upon notice from Landowner that the Drainage Facilities are complete, City agrees to provide the final inspections and a punch list of corrections within thirty (30) days of receipt by City of such notice.

(3) In the event the Phasing Plan is modified in accordance with Section 4.A, then the foregoing provisions shall apply with respect to the revised Building Area(s) as shown on the revised Phasing Plan.

D. Satisfaction of Drainage Conditions. When Landowner has completed construction of the Drainage Facilities in accordance with this Agreement and City has accepted the Drainage Facilities, the Drainage Conditions will be deemed satisfied for all purposes with respect to the Landowner Property. For purpose of this Agreement, City acceptance means final completion in accordance with the Drainage Plans of the Drainage Facilities or phase thereof, which has been finally inspected and approved by the City for acceptance into its drainage system.

5. Hazardous Substances.

A. No Review, Examination or Assessment. The parties acknowledge and understand that City has not conducted any review, examination or assessment to assess, identify or detect the presence of any Hazardous Substances, as defined below, on, under or around Landowner Property. As between the City and Landowner, any liability associated with the presence of any Hazardous Substances on, under or around the Landowner Property, including any interests in said property dedicated to City as provided herein, shall be governed by the provisions of Section 6 below, regardless of whether any such review, examination or assessment is conducted.

B. Definitions.

(1) As used herein, the term "Hazardous Substances" means:

(a) Those substances included within the definitions of hazardous substance, hazardous waste, hazardous material, toxic substance, solid waste, or pollutant or contaminant under any Environmental Law, as defined below;

(b) Those substances listed in the United States Department of Transportation Table [49 CFR 172.101], or by the Environmental Protection Agency, or any successor

agency, as hazardous substances [40 CFD Part 302];

(c) Other substances, materials, and wastes that are or become regulated or classified as hazardous or toxic under federal, state or local laws or regulations; and

(d) Any material, waste, or substance that is

i) a petroleum or refined petroleum product,
ii) asbestos,
iii) polychlorinated biphenyl,
iv) designated as a hazardous substance pursuant to 33 USCS §1321 or listed pursuant to 33 USCS §1317,
v) a flammable explosive, or
vi) a radioactive material.

(2) As used herein, the term "Environmental Law" means all federal, state, local or municipal laws, rules, orders, regulations, statutes, ordinances, codes, decrees or requirements of any government authority regulating, relating to, or imposing liability or standards of conduct concerning any Hazardous Substance, or pertaining to environmental conditions on, under, or about the detention basin site or any of the easement areas which Landowner is required to and does convey to City pursuant to this Agreement, as now or may at any later time be in effect, including, without limitation, the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) [42 USCS §§ 9601 *et seq.*]; the Resource Conservation and Recovery Act of 1976 (RCRA) [42 USCS §§ 6901 *et seq.*]; the Clean Water Act, also known as the Federal Water Pollution Control Act (FWPCA) [33 USCS §§ 1251 *et seq.*]; the Toxic Substances Control Act (TSCA) [15 USCS §§ 2601 *et seq.*]; the Hazardous Materials Transportation Act (HMTA) [49 USCS §§ 1801 *et seq.*]; the Insecticide, Fungicide, Rodenticide Act (7 USCS §§ 136 *et seq.*]; the Superfund Amendments and Reauthorization Act [42 USCS §§ 6901 *et seq.*]; the Clean Air Act [42 USCS §§ 7401 *et seq.*]; the Safe Drinking Water Act [42 USCS §§ 300f *et seq.*]; the Solid Waste Disposal Act [42 USCS §§ 6901 *et seq.*]; the Surface Mining Control and Reclamation Act [30 USCS §§ 1201 *et seq.*]; the Emergency Planning and Community Right to Know Act [42 USCS §§ 11001 *et seq.*]; the Occupational Safety and Health Act [29 USCS §§ 655 and 657]; the California Underground Storage of Hazardous Substances Act [Health and Safety Code §§ 25280 *et seq.*]; the California Hazardous Substances Account Act [Health and Safety Code §§ 25100 *et seq.*]; the California Safe Drinking Water and Toxic Enforcement Act [Health and Safety Code §§ 24249.5 *et seq.*]; the Porter-Cologne Water Quality Act [Water Code §§ 13000 *et seq.*], together with any amendments of or regulations promulgated under the statutes cited above, and any other federal, state or local law, statute, ordinance or regulation now in effect or later enacted that pertains to the regulation or protection of the environment, including ambient air, soil, soil vapor, groundwater, surface water, or land use.

6. Indemnification; Waiver and Release.

A. Indemnification by Landowner. Subject to the provisions of this Section 6, Landowner agrees and covenants to, and shall fully indemnify, defend and hold harmless City and its elective and appointive boards, commissions, officers, employees and agents, from and against any and all liabilities, penalties, losses, damages, costs, expenses (including reasonable attorneys' fees, whether for outside counsel or the City Attorney), causes of action, claims, or judgments (collectively, "Claims") arising by reason of any death, bodily injury, personal injury, property damage or violation of any law or regulation to the extent arising from any actions or omissions in connection with the design, construction, operation, maintenance or repair of the Drainage Facilities by any of the following: Landowner, any of Landowner's engineers, contractors or subcontractors, or any other person or entity employed by or acting on behalf of or as the authorized agent for Landowner, or any of Landowner's engineers, contractors or subcontractors. Provided, however, that Landowner shall not be liable hereunder to indemnify, defend or hold harmless City and its elective and appointive boards, commissions, officers, employees and agents against Claims alleging sole and active negligence of City in its functions of design review, approval or construction inspection in connection with the Drainage Facilities; provided further, that nothing in this Agreement shall be construed as a waiver by City of any immunity or defense it may have relating to any such Claim, including without limitation immunity or defenses relating to design review and/or approval and/or construction inspection.

B. Indemnification Regarding Hazardous Substances. Landowner further agrees and covenants to, and shall fully indemnify, defend and hold harmless City, and its elective and appointive boards, commissions, officers, employees and agents, from and against any and all Claims arising by reason of any death, bodily injury, personal injury, property damage or damage to the environment to the extent arising from any use, storage, treatment, transportation, release or disposal, on, about or around the portion of the Landowner Property on which the detention basin or any of the Drainage Facilities or the easements which are required to be or which are transferred to City shall be located, of any Hazardous Substances, as defined above, by any person or entity (except persons or entities acting on City's behalf or under City's control), occurring on or at any time prior to the date the detention basin site, the Drainage Facilities, and the said easements are conveyed to City as provided in this Agreement. The foregoing indemnification obligation shall not apply to the incorporation of building materials as part of the Drainage Facilities, provided such incorporation is performed in accordance with applicable laws and is not in violation of Environmental Laws in effect at the time of such incorporation.

C. Duration of Indemnification Obligations. The indemnification and hold harmless agreement made by Landowner in Section 6.A above, with respect to the Drainage Facilities, or each part thereof constructed by Landowner, shall expire on a phase-by-phase basis. Such indemnification and hold harmless agreement shall expire with respect to a phase on the date which is one year after the completion of such phase of the Drainage Facilities and acceptance thereof by City (hereafter the "Expiration Date"), provided that Section 6.A above shall not expire and shall remain in effect with respect to

any Claims which are made, initiated, claimed, filed or assessed at any time prior to the Expiration Date, or which relate to (directly or indirectly) any such Claims. The indemnification and hold harmless agreement made by Landowner in Section 6.B above shall survive the termination of this Agreement with respect to a phase until the date which is two years after the completion of such phase and acceptance thereof by City. Section 6.B above shall not expire, however, and shall remain in effect with respect to any Claims which are made, initiated, claimed, filed or assessed at any time prior to such date, or which relate to (directly or indirectly) any such Claims. The provisions of this Section 6.C shall apply only with respect to the indemnification and hold harmless provisions of this Agreement, and shall not affect the liability, if any, which Landowner might have under applicable law to the extent Landowner is a contaminator of the Landowner Property.

D. Additional Provisions Regarding Indemnification Obligations. The parties further agree and understand as follows: (1) City does not, and shall not be deemed to, waive any rights against Landowner which it may have by reason of the aforesaid indemnity and hold harmless agreements because of any insurance coverage provided pursuant to Section 8 below; (2) except as may otherwise be specifically and expressly provided in subsection 6.A. above relating to Claims based upon allegations of sole and active negligence on the part of City, the aforesaid indemnity and hold harmless agreements shall not be limited or waived in any way based upon the fact that City has or shall have prepared, supplied, or approved of plans and/or specifications for the Drainage Facilities, or has or shall have inspected or failed to inspect construction of the Drainage Facilities; (3) the scope of the aforesaid indemnity and hold harmless agreements is to be construed broadly and liberally to provide the maximum coverage for City in accordance with their terms; (4) no specific term or word contained in this section shall be construed as a limitation on the scope of the indemnification and defense rights and obligations of the parties unless specifically so provided; and (5) Landowner shall cause all engineering and construction contracts relating to the Drainage Facilities to require the engineer or contractor to fully and without limitation indemnify, defend and hold harmless City and its elective and appointive boards, commissions, officers, employees and agents, from and against any and all Claims arising by reason of any death, bodily injury, personal injury, property damage or violation of any law or regulation to the extent arising from any actions or omissions of such professional in connection with the design, construction, maintenance, operation or repair of the Drainage Facilities by said engineer or contractor, or any other person or entity employed by or acting as the authorized agent for said engineer or contractor, but only to the extent that such professional or other party has contractual responsibility for a portion or aspect of the Drainage Facilities. For example, a contractor responsible for constructing a portion of the Drainage Facilities would not be held responsible for the design, nor would an engineer who designed a portion of the Drainage Facilities be held responsible for construction not in accordance with the design. So long as the construction contract contains the language contained in **Exhibit E**, attached hereto and incorporated herein by this reference, or other language approved in writing by the City, and if City is satisfied in its judgment with the adequacy of the engineer's or contractor's insurance, Landowner shall be deemed to have satisfied its obligation under subsection 6.D(5) to obtain for the City indemnification and defense

obligations on the part of Landowner's engineers and contractors.

E. Waiver by Landowner. In addition to Landowner's obligations to indemnify, hold harmless and defend City as set forth above, Landowner, its assigns, transferees and successors, hereby waives and releases any and all claims of whatever sort or nature which may arise against City or its officers, employees and agents, in connection with the design or construction of the Drainage Facilities.

F. Unknown Claims. This waiver and release shall include any and all claims arising under Section 1542 of the California Civil Code, which provides that:

> "A general release does not extend to claims which a creditor does not know or suspect to exist in his favor at the time of executing the release, which if known by him must have materially affected his settlement with the debtor."

Thus, notwithstanding the provisions of Section 1542, and for the purpose of implementing a full and complete release, the parties hereto expressly acknowledge that this Agreement is intended to release and extinguish, without limitation, all claims as described in this Section 6 which the parties do not know or suspect to exist. The provisions of this Section 6 shall survive termination of this Agreement.

G. Indemnification by City. City further agrees and covenants to, and shall fully indemnify, defend and hold harmless Landowner, and its elective and appointive boards, commissions, officers, employees and agents, from and against any and all Claims arising by reason of any death, bodily injury, personal injury, property damage or damage to the environment (i) to the extent arising from any City use, storage, treatment, transportation, release or disposal, on, about or around the portion of the Landowner Property on which the detention basin or any of the Drainage Facilities or the easements which are required to be or which are transferred to City shall be located, of any Hazardous Substances, as defined above, by any person or entity (except persons or entities acting on Landowner's behalf or under Landowner's control), occurring on or at any time after the date the detention basin site, the Drainage Facilities, and the said easements are conveyed to City as provided in this Agreement; (ii) arising from any act (including but not limited to those covered by subsection (i) immediately above) on the part of City or its agents or employees in the use and operation of the Drainage Facilities; or (iii) occurring on or at any time arising from any entry upon the Landowner Property by City, its agents, employees or contractors, pursuant to the provisions of section 2 of this Agreement.

7. Security.

A. Security for Drainage Facilities. Prior to approval of a final parcel map, or a final subdivision map, for any portion of the Landowner Property, Landowner shall post with City the security required by this Section 7.A in order to secure performance of all of Landowner's obligations hereunder with respect to the Drainage Facilities. In all cases the security shall be in the form of a standby letter of credit, acceptable in form to

the City Attorney. In City's sole and absolute discretion, City may approve an alternate form of security proposed by Landowner.

(1) Landowner shall post with the City the following security (the "Initial Drainage Security") in connection with the City's approval of the final Master Parcel Map, which affects the entire Landowner Property: a standby letter of credit in an amount equal to the total cost of construction of the Drainage Facilities, as shown on the Engineer's Cost Estimate, attached hereto as **Exhibit F**, and incorporated herein by this reference.

(2) The Initial Drainage Security shall be reduced and/or replaced, from time to time, in connection with the commencement of construction of Drainage Facilities shown on improvement plans approved by the City. As and when City approves the improvement plans ("Approved Plans") for all or any portion of the Drainage Facilities and authorizes the commencement of construction of the Drainage Facilities ("Approved Facilities") shown on the Approved Plans, Landowner shall replace the Initial Drainage Security with respect to the Approved Facilities with a Labor and Material Bond and Performance Bond or alternate security as may be approved by the City (the "Construction Security") in the amount customarily required by the City in connection with subdivision improvements, based upon the estimated cost of completing the Approved Facilities. Once Landowner has furnished the City with the Construction Security, the Initial Drainage Security shall be reduced and released by the City with respect to those amounts secured by the Construction Security. If the Drainage Facilities are completed before the entire Initial Drainage Security has been released, the then-remaining Initial Drainage Security shall be released when Landowner furnishes the security required by Section 7.B.

B. Security for Warranty. To secure the terms of the warranties set forth in Section 3.A above, Landowner shall provide warranty security in a form acceptable to City in the amount of ten percent (10%) of the full cost to construct the applicable Drainage Facilities. The warranty security for the Drainage Facilities shall be the warranty security furnished in connection with the subdivision to which such facilities are attributed. Warranty security shall be provided at the time that each portion of the Drainage Facilities are conveyed to City as set forth herein, and shall remain effective throughout any applicable guarantee period. Prior to City making any temporary or permanent repairs or replacements during the warranty period, City shall provide Landowner with detailed information concerning the warranty work that needs to be completed, including the estimated cost of the work and the reasons that the City believes the work is required. City and Landowner shall meet and confer regarding such warranty work and Landowner shall be given a reasonable opportunity to perform such warranty work within a time frame and on conditions which are reasonable under the circumstances. If City makes or causes to be made any temporary or permanent repairs or replacements during such warranty period, Landowner shall be assessed, in addition to actual costs and expenses of such repair or work, fifteen percent (15%) of such costs and expenses for overhead. The assessment of costs, expenses and overhead shall first be drawn from Landowner's warranty security. If the amount exceeds the balance of the warranty security, Landowner will be required to pay for the additional costs incurred within thirty (30) days after City requests payment of the additional amount.

8. **Insurance.** Landowner shall obtain and deliver to City, at no cost to City, certificates of insurance which indicate that City, its elective and appointive boards, commissions, officers, agents and employees are covered as additional insureds under all insurance policies maintained for design and/or construction of the Drainage Facilities (1) by Landowner, or (2) by any engineer, contractor or subcontractor directly or indirectly employed by Landowner to perform any work related to the Drainage Facilities, with respect to any and all liability resulting from or in any way arising out of any actions or omissions by Landowner or any engineer, contractor or subcontractor directly or indirectly employed by Landowner in connection with the design, construction, operation, maintenance or repair of the Drainage Facilities. The aforesaid policies shall also provide that no cancellation, major change in coverage, or expiration may be affected by the insurance company or the insured during the term of this Agreement, without first giving to City thirty (30) days' written notice prior to the effective date of such cancellation or change in coverage. Landowner shall not permit any contractor or subcontractor to commence or continue work on the Drainage Facilities until the aforesaid certificates have been approved by the City's Division of Risk Management.

9. **Binding on Successors.** Subject to the provisions of section 14 of this Agreement, this Agreement shall be binding on and shall inure to the benefit of City and Landowner and their respective principals, heirs, executors, administrators, devisees, legal representatives, successors, assigns, affiliates, parent and subsidiary corporations, and their past, present and future shareholders, directors, officials, employees and agents. The parties agree that Landowner's agreements and covenants contained herein are covenants which run with the Landowner Property, in accordance with Section 1468 of the Civil Code. The burden of said covenants shall be binding upon Landowner's constituents, successors, transferees and assigns, for the benefit of the Landowner Property to be served by the Drainage Facilities.

10. **Landowner's Representations**. Landowner certifies that it owns full legal title to the Landowner Property. Each individual executing this Agreement on behalf of a corporation, joint venture, partnership or other business represents and warrants that he or she has been authorized to do so by the entity on whose behalf he or she executes this Agreement and that said entity will thereby be obligated to perform the terms of this Agreement.

11. **Consultation With Attorneys.** Each party to this Agreement expressly states and represents that he/she/it have consulted with their respective attorneys concerning all portions of this Agreement and have been fully advised by said attorneys with respect to their rights and obligations hereunder. After said consultation and advice, each party voluntarily enters into this Agreement.

12. **Recording.** The parties agree that any party may record this Agreement in the office of the Recorder of Sacramento County. Upon request of Landowner, and if Landowner is not then in default under this Agreement, City agrees to execute such documents as are required to remove this Agreement from the title to a residential lot within the Landowner Property at the time of closing to a residential purchaser. City shall also,

upon request of Landowner, take such action to remove this Agreement from title upon City acceptance of a phase of the Drainage Facilities, as to any of Landowner's land as to which building permits were or could have been issued for said phase.

13. Notices. All notices herein required, unless otherwise specified, shall be in writing, and shall be delivered in person or sent by first class mail, postage prepaid.

To City:

Department of Utilities
City of Sacramento
5770 Freeport Boulevard
Sacramento, CA 95822
Attn: Bill Busath

To Landowner:

Mr. Thomas P. Winn
Winncrest Natomas LLC
2240 Douglas Blvd., Suite 200
Roseville, CA 95661

Any party may change its address by notice in writing to the other parties and thereafter notices shall be addressed and transmitted to the new address.

14. Assignment. This Agreement may not be assigned without the mutual written consent of all parties, and any attempt to assign this Agreement without such consent shall be void.

15. Amendment. This Agreement may only be amended in a writing signed by all parties.

16. Attorneys' Fees and Costs. Any party may bring a suit or proceeding to enforce or require performance of the terms of this Agreement, and the prevailing party in such suit or proceeding shall be entitled to recover from the other parties reasonable costs and expenses, including attorneys' fees, including outside counsel (and, in the case of City, the City Attorney).

17. Term of Agreement. This Agreement shall become effective as of the date first written above, and, subject to the provisions of Section 6 above, shall terminate one (1) year after the completion of all the Drainage Facilities and acceptance thereof by City.

18. No Agency. Neither Landowner nor any of Landowner's agents, engineers, contractors or subcontractors are or shall be considered to be agents of City in connection with the performance of any of Landowner's obligations under this

Agreement.

19. Other Agreements. This Agreement is not intended to, and shall not, cancel, supersede, modify or otherwise affect any other agreements which have been or may be made or any approvals or permits which have been issued between or by any party regarding the subject matter hereof, including but not limited to development agreements, subdivider agreements, and improvement agreements.

20. Habitat Conservation Fees. Landowner shall pay all applicable Habitat Conservation Fees with regard to construction of the Drainage Facilities, subject to Landowner's right to reimbursement of such fees pursuant to the provisions of **Exhibit G**; provided, however, the amount of such paid fees included within the Reimbursement Amount calculated pursuant to **Exhibit G** shall be limited to the fees paid less Landowner's prorata share thereof as calculated by City based upon relative benefit from the Drainage Facilities.

21. Reimbursement Provisions. City has undertaken, pursuant to the North Natomas Financing Plan, a policy of providing reimbursement to landowners who construct drainage facilities which create special benefit in the form of drainage capacity, in whole or in part, to other land in the Financing Plan area. If Landowner, pursuant to this Agreement, constructs Drainage Facilities which benefit lands in the North Natomas Finance Plan area which belong to other landowners who do not contribute their proportional share of the cost thereof at the time of construction, Landowner is entitled to reimbursement pursuant to the provisions of **Exhibit G**, attached hereto and incorporated herein by this reference. If said **Exhibit G** is not attached to this Agreement, Landowner and City have agreed that there is no applicable reimbursement right or entitlement for Landowner with regard to the Drainage Facilities constructed hereunder.

22. City Attorney Costs. Landowner shall pay to City the sum of $1,500.00 for the costs incurred by the City Attorney in negotiation of and preparation of this Agreement.

LAND OWNER LEGAL DESCRIPTION

All of Lots 65 and 69 of Natomas Central Subdivision, according to the official plat thereof, filed in the office of the recorder of Sacramento County, State of California, in Book 16 of Maps, at Page 3, and a portion of Lots 64, 70, 71, 88, and 89, of map said Natomas Central Subdivision, being a portion of Section 4 and 9, Township 9 North, Range 4 East, Mount Diablo Baseline and Meridian, according the Official Township Plats thereof, described as follows:

BEGINNING at a point which is the southeast corner of said Lot 64; thence along the south boundary line of said Lots 64 and 65, South 88° 49′ 42″ West, a distance of 3100.00 feet to the southwest corner of said Lot 65; thence along the west boundary line of said Lot 65, North 00° 33′ 18″ West, a distance of 2009.06 feet to the northwest corner of said Lot 65; thence along the north boundary line of said Lot 65, North 89° 39′ 42″ East, a distance of 139.80 feet to the southwest corner of said Lot 69; thence along the west boundary line of said Lots 69 and 89, North 00° 33′ 18″ West, a distance of 3423.80 feet to a point on the southwesterly right-of-way line of Interstate Highway 5, per Individual Grant Deed to the State of California, recorded as Document No. 821130-832, in said County, also being the beginning of a non-tangent curve concave to the southwest having a radius of 2370.00 feet, and to which a radial line bears North 13° 29′ 34″ East; thence leaving the west boundary line of said Lot 89, and proceeding along said southerly right-of-way line, southeasterly 391.58 feet, along said curve through a central angle of 09° 28′ 00″ to the beginning of a non-tangent line; thence continuing South 66° 55′ 04″ East, a distance of 256.52 feet to the beginning of a tangent curve concave to the northeast having a radius of 1230.00 feet; thence continuing along said southwesterly right-of-way line per Grant Deed to the State of California, recorded as Document No. 870825-679, in said County, southeasterly 125.95 feet, along said curve through a central angle of 05° 52′ 02″ to the beginning of a non-tangent line; thence continuing, South 72° 55′ 56″ East, a distance of 1301.92 feet to the beginning of non-tangent curve concave to the southwest having a radius of 970.00 feet, and to which a radial line bears North 16° 53′ 49″ East; thence southeasterly 384.38 feet, along said curve and said right-of-way line through a central angle of

22° 42′ 16″ to the beginning of a non-tangent curve concave to the southwest having a radius of 3830.00 feet, and to which a radial line bears North 39° 36′ 05″ East; thence southeasterly 240.59 feet, along said curve and right-of-way line through a central angle of 03° 35′ 57″ to the beginning of a non-tangent curve concave to the southwest having a radius of 570.00 feet, and to which a radial line bears North 43° 44′ 13″ East; thence southeasterly 294.44 feet, along said curve and said right-of-way line through a central angle of 29° 35′ 49″ to the beginning of non-tangent line; thence continuing along said southwesterly right-of-way line, South 16° 08′ 43″ East, a distance of 1115.76 feet; thence continuing, North 89° 26′ 42″ East, a distance of 35.01 feet to a point of intersection with the east boundary line of said Lot 71, said east boundary line also being the east line of said Section 4, also being the east boundary line of a Deed to the County of Sacramento, recorded as Book 1986, Page 205, Official Records of said County; thence along the east boundary line of said Lots 71, 70, and 64, South 00° 33′ 18″ East, a distance of 3060.14 feet to the POINT OF BEGINNING.

Containing 14,429,762.76 square feet or 331.2618 acres, more or less.

Basis of Bearings for this description is between found Caltrans monuments 24-241 and 24-236A as shown on the Record of Survey Map recorded in Book 42 of Surveys, at Page 14, in said County. Said line is taken to bear North 28° 19′ 35″ West

DRAINAGE CONDITIONS

EXHIBIT B

DRAINAGE CONDITIONS

Exhibit I-4

PUD CONDITIONS OF APPROVAL

The following conditions apply to the Westborough PUD:

a. Prior to approval of any development request within the Westborough PUD, a Special Permit must be approved by the City Planning Commission or Planning Director - as applicable.

b. The property owners of the PUD shall participate in the North Natomas Landscaping and Lighting District and any other applicable Lighting and Landscaping Districts, once adopted, to fund the maintenance costs of landscaping and lighting needs throughout the project area.

d. Any development within Westborough PUD must comply with the Residential and Non-Residential Development Guidelines in the Comprehensive Floodplain Management Plan.

e. The PUD Development Guidelines shall incorporate all applicable Expanded North Area Design Review District standards related to single and two family residential uses and multi-family residential uses. Any development within the PUD shall comply with these standards.

f. The North Natomas Community Plan requires that high density residential projects in excess of 200 units and 8 acres must create multiple apartment complexes separated by a local street or other linkage. No Special Permit shall be approved for a high density residential project that exceeds the apartment complex size unless a local street or other public linkage has been provided between apartment complexes.

g. Front-on lots on streets with projected volumes greater than 4,000 average daily trips (ADT) should be discouraged. Front-on lots in these locations must incorporate special design features to lessen their impact on street operations. These features include, but are not limited to: additional building setbacks, circular or hammerhead driveways, sidewalks separated from the curb (if allowed), etc. to the satisfaction of Public Works and Planning and Development Departments.

FOR CITY CLERK USE ONLY

RESOLUTION NO.: 99-615

feet adjacent thereto as a public utility easement for underground facilities and appurtenances;

21. Designate a parcel of land for an electric substation to be acquired by the Sacramento Municipal District having approximately 1 acre of net usable area. The exact size and location of the substation parcel shall be by mutual agreement of SMUD and the property owners prior to the recordation of the Final Map. Contact Marvin Johnson at (916) 732-5338 for size and location.

    Note: SMUD is planning 69 kV overhead routes along Del Paso and El Centro Roads for the future substation site.

22. The owner/developer must disclose to future/potential owners the existing or proposed 69kV electrical facilities.

23. Provide two 20' x 40' exclusive easements for Pacific Bell's Controlled Environmental Vaults (CEV's) to the satisfaction of Pacific Bell.

24. Storm drainage facilities shall be designed in compliance with the City's North Natomas Drainage and Procedures Manual.

25. All sewer facilities shall be constructed in accordance with an approved master sewer study for the project. Prior to any trunk sewer design, a coordination and reimbursement meeting shall be held with CSD-1 staff.

26. A Homeowners' Association shall be formed whose responsibilities include maintenance of the private collector sewer.

27. County of Sacramento Improvement Standards shall apply to all on-site sewer construction.

    CSD-1 Advisories:

    a. A sewer study must be completed and accepted by CSD-1 staff prior to submittal of sewer improvement plans.

    b. Development of this property may require the payment of sewer impact fees. The applicant should contact the Fee Quote Desk at 875-6679 for sewer impact fee information.

FOR CITY CLERK USE ONLY

DATE ADOPTED: OCT 26 1999

EXHIBIT B (

DRAINAGE CONDITIONS

28. Prior to sign-off of the Final Map, Natomas Central Mutual Water Company shall be notified of map processing. In addition, all assessments due on the property shall be paid. If land use is other than agricultural, severance from the company is required. Pursuant to Company by-laws, severance from the Company requires execution of a stock cancellation agreement with Natomas Central Mutual Water Company, and severance fees must be paid.

City Utilities

29. An assessment district, community facilities district or other financing mechanism approved in writing by the City must be formed for the purpose of constructing all common drainage facilities within detention basin sub-area 8A and any additional drainage capacity or facilities required to accommodate development of the subject area in accordance with the drainage master plan for sub-basin 8A and other applicable drainage plans and criteria for North Natomas. For this purpose, "other financing mechanism" includes but is not limited to a fully executed agreement approved as to form by the City Attorney, which provides for funding and construction of the said facilities, and which provides for posting or depositing with the City unconditional security for performance of the landowner's obligations, which security is adequate in the sole and exclusive discretion of the City, and which is in a form acceptable to the City Attorney.

30. The applicant and/or any successor shall fully participate in any financing mechanism, including but not limited to assessment districts, or community facilities districts formed for the purpose of financing the facilities specified in the previous condition, and any such mechanism formed for the purpose of financing the drainage facilities required under the North Natomas Comprehensive Drainage Plan. For this purpose, "fully participate" requires that the applicant and/or any successor shall, notwithstanding the provisions of Articles XIIIC and/or XIIID of the California Constitution, or any other applicable federal or state law, rule or regulation, waive and relinquish any right to protest or vote against the formation of the mechanism and/or the levy of any assessment or tax pursuant thereto; actively participate in a positive manner in the proceedings for formation of the mechanism and/or the levy of any assessment or tax pursuant thereto; and pay all taxes, assessments and/or fees

FOR CITY CLERK USE ONLY

RESOLUTION NO.: 99-616

DATE ADOPTED: OCT 26 1999

levied pursuant thereto.

31. A drainage master plan for this site and the entire North Natomas Comprehensive Drainage Plan "Detention Basin 8A" drainage area must be completed and approved by the Department of Utilities. This plan is required to show the sizes of all trunklines in the major right-of-ways (as depicted in the North Natomas Community Land Use Plan). All outfall structures, drainage channels, detention basins and pump stations shall also be shown. Outfall structures must be located where the lake perimeter (bulkhead) is adjacent to the road right-of-way. If an outfall structure is placed between residential lot lines, then a separate lot (typical width 30 feet to 40 feet) must be dedicated in fee title to the City of Sacramento for access and maintenance. A phasing plan for drainage infrastructure, if appropriate, shall be approved by the Department of Utilities and included in the final master drainage plan report.

32. A water master plan for this entire area must be completed and approved by the Department of Utilities prior to recordation of the final master parcel map. This study shall also determine if the existing water distribution infrastructure is adequate to supply fire flow demands resulting from developing this project. All water mains shall be placed within the asphalt section of public street right-of-ways as per the City's Design Procedures Manual, unless otherwise approved by the Department of Utilities. Dedicate in fee title to the City Lot Z (Water Tank site). Lot Z shall be a minimum of approximately 260 feet by 260 feet. Lot Z shall be located so that maintenance vehicles will have street access to the Water Tank site.

33. A sanitary sewer master plan for this entire area must be completed and approved by Sacramento County Sanitation District No. 1 prior to recordation of the final master parcel map. The sewer master plan shall be provided to the Department of Utilities to assure that no conflicts with water or drainage facilities exist within the streets or easements. All sewer lines shall be placed within the asphalt section of public street right-of-ways as per the City's Design Procedures Manual, unless otherwise approved by the Department of Utilities and Sacramento County Sanitation District No. 1.

34. Properly abandon under permit, from the City and County Environmental Health Division, any well or septic system located on

FOR CITY CLERK USE ONLY
RESOLUTION NO.: 99-616
DATE ADOPTED: OCT 26 1999

the property prior to recordation of the final master parcel map.

35. Final design of the detention basins shall be coordinated and approved by the Department of Utilities.

36. All existing easements and all existing right-of-ways shall be shown on the Tentative Master Parcel Map. No water or storm drainage easements shall be abandoned on this map without the written approval of the Department of Utilities.

37. Dedicate all necessary easements, right-of-way, or fee title property on the final map as required to implement the approved drainage, water and sewer studies, per each approving agency requirements.

38. The full width of the private streets shall be dedicated as an easement for the water distribution and drainage system. All water and drainage facilities within the subdivision shall be constructed to City standards and approved by the Department of Utilities prior to acceptance of maintenance responsibilities. The easement shall include language assuring Department of Utility personnel and maintenance vehicles shall have unrestricted access to any private streets and easements at all times. Private streets shall have a minimum paved width (from lip of gutter to lip of gutter) of twenty five feet (25').

39. If the applicant wants the City to maintain and operate the on-site (private) storm drainage facilities, a written request must be filed with the Department of Utilities (per the Policy for Private Streets in Residential Areas).

40. The applicant shall develop a lake management plan subject to approval by the Department of Utilities. This management plan will address the operation and maintenance of flood control, water quality and other items directly related to the drainage system.

41. The applicant shall execute an agreement with the City which delineates the maintenance responsibilities of the Homeowners Association (HOA). This agreement shall include a provision which, in the event of the HOA's failure to adequately perform their maintenance responsibilities, allows the Department of Utilities to perform maintenance and be reimbursed for such maintenance by the HOA.

FOR CITY CLERK USE ONLY

RESOLUTION NO.: 99-616

DATE ADOPTED: OCT 26 1999

DRAINAGE CONDITIONS

42. The applicant shall provide a water supply canal and right-of-entry for Natomas Central Mutual Water Company (NCMWC) to replace the existing water supply canal (canal 13A) and easement (40' ditch easement per 589 O.R. 184 joint use with State per 690313 O.R. 264). The relocation of the existing canal and easement shall be to the satisfaction of NCMWC and the Department of Utilities. Relocation of the existing canal and easement may require the reconfiguration of the proposed lots along the west boundary of the project.

43. Dedicate to the City an easement for the operation and maintenance of the 54-inch storm drain outfall pipe located in the County. The location of the pipe and the width of the easement shall be to the satisfaction of the Department of Utilities.

ADVISORY NOTES:

The following advisory notes are informational in nature and are not requirements of the Tentative Master Parcel Map:

1. Comply with Section 40.08.850 of the City Code regarding Master Parcel Maps, Ordinance No.95-013, Dated March 1995.

2. Prior to the issuance of any building permits, provide the City with a copy of the certificate of payment of school fees for the applicable school district(s).

3. This project is within the SAFCA Operations and Maintenance Assessment District No. 1, the North Area Local Project Capital Assessment District No. 2, and the SAFCA Capital Improvement Fee Equalization (CIEF) area. Therefore, the property owner will be required to pay these special benefit assessments and the CIEF based on the proposed land use and building intensity.

4. Prior to issuance of any building permits within the subject area all sanitary sewer, storm drainage, water, and flood control improvements shall be in place and fully functioning or an interim infrastructure plan and agreement shall be required.

5. Post construction, stormwater quality control measures shall be incorporated into the development to minimize the increase of urban runoff caused by development of the area. Since the project is in an

FOR CITY CLERK USE ONLY

RESOLUTION NO.: 99-616

DATE ADOPTED: OCT 26 1999

area served by a regional water quality control facility only source control measures are required. Refer to the draft "Manual of Standards for Design of New Development On-Site Stormwater Quality Control Measures" dated January 23, 1995, for appropriate source control measures.

6. Subject property must complete annexation to both the Sacramento Regional County Sanitation District and County Sanitation District No. 1 of Sacramento County or execute sanitary sewer service agreement with Sacramento Regional County Sanitation District and County Sanitation District No. 1 prior to issuance of building permits.

7. This project is 331 ± acres, therefore the project is required to comply with the State "NPDES General Permit for Stormwater Discharges Associated with Construction Activity" (State Permit). To comply with the State Permit, the applicant will need to file a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) and prepare a Stormwater Pollution Prevention Plan (SWPPP) prior to construction. A copy of the State Permit and NOI may be obtained from the Department of Utilities by calling 433-6318.

8. The applicant must comply with the City of Sacramento's Grading, Erosion and Sediment Control Ordinance. This ordinance requires the applicant to show erosion and sediment control methods on the subdivision improvement plans. These plans shall also show the methods to control urban runoff pollution from the project site during construction.

9. Depending upon project phasing and the construction pace of surrounding development, developers in North Natomas may be required to construct water transmission mains (pipes greater than 12"). In such cases, reimbursement agreements between the City and developers will be negotiated.

10. Prior to occupancy within the subject area, all sanitary sewer, storm drainage, water and flood control improvements shall be in place, fully functioning, and a notice of completion shall be issued by Public Works.

11. Gas service may be available to this project if desired. The developer should contact PG&E's Service Planning Department as

FOR CITY CLERK USE ONLY

RESOLUTION NO.: 99-616

DATE ADOPTED: OCT 26 1999

owners prior to the recordation of the Final Map. Contact Marvin Johnson at (916) 732-5338 for size and location.

Note: SMUD is planning 69 kV overhead routes along Del Paso and El Centro Roads for the future substation site.

47. The owner/developer must disclose to future/potential owners the existing or proposed 69kV electrical facilities.

48. Provide two 20' x 40' exclusive easements for Pacific Bell's Controlled Environmental Vaults (CEV's) to the satisfaction of Pacific Bell.

49. Storm drainage facilities shall be designed in compliance with the City's North Natomas Drainage and Procedures Manual.

50. All sewer facilities shall be constructed in accordance with an approved master sewer study for the project. Prior to any trunk sewer design, a coordination and reimbursement meeting shall be held with CSD-1 staff.

51. A Homeowners' Association shall be formed whose responsibilities include maintenance of the private collector sewer.

52. County of Sacramento Improvement Standards shall apply to all on-site sewer construction.

CSD-1 Advisories:

A sewer study must be completed and accepted by CSD-1 staff prior to submittal of sewer improvement plans. Development of this property may require the payment of sewer impact fees. The applicant should contact the Fee Quote Desk at 875-6679 for sewer impact fee information.

53. Prior to sign-off of the Final Map, Natomas Central Mutual Water Company shall be notified of map processing. In addition, all assessments due on the property shall be paid. If land use is other than agricultural, severance from the company is required. Pursuant to Company by-laws, severance from the Company requires execution of a stock cancellation agreement with Natomas Central Mutual Water Company, and severance fees must be paid.

DATE ADOPTED: OCT 26 1999

City Utilities

54. Prior to or concurrent with the submittal of improvement plans, a project specific drainage study as described in section 11.7 of the City Design and Procedures Manual shall be approved by the Department of Utilities. The 10-year and 100-year HGL's developed using the Sacramento City/County Drainage Manual Volume 2 Hydrology Standards, dated December 1996, or amendments thereto shall be shown on the improvement plans. Drain inlets shall be a minimum of 6 inches above the 10-year HGL. Building pad elevations shall be a minimum of 1.00 foot above the 100-year HGL and approved by the Department of Utilities. All drainage lines shall be placed within the asphalt section of public-right-of-ways as per the City's Design and Procedures Manual, unless otherwise approved by the Department of Utilities.

55. Prior to or concurrent with the submittal of improvement plans, a project specific water study shall be approved by the Department of Utilities.

56. The water distribution system shall be designed to satisfy the more critical of the two following conditions:

a. At maximum day peak hour demand, the operating or "residual" pressure at all water service connections shall be at least 30 pounds per square inch.

b. At average maximum day demand plus fire flow, the operating or "residual" pressure in the area of the fire shall not be less than 20 pounds per square inch.

Two points of service for the water distribution system for this subdivision or any phase of this subdivision are also required. All water lines shall be placed within the asphalt section of public-right-of-ways as per the City's Design and Procedures Manual, unless otherwise approved by the Department of Utilities.

57. Meet all County Sanitation District requirements.

FOR CITY CLERK USE ONLY

RESOLUTION NO.: 99-616

DATE ADOPTED: OCT 26 1999

DRAINAGE CONDITIONS

58. The proposed development is located within the Reclamation District 1000 (RD 1000). Obtain approval from RD 1000 and pay necessary fees.

59. Per Sacramento City Code, section 40.07.710, "no final map shall be certified [by the Director of Public Works] until the required improvements have been installed or agreed to be installed in accordance with Chapter 40.12 (Subdivision Improvements)."

60. Paragraphs (a), (b), (c), (d), (f), (n) and (q) of Section 40.12.1211 of the City Code shall be required for this development. Off-site water and drainage main extensions may be required.

61. Properly abandon under permit, from the City and County Environmental Health Division, any well or septic system located on the property prior to recordation of the final map.

62. A grading plan showing existing and proposed elevations is required. Adjacent off-site topography shall also be shown to the extent necessary to determine impacts to existing surface drainage paths. No grading shall occur until the grading plan has been reviewed and approved by the Department of Utilities.

63. This project is 331 +/- acres, therefore the project is required to comply with the State "NPDES General Permit for Stormwater Discharges Associated with Construction Activity" (State Permit). To comply with the State Permit, the applicant will need to file a Notice of Intent (NOI) with the State Water Resources Control Board (SWRCB) and prepare a Stormwater Pollution Prevention Plan (SWPPP) prior to construction. A copy of the State Permit and NOI may be obtained from the Department of Utilities by calling 264-1400.

64. The applicant must comply with the City of Sacramento's Grading, Erosion and Sediment Control Ordinance. This ordinance requires the applicant to show erosion and sediment control methods on the subdivision improvement plans. These plans shall also show the methods to control urban runoff pollution from the project site during construction.

REIMBURSEMENT PROVISIONS

1. **Reimbursement Amount.** Upon full completion of the Drainage Facilities, and upon City acceptance of the Drainage Facilities, Landowner shall be entitled to reimbursement for a portion of the actual Drainage Facilities costs incurred by Landowner for construction of the Drainage Facilities (the "Reimbursement Amount"). An estimate of the Drainage Facilities costs is set forth in the Phasing Plan (Exhibit C). The Reimbursement Amount shall be determined upon City review and approval of the actual Drainage Facilities costs incurred by Landowner. Landowner shall provide copies of all contracts, change orders and invoices for the costs of the work and such other documentation as may be requested by City to verify the total Drainage Facilities Costs incurred by Landowner. In making its determinations regarding the Reimbursable Amount, City shall take into consideration any and all actual costs incurred by Landowner pursuant to this Agreement relating to designing, engineering and the construction of the Drainage Facilities, which costs include, but are not limited to, all engineering, architectural, other professional fees, cost of construction and supervision, obtaining of materials and labor, a four percent (4.00%) construction management fee, city and other public fees and costs associated with the acquisition of easements and/or real property (including, without limitation, Landowner-paid back taxes, assessments, and property related fees or charges) necessary with regard to the completion of the matters set forth in this Agreement, and any funds advanced or otherwise paid by Landowner pursuant to Section 3.B. of this Agreement.

In accordance with Section 84.02.210 of the Sacramento City Code, the Reimbursement Amount, as reduced from time to time by reimbursements paid, shall be subject to adjustments for inflation calculated consistent with the provisions of Section 84.02.211 of the Sacramento City Code, but shall not otherwise accrue interest. The portion of the total Drainage Facilities Costs as to which Landowner shall be entitled to reimbursement shall be as specified in the Phasing Plan (Exhibit C), which specifies the proportionate cost shares of the various landowners within the basin.

2. **Sources for Reimbursement.** Nothing in this Agreement shall be construed to create an obligation of, or be attributable to, City's general or special funds, or any other funds in the hands of City or its accounts now and in the future, except as otherwise expressly provided herein. City's obligation hereunder to provide reimbursement is limited to the following alternative sources of funds, to the extent funds are available therefrom and not otherwise committed for reimbursement by the City to others:

a. Drainage Fees that are paid to the City by other landowners within Basin 8A pursuant to the Fee Ordinances for North Natomas, shall be maintained by the City in a separate account (the "Drainage Fee Account") and shall not be commingled with any other development or impact fees collected with respect to North Natomas, including without limitation, any transit fees. City shall impose a Drainage Fee upon any landowner within the basin who is obligated to provide reimbursement in accordance with the provisions of the Phasing Plan, which fee shall be payable upon such landowner's first recordation of a master parcel map, parcel map

or subdivision map, or issuance to such landowner of a special permit, whichever first occurs.

Landowner acknowledges that a portion of such Fees, up to, but not in excess of **Three Percent (3%)** of the Fee, will be retained by the City to defer the City's cost of administration of this Agreement.

b. Funds generated through public financing mechanisms consistent with the North Natomas Finance Plan and created and implemented by City in its sole and exclusive discretion, which includes funds for the acquisition of the Drainage Facilities and/or the payment of reimbursement to Landowner for financing some or all of the Drainage Facilities costs pursuant to this Agreement. Nothing in this subsection shall affect the status of Landowner's right, if any, to protest or otherwise challenge such public financing mechanisms, in whole or in part, or any previous waiver of such rights.

Nothing in this Agreement shall be construed in such a manner as to allow Landowner to be reimbursed from more than one source; for example, should Landowner be reimbursed by virtue of fee credits and/or reimbursements from Fees generated through the North Natomas Finance Plan, Landowner shall not be entitled to reimbursement from funds generated through a Mello-Roos District or other similar mechanism.

3. **Timing of Reimbursement.** Upon full completion of the Drainage Facilities and acceptance thereof by the City, the City will pay Landowner the amount then available in the Drainage Fee Account for reimbursement up to, but not in excess of, the approved and properly proportioned Reimbursement Amount for the Drainage Facilities. Thereafter, on a quarterly basis, commencing on the first of the calendar month following completion of the Drainage Facilities and continuing on the first of each month thereafter until the Reimbursement Amount is reduced to zero, the City will pay Landowner the amount then available for reimbursement in the Facilities Account, up to the then outstanding Reimbursement Amount.

4. **Agreements with Other Landowners.** To protect such reimbursement to Landowner, City agrees that any and all other credit/reimbursement agreements involving reimbursements from the Drainage Fee will include the following terms:

(i) The reimbursement amount under the other agreements shall be based on the actual costs incurred for the improvements, as reviewed and approved by the City, and the contracts for such work shall be awarded based on a competitive bid as required for comparable City Drainage Facilities.

5. **Allocation of Reimbursements.** If and to the extent Landowner assigns its right to reimbursements under this Agreement, City's reimbursement to Landowner shall nevertheless be made directly to Landowner unless and until City is notified in writing by Landowner and an assignee that payment should be made otherwise.

6. **Special provisions.** Because each North Natomas drainage basin area is unique, it is necessary to include certain special provisions. If no special provisions are needed, none will be added to this section.

SUMMARY

The centerpiece of the Westborough development is an approximately 19-acre lake that will provide aesthetic and limited recreational uses for residents. The lake will also serve as a drainage detention basin for flood control and water quality enhancement for the Westborough development and land to the North of the development within the same drainage. The lake will be part of a comprehensive set of best management practices developed to manage stormwater runoff from the development. The lake will be operated as a vegetated wet pond. Rooted aquatic plants will sequester pollutants in runoff and enhance the function of the lake as a sedimentation basin. Water level during the summer will be maintained by input of well water.

If high nutrient concentrations are present the well water, excessive algae growth may occur, particularly before aquatic vegetation is well established. Excessive algae growth may create nuisance conditions in the summer that require management to meet use and water quality objectives. Excessive algae can be managed using appropriate dose and formulation of algaecides following City approval. Aquatic plant harvesting will be conducted regularly to remove sequestered pollutants.

Monitoring will be an integral part of the management plan for the lake. Regular monitoring will document the efficacy of the management plan and allow for informed decisions about future management options. Monitoring will include quarterly measurement of lake level, water transparency, temperature and dissolved oxygen, pH, nutrients, chlorophyll, water column metals, and coliform bacteria. Metals in plants will be measured prior to each harvest. Metals in sediments will be measured once per year. Quarterly and annual reports on the monitoring results will be produced.

A public education program is recommended to provide information to residents on best management practices, to prevent aquatic weed infestation and development of a resident waterfowl

community, and to explain the management objectives and operation of the wet pond for stormwater treatment.

Westborough Lake Management Plan

This report provides a description of the expected condition and required management activities for the lake at the Westborough development. Management objectives for the lake and a management strategy for meeting those objectives are provided. The Plan will be implemented by a qualified lake management firm under contract with the homeowners association.

INTRODUCTION

Lakes are valuable amenities that provide recreational, aesthetic, and wildlife habitat benefits to residential communities. Lakes contain their own biological communities, however, that change in response to seasons and physical and chemical characteristics of the water. The chemical and physical characteristics of the water are, in turn, determined by the soils, activities, and land use in the watershed of the lake. Runoff from residential watersheds can enter lakes through storm drains. Urban runoff contains numerous constituents that can influence the biological communities in lakes that receive the runoff.

Productivity, or the amount of biological activity in lakes, is determined by a combination of hydrologic, chemical, and biological factors. Often, lake productivity is determined by the amount of nutrients entering the lake. The importance of nutrient loading of lakes in determining lake status is reflected in the way lakes are typically classified – by trophic state. Trophic state refers to the level of primary production (plant growth) in a lake. Lakes with abundant of algae and aquatic plants are termed eutrophic (well-fed), lakes with little plant growth are termed oligotrophic (poorly-fed), lakes somewhere in between are termed mesotrophic (medium-fed). Urban runoff can contribute nutrients to lakes that stimulate productivity. The increase in lake productivity caused by human activity in the watershed is termed cultural eutrophication. Cultural eutrophication can lead to nuisance conditions, including excessive algae and aquatic plant growth.

Trophic state can be determined by examining several lake characteristics that are correlated with productivity (Table 1). Trophic state indices based transparency, total phosphorus concentration, and chlorophyll *a* concentration (Carlson 1977) are also commonly used to classify lake trophic state. According to Carlson's indices, a TSI less than 40 indicates an oligotrophic state, a TSI between 45 and 50 indicates mesotrophy, and a TSI greater than 53 indicates eutrophy.

Table 1. Qualitative characteristics of oligotrophic and eutrophic lakes (adapted from Welch 1980).

Characteristic	Trophic State	
	Oligotrophic	*Eutrophic*
Depth	Deep	Shallow
Hypolimnion:epilimnion	>1	<1
Primary production	Low	High
Rooted macrophytes	Few	Abundant
Phytoplankton density	Low	High
Number of phytoplankton species	Few	Many
Frequency of phytoplankton blooms	Rare	Common
Hypolimnion dissolved oxygen depletion	No	Yes
Nutrient supply	Low	High
Fish species	Cold water,slow growth,restricted to hypolimnion	Warm water, fast growth, tolerate low oxygen in hyplolimnion and high temperatures in epilimnion

Cultural eutrophication is a major determinant of lake trophic state, but it is not the sole determinant. Other factors, such as hydrology and interactions among the biota in a lake, also play a role. Hydrology influences trophic state by a flushing action. If the rate that water moves through a lake is high enough, algae are washed out of the lake faster than they can reproduce, which leads to low algae densities and oligotrophic, clear-water conditions.

The structure of the food web in a lake can also influence the amount of algae present and the trophic state of a lake. Algae are eaten by zooplankton (tiny, nearly microscopic animals). An abundance of zooplankton can keep algae densities low and the water clear. Small fish eat zooplankton, however, and when small fish are abundant zooplankton densities are low, algae densities high, and the water turbid – a eutrophic condition. Another link in the food chain can be added – large fish that eat small fish – which results in few small fish, abundant zooplankton, few algae and clear water.

Clear-water conditions can also occur in lakes with high nutrient loading if abundant macrophytes are present. Macrophytes compete with algae for light and nutrients in the water column, and there is evidence that shallow, high-nutrient lakes can exist in two states: a turbid, algae dominated state; and a clear-water, macrophyte dominated state. Altering the structure of the food web or changing the relative abundance of macrophytes and algae, a technique termed biomanipulation, can therefore cause changes in the water quality of a lake and has been used successfully to reduce algae densities and enhance water quality in eutrophic lakes.

THE WESTBOROUGH PROJECT

The Westborough Project is a 331-acre mixed-use development located in the North Natomas area of Sacramento, California. The Project will include 1255 residential lots, neighborhood commercial, and light industrial development. An elementary school, community park, and private recreational center are also planned. Westborough will be located to the northwest of the intersection of El Centro and Del Paso Roads and to the southwest of the I-5/Highway 99 intersection (Figure 1). The topography of the area is essentially flat and is currently undeveloped agricultural land. A north/south trending drainage canal bisects the central portion of the lake area. A northeast/southwest trending drainage canal is located north of the site and is identified as a "drainage corridor" for the development. This drainage system receives surface water from an

approximately 417-acre area north of the site to Elkhorn Boulevard (Wallace Kuhl and Assoc, 1999).

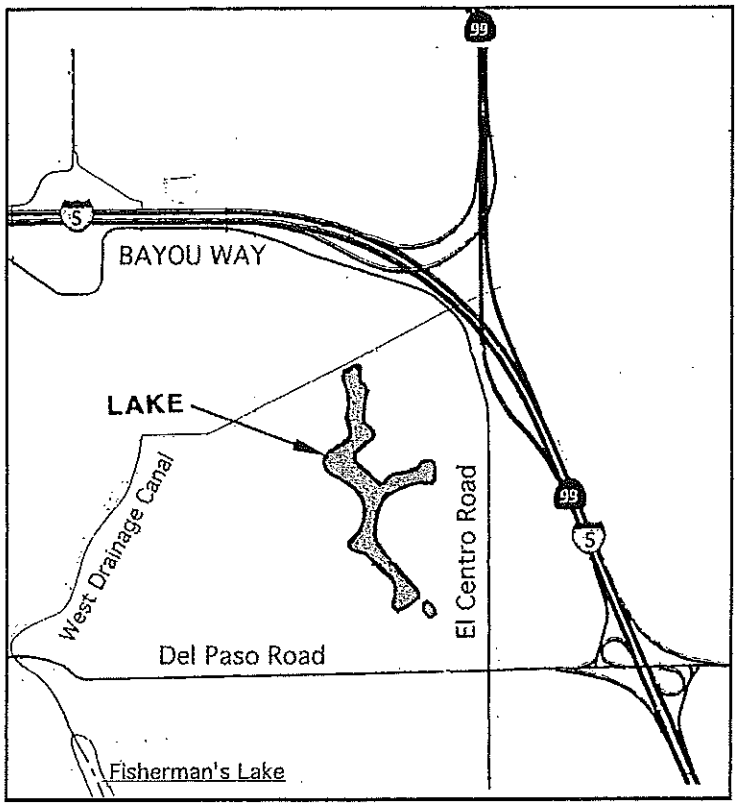

Figure 1. Vicinity map for Westborough lake.

Design

The lake at Westborough is designed as an amenity for the residents and to provide flood control and water quality enhancement of surface water runoff from the development and surrounding areas (Figure 2). The lake is designed as a wet basin, and will contain water year-round. The approximately 19-acre lake basin will be surrounded by a perimeter headwall that is 26 inches above the expected winter water surface elevation and 17 inches above the expected summer water elevation. For public safety, typical grading will include a perimeter shelf approximately four feet wide and one to two feet deep, depending upon the season. The lakebed will slope from the perimeter shelf to a maximum depth of 14 feet at a 4:1 or flatter slope (Wallace Kuhl and Assoc. 1999). The lake bottom will be sealed with a 12-inch thick clay layer.

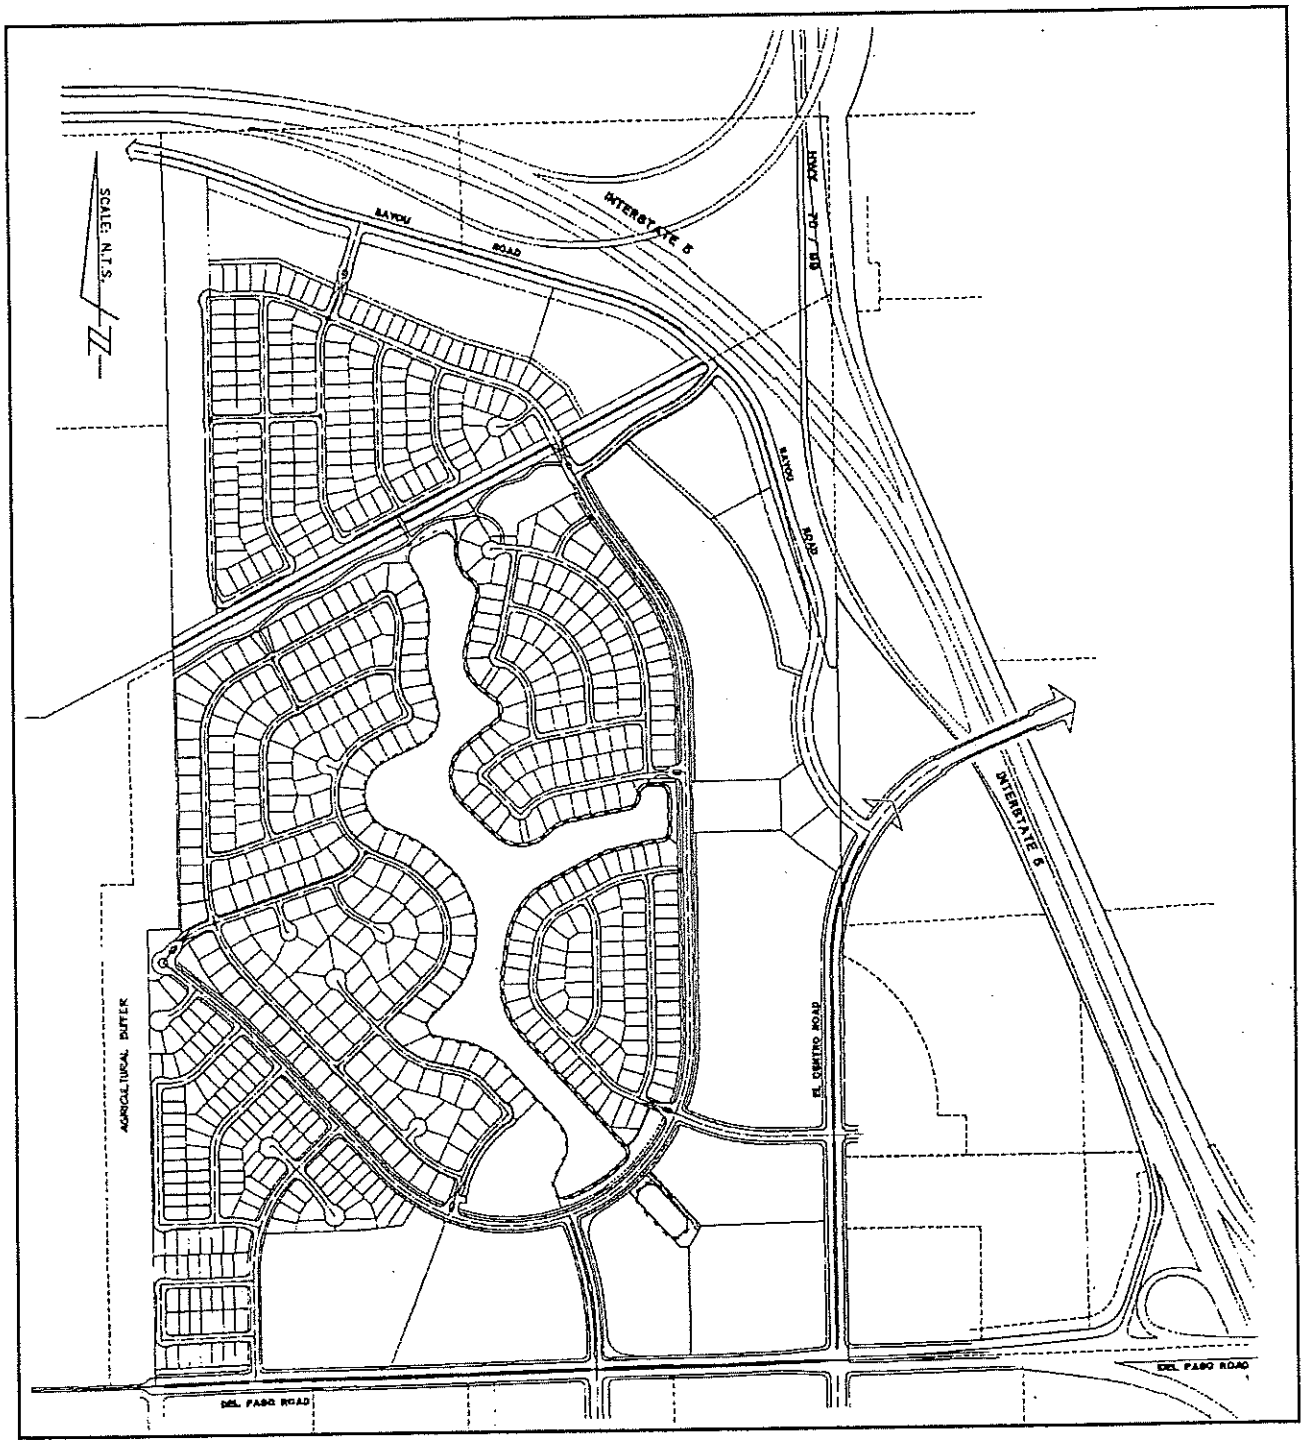

Figure 2. Map of Westborough development.

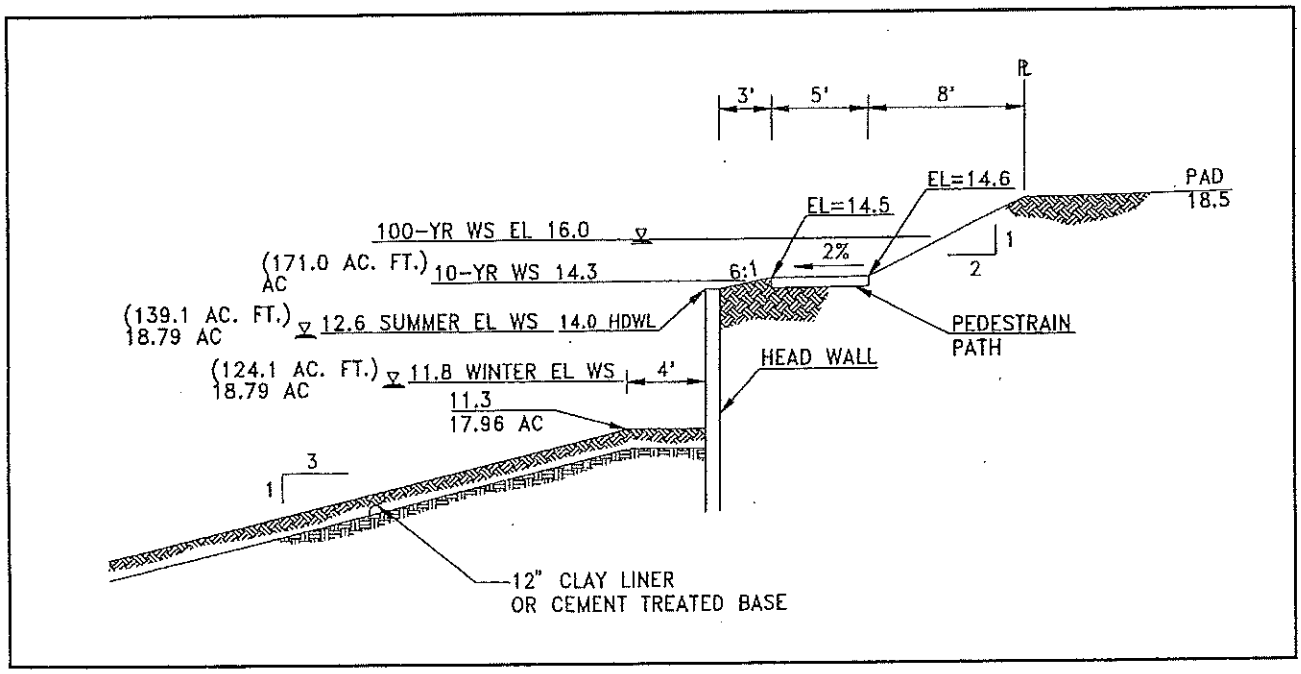

Figure 3. Detail of lake perimeter wall elevations (from Spinks Corp. drawing).

Lake water level will fluctuate with the seasons to permit damping of the winter runoff hydrograph and extend the detention time of water in winter. The summer surface water elevation will be 12.6 feet, and the winter elevation 11.8 feet, above mean sea level. Under typical conditions, the lake depth will vary from 11.8 (winter, no-flow condition) to 12.6 feet (summer). The lake volume in the summer and winter will be approximately 139 and 124 acre-feet, respectively. At maximum storage capacity, 16.0 feet above mean sea level (100-year), the accumulated lake volume will be approximately 175 acre-feet. Thus, the accumulated volume of the lake between the winter operating pool and the maximum pool is approximately 51 acre-feet. The lake will be filled, and summer water level (12.6 feet above MSL) maintained, with water drawn from a well located at the south end of the lake.

The surface water drainage system for the Westborough development will direct runoff into the lake at up to eight major inlets. The inlets will be located in the arms of the lake, between lots, and adjacent to the road, which will assist in circulation during the runoff period. The distance

between the nearest stormwater inlet and the outlet of the lake is greater than 700 feet, which will limit "short-circuiting" of flow between the inlets and outlet and maximize pollutant removal efficiency. Outflow from the lake will discharge to the West Drainage Canal at a point west of the Plant 3 pumpstation. The West Drainage Canal flows into Fisherman Lake and then into the Sacramento River just upstream of its confluence with the American River via the RD 1000 pumpstations 3, 1A and 1B.

Functioning of the lake for pollutant removal requires provision of adequate water detention time and proper design. During winter, the lake will provide stormwater management and pollutant removal. Hydrologic flow estimates indicate that the maximum estimated storage volume of is sufficient to retain a 10-year, 12-hour storm event. A more typical event would result in an estimated runoff volume near the winter storage volume.

The lake will be one component in a package of best management practices (BMPs) for water quality at the Westborough development. The lake will be managed as a vegetated, wet-pond system for treatment of urban runoff. Vegetated wet ponds are an effective water quality BMP. If properly maintained, vegetated wet ponds can achieve high removal rates for sediment, biological oxygen demand (BOD), organic nutrients, and trace metals. Biological processes within the pond also remove soluble nutrients, such as nitrates, ammonia, and orthophosphorus, which contribute to nutrient enrichment and eutrophication. Wet ponds are most cost-effective in large, intensively developed sites (Schuler 1987) like the Westborough development. Other BMPs that will contribute to water quality enhancement at Westborough include use of landscape plants and maintenance that minimize water and fertilizer use; a public education program to raise awareness of how actions by individuals can contribute to water quality improvement or degradation; and applicable implementation of the City's comprehensive stormwater management plan.

Wet ponds can remove pollutants effectively over long periods with appropriate maintenance. The primary mechanisms for pollutant removal are sedimentation and biological uptake. Sedimentation efficacy is primarily a function of detention time. Biological uptake is the

primary removal pathway for soluble nutrients that have minimal settling rates. For wet ponds with a basin volume:mean storm runoff volume ratio greater than 4.0, as expected under typical operating conditions at Westborough, estimated pollutant removal rates are greater than 80 to 90 percent for sediment, 60 to 65 percent for total phosphorus, 45 to 50 percent for total nitrogen, 40 to 45 percent for BOD, and 65 to 70 percent for many metals (U.S. EPA 1986, Sugnet and Associates 1997).

Biological uptake of soluble nutrients and sedimentation in the lake will be enhanced by establishing rooted aquatic plants, or macrophytes, in the lake. Established stands of rooted aquatic plants in lakes can efficiently "scrub" nutrients and other pollutants from inflowing water. Numerous studies have documented that shallow lakes with aquatic plants have clearer water, with lower algae abundance than shallow, unvegetated lakes. Experience with other urban lakes in the Sacramento area has shown that vegetated lakes are more efficient in removing sediments from stormwater than unvegetated lakes.

Vegetated wet ponds require periodic harvesting to maintain beneficial uses and optimal function. Excessive aquatic plant biomass often leads to diurnal fluctuations in dissolved oxygen concentration during summer when plant biomass and photosynthetic rate is highest. Plants raise dissolved oxygen concentrations during the day through photosynthesis, but consume dissolved oxygen during the night when they respire. Dissolved oxygen concentration during the early morning hours, after a night of respiration, can be quite low and lead to fish kills. In addition, surface mats of aquatic vegetation detract from the aesthetic appeal of lakes and often require management. Furthermore, as plant biomass accumulates, growth and pollutant sequestering slows because of self-shading.

Expected Lake Water Quality and Biology

The lake at Westborough is shallow and thermal stratification is not anticipated. If groundwater is undersaturated with dissolved oxygen, however, aeration may be required to meet the management objectives for the lake. Other groundwater-fed lakes in residential developments in

the Sacramento area do not require aeration prior to discharge. If the lake is highly productive some transient dissolved oxygen depletion may occur and pH may be high during summer months.

Although no well-water chemistry is available, the typically high nutrient concentrations found in Central Valley groundwater can be expected to support abundant algae populations in the lake during the summer months. Experience with other vegetated wet ponds in the Sacramento area suggests that aquatic plants should grow well in the lake, however, establishment of populations capable of reducing nutrient concentrations low enough to limit algae growth may take two to four years. It is likely that some control of algae in the water will be required to meet management objectives (see below) during the period of macrophyte establishment.

Macrophytes must be harvested periodically from vegetated wet ponds to remove nutrients sequestered in the plants and to stimulate growth and additional nutrient uptake. Some species of macrophytes, such as Eurasian watermilfoil, Brazilian elodea, and Parrotsfeather, can establish high density stands that form surface mats and interfere with recreational and aesthetic uses of lakes. If these species become established, additional management will be required to maintain the lake.

Problems associated with runoff from residential lawns and streets (e.g., bacteria, grease and oils, pesticides, and sediment) will be minimized by use of the BMPs noted above.

Lake Uses and Management Goals

Development of a lake management plan for a manmade lake, such as the lake at Westborough, is a four-step process. The initial step is to identify the uses of the lake and the water quality characteristics desired. In most cases, clear water, free of surface algae mats and aquatic macrophytes (rooted aquatic plants) are primary management goals. The second step is to identify existing or potential factors that could contribute to failure to meet the management goals. The third step is to develop a plan for minimizing water quality problems by reducing or eliminating

its causes. The fourth step is to develop a strategy for dealing with the nuisance organisms that proliferate when nutrient concentrations permit.

Lake Uses

The lake at Westborough is intended to provide aesthetic, stormwater detention, water quality enhancement, and limited recreational benefits. Recreational use of the lake will be limited to non-motorized boating. No swimming or other water contact recreation will be permitted.

Management Goals

Management goals for a lake are based on the intended uses. Lake users and residents of the Westborough development will ultimately determine the desired condition and uses of the lake. All uses, however, must be consistent with, and subordinate to, the City's use of the lake as a flood control and water quality enhancement facility. If the uses identified above are adopted by the community, the following management goals will be adopted as narrative water quality standards:

- The lake should be free of surface mats of algae and macrophytes.
- Cyanobacteria blooms that could harm pets should be avoided.
- The lake should ~~not produce nuisance odors.~~
- The lake will not contain concentrations of coliform bacteria associated with human wastes that exceed established water quality standards.
- The lake shall not contain floating material such as oil and grease, trash, scums, etc. that interfere with uses.
- Toxic materials that harm aquatic life or human health will not accumulate in the lake or be discharged from the lake.

- Outflow from the lake will not harm aquatic life in aquatic systems downstream from the discharge.

- The lake will be managed to reduce urban runoff and stormwater runoff pollutants discharged from the outfall structure to the maximum extent practicable as determined by the City in accordance to its NPDES stormwater permit and stormwater management program.

Specific numeric lake management criteria are recommended as target values (Table 2). There is considerable uncertainty about the condition of the lake and development of the biological community after filling. It must be noted that the Westborough lake will take a number of years to reach a stable state. Processes such as final buildout, formation and consolidation of sediments, and introduction and establishment of biological communities will alter the condition of the lake and interact to influence future water quality. Monitoring will be required to assess the practicality of some of the management criteria.

Table 2. Management objectives for water quality in the lake at Westborough.

Constituent	Management Objective
Dissolved Oxygen	5 mg/L - mean monthly concentration 4 mg/L - single value
Clarity	0.5 m Secchi depth - mean monthly value
pH	6.5-9
Total Coliform Bacteria	500/1100 MPN/100 mL[1]
Dissolved Inorganic Nitrogen[2]	0.15 mg/L
Un-ionized ammonia	0.02 mg/L - single value
Total Phosphorus	0.05 mg/L - mean monthly concentration
Carlson's Trophic State Index	< 60
Chlorophyll	0.015 mg/L - mean monthly concentration 0.04 mg/L - single value

[1] Median value/90th percentile value
[2] Nitrate + Ammonia-nitrogen

Metals monitoring of water, plants, and sediment should be conducted to assess performance of the lake as a stormwater treatment facility. Priority pollutant metals to be assayed include cadmium, chromium, copper, lead, nickel, and zinc. Criterion metals concentrations in water are shown in Table 3. Metals concentration in sediments and plants should not exceed hazardous threshold limits from Title 26.

Table 3. Criterion concentrations for metals in water. (hardness expressed as mg $CaCO_3$/L)

	Continuous Concentration Criterion (µg/L)	Maximum Concentration Criterion (µg/L)
Cadmium[a,b]	[e(0.7852[ln(hardness)]-3.490)x0.85]	[e(1.128[ln(hardness)]-3.828)x0.85]
Chromium (III)[a,b]	[e(0.8190[ln(hardness)]-1.465)x0.85]	[e(0.8190[ln(hardness)]-3.688)x0.85]
Copper[a,b]	[e(0.8545[ln(hardness)]-1.465)x0.85]	[e(0.9422[ln(hardness)]-1.464)x0.85]
Lead[a,b]	[e(1.273[ln(hardness)]-4.705)x0.25]	[e(1.273[ln(hardness)]-1.460)x0.50]
Nickel[a,b]	[e(0.8460[ln(hardness)]-1.164)x0.85]	[e(0.8460[ln(hardness)]-3.361)x0.85]
Zinc[a,b]	[e(0.8473[ln(hardness)]-0.761)x0.85]	[e(0.8473[ln(hardness)]-0.860)x0.85]

[a] Values for aquatic life criteria are based on Quality Criteria for Water 1986 (USEPA 1987) as updated in US EPA (December 22, 1992). Criteria concentrations are expressed in terms of allowable dissolved metal following the US EPA Guidance Document on Dissolved Criteria-Expression of Aquatic Life Criteria-October 1993.

[b] Assumes a Water Effects Ratio (WER) of 1.0 until site specific data is obtained. Criterion Concentration = value in table x WER.

MANAGEMENT PLAN

Best Management Practices (BMPs)

Best Management Practices for water quality for the project should focus on prevention of water quality problems. BMPs that focus on water conservation, infiltration, nutrient loading, sediment management, and individual behaviors are listed in Table 4. Because of the aesthetic and nuisance concerns associated with the lake, the BMPs discussed in this Management Plan may be in addition to BMPs required by the City as part of the City's Stormwater Management Program.

Public education is critical to effective BMPs. Therefore, an informational program is recommended to provide residents of the development information on the management objectives, operation of the wet pond, and individual actions that can be taken to protect water quality in the lake.

Table 4. BMPs for protection of Westborough Lake.

- Water conservation measures – reduce surface water runoff
  - Check outside faucets for leaks.
  - Mulch shrubs and other plants to retain soil moisture longer.
  - Use trickle or drip irrigation whenever possible.
  - Maintain lawn sprinklers to avoid "street watering".
  - Water lawns less frequently but more deeply.
  - Group plants with similar water requirements together.
  - Use native plants that require less water.
- Infiltration measures – allow water to enter the soil rather than runoff the surface
  - Install porous pavement.
  - Direct downspouts onto lawns rather than to the street.
- Nutrient management measures - less fertilizer used on lawns means less nutrients in the lake
  - Apply fertilizers sparingly, never exceed label rates.
  - Never dump lawn clippings and other materials into the water.
  - Do not feed waterfowl, prevent a resident population from establishing.
  - Clean up pet waste immediately.
- Sediment management measures
  - Sweep streets to prevent "washoff" into the lake.
  - Maintain vegetated waterways to avoid erosion.
  - Install silt screens around lake during construction.
  - Incorporate sediment traps and oil and grease separators into storm drains.
  - Use erosion control measures (silt screens, soil covers, etc.) during construction
- Responsible chemical use
  - Avoid using pesticides and fertilizers prior to predicted rainfall.
  - Avoid overwtering after applying fertilizers and pesticides.
- Public Education
  - Develop a public education program to inform residents and lake users about activities they can do to protect lake water quality.

Waterfowl, Fish, and Plant Stocking

Many BMPs implemented by residents and businesses in the development for little or know cost can be very effective in preventing serious water quality problems. Adoption of a prohibition on feeding of waterfowl, for example, can prevent serious water quality problems. Use of the lake by migratory waterfowl will add to the biological diversity and enhance the quality of the aesthetic experience of residents and visitors to the development. A large resident waterfowl population, however, can create management problems. A single duck can excrete 2.1 pounds of nitrogen and 1.3 pounds of soluble phosphorus each year. A population of several hundred resident ducks, which could easily develop on the lake, could be responsible for a significant portion of the nutrient loading to the lake. Resident waterfowl will destroy lakeside vegetation and contribute to erosion of lake banks. The most effective waterfowl management technique is to prevent development of large, resident populations. Residents should not stock domestic waterfowl, and should refrain from feeding wild, transient waterfowl. Uneaten feed will decompose in the water, which will add nutrients and create conditions conducive to the spread of avian botulism and fowl cholera. A restriction against feeding and stocking waterfowl will be incorporated into covenants.

Unauthorized introductions of all organisms should be policed by the Homeowners Association. Some fish species can also contribute to water quality problems through their feeding activities. Fish such as carp and goldfish should not be introduced by residents. Similarly, some aquatic plants can create a nuisance when introduced to a lake. A prohibition against fish and plant stocking will also be incorporated into covenants. Some stocking guidelines are:

- Residents will not release, or allow to be released, any fish, invertebrate, or plant into the lake
- All fish stocking, including original and any subsequent stocking, may be performed only with a permit from the California Department of Fish and

Game. No fish species that require food supplements beyond existing sources in the lake will be permitted.

- Arrangements will be made as soon as possible after the lake is filled for the local mosquito abatement district to establish a population of mosquito fish (*Gambusia affinus*) for mosquito control. The lake will be restocked as necessary to maintain a population sufficient for vector control.

Landscape Practices

Landscape maintenance may also contribute to water quality problems in the lake. Over fertilization can led to high nutrient concentrations in surface runoff that can stimulate phytoplankton growth. Landscape maintenance personnel often use a calcium-based, slow release fertilizer to reduce the labor of application. These fertilizers are spread liberally, and then the lawns are watered heavily to prevent burning. Under this application scenario, nutrient-rich runoff can enter stormdrains and the lake causing algae to "bloom".

Landscape maintenance guidelines will be incorporated into covenants for the development as follows:

- Soil tests should be conducted to determine fertilizer requirements. Fertilizer applications should be designed to alleviate deficiencies detected in soil tests. Commercial landscape companies should keep detailed records of test results, application dates and rates, and irrigation schedule.

- Nitrogen fertilizers should not be applied at rates greater than 0.5 pounds per 1,000 square feet and at frequencies greater than every 12 weeks.

- Phosphorus fertilizers should not be applied unless a need is clearly demonstrated, such as the first growing season for newly established turf areas. In no case should the rate exceed 0.05 pounds per 1,000 square feet.

- Fertilizers should not be applied prior to predicted rain events.

- Fertilizer application methods should not allow fertilizer to enter lake water directly.

- There should be no application of fertilizer to drainage ditches, seasonal dry waterways, impervious surfaces, or within 10 feet of the water.

- Irrigation schedules should be designed to prevent runoff from freshly fertilized landscape.

- Landscape contractors should be required to provide at least five days written notice to the Homeowners Association for fertilizer and significant herbicide and insecticide application. The notice should include justification for the action (e.g., copy of soil test report) and a description of rates, application methods and time including precautions to prevent pollution of surface waters, the materials to be applied.

- Disposal of leaves and other organic debris into the lake and/or other waterways (even seasonally dry waterways) should be avoided. Disposal of organic debris in water has several detrimental results. They can cause oxygen depletion when they decompose and they contribute nutrients to the lake water that can stimulate algae growth. Curbside stockpiling of leaves and other "green" waste should be done on the street side of the gutter flow line.

- Landscape planting should avoid use of deciduous trees or shrubs greater than four feet in height when mature within 15 feet of the shoreline to avoid leaf fall into the lake.

Sediment Control

Whenever vegetation is removed from an area, e.g., for construction, preparation for new landscaping, after a fire, etc., the potential for soil erosion and sediment deposition in the lake exists. Sediment deposition in the lake has several undesirable effects. It can reduce light penetration through the water causing beneficial aquatic plants to die. Sediment also carries substantial amounts of nutrients with it, which can contribute to algae growth when the water clears. Lastly, over the long-term sediment deposition causes the lake to become more shallow, warmer, and more productive, i.e., with more algae and nuisance aquatic plant problems. To minimize erosion and sediment deposition in the lake all excavation within the watershed should be done in accordance with the City of Sacramento's Grading and Erosion Control ordinance and National Pollutant Discharge Elimination System (NPDES) permit.

Whatever the method of implementation, through covenants or by voluntary adoption, residents of the Westborough development should be aware of the impacts of their activities on the lake. An aware and informed community is a prerequisite to effective lake management. Signs or an information program that describes the organisms and functioning of the lake and encourages voluntary adoption of BMPs to protect the lake is recommended. Potential subjects for information program include:

- Description and explanation of landscape maintenance guidelines.
- Proper disposal of automotive fluids, cleaning detergents and other wastes.
- Problems caused by resident waterfowl and prohibition against feeding.
- Problems caused by exotic fish and prohibition against stocking.
- Explanation of lake functions as a stormwater treatment facility and overall goals of the lake management plan.

Management of Algae and Rooted Aquatic Vegetation

Even with well-implemented BMPs, nutrients in the groundwater used to maintain lake level in the summer are expected to support abundant algae in the lake. Some form of treatment is likely to be required to meet management objectives. As noted above, the most effective way to prevent algae growth in the lake is to limit the amount of nutrients entering the lake. Management strategies to reduce nutrient loading when the water supply is from groundwater, however, are limited. Nutrient concentration in the inflow could be reduced by treatment of the water prior to discharge into the lake, or treatment of the entire lake, with aluminum sulfate (alum). This management strategy is expensive and when water is treated prior to discharge into the lake a sludge must be disposed. Nutrient precipitation prior to discharge into the lake is not recommended at this time.

Some form of in-lake algae treatment will likely be required to meet the management objectives of the lake during the summer months. The amount of algae in the lake can be reduced by a number of hydrologic, physical, and chemical techniques. Whole lake treatment with alum can provide temporary improvement of water quality, and if algae problems are persistent and difficult to manage with other techniques (see below) a whole lake treatment should be considered. The flushing rate of the lake should be maximized to reduce algae abundance in the lake.

Excessive algae can also be treated with a number of effective algaecides. Various forms of copper have no restrictions on water-use following application, however, the City and State may have use resrictions that differ from those on the label. Copper should be used to control excessive algae in the lake if surface algae scums develop or use is degraded. Copper may injure rooted aquatic plants, however, selection of the correct formulation and dose by a licensed aquatic applicator should permit control of algae with minimal to no effect on rooted plants.

The City must preapprove all chemical applications. The City's water quality requirements have priority over algae control in the lake, and these requirements may limit the use of copper for algae control. If copper applications result in copper concentrations at the discharge point that are

greater than at other wet pond discharges in North Natomas, alternative (*e.g.*, alum treatment) or no algae control must be considered.

Rooted aquatic plants will require periodic harvesting to remove sequestered nutrients and other pollutants. A minimum of two macrophyte harvests are recommended. The first harvest, in July would be conducted to remove accumulated pollutants and to stimulate additional growth and pollutant uptake. A second harvest should occur in fall to remove accumulated pollutants before the plants senesce and they are released back into the water. If nuisance, invasive plants are introduced to the lake additional harvesting may be necessary to meet management objectives. Prior to harvest, plants samples should be collected for metals analyses.

Rooted aquatic plant problems may be avoided if introduction of the problem plants can be prevented. As noted above, some exotic plants, like Eurasian watermilfoil, are particularly troublesome. Every effort should be made to prevent the introduction of these nuisance aquatic plants into the lake. All boats launched in the lake, which have been used in other lakes during the previous two weeks should be inspected for plant fragments that could cause weed problems. This could be a voluntary inspection stimulated by a sign posted at the boat ramp. The sign should also warn residents of the danger of introducing aquarium fish and plants to the lake.

Management of trash and litter

Trash and litter problems can be limited by assuring that adequate numbers of trash receptacles are available and that they are emptied regularly. Trash and litter on the lake may be collected by hand by residents or the service may be purchased from a lake management company.

Management of Water Quality

The water quality criteria are intended as a guide for maintenance of water quality that will meet the management goals for the lake. These criteria are intended to serve as warning signs for

significant water quality problems. Consequently, a single exceedence of any water quality parameter will not necessitate an immediate change in the management plan. If water quality fails to meet the criteria regularly the City, the Homeowners Association, and water quality and lake management experts should evaluate the consequences and impacts of continued exceedence. If it is determined that serious harm to aquatic life in and downstream from the lake will occur, or if regulatory thresholds are exceeded, an in-depth evaluation of the lake and management plan will be necessary. Some possible responses to exceedence of specific water quality criteria are shown in Table 5.

Monitoring

All lake management plans must be adaptive; changes may be required as lake biology and water chemistry evolve. Regular monitoring of lake water quality permits ongoing assessment of the efficacy of the management plan and allows adaptation to changes in the lake.

Monitoring should be an integral part of the management plan. A monitoring program should provide data needed to understand the biological and chemical characteristics of the lake. Some of the monitoring effort may be conducted by interested, well-trained lake shore residents or the service may be purchased from a lake management company. However the data is obtained, it must be incorporated into the management effort to ensure that the management plan is adaptive and effective. Monitoring should include measurement of lake level, water transparency, temperature and dissolved oxygen profiles, pH, nutrients, chlorophyll, suspended solids, and coliform bacteria.

Recommended monitoring parameters are shown in Table 6. Sampling locations are shown in Figure 4. A minimum of quarterly sampling is recommended.

Table 5. Potential response to selected examples of unacceptable water quality.

Parameter	Management Response
pH	• Identify cause as short-term or persistent • Calculate rate of loss of available carbonates • Take action to eliminate source or compensate for carbonate loss
Dissolved Oxygen	• Identify cause of dissolved oxygen depletion and eliminate • Consider installation of recirculation/aeration system
Nitrate-nitrogen	• Examine landscape maintenance practices • Evaluate other potential sources • Eliminate sources
Ammonia-nitrogen	• Examine landscape practices • Evaluate in-lake sources (ammonification of organic materials) • Consider aeration to increase nitrification
Phosphorus	• Examine landscape practices • Evaluate other sources • Eliminate sources • Anticipate phytoplankton blooms and prepare for treatment
Chlorophyll *a*	• Evaluate nutrient concentrations • Take action to reduce nutrient concentration
Oil and grease	• Locate source; prevent remaining reservoir from entering lake • Identify reason source was created and prevent recurrence • If concentrations are high enough to endanger aquatic life contact RWQCB and CDFG for assistance
Coliform bacteria	• Post notices • Identify source and eliminate

MANAGEMENT COST ESTIMATE

Prediction of the condition of the lake prior to filling provides only a limited picture of the potential management problems that may be encountered. Estimated lake management costs are based upon expected conditions in the lake and are based upon the need to maintain the lake as an aesthetic amenity in a condition that will not impede flood control or cause water quality impairments or violations downstream of the discharge point. Certain activities are sure to be required including monitoring, algae control, plant harvesting, and trash cleanup. Preventive actions for waterfowl and aquatic weed problems, such as signs and fliers that discourage feeding of waterfowl and introduction of fish and aquatic plants as discussed above, will be incorporated into CC&Rs.

Monitoring of water quality will be conducted. Summer sampling will provide information required for more informed management decisions. The monitoring program should include regular examination of the watershed of the lake to identify activities that could contribute to water quality degradation, such as improper landscape maintenance. Regular monitoring of the lake will facilitate early identification of problems and permit rapid correction of potential detrimental activities.

Management actions depend upon the conditions that develop in the lake and the management objectives determined by the homeowners. Some form of control, however, is likely to be necessary to meet the objectives for the lake. The extent and duration of summer algae problems are unknown at this time and the need for aquatic plant harvesting is a function of the plant growth rate and efficacy of the weed introduction prevention program discussed above. If algae are a problem, they may be controlled with proper copper application, chemical precipitation of nutrients in well-water, more efficient mixing, and/or alteration of system hydrology. Chemical control with an appropriate copper application is recommended and budgeted, however, any chemical application for algae control must first be approved by the City.

Table 6. Frequency, sample type, and number of stations for monitoring water quality in Westborough Lake.

Parameter	Frequency	Sample type	Stations
Water level	weekly in winter biweekly in summer	staff gauge	overflow weir
Temperature	quarterly	profile	3
Dissolved oxygen	quarterly	profile	3
pH	quarterly	profile	3
Specific conductance	quarterly	profile	3
Alkalinity	quarterly	depth integrated composite	1
Hardness	quarterly	depth integrated composite	1
Chlorophyll *a*	quarterly	depth integrated composite	1
Phytoplankton	quarterly	depth integrated composite	1
Zooplankton	quarterly	depth integrated composite	1
Bacteria	quarterly	grab	3
Nutrients	quarterly	depth integrated composite	1
Suspended Solids	quarterly	depth integrated composite	1
Sediment Metals	annual	grab	2*
Plant Metals	prior to harvests	composite	6**

* separate composite samples will be collected from arm and main lake stations to assess localization of pollutants near inflows

** plant samples for metal analyses will be collected from three main lake basin stations and three additional near-shore stations. Samples will be composited for analysis.

Trash cleanup by a professional lake management firm twice per month is budgeted to control litter.

Estimated management costs are shown in Table 7. Actual management costs will depend upon severity and frequency of algae and aquatic plant problems, which are a function of the efficacy of the prevention program for aquatic weeds and waterfowl. A 20 percent contingency is included in the budget for the first year to accommodate any changes in the Plan mandated by the City of Sacramento for flood control and/or water quality purposes. Such changes shall be at the discretion of the Department of Utilities. An Annual Report will be produced that summarizes

management activities and limnological characteristics of the lake. Limnological characteristics and management problems in the lake will likely change as the lake ages. The Annual Report will also include recommendations on changes to the Management Plan so that the management of the lake will adapt to changing conditions. Any changes to the Plan must be approved by the City.

ROLES AND RESPONSIBILITIES

It is the responsibility of the homeowners association to fund and implement the activities outlined in this Plan, and to maintain the lake in a condition that permits functioning as a flood control and water quality enhancement facility. It will not be the responsibility of the City of Sacramento to maintain the aesthetic appearance of the lake or manage nuisance conditions that may develop in the lake. The homeowner's association and the City will, however, work cooperatively on public education and enforcement of best management practices to maintain water quality and the aesthetic value of the lake. The City of Sacramento will do the following:

- maintain inlets to the lake and the outlet structure as needed to provide drainage and flood control;
- regulate the operations and maintenance of the lake to assure compliance with Federal, State, and local water quality requirements;
- determine if the homeowners association is maintaining the lake in a manner consistent with the City's flood control and/or water quality standards and take actions necessary to remedy any deficiencies if City standards are not met. The City may charge the homeowner's association for costs of remedial actions.

Westlake Monitoring Report: July 31, 2008

Summary

Water quality in Westlake on July 31, 2008 was good and most management objectives were met. The pH was slightly greater than the management objective. The water termperature of Westlake was lower in 2008 than in previous years, and consequently the phytoplankton abundance and community composition differed from previous years. Green algae dominated the phytoplankton and cell densities and chlorophyll-a concentration were low. Water transparency was greater than in recent years in the summer.

Introduction

This report includes monitoring data collected on April 24, 2008. The monitoring program follows the lake management plan developed by Perry and Sytsma (2000).

Westlake is located in a 331-acre mixed-use development in the North Natomas area of Sacramento, California northwest of the intersection of El Centro and Del Paso Roads and to the southwest of the I-5/Highway 99 intersection (Figure 1). The development includes 1255 residential lots, neighborhood commercial, and light industrial development. An elementary school, community park, and private recreational center are also planned.

The topography of the area is essentially flat. A northeast/southwest trending canal located north of the site provides drainage for the development and an area located north of the site near Highway 99 and Elkhorn Boulevard (Wallace Kuhl and Assoc, 1999).

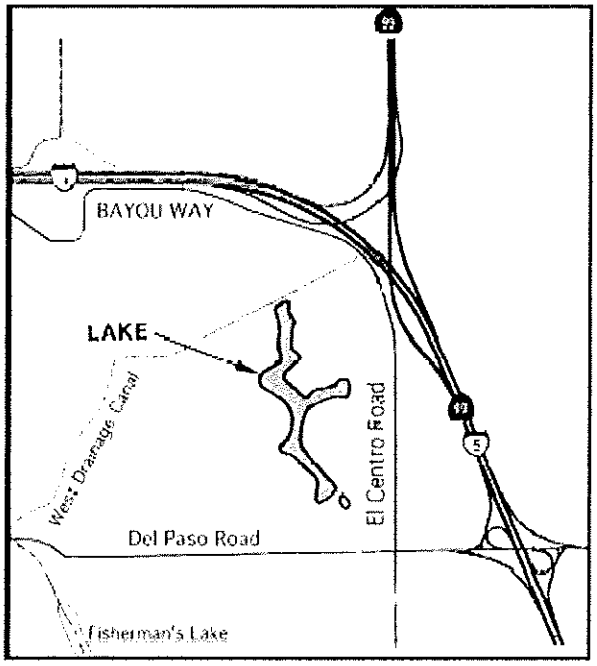

Figure 1. Vicinity map for Westlake.

Design

Westlake was designed as an amenity for the residents and to provide flood control and water quality enhancement of surface water runoff from the development and surrounding areas (Figure 2). The lake is designed as a wet basin and contains water year-round. The approximately 19-acre lake basin is surrounded by a perimeter headwall that is 26 inches above the expected winter water surface elevation and 17 inches above the expected summer water elevation. For public safety, a shelf approximately four feet wide and one to two feet deep was constructed at the perimeter of the basin. The lakebed slopes from the perimeter shelf to a maximum depth of 14 feet at a 4:1 or flatter slope (Wallace Kuhl and Assoc. 1999). The lake bottom was sealed with a 12-inch thick clay layer.

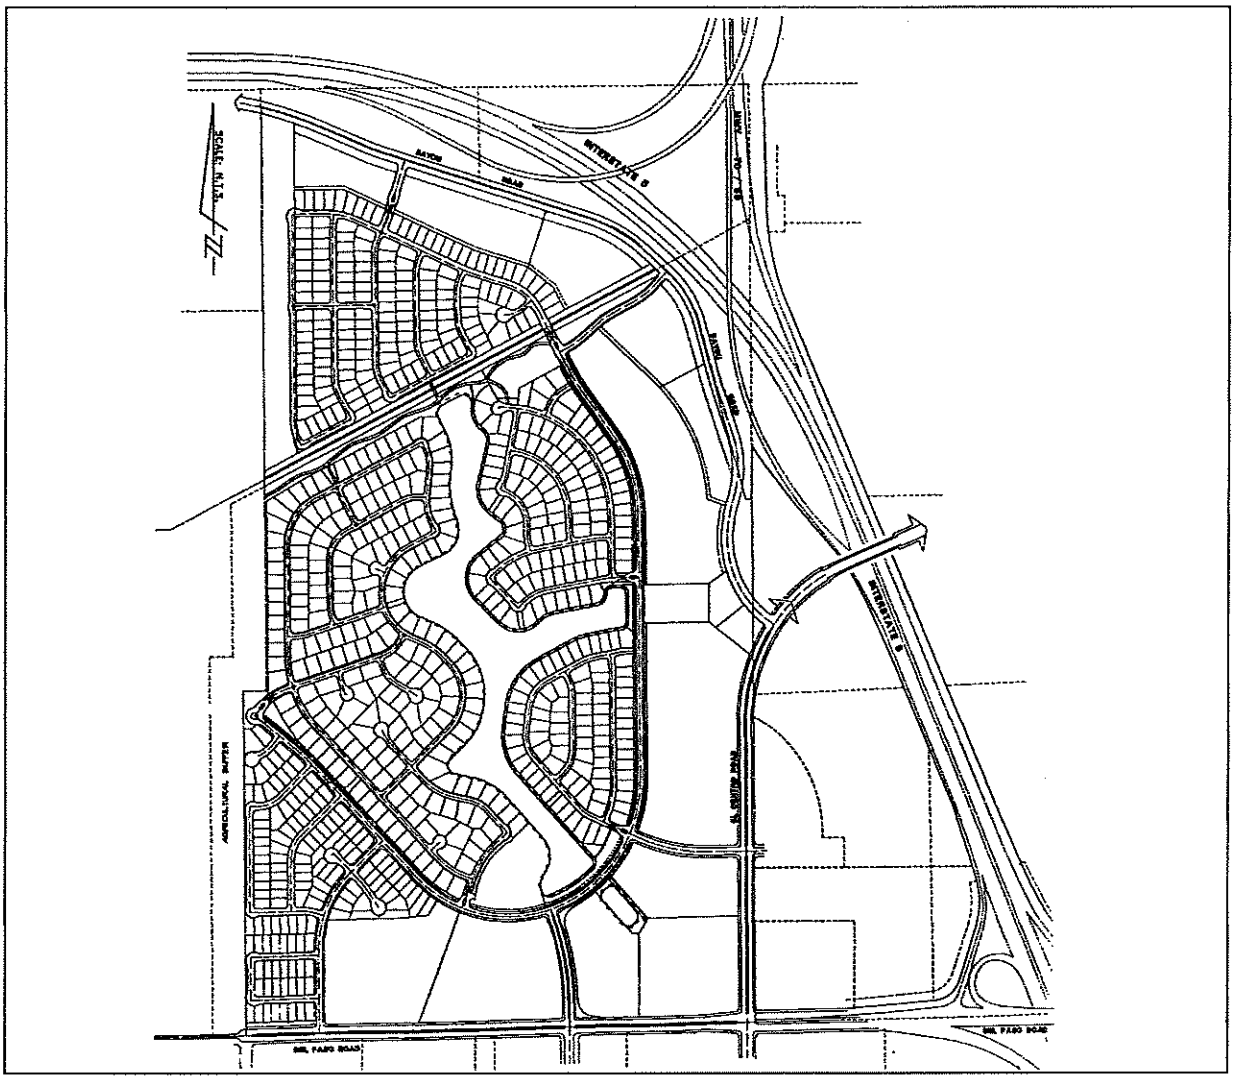

Figure 2. Map of Westlake development.

Lake water level fluctuates with the seasons to permit damping of the winter runoff hydrograph and extend the detention time of water in winter. The summer surface water elevation is 12.6 feet, and the winter elevation 11.8 feet above mean sea level. Under typical conditions, the lake depth varies from 11.8 (winter, no-flow condition) to 12.6 feet (summer). The lake volume in the summer and winter is approximately 139 and 124 acre-feet, respectively. At maximum storage capacity, 16.0 feet above mean sea level (100-year), the accumulated lake volume is approximately 200 acre-feet. Thus, the accumulated volume of the lake between the

winter operating pool (11.8 feet msl) and the 100-year pool (16.0 feet msl) is approximately 76 acre-feet. The lake was filled, and summer water level (12.6 feet above MSL) maintained, with water drawn from a well located at the south end of the lake.

The surface water drainage system for the development directs runoff into the lake. Outflow from the lake is discharged to the West Drainage Canal at a point west of the Plant 13 pump station. The West Drainage Canal flows into Fisherman Lake and then into the Sacramento River just upstream of its confluence with the American River via the RD 1000 pumpstations 3, 1A and 1B.

The lake is one component in a package of best management practices (BMPs) for water quality at the development. The lake is managed as a vegetated, wet-pond system for treatment of urban runoff. If properly maintained, vegetated wet ponds can achieve high removal rates for sediment, biological oxygen demand (BOD), organic nutrients, and trace metals in urban runoff. Biological processes within the pond also remove soluble nutrients, such as nitrates, ammonia, and orthophosphorus, which contribute to nutrient enrichment and eutrophication. Rooted aquatic plants, or macrophytes, in the lake enhance biological uptake of soluble nutrients in the lake and increase sedimentation.

Lake Uses

Westlake is intended to provide aesthetic, storm water detention, water quality enhancement, and limited recreational benefits. Recreational use of the lake is limited to non-motorized boating. No swimming or other water contact recreation is permitted.

Management Goals

Management goals for a lake are based on the intended uses. The following management goals were recommended in the lake management plan (Perry and Sytsma 2000):

- The lake should be free of surface mats of algae and macrophytes.
- Cyanobacteria blooms that could harm pets should be avoided.
- The lake should not produce nuisance odors.
- The lake will not contain concentrations of coliform bacteria associated with human wastes that exceed established water quality standards.
- The lake shall not contain floating material such as oil and grease, trash, scums, etc. that interfere with uses.
- Toxic materials that harm aquatic life or human health will not accumulate in the lake or be discharged from the lake.
- Outflow from the lake will not harm aquatic life in aquatic systems downstream from the discharge.
- The lake will be managed to reduce urban runoff and storm water runoff pollutants discharged from the outfall structure to the maximum extent practicable as determined by the City in accordance to its NPDES storm water permit and storm water management program.

Specific numeric lake management criteria were recommended as target values (Table 1). Westlake will take a number of years to reach a stable state. Processes such as final buildout, formation and consolidation of sediments, and introduction and establishment of biological communities will alter the condition of the lake and interact to influence future water quality.

Table 1. Management objectives for water quality in Westlake.

Constituent	Management Objective
Dissolved Oxygen*	5 mg/L - mean monthly concentration 4 mg/L - single value
Clarity	0.5 m Secchi depth - mean monthly value
pH**	6.5-9
Total Coliform Bacteria	500/1100 MPN/100 mL[1]
Dissolved Inorganic Nitrogen[2]	0.15 mg/L
Un-ionized ammonia	0.02 mg/L - single value
Total Phosphorus	0.05 mg/L - mean monthly concentration
Carlson's Trophic State Index***	< 60
Chlorophyll	15 mg/m^3 - mean monthly concentration 40 mg/ m^3 - single value

[1] Median value/90th percentile value
[2] Nitrate + Ammonia-nitrogen
* Measured in the morning
** Measured in the afternoon
*** TSI_{Secchi} = 60-14.41 x ln Secchi transparency (m)
TSI_{Chl} = 9.81 x ln Chlorophyll *a* (mg/m^3) + 30.6
TSI_P = 14.42 x ln Total Phosphorus (mg/m^3) + 4.15

Lake Management Activities

The lake was treated with algaecides and herbicides, as needed, during the quarter.

Lake Monitoring

Methods

Westlake was sampled on April 24, 2008. Profiles of temperature, dissolved oxygen, pH, and conductivity were measured at three locations the lake with a Hydrolab Quanta multiprobe instrument calibrated according to the manufacture's specifications. A depth-composited sample (surface, 1 and 2 m) was collected for laboratory analysis of chlorophyll-a, alkalinity, hardness, total suspended solids, total and soluble reactive phosphorus, total Kjeldahl nitrogen, nitrate-nitrogen, and ammonia-nitrogen at the mid-lake station. Surface samples for E. coli bacteria

analysis were collected at each station. Total coliform bacteria were measured until April 2008. Water transparency was measured with a Secchi disk at all three stations. Phytoplankton samples (250 mL) were collected by surface grab at station 2.

Laboratory analyses of samples were conducted by Caltest Analytical Laboratory using standard methods. Methods are detailed in the laboratory report included in an appendix to this report. All laboratory results met quality control requirements. Laboratory reporting limits are higher than the method detection limits for some of the analyses. American Civil Constructors requested that the laboratory report data below the laboratory's reporting limit but above the method detection limit. Values less than the reporting limit may be less reliable than values above the reporting limit, however, for lake management purposes the lower method detection limit may provide acceptable data.

Phytoplankton samples were preserved with lugol's solution in the field. Samples were concentrated into a five-mL volume by allowing them to settle for five days and aspirating the supernatent. Phytoplankton in the concentrated sample were counted in a Nannoplankton® counting chamber (Phycotech, Inc.). At least 350 cells were counted with a Nikon Eclipse 600 microscope (100x and 400x). Organisms were identified at the species level whenever possible using Weber (1971) and Prescott (1982). Phytoplankton analyses were done by Miguel Estrada.

Results and Discussion

Results of the July 31, 2008 sampling of Westlake are discussed below. The data are summarized in Table 2.

Temperature

Water temperature is an important determinant of the biological and chemical characteristics of lakes. Shallow lakes are typically isothermal, i.e., water temperature does not change significantly with depth, but Westlake does exhibit thermal stratification on some occasions in the summer. Weak thermal stratification was evident in Westlake on July 31. Lake mean water temperature was about 2 C degrees lower than in July 2007. Water temperatures in Spring 2008 were also lower than in Spring 2007.

pH and Alkalinity

The pH of lakes is a function of the geology of the watershed and biological activity in the lake. In most freshwater systems, pH is determined by the carbonate ($CO_2 - HCO_3^- - CO_3^{2-}$) system. The carbonate system buffers pH changes in lakes. Changes in pH occur when concentrations of CO_2 and HCO_3^- in the system change. During photosynthesis and respiration, carbon dioxide (CO_2) is consumed or produced. Thus, pH can be an indicator of the productivity of a system.

The pH of Westlake averaged 9.2, which was slightly above the management objective but within the range measured in the lake previously. Total alkalinity was 180 mg $CaCO_3$/L, which was the same as in July 2007.

Conductivity

Water is a solvent for salts. Specific conductance is a measure of the amount of salts dissolved in water. The more dissolved salts the higher the specific conductance and salinity. Specific conductance in Westlake averaged 530 µS/cm , which was similar to that measured

previously in Summer. There is no management objective for specific conductance but changes could reflect changes in the chemistry of the well water used to maintain lake level.

Dissolved Oxygen

Dissolved oxygen is critical for survival of many aquatic organisms. Most desirable fish species require dissolved oxygen concentrations greater than 5 mg/L. Water temperature determines the amount of oxygen that can dissolve in water (100 % saturation). The concentration of oxygen at saturation decreases with increasing water temperature. The dissolved oxygen management objective is a mean monthly value of 5 mg/L or a single measurement of 4 mg/L.

There was dissolved oxygen depletion in the bottom water of Westlake due to the weak thermal stratifcation present on July 31. Concentration averaged 6.9 mg/L in the lake with a minimum concentration of 5.6 mg/L. The dissolved oxygen concentration met the management objective for the lake.

Nitrogen

Ammonia and Nitrate+Nitrite-Nitrogen

Inorganic nitrogen is an important nutrient for rooted plants and phytoplankton. Inorganic nitrogen can occur in reduced (ammonium) and oxidized forms (nitrate+nitrite). The ammonium and nitrate concentrations were below the method detection limit. The ammonium and nitrate concentrations are commonly nondetectable in the Westlake. Total inorganic nitrogen concentration met the management objective for the lake.

Ammonia gas forms ammonium hydroxide in water, which can in turn dissociate into ammonium and hydroxyl ions. The unionized form of ammonia is toxic to fish. The ratio of unionized to total ammonia changes with pH and temperature (Emerson *et al.* 1975). Temperature and pH are quite variable in aquatic systems due to diurnal variation in light and photosynthesis, which can lead to fluctuating unionized ammonia concentrations. EPA (1999) issued total ammonia criteria concentrations to protect fish. The criterion concentration for chronic exposure at the temperature and pH of Westlake was 0.26 mg ammonia-N/L. Therefore, the concentration in the lake was well below the concentration of concern for fish health.

Total Nitrogen

The total Kjeldahl nitrogen (TKN) concentration in the water includes nitrogen associated with planktonic organisms in addition to the dissolved, inorganic ammonia-nitrogen present in the water. TKN concentration in Westlake was 1.8 mg/L. TKN concentration is typically detectable in the lake with concentrations ranging from undetectable to 4.6 mg/L. Nitrate concentration was nondetectable so the total nitrogen (TKN+nitrate) was ~1.8 mg/L. No total nitrogen management objective was set for the lake.

Table 2. Westlake water quality data from July 31, 2008 and historical data.

Phosphorus

Orthophosphorus

Orthophosphate-phosphorus is a measure of phosphorus available for plant uptake. Since phosphorus often limits algae growth in lakes, orthophosphate-phosphorus is often used as an indicator of the algae production potential of a lake. Orthophosphorus concentrations are typically very low in lakes (< 0.01 mg/L). Orthophosphorus concentration was below the detection limit, which is typical of Westlake in Summer.

Total Phosphorus

Total phosphorus is a measure of the phosphorus dissolved in the water (ortho-phosphate) plus phosphorus associated with organic complexes, planktonic organisms, and some suspended sediment in the water column. Total phosphorus concentration was 0.18 mg/L. Summertime total phosphorus ranged from <0.1 to 0.33 mg/L from 2004 through 2007.

Hardness

Water hardness is determined primarily by the concentrations of calcium and magnesium in water. Iron and manganese may also contribute to hardness. Hardness is expressed as calcium carbonate equivalents. Because the cations that contribute to water hardness compete with metal ions in some biochemical processes, hardness can be used to predict the toxicity of some metals to fish. Metal toxicity is greater in "soft" water (< 20 mg $CaCO_3$/L). Consideration of hardness of Westlake is important when algae are managed with copper-containing algaecides. In general, extreme care must be used when treating "soft" water with copper-based algaecides.

Hardness of Westlake was 90 mg $CaCO_3$/L, which was within the range measured in the lake in the summer previously (78-180 mg/L). Hardness in Westlake has been generally similar to, although more variable than, other Central Valley lakes and within the "hard water" range. Even though hardness is adequate, caution should be exercised when using copper herbicides in Westlake to avoid toxicity to sensitive fish species.

Suspended Solids

Suspended solids are a measure of particulate material in the water column. Particulate matter may include algae and suspended sediments. When compared to other measurements, chlorophyll-a or total phosphorus for example, suspended solids information can provide an indication of the type of material suspended in the water column. Suspended solids concentration was 5.0 mg/L, which was within the range measured previously in the lake in the summer (undetectable to 24 mg/L).

Chlorophyll-a

Algae contain a number of pigments that function in photosynthesis. Measurement of the amount of the green, chlorophyll-a pigment extracted from algae in a water sample provides and indirect indication of the abundance of algae in the water. Summer chlorophyll-a concentrations greater than about 5 to 10 mg/m^3 are considered an indication of eutrophic conditions. Chlorophyll-a concentration was 29 mg/m^3 on July 31. Summer chlorphyll-a concentrations are typically much higher (93-250 mg/m^3) in Westlake, particularly in recent years. The low concentrations in 2008 may relate to the low water temperatures noted previously.

Secchi Transparency

A Secchi disk is a 20-cm, black and white disk that is commonly used for measuring water clarity in lakes. Secchi transparency is a measure the amount of suspended material, *e.g.*, algae cells and sediment, in the water column. A Secchi transparency of 0.5 m has been established as the management objective for Westlake.

The mean Secchi disk transparency was 0.8 m, which was greater than summer transparency in recent years. The high transparency was a result of the low chlorophyll-a concentrations in the lake. The management objective was met.

Phytoplankton

The phytoplankton community was dominated by green algae (Chlorophytaceae), primarily *Sphaerocystus schroeteri.* The cyanobacteria, *Anabaena wisconsinense*, was the subdominant species present. Cell densities were low in comparison to previous years, possibly due to the low Spring and Summer temperatures in the lake.

Table 3. Historical abundance and dominant species, and phytoplankton community composition in Westlake on July 31, 2008.

Group	Species	Colonies/L	Cells/L	% Total
Bacillariophyceae	Nitzschia acicularis (Kuetzing) W. Smith		40,103	0.2

		1,845,261	17,101,185	

Historical Summer Dominants and Abundance		
2007	cyanophytes	75,913,657
2006	cyanophytes	187,411,034
2005	cyanophytes	66,676,580
2004	chlorophytes	3,856,246
2003	chlorophytes	11,243,101

Bacteria

Total coliform bacteria include bacteria that are found in the soil, in water that has been influenced by surface water, and in human or animal waste. *Escherichia coli* is the major species in the fecal coliform group. Of the five general groups of bacteria that comprise the total coliforms, only *E. coli* is generally not found growing and reproducing in the environment. Consequently, measurement of *E. coli* concentration provides the best indictor of potential contamination with human and animal wastes. The national and state standard for recreational water contact in the Central Valley is 126 cfu/100mL. While 1:1 conversion of MPN and cfu concentrations are not exact (Gronewold and Wolpert 2008), MPN of *E. coli* were well below this standard.

Collected By: Stuart Perry
PO/Contract #:

Dear Stuart Perry:

Enclosed are the analytical results for sample(s) received by the laboratory on Thursday, July 31, 2008. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Enclosures

NARRATIVE

Lab Order: I071098

Project ID: WESTLAKE

General Qualifiers and Notes

Caltest authorizes this report to be reproduced only in its entirety. Results are specific to the sample(s) as submitted and only to the parameter(s) reported.

Caltest certifies that all test results for wastewater and hazardous waste analyses meet all applicable NELAC requirements; all microbiology and drinking water testing meet applicable ELAP requirements, unless stated otherwise.

All analyses performed by EPA Methods or Standard Methods (SM) 18th Ed. except where noted.

Caltest collects samples in compliance with 40 CFR, EPA Methods, Cal. Title 22, and Standard Methods.

Dilution Factors (DF) reported greater than '1' have been used to adjust the result, Reporting Limit (RL), and Method Detection Limit (MDL).

All Solid, sludge, and/or biosolids data is reported in Wet Weight, unless otherwise specified.

Laboratory filtration for dissolved metals (excluding mercury) and/or pH analysis was not performed within the 15 minute holding time as specified by 40CFR 136.3 table II.

Results Qualifiers: Report fields may contain codes and non-numeric data correlating to one or more of the following definitions:

ND - Non Detect - indicates analytical result has not been detected.

RL - Reporting Limit is the quantitation limit at which the laboratory is able to detect an analyte. An analyte not detected at or above the RL is reported as ND unless otherwise noted or qualified. For analyses pertaining to the State Implementation Plan of the California Toxics Rule, the Caltest Reporting Limit (RL) is equivalent to the Minimum Level (ML). A standard is always run at or below the ML. Where Reporting Limits are elevated due to dilution, the ML calibration criteria has been met.

J - reflects estimated analytical result value detected below the Reporting Limit (RL) and above the Method Detection Limit (MDL). The 'J' flag is equivalent to the DNQ Estimated Concentration flag.

E - indicates an estimated analytical result value.

B - indicates the analyte has been detected in the blank associated with the sample.

NC - means not able to be calculated for RPD or Spike Recoveries.

SS - compound is a Surrogate Spike used per laboratory quality assurance manual.

NOTE: This document represents a complete Analytical Report for the samples referenced herein and should be retained as a permanent record thereof.

QUALITY CONTROL DATA QUALIFIERS

Lab Order: I071098

Project ID: WESTLAKE

QUALITY CONTROL PARAMETER QUALIFIERS

Results Qualifiers: Report fields may contain codes and non-numeric data correlating to one or more of the following definitions:

NS - means not spiked and will not have recoveries reported for Analyte Spike Amounts

NC - means not able to be calculated for RPD or Spike Recoveries.

QC Codes Keys: These descriptors are used to help identify the specific QC samples and clarify the report.

MB - Method Blank

LCS/LCSD - Laboratory Control Spike / Laboratory Control Spike Duplicate

DUP - Duplicate of Original Sample Matrix

MS/MSD - Matrix Spike / Matrix Spike Duplicate

RPD - Relative Percent Difference

%Recovery - Spike Recovery stated as a percentage

1	The RPD was high because the sample was not homogenous.

Central Valley Regional Water Quality Control Board
11020 Sun Center Drive, No. 200
Rancho Cordova, CA 95670-6114

Re: Legal Authority to Comply with Federal NPDES Storm Water Regulations and Water Discharge Requirements Order No. R5-2008-0142

This letter shall serve as the statement verifying the authority of the City of Citrus Heights ("City") to implement and enforce certain Federal NPDES Storm Water Regulations and the requirements of Water Discharge Requirements Order No. R5-2008-0142 ("Order") which implements NPDES Permit CAS082597 ("Permit"). The City submits this statement along with its Stormwater Quality Improvement Plan ("SQIP") as required by the Order.

Section D.6 of the Order requires the preparation of a statement "certified by its Chief Legal Counsel," verifying that adequate authority exists to implement the terms of the Order and requirements of federal stormwater regulations. Section D.6 specifies six items that must be included in the statement:

> "6. Each Permittee shall provide to the Regional Board a statement certified by its chief legal counsel that the Permittee has adequate legal authority to implement and enforce each of the requirements contained in 40 CFR 122.26(d)(2)(i)(A-F) and this Order, including any modifications thereto in effect when the certified statement is provided. This statement, which shall be included in Permittees' revised SQIP(s), shall include the following:
>
> a. Citation of urban runoff related ordinances adopted by the Permittee and the reasons the ordinances are enforceable;
>
> b. Progressive enforcement policy and how it will be effectively implemented;
>
> c. Identification of the local administrative and legal procedures available to mandate compliance with the Permittees' urban runoff related ordinances, which incorporate the conditions of this Order;
>
> d. Description of how these ordinances are implemented and how enforcement actions under these ordinances may be appealed;

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions; and

f. Description of the Permittee's storm water management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities.

As required by the Order, a complete discussion of each issue follows.

a. Citation of urban runoff related ordinances adopted by the Permittees and the reasons the ordinances are enforceable.

On September 22, 2004, the City adopted Ordinance No. 2004-08, the Citrus Heights Storm Water Ordinance ("City Storm Water Ordinance.") The City's Storm Water Ordinance is the principal ordinance governing discharges to the municipal separate storm sewer system (MS4) of which the City's storm sewer system is a designated part. The City's Storm Water Ordinance further refined the County's Storm Water Ordinance and adopted revisions necessary to expressly authorize the County to enforce the storm water discharge standards in order to ensure compliance with the terms of the Permit. The purpose of the City Storm Water Ordinance is to "protect and enhance the water quality of watercourses, water bodies and wetlands within the unincorporated area of the City in a manner consistent with the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and Municipal Discharge Permit No. CA0082597 by controlling the contribution of urban pollutants to stormwater runoff which enters the County stormwater conveyance system." The provisions of the City Storm Water Ordinance authorize implementation or enforcement of each mandate of the Order or storm water regulation.

Additionally, the City's Land Grading and Erosion Control Ordinance ("Grading Ordinance"), Chapter 16A.52 of the City of Citrus Heights Municipal Code, regulates grading projects and sets conditions for approval of such projects. The City enacted this ordinance specifically to minimize the degradation of the water quality of watercourses caused by grading, filling and excavation of land, and to control sediment and pollutant runoff from other construction-related activities. These goals are achieved by establishing administrative procedures, minimum standards of review, and implementation and enforcement procedures for controlling erosion, sedimentation and other construction-related pollution.

The Grading Ordinance and the City's Storm Water Ordinance were properly published, introduced and adopted by the City Council and constitute enforceable enactments pursuant to the City's police power.

The City's authority under the Grading Ordinance and the City Storm Water Ordinance is very wide-ranging and is sufficient to address the majority of the mandates contained in the Order. The

Order requires the Permittees to "carry out all inspections, surveillance, and monitoring necessary to determine compliance and noncompliance with local ordinances and permits, including the prohibition of illegal discharges to the MS4." The City Storm Water Ordinance authorizes inspections and monitoring by the City and requires regular reports from dischargers. Additionally, the Order requires the City to have the legal authority to require "that treatment control BMPs be properly operated and maintained." City Storm Water Ordinance sections 98-210 through 98-226 require any person engaged in activities which may result in pollutants entering the stormwater conveyance system to implement and maintain BMPs.

The Order and federal storm water regulations require the City to "control the contribution of pollutants from one portion of the shared MS4 to another portion of the MS4 through interagency agreements among Permittees." While not specifically covered in any existing interagency agreements, the current Memorandum of Understanding (MOU) between the City and the other permittees implicitly addresses this requirement.

b. Progressive enforcement policy and how it will be effectively implemented.

The City's Storm Water Ordinance provides various levels of enforcement, which are discussed further below. The City may issue a notice of violation to any person found in violation of the City's Storm Water Ordinance. If an issue is not resolved voluntarily after the notice of violation, the City has administrative enforcement options, including the ability for the administrator to issue an administrative compliance order which, among other things, sets forth the specific steps and time schedules for compliance and the measures necessary to implement the BMPs in accordance with the City's Storm Water Ordinance. Additionally, if a violation constitutes an immediate threat to public health or safety, including for example, significant harm to human or aquatic life, the City may issue a cease and desist order requiring the immediate end to the activities causing the threat. The City also has the ability to impose administrative civil penalties up to $5,000 for each violation of the storm water ordinance.

c. Identification of the local administrative and legal procedures available to mandate compliance with the Permittees' storm water related ordinances, which incorporate the conditions of this Order.

The City Storm Water Ordinance has several administrative procedures available to mandate compliance with the requirements contained in the ordinance. As discussed further below, these options include issuing notices of non-compliance, administrative enforcement orders and cease and desist orders. In addition to administrative enforcement options, the City may seek civil and criminal penalties against a violator and may seek nuisance abatement through the court system. Lastly, Section 22-226 of the City Storm Water Ordinance allows the City General Services Director to promulgate regulations for the implementation of the City's Storm Water Ordinance. This section gives the City the ability to further refine its administrative compliance options.

d. Description of how these ordinances are implemented and how enforcement actions under these ordinances may be appealed.

The City will implement the City Storm Water Ordinance through the stormwater program detailed in the SQIP.

The City Storm Water Ordinance sets forth a detailed process for appealing enforcement action brought pursuant to it. Section 98-240 provides that any person receiving a notice of non-compliance, an administrative compliance order or otherwise suffers an adverse determination under the ordinance may request an administrative hearing before an administrative hearing officer designated by the City Council. The Ordinance requires the appellant to file with the Director, within 30 days of receipt of notice of an adverse determination, a written request for an administrative hearing, accompanied by an administrative hearing fee as established by resolution of the Council. The City then holds a hearing on the matter before a hearing officer within 45 days of the filing of the written request unless, in the reasonable discretion of the hearing officer and pursuant to a request by the appealing party, a continuance of the hearing is granted. The hearing office must issue his or her final decision within ten days of the hearing.

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions.

As stated above, the City Storm Water Ordinance includes an extensive section on enforcement actions (giving the City a wide variety of administrative options in case of violations). The administrative enforcement options include issuing a notice of non-compliance, administrative compliance orders, and cease and desist orders. Issuance of a cease and desist order functions as an injunction in that it allows the Director to direct the owner or occupant of any premises, or any other person responsible for any violation of the proposed ordinance, to take one or more of the following actions: (1) Immediately discontinue any prohibited discharge to the City stormwater conveyance system; (2) Immediately discontinue any other violation of the ordinance; and (3) Clean up the area affected by the violation. The Director may direct by a Cease and Desist Order that any person immediately cease any activity that may lead to a violation of Receiving Water Limitations.

The City has similar authority under the Grading Ordinance. The powers include the issuance of stop work notices, denial of future grading permits and the abatement of nuisance conditions.

f. Description of the Permittee's storm water management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities.

The City's General Services Department ("GSD") oversees the responsibility for compliance with the Storm Water Quality Improvement Plan and the Order. The Planning Division of the Community Development Department participates in the implementation and enforcement of the Order by enforcing and reviewing environmental documents and conditioning projects to comply with the Order

and Permit requirements. GSD works closely with the members of the City's Code Enforcement department for the enforcement aspect of the Order, as the Code Enforcement division has an appeals process and the ability to lien properties for unpaid fines.

Based on the foregoing discussion, the City Attorney respectfully submits this certification. Please do not hesitate to contact me if you need further information.

Sincerely,

Ruthann G. Ziegler
City Attorney

15.12.630 Expiration of this Article

Article 1
General Provisions

15.12.010 FINDINGS. a. The Federal Clean Water Act provides for the regulation and reduction of pollutants discharged into the waters of the United States by extending National Pollutant Discharge Elimination System requirements to stormwater and urban runoff discharge into the City stormwater conveyance system.

b. Stormwater flows from individual properties to the City stormwater conveyance system and then ultimately to the waters of the United States.

c. The City is a co-permittee under the Waste Discharge Requirements for County of Sacramento, cities of Sacramento, Folsom, Citrus Heights, Elk Grove, Rancho Cordova, and Galt Area-Wide Storm Water Discharges From Municipal Separate Storm Sewer Systems, which also serves as a NPDES Permit under the Federal Clean Water Act (NPDES No. CA0082597). As a co-permittee, the City is required to possess the necessary legal authority, and to implement appropriate procedures, to regulate the entry of pollutants and non-stormwater discharges into the City stormwater conveyance system.

d. The Municipal Storm Water Permit requires the City too effectively prohibit non-stormwater discharges into the City stormwater conveyance system except as otherwise permitted by Federal law.

e. The City Council finds in this regard that the provisions of this Chapter are necessary to provide the City with the legal authority necessary to implement and otherwise comply with the requirements of its Municipal Storm Water Permit.

15.12.020 PURPOSE AND INTENT. a. This Chapter is adopted pursuant to Article XI, Section 7 of the California Constitution which authorizes the City to exercise its police power to protect and promote the public health, safety and general welfare. While stormwater runoff is one step in the natural cycle of water, human activities, including, but not limited to, agriculture, construction, manufacturing and the operation of an urban infrastructure, may result in undesirable discharges of pollutants and certain sediments. Such discharges may accumulate in local drainage channels and waterways and eventually may be deposited in the waters of the United States. The purpose of this Chapter is to protect and enhance the water quality of watercourses, water bodies and wetlands within the unincorporated area of the City in a manner consistent with the

Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and Municipal Discharge Permit #CA0082597 by controlling the contribution of urban pollutants to stormwater runoff which enters the City stormwater conveyance system.

b. It is the intent of the City Council in adopting this Chapter to provide the City with the legal authority to accomplish the following goals:

1. To reduce the discharge of pollutants in stormwater to the maximum extent practicable;

2. To effectively prohibit non-stormwater discharges into the City stormwater conveyance system;

3. To comply with the requirements of the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and NPDES Municipal Storm Water Discharge Permit #CA0082597 as they apply to the discharge of pollutants into and from the City stormwater conveyance system;

4. To fully implement the Comprehensive Stormwater Management Program as approved by the Regional Board;

5. To protect the physical integrity and function of the City stormwater conveyance system from the effects of pollutants and materials other than stormwater;

6. To prevent the contamination of groundwater as a result of pollution migration from the City stormwater conveyance system;

7. To promote cost effective management and beneficial use of sediments in the City stormwater conveyance system;

8. To protect the health and safety of maintenance personnel and the public who may be exposed to pollutants in the City stormwater conveyance system;

9. To provide for the recovery of regulatory costs incurred by the City in the implementation of its stormwater drainage program, including, but not limited to, enforcement activities, inspections, investigations, sampling and monitoring; and

10. To establish appropriate enforcement procedures and penalties for violations of the provisions of this Chapter.

15.12.030 DEFINITIONS.

Any term(s) defined in the Federal Clean Water Act, as amended, and/or defined in the regulations for the stormwater discharge permitting program issued by the United States Environmental Protection Agency, as amended, and which are not specifically defined in this Chapter shall, when used in this Chapter, have the same meaning as set forth in said Act or regulation. ***(COEG Ord. No. 26-2004, eff. 8-19-04)***

As used in this Chapter, the following words and phrases shall have the meanings set forth below unless the context clearly indicates otherwise.

a. "Administrator" means the Administrator of the City's Department of Public Works and his or her designees.

b. "Best Management Practices (BMP)" means schedules of activities, prohibition of practices, general good housekeeping practices, pollution prevention and educational

practices, maintenance procedures, and other management practices to prevent or reduce to the maximum extent practicable the discharge of pollutants directly or indirectly to waters of the United States. BMPs shall also be defined to include structural controls, treatment controls, training requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, and drainage from raw materials storage.

c. "City" means the City of Elk Grove.

d. "City Council" means the City Council of the City of Elk Grove.

e. "County" means the County of Sacramento.

f. "City Stormwater Conveyance System" means those public and natural facilities within the City which are owned, operated, maintained or controlled by the City by which stormwater may be conveyed to waters of the United States, including, but not limited to, any roads with drainage systems, municipal streets, catch basins, water quality basins, detention basins, constructed wetlands, natural and artificial channels, aqueducts, canyons, stream beds, gullies, curbs, gutters, ditches, sumps, pumping stations, and storm drains. The City stormwater conveyance system includes natural creeks and small streams which are also defined as receiving waters by the Municipal Storm Water Permit, but does not include the Sacramento River, American River, Cosumnes River, Mokelumne River, or navigable waterways of the Delta.

g "Discharge" mean the release or placement of any material into the City stormwater conveyance system, including, but not limited to, stormwater, wastewater, solid materials, liquids, hazardous waste, raw materials, debris, litter or any other substance.

h. "Illicit connection" means any physical connection to the City stormwater conveyance system which is not expressly authorized by the City.

i. "Implementing Agency" means the agency or department designated by the Administrator to enforce the provisions of this Chapter with respect to a particular site, facility or industry category.

j. "Industry or industrial activity" means any service, business, enterprise, or any other activity conducted by any person for the purpose of monetary or other compensation.

k. "Material" means any substance, including, but not limited to, raw materials, finished products, garbage and debris, lawn clippings, leaves and other vegetation, biological and fecal waste, sediment and sludge, oil and grease, gasoline, paints, solvents, cleaners and any fluid or solid containing chemicals.

l. "Municipal Storm Water Permit" means NPDES Permit # CA0082597, including any amendments thereto or successor permit, issued by the Regional Board to the County and the cities of Folsom, Galt, Sacramento, Citrus Heights, Elk Grove and Rancho Cordova.

m. "National Pollution Discharge Elimination System Permit or NPDES Permit" means a permit issued by either the Regional Board or the State Water Resources Control Board pursuant to Chapter 5.5 (commencing with Section 13370) of Division 7

of the Water Code to control discharges from point sources to waters of the United States.

n. "Non-stormwater discharge" means any discharge to the City stormwater conveyance system or directly to the Sacramento River, the Cosumnes River, the Mokelumne River, the navigable waters of the Delta, or the American River which is not composed exclusively of stormwater.

o. "Person" means any natural person as well as any corporation, partnership, public agency, trust, estate, cooperative association, joint venture, business entity or other similar entity, or the agent, employee or representative of any of the above.

p. "Pollutant" means any contaminant or other substance which, as determined by the Administrator, is discharged or has a reasonable potential to be discharged in sufficient quantities or concentrations to cause exceedance of receiving water limitations defined in Section C. 1. of the Municipal Storm Water Permit, or any successor section, or otherwise cause a violation of the Municipal Storm Water Permit. Pollutant may include, but is not limited to, solid waste, sewage, garbage, medical waste, wrecked or discarded equipment, radioactive material, dredged soil, rock, sand, industrial waste, feces, fecal coliform, fecal streptococcus, enterococcus, volatile organic carbon, surfactants, oil and grease, petroleum hydrocarbon, organic solvents, metals, phenols, pesticides, nutrients, suspended or settlable solids, materials causing an increase in biochemical or chemical oxygen or total organic carbon, substances which alter pH, and those pollutants defined in Section 1362(6) of the Federal Clean Water Act.

q. "Potential user" means any person who by nature of the enterprise, activity or industry in which such person is engaged, or by the use, possession or ownership of specified types of equipment, is determined by the Administrator to generate or have the capacity to generate wastes or wastewater which have significant potential to be discharged to the City stormwater conveyance system.

r. "Premises" means any building, lot, parcel or land, or portion thereof, whether improved or unimproved.

s. "Prohibited discharge" means any non-stormwater discharge to the City stormwater conveyance system or directly to the Sacramento River, the Cosumnes River, the Mokelumne River, navigable waters of the Delta, or the American River, which is not otherwise specifically authorized by this Chapter, the Regional Board, State or Federal law, or an NPDES permit.

t. "Receiving water limitations" means those restrictions defined and listed in Section C.1. of the Municipal Storm Water Permit or any successor section.

u. "Receiving waters" means surface bodies of water, as defined by the Municipal Storm Water Permit, including, but not limited to, creeks and rivers, which serve as discharge points for the City stormwater conveyance system.

v. "Regional Board" means the California Regional Water Quality Control Board, Central Valley Region.

w. State General Construction Activity Permit shall mean the State Water Resources Control Board's Water Quality Order No. 99-08-DWQ, National Pollution Discharge Elimination System (NPDES) General Permit No. CAS000002 Waste Discharge Requirements (WDRS) for Discharges of Storm Water Runoff Associated With Construction Activity, and any successor documents.

x. State General Industrial Activity Permit shall mean the State Water Resources Control Board's Water Quality Order No. 97-03-DWQ, National Pollution Discharge Elimination System General Permit No. CAS000001, Waste Discharge Requirements for Discharges of Storm Water Associated With Industrial Activities Excluding Construction Activities, and any successor document.

y. "Stormwater" means surface runoff and drainage resulting from storm events and snow melt.

z. "Subject Activity" means any industrial activity which is determined by the Administrator to discharge or have the potential to discharge pollutants into stormwater or non-stormwater in quantities or concentrations which may cause exceedance of receiving water limitations, or for which a requirement has been imposed by the state or federal government on the City to conduct stormwater regulatory activities focused on the activity.

aa. "Threatened prohibited discharge" means any condition or activity which does not currently result in a prohibited discharge but is nevertheless determined by the Administrator to be a condition which results in a substantial likelihood of a future prohibited discharge.

bb. "User" means any person who discharges, or causes to discharge, either directly or indirectly, stormwater or any other material into the City stormwater conveyance system.

cc. "Waters of the United States" has the same meaning as set forth in Part 122.2 of Title 40 of the Code of Federal Regulations or any successor provision. ***(COEG Ord. No. 26-2004, eff. 8-19-04)***

15.12.035 CONSTRUCTION. The provisions of this Chapter shall be construed to assure consistency with the requirements of the Federal Clean Water Act and any acts amendatory thereof or supplementary thereto, applicable implementing regulations, and NPDES Permit # CA 0082597 and any amendment, revision or reissuance thereof. In the event of a conflict between this Chapter and any federal or state law, regulation, order or permit, the requirement, which establishes the higher standard for public health and safety, shall govern.

15.12.040 APPLICABILITY. The provisions of this Chapter shall be applicable to all users and potential users located within the City and all users that discharge either directly or indirectly into the City stormwater conveyance system. This Chapter shall not be applicable to persons located outside the boundaries of the City if their stormwater or non-stormwater discharge enters a stormwater conveyance facility owned or operated by another public agency which is subject to a valid NPDES Permit for discharges from a municipal separate storm sewer system prior to entering the City

stormwater conveyance system. This Chapter shall not apply to facilities subject to and in compliance with the State General Construction Activity Stormwater Permit and/or the City of Elk Grove Erosion and Sediment Control Ordinance. Non-stormwater discharges at construction sites between one and five acres in size, and which the Administrator determines are in accordance with the non-stormwater discharge standards of the State General Permit for Construction Activity, are considered to be in compliance with this Chapter. This Chapter shall not apply to facilities operated by the State of California or by agencies of the Federal Government.

15.12.050 REGULATORY CONSISTENCY. The provisions of this Chapter shall take precedence over and are controlling with respect to any conflicting or inconsistent provisions in this Code.

15.12.060 COMPLIANCE DISCLAIMER. Compliance by any person with the provisions of this Chapter shall not preclude the need to comply with other local, state or federal statutory or regulatory requirements relating to the control of pollutant discharges or protection of stormwater quality, or both.

15.12.070 SEVERABILITY. If any section, subsection, subdivision, paragraph, sentence, clause or phrase of this Chapter is for any reason held to be invalid or unconstitutional by a decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases of this Chapter. The City Council hereby declares that it would have adopted this Chapter and each section, subsection, subdivision, paragraph, sentence, clause or phrase thereof without regard to whether any other section, subsection, subdivision, paragraph, sentence, clause or phrase of this Chapter would subsequently be declared to be invalid or unconstitutional.

15.12.080 ADMINISTRATION. Except as otherwise provided herein, the Administrator shall be responsible for the administration, implementation and enforcement of the provisions of this Chapter. Any powers granted to or duties imposed upon the Administrator may be delegated by the Administrator to other City employees or, upon the approval of the City Council, to employees of other public agencies.

15.12.090 DISCLAIMER OF LIABILITY. The degree of protection required by this Chapter is considered reasonable for regulatory purposes and is based on scientific, engineering and other relevant technical considerations. The standards set forth herein are minimum standards and this Chapter does not imply that compliance will ensure that there will be no unauthorized discharge of pollutants into the waters of the United States. This Chapter shall not create liability on the part of the City or any officer or employee thereof for any damages that result from reliance on this Chapter or any administrative decision lawfully made thereunder.

CHAPTER 15.12

Article 2
Prohibited Discharges

15.12.100 PROHIBITED DISCHARGE. Except as provided in Section 15.12.110, it shall be unlawful for any person to make or cause to be made any non-stormwater discharge into the City stormwater conveyance system or directly to the Sacramento River, American River, Cosumnes River, Mokelumne River, or navigable waters of the Delta.

15.12.110 EXCEPTIONS TO DISCHARGE PROHIBITION. The following discharges to the City stormwater conveyance system are exempt from the otherwise applicable discharge prohibition set forth in Section 15.12.100:

a. Any discharge regulated under a NPDES permit issued to the discharger, and administered by the State pursuant to Chapter 5.5 of Division 7 of the Water Code, provided that any such discharge is in compliance with all requirements of the NPDES permit and all other applicable laws and regulations.

b. Any discharge from any of the following activities provided that any such discharge does not cause or contribute to the violation of any Receiving Water Limitation as determined by the Administrator:

1. Water line flushing;
2. Landscape irrigation;
3. Diverted stream flows;
4. Rising ground waters;
5. Uncontaminated ground water infiltration [as defined in 40 CFR 35.2005(20)] to separate storm sewers;
6. Uncontaminated pumped ground water;
7. Discharges from potable water sources;
8. Foundation drains;
9. Air conditioning condensate;
10. Irrigation water;
11. Springs;
12. Water from crawl space pumps;
13. Footing drains;
14. Lawn watering;
15. Individual residential car washing;
16. Flows from riparian habitats and wetlands;
17. Dechlorinated swimming pool discharges; or

18. Discharges or flows from emergency fire fighting activities.

c. Any discharges which the Administrator or the Regional Board determines in writing are necessary for the protection of public health or safety.

d. Additional categories of non-stormwater discharges, which do not cause or contribute to the violation of any Receiving Water Limitation may be excepted from the otherwise applicable prohibition by the Administrator upon approval of the Executive Officer of the Regional Board, as provided in Sections A.3. and D.4.a.1.d. of the Municipal Storm Water Permit, or any successor sections.

15.12.120 EXCEPTION TO OTHERWISE APPLICABLE EXEMPTIONS. Notwithstanding the exemptions provided for in Section 15.12.110 above, if the Regional Board or the Administrator determines that a discharge which is otherwise exempt from the prohibition on discharges causes or significantly contributes to the violation of any Receiving Water Limitation or results in the conveyance of significant quantities of pollutants to surface waters, or is otherwise a danger to public health or safety, the Administrator may give written notice to the owner or operator of the facility that the discharge exception shall not apply to the discharge at issue following expiration of the thirty (30) day period commencing upon delivery of the notice. Upon expiration of such thirty (30) day period, any such discharge shall be unlawful. Upon finding that any continuance of the discharge poses an immediate significant threat to the environment or to public health and safety, the Administrator may waive the thirty day waiting period and require immediate cessation of the discharge. ***(COEG Ord. No. 26-2004, eff. 8-19-04)***

15.12.130 GENERAL DISCHARGE PROHIBITION. It shall be unlawful for any person to discharge, or cause to be discharged, any material to the City stormwater conveyance system which results in, or contributes to, a violation of the Municipal Storm Water Permit.

15.12.140 THREATENED PROHIBITED DISCHARGE. It shall be unlawful for any person to maintain, or cause to be maintained, a threatened prohibited discharge after having received notice of the Administrator's determination as to the existence of a threatened prohibited discharge.

15.12.150 ILLICIT CONNECTIONS PROHIBITED. a. It shall be unlawful for any person to establish, use or maintain, or cause to establish, use or maintain, any illicit connection. Illicit connections shall be subject to removal and abatement by the City pursuant to Chapter 16.02 of this Code.

b. The prohibition set forth in subsection (a) above shall apply to illicit connections in existence at the time that this Chapter becomes effective. Upon the effective date of this Chapter, any person who maintains an illicit connection shall have thirty (30) days from the effective date of this Chapter to disconnect and discontinue use of such connection. Notwithstanding the provisions of this section, any person who maintains an

illicit connection, as defined in Section 15.12.030(g), may apply to the City for a permit to continue the connection subject to applicable City standards.

15.12.160 NEGLIGENCE OR INTENT NOT REQUIRED. A violation of the provisions of this Article shall occur irrespective of the negligence or intent of the violator to construct, maintain, operate or utilize an illicit connection or to cause, allow or facilitate any prohibited discharge.

Article 3
Reduction of Pollutants in Stormwater

15.12.200 GENERAL REQUIREMENTS. a. The Administrator may designate as Subject Activities any activities, including industrial activities, which are identified as potential sources of discharges of pollutants to the City Stormwater Conveyance System, or for which a requirement has been imposed by the state or federal government for the City to conduct stormwater regulatory activities focused on the Subject Activity in question.

b. Any person who the Administrator determines is conducting any Subject Activity shall prevent or reduce the discharge of pollutants from those activities, to the maximum extent practicable, through the implementation of BMPs in accordance with Section 15.12.220.

c. The Administrator shall conduct a notification and comment process for designations or determinations made pursuant to section (a) of this section.

d. Any determination made by the Administrator pursuant to subsection (b) of this section shall be subject to the provisions for the adoption of regulations set forth in Section 15.12.230. ***(COEG Ord. No. 26-2004, eff. 8-19-04)***

15.12.210 CONTAINMENT AND NOTIFICATION OF SPILLS. a. Any person owning or occupying premises, or conducting any activity that has knowledge of any non-stormwater discharge or threatened prohibited discharge, from the premises or activity to the City storm water conveyance system shall immediately take all reasonable action to contain and otherwise minimize any such discharge.

b. The Administrator may designate types of activities where the owner or operator of the activity shall be required to notify the Administrator or the Implementing Agency within twenty-four (24) hours of the discovery of an actual discharge into the City stormwater conveyance system.

c. For any discharge subject to the reporting requirements of the State of California Water Code sections 13271 and 13272, notification in compliance therewith shall constitute sufficient notification for the purposes of this Section.

15.12.220 BEST MANAGEMENT PRACTICES. a. The Administrator may adopt regulations for specified Subject Activities. Such regulations shall describe Best

Management Practices ("BMPs") which, if implemented by persons conducting such Specified Activities, shall satisfy the requirements of Section 15.12.200.

b. Persons conducting Subject Activities may implement BMPs not contained in the adopted regulations to satisfy the requirement of Section 15.12.200(b) through either of the following mechanisms:

i. By submitting and receiving prior written approval for the alternative BMPs from the Administrator if he or she determines that the proposed alternative BMPs provide a level of protection from stormwater discharges equivalent to the BMPs contained in the regulations adopted pursuant to (a) above; or

ii. By implementing alternative BMPs which provide a level of protection from storm water discharges equivalent to the BMPs contained in the regulations adopted pursuant to (a) above.

c. Any alternative BMPs implemented pursuant to subsection (b)(ii) above shall be subject to review and approval by the Administrator as part of the inspection procedures set forth in Article 4 of this Chapter. If a person conducting Subject Activities implements alternative BMPs without the prior written approval of the Administrator and subsequently receives written notice from the Administrator that the alternative BMPs do not provide the required equivalent level of protection from storm water discharges, the continued implementation of such alternative BMPs shall be deemed to be a violation of the requirements of 15.12.200(b) as of the date of delivery of such notice unless it is ultimately determined pursuant to an administrative appeal pursuant to Section 15.12.400 that the alternative BMPs provide the required equivalent level of protection from stormwater discharges.

d. Any facility that is in compliance with its State or Federal NPDES permit for stormwater discharges for that facility shall be deemed to have met the requirements of Section 15.12.200(b).

e. The Administrator shall develop regulations for determining when BMPs have been successfully implemented.

15.12.230 ADMINISTRATIVE RULES AND REGULATIONS. a. The Administrator shall have the authority to promulgate regulations for the implementation of this Chapter. Prior to the Administrator's initiation of any proposed regulations, the Administrator shall submit a public input plan to the City Council for its approval. The public input plan approved by the City Council shall be generally applicable to the promulgation of regulations by the Administrator.

b. All regulations promulgated by the Administrator shall be consistent with the provisions of this Chapter. Any such regulations, or amendments thereof, shall be filed with the City Clerk of the City Council. The City Clerk shall cause announcement of said rules or regulations to be published in a newspaper of general circulation within ten calendar days. Such announcements shall provide a reasonable summary of the content of the rule. In addition, the Administrator shall make a reasonable effort to identify, notify, and provide copies to any activities which are specifically designated by the Administrator as subject to a rule or regulation. However, neither the failure of the

Administrator to provide such notice nor the failure to receive individual notice shall exempt an activity from that rule or regulation. No regulations promulgated by the Administrator, or amendments thereof, shall be enforced or become effective until thirty (30) calendar days following the date on which notification of the regulations are published.

c. Any person who asserts that he or she is aggrieved by the terms or application of a regulation issued pursuant to this section may appeal the issuance of such regulation by filing a written notice of appeal with the City Clerk of the City Council. The notice of appeal shall specifically identify the regulation or regulations from which the appeal is taken and the reasons for the appeal. Upon receipt of such notice, the City Clerk of the City Council shall schedule the appeal for a public hearing by the City Council. At the conclusion of the public hearing the City Council shall be vested with jurisdiction to deny the appeal or to rescind or modify the regulation. The City Council's determination in this regard shall be final.

d. Any regulation from which an appeal is filed prior to its effective date shall not become effective until the date of a determination by the City Council of the appeal. Any regulation from which an appeal is filed on or subsequent to the effective date thereof shall remain in full force and effect during the pendency of the appeal, and any decision which rescinds or modifies the regulation shall apply prospectively.

15.12.235 BMP Maintenance Requirements. The Administrator may require a property owner to establish, document, and conduct a maintenance program, subject to approval, for any BMP. This requirement may apply to BMPs required by the City or BMPs that were voluntarily installed pursuant to Section 15.12.220. Such a maintenance program may be required when the Administrator determines that proper maintenance is necessary to protect public safety, health, infrastructure, or the environment, or to otherwise meet the purposes of this Chapter. Maintenance requirements established pursuant to this subsection must be appropriate for the site conditions and design of BMPs. ***(COEG Ord. No. 26-2004, eff. 8-19-04)***

Article 4

Inspection and Monitoring

15.12.300 SCOPE OF INSPECTIONS. a. Prior to commencing any inspection authorized pursuant to this section, the Administrator shall obtain the consent of the owner or occupant of the premises, an administrative inspection warrant or a criminal search warrant. Routine or area inspections shall be based upon such reasonable selection processes as may be deemed necessary to carry out the objectives of this Chapter including, but not limited to, random sampling, sampling in areas with evidence of stormwater contamination, illicit connections, discharge of non-stormwater to the City stormwater conveyance system or similar factors.

b. The Administrator may enter upon private property to investigate the source of any discharge to any public street, inlet, gutter, storm drain or the City storm water conveyance system.

c. The Administrator may enter upon private property for the purpose of verifying compliance with the provisions of this Chapter, including, but not limited to, the following:

1. Identifying products produced, processes conducted, chemicals used and materials stored on or contained within the property;

2. Identifying point(s) of discharge of all wastewater, process water system, pollutants and other discharges from the property;

3. Investigating the natural slope of the premises, including drainage patterns and artificial conveyance systems;

4. Establishing the location of all points of discharge from the property, whether by surface runoff or through a storm drain system;

5. Locating any illicit connection or the source of any prohibited discharge; and

6. Evaluating implementation of BMPs.

d. For purposes of verifying compliance with the provisions of this Chapter, the Administrator may inspect any vehicle, truck, trailer, tank truck or other mobile equipment, or any stationary equipment, which may reasonably be believed to be used by the business for business-related activities and to be associated with industrial sources of pollutants or with non-stormwater discharges.

e. The Administrator may inspect all records of the owner or occupant of any premises relating to chemicals or processes presently or previously occurring on-site, including materials and/or chemical inventories, facilities maps or schematics or diagrams, material safety data sheets, hazardous waste manifests, business plans, pollution prevention plans, State general permits, monitoring program plans or any other records relating to illicit connections, prohibited discharges or the potential discharge of pollutants to the City stormwater conveyance system. In addition, the Administrator may require the owner or occupant to furnish, within a reasonable time period, copies of all such records. ***(COEG Ord. No. 26-2004, eff. 8-19-04)***

f. The Administrator may conduct any necessary surveillance, inspect, sample and test any area runoff, soils area (including any groundwater testing), process discharge, materials within any waste storage area (including any container contents), and/or treatment system discharge for the purpose of determining the potential for the contribution of pollutants to the City stormwater conveyance system. The Administrator may conduct surveillance and investigate the integrity and layout of all storm drain and sanitary sewer system or other pipelines on the premises using appropriate tests, including, but not limited to, smoke and dye tests or video surveys. The Administrator may conduct any necessary surveillance, take photographs or video tape, make measurements or drawings, and create any other record reasonably necessary to document conditions on the premises.

g. The Administrator may require regular reports from industrial facilities and construction sites discharging into the City stormwater conveyance system.

h. The Administrator may erect and maintain monitoring and sampling devices for the purpose of measuring any discharge or potential source of discharge to the City stormwater conveyance system.

15.12.330 Reporting Requirements. a. The Administrator may require any person to report information for purposes related to the goals of this Chapter. Required information may include but is not limited to the following: characterization of industrial activities; compliance with this Chapter, compliance with State General Permit requirements; compliance with Administrative Enforcement Orders or other enforcement actions; discharge monitoring; training; and BMP implementation, effectiveness, and maintenance.

b. The Administrator may require information to be submitted on an as needed basis.

c. The Administrator may require submitted information to be compiled, summarized, analyzed or organized in a reasonable manner that facilitates its interpretation or other use. As necessary to facilitate the use of information, the Administrator may also specify the medium and format of required submittals.

d. Failure to provide information in a timely manner as required by the Administrator, or knowingly or negligently providing false information shall be a violation of this Chapter. ***(COEG Ord. No. 26-2004, eff. 8-19-04)***

15.12.350 FEES. The Administrator shall collect such fees as may be authorized by the City Council to provide for the recovery of regulatory costs, including routine inspections and other regulatory functions associated with this Chapter. There shall be no fee assessed to appeal the determination that a person conducts any Subject Activity. Any such fees shall be established by resolution of the City Council.

Article 5
Enforcement

15.12.400 NOTICE OF NON-COMPLIANCE.

a. The Administrator may deliver to the owner or occupant of any premises, or to any person responsible for an illicit connection, prohibited discharge, maintenance of a threatened prohibited discharge, failure to implement BMPs in accordance with Section 15.12.200(b), or any other violation of this Chapter a Notice of Non-Compliance. The Notice of Non-Compliance shall be delivered in accordance with Section 15.12.430 hereof.

b. The Notice of Non-Compliance shall identify the provision of this Chapter which has been violated. The Notice of Non-Compliance shall state that continued non-

compliance may result in additional enforcement actions, including the recovery of any costs incurred by the City.

c. The Notice of Non-Compliance shall identify a compliance date that must be met; provided, however, that the compliance date may not exceed ninety (90) days unless the Administrator extends the compliance deadline an additional period not exceeding ninety (90) days when good cause exists for the extension.

15.12.410 ADMINISTRATIVE COMPLIANCE ORDERS.

a. The Administrator may issue an Administrative Compliance Order. The Administrative Compliance Order shall be delivered in accordance with Section 15.12.430 hereof. The Administrative Compliance Order may be issued to any of the following:

1. The owner or occupant of any premises requiring abatement of conditions on the premises that cause or may cause a prohibited discharge in violation of this Chapter.

2. A person who fails to implement BMPs in accordance with Section 15.12.200(b).

3. Any person responsible for a prohibited discharge or maintenance of a threatened prohibited discharge.

b. The Administrative Compliance Order may include the following terms and conditions:

1. Specific steps and time schedules for compliance as reasonably necessary to prevent threatened or future unauthorized discharges, including, but not limited to, the threat of any prohibited discharge from any pond, pit, well, surface impoundment, holding or storage area.

2. Specific requirements for containment, cleanup, removal, storage, or proper disposal of any material having the potential to contribute pollutants to stormwater runoff.

3. Specific requirements for the installation of overhead covering.

4. Any terms or conditions reasonably calculated to prevent continued or threatened violations of this Chapter.

5. Any other measures necessary or appropriate to fully implement BMPs in accordance with Section 15.12.200(b).

15.12.420 CEASE AND DESIST ORDERS.

a. The Administrator may issue a Cease and Desist Order. A Cease and Desist Order shall be delivered in accordance with Section 15.12.430 hereof. A Cease and Desist Order may direct the owner or occupant of any premises, or any other person responsible for any violation of this Chapter, to take any of the following action:

1. Immediately discontinue any prohibited discharge to the City stormwater conveyance system.

2. Immediately discontinue any other violation of this Chapter.

3. Clean up the area affected by the violation.

b. The Administrator may direct by a Cease and Desist Order that any person immediately cease any activity which may lead to a violation of Receiving Water Limitations.

15.12.430 DELIVERY OF NOTICE.

Any notice of non-compliance, administrative compliance order, cease or desist order or other enforcement order pursuant to the requirements of this Chapter shall be subject to the following requirements:

a. The notice shall state that the recipient has a right to appeal the matter as set forth in Section 15.12.440 of this Chapter.

b. The notice shall state that the recipient or the property owner, or both, may be liable for all enforcement costs incurred by the City in correcting the violation.

c. Delivery shall be deemed complete upon either personal delivery to the recipient or deposit in the U.S. mail postage pre-paid for first class delivery.

d. Where the recipient of the notice is the owner of the property, the address for notice shall be the address from the most recently issued equalized assessment roll for the property.

e. Where the owner or occupant of any premises cannot be located after reasonable efforts of the Administrator, the notice shall be deemed delivered after posting on the premises for a period of ten (10) business days.

15.12.440 ADMINISTRATIVE APPEALS.

a. Except as set forth in subsection (b) below, any person receiving a notice of non-compliance, a designation as a person who conducts Subject Activities, an administrative compliance order, or an Administrative Citation pursuant to Chapter 1.12, or who is otherwise subject to an adverse determination pursuant to this Chapter may appeal the matter by requesting an administrative appeals hearing before an Appeals Hearing Officer pursuant to Chapter 1.11 of this Code.
(COEG Ord. 19-2005, eff. 06-10-05)

b. An administrative appeals hearing on the issuance of a cease and desist order or following an emergency abatement action shall be held within seven (7) working days following the issuance of the order or the action of abatement, unless the hearing or the time requirement for the hearing is waived in writing by the party subject to the cease and desist order or the emergency abatement. A request for an administrative appeals hearing shall not be required from the person subject to the cease and desist order or the emergency abatement.
(COEG Ord. 19-2005, eff. 06-10-05)

c. At any administrative appeals hearing, the administrative appeals officer shall permit any interested party, including, but not limited to the Administrator and/or the appealing party to present evidence and argument in support of or against the imposition of the notice of non-compliance, order, designation, determination, administrative citation or abatement action.
(COEG Ord. 19-2005, eff. 06-10-05)

15.12.450 NUISANCE AND ABATEMENT.

a. Any condition in violation of the provisions of this Chapter, including, but not limited to, the maintenance or use of any illicit connection or the occurrence of any prohibited discharge, shall constitute a threat to the public health, safety and welfare and is declared and deemed to be a public nuisance.

b. At the request of the Administrator, the City may seek a court order to enjoin or abate the nuisance, or both. Prior to seeking any court order to enjoin or abate a nuisance or threatened nuisance, the Administrator shall provide notice of the proposed injunction or abatement to the owner and occupant, if any, of the premises where the nuisance or threatened nuisance is occurring.

c. At the request of the Administrator, the City may seek an abatement warrant or other appropriate judicial authorization to enter the premises where any nuisance or threatened nuisance is occurring and to abate the condition and restore the area.

d. In the event the nuisance constitutes an imminent danger to public safety or the environment, the Administrator may enter the premises from which the nuisance emanates, abate the nuisance and restore any property affected by the nuisance without prior notice to or consent from the owner or occupant thereof and without judicial warrant.

1. An imminent danger shall include, but is not limited to, exigent circumstances created by the dispersal of pollutants, where such pollutants presents a significant and immediate threat to the public safety or the environment.

2. Notwithstanding the authority of the City to conduct an emergency abatement action, an administrative hearing pursuant to Section 15.12.440 shall follow the emergency abatement action.

15.12.460 CIVIL PENALTIES.

a. In addition to any other remedies provided by this Chapter or any other law, the Administrator is authorized to impose Administrative Civil Penalties in an amount established by resolution of the City Council, pursuant to Chapter 1.12 of the City Code, upon any person for each violation of this Chapter. Each day, or a portion thereof, that a violation continues constitutes a new violation. Administrative Civil Penalties are subject to the appeal procedures in Chapter 1.11 of this Code.
(COEG Ord. 19-2005, eff. 06-10-05)

b. In addition to any other remedies provided by this Chapter or any other law, the Administrator may also seek and recover reimbursement from any person whose conduct or activity results in any fine, penalty or other charges being imposed upon the City by any authorized Federal, State, or Local Government agency, including, but not limited to, the Central Valley Regional Water Quality Control Board, for violations of the terms of the City's National Pollution Discharge Elimination System ("NPDES") Permit or otherwise, up to the actual amount of the fine, penalty, or charge imposed upon the City. Claims for reimbursement by the City shall be made by written request on forms approved by the Administrator. Claims for reimbursement shall be due and payable as directed by the Administrator in the written request for reimbursement, but in no event shall a claim for reimbursement be due and payable any later than thirty (30) days after presentation of the claim for reimbursement to the responsible person, unless the Administrator finds good cause to allow later payment. Claims for reimbursements by the City are subject to the appeal procedures in Chapter 1.11 of this Code.
(COEG Ord. 19-2005, eff. 06-10-05)

c. In reaching a decision concerning an Administrative Civil Penalty or a claim of reimbursement in any appeal proceeding under this Chapter, the Appeals Hearing Officer, shall be guided by factors including, but not limited to the following: the danger to public health, safety and welfare represented by the violation, recidivism, any economic benefit associated with non-compliance, and any economic impact to the City or the public as a result of the violation.
(COEG Ord. 19-2005, eff. 06-10-05)

15.12.470 CRIMINAL PENALTIES.

a. Any person who negligently or knowingly violates any provision of this Chapter, undertakes to conceal any violation of this Chapter, continues any violation of this Chapter after notice thereof, or fails to implement BMPs in accordance with Section 15.12.200(b) shall be guilty of a misdemeanor and upon conviction thereof be fined not more than $1,000 or imprisoned for not more than six (6) months in the County Jail, or both.

b. Each day in which a violation occurs and each separate failure to comply with either a separate provision of this Chapter, an administrative compliance order, a cease and desist order, or failure to implement BMPs in accordance with Section 15.12.200(b) shall constitute a separate violation of this Chapter punishable by fines or sentences in accordance herewith.

c. The Administrator may authorize specifically designated City employees to issue citations for misdemeanor violations of this Chapter pursuant to Penal Code section 836.5.

15.12.480 MISCELLANEOUS ENFORCEMENT PROVISIONS.

a. Each and every remedy available for the enforcement of this Chapter shall be non-exclusive and it is within the discretion of the Administrator to seek cumulative remedies.

b. The Administrator may request the City to file a civil action in a court of competent jurisdiction seeking an injunction against any threatened or continuing non-compliance with the provisions of this Chapter. Any temporary, preliminary or permanent injunction issued pursuant to this subsection may include an order for reimbursement to the City of all costs incurred in enforcing this Chapter, including, but not limited to, costs of inspection, investigation and monitoring, the costs of abatement undertaken at the expense of the City, costs relating to the restoration of the environment and any other costs or expenses authorized by law.

c. The Administrator may request the City to file an action for civil damages in a court of competent jurisdiction seeking recovery of any of the following:

1. All costs incurred in the enforcement of this Chapter, including, but not limited to, costs relating to investigation, sampling, monitoring, inspection, administrative expenses, all other expenses authorized by law and consequential damages.

2. All costs incurred in mitigating harm to the environment or reducing the threat to human health.

3. Damages for irreparable harm to the environment.

d. The City is authorized to file actions for civil damages resulting from any trespass or nuisance occurring on public property or to the City stormwater conveyance system from any violation of this Chapter where such violation has caused damage, contamination or harm to the environment, public property or the City stormwater conveyance system.

e. The remedies available to the City pursuant to the provisions of this Chapter shall not limit the right of the City or any law enforcement agency to seek any other legal or equitable remedy that may be available to it.

f. Each day in which a violation occurs and each separate failure to implement BMPs in accordance with Section 15.12.200(b) or to comply with either a separate provision of this Chapter, an administrative compliance order, or a cease and desist order shall constitute a separate violation of this Chapter punishable by administrative penalties in accordance with this Chapter.

Article 6
Recovery of Cost of Abatement

15.12.500 COSTS OF ABATEMENT – CONFIRMATION.

a. When proceedings under this Chapter result in the correction of a violation of this Chapter or in a final determination that a violation exists subsequent to the date specified in any notice issued pursuant to the provisions of this Chapter, the costs of such proceedings incurred by the City may be assessed against the property. Such costs may include, but are not limited to, those incurred in inspecting property, publication, mailing and posting of notices, conducting hearings, processing appeals and pursuing any judicial action. It is the purpose of this section to allow the assessment against property of costs of proceedings if a violation is corrected in any manner.

b. The Administrator shall keep an account of the administrative and other costs of abatement, and shall submit to the City Council for confirmation an itemized written report showing such costs and their proposed assessment to the respective properties. The report shall be filed with the City Clerk of the City Council not later than fifteen (15) calendar days in advance of the confirmation hearing required below.

c. Upon receipt of the report, the City Clerk of the City Council shall schedule a public hearing to receive protests and confirm the report. A statement of the proposed assessment and notice of the time, date and place of the hearing, together with reference to the report on file with the City Clerk, shall be mailed to the owner or owners of each parcel of property proposed to be assessed shown on the last equalized assessment roll available on the date of mailing of the notice or any other address or addresses ascertained to be more accurate. Such notice shall be mailed not later than fifteen (15) calendar days in advance of the hearing. Notice of the time, date and place of the public hearing by the City Council shall be published once in a newspaper of general circulation published with the City. With respect to each property proposed to be assessed for which the name or the owner or owners is not shown on the last equalized assessment roll or no address for an owner is shown on the last equalized assessment roll, the notice shall show the name or names of the owner or owners, if such name or names are shown on the last equalized assessment roll, the assessor's parcel number, the street address of the property, if the property has an address and the address is known to the Administrator, the name of the street or road upon which such property abuts, if the property abuts upon a street or road, the amount of the proposed assessment and reference to the report on file with the City Clerk. Such publication shall be made not later than fifteen (15) calendar days in advance of the hearing.

d. At the time fixed for receiving and considering the report, the City Council shall conduct a public hearing and shall receive and consider any objections from members of the general public or property owners liable to be assessed for the abatement. Written protests or objections shall specify the date, hour and description of the subject property under hearing. The City Council may continue the hearing and delegate to the City Manager or his designee the responsibility of hearing individual protests and submitting a recommendation with respect thereto; provided that the City Council provides an opportunity for individual consideration of each project upon receipt of the recommendation by the City Manager or his designee. The City Council may modify the report if it is deemed necessary. The City Council shall then confirm the report by motion or resolution.

15.12.510 COSTS – ASSESSMENTS.

a. If the costs as confirmed are not paid within thirty (30) days of the date of mailing of the notice or date of publication pursuant to Section 15.12.500 above, such costs shall be assessed against the parcel of land pursuant to Section 25845 of the Government Code, and shall be transmitted to the Tax Collector for collection and shall be subject to the same penalties and the same procedures and sale in case of delinquency as provided for ad valorem taxes.

b. If subsequent to the mailing of the notice of non-compliance and prior to transmittal of the notice of unpaid costs to the Tax Collector for collection as set forth in subsection (a) of this section, the property subject to the notice of non-compliance is sold, or title otherwise transferred to a bona fide purchaser, said costs shall be the responsibility of the owner of record as of the date said notice of non-compliance was placed in the United States postal system or posted on the property.

c. In addition to assessing the unpaid costs as provided in subsection (a) herein, the Tax Collector or his designated representative may pursue any remedy provided by law for collection of the unpaid costs.

15.12.520 TREBLE COSTS.

Pursuant to Government Code section 25845.5, upon entry of a second or subsequent civil or criminal judgment within a two (2) year period finding that an owner is responsible for a condition in violation of this Chapter that may be abated pursuant to Government Code section 25845, a court may order the owner to pay treble the costs of abatement.

15.12.530 HEARING OF PROTESTS.

Upon the day and hour fixed for the hearing, the City Council shall hear and pass upon the report of the Administrator together with any such protests or objections. The City Council may make such revision, correction or modification of the report or the charge as it may deem just; and in the event the City Council is satisfied with correctness of the charge, the report of the Administrator (as submitted or as revised, corrected or modified) together with the charge, shall be confirmed or rejected. The decision of the City Council on the report and the charge and on all objections or protests shall be final and conclusive.

15.12.540 Assessment for Summary Abatement.

Where the charge to be made is the result of summary abatement pursuant to Section 15.12.460(c), the City Council may determine whether or not the action to abate was proper, and may confirm the charge or not as it may deem proper.

15.12.550 Time for Contest of Assessment.

The validity of any assessment made under the provisions of this Chapter shall not be contested in any action or proceeding unless the same is commenced within thirty (30) days after the assessment is ordered to be placed upon the assessment roll as provided herein.

15.12.560 Filing Copy of Report with County Auditor.

A certified copy of the assessment shall be filed with the County Auditor on or before August 1. The descriptions of the parcels reported shall be those used for the same parcels on the map books of the County Assessor for the current year.

CHAPTER 15.12

Article 7
Commercial and Industrial Facilities

15.12.600 Findings.

a. One of the requirements of the municipal stormwater permit (NPDES No. CAS0082597) to which the City is a co-permittee, is to track, inspect, and ensure compliance with stormwater ordinances at certain commercial and industrial facilities.

b. The Sacramento County Environmental Management Department (EMD), as both the State-designated Certified Unified Program Agency (CUPA) and the Environmental Health Agency for Sacramento County, is currently tracking and inspecting the majority of commercial and industrial facilities subject to the provisions of the municipal stormwater permit.

c. Utilizing EMD to fulfill the commercial and industrial inspection program requirements under the municipal stormwater permit will result in greater program efficiency, reduced program costs, reduced impacts to the regulated business community, and is in the best interest of the City.

d. On March 17, 2004, the City Council authorized the City Manager to enter into an agreement with EMD for fulfilling the NPDES permit inspection requirements with respect to commercial and industrial facilities.

e. Under the Agreement, the City is required to amend the stormwater ordinance as necessary to authorize the County EMD to implement the stormwater compliance program for commercial and industrial facilities. The City must make any necessary amendments to the stormwater ordinance to the extent necessary to authorize EMD to:

1. Conduct all necessary inspections or re-inspections of regulated facilities within the incorporated City area;

2. Take any necessary enforcement actions as authorized by the Municipal Code and consistent with a City-approved enforcement plan;

3. Investigate and follow-up referred complaints at eligible facilities;

4. Establish and collect fees necessary to recover program implementation costs.

f. The term of the Agreement is July 1, 2004 through June 30, 2010, unless sooner terminated, or extended by the City and County. ***(COEG 26-2004, Eff. 8-16-04)***

15.12.610 Purpose and Intent.

a. The purpose of this Article is to fulfill the requirements of the Agreement between the City and Sacramento County, authorized by the City Council on March 17, 2004, whereby the County shall assume responsibility for providing tracking, inspection, and enforcement of the City's stormwater ordinance with respect to commercial and industrial facilities within the incorporated City area as required by the municipal stormwater permit.

b. It is the intent of the City Council in adopting this Article to provide the necessary amendments in order to authorize the County to accomplish the following goals:

1. Conduct all necessary inspections or re-inspections of regulated facilities within the incorporated City area;

2. Take any necessary enforcement actions as authorized by the Municipal Code and consistent with a City-approved enforcement plan;

3. Investigate and follow-up referred complaints at eligible facilities;

4. Establish and collect fees necessary to recover program implementation costs. ***(COEG 26-2004, Eff. 8-16-04)***

15.12.620 Delegation of Authority to County EMD

a. Pursuant to the Agreement authorized by the City Council on March 17, 2004, whereby the County shall assume responsibility for tracking, inspecting, and enforcing the City's stormwater ordinance at certain commercial and industrial facilities specified in the municipal stormwater permit, the term "Administrator," as used in this Chapter shall also mean the Director of the Sacramento County Environmental Management Department and his or her designees.

b. Any administrative or civil enforcement by the Director of the Sacramento County EMD or his or her designees of any provision of this Chapter under this Article shall be governed by and conducted pursuant to Chapter 15.12 of the Sacramento County Code.

c. Sacramento County may establish and collect from commercial and industrial facilities located within the City such fees as may be necessary to cover the actual costs incurred by Sacramento County to include these facilities in its commercial and industrial compliance program, provided that the fees are established and collected in accordance with the provisions of the Agreement and all applicable legal requirements.

d. The delegation of authority to Sacramento County under this Article is limited to only that required by the March 17, 2004 Agreement, as may be necessary to allow the Director of the County EMD to track, inspect, and ensure compliance with the City's stormwater ordinance at commercial and industrial facilities as required under the municipal stormwater permit. ***(COEG 26-2004, Eff. 8-16-04)***

15.12.630 Expiration of This Article.

The provisions of this Article 7 shall remain in effect only to the extent that the March 17, 2004 Agreement between the City and County EMD, or any successor agreement, remains in effect. Upon expiration of the Agreement, or any successor agreement, the provisions of this Article shall expire. ***(COEG 26-2004, Eff. 8-16-04)***

16.44.370 Laws not Enforced

16.44.010 PURPOSE. It is the intent of the Board of Supervisors in enacting this Chapter to minimize damage to surrounding properties and public rights-of-way, the degradation of the water quality of watercourses, and the disruption of natural or County authorized drainage flows caused by the activities of clearing and grubbing, grading, filling and excavating of land, and sediment and pollutant runoff from other construction related activities, and to comply with the provisions of the County's National Pollutant Discharge Elimination System (NPDES) Permit Number, CA0082597, issued by the California Regional Water Quality Control Board (Regional Board).

These goals will be achieved by establishing administrative procedures, minimum standards of review, and implementation and enforcement procedures for controlling erosion, sedimentation and other pollutant runoff, including construction debris and hazardous substances used on construction sites, and the disruption of existing drainage and related environmental damage caused by the aforementioned activities.

16.44.020 DEFINITIONS. As used in this Chapter, the following words and phrases shall have the meanings given in this section:

(1) "Administrator" means the Administrator of the Public Works Agency of Sacramento County or his or her designated representative(s).

(2) "Applicant" means any person who submits an application for a permit pursuant to this Chapter.

(3) "Civil engineer" means a professional engineer in the branch of civil engineering holding a valid certificate of registration issued by the State of California.

(4) "Clearing and grubbing" means moving or removing by manual or mechanical means trees, vegetation and/or the top four (4) inches or greater of soil.

(5) "Compaction" means the act of compacting or consolidating soil and rock material to a specified density, and the resulting compacted state of the material.

(6) "Construction site" means any land area on which the activity of clearing and grubbing, grading, excavating, or filling is occurring.

(7) "County" is the County of Sacramento.

(8) "County Specifications" means the County Improvement Standards, County Standard Construction Specifications and other standards included in applicable County ordinances, regulations and manuals, as amended from time to time.

(9) "Engineering geology" means the application of geologic knowledge and principles in the investigation and evaluation of naturally occurring rock and soil for use in the design of civil works.

(10) "Environmental Coordinator" is the County official designated by the County Executive to prepare and process environmental documents.

(11) "Erosion" means the transport of the ground surface or soil as a result of the movement of wind or water.

(12) "Erosion control measures" means seeding, mulching, vegetative buffer strips, sod, plastic covering, burlap covering, watering and other measures which control the movement of the ground surface or soil.

(13) "Grade" is the elevation of the ground surface as measured from a known vertical control.

(14) "Grading" includes the act or result of digging, excavating, transporting, spreading, depositing, filling, compacting, settling, or shaping of land surfaces and slopes, and other operations performed by or controlled by human activity involving the physical movement of rock or soil.

(15) "Hazardous Substances" means those materials listed in Title 40 of the Code of Federal Regulations (40 CFR) Part 117 and/or 40 CFR Part 302.

(16) "National Pollutant Discharge Elimination System (NPDES)" means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under sections 307, 402, 318, and 405 of the Clean Water Act.

(17) "Permittee" means the applicant in whose name a valid permit is issued pursuant to this Chapter and the applicant's agents, employees and designated representative(s).

(18) "Person" means any individual, corporation, partnership, association of any type, public agency or any other legal entity.

(19) "Pollutants" is as defined in Title 40 CFR Part 122.

(20) "Runoff" is surface runoff and drainage related to storm events, snow melt, street washwaters related to street cleaning or maintenance and other waters associated with the construction activity which are or may be introduced into the municipal separate storm sewer system.

(21) "Sediment" means soil or earth material deposited by water.

(22) "Sediment control measures" means dikes, sediment detention traps, sediment detention basins, filters, fences, barriers, swales, berms, drains, check dams, and other measures which control the deposit of soil or earth material.

(23) "Site" means a parcel or parcels of real property owned by one or more than one person on which activity regulated by this Chapter is occurring or is proposed to occur.

(24) "Slope" is an inclined ground surface the inclination of which is expressed as a percent.

(25) "Structure" means anything constructed or erected which requires location on the ground or attached to something having location on the ground.

(26) "Watercourse" means a river, stream, creek, basin, lake, pond, waterway, or channel, natural or man-made, having a defined bed and banks. Whenever a watercourse consists of an ordinary channel, and in addition thereto, an overflow channel, the watercourse shall be deemed to include all property lying between the banks of the overflow channel.

(27) "Wetlands" means those areas that are inundated or saturated by surface or

ground water at a frequency sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions, such as swamps, bogs and marshes.

16.44.030 DELEGATION. Whenever in this Chapter an authority or power is vested in or a duty is imposed upon an officer or official, an employee subordinate to the officer or official to whom an appropriate delegation has been made shall be entitled to exercise the power or authority and perform the duty.

16.44.040 ADMINISTRATION. Except as otherwise provided, the Administrator is responsible for administering this Chapter and Grading and Erosion Control Permits, and is authorized from time to time to promulgate and enforce rules or regulations consistent with and necessary to implement the purposes, intent and express terms of this Chapter.

Any rules or regulations promulgated by the Administrator, or amendments thereof, shall be filed with the Clerk of the Board of Supervisors. The Clerk shall cause said rules or regulations to be published in a newspaper of general circulation within ten calendar days. No rules or regulations promulgated by the Administrator, or amendments thereof, shall be enforced or become effective until thirty (30) calendar days following the date on which the rules or regulations are published. Any person shall have fifteen (15) days after the date of publication in which to file an appeal in accordance with the provisions of Section 16.44.300.

16.44.050 PERMITS REQUIRED. Except as provided by Sections 16.44.060, 16.44.065 or 16.44.070, a Grading and Erosion Control Permit shall be required to (1) grade, fill, excavate, store or dispose of 350 cubic yards or more of soil or earthly material or (2) clear and grub 1 acre or greater of land within the unincorporated area of the county. A separate permit is required for work on each site unless sites are contiguous, have the same ownership, and are included in the approved plan. Any determination by the Administrator as to whether a permit is required may be appealed pursuant to the provisions of Section 16.44.300.

16.44.060 PERMITS NOT REQUIRED. (A) A Grading and Erosion Control Permit shall not be required to (1) grade, fill, excavate, store or dispose of less than 350 cubic yards of soil or earthly material or (2) clear and grub less than 1 acre of land within the unincorporated area of the county or (3) for the grading, filling, excavating, storing, disposing, or clearing and grubbing for:

(a) Swimming pools, basements, or footings of structures if authorized by a valid building permit;

(b) Underground utilities;

(c) Mining or quarry operations, if a use permit has been granted by the County.

(d) Refuse disposal sites operated by a governmental agency;

(e) The production of planted agricultural crops;

(B) Notwithstanding the provisions of subsection (A) hereof exempting specified activities from the otherwise applicable permit requirements, the activities described in subsection (A) shall be subject to the standards and requirements of this Chapter. Any building permit issued in connection with the activities described in subsection (A) or in connection with any building permit issued for a single family residence on an individual lot may be conditioned on compliance with the standards and requirements of this Chapter. Any inspections required pursuant to this Chapter or any other Chapter of Title 16 of the Sacramento County Code shall include a determination of compliance with the purpose of this Chapter.

16.44.065 EXEMPTIONS. A Grading and Erosion Control Permit shall not be required for, and the provisions of this Chapter shall not apply to, grading, filling, excavating, storing, disposing, or clearing and grubbing for situations where, in the determination of the Administrator, there is a clear and imminent danger to life or property, or threat of loss of services for which there is an overriding public concern. The Administrator may, at the time of granting such exemption, impose conditions in accordance with Section 16.44.170, including but not limited to, the requirement for the posting of security. Such exemption must be requested from the Administrator and approved in writing prior to the commencement of any activity regulated by this Chapter.

16.44.070 IMPROVEMENT PLANS. Where an improvement plan is being processed in conjunction with either an approved tentative, parcel, or final map; or a development plan is being processed in accordance with the provisions of Title 12 of this code, such plan shall also be considered as a request to undertake those activities regulated by this Chapter. Such plans shall be reviewed and approved, conditionally approved or denied in accordance with the standards and requirements set forth in this chapter and other applicable county specifications. For an approved tentative, parcel, or final map, or development plan; any submitted improvement plans shall include provisions to require compliance with the standards and requirements of this Chapter. If an improvement plan is approved, then a Grading and Erosion Control Permit shall not be required.

16.44.080 APPLICATION CONTENTS. The application for a Grading and Erosion Control Permit shall be filed in the Office of the Administrator, and on a form and submitted with such information as is prescribed by the Administrator, including the following:

(A) The name, address and telephone number of the applicant and the applicant's engineer;

(B) The address and parcel number of the location for which the permit is sought;

(C) A copy of all entitlements granted for the property by the County, including conditions of approval and the environmental documentation;

(D) A copy of all required state and federal permits;

(E) Plans conforming with the requirements of Section 16.44.090;

(F) Specifications conforming with the requirements of Section 16.44.100, if the Administrator expressly requires this information;

(G) Security conforming with the requirements of Section 16.44.110;

(H) Right of Entry conforming with the requirements of Section 16.44.120;

(I) Fees conforming with the requirements of Section 16.44.130;

(J) Other information as may be required by the Administrator.

16.44.090 PLANS. Plans shall be prepared by a civil engineer in conformance with County Specifications and shall include the following:

(A) A vicinity map indicating the site location and significant geographic features;

(B) A site delineation map indicating boundary lines of the property and each lot or parcel into which the site is proposed to be divided;

(C) The location of on-site and surrounding watercourses and wetlands, existing and proposed drainage systems, and drainage area boundaries and acreages. Additional hydrologic analysis shall be provided as required by the Administrator;

(D) The location of existing and proposed roads and structures on the site, and on adjacent property;

(E) Accurate contours at two foot intervals for slopes up to ten percent and five foot intervals for slopes over ten percent showing topography of existing ground and locations of existing vegetation, including all oak trees, all other trees over six inches in diameter measured at four and one-half feet above the ground, groves of trees, and natural features such as rock outcroppings. Spot elevations will be required where relatively flat conditions exist. The spot elevations or contour lines shall be extended off-site for a minimum distance of fifty (50) feet, or one hundred (100) feet in flat terrain;

(F) Elevations, location, extent and slope of all proposed grading shown by contours, cross-sections or other means, and location of any disposal areas, fills or other special features to be included in the work;

(G) A statement of the quantity of material to be excavated, the quantity of material to be filled, whether such excavation or fill is permanent or temporary, and the amount of such material to be imported to or exported from the site;

(H) A delineation of the area to be cleared and grubbed;

(I) A statement of the estimated starting date, grading completion date, and when site improvements will be completed;

(J) The location, implementation schedule, and maintenance schedule of all erosion control measures and sediment control measures to be implemented or constructed prior to, during or after the proposed activity;

(K) A description of measures designed to control dust and stabilize the construction site road and entrance;

(L) A description of the location and methods of storage and disposal of construction materials;

(M) Any additional plans required by the Administrator.

16.44.100 SPECIFICATIONS. When required by the Administrator, the following information shall be prepared and signed by a civil engineer, and submitted with the application for a Grading and Erosion Control Permit:

(A) Preparation of natural ground to occur prior to placement of fill, including provisions for removal of organic or deleterious materials;

(B) Quality control of native or imported fill material;

(C) Degree of compaction;

(D) Gradient of cut and fill slopes;

(E) Geotechnical engineering or engineering geology reports used in the development of the above information.

16.44.110 SECURITY. (A) Prior to issuance of the permit, the applicant shall provide security in an amount estimated by the Administrator to be the cost for stabilizing the activity site if the site is abandoned or work is stopped during the performance of the activity described in the permit. The security shall be one of the following, subject to the approval of the Administrator;

(1) Bond or bonds by one or more duly authorized corporate sureties.

(2) A deposit, either with the County or a responsible escrow agent or trust company, at the option of the County, of money or negotiable bonds of the kind approved for securing deposits of public moneys.

(3) An instrument of credit from an agency of the state, federal or local government when an agency of the state, federal, or local government provides at least 20 percent of the financing for the project, or from one or more financial institutions subject to regulation by the state or federal government and pledging that the funds necessary are on deposit and guaranteed for payment, or a letter of credit by such financial institution.

(B) The security shall be released to the permittee upon either:

(1) Issuance of a certificate of completion, provided no administrative or legal action against such security has been commenced prior to that date and the permittee has complied with the provisions of Section 16.44.260; or

(2) Voluntary relinquishment of the permit by the holder thereof to the County, provided no administrative or legal action against such security has been commenced prior to that date and the permittee has complied with the provisions of Section 16.44.250.

16.44.120 RIGHT OF ENTRY. Whenever any portion of the work requires entry onto adjacent property for any reason, the applicant shall obtain the written consent of the adjacent property owner or his authorized representative, and shall file a copy of said consent with the Administrator before a permit for such work may be issued.

16.44.130 PERMIT FEES. A fee shall be paid by the applicant to the County for plan checking and review, materials testing, site inspections, processing, issuance and other services performed by the Administrator in connection with the investigation of an

application for, and administration of, a Grading and Erosion Control Permit. The fees for these services shall be in the amount of the actual costs incurred by the County based on the hourly rate of the personnel performing the services, including all overhead costs, and as determined by the Accounting and Fiscal Services Section of the Public Works Agency.

A minimum deposit of seven hundred and fifty dollars ($750) shall be paid by the applicant at the time of and with the filing of the application with the Administrator. In the event the accrued costs exceed the initial deposit, the County shall submit a monthly bill to the applicant for the amount owing as of the date on the bill. Interest of one and one-half percent (1-1/2%) per billing period (28 day cycle) compounded each billing period shall be added to the unpaid balance due to any amount which has not been paid in full within twenty-eight (28) days from the date on the bill.

The Administrator shall not perform any services for an applicant if an amount owing is not paid within twenty-eight (28) days, until such time that all amounts owing and interest thereon is paid in full. The balance of fees owing shall be paid in full prior to final inspection. In the event the actual costs do not exceed the minimum deposit amount, the County shall reimburse the applicant the difference between the deposit amount and the actual total charges.

16.44.140 ENVIRONMENTAL REVIEW. Grading and erosion control permits, and amendments thereto, are subject to the requirements of the California Environmental Quality Act (CEQA). The applicant shall furnish a copy of the application to the Environmental Coordinator for preparation and processing of the appropriate environmental documents. The Administrator is authorized to hold public hearings on Negative Declarations, Draft Environmental Impact Reports and Final Environmental Impact Reports prepared on applications for Grading and Erosion Control Permits, for the purposes of receiving comments from the public. The Administrator shall not approve a Grading and Erosion Control Permit prior to considering the applicable environmental document and complying with the requirements of CEQA and the County Procedures for Preparation and Processing of Environmental Documents.

16.44.150 APPLICATION REVIEW. The Administrator shall review and approve, conditionally approve or deny Grading and Erosion Control Permit applications and improvement plans in accordance with the provisions of this Chapter. Grading and Erosion Control Permit applications and improvement plans shall be issued or approved unless the Administrator finds in writing that:

(A) The applicant has failed to provide sufficient or adequate plans, information or other data necessary to allow determinations respecting compliance with the provisions of this Chapter or County Specifications;

(B) The environmental review has not been completed, other provisions of this code or of state law pertaining to environmental review have not been satisfied, or the activity will have significant adverse environmental impacts which cannot be substantially mitigated. Where the activity will have significant adverse impacts, the Administrator may approve the

permit in accordance with the provisions of this Chapter, Title 20, and the California Environmental Quality Act of 1970;

(C) The proposed activity will violate provisions of this Chapter, County Specifications, or state or federal laws, and such violation cannot be resolved by the imposition of conditions pursuant to Section 16.44.170.

(D) The proposed activity will adversely affect surrounding properties and public rights-of-way, the water quality of watercourses, and existing drainage.

16.44.160 CONTENTS OF PERMIT. The Grading and Erosion Control Permit shall include but not be limited to a complete description of the activity for which it is issued, the property for which it is issued, the date of issuance and the date of expiration, and a description of any and all conditions upon which the permit has been issued. The permit shall be kept at the site during the activity for which the permit was issued. A Grading and Erosion Control Permit authorizes the permittee to undertake only that activity described in the permit and only on the property for which the permit is issued.

16.44.170 CONDITIONS. The Administrator may at the time of issuance of the Grading and Erosion Control Permit impose such conditions as are necessary to ensure compliance with this Chapter, County Specifications, or state or federal laws. Such conditions shall be reasonably related to the public needs created by the proposed activity. Conditions to mitigate environmental impacts of the activity may also be imposed by the Administrator.

16.44.180 PROCEDURE FOR IMPOSITION. Any condition imposed pursuant to the provisions of Section 16.44.170 shall be embodied, together with the reasons therefor, in the permit and served upon the applicant or permittee.

16.44.190 TERM. A Grading and Erosion Control Permit shall be effective on the date of issuance, and shall remain in force for one year, unless suspended or revoked by the Administrator, or voluntarily relinquished by the permittee. Before the expiration of a permit, a permittee may apply for an extension of time in which to complete the activity. One extension of not more than one year may be granted by the Administrator.

16.44.200 TRANSFERABILITY. A Grading and Erosion Control Permit shall not be transferable or assignable from one person to another, unless approved by the Administrator and the person to whom the permit is to be transferred agrees to comply with the requirements of the original permit and to any conditions imposed therein.

16.44.210 DENIAL OF PERMIT. The Administrator shall deny an application for a Grading and Erosion Control Permit if any of the findings in Section 16.44.150 are made. Notice shall be served on the applicant, in writing with the reasons stated therefor, pursuant to the provisions of Section 16.44.340.

16.44.220 AMENDMENT OF PERMIT. Any proposed changes in the activity authorized by the permit shall be submitted to the Administrator for review. The permittee shall not undertake or allow activity to occur which does not conform with the plans or conditions of the original permit, unless approved by the Administrator. The Administrator shall review any proposed changes in the same manner and pursuant to the same standards as the original application.

16.44.230 REQUEST FOR INSPECTION. Requests for inspection of any site subject to the provisions of this Chapter shall be made to the Administrator at the following phases of activity. Such a request shall be made at least two full business days in advance of the desired day of inspection.

(A) When the site has been cleared of vegetation and unapproved fill, and scarified, benched, or otherwise prepared and before any fill is placed; and the erosion control and sediment control measures to be implemented in this phase have been placed;

(B) When approximate final elevations have been established; drainage terraces, swales and other drainage devices have been graded and are ready for paving; berms have been installed at the top of slopes; and the erosion control and sediment control measures to be implemented in this phase have been placed;

(C) When work has been completed; slope planting established and irrigation systems installed, if required; and the erosion control and sediment control measures to be implemented in this phase have been placed.

The Administrator, upon inspection of the site, shall notify the person or permittee (1) that the phase of work inspected is approved, or (2) what deficiencies, corrections or other work needs to be completed before approval of that phase.

16.44.240 REPORTS. Notification to the Administrator shall be required within twenty-four (24) hours following the failure of authorized measures to prevent erosion or sediment from leaving the construction site; the deposit of debris or material on adjoining property or public rights-of-way, or; the interference with any existing watercourses or drainage facilities.

16.44.250 CESSATION OF WORK. If activity is ceased on site for any reason for a period in excess of fifteen (15) calendar days, and before the activity being conducted under the permit is completed, all necessary steps shall be taken to prevent damage through erosion or sedimentation to adjoining properties or to the public rights-of-way or to any natural or artificial drainage facilities or watercourses. The premises shall also be graded to blend into the adjacent terrain. The Administrator shall be notified as soon as possible, but no later than fifteen (15) calendar days, after the cessation of work.

16.44.260 COMPLETION OF WORK. After completion of work in accordance with and conforming with an approved permit and delivery to the County of record plans and a

grading plan as finally implemented, and payment of all fees, the Administrator shall issue a certificate of completion.

16.44.270 INSPECTION. The Administrator may enter and inspect property for which a Grading and Erosion Control Permit has been applied to determine applicability or compliance with this Chapter and County Specifications. The Administrator may also inspect any and all property on which grading, filling, clearing and grubbing or excavating activities are occurring.

16.44.280 GROUNDS FOR SUSPENSION AND REVOCATION. A Grading and Erosion Control Permit may be suspended if:

(A) The physical state of the property differs from the descriptions, plans or information furnished to the Administrator in the permit application;

(B) The activity does not conform to the approved plans, grades, conditions or terms of the permit;

(C) The activity is in violation of this Chapter, County Specifications, or state or federal laws;

(D) Any reports required to be submitted to the Administrator have not been submitted; or,

(E) Any of the information contained in reports submitted to the Administrator is in error.

16.44.290 METHOD OF SUSPENSION OR REVOCATION. The Administrator may suspend or revoke a Grading and Erosion Control Permit by issuing a notice of suspension or revocation, stating the reasons therefor, and serving same, upon the permittee. Upon suspension or revocation of a permit, in accordance with the provisions of this Section, the permittee shall immediately cause all grading, filling, excavating, storing, disposing or clearing and grubbing to cease until written authorization is received from the Administrator to proceed with the activity.

The permittee shall have fifteen (15) calendar days after the date of service of the suspension or revocation in which to file an appeal in accordance with the provisions of Section 16.44.300. If such an appeal is filed, the suspension or revocation shall remain in force and be effective until a final decision on the appeal is issued by the Board of Supervisors.

If the Administrator suspends a permit, such permit may either be reinstated or revoked by the Administrator, depending upon whether the permittee corrects the grounds stated for the suspension in the notice issued by the Administrator. If the permittee fails to remedy
the grounds for suspension within a time period specified by the Administrator, but in no event later than sixty (60) calendar days, the Administrator shall revoke the permit.

16.44.300 APPEALS. If the applicant for a Grading and Erosion Control Permit, the

permittee, or other persons whose property rights may be affected is dissatisfied with any determination made by the Administrator, such person may appeal to the Board of Supervisors. Any such appeal shall be in writing, shall state the specific reasons therefor and grounds asserted for relief, and shall be filed with the Clerk of the Board of Supervisors not later than fifteen (15) calendar days after the date of the action being appealed. If an appeal is not filed within the time or in the manner prescribed above, the right to review of the action against which the complaint is made shall be deemed to have been waived.

16.44.310 APPEAL FEE. The Board of Supervisors shall by resolution adopt and, from time to time, amend a fee for the filing of appeals. Such fee shall be for the sole purpose of defraying costs incurred for the administration of appeals. The fee for an appeal shall be paid at the time of and with the filing of an appeal. No appeal shall be deemed valid unless the prescribed fee has been paid.

16.44.320 APPEAL HEARINGS. After the filing of an appeal within the time and in the manner prescribed by Section 16.44.300, the Board of Supervisors shall conduct a hearing for the purpose of determining whether the appeal should be granted. Written notice of the time, date and place of the hearing shall be served upon the Administrator and the appellant not later than ten days preceding the date of the hearing.

16.44.330 ACTIONS ON APPEALS. The Board of Supervisors shall review the entire proceeding or proceedings relating to the act or decision being appealed, de novo, and may make any order it deems just and equitable, including the granting of a Grading and Erosion Control Permit. Any hearing may be continued from time to time.

At the conclusion of the hearing, the Board of Supervisors shall prepare a written decision which either grants or denies the appeal, and contains findings of fact and conclusions. The written decision, including a copy thereof, shall be filed with the Clerk of the Board of Supervisors. The Clerk shall serve such decision on the applicant or permittee and the Administrator. The decision of the Board of Supervisors shall become final upon the date of filing and service with respect to any appeal.

16.44.340 NOTICES. Any notice authorized or required by this Chapter shall be deemed to have been filed, served and effective for all purposes on the date when it is personally delivered in writing to the party to whom it is directed or deposited in the United States mail, first class postage prepaid, and addressed to the party to whom it is directed.

Whenever a provision in this Chapter requires a public hearing to be conducted, notice of the time, date, place and purpose of the hearing shall be published at least once not later than ten (10) calendar days in advance of the date of commencement of the hearing in a newspaper of general circulation which is published within the County. The same type of notice shall also be served on each permittee whose permit may be affected by the action taken at the conclusion of the hearing.

16.44.350 ACTION AGAINST AND RELEASE OF SECURITY. The Administrator may commence action against the security provided by a permittee if:

(A) The permittee ceases activities on site prior to completion of work without complying with the provisions of Section 16.44.250;

(B) The permittee fails to comply with the terms of the permit;

(C) The activity has caused or is threatening to cause damage or injury to persons, property or the environment.

The monies so obtained shall be used solely to finance remedial work undertaken by the County or a private contractor under contract to the County, and to reimburse the County for any administrative costs and expenses incurred in remedying the situation, including attorneys fees and legal costs incurred in any necessary action to obtain the security.

16.44.360 VIOLATIONS. Except as otherwise specifically provided, pursuant to the provisions of Government Code Section 25132, violation of any of the provisions contained in this Chapter shall constitute an infraction subject to a fine of one hundred (100) dollars for each day or any portion thereof a violation continues.

Violation of any of the provisions of this Chapter following notice to the permittee by the Administrator advising of the violation and ordering a cessation thereof, shall pursuant to the provisions of Section 1.01.190 contained in Title 1 of this Code, constitute a misdemeanor.

Violation of any of the provisions of this Chapter may be remedied by injunction or other civil proceeding commenced in the name of the County pursuant to direction by the Board of Supervisors.

16.44.370 LAWS NOT ENFORCED. There are many ordinances and other laws applicable to activities permitted under this Chapter which are not sought to be enforced under this permitting process. Such laws include, but are not limited to, building, floodplain management, and land development measures. The issuance of a Grading and Erosion Control Permit shall not be deemed to constitute a representation that the activity so permitted or the property upon which such activity is occurring complies with such other ordinances or other laws. Nor shall the existence of such an unrevoked permit be deemed to preclude any criminal or civil remedy for violation of such other ordinances or laws. The possession of a Grading and Erosion Control Permit shall not be deemed to relieve the holder of the requirement to apply for or obtain any other license or permit required by ordinance or statute.

Conservation and Air Quality Element

This Element of the General Plan addresses several important topics:

- **Conservation** of the City's natural resources, and
- The preservation and enhancement of local and regional **Air Quality** through reductions in the emission of pollutants and energy use.
- The preservation and enhancement of **Water Quality** in streams and rivers and in the underground aquifer.

CONSERVATION

Conservation is an important issue not only for Elk Grove but for every jurisdiction in the Sacramento region and in California. Many of the resources on which the city relies are available in limited and/or finite amounts (energy, for example); resources such as natural riparian habitat, watershed, and other types of open land uses would also be threatened by unplanned development.

Resources in Elk Grove which require the implementation of conservation-oriented policies include:

- **Energy**
- **Water supplies**
- **Land for future development**
- **Agricultural lands and soils**
- **Lands within the Primary Zone of the Sacramento River Delta**
- **Natural habitats**
- **Trees**
- **Air quality**
- **Surface and Groundwater Quality and Supply**

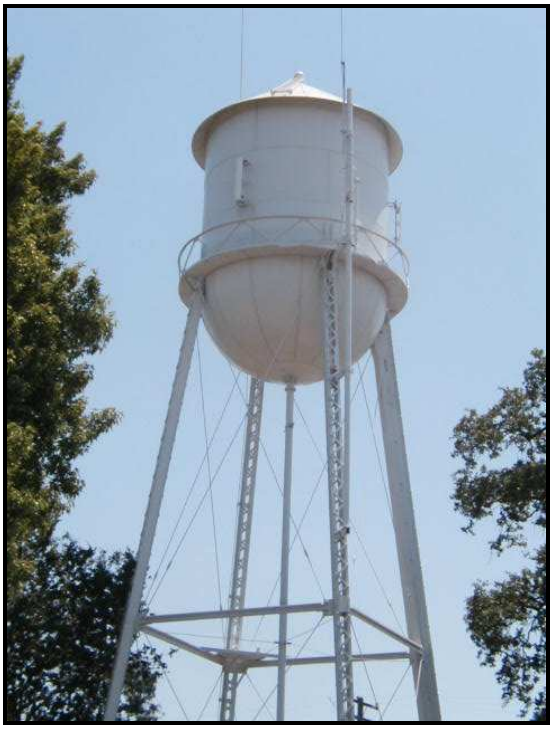
Other "resources" which are addressed in other elements of the General Plan are also important. These include:

- The rural character of the eastern portion of Elk Grove
- The capacity of drainage systems to provide flood protection for developed areas of the city
- Open space for a variety of uses

Please refer to the Land Use and Public Facilities and Finance elements for discussion of and policies related to rural areas, and to the Safety Element of this General Plan for additional discussion of and policies related to flooding.

ENERGY

Energy supplies (electricity and natural gas) are supplied to the city by the Sacramento Municipal Utility District (SMUD); details regarding energy supplies are provided in the *General Plan Background Report*. An additional major source of energy supplies in the Planning Area is Suburban Propane, which maintains a distribution facility in Elk Grove on Grant Line Road near State Route 99.



Electrical distribution facilities in Elk Grove

This General Plan addresses conservation of energy through policies and programs aimed at making the city's homes and businesses as energy-efficient as possible. Policies and programs in the Circulation Element of this General Plan also seek to reduce energy consumption by encouraging the use of transport modes other than single-occupant vehicles and by making the flow of vehicles on the city's roadways as smooth as possible.

WATER SUPPLIES

Domestic water supplies in Elk Grove are provided by two major providers: the County of Sacramento

Water Agency and the Elk Grove Water Service. Details on the areas in which these suppliers provide service can be found in the *General Plan Background Report*.

The historic water tower in Old Town remains part of the city's water supply system

In addition to these providers, homes and businesses in a large area of Elk Grove (primarily east of Bradshaw Road) rely on private wells, which tap the underground aquifer beneath the city.

This Element of the General Plan contains policies and programs intended to make more efficient use of water supplies.

LAND FOR FUTURE DEVELOPMENT

As discussed in the Land Use Element, Elk Grove is expected to continue developing for the foreseeable future, adding new homes and businesses primarily on lands now either vacant or in agricultural use. Policies and programs intended to ensure an adequate supply of land for future development are contained in the Land Use, Housing, and Public Facilities and Finance elements of this General Plan.

AGRICULTURAL LANDS AND SOILS

Agriculture has historically been an important part of Elk Grove's land use and economy. Soils within Elk Grove are capable of supporting a number of crops, many of which are still grown (*please see the General Plan Background Report for further information on soils within Elk Grove and the Planning Area*).

Farming remains a part of Elk Grove, but has been in decline and is not expected to be as dominant in the future.

However, Elk Grove's recent history has seen the development of large areas of the city (and, to a lesser extent, the Planning Area) that had previously been farmed. A number of factors, including the growth of the Sacramento region in general, increasing prices related to the production of agricultural crops (energy, water, fertilizers, etc.), stable or declining prices for many crops, and increasing values for land which can be developed with urban uses, have led many property owners to either stop farming altogether or to shift their operations to other parts of Sacramento County or elsewhere.

This General Plan provides for a pattern of land uses (*see the Land Use Element for further information*) which will result in the loss of agricultural use of soils over a large portion of the city (generally, the area south of Elk Grove Boulevard and west of Hwy 99) which has historically been used for large-scale farming. Although this General Plan designates a large area of the city (generally east of Bradshaw Road) for

rural uses, the small parcel sizes in this area will most likely limit agricultural uses to "hobby" farming, the raising of animals either for personal enjoyment or on a small commercial scale, or the growing of specialty crops such as nursery plants.

In the Planning Area outside the current (2004) city limits, this General Plan envisions the potential for converting some additional lands from agriculture to urban uses in the "Urban Study Areas" east of Grant Line Road and south of Kammerer Road. Although the conversion of these lands to urban uses by the City of Elk Grove would require annexation and the completion of detailed planning for these areas, the loss of agricultural production in these areas is a potential that this General Plan considers.

Within Elk Grove, the City considers agriculture (outside of the rural areas designated on the *Land Use Policy Map*) to be an interim use. This Element of the General Plan provides policies and programs that support the use of these for farming while property owners wish to continue this use. The City does not seek to reverse the conversion of agricultural lands to urban uses in the developing areas of Elk Grove, or to curtail the use of non-agricultural lands in order to preserve farming uses on adjacent or nearby properties.

SACRAMENTO RIVER DELTA

Although not within the current incorporated boundaries of Elk Grove, a portion of the Sacramento River Delta is inside the larger Planning Area of the General Plan (*please see the Introduction for a description and map of the Planning Area)*. Therefore, the City's long-term land use policies will require coordination with the Delta Protection Commission (a state agency) once these lands are included within the corporate boundary of Elk Grove.

The Sacramento River Delta

The Delta Protection Commission in 2000 adopted the following Mission Statement and Vision for the Delta:

MISSION STATEMENT:

The mission of the Commission is to guide the protection of the Delta's unique natural quality, cultural viability, economic vitality, and recreational opportunity through:

- *Protection, maintenance, and enhancement and restoration of the overall quality of the Delta environment including agriculture, wildlife habitat, and recreational activities;*
- *Assurance of orderly, balanced conservation and development of Delta land resources; and*
- *Improvement of flood protection to ensure an increased level of public health and safety.*

VISION STATEMENT:

The vision of the Delta Protection Commission is a region in which the essential land uses and unique natural qualities flourish in self-sustaining harmony.

NATURAL HABITAT

As discussed earlier in this Element, although substantial new development is currently (2003) occurring in several areas of Elk Grove, large areas of the city remain in agricultural or "rural" uses. These open lands, combined with the city's location near the Cosumnes and Sacramento rivers and within the range of many native plant and animal species, results in the use of many areas of Elk Grove as habitat for native plants and animals. (*Please see the General Plan Background Report for detailed information on existing habitat*

and plant and animal species in Elk Grove.)

Elk Grove's creeks provide important habitat for many native plants and animals, as well as serving as a community and aesthetic resource

This Element provides policies and programs intended to reduce impacts to plants and animals which will result from the loss of habitat to development (*see the discussion of Agricultural Lands above*). This General Plan, as discussed earlier, envisions the development of many areas currently used as habitat by native plants and animals; the loss of this habitat is viewed as an unavoidable result of urbanization, and while impacts to native species can be reduced or mitigated, this Plan does not seek to entirely eliminate these impacts.

TREES

Mature trees—both native oaks and other native and non-native species—form an important part of Elk Grove's aesthetic, open space, and historical heritage. Because they provide relief from the primarily flat terrain of the city, as well as shade, shelter for animals and other plants, and ties to the area's historical past, mature trees are viewed as an important resource to be protected and conserved. Trees also provide other benefits, including improvements in water quality, shade for buildings, and reduction in pollution, which also justify their protection as a resource.

Oaks and other trees form a shaded canopy over a portion of Sheldon Road in the rural area of Elk Grove.

This Element provides policies and programs aimed at preserving and protecting large mature trees of all types.

AIR QUALITY

Air quality in the Sacramento region is, unfortunately, among the worst in the United States. A combination of poor air circulation, high summertime temperatures, and numerous sources of pollution both locally and at distant locations combine to create air pollution which frequently exceeds state and federal standards. (*For more information on current air quality, please see the General Plan Background Report.*)

Regional air quality frequently does not meet state and federal standards, but the City of Elk Grove seeks to help achieve improvements in air quality

The City recognizes that Elk Grove can play a role in the improvement of local and regional air quality. To that end, this Element contains policies and programs that seek to reduce the consumption of fossil fuels, whose burning in engines and at generating plants is a major source of air pollutants.

This General Plan also contains policies and programs in the Circulation Element, which are intended to reduce the use of private motor vehicles in favor of walking, cycling, and public transit, and to reduce roadway congestion.

WATER QUALITY

The quality of Elk Grove's surface and subsurface (groundwater) supplies is important not only to its residents—all of the city's drinking water supplies are derived from a combination of surface water and groundwater—but for the plants and animals who rely on water to survive. This Element addresses the issue of protecting and preserving water quality through reduction in pollutants discharged to the ground, or to surface waters via urban runoff. This Element also addresses protection and enhancement of water quality in local creeks through efforts to preserve natural creek buffers and natural creek alignments and control/reduce runoff discharge volume, rate, velocity, and/or temperature.

The establishment and implementation of conservation-oriented policies can have numerous benefits, including the establishment of more efficient and cost-effective land uses which minimize the unnecessary use of limited resources. The Conservation and Air Quality policies of the General Plan implement these Guiding and Focused Goals:

Guiding Goal 1: A High Quality of Life for All Residents

Focused Goal 1-3: A balanced and efficient transportation system

Focused Goal 1-5: Excellence in the design of new development

Focused Goal 1-9: A pattern of land use which enhances the community character of Elk Grove, provides employment and shopping opportunities to serve residents and the region, which provides for use of transit, and which protects Elk Grove's unique historical and natural features

Guiding Goal 2: Diversified Economic Base

Focused Goal 2-2: A balance between the numbers and types of workers residing in Elk Grove and opportunities for employment in the city

Guiding Goal 3: Protection of the Natural Environment

Focused Goal 3-1: Development which recognizes environmental constraints and is designed and operated to minimize impacts on the environment

Focused Goal 3-2: Open space lands in proximity to Elk Grove that provide for agricultural use and habitat for native species

Focused Goal 3-3: Natural resources managed and protected for the use and enjoyment of current and future generations

Focused Goal 3-4: Preservation and enhancement of Elk Grove's natural areas, in particular the areas within the floodplain of the Cosumnes River

Guiding Goal 4: Preservation and Enhancement of Elk Grove's Unique Historic and Natural Features

Focused Goal 4-1: Preservation and enhancement of Elk Grove's historic structures and districts

Focused Goal 4-2: Preservation of the large oak and other tree species which are an important part of the City's historic and aesthetic character

Guiding Goal 5: Preservation of the Rural Character of Elk Grove

Focused Goal 5-1: Retention of those areas identified for 2-acre and larger lots on the Land Use Map as a rural area through land use and infrastructure controls

Focused Goal 5-2: Maintenance of those features that provide the character of Elk Grove's rural areas, including: large oak and other trees, small local roadways, animal keeping and raising, equestrians, agriculture, and limited commercial opportunities

The following policies and action items implement these goals:

CONSERVATION POLICIES: CONSERVATION OF ENERGY

Policies related to Energy Conservation are found in the Air Quality section of this Element.

CONSERVATION POLICIES: CONSERVATION OF WATER

CAQ-1 Reduce the amount of water used by residential and non-residential uses by encouraging water conservation.

CAQ-1-Action 1 Implement the City's Water Conservation Ordinance.

CAQ-1-Action 2 Actively encourage water conservation by both agricultural and urban water users.

CAQ-1-Action 3 Work with urban and agricultural water purveyors to establish long range conservation plans which set specific conservation objectives and utilize, to the extent possible, a common

planning horizon, plan framework and estimating/ forecasting procedures.

CAQ-1-Action 4 Promote the use of drought-tolerant vegetation to minimize water consumption by providing information to developers and designers.

CONSERVATION POLICIES: CONSERVATION OF LAND FOR FUTURE DEVELOPMENT

Policies related to future use of land for development are found in the Land Use Element of this General Plan.

CONSERVATION POLICIES: CONSERVATION OF AGRICULTURAL USES

CAQ-2 The loss of agricultural productivity on lands designated for urban uses within the city limits as of January 2004 is accepted as a consequence of the development of Elk Grove. As discussed in the Land Use Element, the City's land use concept for the Planning Area outside the 2004 city limits anticipates the retention of significant areas of agricultural production outside the current city limits.

(Please see the Land Use Concept Map in the Land Use Element for further information.)

CAQ-3 The City of Elk Grove considers the only mitigation for the loss of agricultural land to consist of the creation of *new* agricultural land in the Sacramento region equal in area, productivity, and other characteristics to the area that would be lost due to development. The protection of *existing* agricultural land through the purchase of fee title or easements is not considered by the City to provide mitigation, since programs of this type result in a net loss of farmland.

Please see the Open Space Policies section of the Parks, Trails, and Open Space Element of this General Plan for further discussion of the City's policies regarding agricultural lands.

CAQ-4 While agricultural uses are anticipated to be phased out within the city limits, the City recognizes the right of these uses to continue as long as individual owners/farmers desire. The City shall not require buffers between farmland and urban uses, relying instead on the following actions to address the impacts of farming on urban uses:

CAQ-4-Action 1 Implement the City's "Right to Farm" ordinance.

CAQ-4-Action 2 Prospective buyers of property adjacent to agricultural land shall be notified through the title report that they could be subject to inconvenience or discomfort resulting from accepted farming activities as per provisions of the City's right-to-farm ordinance.

CONSERVATION POLICIES: CONSERVATION OF SOILS

CAQ-5 Roads and structures shall be designed, built and landscaped so as to minimize erosion during and after construction.

CONSERVATION POLICIES: LANDS WITHIN THE PRIMARY ZONE OF THE SACRAMENTO RIVER DELTA

Note to reader: No portion of the Primary Zone of the Sacramento River Delta is currently within the 2002 city limits, although a portion of the Primary Zone is within the larger Planning Area for this General Plan (see the Introduction for a description of the Planning Area).

CAQ-6 Within the Primary Zone of the Legal Delta (as defined by the State of California in the State Water Code, Section 12220), the City's land use and other policies shall conform with the "Land Use and Resource Management Plan for the Primary Zone of the Delta" developed by the Delta Protection Commission.

CAQ-6-Action 1 Coordinate with the Delta Protection Commission by providing updates on the status of any requests by the City to include any lands in the

Primary Zone in the City's sphere of influence or incorporated boundaries.

CAQ-6-Action 2 Prior to the annexation of any land in the Primary Zone of the Legal Delta, ensure that this General Plan is consistent with the Delta Protection Commission's Act and Plan as it affects the area within the Primary Zone.

CONSERVATION POLICIES: CONSERVATION OF NATIVE AND NON-NATIVE HABITATS, PLANTS, AND ANIMALS

CAQ-7 Encourage development clustering where clustering would facilitate on-site protection of woodlands, grasslands, wetlands, stream corridors, scenic areas, or other appropriate natural features as open space, provided that:

1. Urban infrastructure capacity is available for urban use.
2. On-site resource protection is appropriate and consistent with other General Plan Policies.
3. The architecture and scale of development is appropriate for the area.
4. Development rights for the open space area are permanently dedicated and appropriate long-term management is provided for by either a public agency, homeowners association, or other appropriate entity.

This policy shall not apply in the Rural Residential area east of State Route 99, where clustering of development is not permitted.

CAQ-8 Large trees (both native and non-native) are an important aesthetic (and, in some cases, biological) resource. Trees which function as an important part of the City's or a neighborhood's aesthetic character or as natural habitat should be retained to the extent possible during the development of new structures, roadways (public and private, including roadway widening), parks, drainage channels, and other uses and structures.

If trees cannot be preserved onsite, offsite mitigation or payment of an in-lieu fee may be required by the City. Where possible, trees planted for mitigation should be located in the same watershed as the trees, which were removed.

Trees that cannot be protected shall be replaced either on-site or off-site as required by the City.

CAQ-8-Action 1 When reviewing native or non-native trees for preservation, considering the following criteria:

- Aesthetic value
- Biological value
- Shade
- Water quality benefits
- Runoff reduction
- Air quality (pollutant reduction)
- Health of the tree(s)
- Suitability for preservation in place
- Safety hazards posed by the tree(s)

CAQ-8-Action 2 Develop a list of trees which shall be considered generally exempt from preservation. These may include trees, which pose a threat to public safety, to native trees, or to natural habitat.

CAQ-8-Action 3 Develop a list of trees which may be used when providing replacement trees for the loss of native and non-native trees.

CAQ-8-Action 4 Implement the City's Tree Preservation Ordinance.

CAQ-8-Action 5 Amend the City's Tree Preservation Ordinance to conform with the policies of this General Plan and to expand protection to non-native trees.

CAQ-8-Action 6 Develop a list of trees that should not be planted due to their invasive nature (that is, their ability to escape cultivation or to dominate natural areas) and provide this information to the public and the development community.

CAQ-8-Action 7 Retain the services of a qualified arborist(s) under contract to the City to provide information to decision-makers and staff on the suitability of trees for preservation.

CAQ-8-Action 8 Consider the use of revised standard roadway cross-sections which do not require the removal of trees in order to provide additional roadway capacity.

CAQ-8-Action 9 Provide funds for education, programs, and materials emphasizing the value and importance of trees. Support private foundations with local funds for their tree planting efforts. Encourage the harvesting of native seeds and plants prior to the clearing of project sites.

CAQ-9 Wetlands, vernal pools, marshland and riparian (streamside) areas are considered to be important resources. Impacts to these resources shall be avoided unless shown to be technically infeasible. The City shall seek to ensure that no net loss of wetland areas occurs, which may be accomplished by avoidance, re-vegetation and restoration onsite or creation of riparian habitat corridors.

CAQ-9-Action 1 As part of the development review process, ensure that all potentially affected wetland areas are identified, and provide mitigation to ensure that no net loss occurs. Mitigation should occur within the same watershed as the impact, where feasible.

CAQ-9-Action 2 Coordinate with the California Department of Fish and Game and the U.S. Fish and Wildlife Service in the review of development projects.

CAQ-10 Consider the adoption of habitat conservation plans for rare, threatened, or endangered species.

CAQ-10-Action 1 As appropriate, work with the County of Sacramento and other agencies on a Habitat Conservation Plan or other mechanism to implement this policy.

CAQ 11 The City shall seek to preserve areas, where feasible, where special-status plant and animal species and critical habitat areas are known to be present or potentially occurring based on City biological resource mapping and data provided in the General Plan EIR or other technical material that may be adversely affected by public or private development projects. Where preservation is not possible, appropriate mitigation shall be included in the public or private project. "Special-status" species are generally defined as species considered to be rare, threatened, endangered, or otherwise protected under local, state, and/or federal policies, regulations or laws.

CAQ-11 Action 1 The City shall require a biological resources evaluation for private and public development projects in areas identified to contain or possibly contain special-status plant and animal species based on City biological resource mapping and data provided in the General Plan EIR or other technical material. The biological resources evaluation shall determine the presence/absence of these special-status plant and animal species on the site. The surveys associated with the evaluation shall be conducted during the appropriate seasons for proper identification of the species. Such evaluation will consider the potential for significant impact on special-status plant and animal species, and will identify feasible mitigation measures to mitigate such impacts to the satisfaction of the City and appropriate governmental agencies (e.g., U.S. Fish and Wildlife Service, California Department of Fish and Game and U.S. Army Corps of Engineers) where necessary (e.g., species listed under the State and/or Federal Endangered Species Act). Mitigation measures may include, but are not limited to, the following:

- For special-status plant species: On- or off-site preservation of existing populations from direct and indirect impacts, seed and soil collection or plant transplant that ensures that the plant population is maintained.
- For special-status animal species: avoidance of the species and its habitat as well as the potential provision of habitat buffers, avoidance of the species during nesting or breeding seasons, replacement or restoration of habitat on- or off-site, relocation of the species to another suitable habitat area, payment of mitigation credit fees.
- Participation in a habitat conservation plan.

CONSERVATION POLICIES: PROTECTION OF WATER QUALITY AND SUPPLY

CAQ-12 The City shall seek to ensure that the quality of groundwater and surface water is protected to the extent possible.

CAQ-12-Action 1 Continue to cooperate with the County, other cities, and the Regional Water Quality Control Board regarding compliance with the NPDES permit system, and support other water quality improvement projects in order to maintain compliance with the Basin Plan.

CAQ-12-Action 2 Implement the City's NPDES permit on all public and private development projects and activities.

CAQ-12-Action 3 Collect information on design, construction, and operation techniques which help prevent water pollution, and provide this information to the public and the development community.

CAQ-13 Implement the City's NPDES permit through the review and approval of development projects and other activities regulated by the permit.

CAQ-14 The city shall seek to minimize the amount of impervious surfaces and directly connected impervious surfaces in areas of new development and redevelopment and use on-site infiltration of runoff in areas with appropriate soils where the infiltration of storm water would not pose a potential threat to groundwater quality.

CAQ-15 The City shall encourage water supply service providers and County Sanitation District 1 to design water supply and recycled water supply facilities in a manner that avoids and/or minimizes significant environmental effects. The City shall specifically encourage the Sacramento County Water Agency to design well facilities and operation to minimize surface flow effects to the Cosumnes River.

CAQ-16 Future land uses that are anticipated to utilize hazardous materials or waste shall be required to provide adequate containment facilities to ensure that surface water and groundwater resources are protected from accidental releases. This shall include double-containment, levees to contain spills, and monitoring wells for underground storage tanks, as required by local, state and federal standards.

CONSERVATION POLICIES: FLOODING AND DRAINAGE

CAQ-17 The City recognizes the value of naturally vegetated stream corridors, commensurate with flood control and public acceptance, to assist in removal of pollutants, provide native and endangered species habitat and provide community amenities.

CAQ-18 Post-development peak storm water run-off discharge rates and velocities shall be designed to prevent or reduce down-stream erosion, and to protect stream habitat.

CAQ-19 Encourage the retention of natural stream corridors, and the creation of natural stream channels where improvements to drainage capacity are required.

CAQ-19-Action 1 Re-vegetation using native plant species shall be encouraged; use of non-native species shall be discouraged. Use of invasive species shall be prohibited.

CAQ-19-Action 2 The City shall permit stream channel realignment only:

- When necessary to eliminate flood hazards, after alternatives to provide flood capacity while protecting the natural alignment have been shown to be infeasible; or
- To protect and preserve natural features and vegetation which would otherwise be removed; or
- If the existing channel has been significantly disrupted by agricultural improvements or other man-made changes.

CAQ-19-Action 3 The City shall require, to the maximum extent practical, retention of topographic diversity and variation when channels are realigned or modified, including:

- "Self-sustaining" meander characteristics,
- Berms,
- Naturalized side slope, and
- Varied channel bottom elevation,

consistent with the characteristics of the watershed, public safety, and other site-specific considerations.

CAQ-19-Action 4 Where existing streams support riparian vegetation, evaluate options for constructing secondary flood control channels or other facilities for flood control and water quality purposes.

CAQ-19-Action 5 Channel lowering of existing natural streams shall occur only after consideration of alternatives (including surface drainage systems which do not require channel lowering) and only when it is necessary to accommodate the gravity drainage of storm runoff and/or accommodate floodflows under existing bridge structures.

CAQ-19-Action 6 All storm drainage improvements on natural streams shall be designed where feasible to maintain water flows necessary to protect and enhance existing fish habitat, native riparian vegetation, water quality, and/or ground water recharge.

CAQ-19-Action 7 Improvements in water-courses shall be designed for low maintenance, and to accommodate peak flows with vegetation (including mitigation plantings) in the channel. Channel modifications shall retain marsh and riparian vegetation whenever possible.

CO-19-Action 8 Development design shall maximize the total floodplain frontage that is open to public view. Development adjacent to stream corridors shall be encouraged to provide a public street paralleling at least one side of the corridor with vertical curbs, gutters, foot path, street lighting, and post and cable barriers to prevent vehicular entry.

CAQ-19-Action 9 Trails along stream corridors shall be located to minimize wildlife impacts and shall be restricted to non-motorized traffic.

CAQ-19-Action 10 Except where approved by the City as part of the development of a public or private development project, no grading, clearing, tree cutting, debris disposal or any other similar action shall be allowed

in stream corridors except for normal channel maintenance.

CAQ-20 Fill may not be placed in any 100-year floodplain as delineated by currently effective FEMA Flood Insurance Rate Maps or subsequent comprehensive drainage plans unless specifically approved by the City.

No fill shall be permitted in wetland areas unless approved by the City and appropriate state and federal agencies.

CAQ-21 Development adjacent to a natural stream(s) shall provide a "stream buffer zone" along the stream.

"Natural streams" shall be generally considered to consist of the following, subject to site-specific review by the City:

- Deer Creek
- Elk Grove Creek
- Laguna Creek and its tributaries
- Morrison Creek
- Strawberry Creek
- White House Creek

The following are examples of desired features for this transition zone; the specific design for each transition zone shall be approved on a case-by-case basis by the City.

Stream buffer zones should generally measure at least 50 (fifty) feet from the stream centerline (total width of 100) feet or more, depending on the characteristics of the stream, and shall include:

1. Sufficient width for a mowed fire-break (where necessary), access for channel maintenance and flood control, and for planned passive recreation uses.
2. Sufficient width to provide for:
   a. Quality and quantity of existing and created habitat,
   b. Presence of species as well as species sensitivity to human disturbance,
   c. Areas for regeneration of vegetation,
   d. Vegetative filtration for water quality,
   e. Corridor for wildlife habitat linkage,
   f. Protection from runoff and other impacts of urban uses adjacent to the corridor
   g. Trails and greenbelts.
3. The stream buffer zone should not include above ground water quality treatment structures designed to meet pollutant discharge requirements.

CAQ-22 Stream crossings shall be minimized and be aesthetically compatible with the natural appearance of the stream channel. The use of bridges and other stream crossings with natural (unpaved) bottoms shall be encouraged to minimize impacts to natural habitat.

CAQ-23 Uses in the stream corridors shall be limited to recreation and agricultural uses compatible with resource protection and flood control measures. Roads, parking, and associated fill slopes shall be located outside of the stream corridor, except at stream crossings.

CAQ-24 Open space lands within a stream corridor shall be required to be retained as open space as a condition of development approval for projects that include a stream corridor. Unencumbered maintenance access to the stream shall be provided.

CONSERVATION POLICIES: CONSERVATION OF OTHER NATURAL RESOURCES/RECYCLING AND RE-USE OF MATERIALS

CAQ-25 The City shall encourage:

- Recycling,
- Reduction in the amount of waste, and
- Re-use of materials to reduce the amount of solid waste generated in Elk Grove.

CAQ-25-Action 1 The City shall comply with the requirements of AB939 with regard to meeting state-mandated targets for reductions in the amount of solid waste generated in Elk Grove.

CAQ-25-Action 2 The City shall provide information to businesses and residents on available options to implement the City's waste reduction targets.

CAQ-25-Action 3 Encourage the use of recycled concrete in all base material utilized in City and private road construction.

CAQ-25-Action 4 Include a requirement for the use of recycled base material in all requests for bids for City roadway construction projects.

CAQ-25-Action 5 Establish procurement policies and procedures, which facilitate purchase of recycled, recyclable or reusable products and materials where feasible.

CAQ-25-Action 6 Outside contractors bidding to provide products or services to the City, including printing services, shall be required to demonstrate that they will comply with City recycled materials policies.

CAQ-25-Action 7 The City shall actively promote a comprehensive, consistent and effective recycled materials procurement effort among other governmental agencies and local businesses.

CONSERVATION POLICIES: AIR QUALITY

CAQ-26 It is the policy of the City of Elk Grove to minimize air pollutant emissions from all City facilities and operations to the extent feasible and consistent with the City's need to provide a high level of public service.

CAQ-26-Action 1 The City shall encourage all its employees to use transportation alternatives such as public transit, bicycling, walking, and carpooling for commute and other work-related trips. The City shall provide information on these and other applicable programs to all employees.

CAQ-26-Action 2 All City facilities shall incorporate energy-conserving design and construction techniques.

CAQ-26-Action 3 The City shall encourage City contractors and vendors to reduce emissions from their operations (such as by using low emission vehicles), and shall consider including a preference for low emission contractors and vendors in City requests for proposals where appropriate.

CAQ-27 The City shall promote energy conservation measures in new development to reduce on-site emissions and power plant emissions. The City shall seek to reduce the energy impacts from new residential and commercial projects through investigation and implementation of energy efficiency measures during all phases of design and development.

CAQ-27-Action 1 Provide information to the public and builders on available energy conservation techniques and products.

CAQ-27-Action 2 Encourage the use of trees planted in locations that will maximize energy conservation and air quality benefits. Encourage the use of landscaping materials which produce lower levels of hydrocarbon emissions.

CAQ-27-Action 3 During project review, City staff shall consider energy conservation and, where appropriate, suggest additional energy conservation techniques.

CAQ-27-Action 4 During project review, ensure that "Best Available Control Technology" is properly used and implemented.

CAQ-27-Action 5 Encourage new commercial uses to limit delivery hours to non-peak hours.

CAQ-28 The City shall emphasize "demand management" strategies which seek to reduce single-occupant vehicle use in order to achieve state and federal air quality plan objectives.

CAQ-28-Action 1 Implement the requirements for designated carpool and vanpool parking for all new office developments.

CAQ-28-Action 2 All City facilities shall include designated carpool and vanpool spaces, and all City staff shall be encouraged to take part in ridesharing.

CAQ-29 The City shall seek to ensure that public transit is a viable and attractive alternative to the use of private motor vehicles.

CAQ-29-Action 1 Consider implementation of a development impact fee to provide funding for the development of new public transit facilities in Elk Grove.

CAQ-29-Action 2 The City shall review all options for providing public transit to the residents and businesses of Elk Grove and seek to implement the option which provides the most effective and cost-efficient service.

CAQ-30 All new development projects which have the potential to result in substantial air quality impacts shall incorporate design, construction, and/or operational features to result in a reduction in emissions equal to 15 percent compared to an "unmitigated baseline" project. An "unmitigated baseline project" is a development project which is built and/or operated without the implementation of trip-reduction, energy conservation, or similar features, including any such features which may be required by the Zoning Code or other applicable codes.

CAQ-30-Action 1 The City shall develop and implement "Emission Reduction Measures" to achieve the reduction required by this policy. These Emission Reduction Measures should consider the following:

- Cost-effectiveness
- A maximum cost for measures, and consideration of a waiver from full compliance if this maximum cost would be exceeded.
- Credits for emission reductions already in place (e.g., for buildings in the latter phases of a multi-phased project which included emission reduction measures in its design) or which are required to mitigate other impacts.

CAQ-31 The City shall support intergovernmental efforts directed at stringent tailpipe emission standards and inspection and maintenance programs for all feasible vehicle classes and revisions to the Air Quality Attainment Plan to accelerate and strengthen market-based strategies consistent with the General Plan.

CAQ-31-Action 1 The City shall ensure that all City vehicles conform with applicable emission standards and the time of purchase and continuing throughout their use by the City. The City shall consider pollutant emissions as one criterion for vehicle purchasing decisions, seeking to purchase lower-emitting vehicles.

CAQ-31-Action 2 The City shall participate in intergovernmental groups seeking to improve local and regional air quality.

CAQ-31-Action 3 In conjunction with Sacramento Metropolitan Air Quality Management District, support and participate in a public education and outreach program dealing with air quality issues, with a goal of attaining a solid foundation of public support for needed air quality measures.

CAQ-31-Action 4 The City shall consider

the adoption of an ordinance to discourage excessive idling of diesel-powered and other heavy vehicles to reduce air pollutant emissions.

CAQ-32 As part of the environmental review of projects, the City shall identify the air quality impacts of development proposals to avoid significant adverse impacts and require appropriate mitigation measures, potentially including—in the case of projects which may conflict with applicable air quality plans—emission reductions in addition to those required by Policy CAQ-30.

CAQ-32-Action 1 Coordinate with the Sacramento Metropolitan Air Quality Management District on the review of proposed development projects, specifically including projects that could conflict with any applicable air quality plans and/or the State Implementation Plan.

CAQ-33 The City shall require that public and private development projects use low emission vehicles and equipment as part of project construction and operation, unless determined to be infeasible.

This page intentionally left blank.

Parks, Trails, and Open Space Element

Parks, Recreation, and Open Space are important components of the quality of life desired by the residents of Elk Grove. This Element of the General Plan addresses the City's goals, policies, and actions to ensure that the City's desires and/or needs for parks, recreation, and open space are recognized and addressed as the development of the city continues.

PUBLIC PARKS AND RECREATION

One of the city's many ballfields

Elk Grove is home to numerous public parks, some of which are owned and operated by the Elk Grove Community Services District (CSD), an independent agency which operates in Elk Grove and surrounding areas (*see the Background Report for additional information on the Elk Grove CSD*). The Elk Grove CSD has an adopted Master Plan of Parks, which identifies standards for public parks, desired locations for new facilities, and standards for the development of new parks.

This General Plan envisions that the City will take a more active role in defining the locations, sizes, and facilities provided at public parks, as well as in expanding the number of trails in Elk Grove. At the same time, the City will continue to work with the Elk Grove CSD.

TRAILS AND OPEN SPACE

Multi-use trails provide opportunities for cycling, pedestrian, and equestrian uses

An important component of the community's vision for the future of Elk Grove is the retention of significant amounts of open space in the Planning Area (*please see the Introduction to this General Plan for a description of the Planning Area*), and the creation of a trails system to link the developed portions of Elk Grove with these areas. Although the area within the current city limits is envisioned to be for the most part developed with urban uses (*please see the Land Use Element for a map and discussion of proposed land uses*), the City recognizes that there are many important open space resources in the Planning Area, including the Cosumnes River, the Delta, and agricultural areas.

Open spaces are an important part of the City's vision for the future

This General Plan therefore provides policies and programs to ensure that trails and open space are addressed as development proceeds within the city, and to ensure that the City's vision for trails and open space as well as other habitat and conservation needs in the Planning Area is considered by the County of Sacramento, the Local Agency Formation Commission, and other agencies in the area outside the city limits.

Major power line corridors are proposed to serve as part of a community-wide open space network.

The Parks, Recreation, and Open Space Element implements the following Goals of the City of Elk Grove:

Guiding Goal 1: A High Quality of Life for All Residents

Focused Goal 1-2: Outdoor recreation opportunities for all residents

Focused Goal 1-7: Active and passive park facilities and recreation programs that satisfy the leisure time and recreation needs of all residents

Focused Goal 1-8: Creation and maintenance of a strong, positive community image for Elk Grove

Guiding Goal 2: Diversified Economic Base

Focused Goal 2-3: Creation of Elk Grove as a desired place to locate major employment-generating uses

Guiding Goal 3: Protection of the Natural Environment

Focused Goal 3-2: Open space lands in proximity to Elk Grove which provide for agricultural use and habitat for native species

Focused Goal 3-3: Natural resources managed and protected for the use and enjoyment of current and future generations

Focused Goal 3-4: Preservation and enhancement of Elk Grove's natural areas, in particular the areas within the floodplain of the Cosumnes River

Guiding Goal 4: Preservation and Enhancement of Elk Grove's Unique Historic and Natural Features

Focused Goal 4-2: Preservation of the large oak and other tree species which are an important part of the City's historic and aesthetic character

Guiding Goal 5: Preservation of the Rural Character of Elk Grove

Focused Goal 5-2: Maintenance of those features that provide the character of Elk Grove's rural areas, including: large oak and other trees, small local roadways, animal keeping and raising, equestrians, agriculture, and limited commercial opportunities

PARKS, TRAILS, AND OPEN SPACE POLICIES: PARKS AND TRAILS

PTO-1 The City of Elk Grove supports the development, maintenance, and enhancement of parks and trails serving a variety of needs at the neighborhood, area, and citywide level. The City may seek to accomplish the provision of parks and trails in cooperation with the Elk Grove Community Services District.

PTO-1-Action 1 As part of the review of development projects, ensure that public parks and trails are provided which meet the City's criteria and which implement the City's Parks and Trails Master Plan.

PTO-2 The City specifically supports the provision of parkland at a rate which exceeds the levels historically (prior to adoption of this General Plan) provided in Elk Grove. Parks shall be provided which meet community needs and desires.

PTO-2-Action 1 The City shall conduct a "nexus study" to determine the demand for parkland in the city and the reasonable relationship between the demand and the type of development project to support the imposition of parkland dedication and/or fees.

PTO-2-Action 2 To the extent consistent with applicable state law, the City shall develop criteria defining the types of parks and trails to be developed, including criteria defining desired:

- Park types and sizes

- Park facilities by type
- Locational criteria
- Spacing
- Trails and related facilities by type and function

PTO-2-Action 3 The City shall adopt a comprehensive Parks and Trails Master Plan which provides information on parks criteria, planned parks, and off-street recreational, walking, equestrian, and multi-use trails. Prior to the adoption of the parks standards and the Parks and Trails Master Plan, the City shall require the provision of parks as part of development projects to implement the City's parkland standards. The size, location, and facilities provided in these parks may be determined on a case-by-case basis.

PTO-3 Funding for maintenance of parks and/or trails shall be assured to the City's satisfaction prior to the approval of any Final Subdivision Map which contains or contributes to the need for a public parks and facilities.

PTO-3-Action 1 The City shall pursue the implementation of funding mechanisms to provide for the long-term maintenance of parks and/or trails in those instances where funding is not available from other sources. Such mechanisms may include local or regional assessment districts, homeowners associations, or other methods as determined appropriate by the City.

PTO-4 New residential developments may be required to, at a minimum, provide parks consistent with the Quimby Act (CA Govt. Code Section 66477), through land dedication, fees in lieu, or on-site improvements at a standard of five (5) acres of land for parks per 1,000 residents. Land dedication and/or payment of in-lieu fees shall be required consistent with state law. Land dedication and/or fees may be required pursuant to other policies in this Element with or without the use of the authority provided in the Quimby Act, or in combination with the Quimby Act and other legal authority.

PTO-4-Action 1 The City shall adopt standards designating which types of lands shall be considered "parks" for the purpose of implementing Quimby Act requirements.

PTO-5 The City encourages the Elk Grove Community Services District to develop self-supporting recreation programs for those activities that go beyond providing for basic recreation needs. Examples include outdoor and indoor sports complexes, aquatic centers, and community centers. The City may also develop and operate such programs independently.

PTO-6 The City encourages park development adjacent to school sites and the formation of joint use agreements between school and park districts.

PTO-6-Action 1 During the review of proposed development projects, comment to the Elk Grove Community Services District and the Elk Grove Unified School District to encourage location of schools adjacent to parks.

Please see the Public Facilities/Finance Element for additional policies related to the locations of public schools.

PTO-7 The trails system in Elk Grove should provide for connectivity, so that all trails are linked to the extent possible for greater use as recreational and travel routes. The following features should be included in the trails system in Elk Grove:

- Trails should link residential areas with parks, commercial and office areas, and other destinations.
- Trails along major roadways should avoid meanders or other design features which make bicycle use less convenient or safe.
- Trails should be located off-street to the extent possible.

- Easements such as access roads should be placed in joint use as trails.

PTO-8 The City's desired trails system is shown in Figure PTO-2. Flexibility shall be considered when making decisions on specific trail locations within projects, so long as the trails shown in figure PTO-2 are implemented and other policies (such as connectivity) are incorporated in the trails system.

PTO-8-Action 1 As part of the review of development projects, ensure that trails are provided which meet the City's criteria and which implement the City's desired trails plan.

PTO-9 Funding for maintenance of City trails shall be assured prior to the approval of any project which contains a City-owned trail.

PTO-10 Trailheads should be provided at appropriate locations to provide safe starting points on the trails system for equestrians, cyclists, and pedestrians.

PTO-10-Action 1 Develop standards for and locations of potential trailhead locations, including sufficient space for the off-street parking of equestrian trailers and vehicles.

PTO-10-Action 2 To the extent possible, coordinate with the Elk Grove CSD in the review of projects containing trails.

PTO-11 Trails which parallel streams should be primarily located beyond the riparian corridor and wetlands to minimize wildlife impacts and shall be restricted to non-motorized traffic.

PTO-12 Trails should be designed with the safety of users and adjacent property owners in mind. To the extent possible, the bicycle trails system should provide safe, off-street options suitable for use by children and less-experienced riders.

PTO-12-Action 1 Involve the Elk Grove Police Department in the review of proposed trail locations and designs.

PTO-13 Recreational trails should not be placed adjacent to or on farmland if feasible alternative routes exist elsewhere in the vicinity. However, if no other feasible routes exist, trail facilities should be designed in cooperation with adjacent property owners to minimize adverse impacts on farming practices.

PTO-14 The City supports the use of volunteers and community groups to provide maintenance and safety patrols on trails.

PARKS, TRAILS, AND OPEN SPACE POLICIES: OPEN SPACE

PTO-15 The City views open space lands of all types as important resource which should be preserved in the region, and supports the establishment of multi-purpose open space areas to address a variety of needs, including, but not limited to:

- Maintenance of agricultural uses;
- Wildlife habitat
- Recreational open space
- Aesthetic benefits
- Flood control

To the extent possible, lands protected in accordance with this policy should be in proximity to Elk Grove, to facilitate use of these areas by Elk Grove residents, assist in mitigation of habitat loss within the city, and provide an open space resource close to the urbanized areas of Elk Grove.

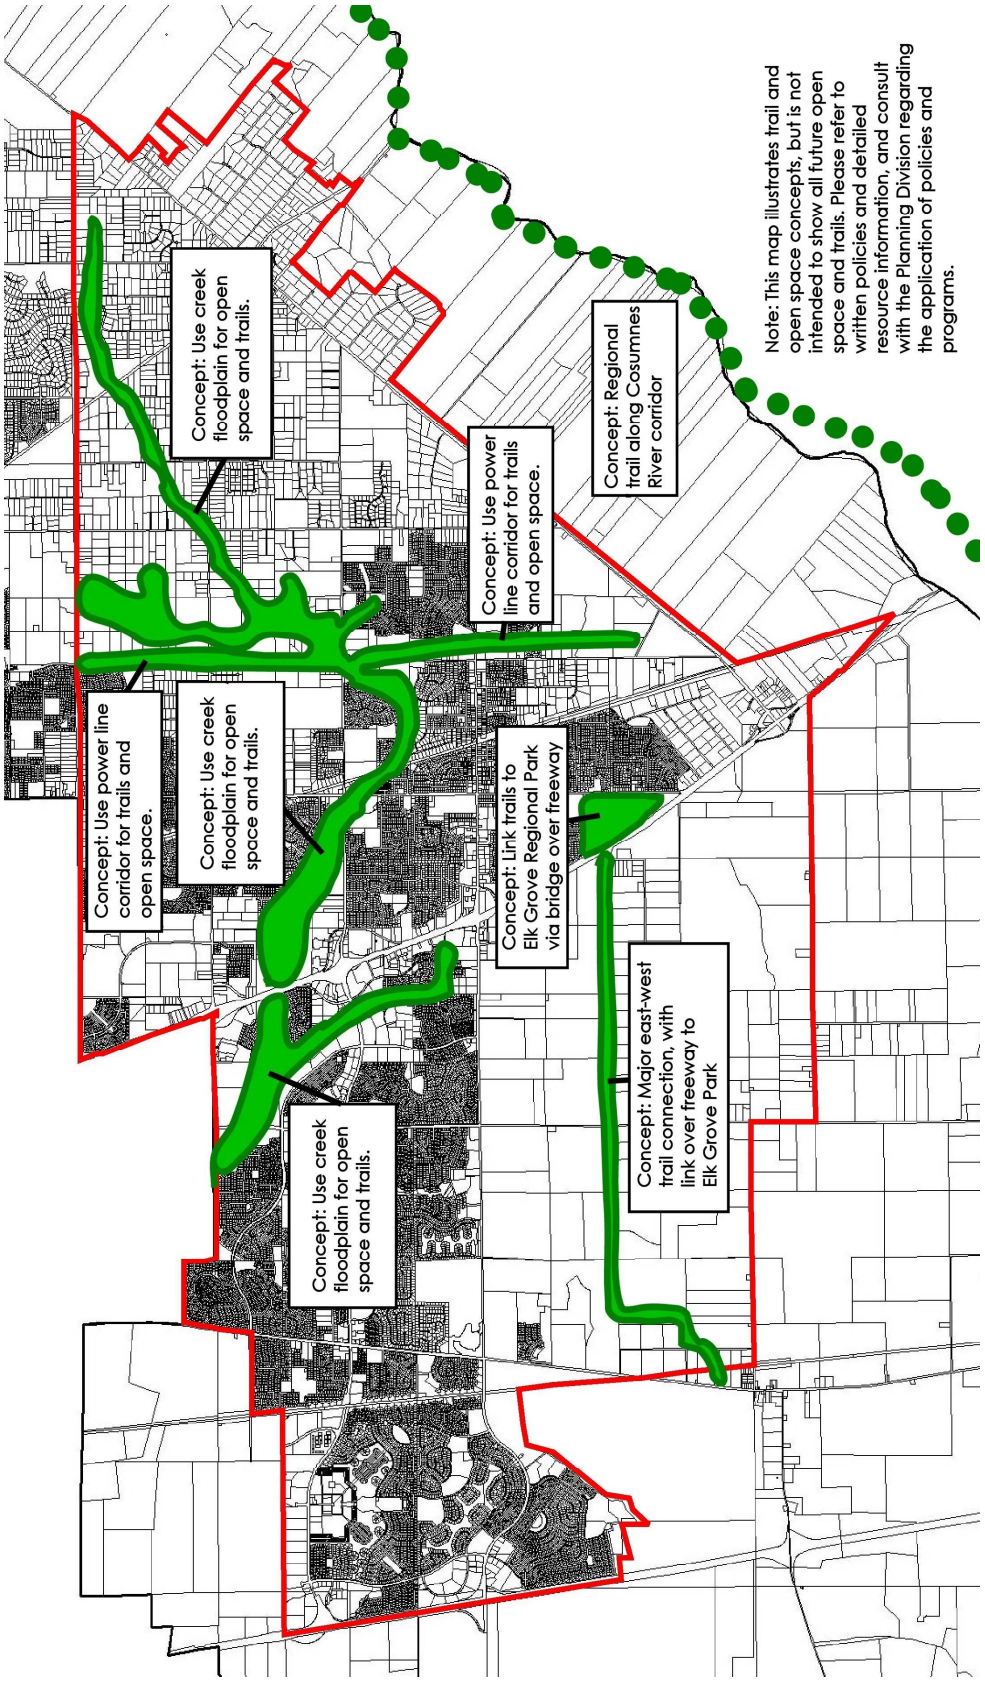
PTO-15-Action 1 Consider the establishment of a citywide fee and/or assessment system which would provide funding for the purchase of open space land or easements and the maintenance of these areas.

PTO-15-Action 2 Work with the County of Sacramento and other resource

agencies to develop a regional open space plan which provides for multiple uses of open space (e.g., agriculture and wildlife foraging)

PTO-15-Action 3 Consider using funds collected under existing (2003) fee programs (e.g., Swainson's Hawk mitigation and East Franklin Specific Plan agricultural mitigation) to fund this expanded open space program.

PTO-16 Stream corridors, floodways, electrical transmission corridors, and similar features shall be considered for inclusion in the citywide trails and open space system.



PTO-16-Action 1 Involve the Elk Grove CSD in the identification of appropriate open space and trails corridors which could be identified in this General Plan and the Elk Grove CSD's Master Plan.

PTO-17 The City encourages the creation of a regional trail/open space system which links the Cosumnes River with the Sacramento River and provides for trail connections between Elk Grove and these open space areas. The City's vision for regional open space and trails is shown in Figure PTO-1 and in the "Planning Area Land Use Concept" in the Land Use Element of this General Plan.

PTO-17-Action 1 Within the Cosumnes River floodplain, the City will encourage the dedication or acquisition of easement or fee title for trails as part of an overall trail system linking the Cosumnes and Sacramento rivers. *Note: This policy affects lands within the planning area but outside of the 2002 city limits only.*

PTO-18 To the extent possible, retain natural drainage courses in all cases where preservation of natural drainage is physically feasible and consistent with the need to provide flood protection.

Figure PTO-1: Open Space Policy Map

Public Facilities and Finance Element

This Element of the General Plan addresses the following public facilities issues:

- **Water Service**, including both potable (drinkable) and non-potable water delivery.
- **Sewer Service**, and
- **Financing and construction** of public facilities

This Element also addresses the following public services:

- **Public Libraries** and
- **Public Schools**

*Note: The City's policies related to **solid waste**, another public facility, are contained in the Conservation and Air Quality Element. Policies related to **police and fire protection** are in the Safety Element. Policies related to **parks** are located in the Parks, Trails, and Open Space Element.*

WATER SERVICE

Domestic water service in Elk Grove is provided by two public water service providers—the Sacramento County Water Agency and the Elk Grove Water Service—and, in the eastern portion of the city, by private wells tapping the underground aquifer.

Drinking water in Elk Grove comes from both surface water (such as rivers) and wells.

Water supply is important both from the standpoint of health and convenience, but also the need for water to help suppress fires and support the efforts of the Elk Grove Community Services District's fire personnel.

For detailed information on water service in Elk Grove, please see the Background Report.

SEWER SERVICE

Sewer service in the Planning Area is provided by County Sanitation District 1 (CSD-1), which maintains an extensive system of sewer lines and treatment facilities.

For detailed information on CSD-1, please see the Background Report, which accompanies this General Plan.

FINANCE OF PUBLIC FACILITIES

Because they involve projects that will ultimately be owned and/or operated by public agencies, and because they involve substantial costs, public facilities projects (roads, water lines, etc.) are often financed either totally or in part with public funds.

So-called "zipper streets" that combine narrow and wide sections are the result of deferred roadway construction policies in place prior to the incorporation of Elk Grove

Although many variations of public funding are available, most types involve the collection of money from either new development or existing development, or both. Funds can be collected in the form of:

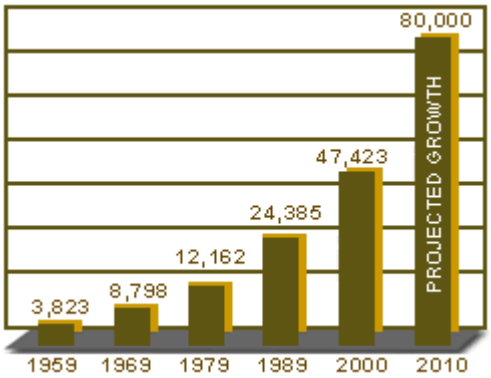
- Property assessments
- Connection or "hookup" fees (such as for connection to a public water system)
- Impact fees

The funds collected are then used to fund the construction of facilities in one of several basic ways:

- Construction is funded directly when sufficient money is available (commonly known as "pay-as-you-go" financing)
- The public agency uses its ability to borrow funds (often through the issuance of bonds) to provide "up-front" financing, repaying the loans through fees or assessments charged on future development.

In Elk Grove, much of the infrastructure development which occurred prior to the incorporation of the City used a "pay-as-you-go" approach (although bond financing was used for some facilities). The policies of the County of Sacramento also allowed the incremental construction of roadways—for instance, a planned 6-lane roadway would first be built with 2 or 4 lanes, with the final lanes added at a later date.

Based on a review of past practices, the County also apparently attempted to avoid building facilities (primarily roadways) on land that was not being developed at the time.



The most visible result of these policies in Elk Grove is the so-called "zipper street," which goes from a fully improved section to a narrow, two-lane section and then back again to a four-lane roadway (as shown in the photo on the previous page). Other, less visible examples of infrastructure built in increments have included sewer, drainage, and water systems.

This Element expresses the City's policy to construct infrastructure facilities through the use of "up front" financing so that roadways, drainage facilities, etc., can be completed with the initial phase of construction, avoiding the use of interim facilities and the creation of traffic congestion and other problems resulting from insufficient capacity.

PUBLIC SCHOOLS

Public schools in Elk Grove and the Planning Area are provided by the Elk Grove Unified School District (EGUSD), an independent agency which provides elementary, middle school, and high schools, as well as special education facilities and services.

The Elk Grove Unified School District is known for the high quality of its schools, which consistently perform well in standardized tests. Growth in the District's service area in recent years has resulted in the need to add substantial new capacity, both at new schools and at existing schools. Projected student enrollment in EGUSD schools as of 2002 is shown below:

Source: EGUSD web site, 11/2002

Under state law, the Elk Grove Unified School District can in most cases act independently of the City in the location, construction, and operation of public schools. In practice, the City and the EGUSD have enjoyed a cooperative working relationship; however, this General Plan recognizes that the District is not bound by the City's policies or regulations, and that the City is limited by state law in its ability to coordinate development of new homes and other uses with the availability of public schools.

This Element of the General Plan, therefore, stresses cooperation with the District to the extent permitted by law, and expresses the City's desires with regard to public schools.

Additional information on the Elk Grove Unified School District is included in the General Plan Background Report.

The following Goals of the City of Elk Grove are implemented in this Public Facilities and Finance Element:

Guiding Goal 1: A High Quality of Life for All Residents
Focused Goal 1-4: High quality public facilities and services
Focused Goal 1-5: Excellence in the design of new development
Focused Goal 1-8: Creation and maintenance of a strong, positive community image for Elk Grove
Guiding Goal 2: Diversified Economic Base
Goal 2-4: Creation of Elk Grove as a desirable place to establish a business, particularly major employment-generating uses
Guiding Goal 5: Preservation of the Rural Character of Elk Grove
Focused Goal 5-1: Retention of those areas identified for 2-acre and larger lots on the Land Use Map as a rural area through land use and infrastructure controls

PUBLIC FACILITIES AND FINANCE POLICIES: GENERAL POLICIES

PF-1 Except when prohibited by state law, the City shall require that sufficient capacity in all public services and facilities will be available on time to maintain desired service levels and avoid capacity shortages, traffic congestion, or other negative effects on safety and quality of life.

PF-1-Action 1 Consider participating in efforts to develop regional water solutions, such as the Water Forum.

PF-2 The City shall coordinate with outside service agencies—including water and sewer providers, the Elk Grove Community Services District, and the Elk Grove Unified School District--during the review of plans and development projects.

PUBLIC FACILITIES AND FINANCE POLICIES: WATER SERVICE

PF-3 Water supply and delivery systems shall be available in time to meet the demand created by new development, or shall be assured through the use of bonds or other sureties to the City's satisfaction.

PF-3-Action 1 The following shall be required for all development projects, excluding subdivisions:

- An assured water supply and delivery system shall be available at the time of project approval. The water agency providing service to the project may provide several alternative methods of supply and/or delivery, provided that each is capable individually of providing water to the project.
- All required water infrastructure for the project shall be in place at the time of project approval, or shall be assured through the use of bonds or other sureties to the City's satisfaction. Water infrastructure may be phased to coincide with the phased development of large-scale projects.

PF-3-Action 2 The following shall be required for all subdivisions to the extent permitted by state law:

- Proposed water supply and delivery systems shall be identified at the time of tentative map approval to the satisfaction of the City. The water agency providing service to the project may provide several alternative methods of supply and/or delivery, provided that each is capable individually of providing water to the project.
- The agency providing water service to the subdivision shall demonstrate prior to the approval of the Final Map by the City that sufficient capacity shall be available to accommodate the subdivision plus existing development, and other approved projects in the same service area, and other projects

that have received commitments for water service.
- Offsite and onsite water infrastructure sufficient to provide adequate water to the subdivision shall be in place prior to the approval of the Final Map or their financing shall be assured to the satisfaction of the City, consistent with the requirements of the Subdivision Map Act.
- Offsite and onsite water distribution systems required to serve the subdivision shall be in place and contain water at sufficient quantity and pressure prior to the issuance of any building permits. Model homes may be exempted from this policy as determined appropriate by the City, and subject to approval by the City.

PF-4 The City shall require new utility infrastructure for electrical, natural gas and other infrastructure services avoid sensitive resources, be located so as to not be visually obtrusive, and, if possible, be located within roadway rights-of-ways or existing utility easements.

PF-5 The City supports the use of reclaimed water for irrigation wherever feasible.

PF-6 The City shall seek to protect the quality and quantity of groundwater resources, including those which serve households and businesses which rely on private wells.

PF-7 The City shall require that water flow and pressure be provided at sufficient levels to meet domestic, commercial, industrial, and firefighting needs.

PUBLIC FACILITIES AND FINANCE POLICIES: SEWER SERVICE

PF-8 Sewage conveyance and treatment capacity shall be available in time to meet the demand created by new development, or shall be assured through the use of bonds or other sureties to the City's satisfaction.

PF-8-Action 1 The following shall be required for all development projects, excluding subdivisions:

- Sewer/wastewater treatment capacity shall be available at the time of project approval.
- All required sewer/wastewater infrastructure for the project shall be in place at the time of project approval, or shall be assured through the use of bonds or other sureties to the City's satisfaction.

PF-8-Action 2 The following shall be required for all subdivisions to the extent permitted by state law:

- Sewage/wastewater treatment capacity shall be available at the time of tentative map approval.
- The agency providing sewer service to the subdivision shall demonstrate prior to the approval of the Final Map by the City that sufficient capacity shall be available to accommodate the subdivision plus existing development, and other approved projects using the same conveyance lines, and projects which have received sewage treatment capacity commitment.
- Onsite and offsite sewage conveyance systems required to serve the subdivision shall be in place prior to the approval of the Final Map, or their financing shall be assured to the satisfaction of the City, consistent with the requirements of the Subdivision Map Act.
- Sewage conveyance systems within the subdivision shall be in place and connected to the sewage disposal system prior to the issuance of any building permits. Model homes may be exempted from this policy as determined appropriate by the City, and subject to approval by the City.

PF-9 Development along corridors identified by sewer providers in their Master Plans as locations of future sewerage conveyance facilities shall incorporate appropriate easements as a condition of approval.

PF-10 The City shall strongly discourage the extension of sewer service into any area designated for Rural Residential land uses. Sewers shall not be used to accommodate lot sizes smaller than 2 (two) gross acres in the Rural Residential area, and lot sizes shall be large enough to accommodate septic systems. This policy shall not be construed to limit the ability of any sewer agency to construct "interceptor" lines through or adjacent to the Rural Residential area, provided that no "trunk" or service lines are provided within the Rural Residential area.

PF-11 The installation of "dry sewers" shall not be required as a condition of approval of development in the Rural Residential land use category.

PF-12 To reduce the potential for health problems and groundwater contamination resulting from the use of septic systems, the City shall take the following actions:

PF-12-Action 1 The City shall prepare and implement a public information campaign aimed at homeowners in areas with septic systems on the proper design, use, and care of septic systems.

PF-12-Action 2 The City shall consider adopting Plumbing Code revisions to allow the use of updated technologies which offer an alternative to septic systems for the treatment of sewage on individual sites.

PF-13 Residential development on lots smaller than two (2) gross acres shall be required to connect to public sewer service. This policy shall not apply to lots smaller than 2 gross acres in the Rural Residential land use category which existed as legal lots as of the date of adoption of this General Plan; these lots shall not be required to connect to public sewer service as a condition of development.

PF-14 Independent community sewer systems may not be established for new development.

PUBLIC FACILITIES AND FINANCE POLICIES: PUBLIC LIBRARIES

PF-15 The City shall cooperate with the County of Sacramento in the planning and implementation of future library facilities and facility expansions in Elk Grove.

PUBLIC FACILITIES AND FINANCE POLICIES: PUBLIC SCHOOLS

PF-16 Specific plans shall identify all existing and planned school sites and should include guidelines and conceptual examples for incorporating new schools into overall neighborhood design.

PF-17 While recognizing that school siting and development are not within the jurisdiction of the City to control, the City strongly encourages the School District to consider the following criteria:

- Traffic impacts on nearby roadways are addressed and mitigated to meet City standards for level of service.
- Schools should serve as a focal point of neighborhood activity and be interrelated with churches, parks, greenways and off-street paths whenever possible.
- Almost all residences will be within walking distance of a school (one mile or less) and all residences are within two miles of a school whenever possible.
- New schools are adjacent to neighborhood and community parks whenever possible and designed to promote joint use of appropriate facilities.
- New schools should link with trails, bikeways, and pedestrian paths wherever possible.

PF-18 The City supports state legislative efforts to secure additional state funding for school construction and ensure maintenance of local district priorities for funds in the state school bond program.

PUBLIC FACILITIES AND FINANCE POLICIES: FINANCING AND PHASING OF PUBLIC FACILITIES

PF-19 Public facilities should be phased in a logical manner which avoids "leapfrog" development and encourages the orderly development of roadways, water and sewer, and other public facilities. The City shall not provide public financing or assistance for projects that do not comply with the planned phasing of public facilities. Interim facilities may be used only if specifically approved by the City Council.

PF-20 The City shall require secure financing for all components of the transportation system through the use of special taxes, assessment districts, developer dedications, or other appropriate mechanisms in order to provide for the completion of required major public facilities at their full planned widths or capacities in one phase. For the purposes of this policy, "major" facilities shall include the following:

- Any roadway of a collector size or above, including any roadway shown on the Circulation Plan in this General Plan.
- All wells, water transmission lines, treatment facilities, and storage tanks needed to serve the project.
- All sewer trunk and interceptor lines and treatment plants or treatment plant capacity.

The City shall use its financial capacity to facilitate implementation of this policy if necessary, including, but not limited to:

- Issuing bonds,
- Using City funds directly, with repayment from future development fees
- Fee programs
- Developer financing

PF-21 New development shall fund its fair share portion of its impacts to all public facilities and infrastructure as provided for in state law.

PF-22 Infrastructure financing plans which specify the extent, timing and estimated cost of all necessary infrastructure shall be required for the approval of urban uses in the Laguna Ridge and Southeast Policy Areas, as defined in this General Plan. The resulting financing mechanisms shall be implemented prior to the development of urban uses.

PF-23 The City will coordinate with independent public service providers, including schools, parks and recreation, reclamation, water, transit, electric and other service districts, in developing financial and service planning strategies.

PF-24 Fee programs and/or other finance mechanisms for roadway and related infrastructure shall include sufficient funding for all of the following items:

- Design, engineering, environmental compliance, and construction of roadway lanes, traffic signals, and bridges.
- Right of way acquisition, design, engineering, environmental compliance, and construction costs sufficient to ensure that "zipper streets" are not created by non-participating owners. *(Please see the introduction to the Circulation Element for a discussion of the "zipper street" phenomenon.)*
- Drainage and other facilities related to new roadway construction.
- Installation of landscaped medians and streetscaping where appropriate.
- Installation of sidewalks or other facilities where needed to provide safe passage for pedestrians.

PF-25 Fee programs and/or other finance mechanisms for roadway and related infrastructure shall include sufficient funding for all of the following items:

- Design, engineering, environmental compliance, and construction of roadway lanes, traffic signals, and bridges.

- Right of way acquisition and design/engineering/environmental compliance/construction costs sufficient to ensure that "zipper streets" are not created by non-participating owners. *(Please see the introduction to the Circulation Element for a discussion of the "zipper street" phenomenon.)*
- Drainage and other facilities related to new roadway construction.
- Installation of landscaped medians and streetscaping where appropriate.

Fee programs and/or other finance mechanisms shall be reviewed regularly to ensure that sufficient funding will be available to construct all required facilities.

PF-26 To minimize damage to roadways and to reduce inconvenience to residents and businesses, the City shall seek to ensure that all utilities located in roadways are installed in a single operation. Multiple installations in which separate utilities are installed at different times and/or in different trenches, are specifically discouraged.

PF-26-Action 1 Work with utility providers to coordinate the installlation or upgrading of utilities and eliminate multiple trenching of city streets.

PUBLIC FACILITIES AND FINANCE POLICIES: OPEN SPACE ACQUISITION

Please see the Conservation Element and the Parks, Trails, and Open Space Element for policies related to the public financing of open space acquisition.

ORDINANCE NO. 26-2004

AN URGENCY ORDINANCE OF THE CITY COUNCIL OF THE CITY OF ELK GROVE AMENDING CHAPTER 15.12 OF THE ELK GROVE MUNICIPAL CODE RELATING TO STORM WATER DRAINAGE SERVICES

The City Council of the City of Elk Grove does ordain as follows:

SECTION 1. PURPOSE.

The purpose of this ordinance is to amend Chapter 15.12 of the City of Elk Grove Municipal Code in order to comply with federal stormwater regulations and NPDES Municipal Stormwater Permit No. CAS082597, and to provide the County of Sacramento, Environmental Management Division with the necessary authority to conduct inspections and enforcement activities pursuant to the Agreement between the City and the County dated March 17, 2004.

SECTION 2. FINDINGS.

1. One of the requirements of the Municipal Stormwater Permit (NPDES No. CAS0082597) to which the City is a co-permittee is to track, inspect, and ensure compliance with the Stormwater Ordinances at certain commercial and industrial facilities.

2. The Sacramento County Environmental Management Department ("EMD"), as both the state-designated Certified Unified Program Agency ("CUPA") and the environmental health agency for Sacramento County, is currently tracking and inspecting the majority of commercial and industrial facilities subject to the provisions of the Municipal Stormwater Permit.

3. On March 17, 2004, the City Council authorized the City Manager to enter into an Agreement with EMD for fulfilling the NPDES Permit inspection requirements with respect to certain commercial and industrial facilities.

4. Under the Agreement, the City is required to amend the Stormwater Ordinance as necessary to authorize the County EMD to implement the stormwater compliance program for commercial and industrial facilities. The City must make any necessary amendments to the Stormwater Ordinance to the extent necessary to authorize EMD to:
   a. Conduct all necessary inspections or re-inspections of regulated facilities within the incorporated City area;

b. Take any necessary enforcement actions as authorized by the Municipal Code and consistent with a City-approved enforcement plan;

c. Investigate and follow-up referred complaints at eligible facilities;

d. Establish and collect fees necessary to recover program implementation costs.

5. The term of the Agreement is July 1, 2004 through June 30, 2010, unless sooner terminated, or extended by the City and County.

6. The purpose of this ordinance is to fulfill the requirements of the Agreement between the City and Sacramento County, authorized by the City Council on March 17, 2004, whereby the County shall assume responsibility for providing tracking, inspection, and enforcement of the City's Stormwater Ordinance with respect to commercial and industrial facilities within the incorporated City area as required by the Municipal Stormwater Permit.

7. Although the NPDES Permit and the Agreement between the City and County do not require inspections to commence on July 1, 2004, County EMD has threatened to forego inspections on certain industrial facilities within the City's jurisdiction, if those facilities had been scheduled to be inspected after July 1, 2004, and until such time as the City adopts these revisions to the Stormwater Ordinance. Although the County is required to conduct such inspections at least once prior to June 30, 2007, the County has steadfastly maintained that it will be unable to reschedule any such inspections missed, unless the City adopts this urgency ordinance.

8. On June 28, 2004, the Central Valley Regional Water Quality Control Board issued a Notice of Violation to the City of Elk Grove. In the Notice, the Regional Board alleged that the City had failed to effectively implement its stormwater management program, and ordered the City to take several steps to bring the program into compliance with the NPDES Permit. The Notice of Violation alleged that the City's Stormwater Ordinance does not provide the proper authority necessary under the NPDES Permit, and ordered the City to undertake a review of the Ordinance with respect to the NPDES Permit, and make any revisions necessary. Although the Regional Board has since acknowledged that the City's Stormwater Ordinance enforcement provisions are sufficient under the NPDES Permit, City staff has reviewed the Ordinance, and identified certain revisions to other portions of the Stormwater Ordinance which are necessary under the NPDES Permit. In particular, the necessary revisions include a requirement that covered individuals and entities maintain best management practices, and conduct various reporting activities.

9. The provisions of the Elk Grove Municipal Code relating to reduction of pollutants in stormwater and inspection and monitoring must be revised in order for the City to comply with the terms of the Municipal Stormwater Permit, with federal stormwater regulations, and to allow the County EMD to conduct inspections and enforcement activities against certain commercial and industrial facilities within the City's jurisdiction pursuant to the March 17, 2004 Agreement between the City and County.

SECTION 3. AMENDMENT. Chapter 15.12 "Stormwater Management and Discharge Control," of the Elk Grove Municipal Code, is amended to read as follows:

Chapter 15.12

STORMWATER MANAGEMENT AND DISCHARGE CONTROL

Article 1 General Provisions
15.12.010 Findings.
15.12.020 Purpose and Intent.
15.12.030 Definitions.
15.12.035 Construction.
15.12.040 Applicability.
15.12.050 Regulatory Consistency.
15.12.060 Compliance Disclaimer.
15.12.070 Severability.
15.12.080 Administration.
15.12.090 Disclaimer of Liability.

Article 2 Prohibited Discharges
15.12.100 Prohibited Discharge.
15.12.110 Exceptions to Discharge Prohibition.
15.12.120 Exception to Otherwise Applicable Exemptions.
15.12.130 General Discharge Prohibition.
15.12.140 Threatened Prohibited Discharge.
15.12.150 Illicit Connections Prohibited.
15.12.160 Negligence or Intent Not Required.

Article 3 Reduction of Pollutants in Stormwater
15.12.200 General Requirements.
15.12.210 Containment and Notification of Spills.
15.12.220 Best Management Practices.
15.12.230 Administrative Rules and Regulations.
15.12.235 BMP Maintenance Requirements.

Article 4 Inspection, Monitoring and Reporting
15.12.300 Scope of Inspections.
15.12.330 Reporting Requirements

15.12.350 Fees.

Article 5 Enforcement
15.12.400 Notice of Non-Compliance.
15.12.410 Administrative Compliance Orders.
15.12.420 Cease and Desist Orders.
15.12.430 Delivery of Notice.
15.12.440 Administrative Appeals.
15.12.450 Nuisance and Abatement.
15.12.460 Civil Penalties.
15.12.470 Criminal Penalties.
15.12.480 Miscellaneous Enforcement Provisions.

Article 6 Recovery of Cost of Abatement
15.12.500 Costs of Abatement – Confirmation.
15.12.510 Costs – Assessments.
15.12.520 Treble Costs.
15.12.530 Hearing of Protests.
15.12.540 Assessment for Summary Abatement.
15.12.550 Time for Contest of Assessment.
15.12.560 Filing Copy of Report with County Auditor.

Article 7 Commercial and Industrial Facilities
15.12.600 Findings.
15.12.610 Purpose and Intent.
15.12.620 Delegation of Authority to County EMD
15.12.630 Expiration of this Article

Article 1
General Provisions

15.12.010 Findings.

a. The Federal Clean Water Act provides for the regulation and reduction of pollutants discharged into the waters of the United States by extending National Pollutant Discharge Elimination System requirements to stormwater and urban runoff discharge into the City stormwater conveyance system.

b. Stormwater flows from individual properties to the City stormwater conveyance system and then ultimately to the waters of the United States.

c. The City is a co-permittee under the Waste Discharge Requirements for County of Sacramento, cities of Sacramento, Folsom, Citrus Heights, Elk Grove, Rancho Cordova, and Galt Area-Wide Storm Water Discharges From Municipal Separate Storm Sewer Systems, which also serves as a National Pollutant Discharge Elimination System Permit under the Federal Clean Water Act (NPDES No. CA0082597). As a co-permittee, the City is required to possess the necessary legal

authority, and to implement appropriate procedures, to regulate the entry of pollutants and non-stormwater discharges into the City stormwater conveyance system.

d. The Municipal Storm Water Permit requires the City effectively to prohibit non-stormwater discharges into the City stormwater conveyance system except as otherwise permitted by Federal law.

e. The City Council finds in this regard that the provisions of this Chapter are necessary to provide the City with the legal authority necessary to implement and otherwise comply with the requirements of its Municipal Storm Water Permit.

15.12.020 Purpose and Intent.

a. This Chapter is adopted pursuant to Article XI, Section 7 of the California Constitution which authorizes the City to exercise its police power to protect and promote the public health, safety and general welfare. While stormwater runoff is one step in the natural cycle of water, human activities, including, but not limited to, agriculture, construction, manufacturing and the operation of an urban infrastructure, may result in undesirable discharges of pollutants and certain sediments. Such discharges may accumulate in local drainage channels and waterways and eventually may be deposited in the waters of the United States. The purpose of this Chapter is to protect and enhance the water quality of watercourses, water bodies and wetlands within the unincorporated area of the City in a manner consistent with the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and Municipal Discharge Permit #CA0082597 by controlling the contribution of urban pollutants to stormwater runoff which enters the City stormwater conveyance system.

b. It is the intent of the City Council in adopting this Chapter to provide the City with the legal authority to accomplish the following goals:

1. To reduce the discharge of pollutants in stormwater to the maximum extent practicable;

2. To effectively prohibit non-stormwater discharges into the City stormwater conveyance system;

3. To comply with the requirements of the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and NPDES Municipal Storm Water Discharge Permit #CA0082597 as they apply to the discharge of pollutants into and from the City stormwater conveyance system;

4. To fully implement the Comprehensive Stormwater Management Program as approved by the Regional Board;

5. To protect the physical integrity and function of the City stormwater conveyance system from the effects of pollutants and materials other than stormwater;

6. To prevent the contamination of groundwater as a result of pollution migration from the City stormwater conveyance system;

7. To promote cost effective management and beneficial use of sediments in the City stormwater conveyance system;

8. To protect the health and safety of maintenance personnel and the public who may be exposed to pollutants in the City stormwater conveyance system;

9. To provide for the recovery of regulatory costs incurred by the City in the implementation of its stormwater drainage program, including, but not limited to, enforcement activities, inspections, investigations, sampling and monitoring; and

10. To establish appropriate enforcement procedures and penalties for violations of the provisions of this Chapter.

15.12.030 Definitions.

Any term(s) defined in the Federal Clean Water Act, as amended, and/or defined in the regulations for the stormwater discharge permitting program issued by the United States Environmental Protection Agency, as amended, and which are not specifically defined in this Chapter shall, when used in this Chapter, have the same meaning as set forth in said Act or regulation.

As used in this Chapter, the following words and phrases shall have the meanings set forth below unless the context clearly indicates otherwise.

a. "Administrator" means the Administrator of the City's Department of Public Works and his or her designees.

b. "Best Management Practices (BMP)" means schedules of activities, prohibition of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce to the maximum extent practicable the discharge of pollutants directly or indirectly to waters of the United States. BMPs shall also be defined to include structural controls, treatment controls, training requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, and drainage from raw materials storage.

c. "City" means the City of Elk Grove.

d. "City Council" means the City Council of the City of Elk Grove.

e. "County" means the County of Sacramento.

f. "City Stormwater Conveyance System" means those public and natural facilities within the City which are owned, operated, maintained or controlled by the City by which stormwater may be conveyed to waters of the United States, including, but not

limited to, any roads with drainage systems, municipal streets, catch basins, water quality basins, detention basins, constructed wetlands, natural and artificial channels, aqueducts, canyons, stream beds, gullies, curbs, gutters, ditches, sumps, pumping stations, and storm drains. The City stormwater conveyance system includes natural creeks and small streams which are also defined as receiving waters by the Municipal Storm Water Permit, but does not include the Sacramento River, American River, Cosumnes River, Mokelumne River, or navigable waterways of the Delta.

g "Discharge" mean the release or placement of any material into the City stormwater conveyance system, including, but not limited to, stormwater, wastewater, solid materials, liquids, hazardous waste, raw materials, debris, litter or any other substance.

h. "Illicit connection" means any physical connection to the City stormwater conveyance system which is not expressly authorized by the City.

i. "Implementing Agency" means the agency or department designated by the Administrator to enforce the provisions of this Chapter with respect to a particular site, facility or industry category.

j. "Industry or industrial activity" means any service, business, enterprise, or any other activity conducted by any person for the purpose of monetary or other compensation.

k. "Material" means any substance, including, but not limited to, raw materials, finished products, garbage and debris, lawn clippings, leaves and other vegetation, biological and fecal waste, sediment and sludge, oil and grease, gasoline, paints, solvents, cleaners and any fluid or solid containing chemicals.

l. "Municipal Storm Water Permit" means NPDES Permit # CA0082597, including any amendments thereto or successor permit, issued by the Regional Board to the County and the cities of Folsom, Galt, Sacramento, Citrus Heights, Elk Grove and Rancho Cordova.

m. "National Pollution Discharge Elimination System Permit or NPDES Permit" means a permit issued by either the Regional Board or the State Water Resources Control Board pursuant to Chapter 5.5 (commencing with Section 13370) of Division 7 of the Water Code to control discharges from point sources to waters of the United States.

n. "Non-stormwater discharge" means any discharge to the City stormwater conveyance system or directly to the Sacramento River, the Cosumnes River, the Mokelumne River, the navigable waters of the Delta, or the American River which is not composed exclusively of stormwater.

o. "Person" means any natural person as well as any corporation, partnership, public agency, trust, estate, cooperative association, joint venture, business

entity or other similar entity, or the agent, employee or representative of any of the above.

p. "Pollutant" means any contaminant or other substance which, as determined by the Administrator, is discharged or has a reasonable potential to be discharged in sufficient quantities or concentrations to cause exceedance of receiving water limitations defined in Section C. 1. of the Municipal Storm Water Permit, or any successor section, or otherwise cause a violation of the Municipal Storm Water Permit. Pollutant may include, but is not limited to, solid waste, sewage, garbage, medical waste, wrecked or discarded equipment, radioactive material, dredged soil, rock, sand, industrial waste, feces, fecal coliform, fecal streptococcus, enterococcus, volatile organic carbon, surfactants, oil and grease, petroleum hydrocarbon, organic solvents, metals, phenols, pesticides, nutrients, suspended or settlable solids, materials causing an increase in biochemical or chemical oxygen or total organic carbon, substances which alter pH, and those pollutants defined in Section 1362(6) of the Federal Clean Water Act.

q. "Potential user" means any person who by nature of the enterprise, activity or industry in which such person is engaged, or by the use, possession or ownership of specified types of equipment, is determined by the Administrator to generate or have the capacity to generate wastes or wastewater which have significant potential to be discharged to the City stormwater conveyance system.

r. "Premises" means any building, lot, parcel or land, or portion thereof, whether improved or unimproved.

s. "Prohibited discharge" means any non-stormwater discharge to the City stormwater conveyance system or directly to the Sacramento River, the Cosumnes River, the Mokelumne River, navigable waters of the Delta, or the American River, which is not otherwise specifically authorized by this Chapter, the Regional Board, State or Federal law, or an NPDES permit.

t. "Receiving water limitations" means those restrictions defined and listed in Section C.1. of the Municipal Storm Water Permit or any successor section.

u. "Receiving waters" means surface bodies of water, as defined by the Municipal Storm Water Permit, including, but not limited to, creeks and rivers, which serve as discharge points for the City stormwater conveyance system.

v. "Regional board" means the California Regional Water Quality Control Board, Central Valley Region.

w. State General Construction Activity Permit shall mean the State Water Resources Control Board's Water Quality Order No. 99-08-DWQ, National Pollution Discharge Elimination System (NPDES) General Permit No. CAS000002 Waste Discharge Requirements (WDRS) for Discharges of Storm Water Runoff Associated With Construction Activity, and any successor documents.

x. State General Industrial Activity Permit shall mean the State Water Resources Control Board's Water Quality Order No. 97-03-DWQ, National Pollution Discharge Elimination System General Permit No. CAS000001, Waste Discharge Requirements for Discharges of Storm Water Associated With Industrial Activities Excluding Construction Activities, and any successor document.

y. "Stormwater" means surface runoff and drainage resulting from storm events and snow melt.

z. "Subject Activity" means any industrial activity which is determined by the Administrator to discharge or have the potential to discharge pollutants into stormwater or non-stormwater in quantities or concentrations which may cause exceedance of receiving water limitations, or for which a requirement has been imposed by the state or federal government on the City to conduct stormwater regulatory activities focused on the activity.

aa. "Threatened prohibited discharge" means any condition or activity which does not currently result in a prohibited discharge but is nevertheless determined by the Administrator to be a condition which results in a substantial likelihood of a future prohibited discharge.

bb. "User" means any person who discharges, or causes to discharge, either directly or indirectly, stormwater or any other material into the City stormwater conveyance system.

cc. "Waters of the United States" has the same meaning as set forth in Part 122.2 of Title 40 of the Code of Federal Regulations or any successor provision.

15.12.035 Construction.

The provisions of this Chapter shall be construed to assure consistency with the requirements of the Federal Clean Water Act and any acts amendatory thereof or supplementary thereto, applicable implementing regulations, and NPDES Permit # CA 0082597 and any amendment, revision or reissuance thereof. In the event of a conflict between this Chapter and any Federal or State law, regulation, order or permit, the requirement which establishes the higher standard for public health and safety shall govern.

15.12.040 Applicability.

The provisions of this Chapter shall be applicable to all users and potential users located within the City and all users that discharge either directly or indirectly into the City stormwater conveyance system. This Chapter shall not be applicable to persons located outside the boundaries of the City if their stormwater or non-stormwater discharge enters a stormwater conveyance facility owned or operated by another public agency which is subject to a valid NPDES Permit for discharges from a municipal separate storm sewer system prior to entering the City stormwater conveyance system.

This Chapter shall not apply to facilities subject to and in compliance with the State General Construction Activity Stormwater Permit and/or the City of Elk Grove Erosion and Sediment Control Ordinance. Non-stormwater discharges at construction sites between one and five acres in size, and which the Administrator determines are in accordance with the non-stormwater discharge standards of the State General Permit for Construction Activity, are considered to be in compliance with this Chapter. This Chapter shall not apply to facilities operated by the State of California or by agencies of the Federal Government.

15.12.050 Regulatory Consistency.

The provisions of this Chapter shall take precedence over and are controlling with respect to any conflicting or inconsistent provisions in this Code.

15.12.060 Compliance Disclaimer.

Compliance by any person with the provisions of this Chapter shall not preclude the need to comply with other local, state or federal statutory or regulatory requirements relating to the control of pollutant discharges or protection of stormwater quality, or both.

15.12.070 Severability.

If any section, subsection, subdivision, paragraph, sentence, clause or phrase of this Chapter is for any reason held to be invalid or unconstitutional by a decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases of this Chapter. The City Council hereby declares that it would have adopted this Chapter and each section, subsection, subdivision, paragraph, sentence, clause or phrase thereof without regard to whether any other section, subsection, subdivision, paragraph, sentence, clause or phrase of this Chapter would subsequently be declared to be invalid or unconstitutional.

15.12.080 Administration.

Except as otherwise provided herein, the Administrator shall be responsible for the administration, implementation and enforcement of the provisions of this Chapter. Any powers granted to or duties imposed upon the Administrator may be delegated by the Administrator to other City employees or, upon the approval of the City Council, to employees of other public agencies.

15.12.090 Disclaimer of Liability.

The degree of protection required by this Chapter is considered reasonable for regulatory purposes and is based on scientific, engineering and other relevant technical considerations. The standards set forth herein are minimum standards and this Chapter does not imply that compliance will ensure that there will be no unauthorized discharge of pollutants into the waters of the United States. This Chapter shall not create liability

on the part of the City or any officer or employee thereof for any damages that result from reliance on this Chapter or any administrative decision lawfully made thereunder.

Article 2
Prohibited Discharges

15.12.100 Prohibited Discharge.

Except as provided in Section 15.12.110, it shall be unlawful for any person to make or cause to be made any non-stormwater discharge into the City stormwater conveyance system or directly to the Sacramento River, American River, Cosumnes River, Mokelumne River, or navigable waters of the Delta.

15.12.110 Exceptions to Discharge Prohibition.

The following discharges to the City stormwater conveyance system are exempt from the otherwise applicable discharge prohibition set forth in Section 15.12.100:

a. Any discharge regulated under a NPDES permit issued to the discharger, and administered by the State pursuant to Chapter 5.5 of Division 7 of the Water Code, provided that any such discharge is in compliance with all requirements of the NPDES permit and all other applicable laws and regulations.

b. Any discharge from any of the following activities provided that any such discharge does not cause or contribute to the violation of any Receiving Water Limitation as determined by the Administrator:

1. Water line flushing;

2. Landscape irrigation;

3. Diverted stream flows;

4. Rising ground waters;

5. Uncontaminated ground water infiltration [as defined in 40 CFR 35.2005(20)] to separate storm sewers;

6. Uncontaminated pumped ground water;

7. Discharges from potable water sources;

8. Foundation drains;

9. Air conditioning condensate;

10. Irrigation water;

11. Springs;

12. Water from crawl space pumps;

13. Footing drains;

14. Lawn watering;

15. Individual residential car washing;

16. Flows from riparian habitats and wetlands;

17. Dechlorinated swimming pool discharges; or

18. Discharges or flows from emergency fire fighting activities.

c. Any discharges which the Administrator or the Regional Board determines in writing are necessary for the protection of public health or safety.

d. Additional categories of non-stormwater discharges which do not cause or contribute to the violation of any Receiving Water Limitation may be accepted from the otherwise applicable prohibition by the Administrator upon approval of the Executive Officer of the Regional Board, as provided in Sections A.3. and D.4.a.1.d. of the Municipal Storm Water Permit, or any successor sections.

15.12.120 Exception to Otherwise Applicable Exemptions.

Notwithstanding the exemptions provided for in Section 15.12.110 above, if the Regional Board or the Administrator determines that a discharge which is otherwise exempt from the prohibition on discharges causes or significantly contributes to the violation of any Receiving Water Limitation or results in the conveyance of significant quantities of pollutants to surface waters, or is otherwise a danger to public health or safety, the Administrator may give written notice to the owner or operator of the facility that the discharge exception shall not apply to the discharge at issue following expiration of the thirty (30) day period commencing upon delivery of the notice. Upon expiration of such thirty (30) day period, any such discharge shall be unlawful. Upon finding that any continuance of the discharge poses an immediate significant threat to the environment or to public health and safety, the Administrator may waive the thirty day waiting period and require immediate cessation of the discharge.

15.12.130 General Discharge Prohibition.

It shall be unlawful for any person to discharge, or cause to be discharged, any material to the City stormwater conveyance system which results in, or contributes to, a violation of the Municipal Storm Water Permit.

15.12.140 Threatened Prohibited Discharge.

It shall be unlawful for any person to maintain, or cause to be maintained, a threatened prohibited discharge after having received notice of the Administrator's determination as to the existence of a threatened prohibited discharge.

15.12.150 Illicit Connections Prohibited.

a. It shall be unlawful for any person to establish, use or maintain, or cause to establish, use or maintain, any illicit connection. Illicit connections shall be subject to removal and abatement by the City pursuant to Chapter 16.02 of this Code.

b. The prohibition set forth in subsection (a) above shall apply to illicit connections in existence at the time that this Chapter becomes effective. Upon the effective date of this Chapter, any person who maintains an illicit connection shall have thirty (30) days from the effective date of this Chapter to disconnect and discontinue use of such connection. Notwithstanding the provisions of this section, any person who maintains an illicit connection, as defined in Section 15.12.030(g), may apply to the City for a permit to continue the connection subject to applicable City standards.

15.12.160 Negligence or Intent Not Required.

A violation of the provisions of this Article shall occur irrespective of the negligence or intent of the violator to construct, maintain, operate or utilize an illicit connection or to cause, allow or facilitate any prohibited discharge.

Article 3
Reduction of Pollutants in Stormwater

15.12.200 General Requirements.

a. The Administrator may designate as Subject Activities any activities, including industrial activities, which are identified as potential sources of discharges of pollutants to the City Stormwater Conveyance System, or for which a requirement has been imposed by the state or federal government for the City to conduct stormwater regulatory activities focused on the Subject Activity in question.

b. Any person who the Administrator determines is conducting any Subject Activity shall prevent or reduce the discharge of pollutants from those activities, to the maximum extent practicable, through the implementation of BMPs in accordance with Section 15.12.220.

c. The Administrator shall conduct a notification and comment process for designations or determinations made pursuant to section (a) of this section.

d. Any determination made by the Administrator pursuant to subsection (b) of this section shall be subject to the provisions for the adoption of regulations set forth in Section 15.12.230.

15.12.210 Containment and Notification of Spills.

a. Any person owning or occupying premises, or conducting any activity, that has knowledge of any non-stormwater discharge or threatened prohibited discharge, from the premises or activity to the City stormwater conveyance system shall immediately take all reasonable action to contain and otherwise minimize any such discharge.

b. The Administrator may designate types of activities where the owner or operator of the activity shall be required to notify the Administrator or the Implementing Agency within twenty-four (24) hours of the discovery of an actual discharge into the City stormwater conveyance system.

c. For any discharge subject to the reporting requirements of the State of California Water Code Sections 13271 and 13272, notification in compliance therewith shall constitute sufficient notification for the purposes of this Section.

15.12.220 Best Management Practices.

a. The Administrator may adopt regulations for specified Subject Activities. Such regulations shall describe Best Management Practices ("BMPs") which, if implemented by persons conducting such Specified Activities, shall satisfy the requirements of Section 15.12.200.

b. Persons conducting Subject Activities may implement BMPs not contained in the adopted regulations to satisfy the requirement of Section 15.12.200(b) through either of the following mechanisms:

i. By submitting and receiving prior written approval for the alternative BMPs from the Administrator if he or she determines that the proposed alternative BMPs provide a level of protection from stormwater discharges equivalent to the BMPs contained in the regulations adopted pursuant to (a) above; or

ii. By implementing alternative BMPs which provide a level of protection from stormwater discharges equivalent to the BMPs contained in the regulations adopted pursuant to (a) above.

c. Any alternative BMPs implemented pursuant to subsection (b)(ii) above shall be subject to review and approval by the Administrator as part of the inspection procedures set forth in Article 4 of this Chapter. If a person conducting Subject Activities implements alternative BMPs without the prior written approval of the Administrator and subsequently receives written notice from the Administrator that the alternative BMPs do not provide the required equivalent level of protection from stormwater discharges, the continued implementation of such alternative BMPs shall be deemed to be a violation of the requirements of 15.12.200(b) as of the date of delivery of such notice unless it is ultimately determined pursuant to an administrative appeal

pursuant to Section 15.12.400 that the alternative BMPs provide the required equivalent level of protection from stormwater discharges.

d. Any facility that is in compliance with its State or Federal NPDES permit for stormwater discharges for that facility shall be deemed to have met the requirements of Section 15.12.200(b).

e. The Administrator shall develop regulations for determining when BMPs have been successfully implemented.

15.12.230 Administrative Rules and Regulations.

a. The Administrator shall have the authority to promulgate regulations for the implementation of this Chapter. Prior to the Administrator's initiation of any proposed regulations, the Administrator shall submit a public input plan to the City Council for its approval. The public input plan approved by the City Council shall be generally applicable to the promulgation of regulations by the Administrator.

b. All regulations promulgated by the Administrator shall be consistent with the provisions of this Chapter. Any such regulations, or amendments thereof, shall be filed with the Clerk of the City Council. The Clerk shall cause announcement of said rules or regulations to be published in a newspaper of general circulation within ten calendar days. Such announcements shall provide a reasonable summary of the content of the rule. In addition, the Administrator shall make a reasonable effort to identify, notify, and provide copies to any activities which are specifically designated by the Administrator as subject to a rule or regulation. However, neither the failure of the Administrator to provide such notice nor the failure to receive individual notice shall exempt an activity from that rule or regulation. No regulations promulgated by the Administrator, or amendments thereof, shall be enforced or become effective until thirty (30) calendar days following the date on which notification of the regulations are published.

c. Any person who asserts that he or she is aggrieved by the terms or application of a regulation issued pursuant to this section may appeal the issuance of such regulation by filing a written notice of appeal with the Clerk of the City Council. The notice of appeal shall specifically identify the regulation or regulations from which the appeal is taken and the reasons for the appeal. Upon receipt of such notice, the Clerk of the City Council shall schedule the appeal for a public hearing by the City Council. At the conclusion of the public hearing the City Council shall be vested with jurisdiction to deny the appeal or to rescind or modify the regulation. The City Council's determination in this regard shall be final.

d. Any regulation from which an appeal is filed prior to its effective date shall not become effective until the date of a determination by the City Council of the appeal. Any regulation from which an appeal is filed on or subsequent to the effective date thereof shall remain in full force and effect during the pendency of the appeal, and any decision which rescinds or modifies the regulation shall apply prospectively.

15.12.235 BMP Maintenance Requirements.

The Administrator may require a property owner to establish, document, and conduct a maintenance program, subject to approval, for any BMP. This requirement may apply to BMPs required by the City or BMPs that were voluntarily installed pursuant to Section 15.12.220. Such a maintenance program may be required when the Administrator determines that proper maintenance is necessary to protect public safety, health, infrastructure, or the environment, or to otherwise meet the purposes of this Chapter. Maintenance requirements established pursuant to this subsection must be appropriate for the site conditions and design of BMPs.

Article 4
Inspection, Monitoring and Reporting

15.12.300 Scope of Inspections.

a. Prior to commencing any inspection authorized pursuant to this section, the Administrator shall obtain the consent of the owner or occupant of the premises, an administrative inspection warrant or a criminal search warrant. Routine or area inspections shall be based upon such reasonable selection processes as may be deemed necessary to carry out the objectives of this Chapter including, but not limited to, random sampling, sampling in areas with evidence of stormwater contamination, illicit connections, discharge of non-stormwater to the City stormwater conveyance system or similar factors.

b. The Administrator may enter upon private property to investigate the source of any discharge to any public street, inlet, gutter, storm drain or the City storm-water conveyance system.

c. The Administrator may enter upon private property for the purpose of verifying compliance with the provisions of this Chapter, including, but not limited to, the following:

1. Identifying products produced, processes conducted, chemicals used and materials stored on or contained within the property;

2. Identifying point(s) of discharge of all wastewater, process water system, pollutants and other discharges from the property;

3. Investigating the natural slope of the premises, including drainage patterns and artificial conveyance systems;

4. Establishing the location of all points of discharge from the property, whether by surface run-off or through a storm drain system;

5. Locating any illicit connection or the source of any prohibited discharge; and

6. Evaluating implementation of BMPs.

d. For purposes of verifying compliance with the provisions of this Chapter, the Administrator may inspect any vehicle, truck, trailer, tank truck or other mobile equipment, or any stationary equipment, which may reasonably be believed to be used by the business for business-related activities and to be associated with industrial sources of pollutants or with non-stormwater discharges.

e. The Administrator may inspect all records of the owner or occupant of any premises relating to chemicals or processes presently or previously occurring on-site, including materials and/or chemical inventories, facilities maps or schematics or diagrams, material safety data sheets, hazardous waste manifests, business plans, pollution prevention plans, State general permits, monitoring program plans or any other records relating to illicit connections, prohibited discharges or the potential discharge of pollutants to the City stormwater conveyance system. In addition, the Administrator may require the owner or occupant to furnish, within a reasonable time period, copies of all such records.

f. The Administrator may conduct any necessary surveillance, inspect, sample and test any area runoff, soils area (including any groundwater testing), process discharge, materials within any waste storage area (including any container contents), and/or treatment system discharge for the purpose of determining the potential for the contribution of pollutants to the City stormwater conveyance system. The Administrator may conduct surveillance and investigate the integrity and layout of all storm drain and sanitary sewer system or other pipelines on the premises using appropriate tests, including, but not limited to, smoke and dye tests or video surveys. The Administrator may conduct any necessary surveillance, take photographs or video tape, make measurements or drawings, and create any other record reasonably necessary to document conditions on the premises.

g. The Administrator may require regular reports from industrial facilities and construction sites discharging into the City stormwater conveyance system.

h. The Administrator may erect and maintain monitoring and sampling devices for the purpose of measuring any discharge or potential source of discharge to the City stormwater conveyance system.

15.12.330 Reporting Requirements.

a. The Administrator may require any person to report information for purposes related to the goals of this Chapter. Required information may include but is not limited to the following: characterization of industrial activities; compliance with this Chapter, compliance with State General Permit requirements; compliance with Administrative Enforcement Orders or other enforcement actions; discharge monitoring; training; and BMP implementation, effectiveness, and maintenance.

b. The Administrator may require information to be submitted on an as needed basis.

c. The Administrator may require submitted information to be compiled, summarized, analyzed or organized in a reasonable manner that facilitates its interpretation or other use. As necessary to facilitate the use of information, the Administrator may also specify the medium and format of required submittals.

d. Failure to provide information in a timely manner as required by the Administrator, or knowingly or negligently providing false information shall be a violation of this Chapter.

15.12.350 Fees.

The Administrator shall collect such fees as may be authorized by the City Council to provide for the recovery of regulatory costs, including routine inspections and other regulatory functions associated with this Chapter. There shall be no fee assessed to appeal the determination that a person conducts any Subject Activity. Any such fees shall be established by resolution of the City Council.

Article 5
Enforcement

15.12.400 Notice of Non-Compliance.

a. The Administrator may deliver to the owner or occupant of any premises, or to any person responsible for an illicit connection, prohibited discharge, maintenance of a threatened prohibited discharge, failure to implement BMPs in accordance with Section 15.12.200(b), or any other violation of this Chapter a Notice of Non-Compliance. The Notice of Non-Compliance shall be delivered in accordance with Section 15.12.430 hereof.

b. The Notice of Non-Compliance shall identify the provision of this Chapter which has been violated. The Notice of Non-Compliance shall state that continued noncompliance may result in additional enforcement actions, including the recovery of any costs incurred by the City.

c. The Notice of Non-Compliance shall identify a compliance date that must be met; provided, however, that the compliance date may not exceed ninety (90) days unless the Administrator extends the compliance deadline an additional period not exceeding ninety (90) days when good cause exists for the extension.

15.12.410 Administrative Compliance Orders.

a. The Administrator may issue an Administrative Compliance Order. The Administrative Compliance Order shall be delivered in accordance with Section

15.12.430 hereof. The Administrative Compliance Order may be issued to any of the following:

1. The owner or occupant of any premises requiring abatement of conditions on the premises that cause or may cause a prohibited discharge in violation of this Chapter.

2. A person who fails to implement BMPs in accordance with Section 15.12.200(b).

3. Any person responsible for a prohibited discharge or maintenance of a threatened prohibited discharge.

b. The Administrative Compliance Order may include the following terms and conditions:

1. Specific steps and time schedules for compliance as reasonably necessary to prevent threatened or future unauthorized discharges, including, but not limited to, the threat of any prohibited discharge from any pond, pit, well, surface impoundment, holding or storage area.

2. Specific requirements for containment, cleanup, removal, storage, or proper disposal of any material having the potential to contribute pollutants to stormwater runoff.

3. Specific requirements for the installation of overhead covering.

4. Any terms or conditions reasonably calculated to prevent continued or threatened violations of this Chapter.

5. Any other measures necessary or appropriate to fully implement BMPs in accordance with Section 15.12.200(b).

15.12.420 Cease and Desist Orders.

a. The Administrator may issue a Cease and Desist Order. A Cease and Desist Order shall be delivered in accordance with Section 15.12.430 hereof. A Cease and Desist Order may direct the owner or occupant of any premises, or any other person responsible for any violation of this Chapter, to take any of the following action:

1. Immediately discontinue any prohibited discharge to the City stormwater conveyance system.

2. Immediately discontinue any other violation of this Chapter.

3. Clean up the area affected by the violation.

b. The Administrator may direct by a Cease and Desist Order that any person immediately cease any activity which may lead to a violation of Receiving Water Limitations.

15.12.430 Delivery of Notice.

Any notice of non-compliance, administrative compliance order, cease or desist order or other enforcement order pursuant to the requirements of this Chapter shall be subject to the following requirements:

a. The notice shall state that the recipient has a right to appeal the matter as set forth in Section 15.12.440 of this Chapter.

b. The notice shall state that the recipient or the property owner, or both, may be liable for all enforcement costs incurred by the City in correcting the violation.

c. Delivery shall be deemed complete upon either personal delivery to the recipient or deposit in the U.S. mail postage pre-paid for first class delivery.

d. Where the recipient of the notice is the owner of the property, the address for notice shall be the address from the most recently issued equalized assessment roll for the property.

e. Where the owner or occupant of any premises cannot be located after reasonable efforts of the Administrator, the notice shall be deemed delivered after posting on the premises for a period of ten (10) business days.

15.12.440 Administrative Appeals.

a. Except as set forth in subsection (c) below, any person receiving a notice of non-compliance, a designation as a person who conducts Subject Activities, an administrative compliance order or who is otherwise subject to an adverse determination pursuant to this Chapter may appeal the matter by requesting an administrative hearing before a hearing officer appointed by the City Council.

b. Any person appealing a notice of non-compliance, administrative compliance order, designation as a person who conducts Subject Activities or other adverse determination shall file, within thirty (30) days of receipt of notice thereof, a written request for an administrative hearing, accompanied by an administrative hearing fee as established by resolution of the City Council, with the Administrator. A hearing on the matter shall thereafter be held before a hearing officer within forty-five (45) days of the filing of the written request unless, in the reasonable discretion of the hearing officer and pursuant to a request by the appealing party, a continuance of the hearing is granted.

c. An administrative hearing on the issuance of a cease and desist order or following an emergency abatement action shall be held within five (5) business days

following the issuance of the order or the action of abatement, unless the hearing or the time requirement for the hearing is waived in writing by the party subject to the cease and desist order or the emergency abatement. A request for an administrative hearing shall not be required from the person subject to the cease and desist order or the emergency abatement.

d. The Administrator shall appear in support of the notice, order, designation, determination or emergency abatement action and the appealing party shall appear in support of the withdrawal of the notice, order, designation, determination or in opposition to the emergency abatement action. The City shall have the burden of supporting any enforcement or other action by a preponderance of the evidence. Each party shall have the right to present testimony and other documentary evidence as necessary for the appropriate presentation of the case.

e. Except in the case of a proceeding to determine the validity of a cease and desist order or a hearing following an emergency abatement, the final decision of the hearing officer shall be issued within ten (10) business days of the conclusion of the hearing and shall be delivered by first-class mail, postage prepaid, to the appealing party. In the case of a proceeding to determine the validity of a cease and desist order or a hearing following an emergency abatement, the final decision of the hearing officer shall be issued within five (5) business days following the conclusion of the hearing. The final decision shall include notice that any legal challenge to the final decision shall be made pursuant to the provisions of Code of Civil Procedure Sections 1094.5 and 1094.6 and shall be commenced within ninety (90) days following the final decision. Any administrative hearing fee paid by a prevailing party shall be refunded.

15.12.450 Nuisance and Abatement.

a. Any condition in violation of the provisions of this Chapter, including, but not limited to, the maintenance or use of any illicit connection or the occurrence of any prohibited discharge, shall constitute a threat to the public health, safety and welfare and is declared and deemed to be a public nuisance.

b. At the request of the Administrator, the City may seek a court order to enjoin or abate the nuisance, or both. Prior to seeking any court order to enjoin or abate a nuisance or threatened nuisance, the Administrator shall provide notice of the proposed injunction or abatement to the owner and occupant, if any, of the premises where the nuisance or threatened nuisance is occurring.

c. At the request of the Administrator, the City may seek an abatement warrant or other appropriate judicial authorization to enter the premises where any nuisance or threatened nuisance is occurring and to abate the condition and restore the area.

d. In the event the nuisance constitutes an imminent danger to public safety or the environment, the Administrator may enter the premises from which the nuisance emanates, abate the nuisance and restore any property affected by the nuisance

without prior notice to or consent from the owner or occupant thereof and without judicial warrant.

1. An imminent danger shall include, but is not limited to, exigent circumstances created by the dispersal of pollutants, where such pollutants presents a significant and immediate threat to the public safety or the environment.

2. Notwithstanding the authority of the City to conduct an emergency abatement action, an administrative hearing pursuant to Section 15.12.440 shall follow the emergency abatement action.

15.12.460 Civil Penalties.

a. In addition to any other remedies provided by this Chapter, there is hereby imposed an administrative civil penalty of up to $5,000 for each violation of this Chapter. Notice of any administrative civil penalty shall be served and proof of service shall be made in the same manner as provided in Section 15.12.430 hereof. The notice shall provide that any administrative civil penalty imposed shall be administratively reviewed by a hearing officer before it is enforced. When violation of this Chapter pertains to a continuing violation that does not create an immediate danger to health or safety, as determined by the Administrator, the violator shall be provided with a reasonable time to correct or otherwise remedy the violation prior to imposition of the penalty. The Administrator shall determine and notify the violator of the time within which the violator must correct or remedy the violation. The notice shall provide that an administrative civil penalty will be imposed if the continuing violation is not remedied or corrected within the time stated.

b. Enforcement of the administrative civil penalty imposed by the Administrator shall be by written order issued by the hearing officer following notice and an opportunity for hearing. Procedures concerning notice, conduct of the hearing, and service shall be as provided in Section 15.12.440 hereof. The order of the hearing officer concerning the administrative civil penalty shall be in writing resolving the essential issues raised and confirming, amending or rejecting the administrative civil penalty imposed by the Administrator. In reaching a decision concerning any administrative civil penalty, the hearing officer shall be guided by factors including, but not limited to the following: the danger to public health, safety and welfare represented by the violation, recidivism, and any economic benefit associated with non-compliance.

c. The manner of contesting the final order of the hearing officer concerning any administrative civil penalty is governed by Government Code Section 53069.4, or any successor provision thereto. Service of the notice of appeal authorized by Government Code Section 53069.4 on the City shall be served upon the Clerk of the City Council.

15.12.470 Criminal Penalties.

a. Any person who negligently or knowingly violates any provision of this Chapter, undertakes to conceal any violation of this Chapter, continues any violation of this Chapter after notice thereof, or fails to implement BMPs in accordance with Section 15.12.200(b) shall be guilty of a misdemeanor and upon conviction thereof be fined not more than $1,000 or imprisoned for not more than six (6) months in the City Jail, or both.

b. Each day in which a violation occurs and each separate failure to comply with either a separate provision of this Chapter, an administrative compliance order, a cease and desist order, or failure to implement BMPs in accordance with Section 15.12.200(b) shall constitute a separate violation of this Chapter punishable by fines or sentences in accordance herewith.

c. The Administrator may authorize specifically designated City employees to issue citations for misdemeanor violations of this Chapter pursuant to Penal Code Section 836.5.

15.12.480 Miscellaneous Enforcement Provisions.

a. Each and every remedy available for the enforcement of this Chapter shall be non-exclusive and it is within the discretion of the Administrator to seek cumulative remedies.

b. The Administrator may request the City to file a civil action in a court of competent jurisdiction seeking an injunction against any threatened or continuing noncompliance with the provisions of this Chapter. Any temporary, preliminary or permanent injunction issued pursuant to this subsection may include an order for reimbursement to the City of all costs incurred in enforcing this Chapter, including, but not limited to, costs of inspection, investigation and monitoring, the costs of abatement undertaken at the expense of the City, costs relating to the restoration of the environment and any other costs or expenses authorized by law.

c. The Administrator may request the City to file an action for civil damages in a court of competent jurisdiction seeking recovery of any of the following:

1. All costs incurred in the enforcement of this Chapter, including, but not limited to, costs relating to investigation, sampling, monitoring, inspection, administrative expenses, all other expenses authorized by law and consequential damages.

2. All costs incurred in mitigating harm to the environment or reducing the threat to human health.

3. Damages for irreparable harm to the environment.

d. The City is authorized to file actions for civil damages resulting from any trespass or nuisance occurring on public property or to the City stormwater conveyance system from any violation of this Chapter where such violation has caused damage, contamination or harm to the environment, public property or the City stormwater conveyance system.

e. The remedies available to the City pursuant to the provisions of this Chapter shall not limit the right of the City or any law enforcement agency to seek any other legal or equitable remedy that may be available to it.

f. Each day in which a violation occurs and each separate failure to implement BMPs in accordance with Section 15.12.200(b) or to comply with either a separate provision of this Chapter, an administrative compliance order, or a cease and desist order shall constitute a separate violation of this Chapter punishable by administrative penalties in accordance with this Chapter.

Article 6
Recovery of Cost of Abatement

15.12.500 Costs of Abatement – Confirmation.

a. When proceedings under this Chapter result in the correction of a violation of this Chapter or in a final determination that a violation exists subsequent to the date specified in any notice issued pursuant to the provisions of this Chapter, the costs of such proceedings incurred by the City may be assessed against the property. Such costs may include, but are not limited to, those incurred in inspecting property, publication, mailing and posting of notices, conducting hearings, processing appeals and pursuing any judicial action. It is the purpose of this section to allow the assessment against property of costs of proceedings if a violation is corrected in any manner.

b. The Administrator shall keep an account of the administrative and other costs of abatement, and shall submit to the City Council for confirmation an itemized written report showing such costs and their proposed assessment to the respective properties. The report shall be filed with the Clerk of the City Council not later than fifteen (15) calendar days in advance of the confirmation hearing required below.

c. Upon receipt of the report, the Clerk of the City Council shall schedule a public hearing to receive protests and confirm the report. A statement of the proposed assessment and notice of the time, date and place of the hearing, together with reference to the report on file with the Clerk, shall be mailed to the owner or owners of each parcel of property proposed to be assessed shown on the last equalized assessment roll available on the date of mailing of the notice or any other address or addresses ascertained to be more accurate. Such notice shall be mailed not later than fifteen (15) calendar days in advance of the hearing. Notice of the time, date and place of the public hearing by the City Council shall be published once in a newspaper of general circulation published with the City. With respect to each property proposed to be assessed for which the name or the owner or owners is not shown on the last equalized

assessment roll or no address for an owner is shown on the last equalized assessment roll, the notice shall show the name or names of the owner or owners, if such name or names are shown on the last equalized assessment roll, the assessor's parcel number, the street address of the property, if the property has an address and the address is known to the Administrator, the name of the street or road upon which such property abuts, if the property abuts upon a street or road, the amount of the proposed assessment and reference to the report on file with the Clerk. Such publication shall be made not later than fifteen (15) calendar days in advance of the hearing.

d. At the time fixed for receiving and considering the report, the City Council shall conduct a public hearing and shall receive and consider any objections from members of the general public or property owners liable to be assessed for the abatement. Written protests or objections shall specify the date, hour and description of the subject property under hearing. The City Council may continue the hearing and delegate to the City Manager or his designee the responsibility of hearing individual protests and submitting a recommendation with respect thereto; provided that the City Council provides an opportunity for individual consideration of each project upon receipt of the recommendation by the City Manager or his designee. The City Council may modify the report if it is deemed necessary. The City Council shall then confirm the report by motion or resolution.

15.12.510 Costs – Assessments.

a. If the costs as confirmed are not paid within thirty (30) days of the date of mailing of the notice or date of publication pursuant to Section 15.12.500 above, such costs shall be assessed against the parcel of land pursuant to Section 25845 of the Government Code, and shall be transmitted to the Tax Collector for collection and shall be subject to the same penalties and the same procedures and sale in case of delinquency as provided for ad valorem taxes.

b. If subsequent to the mailing of the notice of non-compliance and prior to transmittal of the notice of unpaid costs to the Tax Collector for collection as set forth in subsection (a) of this section, the property subject to the notice of non-compliance is sold, or title otherwise transferred to a bona fide purchaser, said costs shall be the responsibility of the owner of record as of the date said notice of non-compliance was placed in the United States postal system or posted on the property.

c. In addition to assessing the unpaid costs as provided in subsection (a) herein, the Tax Collector or his designated representative may pursue any remedy provided by law for collection of the unpaid costs.

15.12.520 Treble Costs.

Pursuant to Government Code Section 25845.5, upon entry of a second or subsequent civil or criminal judgment within a two (2) year period finding that an owner is responsible for a condition in violation of this Chapter that may be abated pursuant to

Government Code Section 25845, a court may order the owner to pay treble the costs of abatement.

15.12.530 Hearing of Protests.

Upon the day and hour fixed for the hearing, the City Council shall hear and pass upon the report of the Administrator together with any such protests or objections. The City Council may make such revision, correction or modification of the report or the charge as it may deem just; and in the event the City Council is satisfied with correctness of the charge, the report of the Administrator (as submitted or as revised, corrected or modified) together with the charge, shall be confirmed or rejected. The decision of the City Council on the report and the charge and on all objections or protests shall be final and conclusive.

15.12.540 Assessment for Summary Abatement.

Where the charge to be made is the result of summary abatement pursuant to Section 15.12.460(c), the City Council may determine whether or not the action to abate was proper, and may confirm the charge or not as it may deem proper.

15.12.550 Time for Contest of Assessment.

The validity of any assessment made under the provisions of this Chapter shall not be contested in any action or proceeding unless the same is commenced within thirty (30) days after the assessment is ordered to be placed upon the assessment roll as provided herein.

15.12.560 Filing Copy of Report with County Auditor.

A certified copy of the assessment shall be filed with the County Auditor on or before August 1. The descriptions of the parcels reported shall be those used for the same parcels on the map books of the County Assessor for the current year.

Article 7
Commercial and Industrial Facilities

15.12.600 Findings.

a. One of the requirements of the municipal stormwater permit (NPDES No. CAS0082597) to which the City is a co-permittee, is to track, inspect, and ensure compliance with stormwater ordinances at certain commercial and industrial facilities.

b. The Sacramento County Environmental Management Department (EMD), as both the State-designated Certified Unified Program Agency (CUPA) and the Environmental Health Agency for Sacramento County, is currently tracking and inspecting the majority of commercial and industrial facilities subject to the provisions of the municipal stormwater permit.

c. Utilizing EMD to fulfill the commercial and industrial inspection program requirements under the municipal stormwater permit will result in greater program efficiency, reduced program costs, reduced impacts to the regulated business community, and is in the best interest of the City.

d. On March 17, 2004, the City Council authorized the City Manager to enter into an agreement with EMD for fulfilling the NPDES permit inspection requirements with respect to commercial and industrial facilities.

e. Under the Agreement, the City is required to amend the stormwater ordinance as necessary to authorize the County EMD to implement the stormwater compliance program for commercial and industrial facilities. The City must make any necessary amendments to the stormwater ordinance to the extent necessary to authorize EMD to:

1. Conduct all necessary inspections or re-inspections of regulated facilities within the incorporated City area;

2. Take any necessary enforcement actions as authorized by the Municipal Code and consistent with a City-approved enforcement plan;

3. Investigate and follow-up referred complaints at eligible facilities;

4. Establish and collect fees necessary to recover program implementation costs.

f. The term of the Agreement is July 1, 2004 through June 30, 2010, unless sooner terminated, or extended by the City and County.

15.12.610 Purpose and Intent.

a. The purpose of this Article is to fulfill the requirements of the Agreement between the City and Sacramento County, authorized by the City Council on March 17, 2004, whereby the County shall assume responsibility for providing tracking, inspection, and enforcement of the City's stormwater ordinance with respect to commercial and industrial facilities within the incorporated City area as required by the municipal stormwater permit.

b. It is the intent of the City Council in adopting this Article to provide the necessary amendments in order to authorize the County to accomplish the following goals:

1. Conduct all necessary inspections or re-inspections of regulated facilities within the incorporated City area;

2. Take any necessary enforcement actions as authorized by the Municipal Code and consistent with a City-approved enforcement plan;

3. Investigate and follow-up referred complaints at eligible facilities;

4. Establish and collect fees necessary to recover program implementation costs.

15.12.620 Delegation of Authority to County EMD

a. Pursuant to the Agreement authorized by the City Council on March 17, 2004, whereby the County shall assume responsibility for tracking, inspecting, and enforcing the City's stormwater ordinance at certain commercial and industrial facilities specified in the municipal stormwater permit, the term "Administrator," as used in this Chapter shall also mean the Director of the Sacramento County Environmental Management Department and his or her designees.

b. Any administrative or civil enforcement by the Director of the Sacramento County EMD or his or her designees of any provision of this Chapter under this Article shall be governed by and conducted pursuant to Chapter 15.12 of the Sacramento County Code.

c. Sacramento County may establish and collect from commercial and industrial facilities located within the City such fees as may be necessary to cover the actual costs incurred by Sacramento County to include these facilities in its commercial and industrial compliance program, provided that the fees are established and collected in accordance with the provisions of the Agreement and all applicable legal requirements.

d. The delegation of authority to Sacramento County under this Article is limited to only that required by the March 17, 2004 Agreement, as may be necessary to allow the Director of the County EMD to track, inspect, and ensure compliance with the City's stormwater ordinance at commercial and industrial facilities as required under the municipal stormwater permit.

15.12.630 Expiration of This Article.

The provisions of this Article 7 shall remain in effect only to the extent that the March 17, 2004 Agreement between the City and County EMD, or any successor agreement, remains in effect. Upon expiration of the Agreement, or any successor agreement, the provisions of this Article shall expire.

SECTION 4. EFFECTIVE DATE. This ordinance shall take effective immediately as an urgency ordinance. As of July 1, 2004, the Sacramento County Environmental Management Department is responsible for conducting inspections on certain commercial and industrial facilities within the City's jurisdiction. In order to conduct these inspections, and to allow the County to reschedule any inspections which may have been missed in the intervening time since July 1, 2004, this ordinance is necessary immediately. For these reasons, the City Council finds that the immediate passage of this ordinance is necessary for the immediate preservation of the public

peace, health, and safety, the physical integrity of the City and orderly administration of municipal affairs within the City of Elk Grove.

SECTION 5. PUBLICATION. In lieu of publication of the full text of the ordinance within 15 days after its passage, a summary of the ordinance may be published at least five days prior to and fifteen (15) days after adoption by the City Council and a certified copy shall be posted in the office of the City Clerk, pursuant to GC 36933(c)(1).

PASSED AND ADOPTED by the City Council of the City of Elk Grove on this 18th day of August 2004.

SOPHIA SCHERMAN, MAYOR
CITY OF ELK GROVE

CITY OF
FOLSOM
DISTINCTIVE BY NATURE

April 20, 2009

Mr. William Marshall
California Regional Water Quality Control Board
Central Valley Region
11020 Sun Center Drive, Suite 200
Rancho Cordova, CA 95670-6114

Re: Statement of Legal Authority to Implement and Enforce Federal NPDES Storm Water Regulations and Sacramento NPDES/MS4 Permit No. CAS082597

Dear Mr. Marshall:

The "Waste Discharge Requirements [for County of Sacramento and] Cities of Citrus Heights, Elk Grove, Folsom, Galt, Rancho Cordova and Sacramento Storm Water Discharges from Municipal Separate Storm Sewer System Sacramento County, NPDES No. CAS082597, Order No. R5-2008-0142" (Order) which was issued by the California Regional Water Quality Control Board Central Valley Region on September 11, 2008 requires a statement of legal authority to implement and enforce the requirements contained in 40 CFR Section 122.26(d)(2)(i)(A-F) and the Order. The statement is required to include the following:

a. Citation of urban runoff related ordinances adopted by the Permittee and the reasons the ordinances are enforceable;

b. Progressive enforcement policy and how it will be effectively implemented;

c. Identification of the local administrative and legal procedures available to mandate compliance with the Permittee's urban runoff related ordinances, which incorporate the conditions of the Order;

d. Description of how these ordinances are implemented and how enforcement and actions under these ordinances may be appealed;

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions; and

f. A description and summarization of the Permittee's storm water management structure, including the coordination and communication between departments.

The City of Folsom submits the following statement verifying its authority to implement and enforce the requirements of the Order and associated federal Storm Water regulations. The City submits this statement along with its Stormwater Quality Improvement Plan ("SQIP") as required by the Order.

Statement of Legal Authority

a. Citation of urban runoff related ordinances adopted by the Permittee and the reasons the ordinances are enforceable

The primary ordinance regulating and controlling discharges to the City's municipal separate storm sewer system (MS4) is Chapter 8.70, Storm Water Management and Discharge Control (a copy of which is attached hereto as Exhibit A, "Storm Water Ordinance") of the *Folsom Municipal Code* ("FMC"). One of the stated objectives of the Storm Water Ordinance is to provide the City with the legal authority to comply with the requirements of the NPDES permit.

FMC Chapter 14.29, Grading (a copy of which is attached hereto as Exhibit B, "Grading Ordinance") was adopted, in part, to: maintain the natural environment; address the harmful effects of runoff; assure the proper restoration of vegetation and soil systems; and control against dust and erosion and their consequent effects on soil structure and water quality. The Grading Ordinance sets forth rules and regulations to control: excavation; grading and earthwork construction, including fills and embankments; establishes the procedure for the issuance of grading permits; provides for approval of plans; and authorizes inspection of grading activities.

The City of Folsom Charter (Charter) was adopted on June 5, 1990 and filed with the Secretary of State on August 13, 1990. Section 1.01 of the Charter establishes the general powers of the City, including the power to make and enforce all ordinances and regulations with respect to municipal affairs and other matters subject to applicable general laws. The ordinances set forth in Chapters 8.70 and 14.29 of the FMC are enforceable as they were adopted by the Folsom City Council pursuant to the procedural requirements set forth in Section 2.12 of the Charter. These ordinances were codified pursuant to the provisions of the Government Code of the state of California.

Although Chapter 8.70, the Storm Water Ordinance, was substantially revised in 2004 to comply with the 2002 stormwater permit requirements, there is a requirement in the 2008 Order which is not specifically addressed by the Ordinance. The 2008 Order requires the Permittees to "require that all developments subject to Development Standards and site specific plan requirements provide verification of maintenance provisions for Structural

Treatment Control best management practices (BMP's), including, but not limited to, legal agreements, covenants, California Environmental Quality Act (CEQA) mitigation requirements, and/or conditional use permits." The Storm Water Ordinance currently requires proper operation, and maintenance of BMP's and other control measures; however, the ordinance does not address verification of maintenance provisions, such as a legally enforceable agreement.

City staff will recommend to the City Council that revisions be made to the Storm Water Ordinance to address the aforementioned provision and any others that arise throughout implementation of this Order.

b. Progressive enforcement policy and how it will be effectively implemented

The City of Folsom, pursuant to its authority as a charter city, has adopted procedures, standards, sanctions/fines and remedies for the enforcement of the FMC. These may be found at Title 1, Chapters 1.08-1.10. A copy of these code provisions are attached hereto as Exhibit C.

FMC Title 8, Health, Sanitation and Welfare, Chapter 8.70, Sections 8.70.400 through 8.70.510, provide that Chapter 8.70 shall be enforced pursuant to Title 1, Chapters 1.08 through 1.10, inclusive.

All of the sanctions for administrative violations (*See* FMC Title 1, Chapter 1.09, Section 1.09.013, attached) are available as progressive remedies under the Permittee's ordinance. Additionally, violation of Chapter 8.70 is identified as a Level E violation, subjecting the violator to a fine of $100 to $10,000, which may be imposed on a per day basis for each violation.

On or about April 4, 2004, the City entered into a Memorandum of Understanding with the County of Sacramento, Environmental Management Department, to track, inspect and insure the compliance of the City's commercial and industrial facilities per California Regional Water Quality Control Board Order No. R5-2002-0206. The County Environmental Management Department is both the State designated Certified Unified Program Agency and Environmental Health Agency for Sacramento County. Their authority is established in Chapter 6.11, Division 20 and Chapter 4, Division 104 of the Health and Safety Code.

In addition to the City ordinances, the County has a progressive enforcement policy for this portion of the City's compliance, which is founded in the County's stormwater ordinance, and those ordinances of the Permitees, including the City of Folsom's stormwater ordinance. Enforcement of City of Folsom provisions is conducted by the City of Folsom. A copy of the County's policy is attached hereto as Exhibit D.

c. Identification of the local administrative and legal procedures available to mandate compliance with the Permittee's urban runoff related ordinances, which incorporate the conditions of the Order

The local administrative and legal procedures available to mandate compliance with Folsom's Storm Water Ordinance and Grading Ordinance are set forth in FMC Chapter 8.70, Storm Water Management and Discharge Control (Exhibit A); and FMC Chapter 14.29, Grading (Exhibit B). The provisions set forth in Chapter 8.70 are enforced pursuant to Chapter 1.08, Enforcement of the Folsom Municipal Code and Other Applicable Laws; Chapter 1.09, Administrative Violations and Administrative Enforcement Procedures; and Chapter 1.10, Additional Remedies (Exhibit C), of the FMC (Sections 8.70.400, 8.70.410, 8.70.420). The provisions set forth in Chapter 14.29 are enforced pursuant to Sections 14.29.430 and 14.29.410.

d. Description of how these ordinances are implemented and how enforcement and actions under these ordinances may be appealed

Storm Water Ordinance

Section 8.70.090 of the City's Storm Water Ordinance charges the "administrator" with the responsibility of administration, implementation and enforcement of the provisions of Chapter 8.70 (See also, Section 8.70.400.B.). The powers and duties granted or imposed upon the administrator may be delegated to other city employees or, upon the approval of the City Council, to employees of other public agencies. The "administrator" is defined as the Public Works Director or his or her designees (FMC Section 8.70.030). Implementation and enforcement of the ordinance may also require the participation of other departments and staff including, but not limited to, Code Enforcement, Community Development, Utilities and the City Attorney.

Pursuant to Section 8.70.230, the administrator has the authority to develop administrative rules and regulations governing the content and implementation of required Best Management Practices, the designation of significant dischargers, and the implementation of other provisions of the Storm Water Ordinance.

Any person charged with a violation of the Storm Water Ordinance and who has been served with a notice to correct, stop order or notice of administrative violation may contest the violation or proposed sanction by requesting a hearing (Section 1.09.030). Any stop order remains in effect until the time of the hearing and any subsequent judicial review (Section 1.09.031). The decision of the hearing officer constitutes the final administrative decision and such decision is not appealable to the City Council or any other City body (Section 1.09.050). Appeal is only available through judicial review of the final administrative decision by the filing of a writ of mandate (Section 1.09.051).

Grading Ordinance

Section 14.29.140 of the City's Grading Ordinance designates the Public Works department as the department responsible for the administration of the Grading Ordinance. Section 14.29.430.A. imposes the duty to enforce the provisions of the Grading Ordinance on the Public Works Director and other authorized employees of the City. Unless exempted, a grading permit must be issued by the Public Works Director, or his or her designee prior to the initiation of any grading, excavation, fill or dredging activities (Section 14.29.200, 14.29.260, 14.29.261, and 14.29.263). All grading operations for which a permit is required are subject to inspection by the Public Works Director (Section 14.29.400.A.). The Public Works Director also has the authority to suspend or revoke a permit (Section 14.29.410).

If a grading permit applicant or any other person is dissatisfied with any determination made by the Public Works Director, they may appeal the decision to the City Council (Sections 14.29.210 and 14.29.410.B.).[1]

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions

Storm Water Ordinance

If the Regional Board or the administrator determines that a discharge that is otherwise exempt from the prohibition on discharges causes or significantly contributes to the violation of any receiving water limitation, or results in the conveyance of significant quantities of pollutants to surface waters, or is otherwise a danger to public health or safety, the administrator has the authority to prohibit such discharge, or require the responsible party(ies) to implement BMP's that will reduce the pollutants to the maximum extent practicable (Section 8.70.130).

Pursuant to Section 8.70.230, the administrator has the authority to develop and establish BMP's which shall be implemented by persons conducting activities associated with certain categories of businesses as designated by the administrator. A violation of the Storm Water Ordinance is subject to the administrative enforcement procedures set forth in Chapter 1.08, Enforcement of the Folsom Municipal Code and Other Applicable Laws, Chapter 1.09, Administrative Violations and Administrative Enforcement Procedures, and Chapter 1.10, Additional Remedies (Exhibit C) (Sections 8.70.400, 8.70.410, 8.70.420). Violations are subject to a notice to correct, stop order, notice of administrative violation and administrative sanctions (1.09.023, 1.09.024, 1.09.012,

[1] Although the Grading Ordinance identifies the Public Works Director and the Public Works Department as the department and director responsible for administration and enforcement of the ordinance, due to departmental reorganizations the Grading Ordinance is being administered and enforced by the Community Development Director and the Community Development Department. The Community Development Director acts under authority as the designee. The departmental reorganizations have been generally addressed by Ordinance 994, however, specific changes to departmental references in the Grading Ordinance will be addressed in a future amendment to the Grading Ordinance.

1.09.013, 1.09.014). Administrative sanctions range from $100 to $10,000 (Section 8.70.410 C. and 1.09.012). A violation of the Storm Water Ordinance is also punishable as a misdemeanor (Section 8.70.410). Enforcement of the FMC or other applicable laws is not limited to the administrative enforcement procedures. If the City Attorney determines that enforcement through administrative procedures will not result in effective redress then enforcement may be sought through civil and criminal actions (Section 1.09.011).

Grading Ordinance

Unless exempted, a grading permit must be issued by the Public Works Director prior to the initiation of any grading, excavation, fill or dredging activities (Section 14.29.200, 14.29.260, 14.29.261, and 14.29.263). All work must be done in accordance with approved plans and specifications which cannot be changed, modified or altered without authorization from the Public Works Director. The Public Works Director may require modification of grading operations and project designs if delays occur which incur weather generated problems not considered at the time the permit was issued (Section 14.29.263.A.). Section 14.29.410 authorizes the Public Works Director to suspend or revoke a permit for various reasons, including failure to conform to the approved permit or threats to health, safety or public welfare. If the permittee fails to correct objectionable or emergency conditions, the City may correct the conditions and take action against the permittee's security to cover the cost (Section 14.29.410.C.). In the event any person, firm or corporation performs any work in violation of the Grading Ordinance or fails or refuses to perform any work required by the Grading Ordinance, such violation is declared a public nuisance, and at the direction of the City Council, the City Attorney is authorized to bring and prosecute an action to enjoin the performance of such work or maintenance of the completed work (Section 14.29.430.C.) A violation of the Grading Ordinance is also an infraction punishable by a progressive series of fines (Section 14.29.430.D.).

f. A description and summarization of the Permittee's storm water management structure, including the coordination and communication between departments

The City of Folsom Stormwater Management Program resides within the Department of Public Works. The Director of Public Works is the designated administrator of the Order who is responsible for overseeing the program and certifying all compliance deliverables. The City has designated staff in various departments to conduct the management, engineering, planning and maintenance activities required by the Stormwater Permit. A detailed description of the City's program organization and staffing is included in Section 7.2 Program Management, of the 2009 Stormwater Quality Improvement Plan.

Based on the ordinances discussed above and subject to the noted exceptions, this statement of legal authority is respectfully submitted. Please notify the undersigned if you need further information.

Very truly yours,

Bruce C. Cline
City Attorney

8.70.080 Severability.
8.70.090 Administration.
8.70.100 Disclaimer of liability.

Article II. Prohibited Discharges

8.70.110 Prohibited discharge.
8.70.120 Exceptions to discharge prohibition.
8.70.130 Exception to otherwise applicable exemptions.
8.70.140 General discharge prohibition.
8.70.150 Threatened prohibited discharge.
8.70.160 Illicit connections prohibited.
8.70.170 Negligence or intent not required.

Article III. Reduction of Pollutants In Stormwater

8.70.200 General requirements.
8.70.210 Containment and notification of spills.
8.70.220 Compliance with best management practices.
8.70.230 Best management practices.

Article IV. Inspection and Monitoring

8.70.300 Scope of inspections.
8.70.310 Establishment of stormwater management and discharge control fund.
8.70.320 Required commercial and industrial facility inspections.

Article V. Enforcement

8.70.400 Enforcement.
8.70.410 Penalties.
8.70.420 Enforcement procedures, notice to correct.

Article VI. Recovery of Costs

8.70.500 Abatement.
8.70.510 Regulatory actions.

Article I. General Provisions

8.70.010 Findings.

A. The Federal Clean Water Act provides for the regulation and reduction of pollutants discharged into the waters of the United States by extending National Pollutant Discharge Elimination System requirements to stormwater and urban run-off discharge into the city stormwater conveyance system.

B. Stormwater flows from individual properties to the city stormwater conveyance system and then ultimately to the waters of the United States.

C. The city is a co-permittee under the "Waste Discharge Requirements for County of Sacramento, Cities of Sacramento, Folsom, Elk Grove, Citrus Heights and Galt Area-Wide Storm Water Discharges From Municipal Separate Storm Sewer Systems Sacramento County" (Order No. R5-2002-0206) dated December 6, 2002, which also serves as a National Pollutant Discharge Elimination System Permit under the Federal Clean Water Act (NPDES No. CAS082597). As a co-permittee, the city is required to possess the necessary legal authority, and to implement appropriate procedures, to regulate the entry of pollutants and non-stormwater discharges into and from the city stormwater conveyance system.

D. The city's municipal stormwater permit requires the city effectively to prohibit non-stormwater discharges from the incorporated area of the city into the city stormwater conveyance system except as otherwise permitted by federal law.

E. Non-stormwater discharges and stormwater pollutants that are discharged directly to waters of the state without passing through the city stormwater conveyance system are not subject to the requirements of the municipal storm water permit. However, such discharges have the potential to degrade water quality and impact the quality of life for the people of the city. Regulation of such discharges by the city provides benefits to its people and protects the local environment.

F. The city council finds in this regard that the provisions of this chapter are necessary to provide the city with the legal authority necessary to implement and otherwise comply with the requirements of its municipal stormwater permit. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.020 Purpose and intent.

A. This chapter is adopted pursuant to Article XI, Section 7 of the California Constitution which authorizes the city to exercise its police power to protect and promote the public health, safety and general welfare. While stormwater runoff is one step in the natural cycle of water, human activities, including, but not limited to, agriculture, construction, manufacturing and the operation of an urban infrastructure, may result in undesirable discharges of pollutants and certain sediments. Such discharges may accumulate in local drainage channels and waterways and eventually may be deposited in the waters of the United States. The purpose of this chapter is to protect and enhance the water quality of watercourses, water bodies and wetlands within the incorporated area of the city in a manner consistent with the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and municipal discharge permit #CAS082597 by controlling the contribution of urban pollutants to stormwater runoff which enters the city stormwater conveyance system.

B. It is the intent of the city council in adopting this chapter to provide the city with the legal authority to accomplish the following goals:

1. To reduce the discharge of pollutants in stormwater to the maximum extent practicable (MEP);

2. To effectively prohibit non-stormwater discharges into the city stormwater conveyance system;

3. To comply with the requirements of the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and NPDES municipal stormwater discharge permit #CAS082597 as they apply to the discharge of pollutants into and from the city stormwater conveyance system;

4. To fully implement the city's comprehensive stormwater management program as approved by the regional board;

5. To protect the physical integrity and function of the city stormwater conveyance system from the effects of pollutants and materials other than stormwater;

6. To prevent the contamination of groundwater as a result of pollution migration from the city stormwater conveyance system;

7. To promote cost effective management and beneficial use of sediments in the city stormwater conveyance system;

8. To protect the health and safety of maintenance personnel and the public who may be exposed to pollutants in the city stormwater conveyance system;

9. To provide for the recovery of regulatory costs incurred by the city in the implementation of the comprehensive stormwater management program, including, but not limited to, enforcement activities, inspections, investigations, sampling and monitoring; and

10. To establish appropriate enforcement procedures and penalties for violations of the provisions of this chapter. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.030 Definitions.

A. As used in this chapter, the following words and phrases shall have the meanings set forth below unless the context

clearly indicates otherwise.

"Administrator" means the public works director and his or her designees.

"Best management practices" or "BMPs" means schedules of activities, prohibition of practices, general good house-keeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce to the maximum extent practicable pollutant discharges directly or indirectly to the city stormwater conveyance system or receiving waters. BMPs shall also be defined to include structural controls, treatment controls, source controls, training requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, and drainage from raw materials storage. BMPs may be established by the administrator for a particular individual business or industry type which shall be implemented by the owner or operator of a business.

"Business" means any commercial/industrial/retail business, enterprise, trade, service, calling, vocation, profession, or any means of livelihood whether or not carried on for gain or profit.

"City council" means the city council of the city of Folsom.

"City stormwater conveyance system" means those public and natural facilities within the incorporated area of the city which are owned, operated, maintained or controlled by the city by which stormwater may be conveyed to waters of the United States, including, but not limited to, any roads with drainage systems, municipal streets, catch basins, water quality basins, detention basins, constructed wetlands, natural and artificial channels, aqueducts, canyons, stream beds, gullies, curbs, gutters, ditches, sumps, pumping stations, drain inlets and storm drains.

"County" means the county of Sacramento.

"Discharge" means the release or placement of any pollutant into the city stormwater conveyance system or receiving waters.

"Illicit connection" means any physical connection to the city stormwater conveyance system or receiving waters which is not expressly authorized by the city.

"Illicit discharge" means any discharge to the storm drain system or receiving waters that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes all non-stormwater discharges except discharges pursuant to an NPDES permit, or discharges that are authorized by the regional board.

"Implementing agency" means the agency or department designated by the administrator to enforce the provisions of this chapter with respect to a particular site, facility or industry category.

"Material" means any substance, including, but not limited to, raw materials, finished products, garbage and debris, lawn clippings, leaves and other vegetation, biological and fecal waste, sediment and sludge, oil and grease, gasoline, paints, solvents, cleaners and any fluid or solid containing chemicals.

"Municipal stormwater permit" means NPDES Permit #CAS082597, including any amendments thereto or successor permit, issued by the regional board to the city, the selected incorporated cities within the boundaries of the county, and the county of Sacramento.

"National Pollutant Discharge Elimination System Permit" or "NPDES permit," means a permit issued by either the regional board or the State Water Resources Control Board pursuant to Chapter 5.5 (commencing with Section 13370) of Division 7 of the Water Code to control discharges from point sources to waters of the United States.

"Nonstormwater discharge" means any discharge to the city stormwater conveyance system or directly to the receiving waters that is not composed exclusively of stormwater.

"Person" means any natural person as well as any corporation, partnership, public agency, trust, estate, cooperative association, joint venture, business entity or other similar entity, or the agent, employee or representative of any of the above.

"Pollutant" means any contaminant or other substance which, if present in sufficient quantities or concentrations can cause exceedance of receiving water limitations defined in Section B 1. of the municipal stormwater permit, or any successor section or permit, or otherwise cause a violation of the municipal stormwater permit. Pollutant may include, but is not limited to, solid waste, sewage, garbage, medical waste, wrecked or discarded equipment, radioactive material, dredged soil, rock, sand, industrial waste, feces, fecal coliform, fecal streptococcus, enterococcus, volatile organic carbon, surfactants, oil and grease, petroleum hydrocarbon, organic solvents, metals, phenols, pesticides, nutrients, suspended or settleable solids,

materials causing an increase in biochemical or chemical oxygen or total organic carbon, substances which alter pH, and those pollutants defined in Section 1362(6) of the Federal Clean Water Act.

"Potential discharger" means any person who by nature of the business in which such person is engaged, or by the use, possession or ownership of specified types of equipment, is determined by the administrator to generate or have the capacity to generate pollutants which have significant potential to be discharged to the city stormwater conveyance system or receiving waters.

"Premises" means any building, lot, parcel or land, or portion thereof, whether improved or unimproved.

"Prohibited discharge" means any non-stormwater discharge to the city stormwater conveyance system or directly to the receiving waters, which is not otherwise specifically authorized by this chapter, the regional board, state or federal law, or an NPDES permit.

"Receiving water limitations" means those restrictions and prohibitions defined and listed in Section B 1. of the municipal stormwater permit or any successor section, or permit.

"Receiving waters" means surface bodies of water, as defined by the municipal stormwater permit, including, but not limited to, creeks and rivers, which serve as discharge points for the city stormwater conveyance system.

"Regional board" means the California Regional Water Quality Control Board, Central Valley Region.

"Significant redevelopment" means the creation or addition of at least 5,000 square feet of impervious surfaces on an already developed site. Significant redevelopment includes, but is not limited to, expansion of a building footprint, or replacement of a structure; replacement of impervious surface that is not part of a routine maintenance activity; and land disturbing activities related to structural or impervious surfaces.

"Stormwater" means surface runoff and drainage resulting from storm events and snowmelt.

"Threatened prohibited discharge" means any condition or activity which does not currently result in a prohibited discharge but has a substantial likelihood of resulting in a prohibited discharge.

"Discharger" means any person who discharges, or causes to discharge, either directly or indirectly, stormwater or any other pollutant into the city stormwater conveyance system or receiving waters.

"Waters of the state" means any surface water or groundwater, including saline waters, within the boundaries of the state.

"Waters of the United States" has the same meaning as set forth in Part 122.2 of Title 40 of the Code of Federal Regulations or any successor provision.

B. Any term(s) defined in the Federal Clean Water Act, as amended, and/or defined in the regulations for the stormwater discharge permitting program issued by the Environmental Protection Agency, as amended, and that are not specifically defined in subsection A of this section shall, when used in this chapter, have the same meaning as set forth in such act or regulations. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.040 Construction.

The provisions of this chapter shall be construed to assure consistency with the requirements of the Federal Clean Water Act and any acts amendatory thereof or supplementary thereto, applicable implementing regulations, and NPDES Permit # CA 0082597 and any amendment, revision or reissuance thereof. In the event of a conflict between this chapter and any federal or state law, regulation, order or permit, the requirement which establishes the higher standard for public health and safety shall govern. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.050 Applicability.

The provisions of this chapter shall be applicable to all dischargers and potential dischargers located within the incorporated area of the city and all dischargers or potential dischargers that discharge either directly or indirectly into the city stormwater conveyance system or receiving waters. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.060 Regulatory consistency.

The provisions of this chapter shall take precedence over and are controlling with respect to any conflicting or inconsistent

provisions in this code. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.070 Compliance disclaimer.

Compliance by any person with the provisions of this chapter shall not preclude the need to comply with other local, state or federal statutory or regulatory requirements relating to the control of pollutant discharges or protection of stormwater quality, or both. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.080 Severability.

If any section, subsection, subdivision, paragraph, sentence, clause or phrase of this chapter is for any reason held to be invalid or unconstitutional by a decision of any court of competent jurisdiction, such decision shall not affect the validity of the remaining sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases of this chapter. The city council hereby declares that it would have adopted this chapter and each section, subsection, subdivision, paragraph, sentence, clause or phrase thereof without regard to whether any other section, subsection, subdivision, paragraph, sentence, clause or phrase of this chapter would subsequently be declared to be invalid or unconstitutional. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.090 Administration.

Except as otherwise provided herein, the administrator shall be responsible for the administration, implementation and enforcement of the provisions of this chapter. Any powers granted to or duties imposed upon the administrator may be delegated by the administrator to other city employees or, upon the approval of the city council, to employees of other public agencies. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.100 Disclaimer of liability.

The degree of protection required by this chapter is considered reasonable for regulatory purposes and is based on scientific, engineering and other relevant technical considerations. The standards set forth herein are minimum standards and this chapter does not imply that compliance will ensure that there will be no unauthorized discharge of pollutants into the waters of the United States. This chapter shall not create liability on the part of the city or any officer or employee thereof for any damages that result from reliance on this chapter or any administrative decision lawfully made thereunder. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

Article II. Prohibited Discharges

8.70.110 Prohibited discharge.

Except as provided in Section 8.70.120, it shall be unlawful for any person to make or cause to be made any non-stormwater discharge into the city stormwater conveyance system or receiving waters. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.120 Exceptions to discharge prohibition.

The following discharges to the city stormwater conveyance system are exempt from the otherwise applicable discharge prohibition set forth in Section 8.70.110:

A. Any discharge regulated under an NPDES permit issued to the discharger, and administered by the state pursuant to Chapter 5.5 of Division 7 of the Water Code, provided that any such discharge is in compliance with all requirements of the NPDES permit and all other applicable laws and regulations.

B. Any discharge from the following activities provided that any such discharge does not cause or contribute to the violation of any receiving water limitation.

1. Water line flushing and other planned or unplanned discharges from potable water sources;
2. Landscape irrigation and lawn watering;
3. Diverted stream flows;
4. Rising groundwaters or springs;
5. Uncontaminated groundwater infiltration, as defined in 40 CFR 35.2005(20) or any successor provision, to separate storm sewers;
6. Pumped groundwater that does not contain any pollutants;

7. Water from crawl space pumps;

8. Passive foundation and footing drains;

9. Air conditioning condensation;

10. Individual residential car washing;

11. Natural flows from riparian habitats and wetlands;

12. Dechlorinated swimming pool discharges that do not contain biocides or other chemicals, excluding filter backwash water;

13. Irrigation water; and

14. Waters that do not contain any wastes as defined in Water Code Section 13050(d) and Health and Safety Code Section 25117.

C. Any discharges which the administrator, the county health officer or the regional board determines in writing are necessary for the protection of public health or safety.

D. Additional categories of non-stormwater discharges which do not cause or contribute to the violation of any receiving water limitation may be exempted from the otherwise applicable prohibition by the administrator upon approval of the executive officer of the regional board, as provided in the municipal stormwater permit, or any successor sections. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.130 Exception to otherwise applicable exemptions.

Notwithstanding the exemptions provided for in Section 8.70.120, if the regional board or the administrator determines that a discharge which is otherwise exempt from the prohibition on discharges causes or significantly contributes to the violation of any receiving water limitation or is identified as a source of pollutants to waters of the State, or is otherwise a danger to public health or safety, the administrator may prohibit such discharge or require the responsible party(ies) to implement BMPs that will reduce the pollutants to the maximum extent practicable. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.140 General discharge prohibition.

It shall be unlawful for any person to discharge, or cause to be discharged, any pollutant to the city stormwater conveyance system or receiving waters which results in, or contributes to, a violation of the municipal stormwater permit. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.150 Threatened prohibited discharge.

It shall be unlawful for any person to maintain, or cause to be maintained, a threatened prohibited discharge after having received notice of the administrator's determination as to the existence of a threatened prohibited discharge. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.160 Illicit connections prohibited.

A. It shall be unlawful or any person to establish, use or maintain, or cause to establish, use or maintain, any illicit connection. Illicit connections shall be subject to removal and abatement by the city pursuant to Chapters 1.08 to 1.10 of this code.

B. The prohibition set forth in subsection A of this section shall apply to connections in existence at the time that this chapter becomes effective, irrespective of whether such connection was made under a permit or other authorization or whether permissible under the laws or practices applicable or prevailing at the time that the connection was made. Upon the effective date of this chapter, any person who maintains an illicit connection shall have 30 days from the effective date of this chapter to disconnect and discontinue use of such connection. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.170 Negligence or intent not required.

A violation of the provisions of this article shall occur irrespective of the negligence or intent of the violator to construct, maintain, operate or utilize an illicit connection or to cause, allow or facilitate any prohibited discharge. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

Article III. Reduction of Pollutants In Stormwater

8.70.200 General requirements.

Any person engaged in activities which may result in non-stormwater or pollutants entering the stormwater conveyance system or receiving waters shall undertake all measures to eliminate or reduce the risk of non-stormwater and/or pollutant discharges to the maximum extent practicable. The following requirements shall apply:

A. Business Related Activities.

1. Stormwater Pollution Prevention Plan. The administrator may require any business in the city that is engaged in activities that may result in non-stormwater and/or pollutant discharges to develop and implement a stormwater pollution prevention plan in accordance with requirements established by the administrator.

2. Coordination with Hazardous Materials Release Response Plans and Inventory. Any business requiring a hazardous materials release response and inventory plan under Chapter 6.95 (commencing with Section 25500) of Division 20 of the California Health and Safety Code, shall include in that plan provisions for compliance with this chapter, including the provisions prohibiting non-stormwater discharges and illicit discharges, and requiring the discharge of pollutants to be reduced to the maximum extent practicable.

3. Coordination with Hazardous Waste Generator Contingency Plan and Emergency Procedures. Any business requiring a hazardous waste generator contingency plan and emergency procedures pursuant to California Code of Regulations, Title 22, Sections 66265.51 to 66265.56, shall include in that plan provisions for compliance with this chapter, including the provisions prohibiting non-stormwater discharges and illicit discharges, and requiring the discharge of pollutants to be reduced to the maximum extent practicable.

B. Development/Redevelopment.

1. The administrator may develop controls as appropriate to minimize the long-term, post construction discharge of non-stormwater and/or pollutants from new development or significant redevelopment. Controls may include source control measures to prevent pollution of stormwater and/or treatment controls designed to remove pollutants from stormwater.

2. Any person associated with construction activities in the city shall prevent non-stormwater and/or pollutants from entering the stormwater conveyance system or receiving waters and comply with all applicable federal, state and local laws, ordinances or regulations including but not limited to the general permit for stormwater discharges associated with construction activity issued by the State Water Resources Control Board and any city ordinance, regulation or standard related to development and grading.

C. Compliance with General and/or Individual Stormwater Permits. Each discharger subject to any general and/or individual stormwater permit issued by the United States Environmental Protection Agency, the State Water Resources Control Board, the Regional Water Quality Control Board or the city of Folsom shall comply with the requirements of such permit. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.210 Containment and notification of spills.

Any person owning or occupying a premises that has knowledge of any discharge of pollutants, any non-stormwater discharge or threatened prohibited discharge, from the premises to the city stormwater conveyance system or receiving waters shall immediately take all reasonable action to contain and otherwise minimize any such discharge and notify the city within 24 hours of such prohibited discharge or threatened prohibited discharge. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.220 Compliance with best management practices.

Every person undertaking any activity or use of a premises which may cause or contribute to stormwater pollution or contamination, illicit discharges, or other non-stormwater discharges shall (1) comply with those best management practices or pollution control measures as may be established by the administrator and (2) properly operate and maintain those best management practices or control measures utilized on the premises to prevent or reduce, to the maximum extent practicable, stormwater pollution or contamination, illicit discharges, or other non-stormwater discharges as required by the administrator. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.230 Best management practices.

The administrator may establish BMPs which shall be implemented by persons conducting activities associated with certain categories of businesses as designated by the administrator. Those activities for which BMPs may be established include, but are not limited to, new development and/or significant redevelopment, construction, maintenance, storage, material handling, food handling, waste handling, air pollution control, water and wastewater treatment, heating and cooling, manufacturing, assembly, equipment operations, vehicle washing, maintenance, loading, and fueling, and cleaning (including carpets, streets, sidewalks, etc.). BMPs may be established for individual premises or businesses, or may be established generally for categories of business activities or equipment. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

Article IV. Inspection and Monitoring

8.70.300 Scope of inspections.

A. Prior to commencing any inspection authorized pursuant to this section, in the absence of an emergency situation that results in an immediate threat to life, health, safety, or the general welfare, the administrator shall obtain the consent of the owner or occupant of the premises. If such consent is not obtained, the administrator shall obtain an administrative inspection warrant or a criminal search warrant, as may be required by law. In the event an emergency situation is in progress, the administrator may enter upon private property to eliminate an immediate threat to life, health, safety, or the general welfare including, but not limited to, abatement, cleanup and disposal of a prohibited discharge or threatened prohibited discharge.

B. Routine and/or area inspections shall be based upon such reasonable selection processes as may be deemed necessary to carry out the objectives of this chapter, including, but not limited to, random sampling, sampling in areas with evidence of stormwater contamination, illicit connections, discharge of non-stormwater to the city stormwater conveyance system or receiving waters or similar factors.

C. The administrator may enter upon private property to investigate the source of any discharge to any public street, inlet, gutter, storm drain or the city stormwater conveyance system or receiving waters.

D. The administrator may enter upon private property for the purpose of verifying compliance with the provisions of this chapter, including, but not limited to, the following:

1. Identifying products produced, processes conducted, chemicals used and materials stored on or contained within the property;

2. Identifying point(s) of discharge of all wastewater, process water systems, pollutants and other discharges from the property;

3. Investigating the natural slope of the premises, including drainage patterns and artificial conveyance systems;

4. Establishing the location of all points of discharge from the property, whether by surface run-off or through a storm drain system;

5. Locating any illicit connection or the source of any prohibited discharge; and

6. Evaluating compliance with BMPs.

E. For purposes of verifying compliance with the provisions of this chapter, the administrator may inspect any vehicle, truck, trailer, tank truck or other mobile equipment.

F. The administrator may inspect, review and copy all records of the owner and/or occupant/business owner of any premises relating to illicit connections, prohibited discharges or threatened prohibited discharge of pollutants to the city stormwater conveyance system or receiving waters. This may include, but not be limited to, chemicals or processes presently or previously occurring on-site, including materials and/or chemical inventories, facilities maps or schematics or diagrams, material safety data sheets, hazardous waste manifests, business plans, pollution prevention plans, state general permits, monitoring program plans or any other records.

G. The administrator may inspect, sample and test any area runoff, soils area (including any groundwater testing), process discharge, materials within any waste storage area (including any container contents), and/or treatment system discharge for the purpose of determining the potential for the contribution of pollutants to the city stormwater conveyance system or receiving waters. The administrator may investigate the integrity of all storm drain and sanitary sewer systems or other pipelines on the premises using appropriate tests, including, but not limited to, smoke and dye tests or video surveys. The administrator may take photographs or videotape, make measurements or drawings, and create any other record reasonable necessary to document conditions on the premises.

H. The administrator may erect and maintain monitoring and sampling devices for the purpose of measuring any discharge or potential source of discharge to the city stormwater conveyance system or receiving waters.

I. The administrator may require regular reports from a premises owner and/or business owner regarding the provisions of this chapter whose premises discharges to the city stormwater conveyance system or receiving waters.

J. City-approved construction permits including approved building permits shall constitute permission by premises owner and/or business owner for administrator or designee to enter upon premises and conduct any and all inspections, monitoring and testing necessary to determine compliance with this code and approved permits.

K. The business owner and/or premises owner shall bear all costs incurred by the city associated with the administration and enforcement of this chapter including, but not limited to, investigation, testing, reports, and monitoring. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.310 Establishment of stormwater management and discharge control fund.

Fees to defray the cost of processing applications, determining compliance, and monitoring compliance pursuant to this title may be established by resolution of the city council. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.320 Commercial and industrial facility inspections.

A. The city and Sacramento County are co-permittees under NPDES Permit No. CAS082597. The permit requires regular compliance inspections and enforcement at certain commercial and industrial facilities as defined by the permit. Sacramento County operates an inspection, investigation and enforcement program that enforces compliance with environmental and water quality requirements by commercial and industrial facilities located within the county.

B. Under Article 11, Section 8 of the California Constitution, and applicable provisions of the city and Sacramento County Charters, the city and Sacramento County may enter into agreements for Sacramento County to perform specified municipal functions within the city.

C. In order to provide for effective and efficient administration and enforcement of this chapter with respect to commercial and industrial facilities within the city, and to ensure compliance with NPDES Permit No. CAS082597, the city council and the Sacramento County board of supervisors may enter into an agreement or agreements for Sacramento County to administer and enforce the provisions of this chapter with respect to commercial and industrial facilities located within the city, by including commercial and industrial facilities located within the city in Sacramento County's commercial and industrial compliance program. If the city council and the Sacramento County board of supervisors enter into such an agreement or agreements:

1. Sacramento County and its authorized official(s) and employee(s) shall enforce the provisions of this chapter as they apply to commercial and industrial facilities located within the city, in accordance with the provisions of such agreement(s).

2. Sacramento County and its authorized official(s) and employee(s) shall be authorized to take any action with respect to commercial and industrial facilities located within the city, in accordance with the provisions of this chapter and such agreement(s).

3. Sacramento County may establish and collect from commercial and industrial facilities located within the city such fees as may be necessary to cover the actual costs incurred by Sacramento County to include these facilities in its commercial and industrial compliance program, provided that the fees are established and collected in accordance with the provisions of such agreement(s) and all applicable legal requirements. (Ord. 1018 § 2 (part), 2004)

Article V. Enforcement

8.70.400 Enforcement.

A. This chapter shall be enforced pursuant to the provisions of Chapters 1.08 to 1.10, inclusive, of Title 1 of the Folsom Municipal Code.

B. The administrator shall enforce the provisions of this chapter.

C. If the city council and the Sacramento County board of supervisors enter into an agreement for Sacramento County to administer and enforce the provisions of this chapter with respect to the commercial and industrial facility inspections within the city, pursuant to Section 8.70.320 of this chapter, any administrative or civil enforcement by Sacramento County of any provision of this chapter with respect to such facilities shall be governed by and conducted pursuant to Chapter 15.12 of the Sacramento County Code, and the provisions of subsections A and B of this section and sections 8.70.410 and 8.70.420 of this chapter shall not apply. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.410 Penalties.

A. A violation of this chapter shall be an administrative violation as defined in Section 1.08.020 of this code. In addition to enforcement by any procedure set forth in Chapters 1.08 to 1.10, inclusive, any violation of this chapter shall be punishable as a misdemeanor, which shall be punishable by a fine not to exceed $1,000, or by imprisonment in the county jail for not more than 6 months, or by both such fine and imprisonment.

B. Each of the sanctions for administrative violations identified in Section 1.09.013 of this code shall be available for enforcement of the provisions of this chapter.

C. In addition to the criminal penalty set forth in subsection A of this section, based upon the criteria for the imposition of administrative sanctions set forth in Section 1.09.014 of this code, a violation of a provision of this chapter shall be deemed a level E violation, as that term is described in Section 1.09.012 of this code. The range of monetary sanctions available for a violation of this chapter shall be as set forth in Section 1.09.012(A)(5) and may be imposed on a per day basis for each violation. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

8.70.420 Enforcement procedures, notice to correct.

A. Prior to the suspension, revocation, or denial of any license or permit, or the assessment of any fee, penalty, or charge, or the commencement of any other enforcement action pursuant to this chapter, the enforcement authority shall follow the procedures set forth in Chapter 1.09 of this code. The rights to judicial review set forth in Sections 1.09.050 to 1.09.059, inclusive, of this code shall apply.

B. A notice to correct shall not be required to commence the administrative hearing procedures set forth in Chapters 1.08 to 1.10, inclusive, of this code. Pursuant to Section 1.09.024(A) of this code, a notice of administrative violation shall be served in accordance with the provisions of Section 1.09.027 of this code. (Ord. 1018 § 2 (part), 2004: Ord. 922 § 1 (part), 2000)

Article VI. Recovery of Costs

8.70.500 Abatement.

A. Any person engaged in activities which cause, allow, facilitate or result in a prohibited discharge or threatened prohibited discharge, whether on public or private property, shall bear all costs incurred by the city as a result of such prohibited discharge or threatened prohibited discharge including, but not limited to, the cost of abatement, cleanup and disposal.

B. The administrator will keep an account of the administrative, labor, equipment and other costs of abatement, cleanup and recovery. (Ord. 1018 § 2 (part), 2004)

8.70.510 Regulatory actions.

Any person determined to be in violation of this chapter whose activities result in the city being in violation of any federal, state or local statute, ordinance, regulation or permit, shall bear all costs incurred by the city resulting from, or related to any correction of a violation or the payment of monetary sanctions, or both. (Ord. 1018 § 2 (part), 2004)

14.29.420 Security.
14.29.430 Enforcement and penalty.

14.29.100 Short title.

This chapter shall be known as the "Grading Ordinance" of the city and may be so cited. (Ord. 415 § 1 (part), 1981)

14.29.110 Purpose.

This chapter establishes standards for the preparation of sites and construction activities to protect the health, safety and general welfare of those working or living on or near the site by protecting against unwarranted or unsafe grading, drainage works or other aspects of site development as follows:

1. To establish standards and procedures for grading and excavation so as to minimize hazards to life and limb, protect against erosion, maintain the natural environment, and protect the safety, use and stability of public rights-of-way and drain-age channels;

2. To assure that projects approved under this chapter will be free from harmful effects of runoff, including inundation and erosion, and that neighboring and downstream properties will be protected from drainage problems resulting from new development;

3. To assure proper restoration of vegetation and soil systems disturbed by grading or fill activities authorized under this chapter. It is intended through this chapter to maintain an attractive and healthy landscape and to control against dust and erosion and their consequent effects on soil structure and water quality. (Ord. 415 § 1 (part), 1981)

14.29.120 Definitions.

The definitions as stated in the glossary of the Erosion and Sediments Control Handbook maintained by the department of public works shall apply to the interpretation and enforcement of this chapter. (Ord. 415 § 1 (part), 1981)

14.29.130 Scope.

This chapter sets forth rules and regulations to control excavation, grading and earthwork construction including fills and embankments, establishes the administrative procedure for issuance of permits, and provides for approval of plans and inspection of grading construction. (Ord. 415 § 1 (part), 1981)

14.29.140 Administration.

The public works department is designated the department responsible for the administration of this chapter. (Ord. 415 § 1 (part), 1981)

14.29.150 Validity and severability.

If any part of this chapter is found not valid, the remainder of this chapter shall remain in effect. (Ord. 415 § 1 (part), 1981)

14.29.160 Fees.

A schedule of fees may be established by resolution of the city council for all costs incurred in the processing of any grading application. Such fees shall cover the full costs of review, approvals, inspections, certification of compliance, or other determinations or actions necessitated by the permit application. A separate and distinct fee may be set by the city council by resolution for the cost of appeals filed pursuant to this chapter. (Ord. 415 § 1 (part), 1981)

14.29.170 Exemptions.

A grading permit is not required if the proposed work consists of the following activities and such activities will not endanger adjacent property, cause increased erosion, sedimentation and rate of water runoff, divert or impair the flow of water within a water course or cause a public nuisance. All development activities exempted from the grading permit requirement shall be carried out in a manner consistent with the design principles and standards set out herein to assure that the potential for erosion of any project is minimized.

A grading permit is not required for the following:

1. Excavation below finished grade for basements and footings of a building, retaining wall, swimming pool, or other structure authorized by a valid building permit. This shall not exempt any fill made with the material from such excavation nor exempt any excavation having an unsupported height greater than five feet after the completion of such structures;
2. Excavation for cemetery graves;
3. Excavation when all of the following conditions are met:
    a. The quantity is fifty cubic yards or less,
    b. The depth is three feet or less,
    c. The slope of the cut face is two feet horizontal to one foot vertical or less;
4. Fill when all of the following conditions are met:
    a. The quantity is fifty cubic yards or less placed on ground sloping twenty percent or less,
    b. The height is three feet or less,

c. The slope of the fill embankment face is two feet horizontal to one foot vertical or less,

d. The existing drainage patterns are not altered;

5. Minor agricultural land leveling when the change in elevation is three feet or less;

6. Clearing vegetation when all of the following conditions are met:

a. The slope of the ground is twenty percent or less,

b. The area to be cleared is one acre or less;

7. Grading in refuse disposal areas and sanitary landfills;

8. Trenches for public utilities, unless encroachment permits are otherwise necessary. (Ord. 415 § 1 (part), 1981)

14.29.180 Transfer of responsibility for certification.

If the civil engineer, the soil engineer, the engineering geologist, or the testing agency of record are changed during the course of the work, the work shall be stopped until the replacement has agreed to accept the responsibility within the area of their technical competence for certification upon completion of the work. (Ord. 415 § 1 (part), 1981)

14.29.190 Uniform building code superseded.

If there is any inconsistency between the provisions of this chapter and Chapter 70 of the Uniform Building Code as adopted by the city, the provisions of this chapter shall control. (Ord. 415 § 1 (part), 1981)

14.29.200 Grading permits.

Unless exempted under Section 14.29.170, a grading permit is required from the public works director prior to the initiation of any grading, excavation, fill or dredging activities included under Section 14.29.201 or Section 14.29.202. (Ord. 415 § 1 (part), 1981)

14.29.201 Excavation.

A grading permit is required for any excavations that:

1. Disturbs more than five thousand square feet in surface area or more than eight hundred cubic yards total cut area; or

2. Disturbs more than two thousand five hundred square feet in surface area or more than four hundred cubic yards total cut area in a flood hazard or erosion hazard area;

3. Is more than two feet deep; or

4. Creates a cut slope more than five feet high and steeper than two horizontal to one vertical. (Ord. 415 § 1 (part), 1981)

14.29.202 Fill.

A grading permit is required for any fill that:

1. Exceeds fifty cubic yards on any one lot; or

2. Exceeds twenty-five cubic yards on any one lot in a flood hazard or erosion hazard area; or

3. Has an unsupported height more than five feet; or

4. Is more than one foot deep and is placed on natural terrain with a slope steeper than two horizontal to one vertical; or

5. Is more than three feet deep and is intended to support structures;

6. Obstructs a natural or manmade drainage course which carries a significant amount of storm runoff to the extent that increased erosion and siltation will occur. (Ord. 415 § 1 (part), 1981)

14.29.203 Earth-filled dams.

For the purpose of creating ponds or catching stormwater, earth-filled dams require a grading permit. Such requirement may be waived on a case-by-case basis by the public works director where the following conditions exist:

1. The proposed dam will not create a hazard to private property and improvements;

2. The proposed dam will not drastically affect existing drainage patterns or create erosion hazards. (Ord. 415 § 1 (part), 1981)

14.29.204 Gravel extraction.

Grading in areas of mining, quarrying, excavating, processing and stockpiling of rock, sand, gravel, aggregate or clay shall be conducted in accordance with a mining and reclamation plan prepared in accordance with the laws of the state of California and any ordinances of this city enacted pursuant thereto and shall conform to the provisions of this chapter. (Ord. 415 § 1 (part), 1981)

14.29.210 Appeals.

The decision of the public works director upon applications for permits under this chapter shall be in writing and a copy of such decision shall be served upon the applicant, in person or by first class mail, postage prepaid. Any other person who files a written request therefor with the public works director shall also receive a copy of such decision.

If the applicant or any other person is dissatisfied with any determination made by the public works director, he may appeal in writing to the city council stating the reasons for his dissatisfaction with the determination of the public works director. The appeal must be filed within 10 days of the decision by the public works director. The appeal shall be filed with the clerk of the city council and the council shall hear the appeal within sixty days after the date of the filing of the appeal. Written notice shall be given to the public works director, the appellant and all other persons requesting the same, specifying the place, date and time of hearing the appeal. (Ord. 415 § 1 (part), 1981)

14.29.220 Hazards.

Existing Hazards. Whenever the public works director determines that any existing excavation or embankment or fill on private property, to include the exceptions listed in Section 14.29.170 has become a hazard to life or limb, endangers property or adversely affects the safety, use or stability of a public way or drainage channel, the owner of the property upon which the excavation, embankment or fill is located, or other person or agent in control of said property or project, upon receipt of notice in writing from the public works director, shall within the period specified therein repair or eliminate such excavation, embankment or fill so as to eliminate the hazard and be in conformance with the requirements of this chapter. The public works director may issue special or conditional permits and/or require performance bonds or other forms of security in accordance with Section 14.29.420 to ensure compliance with the intent of this section. (Ord. 415 § 1 (part), 1981)

14.29.230 Amendment to permit.

All changes in the plans, grades, timing or extent of work shall be submitted to the director of public works for written approval and incorporation into the permit before any change in the work is commenced. The director of public works may amend the permit to approve such changes if appropriate, or may deny approval of such changes.

Failure to obtain prior approval for any change in the work shall be cause for the suspension of the permit until approval is obtained, and may result in the revocation of the permit if such changes are deemed to be hazardous to adjoining properties or to the public at large. (Ord. 415 § 1 (part), 1981)

14.29.240 Extension of time.

Each permit shall be valid for a period of one year from the date of issuance unless noted otherwise on the permit. The date the permit expires shall be noted on the permit.

1. The permittee may, before the expiration of the permit, apply for an extension of time in which to complete the work in a reasonable and expeditious manner.

2. Extensions of time may be granted by the director of public works for a period or periods not exceeding a total of one year.

3. Denial of an extension of time shall not preclude the right of the permittee to apply for a new permit for the remaining balance of the work.

4. Written consent of the surety to any extension of time must be furnished before the approval of the extension becomes effective, unless the security consists of a cash deposit.

5. Every permit issued by the public works director under the provisions of this chapter shall expire by limitation and become null and void if the building or work authorized by such permit is suspended or abandoned at any time after the work is commenced for a period of one hundred twenty days. Permits may be granted an extension of time where the public works director finds that unusual circumstances warrant such an extension of

time and will not create a hazard or nuisance.

6. Before any work can be recommenced, if a permit has expired, a new permit shall be first obtained to do so, and the fee therefor shall be one-half the amount required for a new permit for such work, provided no changes have been made or will be made in the original plans and specifications for such work and provided further, that such suspension or abandonment has not exceeded one year. (Ord. 415 § 1 (part), 1981)

14.29.250 Transfer of permit.

The transfer of a permit from the permittee to another person shall be subject to the written approval of the director of public works. The person to whom the permit is being transferred shall agree in writing to such modifications as may be required, and shall furnish the required security before transfer of the permit will be approved. (Ord. 415 § 1 (part), 1981)

14.29.260 Grading permit requirements.

Except as exempted in Section 14.29.170, no person shall do any grading without first obtaining a grading permit from the public works director. A separate permit shall be required for each site and may cover both excavations and fills. Subdivisions on which all grading is performed as a unit shall be considered a single site. (Ord. 415 § 1 (part), 1981)

14.29.261 Application.

To obtain a permit the applicant shall first file an application therefor in writing on a form furnished for that purpose by the public works director. Every application shall include the following:

1. The name, address and telephone number of the applicant;
2. The names, addresses, and the telephone numbers of all property owners other than the applicant;
3. The names, addresses, and telephone numbers of any and all contractors or persons actually doing the work, and the work that each will be doing;
4. The name, address, telephone number and registration number of the party responsible for preparing the grading plan;
5. The name, address and telephone number of the party responsible for preparing the erosion and sediment control plan;
6. The name, address and telephone number and registration number of the registered civil engineer responsible for the preparation of the soils and engineering report, if required;
7. Identify and describe the work to be covered by the permit for which application is made;
8. Describe the land on which the proposed work is to be done, by lot, block, tract, and house and street address or similar description that will readily identify and definitely locate the proposed building or work;
9. Indicate the use or occupancy for which the proposed work is intended;
10. Be accompanied by plans and specifications as required in Section 14.29.263;
11. Be signed by the permittee, or his authorized agent, who may be required to submit evidence to indicate such authority;
12. State the estimated quantity of work involved;
13. State the estimated starting and completion dates;
14. Give such other information as reasonably may be required by public works director. (Ord. 415 § 1 (part), 1981)

14.29.262 Plans and specifications.

A. Minor Grading. A minor grading plan is to be submitted where the grading includes less than five thousand cubic yards total of cut and fill where the public works director has determined that a grading project is of a minor nature due to the absence of:

1. Steep slopes (greater than or equal to fifteen percent);
2. Location in a geologic study area or flood hazard area;
3. Potential damage to structures on or adjacent to the subject site;
4. Potential blockage of drainage channels;
5. Potential impairment of significant natural vegetation, biological habitats, public views or other sensitive natural resources.

B. A minor grading plan is to consist of the following as determined by the public works director, provided that

information submitted with any required plot plan, site plan, or development plan may also be used to fulfill those submittal requirements:

1. General vicinity map;
2. Property limits of the site;
3. Generalized existing contours and drainage channels including those areas of the subject site and adjoining properties that will be affected by the disturbance either directly or through drainage alterations;
4. Location of any buildings or structures that are within fifty feet of the area which may be affected by the proposed grading operation,
5. Limiting dimensions, elevations or finished contours to be achieved by the grading and proposed drainage channels and related construction.

C. Engineered Grading. An engineered grading plan is to be submitted for any grading in excess of five thousand cubic yards or where the public works director has determined that a grading project should be engineered, based on the presence of:

1. Steep slopes;
2. Located in an erosion hazard area or a flood hazard area;
3. Potential damage to structures on the subject site or adjacent properties;
4. Potential impairment of natural vegetation, biological habitats, public views, or other sensitive resources.

D. Where it is determined by the public works director that, due to terrain, soil characteristics, grading design, etc., engineered grading plans will serve no benefit with respect to effecting a safe and adequate grading operation, such engineered grading plan requirements may be waived.

E. An engineered grading plan is to be drawn to scale and is to be of sufficient clarity to indicate the nature and extent of the work proposed and show in detail that it will conform to the provisions of this chapter. Two sets of plans and specifications are to be prepared and signed by a civil engineer and are to include the following information as determined by the public works director:

1. General vicinity map;
2. Property limits of the subject site;
3. Details of terrain and area drainage and accurate contours of existing ground at intervals determined by the public works director;
4. Location of any buildings or structures that are within fifty feet of the area which may be affected by the proposed grading operations;
5. Limiting dimensions, elevations of finished contours to be achieved by the grading, and proposed drainage channels and related construction;
6. Specifications covering construction and material requirements;
7. Soil engineering report to include data regarding the nature, distribution and strength of existing soils, conclusions and recommendations for grading procedures and criteria for corrective measures when necessary, and opinions and recommendations covering adequacy of sites to be developed by the proposed grading;
8. Engineering geology report to include a description of the site, conclusions and recommendations regarding the effect of geologic conditions and recommendations covering the adequacy of sites to be developed by the proposed grading;
9. A statement indicating methods to mitigate any conditions whereby the public works director may require an engineered grading plan such as steep slopes, location in a geologic study area or flood hazard area, potential damage to structures on the subject site or adjacent property, potential impairment of natural vegetation, habitat, public view or other sensitive resources;
10. Drainage plan if not included in any of the above;
11. Erosion control plan and/or recommendation for mitigating measures. (Ord. 415 § 1 (part), 1981)

14.29.263 Issuance.

A. The application, plans and specification filed by an applicant for a permit shall be checked by the public works director. Such plans may be reviewed by other departments of the city to check compliance with the laws and ordinances under their jurisdiction. If the public works director is satisfied that the work described in an application for permit and the plans filed therewith conform to the requirements of this chapter and other pertinent laws and ordinances and that the fee specified in Section 14.29.160 has been paid, the public works director shall issue a permit therefor to the applicant.

When the public works director issues the permit, he shall endorse in writing or stamp on both sets of plans and specifications "APPROVED." Such approved plans and specifications shall not be changed, modified, or altered without authorization from

the public works director; and all work shall be done in accordance with the approved plans. The public works director may require that grading operations and project designs be modified if delays occur which incur weather generated problems not considered at the time the permit was issued.

B. Coordination of Grading Plans. The public works director may require inspection and testing by an approved testing agency or the public works department, and he is responsible for coordination of the parties to all grading activities including the civil engineer, soils engineer, engineering geologist, public works department, other city departments where required, the grading contractor, and the testing agency.

C. Retention of Plans. One set of approved plans, specifications and computations shall be retained by the public works director for a period of not less than ninety days from date of completion of the work covered therein, and one set of approved plans and specifications shall be returned to the applicant, which set shall be kept on such building or work site at all times during which the work authorized thereby is in progress.

D. The issuance of a permit based upon plans and specifications shall not prevent the public works director from thereafter requiring the correction of errors in said plans and specifications or from preventing building operations being carried on thereunder when in violation of this chapter or of any other ordinance of the city.

E. Upon completion of the rough grading and/or final grading for any engineered gradings, the public works director may require submission of an as-graded grading plan and soil and geologic grading reports.

F. The applicant is to notify the public works director when the grading operation is ready for final inspection. Final approval will not be given until all work has been completed in accordance with the final approved grading plan including installation of all drainage facilities and their protection devices and all revegetation and erosion control measures as required. (Ord. 415 § 1 (part), 1981)

14.29.300 Grading standards.

Excavations and fills are to be conducted in accordance with the standards set out in Section 14.29.301 through Section 14.29.303. (Ord. 415 § 1 (part), 1981)

14.29.301 Grading standards--Cuts and fills minimum.

Cuts and fills are to be limited to the minimum amount necessary to provide stable embankments for required parking areas or street rights-of-way, structural foundations, and adequate residential yard area or outdoor storage or sales area incidental to a nonresidential use. Adequate graded storage and sales area is to be limited to not more than twenty percent of gross floor area. (Ord. 415 § 1 (part), 1981)

14.29.302 Grading standards--Cut slopes.

Cut slopes are to be no steeper than two horizontal to one vertical or fifty percent except where certified by a registered civil engineer as to stability and/or approved by the public works director. (Ord. 415 § 1 (part), 1981)

14.29.303 Grading standards--Fills.

Fills are to be subject to the following standards, provided that the public works director may exempt minor fills that are not intended to support structures unless otherwise recommended in an approved soil engineering report:

1. Fill slopes may not be constructed on natural slopes steeper than two to one or as determined by the public works director.

2. The ground surface is to be prepared to receive fill by removing vegetation, noncomplying fill, topsoil, and other unsuitable materials, scarifying to provide a bond with the new fill, and, where slopes are steeper than two to one and the height is greater than five feet, benching into sound bedrock or other competent materials as determined by the public works director.

3. The bench under the toe of a fill on a slope steeper than two to one is to be at least ten feet wide. The area beyond the toe of a fill is to be sloped for sheet overflow or a paved drain provided. Where fill is to be placed over a cut, the bench under the toe of a fill is to be at least ten feet wide, but the cut must be made before placing any fill and approved by the soils engineer (or public works director for minor grading) as a suitable foundation for fill. Unsuitable soil is soil which is not competent to support other soil or fill, to support structures, or to perform satisfactorily the other functions for which the soil is intended.

4. Detrimental amounts of organic material may not be permitted in fills. No rock or similar irreducible material with a maximum dimension greater than twelve inches is to be buried or placed in fills, except that the public works director may permit placement of larger rock when the soils engineer properly devises a method of placement, continuously inspects its placement and approves the fill stability. The following conditions also apply in such case:

a. Prior to issuance of a grading permit, potential rock disposal areas are to be delineated on the grading plan if required;

b. Rock sizes greater than twelve inches in maximum dimension are to be below grade, measured vertically at a distance determined by the public works director;

c. Rocks are to be placed so as to assure filling of all voids with fines.

5. All fills for building pads and roads are to be compacted to a minimum of ninety percent of maximum density as determined by the public works director. Fill density will be determined by the public works director.

6. Drainage and terracing is to be provided and the area above fill slopes and the surfaces of terraces are to be graded and paved as required in Section 14.29.320. (Ord. 415 § 1 (part), 1981)

14.29.310 Setbacks.

Setbacks for cuts and fills are to be as follows:

1. The tops of cuts and toes of fill slopes are to be set back from the outer boundaries of the permit area including slope right areas and easements in accordance with Figure No. 1 and Table No. 1 attached to the ordinance codified in this chapter.

2. Setbacks between graded slopes and structures are to be provided in accordance with Figure No. 2 attached to the ordinance codified in this chapter. (Ord. 415 § 1 (part), 1981)

14.29.320 Drainage and terracing.

Drainage facilities and terracing are to conform to the following unless otherwise indicated on the approved grading plan:

1. Terraces at least six feet in width are to be established at not more than thirty-foot-in-height intervals on all cut or fill slopes to control surface drainage and debris except that, where only one terrace is required, it is to be a mid-height. For cut slopes greater than sixty feet and up to one hundred twenty feet in height are to be twelve feet in width. Terraces on cut or fill slopes greater than one hundred twenty feet in height are to be designed by the civil engineer and approved by the public works director. Suitable access is to be provided to permit proper cleaning and maintenance.

2. Swales or ditches on terraces are to have a minimum gradient of five percent paved with reinforced concrete not less than three inches in thickness or an approved equal paving. They are to have a minimum paved width of five feet.

3. A single run of swale or ditch may not collect runoff from a tributary area exceeding thirteen thousand five hundred square feet (projected) without discharging into a down drain without approval of the public works director.

4. Cut and fill slopes are to be provided with subsurface drainage as determined necessary by the public works director based upon the soils engineer report or in accordance with a drainage and/or erosion control plan prepared pursuant to this chapter. Check dams, cribbing, rip-rap, or other devices or methods are to be employed to control erosion and provide safety.

5. All drainage facilities are to be designed to carry waters to the nearest practical drainage way approved by the public works director as a safe place to deposit such waters. Erosion of ground in the area of discharge is to be prevented by installation of nonerosive down drains or other devices.

6. Building pads are to have a drainage gradient of two percent toward the street or in an underground conduit. The approved drainage facilities may be one percent if approved by the public works director and all of the following conditions exist throughout the permit area:

a. No proposed fills are greater than ten feet in maximum depth;

b. No proposed finish cut or fill slope faces have a vertical height in excess of ten feet;

c. No existing slope faces, which have a slope face steeper than ten horizontally to one vertically, have a vertical height in excess of ten feet.

7. Paved interceptor drains are to be installed along the top of all cut slopes where the tributary drainage area above slopes towards the cut and has a drainage path greater than forty feet measured horizontally or as approved by the public works director. Interceptor drains are to be paved with a minimum of three inches of reinforced concrete or approved equal. They are to have a minimum depth of twelve inches and a minimum paved width of thirty inches measured horizontally across the drain. The slope of such drain is to be approved by the public works director.

Grading, dredging or diking may not alter any intermittent or perennial stream as shown on any USGS seven and one-half minute map, except as permitted through approval of a streambed alteration permit from the California Department of Fish and Game issued under Section 1601 or 1602 of the Fish and Game Code.

Contours of finished surfaces are to be blended with adjacent natural terrain to achieve a consistent grade and natural appearance. Borders of cut slopes and fills are to be rounded off to a minimum radius of 5 feet so as to blend with the natural terrain. (Ord. 415 § 1 (part), 1981)

14.29.321 Drainage plan content.

Drainage plans are to be accurately and neatly drawn to include the following as determined by the public works director:

1. Flow of surface water onto and off the site;
2. Existing and finished contours at intervals determined by the public works director;
3. Building and road elevations, existing and proposed;
4. Existing and proposed drainage channels including drainage swales, ditches and berms;
5. Location and design of any proposed facilities for storage or for conveyance of runoff into indicated drainage channels including sumps, basins, channels, culverts, ponds, storm drains and drop inlets;
6. Estimates of existing and increased runoff resulting from the proposed improvements if required. (Ord. 415 § 1 (part), 1981)

14.29.322 Storm drainage system standards.

Drainage facilities are to be adequate to assure that the development will not result in stormwater runoff that could cause flooding, ponding, soil erosion, sediment production, and sediment pollution. The following standards also apply:

1. Site development is to be accomplished wherever possible in a manner that will maximize percolation and infiltration of precipitation into the ground and will minimize direct surface runoff into adjoining streets, water courses, or properties.
2. In general, the release rate of stormwater from all parts of the subject site after development should not exceed the stormwater runoff rate from the area in its previous undeveloped state for all intensities and durations of rainfall. The carrying capacity of the channels immediately downstream is to be considered in determining the permitted amount of the stormwater release.
3. All drainage facilities are to be designed to carry stormwaters to the nearest stable channel or natural drainage way with adequate capacity to carry the flow. If drainage facilities discharge onto natural ground, the applicant is to provide a method to reduce the velocity of flow in order to prevent erosion or other harmful effects to the subject site or other adjoining properties. (Ord. 415 § 1 (part), 1981)

14.29.330 Erosion control.

A. The faces of cut and fill slopes shall be prepared and maintained to control against erosion. The protection for the slopes shall be installed as soon as practicable and prior to calling for final approval. Where it is determined by the public works director that cut slopes are not subject to erosion due to erosion-resistant character of the materials, such protection may be omitted.

B. Erosion control plan content. With any minor or engineered grading plan, an erosion control plan may be required to be submitted including the following items:

1. Protective measures to be taken during construction such as hydromulching, berms (temporary or permanent), interceptor ditches, subsurface drains, terraces and/or sediment traps in order to prevent erosion by surface or ground water of the cut faces of excavations or of the sloping surfaces of fills;
2. Permanent methods of revegetation following completion of proposed grading or improvements;
3. Approximate sequence and timing of grading and construction increments and/or subsequent revegetation and/or landscaping work.

C. Revegetation standards.

1. Permanent revegetation or landscaping, if required, is to be commenced on the construction site as soon as practical and in no case exceeding twelve months after achieving final grades and utility implacements. Whenever practical, land is to be developed in increments of workable size which can be completed during a single construction season; erosion control measures are to be coordinated with the sequence of grading or improvements.
2. Grading equipment is to be confined to area immediately adjacent to areas of disturbance as indicated by the plan approved by the public works director.
3. All surfaces disturbed by vegetation removal, grading, haul roads, or other activity of construction which alters the natural vegetative cover are to be prepared for expedient revegetation or otherwise maintained to control erosion unless covered with impervious or other improved surfaces pursuant to approved plans within thirty days of

following the completion of grading, or removal of vegetation if no grading was involved. Erosion control described in the Erosion and Sediment Control Handbook, May 1978, may be used as a guide.

4. Topsoil removed from the surface in preparation for grading and construction is to be stored whenever possible on or near the site and protected from erosion while grading operations are underway; provided, that such storage may not be located where it would cause suffocation of root systems of trees intended to be preserved. After completion of such grading, topsoil is to be restored to exposed cut and fill embankments or building pads so as to provide a suitable base for seeding and planting.

5. Acceptable methods of revegetation include straw-mulching, hydro-mulching or planting of mixture specified by public works director. Other methods of revegetation may be approved by the public works director where equivalent protection is provided.

6. All revegetation and landscaping are to be conducted within suitable growing periods. Native plant material are specifically encouraged in order to reduce irrigation demands.

7. For all grading or improvements to be conducted during the rainy season, a sedimentation control plan is to be submitted including, where necessary, temporary sedimentation basins. Sedimentation control facilities are to be installed in conjunction with initial grading operations and maintained throughout the construction period to remove sediments from runoff waters during development.

8. Permanent sediment catchment basins or other types of sediment retention facilities are required wherever necessary to prevent discharge of sediment into stream channels. Accumulated sediment is to be inspected and removed for disposal according to a regular maintenance schedule.

9. The planting or seeding of vegetative protection must be effective. If the vegetation does not grow and offer proper protection, it must be replanted or reseeded.

10. The maintenance of vegetative protection on graded slopes shall be the responsibility of the permittee and shall be guaranteed until the vegetation is well established or is officially assumed by another party approved by the public works director. (Ord. 415 § 1 (part), 1981)

14.29.400 Grading inspection.

A. General. All grading operations for which a permit is required shall be subject to inspection by the public works director. When required by the public works director, special inspection of grading operations and special testing shall be performed in accordance with the provisions of this chapter.

B. Engineered Grading Requirements. For engineered grading, it shall be the responsibility of the civil engineer who prepares the approved grading plan to incorporate all recommendations from the soil engineering and engineering geology reports into the grading plan. He shall also be responsible for the professional inspection and certification of the grading within his area of technical specialty. This responsibility shall include, but need not be limited to, inspection and certification as to the establishment of line, grade, and drainage of the development area. The civil engineer shall act as the coordinating agent in the event the need arises for liaison between the other professionals, the contractor and the public works director. The civil engineer shall also be responsible for the preparation of revised plans and the submission of as-graded grading plans upon completion of the work.

Soil engineering and engineering geology reports may be required as specified in Section 14.29.262. During grading all necessary reports, compaction data, and soil engineering and engineering geology recommendations shall be submitted to the civil engineer and public works director by the soil engineer and the engineering geologist. The engineering geologist's area of responsibility shall include, but need not be limited to professional inspection and certification of the adequacy of natural ground for receiving fills and the stability of cut slopes with respect to geological matters and the need for sub-drains or other ground water drainage devices. He shall report his findings to the soil engineer and the civil engineer for engineering analysis. The public works director shall inspect the project at the various stages of the work requiring certification and at any more frequent intervals necessary to determine that adequate control is being exercised by the professional consultants.

C. Regular Grading Requirements. The public works director may require inspection and testing by an approved testing agency, the expense of which shall be borne by the applicant. The testing agency's responsibility shall include, but need not be limited to, certification concerning the inspection of cleared areas and benches to receive fill and the compaction of fills.

When the public works director has cause to believe that geologic factors may be involved, the grading operation will be required to conform to engineered grading requirements at no expense to the city. (Ord. 415 § 1 (part), 1981)

14.29.410 Suspension and revocation of permit.

A. A grading permit shall be suspended or revoked by the public works director, unless exempted by said director, if:

1. Conditions at the site vary appreciably from those shown on the approved plans;

2. Construction does not conform to the approved grading plan, final erosion and sediment control plan, time schedules, or conditions of the grading permit;

3. The site is left in a condition hazardous to the public or to the adjacent properties, and permittee does not comply with reasonable requirements to correct said conditions;

4. The permittee does not comply with reasonable requirements to safeguard the workmen, the public or other persons acting in a lawful manner;

5. The permittee, in connection with the operations for which the permit was issued, fails to operate his equipment properly on public roads; or allows material to encroach, obstruct, or be deposited within a public road right-of-way or within a drainage channel in a manner not authorized by said permit; or causes unauthorized obstruction or diversion of drainage channels;

6. The permittee fails to have a qualified inspector, working under the supervision of a registered civil engineer, on the site during operations when so required by the permit or fails to have the work under proper supervision at all times;

7. Emergency conditions exist on the site which constitute a threat to health, safety or public welfare.

B. Prior to the suspension or revocation of a permit, the public works director shall give to the permit holder written notice of intention to suspend or revoke the permit, which notice shall specify the grounds for such intended action and the time and place for the holding of a conference between the public works director and the permit holder and/or their authorized representatives to review the grounds for the proposed action. Notice of the proposed action shall be given to the permit holder at least forty-eight hours, but not more than seventy-two hours before the time set for the conference, if given by personal service, and at least ninety-six hours, but not more than one hundred twenty hours before the time set for the conference, if given by first class mail. Weekends and holidays shall not be counted in determining the time for the giving of notice and the holding of the conference. With the consent of the permit holder the time periods provided for herein may be shortened or extended.

Upon receipt of the notice of intended suspension or revocation, the permit holder shall cease all work in connection with the permit, with the exception of work necessary to correct any condition or perform any work cited in the notice of proposed action as a ground for suspension and/or revocation and work of an emergency nature.

Within twenty-four hours following the conclusion of the conference, the public works director shall render his written decision, either revoking the permit, suspending the permit, or authorizing the permit holder to proceed with the work. Such action may be with or without conditions. The decision shall be served upon the permit holder by personal service or first class mail, postage prepaid, within twenty-four hours after the rendition of the decision.

If the permit holder is dissatisfied by the decision of the public works director, he may appeal to the city council. Said appeal shall be filed, noticed, and acted upon within the same time and in the same manner as an appeal under Section 14.29.210.

C. If the permittee fails to correct said objectionable or emergency conditions, the city may cause the work necessary to correct said conditions to be done, and the city may take action against the permittee's security to cover the cost of performing the work.

D. Any permit which has been suspended may be either reinstated or revoked by the public works director. (Ord. 415 § 1 (part), 1981)

14.29.420 Security.

In all cases, the application for engineered grading permit shall be accompanied by a performance bond or other form of security acceptable to the public works director, posted by the applicant. A bond may also be required along with the application for a minor grading permit if deemed necessary by the public works director. The amount of the bond or security shall be the full cost of the installed erosion and sediment control measures and for the maintenance of such facilities. The bond shall be held until the erosion and sediment control measures have performed satisfactorily for a period of one year following completion of development or until such measures are permanently stabilized as provided for in this chapter. The bond may be used to provide for the installation and maintenance of the control measures if not done by the applicant and sediment runoff is occurring as a result. (Ord. 415 § 1 (part), 1981)

14.29.430 Enforcement and penalty.

A. It shall be the duty of the public works director and other authorized employees of the city, to enforce the provisions of this chapter. No oversight or dereliction on the part of the public works director, or any authorized assistants of any official, or employee of the city vested with the duty or authority to issue permits, shall legalize, authorize, waive or excuse the violation of any provision of this chapter.

B. In the administration and enforcement of this chapter, any duly authorized official or employee of the city shall have authority to enter upon the premises for the purposes of investigation and inspection; provided, however, that the above referred to right of entry shall be exercised only during the daylight hours. No person shall refuse to permit such inspection.

C. In the event any person, firm or corporation shall perform any work in violation of this chapter or any permit issued pursuant thereto, or fail or refuse to perform any work required by this chapter or any permit issued pursuant thereto, the same is declared to be a public nuisance and at the direction of the city council, the city attorney is authorized to bring and prosecute an action in a court of competent jurisdiction to enjoin the performance of such work or, if such work has been accomplished, from maintaining the same.

D. The violation of this chapter is an infraction and shall be punishable by:

1. A fine not exceeding fifty dollars for a first violation;

2. A fine not exceeding one hundred dollars for a second violation within one year;

3. A fine not exceeding two hundred fifty dollars for each additional violation within one year. (Ord. 415 § 1 (part), 1981)

Exhibit C

Chapter 1.08
ENFORCEMENT OF THE FOLSOM MUNICIPAL CODE AND OTHER APPLICABLE LAWS

Sections:

1.08.010 Purpose and intent.
1.08.020 Definitions.
1.08.030 Public nuisance.
1.08.040 Procedures for enforcement.

1.08.010 Purpose and intent.

Pursuant to its authority as a charter city, the city of Folsom adopts the procedures and remedies set forth in this title for the enforcement of the Folsom Municipal Code and Uniform Codes adopted by the city. The purpose of Chapters 1.08 through 1.10 is:

A. To provide standards for the enforcement of the Folsom Municipal Code and other applicable laws;

B. To establish administrative sanctions for violations of the Folsom Municipal Code and other applicable laws as an alternative to criminal or civil enforcement penalties;

C. To establish a hierarchy of administrative sanctions and a prescribed method for enforcement through administrative hearings that are consistent with constitutional protections;

D. To provide for administrative abatement to remedy code violations and to provide for the recovery of costs incurred in administrative abatement as allowed for by state law; and

E. To provide for judicial review of final administrative orders or decisions made pursuant to this title in accordance with the procedures set forth in Code of Civil Procedure Sections 1094.5 and 1094.6.

Nothing in this chapter is intended to abridge or modify the authority of the city manager or other designated person to enforce the Folsom Municipal Code through criminal or civil penalties where such remedies are designated by ordinance as appropriate. (Ord. 846 § 2 (part), 1996)

1.08.020 Definitions.

As used in this chapter:

"Administrative violation" means any infringement or alleged infringement of the Folsom Municipal Code or other applicable laws for which enforcement is to be handled through the administrative procedures established in this title.

"Administrative sanctions" means the sanctions set forth in this chapter for violation of the Folsom Municipal Code or other applicable laws.

"Applicable laws" means any provisions of the Charter of the city of Folsom, any Uniform Code as adopted by the city of Folsom, design standards adopted by the city of Folsom, conditions imposed on any entitlement or environmental document issued or approved by the city of Folsom, and those state laws enforced by the city of Folsom which also have been designated by ordinance for enforcement pursuant to the procedures established in this title.

"Citizen complaint" means a report of an alleged violation of the Folsom Municipal Code or other applicable laws by any person or entity. "Citizen complaint" means and includes a complaint by a city official or city employee only to the extent such official or employee is able to demonstrate a direct affect on his/her person or property as a result of the alleged violation.

"Design standards" means written design standards, design guidelines or development standards that may be adopted by resolution or ordinance from time to time by the city council and/or planning commission, or that may be adopted as part of the conditions of approval on any project, that govern development of land within the city and that are on file with the city clerk.

"Enforcement authority" means the city manager or designated department head, building official, code enforcement officer or police official charged with responsibility for enforcement under this title.

"Entitlement" means any project approval issued by the city council, the planning commission, or any other committee, commission, or department as allowed for under procedures established by the Folsom Municipal Code.

"Mediation" means a meeting held between the enforcement authority and a responsible person under the supervision of an impartial third party to informally resolve issues relating to alleged violations of the Folsom Municipal Code or other applicable laws.

"Notice of administrative violation" means the notice issued by the enforcement authority of an alleged infringement of the Folsom Municipal Code or other applicable laws.

"Notice to correct" means the notice issued by the enforcement authority for required action to achieve compliance with the Folsom Municipal Code or other applicable laws.

"Reasonable time(s)" means between the hours of eight a.m. and five p.m., Monday through Friday, inclusive, unless otherwise required by: (1) an emergency impacting the safety or preservation of life or property; or (2) the fact that the alleged violation of the Folsom Municipal Code or other applicable laws only occurs at some other hour or on a weekend.

"Responsible person" means any person or entity charged with or found to have violated the Folsom Municipal Code or other applicable laws. "Responsible person" includes the parents and/or legal guardian of any person under the age of 18 who is charged with a violation of the Folsom Municipal Code or other applicable laws.

"Stop order" means a written order issued by the enforcement authority or his/her designee that any and all work on a project, improvement or other development must cease on the terms and conditions set forth in the order.

"Uniform Codes" means those Uniform Codes that have been adopted and amended from time to time by ordinance by the Folsom city council, including but not limited to the California Building Code, the Uniform Building Code, the Uniform Housing Code, the Uniform Fire Code, the Uniform Building Code Material Testing and Installation Standards, the Uniform Mechanical Code, the Uniform Plumbing Code, the Uniform Administrative Code, the Uniform Swimming Pool and Hot Tub Code, the Uniform Code for the Abatement of Dangerous Buildings and the National Electrical Code. (Ord. 846 § 2 (part), 1996)

1.08.030 Public nuisance.

Any violation of the Charter of the city of Folsom, of any ordinance of the Folsom Municipal Code, of any provision of any Uniform Codes adopted by the city, or of any design standards is declared to be a public nuisance, subject to redress as provided for in this title. (Ord. 846 § 2 (part), 1996)

1.08.040 Procedures for enforcement.

The city of Folsom shall enforce the provisions of the Folsom Municipal Code or other applicable laws through any of the following procedures:

A. Administrative action concerning an administrative violation as provided for in Chapter 1.09 of this title;

B. Criminal action prosecuted in the name of the people of the state of California when a criminal violation is expressly provided for by ordinance;

C. Civil action instituted by the city attorney in the name of the city of Folsom; or

D. Abatement as authorized by Chapter 1.10 of this title. (Ord. 846 § 2 (part), 1996)

Chapter 1.09
ADMINISTRATIVE VIOLATIONS AND ADMINISTRATIVE ENFORCEMENT PROCEDURES

Sections:

Article I. Administrative Violations

1.09.010 Designation of administrative violations.
1.09.011 Administrative violations are not exclusive remedy.
1.09.012 Levels of administrative violations.
1.09.013 Sanctions for administrative violations.
1.09.014 Standards for imposition of administrative sanctions.

Article II. Administrative Enforcement Procedures

1.09.020 Responsibility and authority.
1.09.021 Purpose of enforcement.
1.09.022 Guidelines for exercising administrative enforcement authority.
1.09.023 Notice to correct and stop order.
1.09.024 Notice of administrative violation.
1.09.025 Right of entry for inspection.
1.09.026 Informal attempts to encourage compliance.
1.09.027 Service of notices.
1.09.028 Responsibility of parent(s) and/or legal guardian.
1.09.029 Confidentiality in connection with citizen complaints.

Article III. Hearings

1.09.030 Right to a hearing.
1.09.031 Preservation of status quo pending hearing.
1.09.032 Request for hearing and fee--Notice of denial of hearing based on untimely appeal.
1.09.033 Meeting with enforcement authority.
1.09.034 Mediation.
1.09.035 Timely hearing.
1.09.036 Notice of time and place of hearing.
1.09.037 Hearing officer.
1.09.038 Ex parte communications.
1.09.039 Rights of the parties.
1.09.040 Hearing procedure.
1.09.041 Hearing open to the public.
1.09.042 Oath.
1.09.043 Quantum and burden of proof.
1.09.044 Rules of evidence.
1.09.045 Subpoenas.
1.09.046 Record of the hearing.
1.09.047 Written transcript.
1.09.048 Written decision.

Article IV. Judicial Review

1.09.050 Final administrative decision.
1.09.051 Judicial review.
1.09.052 Review standard.

Article V. Enforcement of Monetary Sanctions

1.09.060 When monetary sanctions are due.
1.09.061 Place for payment of monetary sanction.
1.09.062 Failure to pay a monetary sanction.

Article I. Administrative Violations

1.09.010 Designation of administrative violations.

A. The following shall be designated as administrative violations and shall be subject to enforcement pursuant to the provisions of this chapter:

1. All violations of the Folsom Municipal Code, unless otherwise excepted by ordinance;
2. All violations of the Charter of the city of Folsom, unless otherwise excepted by ordinance;
3. All violations of Uniform Codes adopted by the city of Folsom;
4. All violations of design standards adopted by the city council and/or the planning commission and on file with the city clerk;
5. All violations of conditions imposed on any entitlement, permit, contract, or environmental document issued or approved by the city of Folsom;
6. All violations of state laws enforced by the city of Folsom that have been designated for enforcement through this chapter by ordinance.

B. An administrative violation may only be adjudicated pursuant to the administrative enforcement procedures established in Sections 1.09.020 through 1.09.049 of this chapter. Each responsible person shall have the right to request an administrative hearing and subsequent judicial review pursuant to the procedures established in Code of Civil Procedure Sections 1094.5 and 1094.6 before the city will take action to collect any administrative penalty. (Ord. 846 § 2 (part), 1996)

1.09.011 Administrative violations are not exclusive remedy.

Nothing in this chapter is intended to limit or prohibit the enforcement of the Folsom Municipal Code or other applicable laws through civil or criminal process where the city attorney has evaluated the criteria set forth in Sections 1.09.014 and 1.09.024, and has determined that enforcement through the administrative enforcement procedures will not result in effective redress, where there have been repeated administrative violations, or where the severity of the violation warrants redress through civil or criminal action. (Ord. 846 § 2 (part), 1996)

1.09.012 Levels of administrative violations.

A. Administrative violations shall be designated by level based upon the potential monetary sanction as follows:

1. Level A violations shall be subject to a fine of $20--$500.
2. Level B violations shall be subject to a fine of $100--$2,500.
3. Level C violations shall be subject to a fine of $100--$5,000.
4. Level D violations shall be subject to a fine of $100--$7,500.
5. Level E violations shall be subject to a fine of $100--$10,000.

Unless otherwise provided for by ordinance, all administrative violations will be deemed a Level A violation.

B. At the time of issuance of a notice of administrative violation pursuant to Section 1.09.024, the enforcement authority shall evaluate in writing the criteria set forth in Section 1.09.014 to determine the appropriate level of sanction and shall provide written notice to the responsible person of the proposed level of sanction and the reasons therefor as required by Section 1.09.024.

C. Where multiple violations have occurred or are occurring, each violation of the Folsom Municipal Code or other applicable laws shall be subject to a separate sanction.

D. The enforcement authority shall have no power or discretion to void any notice of administrative violation until after a meeting with the enforcement authority's supervisor as provided for in Section 1.09.033. If a notice of administration violation is voided, the enforcement authority shall provide written justification for such action to the city manager. (Ord. 846 § 2 (part), 1996)

1.09.013 Sanctions for administrative violations.

Any one of the following sanctions shall be available to redress infringement of the Folsom Municipal Code or applicable

laws.

A. Revocation and/or suspension of licenses or permits, conditional use permits or other entitlements issued by the city of Folsom;

B. The placement of requirements for corrective action on permits, licenses or entitlements issued by the city of Folsom as a condition to avoid revocation of the permit, license or entitlement;

C. Monetary sanctions as set forth in Section 1.09.012 of this chapter;

D. The issuance of a compliance order setting forth corrective action;

E. As an alternative to other sanctions and in appropriate circumstances, requiring community service by the responsible person;

F. Requiring a responsible person to post a performance bond, irrevocable letter of credit or other adequate security to ensure compliance with the Folsom Municipal Code or other applicable laws. (Ord. 846 § 2 (part), 1996)

1.09.014 Standards for imposition of administrative sanctions.

The following factors shall be considered in determining the appropriate sanctions for any administrative violation:

A. The knowledge or intent of the person/entity found to have violated the Folsom Municipal Code or other applicable laws;

B. A final determination of prior violations of the Folsom Municipal Code or other applicable laws within 12 months of the date of the violation. Violations of a similar nature shall be given additional weight in evaluating the appropriate sanctions as provided for in Section 1.09.012(C);

C. Efforts by the person/entity found to have violated the Folsom Municipal Code or other applicable laws to take remedial action upon notice of a violation;

D. Any financial gain realized by a responsible person as a result of an administrative violation;

E. The extent to which the violation undermines the purpose of the ordinance violated;

F. The number of other violations existing at the time of the issuance of the notice of administrative violation;

G. The costs incurred for remedial action taken by the enforcement authority;

H. The degree and permanence of harm to health, safety and/or the environment caused by the violation, including but not limited to any loss of life to person or animal;

I. The amount it would have cost the responsible person to comply with the law;

J. Where the violation consists of failure to obtain a permit or license, the financial cost to obtain a permit or license prior to engaging in the conduct that is the subject of administrative violation. The amount of any sanction imposed for failure to obtain a license or permit shall be no less than one and one-half times the cost of obtaining such license or permit. (Ord. 846 § 2 (part), 1996)

Article II. Administrative Enforcement Procedures

1.09.020 Responsibility and authority.

The city manager shall have overall responsibility and authority to enforce the provisions of the Folsom Municipal Code or other applicable laws. The city manager may delegate to department heads or other appropriate subordinates the authority to enforce any of the provisions of the Folsom Municipal Code or other applicable laws which relate to the responsibilities of their department. The city manager may also delegate to the police department or code enforcement officer the authority to enforce any of the provisions of the Folsom Municipal Code or other applicable laws. (Ord. 846 § 2 (part), 1996)

1.09.021 Purpose of enforcement.

The purpose of administrative enforcement is to obtain fair and uniform compliance with the provisions of the Folsom Municipal Code and other applicable laws. (Ord. 846 § 2 (part), 1996)

1.09.022 Guidelines for exercising administrative enforcement authority.

Administrative enforcement of the provisions of the Folsom Municipal Code and other applicable laws shall be limited to cases where: (1) specific bona fide citizen complaints have been received, (2) where the violation occurs within the context of the city's oversight and approval of a project, or (3) where the enforcement action is a part of a plan for the uniform enforcement of a provision of the Folsom Municipal Code or other applicable laws within the city. No notice to correct or notice of administrative violation shall be issued pursuant to a citizen complaint until the enforcement authority has conducted an independent investigation and determined that there is good cause to believe that a violation of the Folsom

Municipal Code or other applicable laws has occurred. The enforcement authority shall keep a record of all citizen complaints. (Ord. 846 § 2 (part), 1996)

1.09.023 Notice to correct and stop order.

Whenever a violation is discovered which can be corrected and the responsible person has not been issued a notice to correct or notice of administrative violation for the same violation within the past 12 months, the enforcement authority shall issue a notice to correct in order to notify the responsible person of the violation and to order that the violation be corrected within a reasonable time. Unless a different period is specifically set forth in the Folsom Municipal Code, 10 calendar days shall be considered a reasonable time to correct any violation. The notice to correct shall be in writing and shall set forth the facts that constitute the violation, the specific provisions of the law which have been violated, the specific acts required to correct the violation, the time allowed to correct the violation, and the rights to appeal the notice to correct. If the violation is related to a permit, license or other city approval of a project, the notice to correct may be accompanied by a stop order which orders the responsible person to immediately stop any and all work on the project that is subject to the permit, license or approval until the violation is corrected. The notice to correct shall be served in accordance with the provisions of Section 1.09.027. (Ord. 846 § 2 (part), 1996)

1.09.024 Notice of administrative violation.

A notice of administrative violation may be issued under any of the following circumstances:

A. When the violation cannot be corrected;

B. When the violation can be corrected, a notice to correct has been served, and the specified time has passed without adequate correction of the violation;

C. When a stop order has been issued and has not been complied with by the responsible person;

D. When the same violation has been committed by the same responsible person within the past 12 months and a notice to correct or notice of administrative violation has been served on the responsible person within that same 12 month period.

The notice of administrative violation shall be in writing and shall set forth the facts constituting the violation, the specific provisions of the law which have been violated, the proposed sanctions for the violation as specified in Section 1.09.013 of this chapter, and the rights that the responsible person has to appeal the notice of administrative violation. The notice of administrative violation shall be served as provided in Section 1.09.027. (Ord. 846 § 2 (part), 1996)

1.09.025 Right of entry for inspection.

A. Whenever necessary to make an inspection to enforce the Folsom Municipal Code or other applicable laws, or whenever there is reasonable cause to believe there exists a violation of the Folsom Municipal Code or other applicable laws in any building or upon any premises within the jurisdiction of the city, any authorized official of the city may, upon presentation of proper credentials, enter such building or premises at all reasonable times (as that phrase is defined in Section 1.08.020(k) of this title) to inspect the same or to perform any duty imposed by the Folsom Municipal Code or other applicable laws.

B. Except in emergency situations or when consent of the owner and/or occupant of the building or premises to be inspected has been obtained, the city official shall give the owner and/or occupant, if they can be located after reasonable effort, 24 hours written notice of the authorized official's intention to inspect through a notice of intention to inspect. The notice of intention to inspect shall state that the property owner has the right to refuse entry and, that in the event such entry is refused, inspection may be made only upon issuance of an administrative warrant or search warrant as allowed by law by a duly authorized judge.

C. The written notice of intention to inspect shall be served by certified mail, return receipt requested. Where the authorized official intends to inspect within the next 24-hour period, the written notice shall be hand delivered. The notice of intention to inspect may be left with any person above the age of 18 who identifies himself/herself as an occupant, tenant or owner of the premises. If no one is at the premises at the time of delivery, the notice of intention to inspect shall be posted in 2 conspicuous places on the premises.

D. Prior to entering the premises, the authorized official conducting the inspection shall ascertain from the owner and/or occupant whether the notice of intention to inspect has been received and shall obtain permission for entry. Unless an emergency situation exists, if the owner and/or occupant refuses entry after such a request has been made, or if no actual contact is made with the owner and/or occupant prior to the attempt to enter, the official must seek assistance from any court of competent jurisdiction in obtaining such entry. (Ord. 846 § 2 (part), 1996)

1.09.026 Informal attempts to encourage compliance.

Nothing in this chapter shall be interpreted to preclude an enforcement authority from informally encouraging citizens to

comply with the Folsom Municipal Code or other applicable laws. Informal oral or written requests to encourage compliance are encouraged as are attempts to informally negotiate or mediate issues relating to compliance. (Ord. 846 § 2 (part), 1996)

1.09.027 Service of notices.

Any notices required under this chapter except a notice of intention to inspect pursuant to Section 1.09.025 shall be served by personal delivery to the responsible person or by certified mail, return receipt requested, to the last known address of the responsible person. If the responsible person is not present for personal delivery, if certified mail is refused, or if the location of a responsible person cannot be determined after diligent efforts, notices may be posted in a conspicuous place on the affected property for a period of 10 calendar days and by mailing first class to the last known address. When there is no affected property, such alternative service shall be accomplished by publication of any notices in a newspaper of general circulation that is most likely to give actual notice to the responsible person 2 times in a 10-day period and by mailing first class to the last known address. (Ord. 846 § 2 (part), 1996)

1.09.028 Responsibility of parent(s) and/or legal guardian.

Whenever the responsible person is a person under the age of 18, the enforcement authority shall provide copies of all notices and orders specified in this title to the parent(s) and/or legal guardian. Any administrative sanctions levied under this chapter may be levied against the juvenile and the parent(s) and/or legal guardian of the juvenile. The parent(s) and/or legal guardian shall have the right to a hearing and judicial review as set forth in this chapter. In addition to any other defenses that may be raised to the administrative violation, the parent(s) or legal guardian may raise a defense that the parent(s) or legal guardian have exercised good faith efforts to control the behavior of the minor but have been unsuccessful in achieving such control. (Ord. 846 § 2 (part), 1996)

1.09.029 Confidentiality in connection with citizen complaints.

The city shall take all reasonable steps to ensure that the identity of any person making a complaint to the city concerning a violation of the Folsom Municipal Code or other applicable laws shall remain confidential. However, no enforcement action shall be taken beyond issuance of a notice of correction unless: (1) the complaining witness agrees to be identified upon request of the responsible person, or (2) the enforcement authority has developed sufficient independent evidence to proceed with a notice of administrative violation. (Ord. 846 § 2 (part), 1996)

Article III. Hearings

1.09.030 Right to a hearing.

Any person charged with an administrative violation who has been served with a notice to correct, stop order or notice of administrative violation and who wishes to contest the violation or the proposed sanction may request a hearing by filing a request for hearing within 10 calendar days of date of the service of the notice to correct, stop order or notice of administrative violation. (Ord. 846 § 2 (part), 1996)

1.09.031 Preservation of status quo pending hearing.

Any stop order issued pursuant to Section 1.09.023 shall remain in effect until the time of the hearing and any subsequent judicial review. Any additional compliance obligations that may be imposed as the result of a notice to correct, stop order or notice of administrative violation shall also be stayed if a timely request for hearing is filed and until a final decision after the hearing is completed unless an emergency situation affecting the safety or preservation of life or property exists. The enforcement authority shall provide written justification for invoking an emergency situation exception under this section to the responsible person within 24 hours of taking the action to correct the emergency situation. (Ord. 846 § 2 (part), 1996)

1.09.032 Request for hearing and fee--Notice of denial of hearing based on untimely appeal.

The request for hearing shall be filed with the city clerk on a form provided by the city clerk and shall include reference to the notice which is being appealed, shall state all of the grounds for the appeal, and shall be accompanied by payment of: (1) an amount not to exceed $500 as security for payment of the proposed administrative sanction; and (2) a hearing fee. The city clerk shall not accept any request for hearing unless it is accompanied by the hearing fee and the required security for administrative sanction. The amount of the hearing fee shall be established from time to time by resolution of the city council. The amount of the security for the administrative sanction shall be the amount of the maximum sanction specified in the notice of violation, or $500, whichever is less. If the city clerk determines that the request for a hearing is untimely, the city clerk shall advise the responsible person of that determination in writing and shall mail a notice of denial of hearing based on untimely appeal to the responsible person by first class mail. The responsible person shall then have the right to

judicial review of that determination as provided for in Sections 1.09.050 through 1.09.059 of this chapter. Upon a showing of good cause for the delay in filing a request for hearing, the city clerk may refer the issue of the right to an appeal to an administrative hearing pursuant to the procedures set forth in this chapter. The hearing officer shall determine whether there was good cause for the delay in filing the request for hearing before proceeding to the merits of the appeal. (Ord. 846 § 2 (part), 1996)

1.09.033 Meeting with enforcement authority.

Persons charged with a violation of the Folsom Municipal Code or other applicable laws are encouraged to meet with the enforcement authority and/or the appropriate department head or his/her designee prior to requesting a hearing to seek resolution of the matter. Such a meeting may be requested before or after the request of hearing is filed, but a request for the meeting shall not extend the time for filing the request for hearing. (Ord. 846 § 2 (part), 1996)

1.09.034 Mediation.

With the filing of a request for a hearing or at any time before a hearing, the enforcement authority or a responsible person may request that an impartial mediator be appointed to help resolve the issues relating to the charged violation and/or proposed sanctions. The purpose of the mediation shall be to provide an opportunity for the enforcement authority and a responsible person to reach mutual agreement upon steps to achieve compliance with the Folsom Municipal Code or other applicable laws. If the enforcement authority agrees to mediation, the city clerk shall appoint a volunteer mediator to assist in the resolution of the dispute. The hearing may be postponed until completion of the mediation if both parties agree to the postponement. The city will solicit members of the community to act as volunteer mediators and shall provide them with training in mediation skills. Mediators will not receive compensation but shall be recognized publicly for their service to the community. If the enforcement authority and the responsible person reach agreement on a compliance plan, that agreement shall be placed in writing and shall be signed by the enforcement authority, the responsible person and the mediator. If the terms of the agreement are violated, the enforcement authority shall serve a notice of administrative violation as provided for in Section 1.09.024 of this chapter. (Ord. 846 § 2 (part), 1996)

1.09.035 Timely hearing.

The hearing shall be held within 30 calendar days of the filing of a request for hearing unless both parties agree to a postponement of the hearing or the hearing officer rules that there is good cause to postpone the hearing. After the hearing has started, it may be continued with the consent of all parties or upon a showing of good cause for such continuance. (Ord. 846 § 2 (part), 1996)

1.09.036 Notice of time and place of hearing.

The city clerk shall mail to all parties written notice of the time and place of the hearing at least 10 calendar days prior to the date set for the hearing. Such notice shall also include a description of the rights of the parties in the hearing. Hearings shall be conducted in the city. (Ord. 846 § 2 (part), 1996)

1.09.037 Hearing officer.

The city clerk shall appoint an impartial hearing officer for each hearing who may be an employee of the city or a person whose services are acquired by contract with the hearing officer or some public or private agency. The person appointed to conduct the hearing shall not have had within the past 12 months any responsibility for the investigation, prosecution or enforcement of the provision of the Folsom Municipal Code or other applicable laws at issue in the hearing and shall not have had any personal involvement in the case to be heard. (Ord. 846 § 2 (part), 1996)

1.09.038 Ex parte communications.

The hearing officer shall have no communications with any party, any city employee or official, or any potential witness concerning the substance of the case. Having such communications outside the presence of a party may be grounds for disqualification of the hearing officer from conducting the hearing. All communications concerning the case between the hearing officer and any person shall be revealed to the parties in the matter. (Ord. 846 § 2 (part), 1996)

1.09.039 Rights of the parties.

The parties to a hearing shall have the following rights:

A. Timely and adequate notice of the time and place of the hearing, their rights during the hearing and the issues that are to be the subject of the hearing;

B. The right to present evidence and witnesses;

C. The right to present argument;

D. The right to be presented. The representative need not be an attorney;

E. The right to open disclosure of all evidence presented to the hearing officer in the case;

F. The right to confront and cross-examine adverse witnesses;

G. The right to subpoena witnesses or documents;

H. The right to a verbatim record of the hearing;

I. The right to a decision based upon the evidence in the record of the hearing;

J. The right to an impartial hearing officer;

K. The right to a written decision setting forth the reasons for the decision and the evidence relied upon. (Ord. 846 § 2 (part), 1996)

1.09.040 Hearing procedure.

The hearing shall be informal and the hearing officer will have an affirmative obligation to seek the truth concerning the issues in the hearing. The hearing officer may ask questions of any witness and may establish the procedure for the presentation of evidence. The hearing officer may, on his or her own motion, call or subpoena a witness. The hearing officer may order the exclusion of witness during the testimony of other witnesses. (Ord. 846 § 2 (part), 1996)

1.09.041 Hearing open to the public.

All hearings provided under this chapter shall be open to the public and press. (Ord. 846 § 2 (part), 1996)

1.09.042 Oath.

All testimony shall be given under oath. Hearing officers have the authority to administer such oaths. (Ord. 846 § 2 (part), 1996)

1.09.043 Quantum and burden of proof.

All facts must be established by a preponderance of the evidence. The enforcement authority will have the burden to prove that a violation occurred and that the proposed sanction is appropriate. The enforcement authority shall be required to present its case first. (Ord. 846 § 2 (part), 1996)

1.09.044 Rules of evidence.

The rules of evidence adopted by state or federal law shall not apply. All relevant evidence shall be admissible and hearsay evidence may be used for the purpose of supplementing and explaining other evidence. (Ord. 846 § 2 (part), 1996)

1.09.045 Subpoenas.

The hearing officer shall have the authority to issue subpoenas (order to appear and give testimony) and subpoenas duces tecum (order to produce document(s) or paper(s)). The hearing officer may only issue subpoenas and subpoenas duces tecum upon a showing of reasonable necessity by the requesting party. (Ord. 846 § 2 (part), 1996)

1.09.046 Record of the hearing.

The hearing shall be tape recorded and a copy of the recording will be provided to anyone requesting a copy upon the payment of a fee set from time to time by resolution of the city council to cover the cost of duplication. (Ord. 846 § 2 (part), 1996)

1.09.047 Written transcript.

Any person, including a party, may request a typed written transcript of the hearing but the requesting person will be responsible for the cost of transcription, including an administrative fee. An estimate will be provided of the cost of the transcription and the person requesting the transcript will be required to deposit an amount equal to that estimate before transcription will be started. If the cost of the transcription is greater than the estimate, the person requesting the transcript will be required to pay the additional cost before the transcript is provided. If the actual cost of transcription is less than the

estimate, the city will refund the difference. (Ord. 846 § 2 (part), 1996)

1.09.048 Written decision.

The hearing officer shall prepare and forward to the parties a written decision within 30 calendar days of the close of the hearing. The decision shall be mailed by first class mail. If the hearing officer grants the appeal, the hearing officer shall have the discretion to refund the fee charged to the responsible person for the appeal. (Ord. 846 § 2 (part), 1996)

Article IV. Judicial Review

1.09.050 Final administrative decision.

The decision of the hearing officer shall constitute the final administrative decision and shall not be appealable to the city council or any committee or commission of the city. (Ord. 846 § 2 (part), 1996)

1.09.051 Judicial review.

Appeal shall be through judicial review of the final administrative decision by filing a petition for a writ of mandate with the Superior Court in accordance with the provisions of Sections 1094.5 and 1094.6 of the California Code of Civil Procedure. Such writs must be filed within 90 calendar days from the date of the final administrative decision. (Ord. 846 § 2 (part), 1996)

1.09.052 Review standard.

The court may not change the findings of fact of the hearing officer unless there is no substantial evidence to support those findings. (Ord. 846 § 2 (part), 1996)

Article V. Enforcement of Monetary Sanctions

1.09.060 When monetary sanctions are due.

Monetary sanctions levied against a responsible person are due at the following times:

A. If a request for hearing is not filed in relation to the notice of administrative violation, the monetary sanction set out in the notice shall be due and payable 10 calendar days after service of the notice of administrative violation.

B. If a request for hearing is filed within the time limits proscribed by Section 1.09.030 and there is no appeal of the hearing decision to the court pursuant to Section 1.09.051, the monetary sanction shall be due and payable 90 calendar days after the date of a hearing decision, an order by the hearing officer dismissing the request for hearing, or the date the hearing request is withdrawn by the responsible party. The amount of sanction payable shall be the amount set by the hearing officer in a decision after hearing, or the amount set forth in the notice of administrative violation if there is no hearing decision.

C. If there is judicial review of the hearing decision pursuant to Section 1.09.051, the monetary sanction shall be due and payable 30 calendar days after the date of the final court order in relation to that review. The amount due shall be the amount ordered by the hearing officer unless a court modifies the amount of monetary sanction. (Ord. 846 § 2 (part), 1996)

1.09.061 Place for payment of monetary sanction.

All monetary sanctions shall be paid to the city and delivered to the finance department of the city. All payments shall be accompanied by a copy of the notice of administrative violation, or the decision of the hearing officer or the court decision establishing the amount of the monetary sanction. The finance department shall prepare a receipt documenting the payment of the monetary sanction and shall forward one copy of the receipt to the enforcement authority and one copy of the receipt to the city clerk. The city clerk shall thereafter verify that the sanction has been paid in full. If the sanction has been paid in full, the city clerk shall so note in the records pertaining to the administrative violation. If the sanction has not been paid in full, the city clerk shall notify the enforcement authority and responsible person in writing. (Ord. 846 § 2 (part), 1996)

1.09.062 Failure to pay a monetary sanction.

If the responsible party does not pay the monetary sanction within the times provided under Section 1.09.060, or if the responsible party fails to pay the required monetary sanction in full within the times provided under Section 1.09.060, any unpaid portion shall bear interest at the rate of 10 percent per annum from the date such payment was due until paid in full and the city may take any of the following actions to collect the monetary sanction.

A. Liens. The amount of the unpaid sanction plus interest plus a reasonable administrative fee established by the city council from time to time to cover the cost of collection constitutes and may be declared a lien on any real property owned by the responsible party within the city.

1. Notice shall be given to the responsible party prior to the recordation of the lien, and shall be served in the same manner as a summons in a civil action pursuant to Article 3, (commencing with Section 415.10) of Chapter 4 of Title 5 of Part 2 of the Code of Civil Procedure.

2. The lien shall attach when the city manager or his/her designee records a lien listing delinquent unpaid sanctions with the Sacramento County recorder's office. The lien shall specify the amount of the lien, the date of the code violation(s), the date of the final administrative decision, the street address, legal description, and assessor's parcel number of the parcel on which the lien is imposed and the name and address of the recorded owner of the parcel.

3. In the event that the lien is discharged, released or satisfied, either through payment or foreclosure, notice of the discharge containing the information specified in subsection (A)(1) of this section shall be recorded by the city clerk.

B. Special Assessments. The amount of the unpaid sanction plus interest plus a reasonable administrative fee established by the city council from time to time to cover the cost of collection may be declared a special assessment against any real property owned by the responsible person within the city to the extent the responsible person owns more than one parcel within the city. The city council may impose the special assessment on more than one parcel. However, the amount of the assessment shall not exceed the penalty imposed for the administrative violation. The city manager/or his/her designee may present a resolution to the city council to declare a special assessment, and upon passage and adoption thereof, shall cause a certified copy thereof to be recorded with the Sacramento County recorder's office. The assessment may then be collected at the same time and in the same manner as ordinary municipal taxes are collected, and shall be subjected to the same penalties and the same procedure and sale in case of delinquency as provided for ordinary municipal taxes.

C. Withholding Entitlements. The city may withhold issuance of licenses, permits and other entitlements to a responsible person until payment is received.

D. Other Enforcement Procedures. The city may take such other actions as are allowed for enforcement of a civil judgment as provided for pursuant to the Enforcement of Judgments Law, California Code of Civil Procedure Sections 680.010, et seq. (Ord. 846 § 2 (part), 1996)

Chapter 1.10
ADDITIONAL REMEDIES

Sections:

1.10.010 Abatement by city.
1.10.020 Procedure for creation of nuisance abatement lien.
1.10.030 Treble damages for subsequent abatement judgments.

1.10.010 Abatement by city.

Pursuant to California Government Code Section 38773, the city may abate any nuisance at the expense of the persons creating, causing, committing or maintaining the nuisance and any and all expenses of abatement, including reasonable attorney's fees incurred, shall constitute a lien against the property on which the nuisance is maintained and such debt becomes a personal obligation against the property owner. (Ord. 846 § 2 (part), 1996)

1.10.020 Procedure for creation of nuisance abatement lien.

A. Notice Requirement. Whenever a responsible person refuses to abate a nuisance and the owner or person occupying the property refuse to consent to abatement by the city, the enforcement authority shall serve a written notice to abate such nuisance upon the owner of the property (as shown on the last equalized assessment roll or the supplemental roll, whichever is most current), and on any persons known to be possessing such property.

B. Contents of Notice. The notice shall include the following information:

1. The street address, legal description or other description sufficient to identify the affected property;

2. A statement that the property owner and/or person in possession of the property has 10 calendar days from the date of the notice to voluntarily abate the nuisance;

3. A statement that the property owner and/or person in possession of the property, may, during the period of voluntary abatement, (1) file a written request for a hearing with the city clerk as provided for in Section 1.09.030 of this chapter if there is an objection to the demand to abate the nuisance, or (2) present written evidence to the enforcement authority to show that the property owner or person in possession of the property had no responsibility for creating or maintaining the nuisance on the property and that to be required to remove or abate such nuisance will cause financial or physical hardship; and

4. A statement that if the nuisance is not voluntarily abated within the stated period, and the property owner and/or person in possession of the property fails to present the information set forth in subsection (B)(3) of this section or to file a timely written request for a hearing, all persons served with such notice shall be deemed to have consented to the abatement of the nuisance and that, at the election of the city, the city will abate the nuisance and the costs for such abatement may be charged against the premises and may be recorded as a lien against the premises.

C. Service of Notice. The notice to abate the nuisance shall be served in the same manner as a summons in a civil action in accordance with Article 3 (commencing with Section 415.10) of Chapter 4 of Title 5 of Part 2 of the Code of Civil Procedure. If the owner of record, after diligent search, cannot be found, the notice may be served by posting a copy thereof in a conspicuous place upon the property for a period of 10 days. The failure to make or attempt such service on any person as required herein shall not invalidate any proceedings under this chapter as to any other person duly served.

D. Failure to Pay Costs--Authority to Record Lien or to Declare Lien a Special Assessment Against Parcel.

1. Except as to persons who have demonstrated a financial or physical hardship in paying for the costs of abatement, if all or any portion of the costs and expenses incurred by the city in abating the nuisance and accounted for by the enforcement authority remain unpaid after 30 days, pursuant to authority created by law, including Government Code Section 38773, et seq., such portion thereof as remains unpaid shall constitute and shall be declared to constitute a lien on the real property which was the subject of notice to abate.

2. Prior to recordation of the lien, notice shall be given to the land owner. If the land owner, after a diligent search cannot be found, the notice may be served by posting a copy of the notice upon the property subject to the lien, in a conspicuous place, for a period of 10 days. The notice shall also be published in a newspaper of general circulation in the city.

3. The lien shall attach when the city manager or his/her designee records a lien listing delinquent unpaid nuisance abatement costs with the Sacramento County recorder's office. The lien shall specify the amount of the lien, the date of the abatement order, the street address, legal description and assessor's parcel number of the parcel on which the lien is imposed and the name and address of the recorded owner of the parcel.

4. In addition to the recordation of a lien, the amount of the costs and expenses incurred by the city in abating the nuisance plus a reasonable administrative fee established by the city council from time to time to cover the cost of collection may be declared a special assessment against any real property owned by the responsible person within the city to the extent the responsible person owns more than one parcel within the city. The city council may impose the special assessment on more than one parcel. However, the amount of the assessment shall not exceed the penalty imposed for the administrative violation. The city manager/or his/her designee may present a resolution to the city council to declare a special assessment, and upon passage and adoption thereof, shall cause a certified copy thereof to be recorded with the Sacramento County recorder's office. The assessment may then be collected at the same time and in the same manner as ordinary municipal taxes are collected, and shall be subjected to the same penalties and the same procedure and sale in case of delinquency as provided for ordinary municipal taxes.

5. In the event that the lien or special assessment is discharged, released, or satisfied, either through payment or foreclosure, notice of the discharge containing the information specified in subsection (D)(1) of this section shall be recorded. (Ord. 846 § 2 (part), 1996)

1.10.030 Treble damages for subsequent abatement judgments.

Pursuant to California Government Code Section 38773.7, upon the entry of a second or subsequent civil or criminal judgment within a 2-year period that finds an owner of property responsible for a condition that may be abated in accordance with California Government Code Section 38773.5, a court may order the owner to pay treble the costs of the abatement. These costs shall not include conditions abated pursuant to California Health and Safety Code Section 17980. (Ord. 846 § 2 (part), 1996)

Exhibit D

County of Sacramento Environmental Management Department
Water Protection Division Stormwater Compliance Section
Stormwater Enforcement Policy

PURPOSE AND INTENT

The purpose and intent of this document is to provide a framework for inspections and enforcement actions taken by County of Sacramento Environmental Management Department (EMD) Stormwater Compliance Section (SCS) pursuant to Chapter 15.12 of the Sacramento County Code (Stormwater Ordinance) and the stormwater ordinances of the cities of Sacramento, Folsom, Citrus Heights, Galt, Elk Grove and Rancho Cordova (which defer to Chapter 15.12 in matters relating to stormwater enforcement at businesses that EMD regulates).

Effective enforcement against dischargers of pollutants to County and municipal storm drainage systems is a requirement of the National Pollutant Discharge Elimination System (NPDES) Municipal Stormwater Permit (MS4 Permit) and EMD has agreed to regulate nine required categories of businesses for stormwater compliance on behalf of the MS4 Permittees.

Implementation and interpretation of this policy should be consistent with local stormwater ordinances (hereafter referred to as "Stormwater Ordinance"), including but not limited to, the protection of water quality and compliance with the provisions of the MS4 Permit.

DEFINITIONS

A. **Best Management Practices (BMPs).** Best Management Practices or BMPs are defined in section 15.12.130 (b) of the County Stormwater Ordinance and includes policies, practices, structures, and any other means of reducing or eliminating the discharge of pollutants and non-stormwater discharges to the storm drain system.

B. **Enforcement Official.** An enforcement official is any person authorized to conduct inspections and/or issue enforcement actions pursuant to the Stormwater Ordinance. Within the Environmental Management Department, SCS staff will be primarily responsible for enforcing the stormwater ordinance, although, Environmental Health Division and Hazardous Materials Division staff may also enforce.

C. **Fine.** A fine is a monetary Administrative Civil Penalty assessed under the authority of County Section 15.12.560 of the County Stormwater Ordinance and corresponding sections of municipal stormwater ordinances.

D. **General Permit.** The Industrial General Stormwater Permit is a permit issued by the California State Water Resources Control Board, under the National Pollutant Discharge Elimination System provisions of the Federal Clean Water Act. The Industrial General Permit applies to facilities that discharge stormwater associated with industrial activities as defined in 40 CFR 122.26 (b)(14) *i-ix* and *xi.* The MS4 Permit requires inspection of these facilities on a triennial basis.

E. **Hearing Officer.** The hearing officer is any person approved by the Board of Supervisors or Stormwater Program Administrator to conduct administrative hearings as provided by Chapter15.12.

F. **MS4 Permit.** The Municipal Separate Storm Sewer System Permit is a permit issued by the Regional Board under the Federal Clean Water Act National Pollutant Discharge Elimination System for discharges from Municipal Separate Storm Sewer Systems. For the purposes of this policy, MS4 Permit is NPDES Permit number CAS082597 and any successor permits, issued to the County of Sacramento and the Cities of Citrus Heights, Elk Grove, Folsom, Galt, Rancho Cordova and Sacramento.

G. **Operator.** Any individual that runs, manages, or owns a business.

H. **Receiving Water Limitations.** Receiving water limitations are those limitations included in Provision B of the MS4 Permit.

I. **Regional Board.** The Regional Board is the California Regional Water Quality Control Board, Central Valley Region.

J. **Stormwater Compliance Section (SCS).** SCS is the group within the Water Protection Division that manages EMD's Commercial / Industrial Stormwater Compliance Program.

K. **Storm Drain System.** The storm drain system or stormwater conveyance system, are those public facilities within the County which are owned, operated, maintained or controlled by the County or cities, by which stormwater may be conveyed to waters of the United States, including, but not limited to, any roads with drainage systems, municipal streets, roadside drainage ditches, catch basins, water quality basins, detention basins, constructed wetlands, artificial channels, aqueducts, curbs, gutters, ditches, sumps, pumping stations, and storm drains. The storm drain system also includes natural creeks and streams which are identified as receiving waters by the MS4 Permit, but does not include the Sacramento, American, Mokelumne, or Cosumnes rivers, or navigable waters of the Delta.

L. **Stormwater Ordinance.** Stormwater Ordinance refers to Chapter 15.12 of the Sacramento County Code, and/or any equivalent ordinance adopted by a City that establishes authority under which the Environmental Management Department provides stormwater inspection and enforcement services. Each of the incorporated cities within the County (except Isleton) has a stormwater ordinance that has been modified to provide inspection and billing authority to EMD for stormwater compliance. Each of the city ordinances refer to County chapter 15.12 for enforcement matters at businesses that EMD regulates for stormwater on their behalf, to allow for consistent, county-wide enforcement.

- The City of Folsom's stormwater ordinance are sections 8.70.010 – 420
- The City of Sacramento's stormwater ordinance are sections 13.16.010 – 200
- The City of Galt's stormwater ordinance are sections 16.10.010 – 220
- The City of Elk grove's stormwater ordinance are sections 15.12 010 - 560

- The City of Citrus Heights and Rancho Cordova refer to the County's ordinance

AUTHORITY

- **Source of Authority.** The authority for this enforcement policy is established in the stormwater ordinance. All enforcement actions must be generally in accordance with the provisions of chapter 15.12, the County Stormwater Ordinance.

- **Delegation of Authority.** Authority for the interpretation, implementation and enforcement of the stormwater ordinance has been delegated to the Director of EMD by the Administrator of the County OF Sacramento's Municipal Services Agency and through agreements with city departments responsible for administering stormwater ordinances.

FLEXIBILITY

This policy is intended to provide a reasonable framework for selecting and conducting enforcement actions in a manner that is fair, consistent, and well-documented. However, this policy can not anticipate all factors or define all situations that are relevant to determining the proper enforcement action for all violations. Therefore, EMD staff who are responsible for conducting enforcement of the Stormwater Ordinance are expected to exercise a reasonable amount of discretion in implementation of this policy.

RECORDKEEPING

Records shall be kept that include inspection reports, warning letters, violation notices, and other pertinent documents that demonstrate the effort made to bring the violator into compliance. All enforcement records should be imaged and photo should be placed on the I: drive, and/or other appropriate file.

INSPECTION

Types of Businesses:

The MS4 Permit requires triennial stormwater compliance inspections and stormwater complaint response at the following categories of businesses:

- Businesses covered under the State's General Industrial Stormwater Permit
- Auto repair
- Auto body
- Auto dealers (dealers with over 5000 sq-ft of outdoor display space)
- Equipment rental businesses (facilities with over 200 sq-ft of outdoor storage or display space)
- Nurseries (small retailers that do not apply pesticides, fertilizers are excluded)
- Kennels (facilities with over 400 sq-ft. of space devoted to dog kenneling)
- Retail gasoline outlets

- Restaurants and related non-mobile food prep facilities

Stormwater Inspection Compliance Criteria:

- No prohibited discharges to the storm drain system are evident
- No illicit connections to the storm drain system are evident
- No prohibited conditions are evident that are likely to result in pollutant discharges to the storm drain system upon contact with rainfall irrigation overflows, etc. such as:

    1. Poor housekeeping resulting in pollutants on the ground and other outdoor areas
    2. Inadequate spill response resulting in unattended spills and leaks on outdoor areas throughout the facility, or indoor areas that could impact outdoor areas.
    3. Uncovered stored wastes, materials, or inventory items that may be expected to be transported to storm drain system by rainfall, irrigation runoff, etc.
    4. Open waste receptacles such as tallow bins, dumpsters and compactors that contain pollutants that may be made to wash or leak out by rainfall, and/or leak wastes that may be expected to be transported to storm drain system by rainfall, irrigation runoff, etc.
    5. Leaky or contaminated equipment stored or used outdoors that are likely to result in wash-off or leakage of significant pollutants
    6. Track-out of sediment or other materials to street or outdoor areas where it may be expected to be transported to storm drain system by rainfall, irrigation runoff, etc.

Checklist / Notice of Violation (NOV)

Two types of checklists / NOVs are utilized:

1. Food facility checklists / NOVs
2. All other facilities (non-food) checklist / NOVs

When stormwater compliance inspections are conducted, the specialist will always fill out and issue a stormwater checklist and NOV to the facility operator. If there are no violations, the specialist will write "no violations noted" on the NOV form. The checklist and NOV are to be signed by the business operator and is left with a copy of each. In all instances, appropriate compliance literature is provided to the facility operator.

Corrective Actions

The specialist will require the facility operator to correct violations within the 19/35 day time frame, as described in the NOV section below. A re-inspection may be avoided by the facility operator if he/she submits clear proof of compliance to the specialist within the required time frame, or submits an acceptable request for extension prior to the compliance due date.

Acceptable proof of compliance submittals may include photos, receipts, or invoices that clearly demonstrate correction. In many instances, statements from the operator explaining how he/she

intends to change practices to correct and/or avoid repeating violations and/or training logs showing that employees have been trained may be appropriate, in addition to other proof of compliance.

In some instances, it may not be feasible for a facility operator to make necessary corrections within the required time frame, especially when corrections include major repairs or facility modifications. Extensions may be granted but the specialist should require an action plan or statement to be submitted by the facility operator within the initial compliance time frame. The action plan or statement should specify the corrections that are to be made and should provide a time frame for completion.

PROGRESSIVE ENFORCEMENT:

The following steps will be taken to ensure return to compliance at facilities found to be in violation of the Stormwater Ordinance:

Notice of Violation (NOV)

A NOV will be left with the operator after the inspection, regardless of whether violations were found or not. If there are **no** violations found, the NOV will clearly state that there are no violations.

Depending upon the nature of violations noted, the NOV will typically specify the following compliance deadlines:

- **14 days to correct violations** and **19 days to provide proof of compliance** in situations involving unauthorized non-stormwater (prohibited) discharges to the storm drain system or illicit connections.

  Although 14 days are allowed to make corrections, unauthorized non-stormwater discharges should be stopped immediately, especially if the discharge contains hazardous constituents, or hazardous levels of non hazardous constituents.

  However, if a prohibited discharge results from vehicle washing activities at an auto dealer, the operator may be allowed to continue discharging the vehicle wash water for 14 days as he/she explores compliance options (see Commercial Vehicle Wash Policy).

- **30 days to correct violations** and **35 days to provide proof of compliance** for violations that are not prohibited discharges.

***Cease and Desist Order**

The County's Stormwater Ordinance (section 15.12.520) says that a Cease and Desist Order may be issued as an alternative to a NOV when immediate action by the responsible party is necessary to eliminate a continuing or threatened serious violation of the Stormwater Ordinance.

Extensions of Compliance Deadlines

There will be instances when a business operator will not be able to comply with requirements within

the time frame specified. The specialist may grant an extension to the operator if the inspector determines that an extension is warranted. **A request for extension must be received in writing** (mail, e-mail, fax, hand delivered, etc) **by the inspector by no later than the specified compliance deadline date.** It is strongly recommended that a business operator discusses the extension request with the inspector well before the deadline to determine if the inspector is likely to grant the extension. The extension request must include an explanation as to why the extension is needed, as well as a summary of actions taken to date by the operator to comply with requirements of the NOV.

Typically, it will be more appropriate to allow extensions for violations involving pollutant exposure problems that require the implementation of a broad set of BMPs, or significant facility cleanup or remediation.

In general, extensions should not be granted to allow the continuation of unauthorized non-stormwater discharges (NSDs). Exceptions may be made, however, in situations involving vehicle washing. When extensions are allowed for the continuation of NSDs, the extension must be made with the condition that storm drain filters are installed and other appropriate measures implemented in order to help mitigate continuing discharges during the extension period.

Re-Inspections

A facility will be subject to a stormwater compliance re-inspection (typically within 8 weeks) to ensure return to compliance for the following conditions:

- Illicit connections are found.

- Violations are so serious, numerous, or complicated that specialist does not feel that photo or similar document (RTC) submission will be adequate to demonstrate compliance.

- Specialist does not believe that operator is credible enough to rely on document (RTC) submission based upon operator's compliance history, nature of violation(s), and/or inconsistent or contradictory information provided by operator

- Operator fails to provide clear proof of compliance submission (RTC), or fails to request (and is granted) an extension within the NOV specified time frame (19/35 days). The specialist will review the facility file to determine if violations warrant a re-inspection. If the specialist believes that the operator has failed to bring the facility into compliance, a re-inspection should occur within 8 weeks of the initial inspection. **If violations have not been corrected, specialist may charge for re-inspection and associated drive and office time.**

- In lieu of fine, <u>for moderate and repeat minor violations</u>, the specialist may deny the operator the option of submitting a proof of compliance (RTC) submittal and do a re-inspection with fee. For more serious moderate and repeat moderate violations, the specialist may place the facility on **monitoring status**.

Monitoring Status

As an alternative to issuing fines for repeat multiple minor violations and for any moderate violations, the operator may place a facility on monitoring status.

This means that in addition to a charged re-inspection at the end of 19 or 35 days, the operator is put on written notice that he/she will be subject to unannounced re-inspection at charge, one or more times over a given year or years, depending upon the severity of the violations. Repeat multiple minor violations should result in no more that one re-inspection and one monitoring status re-inspection. Moderate violations may result in multiple monitoring status re-inspections.

If the operator is **not** found to have repeat same or similar violations while on monitoring status, he/she is to be released from monitoring status, after final re-inspection. If same or similar repeat violations are noted during monitoring status re-inspections, a fine is to be issued, following policy guidelines.

If, during monitoring status re-inspections, violations unrelated to the violation(s) that resulted in monitoring status are noted, the monitoring status should be extended, at a minimum. If the violations are moderate or major, further enforcement actions should follow, per policy.

Charge for re-inspections should include related drive time and office time.

Charging for re-inspections and complaint responses.

*The cost of performing one complaint response visit and one re-inspection, if necessary, for each facility every three years is included in the stormwater inspection program fees approved by the Board of Supervisors.

Within any given 3-year period beginning with either the start of the stormwater inspection Program in July 2004, or the addition of a given facility to the inspection inventory, which ever best applies, each facility is entitled to one complaint response visit and one re-inspection visit, if needed, without charge (except as noted below).

Any second complaint response or second re-inspection is to be charged for at the current EMD hourly Rate in six minute increments, rounded up, including drive time. If, however, the inspector wishes to reward compliance or provide a compliance incentive, he/she may waive the fee for a second complaint or re-inspection visit, upon his/her discretion. All third or subsequent complaint or re-inspection visits within the 3 year period will be charged.

When a re-inspection is necessary to verify compliance because RTC documentation was not submitted, or submittal was incomplete, a re-inspection fee may be charged at the discretion of the inspector even if it is a first re-inspection.

***Re-inspection fee in lieu of fine.** Re-inspection fees that include inspection, drive time, and associated office time may be assessed as an alternative to a fine, in instances where the re-inspection reveals that a facility operator has failed to correct, or at least make a meaningful effort to correct violations. The fee alone, as an alternative to the fine should not be used in cases involving egregious violations (where a fine and possibly fine and re-inspection billing is more appropriate).

Assessment of Fines

The Stormwater Ordinance (section 15.12.560) authorizes assessment of administrative civil penalties (referred to in this policy as "fines"). In addition to providing the operator the right to appeal the fine or NOV, the assessment of fine amounts will be determined by an assigned Administrative Appeals Hearing Officer except in cases where pre-set fine levels are established by the Board of Supervisors for specific violations. EMD staff will not determine fine levels.

The enforcement notice (typically an NOV) informs the responsible party of the right to a hearing within the given time frame and informs the responsible party regarding the necessary steps to make an appeal.

When a violation involves a continuing violation that does not create an immediate danger to health or safety, as determined by the enforcement official, the violator shall be provided with a reasonable time to correct or otherwise remedy the violation prior to imposition of the penalty. The enforcement official shall determine and notify the violator of the time within which the violator must correct or remedy the violation. The notice shall provide that a fine will be imposed if the continuing violation is not remedied or corrected within the time stated.

When/How to Issue a Fine

Fines should be issued under the following circumstances:

- Despite warning, operator has failed to bring his/her facility into either short or long-term compliance despite having been provided standard compliance time frame (19/35 days) and at least one reasonable extension time frame, if requested. This includes failure to implement appropriate BMPs for pollutant sources/activities.
- Despite warning, operator has failed to submit Proof of compliance, and has refused to allow EMD staff access to re-inspect.
- Operator has committed a repeat violation(s) identical in principal to violation(s) that he/she was issued a violation notice for within the past 5 years.
- Operator has committed an egregious, first time offense that results in serious environmental harm and/or potential or actual threat to human health and offense appears intentional, or is a result of gross negligence.

Note: The preceding conditions will not apply to minor violations such as open dumpster/receptacle lids until such time that pre-set fine amounts are established, unless said minor violations have occurred at least 4 times. Fines shall typically only be issued for moderate to major violations with emphasis on repeat violations and situations where the operator refuses to comply

When the Specialist feels that the imposition of a fine is appropriate he/she shall:

1. Prepare and submit a written report via e-mail or memo regarding the nature of, and circumstances surrounding, the violation to the WPD Chief and gain written approval to proceed with the fine.
2. Prepare all evidence including a summary of the violations, photos, and copies of all notes and notices relevant to the case.

3. Propose a fine level based upon the matrix and guidelines shown below and draft a Notice of Determination (fine letter) to provide to the hearing officer.
4. Contact the assigned Appeals Hearing Officer (or county counsel) to arrange a hearing / fine assessment date
5. Inform County Counsel of intention to issue a fine and provide copies of all pertinent materials.
6. Within 24 hours of setting a hearing date, send fine letter to the business operator informing him/her of the time, date, and location of the hearing.
7. Attend hearing
8. Submit a report to WPD Chief summarizing results of hearing

Draft Fine Matrix: Fine level suggestions are made to the hearing officer based upon authority to impose maximum fines of $5000 per day, per violation, using the matrix below. Settlement offers may be made to the violator to avoid a hearing. The proposal of a settlement amount should be based upon a percentage (less than 25%) of the total suggested fine amount.

AUTHORITY: SACRAMENTO COUNTY CODE, CHAPTER 15, SECTION 12.560	ACTUAL OR POTENTIAL HARM ▼		
EXTENT OF DEVIATION ▼	**Major**	**Moderate**	**Minor**
Major	Maximum: $5,000	Maximum: $3,000	Maximum: $2,000
	Average: $4,000	**Average: $2,500**	**Average: $1,5 00**
	Minimum: $3,000	Minimum: $2,000	Minimum: $1,000
Moderate	Maximum: $3,000	Maximum: $2,000	Maximum: $1,000
	Average: $2,500	**Average: $1,500**	**Average: $7500**
	Minimum: $2,000	Minimum: $1,000	Minimum: $500
Minor	Maximum: $2,000	Maximum: $1,000	Maximum: $500
	Average: $1,500	**Average: $750**	**Average: $250**
	Minimum: $1,000	Minimum: $500	Minimum: $0

Guidelines for using matrix to propose fine levels:

B. Steps in Determining Penalties

1. Initial Penalty. SCEMD will determine an initial penalty for each violation by considering the actual and potential harm and the extent of the deviation from well ordinance requirements. Assigning degrees of actual and potential harm:

(1) Major – the nature of the violation has the potential to present a major threat to human health or safety or the environment and the circumstances of the violation indicate a high potential for harm, or significant harm has occurred.

(2) Moderate – the nature of the violation does not present a major threat to human health or safety or the environment and the likelihood of harm from noncompliance is not high, or moderate harm has occurred.

(3) Minimal – the overall threat to human health or the environment is low or minimal harm has occurred.

b. ***Assigning degrees of extent of the deviation.***

(1) Major – the act deviates from the requirement to such an extent that the requirement is completely ignored or the function of the requirement is rendered ineffective because some of its provisions are not complied with.

(2) Moderate – the act deviates from the requirement but functions to some extent.

(3) Minimal – the act deviates from the requirement but functions nearly as intended.

2. ***Adjusted Initial Penalty***

a. The initial penalty may be adjusted based on the violator's intent in committing the infraction. The following factors will be considered as a basis for adjustment.

ADJUSTMENT FACTOR	CIRCUMSTANCES
Downward adjustment of 100%	Violation was completely beyond the control of the violator.
Downward adjustment of 0 to 50%	Violation occurred even though good faith efforts to comply with regulations were made.
No adjustment	Violation indicated neither good faith efforts nor intentional failure to comply.
Upward adjustment of 50 to 100%	Violation was the result of intentional failure to

	comply.

b. Economic Benefit Adjustment. The initial penalty may be increased if, in the opinion of the SCEMD, the violator realized significant economic benefit as a result of the failure to comply.

(1) The adjustment to the initial penalty cannot exceed the statutory maximum.

(2) Economic benefits to consider include: avoided or delayed costs, or increased profits.

3. ***Combining Multiple Violations. A single penalty may be assessed for multiple violations for the following situations:***

a. The Respondent has violated the same requirement in different locations or units within a site.

b. The Respondent has violated the same requirement on different days. This would not be appropriate if the Respondent has been notified of the violation and has had sufficient time to correct the violation.

4. ***Adjustment factors for cooperation.***

Degree of Cooperation/Effort	Adjustment Factor	Circumstance
Extraordinary	Downward adjustment of up to 25 %	Violator exceeded minimum requirements in returning to compliance or returned to compliance faster than requested.
Good Faith	No adjustment	Violator demonstrated a cooperative effort.
Recalcitrance	Upward adjustment of up to 25 %	Violator failed to cooperate, delayed compliance, created unnecessary obstacles to achieving compliance, or the compliance submittal failed to meet requirements.
Refusal	Upward adjustment of 50 to 100 %	Violator intentionally failed to return to compliance with regulations or to allow cleanup operations to take place. This does not include refusal to allow inspection.

b. Adjustment to create a preventive or deterrent effect. The total base penalty may be adjusted upward or downward to ensure that the penalty is sufficient to provide a deterrent effect on both the violator and/or the regulated community as a whole.

c. Adjustment for compliance history. The total base penalty may be adjusted upward or downward based on the Respondent's compliance history.

(1) General considerations.

(a) Previous violations at the site should receive more weight than previous violations at another site owned or operated by the same person.

(b) Recent violations should receive more weight than older violations.

(c) The same or substantially similar previous violations should receive more weight than previous unrelated violations.

(2) Specific guidance.

(a) Downward adjustments of up to 5% for each previous consecutive inspection with no violations can be made up to a maximum of 10%.

(b) Upward adjustments of up to 100% can be made if a Respondent has a consistent history of noncompliance over the past five (5) years

Project or Training in Lieu of Fine

In lieu of paying a fine, upon approval of the Chief of the WPD, the responsible party may apply all or part of the amount of an imposed fine to complete projects or programs designed to reduce or eliminate the possibility of future violations. Allowable projects or programs may include, but are not limited to, structural BMP installation or staff training, but should generally not include on-going operational or maintenance costs. The cost of the project should roughly equal the amount of the fine to be waived. When considering approval of such projects or programs, the Enforcement Official should consider at, a minimum, the following factors:

A. Severity of the violation.
B. Compliance history of the responsible party.
C. Competitive advantage gained by the responsible party as a result of the violation.
D. Existence of malicious intent or gross negligence that contributed to the violation.

E. Environmental benefit

Cost Recovery

When, in association with a complaint response or violation that requires clean-up and/or extensive investigation by county/municipal staff, EMD staff determines who is responsible for a violation, the responsible party may be required to reimburse the County for all costs incurred by the County or city related to the violation, pursuant to County Stormwater Ordinance, or corresponding sections of the appropriate city ordinance

Cost recovery fees that may be collected include, but are not limited to, investigation, enforcement, compliance assistance, damage, control, and clean-up.

Appeals

The County's Stormwater Ordinance (section 15.12.540) requires that any person served with a notice, order, or fine, be provided an opportunity for a hearing before an appeals hearing officer. Any notice, order, or fine issued, must inform the recipient of his/her right to appeal and provide instructions for requesting an appeals hearing.

To request a hearing, the recipient of the notice, order, or fine must submit a written request, along with a fee of $360 to this department within **30 days** of receipt of the notice, order, or fine. The request is valid if it is postmarked within that **30 day** period. If the appeal is upheld in its entirety by the hearing officer the appellant's fee is to be refunded. If not, the fee is retained.

The hearing must be held within **90 days** of receipt of the hearing request unless a Cease and Desist Order is being appealed, in which case the hearing must be held within **15 days**. This means that when a cease and Desist Order is issued, the operator should be informed that if he/she wishes to appeal, he/she must notify EMD immediately. When the issuing inspector receives a hearing request, he/she should contact the approved hearing officer within 24 hours, to arrange a hearing date. Within 72 hours, the inspector will send a letter by certified mail, informing the appellant as to the date and location of the hearing, as well as other necessary information.

Referrals to the Regional Board

All significant violations and all NOI non-filers must be referred to the Regional Board within 30 days of determination that a significant violation or NOI non-filer status exists. At a minimum, the following information must be included: Name of facility, name of operator, name of owner, type of activities conducted at the facility and copy of the violation.

Abatement by County

When a responsible party is not available, or is otherwise unable or unwilling to cease or control a condition that results in or is likely to result in further or continuing violations, abatement of the condition by the County may be required. Section 15.12.450 of the Stormwater Ordinance authorizes the County Enforcement Official to abate violations on private property.

Referral of Violations to Other Agencies

A. Regional Board

All significant violations and all NOI non-filers must be referred to the Regional Board within 30 days of determination that a significant violation or NOI non-filer status exists. At a minimum, the following information must be included: Name of facility, name of operator, name of owner, type of activities conducted at the facility and copy of the violation.

B. Other County and City Departments

The County Enforcement Official may defer enforcement action against Stormwater Ordinance violations by referring the violation to other County or city departments for enforcement. This may be done when enforcement against the violation itself, or against the practice or condition that caused the violation, is clearly within the jurisdiction and responsibility of the other department.

C. District Attorney

Severe or continuing violations should be referred to the District Attorney for consideration of criminal charges.

RESOLUTION NO. 2522

A RESOLUTION TO ADOPT FINDINGS OF FACT AND A STATEMENT OF OVERRIDING CONSIDERATION AND APPROVING THE UPDATED CITY OF FOLSOM GENERAL PLAN

WHEREAS, the City of Folsom had undertaken a comprehensive planning effort to update the City General Plan; and

WHEREAS, the General Plan update process has involved extensive public participation, both through the substantial contributions made by the Citizens General Plan Advisory Committee and through several Planning Commission and City Council public hearings at which comments were received from concerned citizens; and

WHEREAS, the City Planning Commission, after substantial consideration of alternatives, recommended on September 26, 1988 that the City Council certify the EIR prepared for the Proposed General Plan and approve the General Plan as revised; and

WHEREAS, the Planning Commission further recommended the Preferred Alternative land use plan be approved by the City Council; and

WHEREAS, on October 7, 1988, after holding several work sessions and public hearings, the City Council certified the EIR and approved the revised General Plan, subject to preparation and approval of Findings of Fact and Statements of Overriding Considerations; and

WHEREAS, proposed Findings of Fact and Statements of Overriding Considerations as set forth in Exhibit A and incorporated herein by reference, have been prepared for and reviewed by the City Council in accordance with CEQA Guidelines Section 15091, 15092 and 15093; and

WHEREAS, the proposed General Plan has been prepared in conformance with State Planning and Zoning Law (Government Code Sections 65000-66003), and has been considered pursuant to the California Environmental Quality Act (CEQA) (Public Resources Codes Sections 21000-21177).

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF FOLSOM RESOLVES AS FOLLOWS:

1.The Final EIR for the revised General Plan has been completed in compliance with CEQA, and has been reviewed and considered by the City Council prior to approving the proposed General Plan.

2.The proposed Findings of Fact and Statements of Overriding Considerations, attached as Exhibit A, have been reviewed and considered by the City Council, and are hereby adopted as the City Council's Findings of Fact and Statement of Overriding Considerations.

3.After having considered the Final EIR in conjunction with the approved Findings, the proposed City of Folsom General Plan, and Preferred Alternative Land Use Element and Land Use Map, are hereby adopted and supersede the prior General Plan.

The foregoing Resolution was duly passed and adopted at a properly noticed meeting of the Folsom City Council held on the 31st day of October, 1988, by the following vote:

AYES: Councilmen Goodell, Hannaford, Carmody, Kipp
NOES: None

GLOSSARY ..... BACK OF BOOK

INTRODUCTION

Folsom's General Plan is a long term policy guide for the physical, economic, and environmental growth of the City. It is comprised of goals, policies, and implementation programs which are based on an assessment of current and future needs and available resources.

California State Law requires each City and County to adopt a General Plan "for the physical development of the City or County, and any land outside its boundaries which...bears relation to its planning (Government Code Section 65300)." The role of each community's General Plan is to act as a "constitution" for development, the foundation upon which all land use decisions are made. It expresses community development goals and embodies public policy relative to the distribution of future land use, both public and private (General Plan Guidelines June 1987, OPR). The Plan is to be used by local decision-makers as a visionary document, a "blueprint" for the City's future growth and development.

Folsom's General Plan is strongly oriented toward physical development of land uses, a circulation network, and supporting facilities and services. Because of this, the document is the principle tool for City use in evaluating public and private building projects and municipal service improvements. Conformance of projects and improvements with the General Plan is a major step toward their approval.

Another important concern of the General Plan is enhancement of Folsom's quality of life. This is perhaps the single most important issue facing the City, and is the underlying goal of the local planning process. Goal 1 of the Plan reenforces the City's commitment to maintain and enhance the quality of life.

To retain and enhance Folsom's quality of life, separate identity and sense of community.

Folsom's quality of life is a function of the economic, social, cultural, recreational and environmental conditions experienced by City residents. It depends on how residents perceive their home, neighborhood, and community. Their standard of living, personal happiness, all affect their outlook and perceptions of the City's overall quality of life. Quality of life is a set of values based on individual experiences. Especially true is how people view change and growth in their community. Some people view change for the positive, as dynamics of urban/suburban living, others would prefer things as they were and regard any change as a negative.

The overriding issue, therefore, is whether the existing perceived quality of life will be enhanced by effective decisions dealing with the quality of growth or will it suffer.

10.1 PLAN ORGANIZATION

The City's General Plan is divided into three major parts:

- Master Environmental Assessment
- Environmental Impact Report
- Goals, Policies, and Implementation Document

Since the City has opted to prepare a Master Environmental Assessment (MEA) along with an Environmental Impact Report (EIR), these two documents together with the more typical goals and policies document, constitute the official General Plan. State Planning Law allows a jurisdiction this option (Government Code Section 15166, 15169), although it is still somewhat uncommon, it does allow for a greater degree of flexibility and the ability to update baseline data found in the MEA. All three documents are circulated and certified as the General Plan and accompanying EIR. The General Plan's Environmental Element also serves as the Draft EIR. Upon its certification, the Final EIR will be made part of the Plan.

The Goals and Policies Document is organized into 10 sections. The first of which present an overview of the Plan, its organization, the City's Urban Development Policy, update study assumptions, and Goals and Policies. Chapters 20 and 30 present the Plan's Mandatory and Optional Elements, as defined by State of California law. The last major section, Implementation Programs, is designed to help the reader understand how the General Plan text and map should be used by government staff and private sector

interests to evaluate proposed projects or programs. This section also outlines how the Plan is to be administered and maintained. A Glossary has been included to assist the reader. Finally, the fold out map graphically depicts the City's adopted land use map for Land Uses, circulation, and service-facility uses as currently proposed.

Chapters 20 and 30 embody the General Plan Mandatory and Optional Elements. These are:

Chapter 21.0 Land Use Element:
Discussion focusses on the distribution and development intensity of residential, commercial, industrial, and open space land uses.

Chapter 22.0 Transportation and Circulation Element:
Describes the City's streets, parking, highways, pedestrianways, bikeways, railroads, and future light rail needs. A separate traffic study on the Land Use Plan has been conducted and is incorporated into the supporting technical appendix.

Chapter 23.0 Housing Element:
This section amends the 1985 adopted Element which deals with housing needs and provisions for meeting them.

Chapter 24.0 Open Space and Conservation Element:
Combined in this section are those subjects specified by State Law for the two separate Mandatory Elements. Preservation and management of limited resources is the central orientation. Parks as a form of open space are addressed in the Parks and Recreation Element.

Chapter 25.0 Safety Element:
This section includes seismic safety, flood control, fire, and noise and hazardous materials to some extent.

Chapter 26.0 Noise Element:
Existing future noise sources and issues are addressed, as are noise mitigation measures.

Chapter 31.0 Parks and Recreation Element:
Discusses the City's existing and projected inventory of open space and parklands. Includes parkland dedication standards and the City's efforts to maintain and enhance the City's park and recreation programs.

Chapter 32.0 Air Quality Element:
This section discusses methods and programs available to the City to aid in local and regional air quality improvement efforts. This Element is closely related to the Land Use, Transportation and Circulation Elements.

Chapter 33.0 Public Facilities Element:
This section deals primarily with municipal services and facilities that support development projects. Infrastructure such as water, sanitary sewer, and drainage is discussed; as well as schools, police and fire protection, libraries, and others. Additional material can be found in the MEA.

Chapter 34.0 Hazardous Materials Element:
Presents a discussion on hazardous materials and wastes in today's regulatory environment, and actions and programs that are available to the City to help reduce risks of exposure.

In addition, the City will have a Fiscal Element prepared that will discuss financing mechanisms to pay for future and on-going public facilities and services. Once completed and adopted, the General Plan will be amended to include this Element.

State Planning Law establishes certain minimum requirements which local jurisdictions must meet regarding the substance and content of a General Plan (Government Code Section 65300 et. seq.). Folsom considers this General Plan, incorporating the MEA and EIR, to meet all of these requirements.

State guidelines for the preparation of a General Plan also suggest a certain format or structuring of elements and their content; however, reorganization is permissible, as are Optional Elements, as long as there is internal consistency within the entire General Plan. Folsom has chosen to organize the various elements and achieve internal consistency as demonstrated in Table 10-1. This illustrates the relationship between the City's General Plan Elements and the mandated and optional State

Elements. It should also be mentioned that the accompanying MEA and Draft EIR (Chapter 50.0, Environmental Element) play an important role in determining the consistency and completeness of Folsom's General Plan. Potential significant environmental impacts and mitigation measures are cross-referenced with specific policies and implementation measures, thus creating a valuable document which lays a foundation for future environmental analyses. These documents are incorporated into the General Plan by reference.

URBAN DEVELOPMENT POLICY

11.1 APPLICATION

This Urban Development Policy shall be applicable to the Folsom General Plan Area. A distinction is made in the Policy for incorporated and unincorporated areas and for agricultural uses.

11.2 STATEMENT OF POLICY BASIS

The City of Folsom seeks to implement its General Plan, to direct the orderly growth of the City of Folsom (versus haphazard or leapfrog development), and to provide an adequate level of service to the community. To this end, the City of Folsom has found it to be both timely and appropriate to set forth its Policy for urban development in its General Plan area to ensure that the City can carry out its role as provider of urban services in the northeastern portion of the County of Sacramento. This Policy is set forth in recognition of the following:

1. The State planning policy disfavors encirclement of incorporated Cities with urban development which lacks adequate and comprehenstve urban services.

2. The City of Folsom is a general law City and such political subdivisions have limited authority and means to generate funds under State Law.

3. There has been a further reduction of available revenue for urban development resulting from the fiscal constraints of Articles XIII A and B of the Constitution of the State of California, otherwise known as Propositions 13 and 4.

4. Planned, orderly urban development decreases the cost of urban services while simultaneously improving the environment for urban development.

11.3 POLICY ON DEVELOPMENT OF UNINCORPORATED AREAS

To insure the orderly growth of the City, to enable the logical and most economic extension of services and to better ensure a quality living environment, it is the policy of the City of Folsom to encourage urban development within the City Limits and to discourage urban development in the unincorporated sections of the General Plan area and to coordinate with the County of Sacramento to implement this Policy.

11.4 ANNEXATION POLICY

It is the policy of the City of Folsom to annex all areas within its General Plan area and Sphere of Influence at the earliest time consistent with the Goals and Policies of the Folsom General Plan, the orderly extension of the Folsom City Limits and the provision of public services and facilities in accordance with Sections VI and VII of this Urban Development Policy. In conjunction with this Policy, it is the policy of the City to continue to actively develop additional sources and capacities for services for newly annexed lands. Annexation does not imply development approval.

Section 56076 of the Government Code states that a Sphere of Influence is to be a plan for the probable ultimate physical boundaries and service area of a local governmental agency. A copy of the City's currently adopted Sphere of Influence is shown in Figure 11-1. It is the policy of the City of Folsom to request that LAFCO expand the City's current Sphere of Influence to include areas south of U.S. 50 in a manner consistent with the City's General Plan which will foster orderly urban development and discourage leapfrog development and urban sprawl.

It is the policy of the City of Folsom to encourage annexations which:

1. Are consistent with the City's General Plan, State Law and LAFCO standards and criteria.

2. Constitute fiscally sound additions to the existing City.

3. Ensure the provision of adequate public facilities and services.

4. Are part of a planned and orderly annexation program.

It is the policy of the City of Folsom to pre-zone all properties proposed for annexation in a manner consistent with the City's General Plan. Generally this will involve use of the Agricultural Reserve District (A-1-A) until such time as public facilities and services are available for urban development. However, the City may utilize the County of Sacramento General Plan designation or the existing zoning as a basis for determining pre-zoning consistency so long as the proposed annexation is consistent with and furthers the goals and policies of the City's General Plan.

It is the policy of the City of Folsom that prior to the approval of a tentative map, building permit or other development permit, properties located within the annexation area shall comply with the provisions of Sections VI and VII of this Urban Development Policy to the extent deemed applicable by the City Engineer.

11.5 POLICY FOR APPROVAL OF URBAN DEVELOPMENT PLANS

It is the policy of the City of Folsom to approve development proposals for urban development (not including agricultural development) only when such development is consistent with the General Plan and when full urban services can be logically provided, expanded, and/or extended to serve such development. To insure the logical extension of services in an economically feasible manner, it is the policy of the City of Folsom to restrict development without full services except under extraordinary circumstances. Extraordinary circumstances may be found to exist when the City Council, after considering the recommendation from the Planning Commission finds that:

1. This Policy would cause extreme hardship on the property owner; or

2. The type and extent of the development will not impede implementation of this Policy.

In every case where an exception is granted, there must be a finding of consistency with the General Plan and a finding that the use can function in a safe and healthful manner. The property owner must provide information to the City to support the health and safety finding.

The property owner for whom an exception is granted must:

1. Pay all fees associated with the normal provision of services.

2. Enter into a binding agreement with the City, recorded in the County of Sacramento Recorder's Office, whereby the property owner, his successors, heirs and assigns agree to extend line(s) and connect to services when the adjacent property develops or at the request of the City Council, whichever occurs first.

Agricultural development includes the uses set forth in the A-1-A Zone. These uses, in areas zoned A-1-A, are not governed by this Section of the Urban Development Policy, except as stated in the text of that District, which includes a statement regarding General Plan consistency.

11.6 POLICY ON MUNICIPAL SERVICES AND FACILITIES

It is the policy of the City of Folsom require new development to bear the cost of its increased demand/effect on municipal services and facilities so as not create a greater burden on existing residents. Development contributes to the need for the expansion and extension of the City's circulation, water, sewer, storm drainage, and parks systems and other capital improvements, facilities, and equipment to adequately serve the development area. Service expansion and extension is not necessarily site-specific; rather, it is generally related to a larger area and the City as a whole. In order to accommodate the new development, maintain an acceptable level of service, and alleviate the effects of the increased demand on City services, it is the policy of the City of Folsom to require certain necessary improvements as a part of the development and/or the payment of municipal services and facilities fees consistent with the proportional effect of the development on such services.

The City of Folsom has previously adopted various fees for financing facilities, includi roads, water, sewer, drainage, capital impro ments, and parks. The fees, in effect prior 1983, do not, for the most part, provide sufficie

revenue for improvements needed and for the provision of adequate and acceptable levels of services. The City will periodically update its fees to reflect the cost of providing municipal services and facilities. Also, the City of Folsom is addressing the need for adequate and acceptable educational facilities during the City's urban growth and development by considering an impact fee ordinance.

11.7 POLICY FOR AREA FACILITIES PLANS

In order to assure an adequate funding level for municipal services and facilities in developing areas of the City and in recognition of the possible need for special financing plans to provide such services and facilities, it is the policy of the City of Folsom to formulate and adopt Area Facilities Plans as part of a Public Facilities Element of the Folsom General Plan. Such Area Facilities Plans shall identify the necessary services and facilities and the means to finance such improvements.

It is the policy of the City of Folsom to require the preparation of an Area Facilities Plan or other suitable substitute as approved by the City Council, for a particular area of the City when:

1. Development of an area necessitates provision, extension, and/or expansion of municipal services and facilities which are not customarily constructed by a developer, or

2. There is a need for services or facilities not otherwise funded by the regular City fees, or

3. The construction of the necessary services and facilities cannot be logically or economically provided by one landowner/developer in the normal sequence of orderly development as directed by this Urban Development Policy.

An Area Facilities Plan shall be prepared for and shall apply to all properties within the identified plan area, unless a parcel is specifically excluded in the adopted text of the plan. Where a development proposal covers property which is within an Area Facilities Plan boundary as established by the City Council and such Plan has not been adopted nor has any suitable substitute been approved by the City Council, no tentative subdivision map or development permit shall be approved for such property until the Area Facilities Plan has been adopted. This restriction shall not, however, preclude the approval of final subdivision maps which are in substantial compliance with unexpired tentative subdivision maps which were approved prior to the City Council's determination to require an Area Facilities Plan for the area encompassing such property. The City Council may require the applicant to bear or to share in the cost of the preparation of the Area Facilities Plan.

The adoption of Area Facilities Plans shall not limit the City's authority to impose fees in other areas of the City nor shall it limit the City's or another jurisdiction's authority to impose additional fees in the plan areas for other public facilities when found to be needed in the future.

An Area Facilities Plan shall include, but not be limited to those topics listed in the Public Facilities Element of the General Plan.

11.8 DEFINITIONS

1. Agricultural Development means the types of uses provided for in the City's A-1-A District in areas zoned A-1-A.

2. Development means the act, process, or result of securing approval of a use permit, variance, and/or land division, including a subdivision map, parcel map, land division plat, building permit or the like.

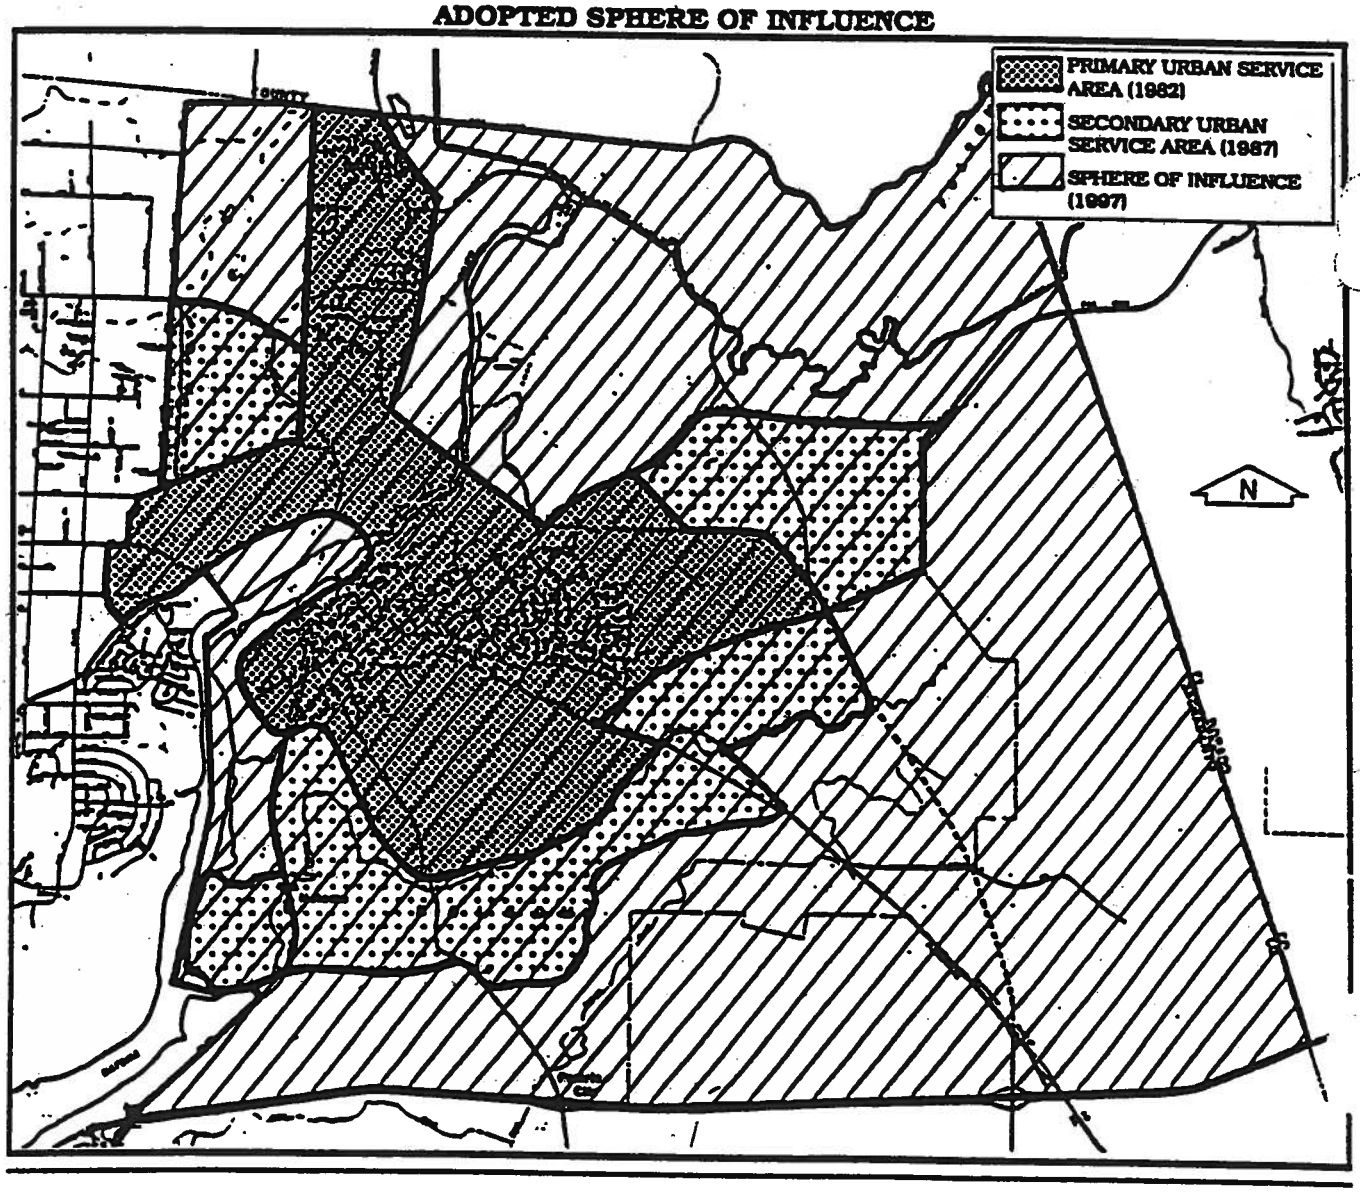
3. Municipal Services and Facilities means those services and related facilities including, but not limited to, water, sewer and storm drainage systems, circulation and transportation systems, parks, police, fire, administration, and other similar services.

4. Urban Development means land development which generates a need for municipal services and facilities as defined. The following development activities typically do not generate a need for services and, therefore, are specifically excluded from the term "urban development" as addressed in this Urban Development Policy:

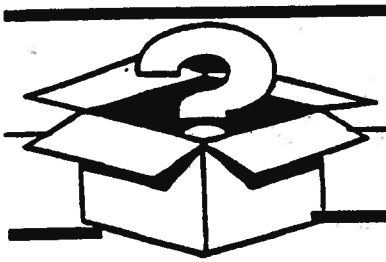
A. Agricultural development as defined herein.

B. The operation, repair or minor alteration of existing public or private structures, facilities, or mechanical equipment which does not involve physical expansion of the use.

C. The construction of minor structures such as carports, patios, swimming pools, or fences which are accessory and appurtenant to existing residential uses.



D. The construction or placement of minor structures such as on-premise signs, small parking lots, or fences which are accessory and appurtenant to existing commercial, industrial, or institutional facilities.



E. Re-occupancy of existing vacant structures by uses which are found by the City to be consistent with the land use designation of the site.

F. Reconstruction of a damaged, destroyed, or unsafe building which involves no expansion of the previously existing use when that use presently is consistent with the Folsom General Plan.

G. Such other development as may be found and declared by resolution of the City Council not to constitute urban development because such development does not generate a need for development improvements and/or City services.

FIGURE 11-1
ADOPTED SPHERE OF INFLUENCE

12.0 ASSUMPTIONS

STUDY ASSUMPTIONS FOR GENERAL PLAN UPDATE AND EAST FOLSOM PLANNING STUDIES

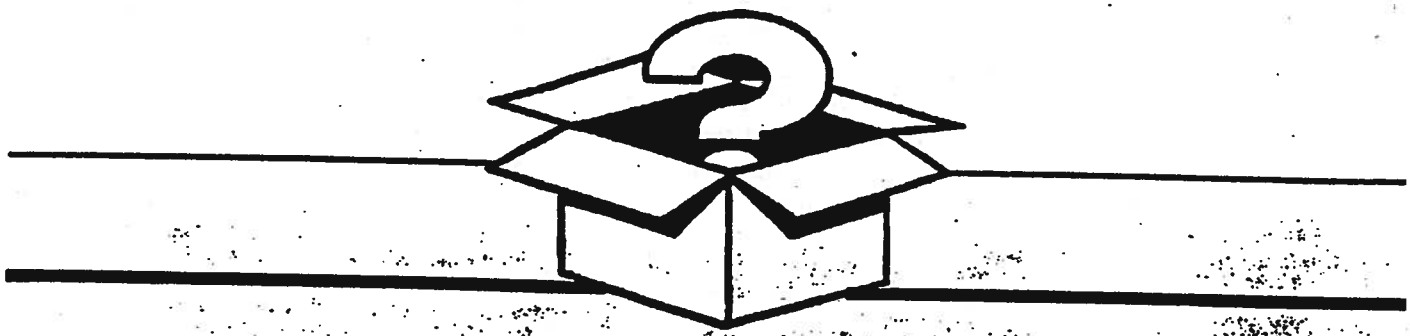
The following major assumptions will be used by staff and consultants to prepare the General Plan Update and East Folsom Planning Studies:

1. The Quality of Life in the City will be maintained as reflected by the policies of the Mayor's Citizen's Advisory Committee.

2. The City will have adequate supplies of water to serve future development when needed.

3. The General Plan Update and East Folsom Planning Studies will show urbanization of the entire City Limits.

4 A stable, local and regional economy is assumed throughout the Planning Period.



5. The Planning Period for the City General Plan Update and East Folsom Planning Studies will be the year 2010. All land use alternatives will be assumed to have been built-out by that time.

6. It is assumed that there will be no constraints for development due to a lack of adequate public services, facilities or infrastructure.

7. Vehicular traffic on surface streets will be accommodated at a Level of Service (LOS) "C" or better in accordance with current City policies.

8. Construction of additional vehicle capacity over the American River (i.e., Bridge Construction) will occur prior to or simultaneous with traffic demand created by new development.

SOURCE: May 18, 1987 Memo to the City Council from the Community Development Department.

12.0
ASSUMPTIONS

October 31, 1988

revenue for improvements needed and for the provision of adequate and acceptable levels of services. The City will periodically update its fees to reflect the cost of providing municipal services and facilities. Also, the City of Folsom is addressing the need for adequate and acceptable educational facilities during the City's urban growth and development by considering an impact fee ordinance.

11.7 POLICY FOR AREA FACILITIES PLANS

In order to assure an adequate funding level for municipal services and facilities in developing areas of the City and in recognition of the possible need for special financing plans to provide such services and facilities, it is the policy of the City of Folsom to formulate and adopt Area Facilities Plans as part of a Public Facilities Element of the Folsom General Plan. Such Area Facilities Plans shall identify the necessary services and facilities and the means to finance such improvements.

It is the policy of the City of Folsom to require the preparation of an Area Facilities Plan or other suitable substitute as approved by the City Council, for a particular area of the City when:

1. Development of an area necessitates provision, extension, and/or expansion of municipal services and facilities which are not customarily constructed by a developer, or

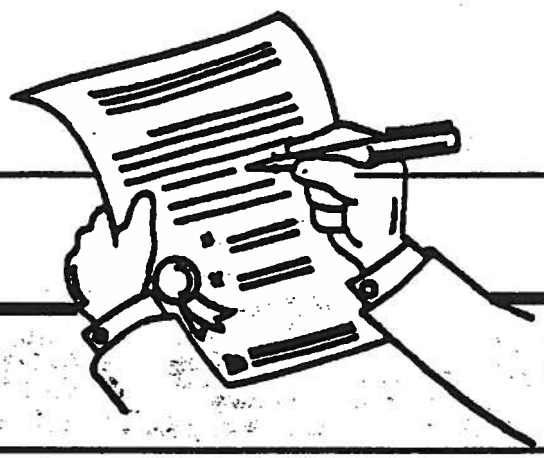
2. There is a need for services or facilities not otherwise funded by the regular City fees, or

3. The construction of the necessary services and facilities cannot be logically or economically provided by one landowner/developer in the normal sequence of orderly development as directed by this Urban Development Policy.

An Area Facilities Plan shall be prepared for and shall apply to all properties within the identified plan area, unless a parcel is specifically excluded in the adopted text of the plan. Where a development proposal covers property which is within an Area Facilities Plan boundary as established by the City Council and such Plan has not been adopted nor has any suitable substitute been approved by the City Council, no tentative subdivision map or development permit shall be approved for such property until the Area Facilities Plan has been adopted. This restriction shall not, however, preclude the approval of final subdivision maps which are in substantial compliance with unexpired tentative subdivision maps which were approved prior to the City Council's determination to require an Area Facilities Plan for the area encompassing such property. The City Council may require the applicant to bear or to share in the cost of the preparation of the Area Facilities Plan.

The adoption of Area Facilities Plans shall not limit the City's authority to impose fees in other areas of the City nor shall it limit the City's or another jurisdiction's authority to impose additional fees in the plan areas for other public facilities when found to be needed in the future.

An Area Facilities Plan shall include, but not be limited to those topics listed in the Public Facilities Element of the General Plan.



11.8 DEFINITIONS

1. Agricultural Development means the types of uses provided for in the City's A-1-A District in areas zoned A-1-A.

2. Development means the act, process, or result of securing approval of a use permit, variance, and/or land division, including a subdivision map, parcel map, land division plat, building permit or the like.

3. Municipal Services and Facilities means those services and related facilities including, but not limited to, water, sewer and storm drainage systems, circulation and transportation systems, parks, police, fire, administration, and other similar services.

4. Urban Development means land development which generates a need for municipal services and facilities as defined. The following development activities typically do not generate a need for services and, therefore, are specifically excluded from the term "urban development" as addressed in this Urban Development Policy:

PARKS AND RECREATION ELEMENT GOALS AND POLICIES 33

PUBLIC FACILITIES ELEMENT GOALS AND POLICIES 38

HAZARDOUS MATERIALS ELEMENT GOALS AND POLICIES 40

FISCAL ELEMENT GOALS AND POLICIES 40

LAND USE ELEMENT GOALS AND POLICIES

GOAL 1

This is the key Goal of the Plan and this sets the tone of the Plan.

To retain and enhance Folsom's quality of life, separate identity and sense of community. Folsom's identity and quality of life are defined by:

1. The diverse natural setting, including the American River, its tributary streams, natural vegetation, topography, native wildlife, and other unique features of the landscape.
2. Developed parks and open space.
3. The historic district and other historic places throughout the community.
4. The State prison site, which provides a large, visual open area in the City.
5. The physical form of Folsom's neighborhoods.
6. Ease of movement.
7. Public access to pedestrian and bicycle trails.

POLICY 1.1

New development shall preserve and/or enhance to the maximum degree feasible, the existing natural vegetation, landscape features and open space, consistent with the Goals and Policies of this Plan.

POLICY 1.2

Existing viewsheds and opportunities for viewsheds should be incorporated into the design of new developments.

POLICY 1.3

Each residential neighborhood should be planned with at least one park/recreational/school area within approximately one half mile of each residential unit.

POLICY 1.4

Each new residential development shall be encouraged to provide pedestrian and bicycle access to parks or schools located within or near the development.

POLICY 1.5

Each new residential development shall be designed with a system of local streets, collector streets, and access to an arterial road that protects the residents from through traffic.

POLICY 1.6

Folsom's historic district shall be enhanced and maintained through the improvement of public facilities.

POLICY 1.7

Historic buildings or locations shall be preserved or incorporated into the design of new developments.

POLICY 1.8

The City shall prepare an inventory of historically and culturally significant buildings and sites. The City should investigate measures for Historic Preservation of these building sites.

POLICY 1.9

Development proposed along streams shall be in conformance with a comprehensive development and management plan to be prepared for stream waterbeds prior to project approval.

POLICY 1.10

When development incentives are required for the preservation of identified resources and open spaces, the City and public shall cumulatively receive the greater short-term and long-term benefits of such incentives.

POLICY 1.11

The location, configuration, and extent of open space and parkway designated on the land use map shall be determined on a project by project basis through site specific mapping approved by the City and consistent with mitigation of environmental impacts and implementation of the overall goals and policies of the General Plan.

The lines depicting the location of Humbug and Willow Creeks on the General Plan are for illustrative purposes and shall be consistent with the Humbug/Willow Creek Management Plan when adopted.

GOAL 2

To ensure that the City exercise appropriate controls over the planning process.

POLICY 2.1

The General Plan sets the overall guidelines for the location and intensity of development in Folsom.

POLICY 2.2

The City will prepare area or specific plans as appropriate to further refine the standards and regulations for development.

POLICY 2.3

General Plan Amendments may be approved when the applicant has successfully indicated substantial benefit could be derived from the project.

1. Requests for higher residential densities must include a demonstration of need for higher density housing.

2. Requests for land use changes must include an evaluation of economic, social and environmental factors which would be enhanced by a change in the land use.

3. Design features for open space, improved recreational facilities, protection of natural features and sensitivity to surrounding development shall be carefully evaluated.

POLICY 2.4

The City shall adopt a grading ordinance which prohibits any substantial grading or modification of the topography prior to approval of a tentative map, planned development or other land use permit. The ordinance shall provide for performance bonds or similar measures acceptable to City and a specific time period for construction to commence. The City shall require slope analysis maps early in the project review process in order to judge future grading activity.

GOAL 3

To address comprehensively Folsom's development issues on the basis of community-wide needs.

POLICY 3.1

The City shall evaluate the community-wide impact of each development on the need for public facilities and services, the circulation and housing impacts from the project, and the effects on the City's identified resources.

POLICY 3.2

Developments should be compatible with the natural features and the buildings that surround them. Compatibility will be measured by the size and configuration of buildings in a project, the use of materials and landscaping, the preservation of existing vegetation and landscape features, and the location of entrance and exit routes on the project site.

POLICY 3.3

Development standards shall be prepared for large land holdings prior to approval of tentative maps or Planned Development permits. Development standards may consist of standards adopted by resolution of the Planning Commission describing standards for development and relationships among land uses within the area covered by the plan. Development standards may be included in specific plans, area plans, or by reference as a condition of approval.

GOAL 4

To provide opportunities for residents to live, work, shop, and enjoy leisure activities within the City.

POLICY 4.1

The City will plan for additional housing needs as determined in the Housing Element for the next 5 to 25 years.

POLICY 4.2

The City will plan for a central community shopping district and a regional shopping center.

POLICY 4.3

Neighborhood business areas will be allowed, subject to size and business use restrictions. The location of such business areas should be based on area or community plans covering the projects to be served by the neighborhood business area. Neighborhood business areas should be pedestrian-oriented, that is, drawing their customers primarily from the residences in the immediate vicinity of the businesses.

POLICY 4.4

The City will expand its system of parks, open spaces, and recreational facilities as new development proceeds.

POLICY 4.5

Industrial and office employers should be encouraged to locate in Folsom to provide more job opportunities for Folsom residents.

GOAL 5

To influence land use decisions of Sacramento, Placer, and El Dorado counties and other governmental agencies which may impact Folsom.

POLICY 5.1

The City shall request to participate in the planning process of other governmental agencies whose jurisdiction includes areas within the city limits of Folsom.

POLICY 5.2

The City shall request copies of proposed plans prepared by other government agencies outside of Folsom but which could affect land in Folsom. City officials should respond in a timely manner to such proposed plans and participate in public meetings or hearings as appropriate.

POLICY 5.3

The City will continue to participate in the Sacramento Area Council of Governments and the Sacramento Local Agency Formation Commission.

GOAL 6

To expand Folsom's Sphere of Influence based on the ultimate boundaries of development that the City can reasonably control and service and to discourage premature development in unincorporated areas surrounding the City.

POLICY 6.1

The Sphere of Influence shall include those parcels of land adjacent to the city limit whose development could have significant visual, traffic, service, and environmental impacts on Folsom so that the City may influence the ultimate development of those parcels.

POLICY 6.2

The City shall consider existing roads or natural features which might logically define a new Sphere of Influence boundary.

POLICY 6.3

A new Sphere of Influence boundary shall include only those lands to which road, water, sewer and other facility/service connections can be extended within the next 25 to 30 years and, therefore, to those areas which will ultimately be annexed to the City.

GOAL 7

To provide for the orderly annexation and development of unincorporated areas within Folsom's Sphere of Influence.

POLICY 7.1

The City shall only annex those lands which can be developed in accordance with the City's General Plan, are fiscally sound additions to the City, can be adequately served by municipal (or acceptable alternative) facilities and services, and are part of a planned, orderly annexation program.

POLICY 7.2

All properties proposed for annexation shall be pre-zoned by the City in a manner consistent with the General Plan. Until facilities and services can be provided, such properties will be designated as agricultural reserve. The existing County zoning or General Plan designation which applies to a property may be considered in determining the appropriate pre-zoning of the subject land which is served by on-site facilities or connected to County facilities.

POLICY 7.3

Prior to the annexation of lands to the City, the applicant shall submit a plan demonstrating the financial feasibility of providing services and facilities to the area proposed for annexation. (refer to Goal 40 and its policies)

POLICY 7.4

The General Plan and zoning designations for annexed lands should consider the following criteria:

1. The capacity of facilities and municipal services.
2. The environmental effects that development on lands proposed for annexation may have on properties within the existing city limits.
3. Existing land uses, if any, on and in the vicinity of the annexed land.
4. The extent of any natural habitats and features of the landscape which should be preserved.
5. The demonstrated need for additional housing, retail commercial uses, other commercial uses, and industrial uses.

GOAL 8

To allow a variety of housing types which provides living choices for Folsom residents.

POLICY 8.1

Average residential densities shall be calculated as the number of dwelling units divided by the total area of the project, excluding any commercial, business and professional or industrial uses. Areas devoted to open space, public parks roads, public schools and other miscellaneous land uses shall be included in the calculation.

NOTE: SEE PAGE 15-5A FOR ADDITION

POLICY 8.2

In order to promote a more diverse housing stock and to allow for a greater mix of compatible densities, five residential density ranges shall be established and applied to the various residential areas. Table 21-5 illustrates these densities and compatible housing types. Examples of these housing types are defined in Figure 21-1.

TABLE 21-5

GENERAL PLAN RESIDENTIAL DENSITIES

HOUSING TYPE	SF (2-3.9)	SFHD (4-6.9)	MLD (7-11.9)	MMD (12-17.9)	MHD (18-25)
SF Detached	◆	◆			
SF Zero Lot Line		◆	◆		
SF Patio		◆	◆		
Duplex		◆	◆		
Halfplex		◆	◆		
Townhouse			◆	◆	
Condominiums			◆	◆	
Garden Apartments			◆	◆	◆
Conventional Apartments				◆	◆
Mobile Home Parks		◆			

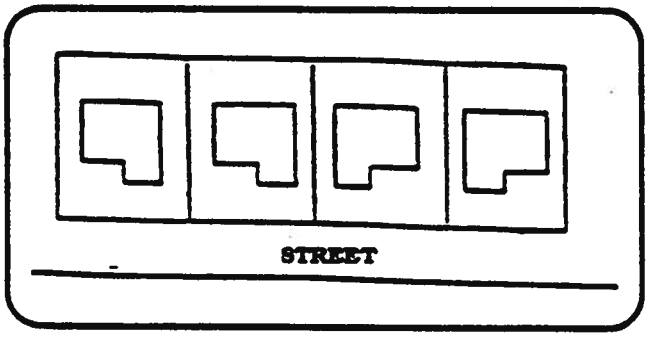
POLICY 8.3

Open space will be required as part of each residential development except in residential estates, multifamily parcels of less than 10 acres and parcels of less than 20 acres for single family uses surrounded by existing development. Open space includes required park lands, common areas, landscaped areas, pedestrian paths, plazas and similar public or private areas, but not areas devoted to vehicle parking and streets. To achieve the open space guidelines, a developer may be allowed to group the homes at somewhat smaller lot sizes than would otherwise be permitted, provided the average density does not increase. (See Policy 8-7 and the Goals and Policies of the Open Space and Conservation Element)

POLICY 8.4

All residential development or residential portions of multi-use developments shall contain a minimum of 30 percent of the land in natural or improved open space, exclusive of roadways and parking lots.

Buffering shall be required between adjacent multi-family projects and single family developments along common boundaries.



POLICY 8.5

Sufficient off-street parking for residents shall be included in the design of all residential projects. Off-street parking for guests shall be included in the design of all multifamily projects. The City shall review its parking standards to ensure that resident and guest parking is adequate to accommodate the anticipated average demand per dwelling unit. Surface lots for off-street parking should be landscaped to reasonably screen the parking area from street view and from adjacent properties.

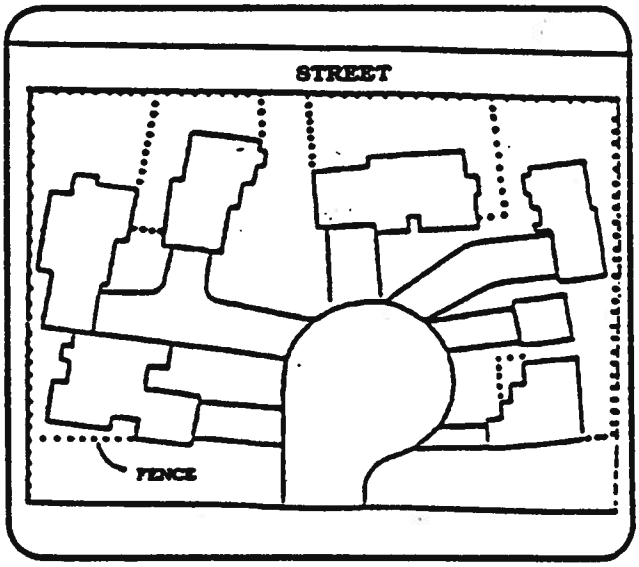
Single Family-Zero Lot Line

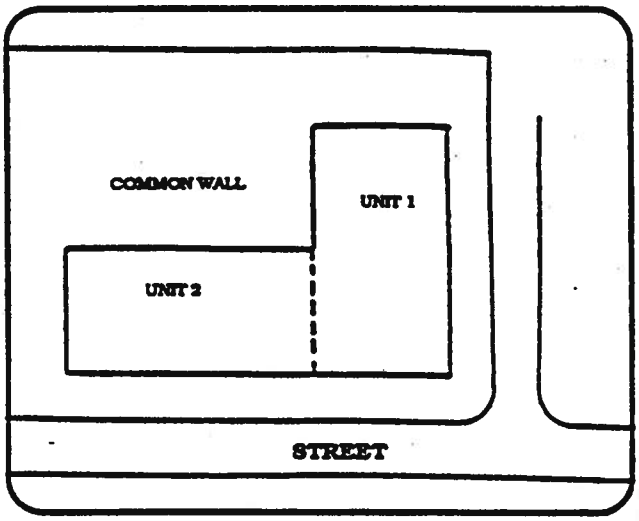
- One House (unit) per Lot
- Each House and Lot Individually Owned
- Zero Setback on One Side of all Lots Leaving Yard on Three Sides of House
- Permits more Usable Sideyard, Smaller Lots and Units, and thus Greater Overall Unit Density



PARAGRAPH TO BE ADDED TO POLICY 8.1

In any development in which land is reserved for acquisition by a public agency for open space, parks, public schools, or other public purposes such land shall be taken into account in calculating the allowable residential desnsity on the remaining land, provided no building permit shall be issued covering residential units attributing to such reserved land, until the reserved land has been acquired by the public agency for which such land was reserved.

FIGURE 21-1



Single Family- Patio Homes

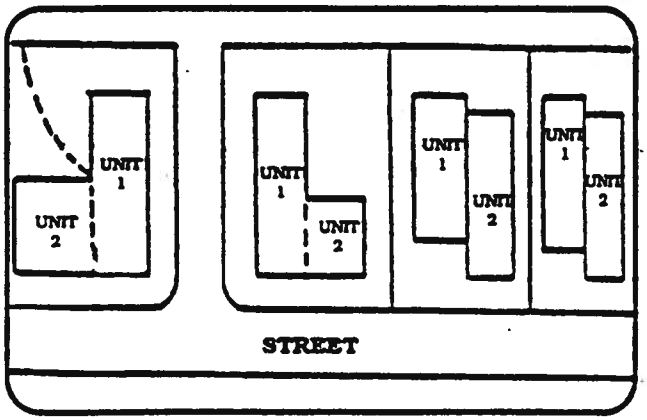
- One House (unit) per Lot
- Each House and Lot Individually Owned
- Flex Building Setbacks, Building Orientation and Lot Sizes
- Emphasis on Creating Gardens and Patios through Use of Fences and Screening
- Sometimes a Development includes Common Open Spaces Owned by All Residents under a Home Owners Association

Duplex

- Two Units per Lot
- Single Ownership of both Units and Lot
- Conventional Building Setbacks Rear and Side Yard Separate for Each Unit
- A Common Wall Between Units
- Often Located on Corner Lots

Half-Plex

- One House (unit) per Lot
- Each House and Lot Individually Owned
- Conventional Building Setbacks. Rear and Side Yards Separate for Each Unit
- A Common Wall Between Units. The Wall is also Located on the Property Line.



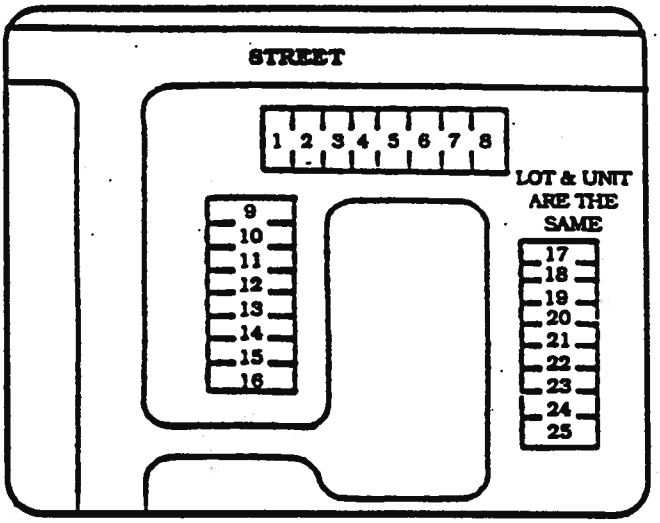


FIGURE 21-1

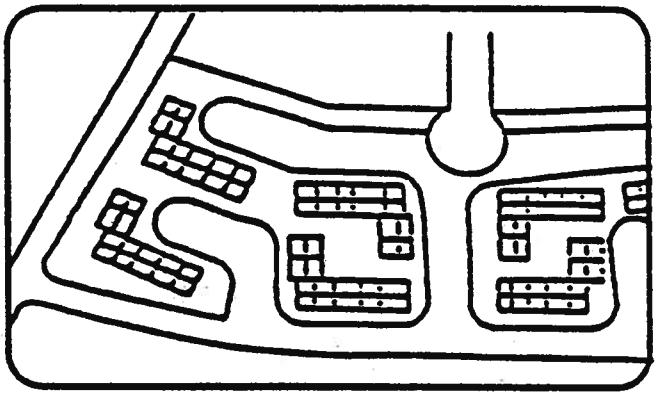
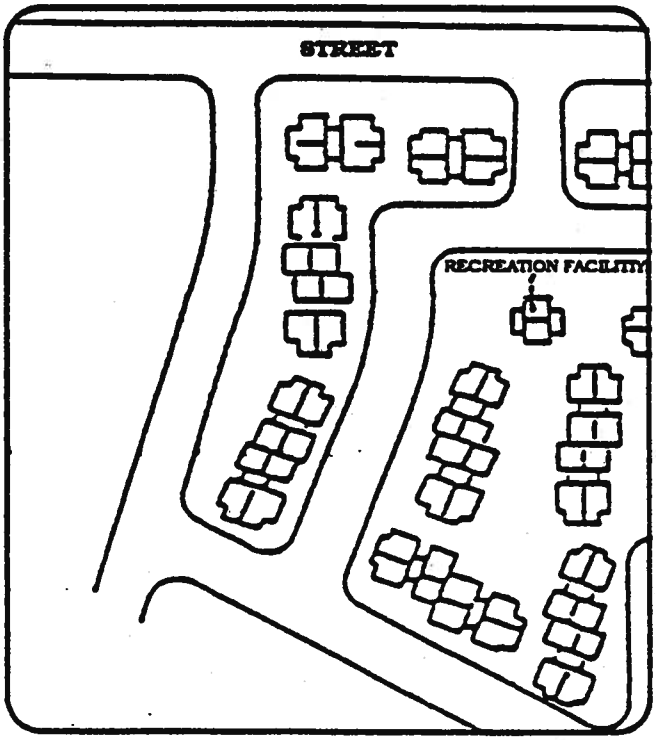


Townhouse- Condominium

- A Housing Style with each Unit having Two Stories and usually Attached with Other Units by Common Walls
- Each Unit and Lot Individually Owned
- Usually includes Common Oven Spaces Owned by All Owners Association



Conventional Apartment

- Rental Units Grouped withinBuildings which are Usually Two or More Stories in Height
- Each Unit Usually Takes Up One Floor.Hence Separate Units are Available on Each Level of the Building
- Single Ownership of All Units and Land
- Higher Density which Generally means Less Emphasis on Landscaping and Recreational Facilities

Air Space Condominium/ Garden Apartments

- Units are Grouped within Buildings which are Two or More Stories in Height
- Each Units taxes up only One Floor, hence Separate Units Are Available on Each Level of the Building
- Common Walls between Units
- Greater Emphasis on Landing and Providing Amenities such as Recreational Facilities
- Condominiums- Each Unit Individually Owned but All Land Beneath Units and Surrounding Area Owned in Common
- Apartments- Single Ownership of All Units and Land and Units are Rented. Usually Less Dense than Conventional Apartments

13

POLICY 8.6

The City should develop a package of incentives and encourage the following:

1.Additional active parkland.
2.Development of parkland.
3.Increased historic preservation.
4.Additional open space.
5.Preservation of natural habitat.
6.Preservation of Savanna Oak Clusters.
7.Additional items as desired.

Policies and Guidelines by Residential Classification

POLICY 8.7

Residential densities for each land use category will be based upon the range of densities which is established for each category of residential use as hereafter set forth. The lower number in each range is allowed as a matter of right. Units in excess of the lower number of each range, up to the top of each range, are permitted at the discretion of the Planning Commission/ City Council in exchange for the provision of special benefits which satisfy a City need over and above the minimum requirements of the General Plan and other City policies and regulations. Examples of special benefits which may qualify the project for densities in excess of the lower number include:

1. Additional park or open space set asides.

2. On-site recreation facilities.

3. The planting of additional trees or other landscaping in excess of the minimum required.

4. The provision of transit facilities or services.

The density bonus allowed for qualifying seniors and low or moderate or lower income family residents pursuant to California Code Section 65915 is to be calculated based upon the lower number of each density range and no additional bonus or other incentive is to be provided; irrespective of whether such project also qualifies for special benefits. In other words, under no circumstances shall the maximum number in each density range be exceeded.

A. Single-Family (SF 2-3.9 Dwelling Units Per Acre)

Single family detached homes at low to medium densities (maximum of two dwelling units per acre). Up to 3.9 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. The following standards shall apply:

1) The project should be located adjacent to an existing single family development or should be of sufficient size to ensure that a single family residential environment can be maintained within the project.

2) Internal roads should be designed to serve the project or connect with adjacent developments and access to through-traffic should be discouraged.

3) No more than 40% of a lot shall be covered.

B. Single-Family High Density/Mobile Home Park (SFHD 4-6.9 Dwelling Units Per Acre)

Single-family homes at high densities (maximum of four dwelling units per acre) are permitted. Up to 6.9 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. Halfplexes, mobile home parks, and attached homes may be included. The following standards shall apply:

1) Lands located near neighborhood commercial centers, along public transit routes, or adjacent to low or medium density multifamily areas would be appropriate for this type of housing.

2) With the exception of mobile home parks, a development may include a mix of housing types within the average density allowed including attached homes, zero lot-line homes and halfplexes.

3) Each home must have its own lot.

4) No more than 35% of a lot shall be covered.

5) Internal roads should be designed to serve the project or connect with adjacent developments and access to through-traffic should be discouraged.

6) A Planned Development Permit shall be required for development within this category.

C. Multi-Family Low Density (MLD 7-11.9 Dwelling Units Per Acre)

Low density multi-family developments at a maximum density of seven dwelling units per acre. Up to 11.9 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. The following standards shall apply:

1) Appropriate locations are along arterial roads and public transit routes, adjacent to neighborhood commercial centers, or in undeveloped areas where the project is of sufficient size to provide any needed buffers for adjacent or proposed single family developments.

2) Homes should generally be in one or two story buildings, with some three story buildings allowed on sloped sites.

3) Project entrances and exits shall be designed with access to a collector or arterial road.

4) Buildings on hillsides shall be sited with respect to existing native vegetation or landscaping to reduce their visual prominence.

5) A design review procedure shall be established to evaluate the proposed use of building and landscaping materials with respect to the natural features of a site.

6) Buildings of multiple stories shall follow the contour of the site and be "stepped" or terraced.

7) Projects shall generally consist of smaller, multiple buildings rather than a few large multifamily buildings.

D. Multi-Family Medium Density (MMD 12-17.9 Dwelling Units Per Acre)

Multi-family medium density at a maximum density of 12 dwelling units per acre are permitted. Up to 17.9 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. The following standards shall apply:

1) Appropriate locations include parcels along arterial roads and public transit routes, lands near commercial centers and major public institutions, and as a buffer between industrial or commercial areas and single family neighborhoods.

2) Parcels shall be of sufficient size to allow the placement of buffers along any project boundary adjacent to an existing or proposed single family development.

3) Buildings should be mainly one or two stories, with three story buildings allowed on sloped sites or to provide parking under a building.

4) Project area shall include adequate open space.

5) Project entrances and exits should be designed with direct access to a collector or arterial road.

6) Buildings on hillsides should be sited with respect to existing native vegetation or landscaping to reduce their visual prominence.

7) Design review of materials and landscaping shall be included in the application process.

8) Buildings of multiple stories should follow the contour of the site and be "stepped" or terraced.

9) Projects shall consist of clusters of smaller buildings (typically 4 to 12 dwelling units per building) and not a few large buildings.

10) Open spaces shall be dispersed throughout a project, unless it is necessary to create a single large open space to preserve an important natural habitat.

11) A landscaping and project maintenance plan shall be submitted to the City. The City will adopt an ordinance detailing the requirements of such a plan.

12) Locations for this type of housing should be selected to reinforce the customer base of a central commercial area, and the proximity of housing to major employment centers.

13) Amenities shall be included in larger projects such as swimming pools and on-site recreation.

E. Multi-Family High Density (MHD 18-25 Dwelling Units Per Acre)

High density multi-family at a maximum density of 18 units per acre are permitted. Up to 25 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. The following shall apply:

1) Locations shall generally be limited to areas near a central commercial center or regional commercial center, but may also include parcels at the intersection of arterial roads, along transit routes, adjacent to public institutions, and as part of a commercial/industrial development compatible with residential uses.

2) Locations of this type of housing shall be selected to reinforce the customer base of a central commercial area, and the proximity of housing to major employment centers.

3) The internal road system shall be designed to ensure that traffic from the project does not use local streets in any adjacent or nearby single family areas.

4) At least 30 percent of the project area shall be reserved for open spaces.

5) Open spaces shall be dispersed through out the project, unless it is necessary to create a single large open space or to preserve an important natural feature.

6) Buildings shall be predominantly two and three stories. Buildings of four or five stories may be permitted in exchange for the preservation of more open space than the minimum required and to allow for the placement of parking underneath buildings.

7) Any hillside or hilltop areas that may be included in the project shall be reserved for open spaces or one and two story buildings that can be integrated with the natural landscape.

8) Buildings on hillsides shall follow the contour of the site and shall be "stepped" or terraced.

9) The use of materials on hillside buildings will be part of a design review process.

10) A landscaping and project maintenance plan shall be submitted to the City. The City will adopt an Ordinance detailing the requirements of such a plan.

11) Recreational facilities for the use of the residents shall be included in the project design including swimming pools and other amenities in larger projects.

12) Turnouts and shelters for buses shall be incorporated into project design for projects along existing or proposed transit routes.

13) Landscaping, especially trees, shall be provided around the boundaries of the project to lessen the visual impact of the development.

POLICY 8.8

Elderly and convalescent housing facilities providing health care shall be encouraged. The Zoning Code shall guide the placement and standards for development of such facilities. Proposed facilities shall be evaluated based on the location, impacts on services and neighboring properties and not on a density basis.

POLICY 8.9

All multiple family projects will be required to obtain a planned development permit in accordance with the City's Zoning Code. Similar development approvals, such as Specific Plans, that cover the same requirements as the planned development permit shall be considered a substitute.

POLICY 8.10

Residential densities within an area plan or specific plan may vary, provided 1) that the overall dwelling unit buildout within the plan area shall not exceed that authorized by the Land Use Element of the General Plan and 2) in no event shall densities within any portion of the Plan area exceed 25 dwelling units per acre. An area plan or specific plan is defined as a large development area typically over 100 acres with an overall master development plan.

POLICY 8.11

Residential density shown on the land use map shall be consistent with General Plan Policies 8.1 and 8.10 for the purpose of calculating density.

GOAL 9

To set criteria which would allow for flexibility in the siting of land uses within a planned area.

POLICY 9.1

A planned area consists of acreage containing one or more projects for which a comprehensive site plan is prepared showing the location of proposed land uses, the configuration of roads within the planned area, public land uses and open spaces, and other aspects of site design.

POLICY 9.2

For planned developments covering large areas, the project applicant may exercise some discretion in locating school, park, and other public facility sites within approximate boundaries specified by the General Plan. However, the locations should reflect:

1. The ability of project residents to walk or bicycle to parks or schools without crossing uncontrolled crossings on arterial roads.

2. The preservation of significant features of the natural landscape, such as trees, important wildlife habitats, and streams or ponds.

3. The usability of school and park sites with respect to terrain, flooding, and access to and from the site.

POLICY 9.3

To encourage the preservation of open spaces and natural features of the landscape, a project applicant may be allowed to concentrate the proposed development on a portion of the site through the clustering of buildings, smaller lot sizes, or taller buildings, provided that the overall unit buildout within the Plan area shall not exceed that authorized by the Land Use Element of the General Plan.

POLICY 9.4

In large-scale residential projects which include a neighborhood commercial center, the proposed location of the center may vary from the approximate location indicated by the General Plan if, based on the proposed street layout and design, improved traffic circulation would result, and there are no significant negative impacts.

GOAL 10

To provide for a commercial and industrial base of the City to encourage:

1. A strong tax base.
2. More jobs within the City
3. A greater variety of commercial goods and services.
4. A regional shopping center.
5. Businesses and industries compatible with Folsom's quality of life.

POLICY 10.1

The City shall have a variety of commercial uses such as:

1. Home occupations in which a resident operates a small business within the home in compliance with City regulations and standards.

2. Individual businesses outside of a commercial area, serving a commercial or industrial project or providing highway-oriented services.

3. Small commercial centers serving individual neighborhoods.

4. A central business district with offices and retail establishments serving the entire community.

5. A regional retail center serving Folsom residents and others from outside the community.

6. An historic business district serving residents and tourists.

7. Specialty commercial areas.

POLICY 10.2

The City should designate lands for a variety of industrial land uses such as:

1. Warehousing/storage facilities for supplies serving other businesses.

2. Industrial parks providing space for research and product development firms.

3. Manufacturing of electronic equipment or components; and manufacturing on a small scale of products to be sold on the premises.

POLICY 10.3

The City should encourage the development of campus-like industrial developments with low-rise buildings and landscaped or natural open spaces.

POLICY 10.4

The City should implement facilities plans to finance the provision of municipal facilities and services to the industrial areas.

POLICY 10.5

The City should preserve and enhance the tourist-oriented, historic commercial uses in the Sutter Street commercial area.

POLICY 10.6

The use or storage of flammable, volatile, or toxic substances as part of an industrial or commercial establishment shall be strictly controlled.

POLICY 10.7

Allow for the continued operation of existing arterial-oriented commercial uses along Folsom-Auburn Road and Natoma Street from Riley Street to Fargo Way.

POLICY 10.8

New commercial uses shall be subject to design and parking standards to be developed by the City for:

1. The number of location of allowed curb cuts.
2. Landscaping or parking areas.
3. The location, size, number and construction of signs.
4. The configuration and design of commercial buildings.

POLICY 10.9

Commercial centers and industrial/office parks when feasible should be served by public transit, and when appropriate public transit centers should be incorporated into the project.

POLICY 10.10

Industrial/office parks shall be designed with internal circulation and incorporate buffering and landscaped setbacks to minimize potential adverse impacts on adjacent land uses.

POLICY 10.11

Child care centers shall be encouraged in the central commercial district, commercial centers, and office parks, when appropriate.

POLICY 10.12

The City should develop an industrial development strategy that identifies the City's industrial market segment and promotional opportunities.

POLICY 10.13

Buffer zones shall be established around existing and proposed industrial areas to prevent encroachment of incompatible uses. The City shall prepare an implementation study to provide notice requirements to users in the buffer zones and identify incompatible uses.

GOAL 11

To plan for a central commercial district which includes retail, office, and service establishments, and cultural and entertainment facilities.

POLICY 11.1

The central commercial district shall be located to incorporate existing community-wide commercial services, and shall generally include properties along East Bidwell Street, generally between Coloma Street and the west side of Blue Ravine Road and south of Riley Street generally west of Glenn Drive.

POLICY 11.2

The purpose of the central commercial district shall be to provide a location for businesses with a city-wide market, to provide a focus for cultural and entertainment activities (public and private), and to provide a City financial center.

13

POLICY 11.3

"Strip" commercial uses, characterized by shallow commercial frontage on arterial streets and multiple curb-cuts, shall not be allowed.

POLICY 11.4

Circulation within the central commercial district shall allow for convenient automobile access and parking, public transit routes, bicycles, and safe pedestrian access among the businesses within the district.

POLICY 11.5

Each block within the district shall contain usable public open space in the form of public plazas, mini-parks, or landscaped pedestrian pathways. Maintenance programs for public and community improvements should be required for commercial areas in order to provide long term maintenance.

POLICY 11.6

In general, the height of buildings in the central commercial district shall not exceed 4 stories. Additional height may be allowed for the provision of open space. The combined floor area ratio of all buildings on a site shall not exceed 2:1. Additional height or a higher floor area ratio may be allowed in exchange for the provision of open space or other specified benefits meeting a City need that are above and beyond the minimum requirements of the General Plan policies and other applicable City policies and regulations.

POLICY 11.7

Public improvements should be provided to support a central commercial area, such as landscaping on existing commercial streets, street furniture (benches, waste receptacles, planters, etc.), and uniform street and other public signing.

POLICY 11.8

A plan for the central commercial district shall be prepared in conjunction with the redevelopment plan to address issues discussed in Goal 11 and support policies including development standards and circulation.

POLICY 11.9

All commercial development or commercial portions of multi-use development shall contain at least ten percent of land area in natural, improved or functional open space, exclusive of roadways and parking lots.

POLICY 11.10

A public transit service center shall be established within the central commercial district.

GOAL 12

To plan for regional commercial centers.

POLICY 12.1

Regional commercial centers shall be primarily highway-oriented retail commercial areas. The purpose of the centers shall be to provide locations for businesses whose customers come primarily from outside the City of Folsom, although businesses may also provide goods and services to Folsom residents.

POLICY 12.2

Regional centers should be located close and accessible to Highway 50, preferably near an interchange.

POLICY 12.3

A ring-road or limited access parkway should define the boundaries of regional centers. A parking and circulation plan should ensure that trees and landscaping are provided to break up the amount of paved surfaces and that traffic entering and exiting centers do not adversely affect any future residential developments nearby.

POLICY 12.4

Regional centers shall include landscaped public open spaces.

POLICY 12.5

Highway-commercial areas shall be designated adjacent to U.S. 50 in order to support the travelling public at major interchanges.

POLICY 12.6

Regional commercial centers should be served by public transit and developed in conjunction with public transit service centers.

POLICY 12.7

In general, the height of buildings in a regional commercial center shall not exceed four stories. Additional height may be allowed for the provision of open space. The combined floor area ratio of all buildings on a site shall not exceed 2:1.

POLICY 12.8

In general, the height of buildings in a highway commercial site shall not exceed four stories. Additional height may be allowed for the provision of open space. The combined floor area ratio of all buildings on a site shall not exceed 2:1, with a maximum lot coverage of 60 percent.

GOAL 13

To plan for small, neighborhood-oriented convenience commercial areas which provide goods and services that may meet the daily needs of nearby residents.

POLICY 13.1

Neighborhood convenience commercial areas should be located so that residents in each neighborhood may meet their daily needs for commercial goods and services.

POLICY 13.2

Neighborhood commercial areas shall in general be limited to five acres or less.

POLICY 13.3

Neighborhood centers should be designed to minimize impacts on adjacent uses through site design, access and parking, landscaping and lighting standards.

POLICY 13.4

Neighborhood commercial areas may be adjacent to future public transit stations.

POLICY 13.5

In general, the height of buildings in a neighborhood commercial center shall not exceed two stories. The combined floor area ratio of all buildings on site shall not exceed .5:1, and 30 to 40 percent lot coverage.

POLICY 13.6

Neighborhood commercial centers shall be developed under the Planned Development Process.

GOAL 14

To plan for and preserve specialty commercial areas.

POLICY 14.1

The City should preserve and enhance the historic business district centered on Sutter Street. The purpose of the district is to provide a tourist-oriented location for businesses offering goods and services consistent with the historic setting of the area. An historic district plan for the area should be prepared by the City containing:

1. Design guidelines for the restoration and/or modification of buildings or sites identified as having historic or cultural significance and for the design and placement of buildings within or adjacent to identified historic buildings or sites.

2. The City should adopt design guidelines to ensure that signage is consistent and harmonious with the theme of the historic business district.

POLICY 14.2

The City should provide for offices, retail, and restaurant uses associated with a hospital when appropriate.

POLICY 14.3

Additional specialty commercial centers for specified commercial uses containing a grouping of businesses offering one or several related goods or services may be considered according to the following standards:

1. The commercial center must serve a purpose not fulfilled by the central commercial district, the regional commercial center, or other designated commercial areas.

2. A plan for the area proposed for commercial uses must be submitted by the landowner(s) clearly stating the purpose of the commercial area; the location of proposed commercial uses, public improvements, landscaping, parking, and open spaces; and a proposed circulation plan.

3. New specialty commercial areas will not be designated on the Folsom General Plan Land Use Map in advance of a specific request for such a designation.

4. The commercial center may not be a "strip" commercial project characterized by one or more long, shallow lots, multiple curb cuts, and a variety of unrelated businesses.

5. Access to and from the commercial center is via an arterial street.

6. The proposed commercial area shall be located and designed to minimize negative traffic, noise, and visual impacts on nearby residential areas.

GOAL 15

To plan for community commercial areas providing goods and services for large neighborhood areas.

POLICY 15.1

Community commercial centers shall in general range in size from five to ten acres.

POLICY 15.2

Community commercial centers should be designed to minimize impacts on adjacent uses through site design, access and parking, landscaping and lighting standards.

POLICY 15.3

Community commercial centers should be developed adjacent to future public transit stations.

POLICY 15.4

Community commercial centers should be developed adjacent to higher density residential, offices, and public uses.

POLICY 15.5

Community commercial centers shall be developed under the Planned Development Process.

POLICY 15.6

In general, the height of buildings on a community commercial center shall not exceed two stories. The combined floor area ratio of all buildings shall not exceed .5:1 and 30 to 40 percent lot coverage.

GOAL 16

To allow for public and quasi-public land uses meeting the governmental service, education, cultural, recreational, and religious needs of Folsom residents.

POLICY 16.1

Fire and Police department substations shall be planned and located so that a maximum response time goal as set by the City Council can be maintained.

POLICY 16.2

Public facilities, such as utility substations, water storage or treatment plants, pumping stations, and sewer treatment plants, should be located, designed, and maintained so that noise, light, glare, or odors associated with these facilities will not negatively impact nearby land uses. Building materials and landscaping shall be used to make these land uses less visually obtrusive from neighboring properties.

POLICY 16.3

The City shall work closely with the school district(s) serving Folsom to ensure that school sites are dedicated or reserved for purchase by the district(s) so that:

1. Each residential neighborhood will contain or have access to the appropriate elementary school according to school district standards.

2. Children do not have to cross an uncontrolled intersection on an arterial road to reach an elementary school.

3. The school can be reached on foot by most of the neighborhood's residents (for elementary schools only).

4. A joint park/school site can be developed wherever possible.

POLICY 16.4

The acreage recommended for new schools should be set according to school district standards.

POLICY 16.5

If a school will serve more than one development, and the subject development will not contain the school site, the applicant must clearly show that a school site has been or will be dedicated elsewhere or that a school already exists with capacity to serve the project and is accessible to the project according to the standards in Policy 16-3.

POLICY 16.6

In determining the number and location of new school sites, standards established by the district shall be used. These standards are based on the assumed average number of students per household for each grade level (varies for different types of housing) and the average size of an elementary school, junior high school, and high school.

POLICY 16.7

The City shall develop standards for the location of proposed private schools. Standards will address:

1. Required off-street parking and street frontage for the dropping off and picking up of students.

2. Access to the proposed school via City streets.

3. Noise, according to the Noise Element of the Folsom General Plan.

4. Size of the parcel on which a proposed school is to be located in relation to the pupil capacity of the school.

5. Required landscaping and other visual/noise barriers if the proposed school is to be located in a residential area.

POLICY 16.8

Utility company rights-of-way may be considered for their use as public or private open space, trails, parkland, or other compatible recreational uses.

POLICY 16.9

Religious institutions may be allowed in residential neighborhoods if sufficient off-street parking is provided and the design of the facility is consistent with the residential character of the neighborhood, and includes:

1. Access to the property via an arterial or collector street.
2. The screening of parking with landscaping and/or materials that will blend with surrounding natural and constructed features of the neighborhood.
3. The shielding of adjacent residential properties from direct light and glare from the property.

POLICY 16.10

Clubs and fraternal organizations shall generally be limited to commercial areas. The use of a single family home in a residential area for a club or fraternal organization may be permitted subject to the following standards:

1. Noise levels shall meet the requirements of the Noise Element of the Folsom General Plan.
2. One small exterior sign will be allowed, subject to City standards.
3. No external modification to the house will be permitted except to provide handicapped access.
4. Off-street parking will be required, according to City parking standards for clubs and fraternal organizations.

TRANSPORTATION AND CIRCULATION ELEMENT GOALS AND POLICIES

GOAL 17

To develop a comprehensive transportation/circulation system which includes as a minimum:

1. Freeways, highways, and/or expressways designed to route through-traffic away from Folsom's neighborhoods.
2. Arterial roads which provide access among Folsom's neighborhoods, major cross-town links, and links between Folsom and adjacent communities.
3. Additional crossing(s) over the American River.
4. Pathways and designated routes for bicycle and pedestrian traffic.
5. Designated routes for commercial vehicles.
6. The protection of residential neighborhoods from through-traffic.
7. Public transportation routes.

POLICY 17.1

The City shall plan for an integrated circulation system which provides for travel by private vehicles, commercial vehicle routes, a public transportation system, and for pedestrian and bicycle routes.

POLICY 17.2

The City should establish a hierarchy of roads consisting of the following:

1. Freeways or limited access highways. Such roads shall be grade separated at each intersection with another road. The major purpose of such roads is to route traffic around Folsom, with as few interruptions to the surface street system as possible. U. S. Highway 50 currently meets the definition of a freeway. The City has made a firm commitment that a new freeway would not bisect the City.

2. Expressways. Allow for moderate- to high-speed travel within the City. The purpose of an expressway is to carry cross-town traffic from other communities or between neighborhoods within the City. An expressway may contain some grade-separated intersections, but this type of road would be mainly a surface street. Expressways should be located to allow for controlled intersections spaced at one-half mile intervals or more. Only arterial and collector roads should intersect with an expressway.

3. Arterial roads (or major streets). Serve to connect neighborhoods within the City and the City with surrounding communities. Arterials would normally define the boundaries of neighborhoods, not provide internal access to a neighborhood.

4. Collector (or secondary) roads. Serve to route traffic from local streets within a neighborhood to an arterial road. Collector streets would not normally serve as "through" roads for more than one area, but would circulate throughout a neighborhood.

5. Local (or tertiary) roads. Serve a portion of a neighborhood only and route traffic to a collector street.

6. Street-ends (cul-de-sacs, dead-end streets, etc.). Limited in length and serve only a few residences.

POLICY 17.3

Arterial roads serving new developments shall be aligned with existing arterial roads when ever possible.

POLICY 17.4

Routes for additional bridge crossings over the American River shall be designated on the Plan Map. Because the Proposed Oak Avenue and Folsom-Auburn Road crossings will serve a significant amount of regional through traffic with distinctly different origins and destinations, financing and construction of the bridges should be considered as a package rather than separately.

POLICY 17.5

The City should locate and improve existing arterial roads to provide direct access between a central commercial district, a regional commercial center, and major public institutions (hospital site, community college site, Civic Center).

POLICY 17.6

The City should require that new arterial roads or extensions or widening of existing arterial roads that are needed to serve a new development are planned and constructed in accordance with the Plan Map and standards contained herein. Land must be set aside by dedication for sufficient rights-of-way and landscaping in accordance with standards contained herein, and a planting strip or other buffer shall be required in single family developments to ensure that homes do not back directly onto the arterial road.

POLICY 17.7

The City shall require the establishment of landscape maintenance assessment agreements or districts for new developments adjacent to arterial roads to ensure that planting strips are required and properly maintained.

POLICY 17.8

A five-year Capital Improvement Plan (CIP) for road improvements should be prepared and implemented by the City. The road improvement plan shall be updated at least every other year subsequent to its initial adoption. The road improvements plan shall establish a schedule for needed road repair and construction and identify sources of funding for road improvements. The

five-year CIP should be consistent with the Fiscal Element of the General Plan which will be prepared to identify total Citywide public facility funding mechanisms.

As part of this program the City should update the Folsom Area Traffic Study on a regular basis (at least annually) as part of a regular traffic monitoring program to attempt to achieve that at least a traffic Level of Service "C" is achieved throughout the City.

POLICY 17.9

The City should plan for the expansion of future public transit routes (bus and fixed rail service).

1. Transit routes should coincide with major destinations for employment and shopping, the location of major institutions, concentrations of multifamily housing, and other land uses likely to attract public transit ridership.

2. The City should preserve existing railroad rights-of-way for their potential future use as public transit routes. The City should work with Regional Transit to determine other rights-of-way which could be preserved for rail transit use. Proposed light rail alignments and station locations are designated on the Plan Map and dedication of land for the required right-of-way shall be required as part of the approval process for development of adjoining parcels.

3. Bus routes should follow major roads with service to residential neighborhoods via collector streets.

POLICY 17.10

The City should develop and maintain a bikeways and pedestrian master plan that links residential developments with sources of employment, public open spaces, parks, schools, neighborhood shopping areas, the central commercial district, other major recreational destinations, and adjoining communities.

1. The City should ensure that new residential developments incorporate pedestrian and bicycle paths or routes when there are nearby schools, parks, public open spaces, sources of employment or other destinations for such travel. Such paths or routes should be designed so that schools and parks are accessible to area residents. Pedestrian/bicycle over- or under-crossings may be provided when necessary to cross arterial roads or expressways.

2. The existing bicycle and pedestrian paths along the American River shall be preserved.

3. The City should establish and maintain an internal pathway system that links parks sources of employment and public open spaces using rights-of-way and parkways.

4. Where on-street bikeways are not feasible, the City should provide for Class I off-street bikeways.

5. The City should endeavor to provide routes paralleling the major arterial routes for long distance bicycle travel.

6. The City should endeavor to provide routes for recreational travel, providing access to important recreational areas of the City, including Folsom Lake.

POLICY 17.11

Whenever any major repair, alteration, or construction of roads are undertaken, immediate consideration of incorporating and providing bicycle routes and facilities should occur, as designated by the City of Folsom Bikeway Master Plan, and state specifications for bikeways.

POLICY 17.12

The City of Folsom should establish an ongoing public education program on bicycle safety and encourage bicycle safety programs for cyclists and motorists.

POLICY 17.13

The Master Plan includes four typical bike lane cross sections which shall be used where appropriate.

1. Class-1 bikeways, separated bicycle paths will be the preferred bikeway, wherever feasible. This form of bike lane will be encouraged in areas such as the Willow Creek-Humbug Creek Parkway, and along the Lake Natoma frontage, and along major boulevards, such as Folsom Boulevard.

2. Class-2 bike lanes, which include a five foot stripped bike lane on the outside of an eight foot parking lane, will be encouraged in areas where on-street parking is likely to occur. Such areas would be in the vicinity of apartment complexes and condominium complexes.

3. Class 3 & 4 bike lanes, which include four foot and eight foot stripped bike lanes on the edge of pavement, should be utilized on city arterial, collector, and other roads as indicated on the bikeways master plan.

POLICY 17.14

The City shall require facilities for parking bicycles in accordance with the Zoning Code.

POLICY 17.15

The City shall review parking requirements to ensure that adequate off-street parking can be provided for new development projects.

POLICY 17.16

The City shall designate locations for park and ride lots and adopt standards for their development. Several such lots are designated on the Plan Map and dedication of land for each site shall be required as part of the approval process for development of adjoining parcels.

POLICY 17.17

The City should strive to achieve at least a traffic Level of Service "C" throughout the City. During the course of Plan buildout it may occur that temporarily higher Level of Service result where roadway improvements have not been adequately phased as development proceeds. However, this situation will be minimized based on annual traffic studies and monitoring programs.

POLICY 17.18

The City will work with the California Department of Transportation in planning for and funding freeway interchange improvements and additional interchanges along U.S. Highway 50. A specific study should be prepared by the City to determine the required phasing of construction of freeway and interchange improvements based upon buildout of land uses designated on the Plan Map.

POLICY 17.19

Because the Traffic Studies upon which this Transportation and Circulation Element are based shows various intersections which will not achieve Level of Service "C", the City should adopt a mandatory TSM program that applies to existing as well as future development and will ensure the assumed reduction in peak hour trips. Prior to adoption of the Program by the City, all discretionary development permits issued by the City should require the applicants to participate in the TSM program when enacted. Specific Studies should be conducted to determine the most desirable methods for achieving the required level of trip reduction.

POLICY 17.20

The City shall develop a long range public transit plan for Folsom. Such a Plan shall be developed in cooperation with SACOG and Regional Transit, and shall include a study to determine the feasibility and financing requirements of:

1. Continued City operated intra-community bus service.

2. Continued City operated commuter bus service to downtown Sacramento and/or service to the nearest RT Metro Rail Station.

3. Extending RT Metro service to Folsom and the preservation of future rights-of-way.

POLICY 17.21

Establishment of speed limits for streets within residential areas should include consideration of the potential traffic noise reduction

which may be achieved through lower speeds. In some cases it may be appropriate to establish a lower speed limit than may be allowed by roadway design to accomplish the goal of maintaining acceptable traffic noise levesl within a neighborhood.

POLICY 17.22

The City shall require a minimum two lanes of arterial roads to be installed adjacent to or in the vicinty of new subdivisions.

HOUSING ELEMENT GOALS AND POLICIES

GOAL 18

To provide for the City's regional share of new housing for all income groups.

POLICY 18.1

Maintain sufficient land zoned at a range of residential densities to accommodate the City's regional share of housing.

POLICY 18.2

Identify sites that are suitable for multifamily housing and residential redevelopment.

POLICY 18.3

To encourage home builders to use multifamily-designated land for the highest allowed density housing consistent with the City's low- and moderate-income housing needs.

13

GOAL 19

To encourage the provision of affordable housing.

POLICY 19.1

The City will make use of state and federal programs for which it would be the applicant, and work with non-profit and for-profit developers to make use of those programs for which the developer must be the applicant. As one of its first implementation actions, the City will identify available, funded programs, determine which of those programs could be used in Folsom (based on the purpose and eligibility requirements for each program), and determine the most appropriate public agency or private entity to take primary responsibility for applying for funding.

POLICY 19.2

The City will also investigate the feasibility of issuing tax-exempt bonds or mortgage credit certificates to provide low-interest financing for affordable housing.

POLICY 19.3

The City will provide density bonuses to home builders proposing to include at least 10% very low-income housing or 20% low-income housing in their residential developments.

POLICY 19.4

The City will work with non-profit organizations, to identify potential projects and sources of funding to develop low- and moderate-income housing.

POLICY 19.5

The City will identify surplus government property that could be used for construction of housing affordable to

RESC # 3762 Housing

low- and moderate-income households and encourage interested developers to make use of such land.

POLICY 19.6

The City will develop a plan for the use of redevelopment tax increment funds set-aside for the construction and rehabilitation of housing for low- and moderate-income households.

GOAL 20

To improve the existing supply of housing.

POLICY 20.1

Provide property owners with assistance to inspect and identify code violations in residential buildings.

POLICY 20.2

Continue to apply for state and federal assistance for housing rehabilitation for low-income households. Rental housing that is repaired with government assistance shall remain affordable to low-income households for a specified period of time.

POLICY 20.3

Require the abatement or demolition of substandard housing that is not economically feasible to repair and which represents a health and safety threat.

POLICY 20.4

Seek, through code enforcement, the private rehabilitation of substandard dwelling units and provide financial assistance, when available, to owners of dwelling units occupied by low-income households. In applying this policy, the City shall seek to avoid the displacement of low-income households.

POLICY 20.5

Periodically survey housing conditions in the to maintain a current data base on housing repair needs.

POLICY 20.6

Allocate a portion of the City's redevelopment tax increment set-aside funds for preserving substandard housing occupied by lower-income households.

GOAL 21

To ensure equal housing opportunity

POLICY 21.1

The City will provide information and referral to individuals with fair housing complaints.

GOAL 22

To promote energy conservation

POLICY 22.1

Continue to implement state energy-efficient standards.

POLICY 22.2

Include energy conservation guidelines as part of the development standards for the specific plan area.

POLICY 22.3

Provide weatherization assistance to low-income households.

RESO # 3762 HOUSING

GOAL 22-A

To promote the preservation of historic residences.

POLICY 22-A.1

The City will encourage the preservation of residential buildings with historic or architectural value.

GOAL 22-B

To develop a plan for the use of redevelopment housing set-aside funds.

POLICY 22-B.1

The City will prepare a plan to guide the use of redevelopment tax-increment funds set aside to support low- and moderate-income housing programs.

RESO # 3762 HOUSING

OPEN SPACE AND CONSERVATION ELEMENT

GOAL 23

To preserve existing heritage trees through a City Ordinance.

POLICY 23.1

The City shall continue to enforce the Tree Preservation/Landscape Ordinance and identify heritage trees to be preserved. Site designs shall consider building and parking configurations which will preserve as many heritage trees as possible.

POLICY 23.2

Replacement trees shall be required whenever existing trees are removed.

POLICY 23.3

The City may allow proposed development to be concentrated on a portion of a site and include taller buidlings or smaller lot sizes to preserve a greater number of existing trees.

GOAL 24

To ensure that projects contain landscaping and trees that compliment the City's natural character.

POLICY 24.1

Development projects shall contain landscaping of common or public areas, surface parking areas, and streets bordering the project.

POLICY 24.2

Prior to the granting of a buidling permit, a project must have an approved landscaping plan showing the location, type, and proposed maintenance of landscaping.

POLICY 24.3

The developer or property owners shall be responsible for maintaining landscaping required as part of the project approval for residential developments where there are common areas, and for all commercial and industrial developments. The City will require the establishment of a landscaping maintenance district or other legally binding maintenance agreement and will reserve the power to enforce the maintenance agreement through appropriate means.

POLICY 24.4

The City shall adopt a landscaping ordinance with standards for:

1. Preferred types of plants and materials.
2. Agreements to ensure the continued maintenance of landscaped areas.
3. Minimum size of trees upon planting.
4. Amount of landscaping area.

GOAL 25

Wherever feasible, to preserve, acquire, rehabilitate, enhance and maintain the identified resources for the use and enjoyment of present and future generations. The identified resources include, but are not limited to:

1. Northern Hardpan Vernal Pools and Associated Sensitive Flora
2. Valley Bunch Grasslands and Associated Sensitive Flora
3. Freshwater Marshlands and Associated Sensitive Flora
4. Riparian Forests and Woodlands and Associated Sensitive Flora
5. Oak Savannah and Woodlands and Associated Sensitive Flora
6. Permanent and Seasonal Wetlands and Associated Sensitive Flora
7. American River Corridor
8. Humbug Creek
9. Blue Ravine Creek
10. Hinkle Creek
11. Willow Creek
12. Lake Natoma
13. Folsom Lake
14. Willow Hill Reservoir, if feasible
15. Tricolored Blackbird
16. Swainson's Hawk
17. Tiger Salamander
18. Valley Elderberry Longhorn Beetle
19. Folsom Boulevard Scenic Corridor, from Highway 50 to Sutter Street
20. Greenback Lane Scenic Corridor, from the Folsom City Limits to Riley Street
21. East Natoma Street Scenic Corridor, from Oak Avenue Parkway to the El Dorado County Line
22. Folsom-Auburn Road Scenic Corridor, from the Folsom City Limits to Greenback Lane

POLICY 25.1

The surface and groundwater quality of Folsom shall not be degraded from City standards.

POLICY 25.2

The City may obtain fee title or protective easements of identified resources.

POLICY 25.3

Sensitive habitat areas and open space shall have their borders defined by public access ways, and/or shall have views from adjacent buildings oriented toward the areas.

POLICY 25.4

The City shall require that a qualified biologist conduct a vegetative/wildlife field survey, and analysis prior to consideration of development applications for projects within or adjacent to sensitive habitat areas and potential habitats for sensitive wildlife and floral species.

POLICY 25.5

The City shall adopt standards for the designation, enhancement and maintenance of identified sensitive habitat areas.

POLICY 25.6

The City shall establish a vegetation preservation ordinance which:

1. Specifies native or "naturalized" vegetation which should be given highest priority for preservation.

2. Requires an applicant to show the approximate location of existing priority vegetation.

3. Specifies the quantity and manner of vegetation which must be planted for replacement.

POLICY 25.7

Trees and other vegetation comprising riparian or other special habitats targeted for preservation should be preserved regardless of whether they are heritage trees.

GOAL 26

The City shall actively encourage the restoration and maintenance of historic buildings or sites.

POLICY 26.1

Identification and publication of available federal, state and private funding sources and incentive programs.

POLICY 26.2

The City should adopt consistent standards for development, public improvements, alley utilization, and frontage improvements for the original 50' x 140' lots situated within the original town boundaries, including the area generally bounded by Bidwell Street, Riverway, Stafford Street and Folsom Boulevard.

GOAL 27

To preserve, acquire, rehabilitate, enhance and maintain the City's identified open spaces for passive and active recreational uses.

POLICY 27.1

The City shall encourage the improvement of public access to recreational facilities and open spaces through:

1. The publication of a trails and recreation guide which maps the trails, open spaces, and parks within the City of Folsom and shows the interconnection with trails and facilities in adjoining communities. The guide shall describe the facilities and hours of operation.

2. The City should require the new parks and open spaces shall be easily accessible to the public, including the mobility impaired.

POLICY 27.2

The City shall develop parkway plans for each identified sensitive habitat area and should include:

1. Provision for pedestrian, bike and/or equestrian trail(s) with connections to adjacent trail systems.

2. Provision for trailhead/parking areas spaced along parkways.

3. Consideration of the development of interpretive centers or trails within parkways.

POLICY 27.3

The City shall adopt a Scenic Corridor Plan for the identified scenic corridors including but not limited to:

1. Folsom Boulevard Scenic Corridor, from Highway 50 to Sutter Street.

2. Greenback Lane Scenic Corridor, from the City Limits to Riley Street.

3. East Natoma Street Scenic Corridor, from Oak Avenue Parkway to the El Dorado County Line.

4. Folsom-Auburn Road Scenic Corridor, from the City Limits to Greenback Lane.

POLICY 27.4

The City shall encourage land owners to consolidate identified habitats, open space and park lands between separately owned development projects and individually owned properties where feasible.

GOAL 28

To provide for the production of natural resources when compatible with the goals and policies of this General Plan.

POLICY 28.1

The City should adopt water conservation measures which reduce water consumption, by user type.

POLICY 28.2

The quality and quantity of surface water runoff from a property shall not exceed existing flows or existing quality or shall comply with City standards for off-site drainage. The City shall implement a surface-runoff water quality monitoring program to insure compliance with City standards.

POLICY 28.3

The City should maintain existing and develop new sources of water to ensure adequate, long term and high quality water supplies.

POLICY 28.4

The City shall when feasible require new development on dredge tailings to reclaim the tailings in conformance with the guidelines and regulations of the California Division of Mines and Geology.

POLICY 28.5

Where feasible, the City shall protect existing or future mining and/or gravel extraction sites from encroachment of non-compatible uses through phasing of development and performance standards. The City recognizes that, as a practical matter, the prospects for mining and/or gravel extraction are extremely unlikely in view of the restrictions upon the issuance of surface mining permits imposed by Ordinance No. 613 adopted in response to an initiative measure.

POLICY 28.6

The City shall encourage community wide recycling in an effort to conserve natural resources and reduce solid waste disposal. This may be established through the development of recycling programs promoted and sponsored by the City with non-profit groups. These programs could include but not be limited to curbside recycling programs, siting of a recycling center or drop off collection centers.

SAFETY ELEMENT GOALS AND POLICIES

GOAL 29

To protect lives and property from unacceptable risks resulting from natural and man-made hazards.

POLICY 29.1

Fire and Police Department personnel/resident population ratios shall be maintained at adequate levels as defined by the City Council.

POLICY 29.2

The City shall maintain a fire prevention and retention program for buildings.

POLICY 29.3

The City shall develop standards for building within the 100 year floodway to assure that the water flows above stream and downstream from a property will not be altered from existing levels.

POLICY 29.4

The City shall work with the U.S. Army Corp of Engineers in developing standards for development within the inundation boundary resulting from a failure of Folsom Dam or the dikes retaining Folsom Lake.

POLICY 29.5

The City shall prepare, publish and coordinate an emergency response plan which addresses medical care, escape routes, mutual aid agreements, temporary housing and communications.

POLICY 29.6

The City shall encourage the preparation and distribution to the general public of a safety guide for the use and enjoyment of Folsom's resources.

POLICY 29.7

The City shall cooperate with SMUD's efforts in preparing and publishing an emergency evacuation plan for Rancho Seco Nuclear Power Plant.

NOISE ELEMENT GOALS AND POLICIES

GOAL 30

To protect the citizens of Folsom from the harmful effects of exposure to excessive noise and to protect the economic base of Folsom by preventing the encroachment of incompatible land uses within areas affected by existing noise-producing uses.

POLICY 30.1

Provide sufficient noise exposure information in the General Plan data base so that existing and potential noise impacts may be effectively addressed in the land use planning and project review processes.

POLICY 30.2

Develop and implement effective strategies to abate and avoid excessive noise exposures in the City by requiring that effective noise mitigation measures be incorporated into the design of new noise-generating and new noise-sensitive land uses.

POLICY 30.3

Protect areas within the City where the present noise environment is within acceptable limits.

POLICY 30.4

Areas within the City of Folsom shall be designated as noise impacted if exposed to existing or projected exterior noise levels exceeding 60 dB Ldn/CNEL or the performance standards of Table 26-3 of the Noise Element.

Noise created by non-transportation-related noise sources associated with new projects or developments shall be controlled so as not to exceed the noise level standards as set forth below as measured at any affected residentially designated lands or land use situated in either the incorporated or unincorporated areas. New residential development shall not be allowed where the ambient noise level due to non-transportation-related noise sources will exceed the noise level standards as set forth below:

TABLE 26-3

NOISE LEVEL PERFORMANCE STANDARDS FOR NEW PROJECTS AND DEVELOPMENTS

EXTERIOR NOISE LEVEL STANDARDS, DBA

CATEGORY	CUMULATIVE NUMBER OF MINUTES IN ANY ONE-HOUR TIME PERIOD	DAYTIME 7:00 A.M. TO 10:00 P.M.	NIGHTTIME 10:00 P.M. TO 7:00 A.M.
1	30	50	45
2	15	55	50
3	5	60	55
4	1	65	60
5	0	70	65

Each of the noise level standards specified above shall be reduced by five DBA for simple tone noises, noises consisting primarily of speech or music, or for recurring impulsive noises.

Noise from single occurrences such as the passage of locomotives, heavy trucks or aircraft should also be evaluated in terms of single event noise levels. The maximum noise level created by such an event may have the potential to result in activity interference even though the cumulative noise exposure in terms of Ldn is within acceptable limits. The potential for sleep disturbance is usually of primary concern in such cases, and should be evaluated on a case-by-case basis.

POLICY 30.5

New development of residential or other noise sensitive land uses will not be permitted in noise impacted areas unless effective mitigation measures are incorporated into the project design to reduce noise levels to:

1. For noise due to traffic on public roadways, railroad line operations and aircraft: 60 dB Ldn/CNEL or less in outdoor activity areas, and interior noise levels to 45 dB Ldn/CNEL or less. Where it is not possible to reduce exterior noise due to these sources to 60 dB Ldn/CNEL or less by incorporating a practical application of the best available noise-reduction technology, an exterior noise level of up to 65 dB Ldn/CNEL will be allowed. Under no circumstances will interior noise levels be permitted to exceed 45 dB Ldn/CNEL with the windows and doors closed.

2. For non-transportation related noise sources: achieve compliance with the performance standards contained within Table 26-3.

3. If compliance with the adopted standards and policies of the Noise Element will not be achieved, a statement of overriding considerations for the project must be provided.

POLICY 30.6

When industrial, commercial land uses or other uses including non-transportation related noise sources are proposed which would affect areas containing noise sensitive land uses, noise levels generated by the proposed use shall not exceed the performance standards contained within Table 26-3.

POLICY 30.7

Prior to approval of proposed development of residential or other noise-sensitive land uses in a noise impacted area, an Acoustical Analysis may be required. The acoustical analysis shall:

1. Be the responsibility of the applicant.

2. Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics.

3. Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions.

4. Include estimated noise levels in terms of Ldn/CNEL and/or the standards of Table 3 for existing and projected future (20 years hence) conditions, with a comparison made to the adopted policies of the Noise Element.

5. Include recommendations for appropriate mitigation to achieve compliance with the adopted policies and standards of the Noise Element. Where the noise source in question consists of intermittent single events, the report must address the effects of maximum noise levels in sleeping rooms in terms of possible sleep disturbance.

6. Include estimates of noise exposure after the prescribed mitigation measures have been implemented.

POLICY 30.8

The City of Folsom shall endeavor to develop and employ procedures to ensure that requirements imposed pursuant to the findings of an acoustical analysis are implemented as part of the project review and building permit processes. The appropriate time for requiring an acoustical analysis would be as early in the project review process as possible so that noise mitigation may be an integral part of the project design.

POLICY 30.9

Noise level criteria applied to land uses other than residential or other noise sensitive uses shall be consistent with the standards in Figure 26-5.

POLICY 30.10

The City of Folsom shall enforce the State Noise Insulation Standards (California Administrative Code, Title 24) and Chapter 35 of the Uniform Building Code (UBC). Title 24 requires that an acoustical analysis be prepared for all new developments of multi-family dwellings, condominiums, hotels and motels proposed for areas within the 60 dB Ldn/CNEL contour of a major noise source for the purpose of documenting that an acceptable interior noise level of 45 dB Ldn/CNEL or below will be achieved. UBC Chapter 35 requires that common wall and floor/ceiling assemblies within multi-family dwellings comply with minimum standards concerning the transmission of airborne sound and structure-borne impact noise.

POLICY 30.11

The City of Folsom shall adopt a community noise control ordinance to address noise complaints and to provide local industry with performance standards for future development and equipment modifications. The ordinance should be consistent with the model noise control ordinance contained in the data base of the General Plan.

POLICY 30.12

The City of Folsom shall actively enforce existing sections of the California Vehicle Code relating to adequate vehicle mufflers and modified exhaust systems.

POLICY 30.13

The findings and specific policies of the Noise Element shall be incorporated into the City of Folsom Zoning Code as appropriate.

POLICY 30.14

The City of Folsom shall periodically review and update the Noise Element to ensure that noise exposure information and specific policies are consistent with changing conditions within the community and with noise control regulations enacted after the adoption of this Element.

POLICY 30.15

If noise barriers are required to achieve the noise level standards contained within this Element, the following construction practices are recommended:

1. Noise barriers exceeding six feet in height relative to the roadway should incorporate an earth berm so that the total height of the solid portion of the barrier (such as masonry or concrete) does not exceed six feet.

2. The total height of a noise barrier above roadway elevation should normally be limited to 12 feet.

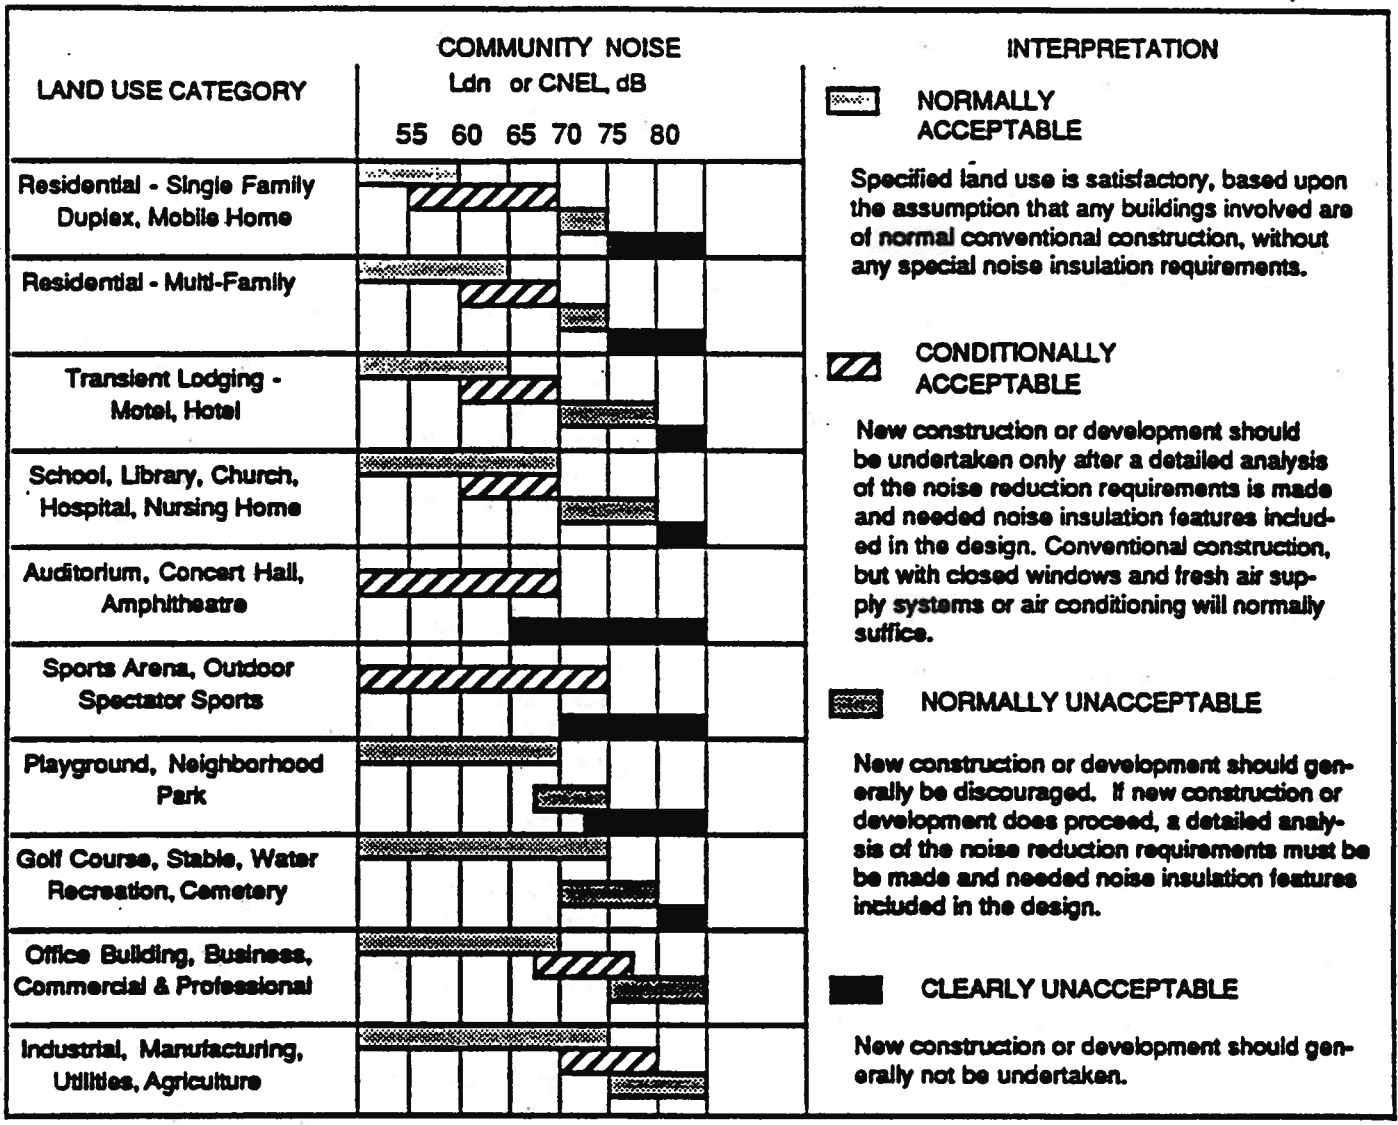
3. The noise barriers should be designed so that their appearance is consistent with other noise barriers in the project vicinity.

13

AIR QUALITY ELEMENT GOALS AND POLICIES

GOAL 31

To improve the air quality of the City of Folsom including:



1. Achievement and maintenance of ambient air quality standards established by the U.S. Environmental Protection Agency and the California Air Resources Board.

2. Minimizing public exposure to toxic or hazardous air pollutants.

3. Limiting visibility reducing particulate matter in the atmosphere.

4. Minimizing public exposure to air pollutants which create a public nuisance through irritation to the senses or unpleasant odor.

FIGURE 26-5
LAND USE COMPATIBILITY FOR COMMUNITY NOISE ENVIRONMENTS

CONSIDERATIONS IN DETERMINATION OF NOISE - COMPATIBLE LAND USE

A. NORMALIZATION NOISE EXPOSURE INFORMATION DESIRED

Where sufficient data exists, evaluate land use suitable with respect to a "normalized" value of CNEL or L_{dn}. Normalized values are obtained by adding or subtracting the constants described in Table 1 to the measured or calculated of CNEL or L_{dn}.

B. NOISE SOURCE CHARACTERISTICS

The land use-noise compatibility recommendations should be viewed in relation to specific source of the noise. For example, aircraft and railroad noise is normally made up of higher single noise events than auto traffic but occurs less frequently. Therefore, different sources yielding the same composite noise exposes do not necessarily create the same noise environment. The State Aeronautics Act uses 65 dB CNEL as the criterion which airports must eventually meet to protect existing residential communities from unacceptable exposure to aircraft noise. In order to facilitate the purposes of the Act, one of which to encourage land compatible with the 65 dB CNEL criterion wherever possible, and in order to facilitate the ability of airports to comply with the Act, residential uses located in Community Noise Exposure Areas greater than 65 dB should be discouraged and considered located within normally unacceptable areas.

C. SUITABLE INTERIOR ENVIRONMENTS

One objective of locating residential units relative to a known noise source is to maintain a suitable interior noise environment at no greater than 45 dB CNEL of L_{dn}. This requirement, coupled with the measured or calculated noise reduction performance of the type of structure under consideration, should govern the minimum acceptable distance to noise source.

D. ACCEPTABLE OUTDOOR ENVIRONMENTS

Another consideration, which in some communities is an overriding factor, is the desire for an acceptable outdoor noise environment. When this is the case, more restrictive standards for land use compatibility, typically below the maximum considered "normally acceptable" for that land use category, may be appropriate.

Source: California Office of Noise Control

POLICY 31.1

Because the City of Folsom shares the air basin with other jurisdictions, and suffers from poor air quality due to regional ozone violations, the City shall work cooperatively with other members of the Sacramento Area Council of Governments, the Sacramento County Air Pollution Control District, the California Air Resources Board, CALTRANS, and the U.S. Environmental Protection Agency toward the development of a consistent and effective approach to the regional air pollution problem. The City will participate in the updating of the 1982 Air Quality Plan, and incorporate Air Quality Plan update measures into the General Plan.

POLICY 31.2

The City shall use consistent and accurate procedures approved by the California Air Resources Board in the review of projects which may have air quality impacts. Comments on the analysis shall be solicited from the Sacramento County Air Pollution Control District and the Air Resources Board.

POLICY 31.3

The City shall encourage the adoption of more stringent vehicle emission standards and enhancements to the Smog Check program through active participation in hearings held by the State Legislature, the California Air Resources Board and the Bureau of Automotive Repair.

POLICY 31.4

To minimize air quality impacts mitigation measures shall be required for transportation emissions associated with all development estimated to generate 2,000 or more trips per day. Measures may include:

1. Project proponent funding of roadway improvements.

2. Commercial/industrial project proponent sponsorship of van pools or club buses.

3. Project proponent funded transit subsidies sufficient to reduce emissions from transit through the substitution of diesel-fueled buses with buses powered by alternative fuels, such as methanol and electric.

4. Commercial/industrial project sponsored daycare and employee services at the employment site.

5. Park and ride lots.

POLICY 31.5

The City shall work with the Air Resources Board or Sacramento County Air Pollution Control District in establishing a carbon monoxide monitoring program in order to accurately determine the status of carbon monoxide air quality and to quantify the impacts of growth and development in the Folsom area.

POLICY 31.6

Non-retail industrial and non-retail commercial projects which directly emit air pollutants should be located in areas designated for industrial development, and separated from residential mixed use areas.

POLICY 31.7

All employers of 50 or more full time employees per shift shall develop and implement incentive-based trip reduction programs for their employees. Incentives may include:

1. Provision of reserved and preferentially located parking spaces for the exclusive use of employees who actively participate in ridesharing.

2. Provision of secure bicycle storage facilities.

3. Provision of shower and locker facilities for use by employees who commute by non-motorized means.

4. Distribution by employers of current information regarding the availability, cost and schedules of public transit.

5. Employer provision of economic incentives to maximize the use of transit, ridesharing, van pooling and non-motorized transportation.

POLICY 31.8

The City shall participate in the development of a regionally consistent transportation emissions accounting system so that transportation emission reductions are accounted for, and those responsible receive appropriate credit.

POLICY 31.9

The City should encourage bicycle usage through the development and maintenance of a safe and comprehensive bikeway system which includes:

1. The provision of securely anchored bicycle racks.

2. Sidewalks in residential development with protective curbing and adequate lighting.

POLICY 31.10

The City of Folsom shall develop, as part of its transportation plan and the Transportation and Circulation Element of the General Plan, a transit development plan so that Folsom residents may safely and conveniently use transit for work, school, shopping, recreational and other trips within the City and outside of the City.

GOAL 32

To minimize public exposure to toxic or hazardous air pollutants.

POLICY 32.1

Reference Policy 31.6.

GOAL 33

To minimize visibility-reducing particulate matter in the atmosphere.

POLICY 33.1

Reference Policy 31.7.

POLICY 33.2

Reference Policy 31.9.

GOAL 34

To minimize public exposure to air pollutants which create a public nuisance through irritation to the senses or unpleasant odor.

PARKS AND RECREATION ELEMENT GOALS AND POLICIES

GOAL 35

To achieve and maintain quality parks which provide optimum satisfaction to the leisure and recreation needs of the citizens.

POLICY 35.1

The City shall construct parks with originality and innovation in design that provide challenge and self-renewal to the user and viewer.

POLICY 35.2

The City shall develop a listing of equipment standards and design guidelines for parks and recreation facilities.

POLICY 35.3

The City shall maintain its parks and recreation facilities in accordance with City adopted maintenance standards.

POLICY 35.4

The City shall encourage, where appropriate, the inclusion of bikeways, walkways, and equestrian trails in parks, parkways, and open space acreage.

POLICY 35.5

Where feasible, park sites throughout the City shall be integrated with the Bikeways Mas-

ter Plan and bicycle trails outside the City such as the American River Bike Path.

POLICY 35.6

The City shall encourage the development of parks with night-use capability.

POLICY 35.7

The City shall encourage construction of shelters, such as pavilions, arbors, lattice canopies, etc. to form shade and shelter for year round use. In conjunction with the shelters, the planting of trees shall be encouraged to increase the shade areas and aesthetics of the parks.

POLICY 35.8

Parkland shall be accepted by the City, if judged to be useful for passive and/or active uses. Land constrained by drainage, slopes or structures which limit the full recreational use of the site shall not be accepted for full credit under the City Parkland Dedication Ordinance. Such lands may be accepted as open space or parkway acreage. Partial credit for constrained lands may be allowed if they are found to be usable or can be made usable in compliance with standards for parkland dedication included in the Parks and Recreation Master Plan.

POLICY 35.9

Lands designated as open space on the Land Use Map of this General Plan may be used for parks, but shall not be credited as parkland pursuant to the Parkland Dedication Ordinance.

Open spaces are an existing resource within Folsom as identified in the General Plan and that to credit these lands for parkland would reduce the full potential of open space that the City requires in order to achieve and maintain the desired quality of life.

POLICY 35.10

The City shall actively encourage the protection and preservation of natural habitats identified in the Open Space and Conservation Element.

POLICY 35.11

The City shall strive to acquire and develop parklands within existing neighborhoods which comply with the standards of this Element and the General Plan.

POLICY 35.12

The following standards are the minimum acceptable standards for parks, open space and recreation facilities in the City of Folsom:

PARK ACREAGE STANDARD

Five acres per thousand population (5 acres per 1,000 persons).

PARKLAND

Areas are generally designated on the Land Use Map of the General Plan for park acreage credit. Those lands which are consistent with the goals and policies of this Element and the General Plan and the Park and Recreation Master Plan shall be credited as parkland.

PARK CATEGORIES

In order to provide a balance, parks have been categorized in terms of their function and sizes. The acreages listed are approximate desirable sizes. The categories are:

- Mini Parks (1 to 2 Acres): Specialized facilities that usually serve a concentrated or limited population or specific group such as tots or senior citizens. Mini parks may feature children's play areas, quiet game areas, landscaping and some sport activities such as multi-purpose courts if space allows. Ideal in close proximity to apartment complexes, townhouses, or elderly housing. May be used to enhance beauty of the City.

- Neighborhood Parks (10 to 20 Acres): A recreation area which provides for indoor and outdoor programs and activities. Neighborhood recreation parks should serve one neighborhood, and be centralized within that neighborhood, a park which can be walked to by children. Where possible they

should be located next to schools to avoid duplication and achieve joint use advantages. Neighborhood recreation parks should primarily serve the needs of the neighborhood residents.

- School/Parks (10 to 20 Acres): A neighborhood park located adjacent to a school. See Neighborhood Park.

- Schools (10 to 20 Acres): School playing fields and facilities can be shared with the City Parks and Recreation program to maximize facilities use. Conversely, parks and other recreational facilities can be shared with schools to enhance school facilities and reduce the need for duplicate facilities and programs.

- Special Use Areas (Undetermined): Within the City there are special use areas which do not fit easily in the other categories.

- Community Parks (20 to 60 Acres): A recreation area which provides recreational opportunities for several neighborhoods. Community parks should avoid duplication of facilities already provided in neighborhood recreation parks, and where suitable, be located adjacent to a secondary school. It should include such facilities as an aquatic center, provision for evening recreation, indoor facilities, amphitheater, specialized athletic fields, tennis, handball, basketball courts, large and small picnic areas, and barbecue facilities, convenient parking, tot play apparatus and restrooms.

- Regional Parks (200+ Acres): A recreation area which provides some remoteness from the urban setting or has features of regional significance including opportunities not possible in other parks within the City park system. This type of park serves a population within a large region, usually those within an hour's travel time. A regional park may be the joint effort of more than one government agency. It should be developed to preserve existing natural areas, areas of great scenic beauty, or areas of historical interest. A regional park could include such facilities as arboretums, camping areas, boating and fishing facilities, bicycling, equestrian and hiking trails, and other special use facilities.

- Open Space/Natural Areas/Parkways (Undetermined): Natural habitat areas, stream courses, utility easements or other corridors designated in the Open Space and Conservation Element and/or Circulation Element for purpose of preservation of natural features or circulation. Open space is clearly distinguished from park acreage and shall not be calculated or credited as parkland acreage. Parkways shall be preserved in their natural state with a network of trails for walking, cycling and horseback riding. Parkways are classified as open space for the preservation of natural resources and shall not be credited as parkland acreage.

SPACE STANDARDS

Park sites and related standards are based Table 31-2. User distribution, user preference, accessibility, availability, and economic factors are to be individually considered.

GOAL 36

To acquire and improve land and facilities recreational use in pace with local needs.

POLICY 36.1

The City shall acquire and develop sufficient lands to meet the recreational needs of the citizens.

POLICY 36.2

The City shall encourage the creation of a series of parks that serve as focal points for surrounding neighborhoods.

POLICY 36.3

The City shall encourage the development of parkways and greenbelts as an integral link between the Citywide park system.

TABLE 31-2
PARK ACREAGE STANDARDS

PARK CATEGORY	SERVICE AREA	DESIRABLE SIZE	ACRES/1000 POPULATION	POPULATION
Mini Park	Less than 1/4 mile radius	1-2 acres	.5 to 1 acre -	1,000-2,000
Neighborhood Park	1/4-1/2 mile radius	15 acres	2.5 to 3.5	2,000-5,000
Community Park	Several Neighborhoods 1-2 miles	45 acres	2.5 to 3.5	12,000-25,000
Special Use Recreation Area/ Natural Area/ Wildlife Area/ Parkway	Not applicable standard	Variable depending on desired size	Variable	Within community 25,000 - 50,000
Regional	Several communities within one hour driving time radius	200 + acre	5 to 10	Contiguous to or encompassing natural resources

POLICY 36.4

The City shall monitor the condition of all facilities in order to repair and replace equipment as needed, and insure that State safety standards and guidelines are being met.

POLICY 36.5

The City shall develop programs to identify and attain alternative sources of funding for the acquisition and development of parklands and financing of recreation programs.

POLICY 36.6

The City shall improve undeveloped and developed parkland as financially feasible.

POLICY 36.7

The City shall develop and maintain a capital improvement program for long term and short term recreation projects.

GOAL 37

To achieve and maintain quality recreation activities which provide optimum satisfaction to the leisure and recreation needs of the citizens.

POLICY 37.1

The City shall encourage the provision of programs and activities designed to meet the recreational needs of the residents of Folsom.

POLICY 37.2

The City shall continue to develop facilities and programs for indoor and outdoor activities directed toward the needs of the neighborhood served.

POLICY 37.3

The City shall encourage the incorporation into parks and recreation planning the needs of all age groups, handicapped, and special interest groups.

POLICY 37.4

The City shall encourage the expansion of services to senior citizens and latch key kids.

POLICY 37.5

The City shall encourage and/or co-sponsor various ethnic programs and activities of local interest.

POLICY 37.6

The City shall encourage that residents of Folsom be given first priority in participation of recreation sponsored programs, activities, and leagues.

POLICY 37.7

The City shall encourage or co-sponsor programs that involve the entire family, e.g., Family Fun Faire, Sports and Field Day, community picnics, and Kite Day.

GOAL 38

To involve and inform the residents, merchants, and visitors of the need for public participation in planning, development, and proper maintenance of recreation facilities.

POLICY 38.1

The City shall strive to implement registration procedures which require minimal paperwork for individuals and groups.

POLICY 38.2

The City shall encourage citizen participation in park and recreation planning through the Park and Recreation Commission.

POLICY 38.3

The City shall encourage neighborhood beautification projects, anti-pollution drives, recycling and other conservation activities that enhance the environment.

POLICY 38.4

The City shall develop a handbook of facility use and maintenance for groups and individuals using City facilities.

POLICY 38.5

The City shall continue to publish and advertise recreation programs, leagues and special events at a minimum of three times per year.

GOAL 39

To effectively use the resources of the City of Folsom and other governmental entities (such as school districts, county, state and federal agencies) to accomplish coordinated, effective planning of recreation and leisure activities.

POLICY 39.1

The City shall encourage those agencies actively providing recreational programs and activities to continue those programs and activities.

POLICY 39.2

The City shall encourage the use of college interns in all areas of parks and recreation.

POLICY 39.3

The City shall encourage the use of community residents to instruct special interest programs; e.g., fishing, fly-tying, gun safety, dance, etc. The City may serve as coordinator for such programs by providing facilities, public relations, instructors, and by paying instructor fees.

POLICY 39.4

The City shall encourage the aid of State or County park rangers, i.e., Folsom Lake State Recreation Area, to provide leadership in programs that inform the community on topics such as conservation and fire safety.

POLICY 39.5

The City shall continue the execution of a joint use, and development arrangement with the Folsom Cordova Unified School District and encouraging an agreement with the Los Rios Community College District.

POLICY 39.6

The City shall work cooperatively with the County Department of Parks and Recreation, State Department of Parks and Recreation, State Department of Corrections and State Department of Fish and Game in coordinating facility development and program offerings.

PUBLIC FACILITIES ELEMENT GOALS AND POLICIES

GOAL 40

To set targets for the ultimate build-out of the City, to plan for the provision of public facilities and services to meet this level of development, and to phase development according to the capacity of public facilities and services to meet those targets.

POLICY 40.1

No permit for construction shall be issued for any new development not served by existing municipal facilities until the following condition have been met:

1. The applicant can provide for the installation and/or financing (through fees or other means) of needed public facilities.

2. The project is included in the area covered by an existing facilities plan approved by the City.

3. The project can be served by on-site or private facilities meeting City and County health and safety requirements.

POLICY 40.2

The City shall require the preparation of a facilities plan for an identified area when:

1. Development of an area necessitates the provision, extension, and/or expansion of municipal services and facilities which are not customarily constructed by a developer; or

2. There is a need for services or facilities not otherwise funded by regular City fees; or

3. The construction of the necessary services and facilities cannot be logically or economically provided by one landowner/developer in the normal sequence of orderly development.

POLICY 40.3

An area facilities plan shall include, but not be limited to the following:

1. The description of the plan area and the basis for the selection of the proposed boundaries and the development potential of the area when it is based on a comprehensive land use map.

2. A statement of the plan's consistency with the Folsom General Plan and the City's Urban Development Policy.

3. Identification of the nature and extent of facilities necessary to serve the area and a schedule of estimated time within which facilities must be constructed.

4. Engineer's estimate of the total cost of such improvements (including plan preparation).

5. A plan for the equitable apportionment of costs among benefitted properties and adjustments thereof based upon the time such costs are paid.

6. The nature of the obligation of each land owner or developer.

7. Discussion of the options available to finance the improvements, including, but not limited to, construction by developers.

not limited to, construction by developers, an assessment district, fees, or a combination of these and/or other provisions.

8. Provisions for amendments to the Plan, which may result from changes in the plan area, development patterns, etc.

9. Provisions to refund or reimburse land - owners who construct facilities with capacity beyond the ultimate need of their developments.

10. Provisions for administration of the area plan and the collection and distribution of funds.

11. A statement which recognizes that the financial commitments required pursuant to such plans are not in lieu of other municipal service and facilities fees. The financial commitments of land owners/developers shall be taken into account by the City in determining the extent of the imposition of such other municipal service and facilities fees.

12. A statement which recognizes that the Area Facilities Plan is not intended to be responsible for the provision of all possible public facilities that will be needed in the future and that there are or may be additional costs/fees established by the City and other juristictions (such as school districts) that may apply to the area. However, the plan must address the need for all public facilities which may reasonably be assumed to be necessary during buildout of the area.

POLICY 40.4

All new development projects shall be planned for an urban level of services:

1. Sidewalks, gutters, and storm drains constructed to standards established by the City, except for residential estates and other projects when appropriately excluded.

2. Sanitary sewer lines of appropriate size to accommodate the project and that will tie into the City's main lines.

3. Public or private roads that can accommodate at least two lanes of traffic.

4. Parking and circulation systems that accommodate emergency vehicles and equipment.

POLICY 40.5

The City shall annually monitor the City's available municipal water supply to ensure adequate reserves exist to serve projected water demand. In the event projected demand exceeds supply, the City may take the following actions to prevent the anticipated shortfall.

1. Condition development approvals on the availability of identified water supplies.

2. Building permits covered by the former General Plan area should be restricted until such time as the City determines adequate supplies exist to allow unrestricted hookups to the municipal water system.

3. Seek to renegotiate municipal water contracts with large water demand users.

4. Within the area known as the East Area Facilities Plan Area consisting of approximately 3,900 acres, and any area south of U.S. Highway 50 which could be annexed to the City, the City shall not approve a final subdivision map or final parcel map, or other entitlement which would permit the commencement of construction until such time as the City has acquired an additional water supply which is adequate to supply such development as required under the Urban Development Policy. This prohibition shall not preclude the approval of final parcel maps covering all or a portion of the property covered by an approved tentative subdivision map, where multiple final subdivision maps are to be filed pursuant to Government Code Section 66456.1.

HAZARDOUS MATERIALS ELEMENT GOALS AND POLICIES

GOAL 41

To protect the health and welfare of the residents of Folsom through the management and regulation of hazardous materials in a manner that will focus on preventing problems.

POLICY 41.1

The City shall endeavor to work with industry, community groups, and government agencies to develop an effective, workable, and fair hazardous materials management system.

POLICY 41.2

As much as feasible, the City shall provide information to the general public and interested parties on technical and administrative developments in the field of hazardous materials management.

POLICY 41.3

The City shall endeavor to develop and implement with Sacramento County, a comprehensive hazardous materials management program.

POLICY 41.4

The City shall expand and strengthen existing Folsom programs where appropriate, to fill in gaps in the current federal, state and local hazardous materials management efforts.

POLICY 41.5

The City shall encourage the effective implementation of workplace safety regulations, and to assure that hazardous material information is available to users and employees.

POLICY 41.6

The City shall improve cooperation, information gathering, and information availability within existing Folsom programs.

POLICY 41.7

The City shall support a household hazardous waste disposal program.

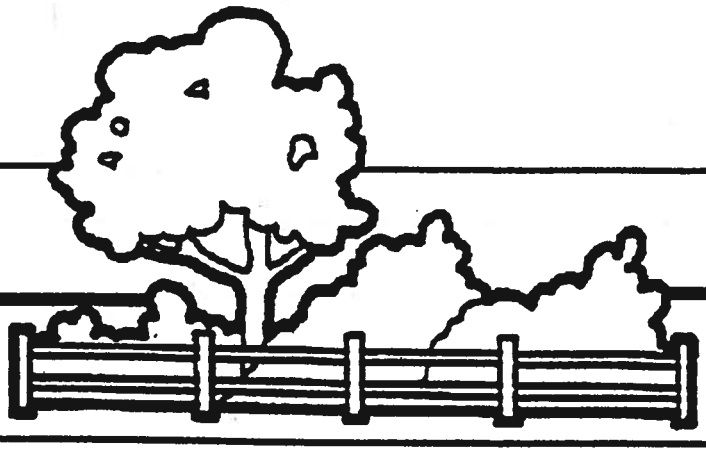
POLICY 41.8

The City shall endeavor to develop land use standards that will reduce the risk of health or environmental damage through industrial or commercial use of hazardous materials.

POLICY 41.9

The City shall endeavor to protect residents and sensitive facilities from avoidable incidents in the transportation of hazardous materials in the county.

POLICY 41.10



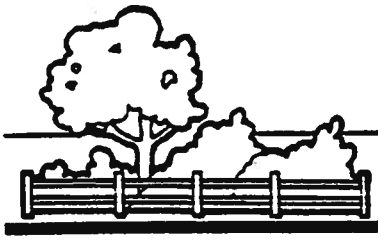
The City shall endeavor to protect residents from avoidable accidents and mishandling of hazardous materials in industrial and commercial facilities.

POLICY 41.11

The City shall support local enforcement of hazardous materials regulations.

FISCAL ELEMENT GOALS AND POLICIES

Goals and Policies will be added upon adoption of the Fiscal Element.



21.0 LAND USE ELEMENT

Prepared For The City of Folsom
Community Development Department

By
Connerly and Associates

21.4 RELATED GOALS AND POLICIES 24

21.5 IMPLEMENTATION 24

21.0 LAND USE

21.1 INTRODUCTION

The Land Use Element of a City's General Plan brings together policies and considerations from the other Elements (resources, geology, natural and human created hazards, traffic and circulation) to determine the most appropriate mix and distribution of land uses. The Land Use Element addresses all aspects of land use: housing, commercial, industry, parks, schools and open spaces. This Element must, therefore, consider the land use implications of each of the other nine Elements.

During the preparation of this Element, extensive consideration was given to existing land uses and future land uses on sites with approved development proposals. The policies developed by the Citizen's Advisory Committee stressed sensitivity to the historical development of Folsom and the relationships among existing land uses. The land use policies strongly favor the preservation of existing single family neighborhoods; the preservation and enhancement of Folsom's Historic District; and the strengthening of the City's existing commercial core, centered on East Bidwell Street.

The policies also envision substantial expansion of the City's commercial and industrial base to meet the City's internal business needs, provide employment to residents who will live in the Folsom area, meet regional commercial and industrial needs, and improve the City's revenue base.

Because of the close economic and social links between jobs, commerce, and housing, the land use policies have been developed to promote a jobs and housing balance. The Citizen's Advisory Committee sought to ensure that all Folsom residents would have access to neighborhood and community-wide commercial goods and services, that residents who so desired could both live and work in Folsom, and that Folsom could serve regional commercial needs along Highway 50.

Although many of the land use policies address the built environment, much attention is also devoted to the maintenance of Folsom's natural environment. The Open Space and Conservation Element (Section 24) contains more specific policies and implementation measures directed to the preservation and enhancement of important natural features. In setting forth land uses, the protection of natural features, waterways, vernal pools, riparian habitats, trees, ridge lines, scenic vistas and other special natural features were given high priority.

The land use policies in this Element establish the standards for development and the direction of development in Folsom. These written policies are further interpreted in the form of a Land Use Map, which illustrates the location of all land uses envisioned in the Folsom General Plan. The Land Use Map is an integral part of the General Plan and the Land Use Element. A change in the Land Use Map must be consistent with the policies of this Element and the other Elements. Conversely, any policy changes could imply changes to the Land Use Element.

21.1.1 STATE POLICY AND AUTHORIZATION

State Law (Government Code Section 65302(a)) requires that the Land Use Element of a General Plan designate the proposed general distribution and general location of housing, business, industry, open space, including agriculture, natural resources, recreation, and enjoyment of scenic beauty, education, public buildings and grounds, solid and liquid waste disposal facilities, and other categories of public and private uses of land.

The Land Use Element must also include standards for population density and building intensity for each district, and identify areas subject to flooding.

21.1.2 RELATED STATE REGULATIONS

SITING OF HAZARDOUS WASTE STORAGE (GOVERNMENT CODE SECTION 6593.1)

The State Department of Health Services maintains a list of sites known or designated to contain hazardous wastes. Any new sites which will store or process hazardous wastes must be approved by the Department of Health Services as well as the City of Folsom.

DESIGNATION OF AGRICULTURAL LAND (GOVERNMENT CODE SECTION 65570)

The State Director of Conservation compiles "important farmland series" maps based on information from the United States Soil Conservation Service. These maps show the several designations of land suited to agricultural uses based on soil quality and characteristics. These maps may be consulted by local agencies in determining areas which should be designated for agriculture or grazing.

DENSITY BONUSES (GOVERNMENT CODE SECTION 65915)

Notwithstanding the maximum number of dwelling units otherwise permitted in a residentially designated area, State Law provides for density bonuses of 25 percent of the number of homes otherwise allowed for the provision of low or moderate income housing. The density bonus or equivalent financial incentives must be offered when a developer proposes to build at least 25 percent of the homes in a project for low and/or moderate income households, or ten percent of the homes for lower income households, or 50 percent of the homes for qualifying elderly or disabled residents.

SURFACE MINING AND RECLAMATION ACT

See Section 24.1.2 of the General Plan.

FAMILY DAY CARE HOMES AND HOMES FOR MENTALLY DISORDERED, HANDICAPPED PERSONS, OR DEPENDENT AND NEGLECTED CHILDREN (CHAPTERS 3.4 AND 3.6, DIVISION 2 OF THE HEALTH AND SAFETY CODE; SECTION 5115 ET. SEQ. OF THE WELFARE AND INSTITUTIONS CODE)

Certain child day care, elderly care, family care, foster home, group home, alcoholic recovery home and other similar facilities are to be considered residential uses allowed in any residentially designated area, notwithstanding any local standards which may define such land uses as commercial or institutional.

21.2 SETTING/ASSUMPTIONS/ISSUES

21.2.1 SETTING

Volume III, Chapter 82.0 of the General Plan and the Master Environmental Assessment (MEA) describe the setting of the Folsom area and the data base upon which the General Plan has been prepared. A summary of the community setting is provided below as it relates to the Land Use Element.

LAND USE

There are approximately 15,200 acres (23.7 square miles) within the City of Folsom, most of which is presently undeveloped. However, the City is undergoing rapid change and urban development. In May 1987, there were about 7,264 homes completed or under construction in Folsom. The most recent evaluation of the City's development status as of November 1987 shows:

TABLE 21-1
EXISTING LAND USES

LAND USE	GROSS ACRES
Residential	1,700
Commercial	179
Industrial	152
Schools/Public Facilities	350
Parks	222
Open Space	854
Folsom Prison	848
Undeveloped and Water	10,415
Under Construction Various Uses	440
TOTAL	15,160

Folsom's population growth relative to Sacramento County is a good indicator of its urbanizing character. The following table compares population growth in the City versus the County.

TABLE 21-2
POPULATION GROWTH TRENDS

1970 POPULATION	1980 POPULATION PERCENT CHANGE*	1988 POPULATION PERCENT CHANGE*	PERCENT CHANGE*
Folsom	5,810** (48%)	11,003 (89.4%)	23,300 (112%)
Sacramento County	631,498 (25.6%)	783,381 (24.1%)	930,100 (18.7%)

SOURCE: U.S. Census, Department of Finance, May 1988

* From previous decade or period.

** Excluding Folsom Prison population.

The distribution of land uses under this Element reflects the more urban nature of development in Folsom. The prior General Plan, prepared during the late 1960s and updated periodically, called for more low density residential development, fewer residential categories, and a maximum residential density of 12 units per acre. The proposed distribution, as reflected in the Land Use Map, provides for fewer residential acres but at higher densities. Commercial acreage is increased by 71 percent, and open space by 43 percent. The following comparison summarizes the changes between the prior and the adopted General Plan land use distribution.

TABLE 21-3
LAND USE DISTRIBUTION

LAND USE CATEGORY	PRIOR GENERAL PLAN ACRES/DWELLING UNITS	ADOPTED GENERAL PLAN ACRES/DWELLING UNITS
Residential Density		
Single Family Low/Low (0.5 du/ac)	2,563	N/A
Single Family Low (2 du/ac)	752	N/A
Single Family (2-3.9 du/ac)	2,345	4,392
Single Family Medium (5 du/ac)	841	N/A
Single Family High (4-6.9 du/ac)	N/A	836
Mobile Home (7 du/ac)	149	N/A
Multi Family Low (7-11.9 du/ac)	N/A	648
Multi Family (12 du/ac)	743	N/A
Multi Family Medium (12-17.9 du/ac)	N/A	146
Multi Family High (18-25 du/ac)	N/A	110
SUBTOTAL RESIDENTIAL	7,393/22,875	6,132/28,184
Commercial	700	1,329
Industrial	1,686	1,531
Schools/Public	389	580
Park	250	300
Open Space	1,541	3030
Prison	848	848
Water	1410	1410
Projected Employment	87,040	99,680
Average Residential Density	3.09/acre	4.60/acre
Estimated Population (Excluding Prison)	56,273	69,333

ASSUMPTIONS:

Population projections are based on an average household size of 2.46. Dwelling units projections are based on the density range average. Employment projections are based on an average employee density per acre of 28 for commercial developments and 40 for industrial developments.

PHYSICAL SETTING

The natural environment of Folsom presents few development constraints. There are site specific environmental considerations which will affect the building location and density of some projects on hillsides and along ridge lines, riparian habitats, vernal pools, and other localized environmentally sensitive areas, for example. Much of these areas would be preserved for open space (see Chapters 2, 3, 4 and 5 of the MEA for discussion of these environmentally sensitive areas).

The mining of significant mineral beds, especially sand and gravel, could also present a localized constraint to development in some areas of Folsom (see Chapter 2 of the MEA for a discussion of the locations of mineral deposits). Policy 28.5 of the Open Space and Conservation Element requires the protection of mining and/or gravel extraction sites so that sand and gravel can be extracted prior to the use of these sites for other purposes.

This policy may require a phasing of development on or near extraction sites to ensure the priority of mineral extraction prior to other development.

Finally, localized soil conditions in the hillside areas of East Folsom may require special development techniques to reduce slope erosion and to ensure slope stability. Most of the eastern hillsides consist of weathered bedrock. Site specific development conditions could ensure that proper erosion control and slope stability techniques are followed.

AREAS SUBJECT TO FLOODING

The General Plan Maps show the general location of designated open spaces and recreation areas. For properties located in areas subject to flooding, special conditions may be attached to reduce flooding potential and to reduce the risks of property damage or injury. These conditions may include underground storm drainage systems to reduce surface runoff from areas that drain into streams and reservoirs and that are capable of handling run-off from a 100-year storm, limits on the amount of paved and other impermeable surfaces, and drainage fees to help pay for downstream improvements needed as a result of the development.

Development proposals located within potential flood prone areas will be required to submit hydrological/drainage studies to determine flood water elevations, water runoff violations and acceptable mitigations as a condition of project approval.

21.2.2 ASSUMPTIONS

The policies contained in this Element are based on several assumptions which were discussed by the Citizen's Advisory Committee. These assumptions are listed below.

PRESERVATION OF IMPORTANT HABITAT

Important natural habitats, such as riparian corridors and vernal pools, can remain viable for wildlife if preserved.

BALANCE OF LAND USES

Folsom can achieve a balance of land uses that will allow residents to live, work, shop, and enjoy recreational activities within the City.

HOUSING

The predominate housing demand will be for single family homes and other affordable ownership housing. Thus, more land is devoted to high density single family housing and low density multi family housing, rather than low and very low density single family housing.

COMMERCIAL SERVICES

As Folsom's resident and worker population grows, the City will be able to support additional neighborhood shopping areas, at least one additional community-level commercial center, and an expanded central commercial district.

JOBS HOUSING BALANCE

Many future residents will live and work in Folsom, reducing the level of inter community travel that would otherwise occur if Folsom were a predominantly "bedroom" community.

REGIONAL SERVICES

Folsom has a strategic location and access with respect to the growing population of eastern Sacramento County, western El Dorado Hills and South Placer County. The City would be well suited for regional-serving commercial establishments.

CENTRAL COMMERCIAL DISTRICT

Folsom is capable of supporting a multi-function commercial core which contains retail, offices, financial services and cultural/entertainment establishments. These uses will have a community wide market area, in addition to being supported in part by nearby residents.

INSTITUTIONS

Large institutional uses (hospital, community college) will provide a local focus for commercial activities and higher density housing.

21.2.3 ISSUES

Several issues were identified during the development of the land use policies. These include:

VIABILITY OF COMMERCIAL AREAS

Without controls on the size and number of neighborhood and community commercial centers, the viability of a central commercial district could be compromised.

VARIETY OF HOUSING TYPES

The prior General Plan provided mainly for low to medium density single family housing. To ensure that Folsom meets its regional housing responsibilities, the City has attempted to expand the number and types of homes that can be constructed while preserving important environmental features.

ECONOMIC BASE

The allocation of land uses has important economic implications for its residents as well as financial implications for the City's revenue base. The City's land use policies provide for commercial and industrial uses which can improve Folsom's tax base. The need to assure an adequate financial base is balanced against the City's responsibility to plan for housing that will serve workers and other new residents.

DEFINING SENSITIVE AREAS

One of the most difficult issues facing the City is to define those areas of the city which are most important to preserve in their natural state. There are many areas that deserve high priority, and these areas are listed in the policies.

21.2.4 LAND USE STANDARDS

State Planning Law requires that the Land Use Element incorporate standards for population density and building intensity. All development projects are governed by General Plan goals and policies, zoning and building code regulations, as well as other applicable City regulations.

Residential development is more adaptable to an application of population and building standards with minimum lot sizes (zoning) and density ranges (General Plan), than non-residential development. Given the wide variety of uses and activities that are permitted in the non-residential zones, it is more difficult to apply strict development standards to commercial and industrial projects. Building intensity and employment density will vary by activity. The Zoning Code regulates actual building intensity (lot coverage) for specific projects through the application of minimum setbacks, maximum lot coverage, height restrictions, parking and landscaping requirements.

As a general rule however, the following building intensities and population/employment densities will be used in analyzing community wide development impacts. Project specific environmental analysis will be used in determining impacts of individual projects. These standards, therefore, are to be used as a guide on a case-by-case basis for project review.

The generalized standards recommended below are based on the policies applicable to each land use designation:

TABLE 21-4
RECOMMENDED DEVELOPMENT STANDARDS

LAND USES	DWELLING UNITS PER ACRE	POPULATION PER ACRE	BUILDING HEIGHT	BUILDING COVERAGE	FLOOR AREA RATIO
Residential [1]					
Single Family	2-3.9	6-12	30-35'	30-35%	-
Single Family High Density	4-6.9	10-17	35'	35%	-
Multi Family Low Density	7-11.9	15-26	35'	40%	-
Multi Family Medium Density	12-17.9	24-36	50'	60%	-
Multi Family High Density	18-25	27-38	35-50'	50-60%	-
		EMPLOYEES PER ACRE	**NUMBER OF STORIES**	**BUILDING COVERAGE**	**FLOOR AREA RATIO**
Non-Residential [2]					
Commercial-					
Neighborhood		20-25	1-2	35%	-
General/Community		25-30	1-2	30-40%	-
Regional		30	3-4	-	2:1
Central District		30-35	4	-	2:1
Specialty [3]		-	-	-	-
Industrial/Office Park		10-40	3-4	40-50%	2:1
Public/Quasi Public [4] -		-	-	-	
Parks/Recreation		-	-	10%	-
Open Space		-	-	10%	-

1 An average household size of 2.46 has been assumed for General Plan and EIR purposes.

2 An average employee density of 28 for commercial uses and 40 for industrial uses has been assumed for General Plan and EIR purposes.

3. Specialty Commercial Area: Building intensity and employment density will vary by type of commercial project. These standards will be determined on a case-by-case basis through a planned development process. Land uses within these designations include: Sutter Street Historic District, Specialty Commercial District, Business/ Professional Offices and other identified areas as appropriate.

4. Public/Quasi - Public Land Uses: Standards will vary depending on the type of Development standards will be applied c... case-by-case basis.

21.3 LAND USE ELEMENT GOALS AND POLICIES

GOAL 1

This is the key Goal of the Plan and this sets the tone of the Plan.

To retain and enhance Folsom's quality of life, separate identity and sense of community. Folsom's identity and quality of life are defined by:

1. The diverse natural setting, including the American River, its tributary streams, natural vegetation, topography, native wildlife, and other unique features of the landscape.

2. Developed parks and open space.

3. The historic district and other historic places throughout the community.

4. The State prison site, which provides a large, visual open area in the City.

5. The physical form of Folsom's neighborhoods.

6. Ease of movement.

7. Public access to pedestrian and bicycle trails.

POLICY 1.1

New development shall preserve and/or enhance to the maximum degree feasible, the existing natural vegetation, landscape features and open space, consistent with the Goals and Policies of this Plan.

POLICY 1.2

Existing viewsheds and opportunities for viewsheds should be incorporated into the design of new developments.

POLICY 1.3

Each residential neighborhood should be planned with at least one park/recreational/school area within approximately one half mile of each residential unit.

POLICY 1.4

Each new residential development shall be encouraged to provide pedestrian and bicycle access to parks or schools located within or near the development.

POLICY 1.5

Each new residential development shall be designed with a system of local streets, collector streets, and access to an arterial road that protects the residents from through traffic.

POLICY 1.6

Folsom's historic district shall be enhanced and maintained through the improvement of public facilities.

POLICY 1.7

Historic buildings or locations shall be preserved or incorporated into the design of new developments.

POLICY 1.8

The City shall prepare an inventory of historically and culturally significant buildings and sites. The City should investigate measures for Historic Preservation of these building sites.

POLICY 1.9

Development proposed along streams shall be in conformance with a comprehensive development and management plan to be prepared for stream waterbeds prior to project approval.

POLICY 1.10

When development incentives are required for the preservation of identified resources and open spaces, the City and public shall cumulatively receive the greater short-term and long-term benefits of such incentives.

POLICY 1.11

The location, configuration, and extent of open space and parkway designated on the land use map shall be determined on a project by

project basis through site specific mapping approved by the City and consistent with mitigation of environmental impacts and implementation of the overall goals and policies of the General Plan.

The lines depicting the location of Humbug and Willow Creeks on the General Plan are for illustrative purposes and shall be consistent with the Humbug/Willow Creek Management Plan when adopted.

GOAL 2

To ensure that the City exercise appropriate controls over the planning process.

POLICY 2.1

The General Plan sets the overall guidelines for the location and intensity of development in Folsom.

POLICY 2.2

The City will prepare area or specific plans as appropriate to further refine the standards and regulations for development.

POLICY 2.3

General Plan Amendments may be approved when the applicant has successfully indicated substantial benefit could be derived from the project.

1. Requests for higher residential densities must include a demonstration of need for higher density housing.

2. Requests for land use changes must include an evaluation of economic, social and environmental factors which would be enhanced by a change in the land use.

3. Design features for open space, improved recreational facilities, protection of natural features and sensitivity to surrounding development shall be carefully evaluated.

POLICY 2.4

The City shall adopt a grading ordinance which prohibits any substantial grading or modification of the topography prior to approval of a tentative map, planned development or other land use permit. The ordinance shall provide for performance bonds or similar measures acceptable to City and a specific time period for construction to commence. The City shall require slope analysis maps early in the project review process in order to judge future grading activity.

GOAL 3

To address comprehensively Folsom's development issues on the basis of community-wide needs.

POLICY 3.1

The City shall evaluate the community-wide impact of each development on the need for public facilities and services, the circulation and housing impacts from the project, and the effects on the City's identified resources.

POLICY 3.2

Developments should be compatible with the natural features and the buildings that surround them. Compatibility will be measured by the size and configuration of buildings in a project, the use of materials and landscaping, the preservation of existing vegetation and landscape features, and the location of entrance and exit routes on the project site.

POLICY 3.3

Development standards shall be prepared for large land holdings prior to approval of tentative maps or Planned Development permits. Development standards may consist of standards adopted by resolution of the Planning Commission describing standards for development and relationships among land uses within the area covered by the plan. Development standards may be included in specific plans, area plans, or by reference as a condition of approval.

GOAL 4

To provide opportunities for residents to live, work, shop, and enjoy leisure activities within the City.

LICY 4.1

The City will plan for additional housing needs as determined in the Housing Element for the next 5 to 25 years.

POLICY 4.2

The City will plan for a central community shopping district and a regional shopping center.

POLICY 4.3

Neighborhood business areas will be allowed, subject to size and business use restrictions. The location of such business areas should be based on area or community plans covering the projects to be served by the neighborhood business area. Neighborhood business areas should be pedestrian-oriented, that is, drawing their customers primarily from the residences in the immediate vicinity of the businesses.

'OLICY 4.4

The City will expand its system of parks, open spaces, and recreational facilities as new development proceeds.

POLICY 4.5

Industrial and office employers should be encouraged to locate in Folsom to provide more job opportunities for Folsom residents.

GOAL 5

To influence land use decisions of Sacramento, Placer, and El Dorado counties and other governmental agencies which may impact Folsom.

POLICY 5.1

The City shall request to participate in the planning process of other governmental agencies whose jurisdiction includes areas within the city limits of Folsom.

POLICY 5.2

The City shall request copies of proposed plans prepared by other government agencies outside of Folsom but which could affect land in Folsom. City officials should respond in a timely manner to such proposed plans and participate in public meetings or hearings as appropriate.

POLICY 5.3

The City will continue to participate in the Sacramento Area Council of Governments and the Sacramento Local Agency Formation Commission.

GOAL 6

To expand Folsom's Sphere of Influence based on the ultimate boundaries of development that the City can reasonably control and service and to discourage premature development in unincorporated areas surrounding the City.

POLICY 6.1

The Sphere of Influence shall include those parcels of land adjacent to the city limit whose development could have significant visual, traffic, service, and environmental impacts on Folsom so that the City may influence the ultimate development of those parcels.

POLICY 6.2

The City shall consider existing roads or natural features which might logically define a new Sphere of Influence boundary.

POLICY 6.3

A new Sphere of Influence boundary shall include only those lands to which road, water, sewer and other facility/service connections can be extended within the next 25 to 30 years and, therefore, to those areas which will ultimately be annexed to the City.

GOAL 7

To provide for the orderly annexation and development of unincorporated areas within Folsom's Sphere of Influence.

POLICY 7.1

The City shall only annex those lands which

can be developed in accordance with the City's General Plan, are fiscally sound additions to the City, can be adequately served by municipal (or acceptable alternative) facilities and services, and are part of a planned, orderly annexation program.

POLICY 7.2

All properties proposed for annexation shall be pre-zoned by the City in a manner consistent with the General Plan. Until facilities and services can be provided, such properties will be designated as agricultural reserve. The existing County zoning or General Plan designation which applies to a property may be considered in determining the appropriate pre-zoning of the subject land which is served by on-site facilities or connected to County facilities.

POLICY 7.3

Prior to the annexation of lands to the City, the applicant shall submit a plan demonstrating the financial feasibility of providing services and facilities to the area proposed for annexation. (refer to Goal 40 and its policies)

POLICY 7.4

The General Plan and zoning designations for annexed lands should consider the following criteria:

1. The capacity of facilities and municipal services.
2. The environmental effects that development on lands proposed for annexati may have on properties within the existing city limits.
3. Existing land uses, if any, on and in the vicinity of the annexed land.
4. The extent of any natural habitats and features of the landscape which should be preserved.
5. The demonstrated need for additional housing, retail commercial uses, other commercial uses, and industrial uses.

GOAL 8

To allow a variety of housing types which provides living choices for Folsom residents.

POLICY 8.1

Average residential densities shall be calculated as the number of dwelling units divided t the total area of the project, excluding any commercial, business and professional or indus uses. Areas devoted to open space, public parks, roads, public schools and other miscellaneous land uses shall be included in the calculation.

SEE PAGE 21-11A FOR ADDITION

POLICY 8.2

In order to promote a more diverse housing stock and to allow for a greater mix of compatible densities, five residential density ranges shall be established and applied to the various residen-

TABLE 21-5
GENERAL PLAN RESIDENTIAL DENSITIES

HOUSING TYPE	SF (2-3.9)	SFHD (4-6.9)	MLD (7-11.9)	MMD (12-17.9)	MHD (18-25)
SF Detached	◆	◆			
SF Zero Lot Line		◆	◆		
SF Patio		◆	◆		
Duplex		◆	◆		
Halfplex		◆	◆		
Townhouse			◆	◆	
Condominiums			◆	◆	
Garden Apartments			◆	◆	◆
Conventional Apartments				◆	◆
Mobile Home Parks		◆			

PARAGRAPH TO BE ADDED TO POLICY 8.1

In any development in which land is reserved for acquisition by a public agency for open space, parks, public schools, or other public purposes such land shall be taken into account in calculating the allowable residential density on the remaining land, provided no building permit shall be issued covering residential units attributing to such reserved land, until the reserved land has been acquired by the public agency for which such land was reserved.

tial areas. Table 21-5 illustrates these densities and compatible housing types. Examples of these housing types are defined in Figure 21-5.

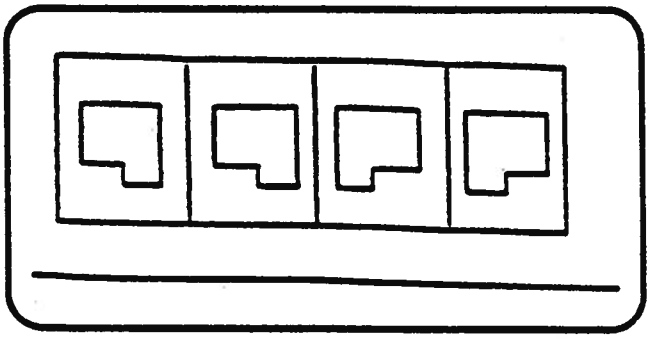
POLICY 8.3

Open space will be required as part of each residential development except in residential estates, multifamily parcels of less than 10 acres and parcels of less than 20 acres for single family uses surrounded by existing development. Open space includes required park lands, common areas, landscaped areas, pedestrian paths, plazas and similar public or private areas, but not areas devoted to vehicle parking and streets. To achieve the open space guidelines, a developer may be allowed to group the homes at somewhat smaller lot sizes than would otherwise be permitted, provided the average density does not increase. (See Policy 8-7 and the Goals and Policies of the Open Space and Conservation Element)

POLICY 8.4

All residential development or residential portions of multi-use developments shall contain a minimum of 30 percent of the land in natural or improved open space, exclusive of roadways and parking lots.

Buffering shall be required between adjacent multi-family projects and single family developments along common boundaries.



POLICY 8.5

Sufficient off-street parking for residents shall be included in the design of all residential projects. Off-street parking for guests shall be included in the design of all multifamily projects. The City shall review its parking standards to ensure that resident and guest parking is adequate to accommodate the anticipated average demand per dwelling unit. Surface lots for off-street parking should be landscaped to reasonably screen the parking area from street view and from adjacent properties.

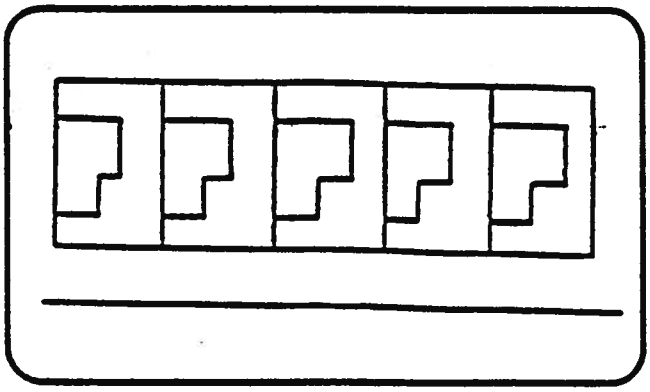
FIGURE 21-1
VARIOUS TYPES OF HOUSING

Single Family Detached

- One House (unit) per Lot
- Each House and Lot Individually Owned
- Conventional Building Setbacks from Front, Rear and Side Property Lines

Single Family-Zero Lot Line

- One House (unit) per Lot
- Each House and Lot Individually Owned
- Zero Setback on One Side of all Lots Leaving Yard on Three Sides of House
- Permits more Usable Sideyard, Smaller Lots and Units, and thus Greater Overall Unit Density



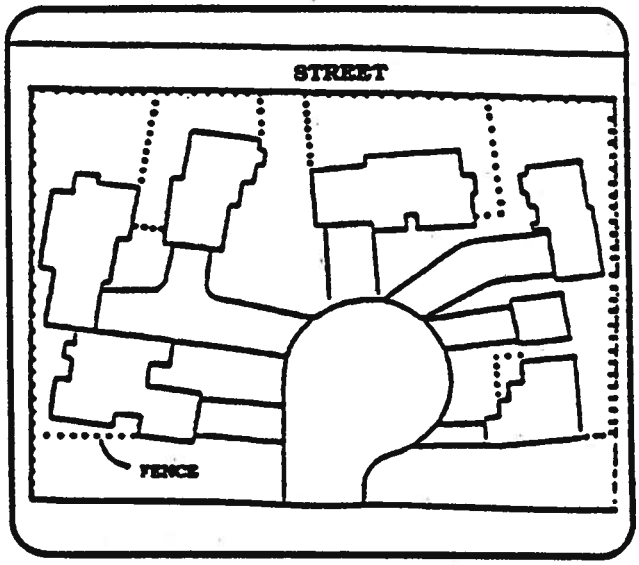


FIGURE 21-1

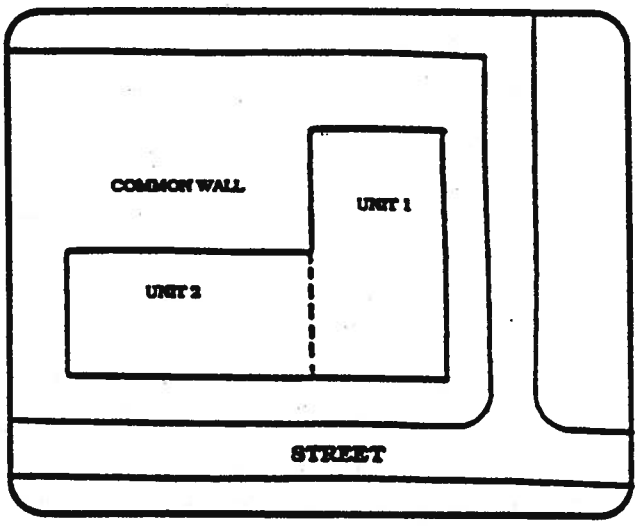


Single Family- Patio Homes

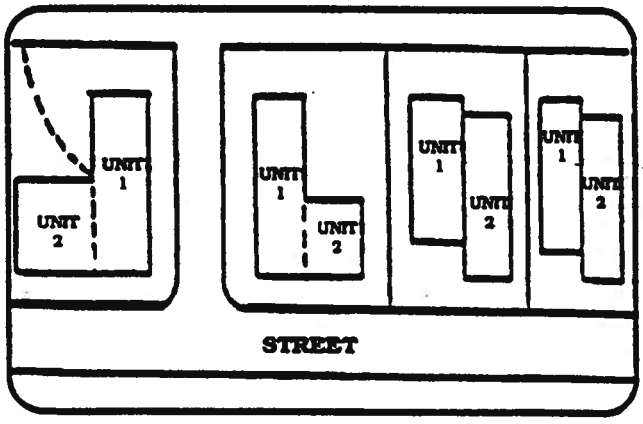
- One House (unit) per Lot
- Each House and Lot Individually Owned
- Flex Building Setbacks, Building Orientation and Lot Sizes
- Emphasis on Creating Gardens and Patios through Use of Fences and Screening
- Sometimes a Development includes Common Open Spaces Owned by All Residents under a Home Owners Association

Duplex

- Two Units per Lot
- Single Ownership of both Units and Lot
- Conventional Building Setbacks Rear and Side Yard Separate for Each Unit
- A Common Wall Between Units
- Often Located on Corner Lots

Half-Plex

- One House (unit) per Lot
- Each House and Lot Individually Owned
- Conventional Building Setbacks. Rear and Side Yards Separate for Each Unit
- A Common Wall Between Units. The Wall is also Located on the Property Line.



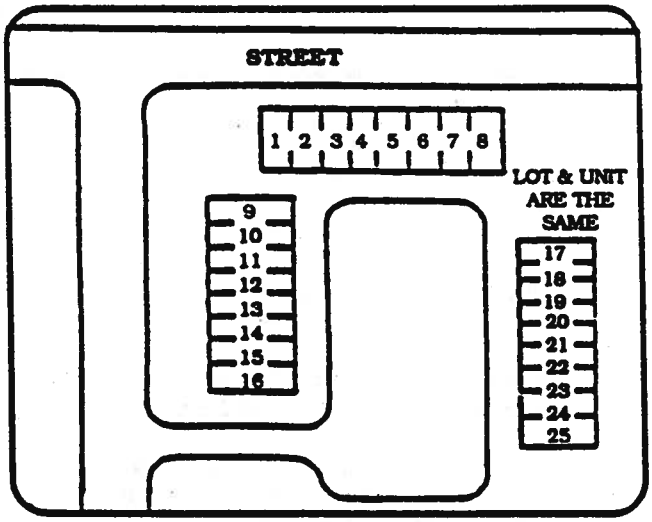


FIGURE 21-1

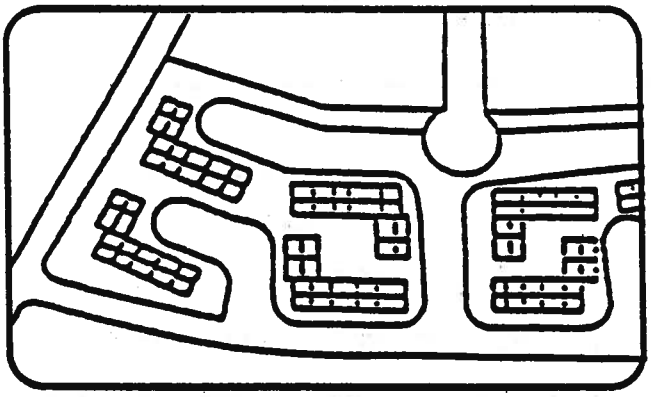
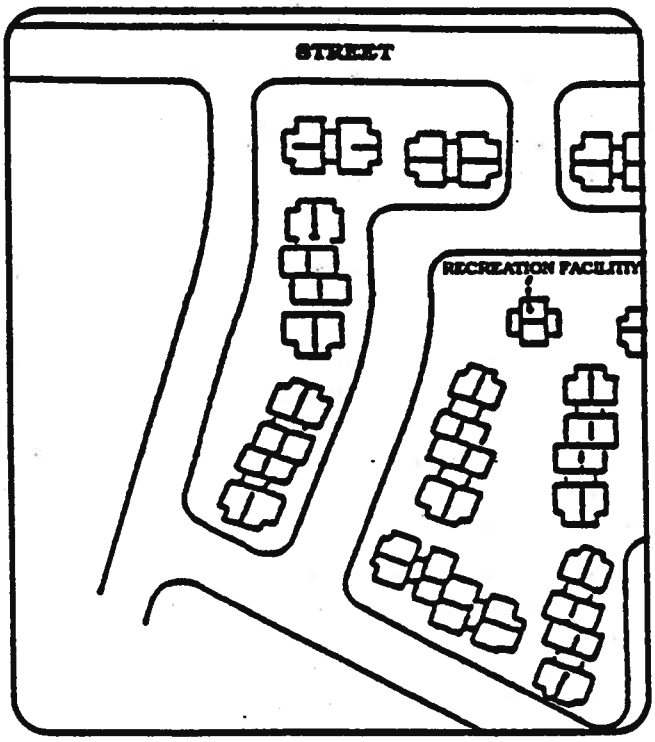


Townhouse- Condominium

- A Housing Style with each Unit having Two Stories and usually Attached with Other Units by Common Walls
- Each Unit and Lot Individually Owned
- Usually includes Common Oven Spaces Owned by All Owners Association



Conventional Apartment

- Rental Units Grouped withinBuildings which are Usually Two or More Stories in Height
- Each Unit Usually Takes Up One Floor.Hence Separate Units are Available on Each Level of the Building
- Single Ownership of All Units and Land
- Higher Density which Generally means Less Emphasis on Landscaping and Recreational Facilities

Air Space Condominium/ Garden Apartments

- Units are Grouped within Buildings which are Two or More Stories in Height
- Each Units taxes up only One Floor, hence Separate Units Are Available on Each Level of the Building
- Common Walls between Units
- Greater Emphasis on Landing and Providing Amenities such as Recreational Facilities
- Condominiums- Each Unit Individually Owned but All Land Beneath Units and Surrounding Area Owned in Common
- Apartments- Single Ownership of All Units and Land and Units are Rented. Usually Less Dense than Conventional Apartments

POLICY 8.6

The City should develop a package of incentives and encourage the following:

1. Additional active parkland.
2. Development of parkland.
3. Increased historic preservation.
4. Additional open space.
5. Preservation of natural habitat.
6. Preservation of Savanna Oak Clusters.
7. Additional items as desired.

POLICIES AND GUIDELINES BY RESIDENTIAL CLASSIFICATION

POLICY 8.7

Residential densities for each land use category will be based upon the range of densities which is established for each category of residential use as hereafter set forth. The lower number in each range is allowed as a matter of right. Units in excess of the lower number of each range, up to the top of each range, are permitted at the discretion of the Planning Commission/ City Council in exchange for the provision of special benefits which satisfy a City need over and above the minimum requirements of the General Plan and other City policies and regulations. Examples of special benefits which may qualify the project for densities in excess of the lower number include:

1. Additional park or ~~open~~ OPEN space set asides.

2. On-site recreation facilities.

3. The planting of additional trees or other landscaping in excess of the minimum required.

4. The provision of transit facilities or services.

The density bonus allowed for qualifying seniors and low or moderate or lower income family residents pursuant to California Code Section 65915 is to be calculated based upon the lower number of each density range and no additional bonus or other incentive is to be provided; irrespective of whether such project also qualifies for special benefits. In other words, under no circumstances shall the maximum number in each density range be exceeded.

A. Single-Family (SF 2-3.9 Dwelling Units Per Acre)

Single family detached homes at low to medium densities (maximum of two dwelling units per acre). Up to 3.9 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. The following standards shall apply:

1) The project should be located adjacent to an existing single family development or should be of sufficient size to ensure that a single family residential environment can be maintained within the project.

2) Internal roads should be designed to serve the project or connect with adjacent developments and access to through-traffic should be discouraged.

3) No more than 40% of a lot shall be covered.

B. Single-Family High Density/Mobile Home Park (SFHD 4-6.9 Dwelling Units Per Acre)

Single-family homes at high densities (maximum of four dwelling units per acre) are permitted. Up to 6.9 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. Halfplexes, mobile home parks, and attached homes may be included. The following standards shall apply:

1) Lands located near neighborhood commercial centers, along public transit routes, or adjacent to low or medium density multifamily areas would be appropriate for this type of housing.

2) With the exception of mobile home parks, a development may include a mix of housing types within the average density allowed including attached homes, zero lot-line homes and halfplexes.

3) Each home must have its own lot.

4) No more than 35% of a lot shall be covered.

5) Internal roads should be designed to serve the project or connect with adjacent developments and access to through-traffic should be discouraged.

6) A Planned Development Permit shall be required for development within this category.

C. Multi-Family Low Density (MLD 7-11.9 Dwelling Units Per Acre)

Low density multi-family developments at a maximum density of seven dwelling units per acre. Up to 11.9 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. The following standards shall apply:

1) Appropriate locations are along arterial roads and public transit routes, adjacent to neighborhood commercial centers, or in undeveloped areas where the project is of sufficient size to provide any needed buffers for adjacent or proposed single family developments.

2) Homes should generally be in one or two story buildings, with some three story buildings allowed on sloped sites.

3) Project entrances and exits shall be designed with access to a collector or arterial road.

4) Buildings on hillsides shall be sited with respect to existing native vegetation or landscaping to reduce their visual prominence.

5) A design review procedure shall be established to evaluate the proposed use of building and landscaping materials with respect to the natural features of a site.

6) Buildings of multiple stories shall follow the contour of the site and be "stepped" or terraced.

7) Projects shall generally consist of smaller, multiple buildings rather than a few large multifamily buildings.

D. Multi-Family Medium Density (MMD 12-17.9 Dwelling Units Per Acre)

Multi-family medium density at a maximum density of 12 dwelling units per acre are permitted. Up to 17.9 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. The following standards shall apply:

1) Appropriate locations include parcels along arterial roads and public transit routes, lands near commercial centers and major public institutions, and as a buffer between industrial or commercial areas and single family neighborhoods.

2) Parcels shall be of sufficient size to allow the placement of buffers along any project boundary adjacent to an existing or proposed single family development.

3) Buildings should be mainly one or two stories, with three story buildings allowed on sloped sites or to provide parking under a building.

4) Project area shall include adequate open space.

5) Project entrances and exits should be designed with direct access to a collector or arterial road.

6) Buildings on hillsides should be sited with respect to existing native vegetation or land scaping to reduce their visual prominence.

7) Design review of materials and landscaping shall be included in the application process.

8) Buildings of multiple stories should follow the contour of the site and be "stepped" or terraced.

9) Projects shall consist of clusters of smaller buildings (typically 4 to 12 dwelling units per building) and not a few large buildings.

10) Open spaces shall be dispersed throughout a project, unless it is necessary to create a single large open space to preserve an important natural habitat.

11) A landscaping and project maintenance plan shall be submitted to the City. The City will adopt an ordinance detailing the requirements of such a plan.

12) Locations for this type of housing should be

selected to reinforce the customer base of a central commercial area, and the proximity of housing to major employment centers.

13) Amenities shall be included in larger projects such as swimming pools and on-site recreation.

E. Multi-Family High Density (MHD 18-25 Dwelling Units Per Acre)

High density multi-family at a maximum density of 18 units per acre are permitted. Up to 25 dwelling units per acre may be permitted in exchange for the provision of the specified benefits as described above. The following shall apply:

1) Locations shall generally be limited to areas near a central commercial center or regional commercial center, but may also include parcels at the intersection of arterial roads, along transit routes, adjacent to public institutions, and as part of a commercial/industrial development compatible with residential uses.

2) Locations of this type of housing shall be selected to reinforce the customer base of a central commercial area, and the proximity of housing to major employment centers.

3) The internal road system shall be designed to ensure that traffic from the project does not use local streets in any adjacent or nearby single family areas.

4) At least 30 percent of the project area shall be reserved for open spaces.

5) Open spaces shall be dispersed throughout the project, unless it is necessary to create a single large open space or to preserve an important natural feature.

6) Buildings shall be predominantly two and three stories. Buildings of four or five stories may be permitted in exchange for the preservation of more open space than the minimum required and to allow for the placement of parking underneath buildings.

7) Any hillside or hilltop areas that may be included in the project shall be reserved for open spaces or one and two story buildings that can be integrated with the natural landscape.

8) Buildings on hillsides shall follow the contour of the site and shall be "stepped" or terraced.

9) The use of materials on hillside buildings will be part of a design review process.

10) A landscaping and project maintenance plan shall be submitted to the City. The City will adopt an Ordinance detailing the requirements of such a plan.

11) Recreational facilities for the use of the residents shall be included in the project design including swimming pools and other amenities in larger projects.

12) Turnouts and shelters for buses shall be incorporated into project design for projects along existing or proposed transit routes.

13) Landscaping, especially trees, shall be provided around the boundaries of the project to lessen the visual impact of the development.

POLICY 8.8

Elderly and convalescent housing facilities providing health care shall be encouraged. The Zoning Code shall guide the placement and standards for development of such facilities. Proposed facilities shall be evaluated based on the location, impacts on services and neighboring properties and not on a density basis.

POLICY 8.9

All multiple family projects will be required to obtain a planned development permit in accordance with the City's Zoning Code. Similar development approvals, such as Specific Plans, that cover the same requirements as the planned development permit shall be considered a substitute.

POLICY 8.10

Residential densities within an area plan or specific plan may vary, provided 1) that the overall dwelling unit buildout within the plan area shall not exceed that authorized by the Land Use Element of the General Plan and 2) in no event shall densities within any portion of the Plan area exceed 25 dwelling units per acre. An area plan or specific plan is defined as a large development area typically over 100 acres with an overall master development plan.

POLICY 8.11

Residential density shown on the Land Use Map shall be consistent with General Plan Policies 8.1 and 8.10 for the purpose of calculating density.

GOAL 9

To set criteria which would allow for flexibility in the siting of land uses within a planned area.

POLICY 9.1

A planned area consists of acreage containing one or more projects for which a comprehensive site plan is prepared showing the location of proposed land uses, the configuration of roads within the planned area, public land uses and open spaces, and other aspects of site design.

POLICY 9.2

For planned developments covering large areas, the project applicant may exercise some discretion in locating school, park, and other public facility sites within approximate boundaries specified by the General Plan. However, the locations should reflect:

1. The ability of project residents to walk or bicycle to parks or schools without crossing uncontrolled crossings on arterial roads.

2. The preservation of significant features of the natural landscape, such as trees, important wildlife habitats, and streams or ponds.

3. The usability of school and park sites with respect to terrain, flooding, and access to and from the site.

POLICY 9.3

To encourage the preservation of open spaces and natural features of the landscape, a project applicant may be allowed to concentrate the proposed development on a portion of the site through the clustering of buildings, smaller lot sizes, or taller buildings, provided that the overall unit buildout within the Plan area shall not exceed that authorized by the Land Use Element of the General Plan.

POLICY 9.4

In large-scale residential projects which include a neighborhood commercial center, the proposed location of the center may vary from the approximate location indicated by the General Plan if, based on the proposed street layout and design, improved traffic circulation would result, and there are no significant negative impacts.

GOAL 10

To provide for a commercial and industrial base of the City to encourage:

1. A strong tax base.
2. More jobs within the City
3. A greater variety of commercial goods and services.
4. A regional shopping center.
5. Businesses and industries compatible with Folsom's quality of life.

POLICY 10.1

The City shall have a variety of commercial uses such as:

1. Home occupations in which a resident operates a small business within the home in compliance with City regulations and standards.

2. Individual businesses outside of a commercial area, serving a commercial or industrial project or providing highway-oriented services.

3. Small commercial centers serving individual neighborhoods.

4. A central business district with offices and retail establishments serving the entire community.

5. A regional retail center serving Folsom residents and others from outside the community.

6. An historic business district serving residents and tourists.

7. Specialty commercial areas.

POLICY 10.2

The City should designate lands for a variety of industrial land uses such as:

1. Warehousing/storage facilities for supplies serving other businesses.

2. Industrial parks providing space for research and product development firms.

3. Manufacturing of electronic equipment or components; and manufacturing on a small scale of products to be sold on the premises.

POLICY 10.3

The City should encourage the development of campus-like industrial developments with low-rise buildings and landscaped or natural open spaces.

POLICY 10.4

The City should implement facilities plans to finance the provision of municipal facilities and services to the industrial areas.

POLICY 10.5

The City should preserve and enhance the tourist-oriented, historic commercial uses in the Sutter Street commercial area.

POLICY 10.6

The use or storage of flammable, volatile, or toxic substances as part of an industrial or commercial establishment shall be strictly controlled.

POLICY 10.7

Allow for the continued operation of existing arterial-oriented commercial uses along Folsom-Auburn Road and Natoma Street from Riley Street to Fargo Way.

POLICY 10.8

New commercial uses shall be subject to design and parking standards to be developed by the City for:

1. The number of location of allowed curb cuts.
2. Landscaping or parking areas.
3. The location, size, number and construction of signs.
4. The configuration and design of commercial buildings.

POLICY 10.9

Commercial centers and industrial/office parks when feasible should be served by public transit, and when appropriate public transit centers should be incorporated into the project.

POLICY 10.10

Industrial/office parks shall be designed with internal circulation and incorporate buffering and landscaped setbacks to minimize potential adverse impacts on adjacent land uses.

POLICY 10.11

Child care centers shall be encouraged in the central commercial district, commercial centers, and office parks, when appropriate.

POLICY 10.12

The City should develop an industrial development stragety that identifies the City's industrial market segment and promotional opportunities.

POLICY 10.13

Buffer zones shall be established around existing and proposed industrial areas to prevent encroachment of incompatible uses. The City shall prepare an implementation study to provide notice requirements to users in the buffer zones and identify incompatible uses.

GOAL 11

To plan for a central commercial district which includes retail, office, and service establishments, and cultural and entertainment facilities.

POLICY 11.1

The central commercial district shall be located to incorporate existing community-wide commercial services, and shall generally include properties along East Bidwell Street, generally between Coloma Street and the westside of Blue Ravine Road and south of Riley Street generally west of Glenn Drive.

POLICY 11.2

The purpose of the central commercial district shall be to provide a location for businesses with a city-wide market, to provide a focus for cultural and entertainment activities (public and private), and to provide a City financial center.

POLICY 11.3

"Strip" commercial uses, characterized by shallow commercial frontage on arterial streets and multiple curb-cuts, shall not be allowed.

POLICY 11.4

Circulation within the central commercial district shall allow for convenient automobile access and parking, public transit routes, bicycles, and safe pedestrian access among the businesses within the district.

POLICY 11.5

Each block within the district shall contain usable public open space in the form of public plazas, mini-parks, or landscaped pedestrian pathways. Maintenance programs for public and community improvements should be required for commercial areas in order to provide long term maintenance.

POLICY 11.6

In general, the height of buildings in the central commercial district shall not exceed 4 stories. Additional height may be allowed for the provision of open space. The combined floor area ratio of all buildings on a site shall not exceed 2:1. Additional height or a higher floor area ratio may be allowed in exchange for the provision of open space or other specified benefits meeting a City need that are above and beyond the minimum requirements of the General Plan policies and other applicable City policies and regulations.

POLICY 11.7

Public improvements should be provided to support a central commercial area, such as landscaping on existing commercial streets, street furniture (benches, waste receptacles, planters, etc.), and uniform street and other public signing.

POLICY 11.8

A plan for the central commercial district shall be prepared in conjunction with the redevelopment plan to address issues discussed in Goal 11 and support policies including development standards and circulation.

POLICY 11.9

All commercial development or commercial portions of multi-use development shall contain at least ten percent of land area in natural, improved or functional open space, exclusive of roadways and parking lots.

POLICY 11.10

A public transit service center shall be established within the central commercial district.

GOAL 12

To plan for regional commercial centers.

POLICY 12.1

Regional commercial centers shall be primarily highway-oriented retail commercial areas. The purpose of the centers shall be to provide locations for businesses whose customers come primarily from outside the City of Folsom, although businesses may also provide goods and services to Folsom residents.

POLICY 12.2

Regional centers should be located close and accessible to Highway 50, preferably near an interchange.

POLICY 12.3

A ring-road or limited access parkway should define the boundaries of regional centers. A parking and circulation plan should ensure that trees and landscaping are provided to break up the amount of paved surfaces and that traffic entering and exiting centers do not adversely affect any future residential developments nearby.

POLICY 12.4

Regional centers shall include landscaped public open spaces.

POLICY 12.5

Highway-commercial areas shall be designated adjacent to U.S. 50 in order to support the travelling public at major interchanges.

POLICY 12.6

Regional commercial centers should be served by public transit and developed in conjunction with public transit service centers.

POLICY 12.7

In general, the height of buildings in a regional commercial center shall not exceed four stories. Additional height may be allowed for the provision of open space. The combined floor area ratio of all buildings on a site shall not exceed 2:1.

POLICY 12.8

In general, the height of buildings in a highway commercial site shall not exceed four stories. Additional height may be allowed for the provision of open space. The combined floor area ratio of all buildings on a site shall not exceed 2:1, with a maximum lot coverage of 60 percent.

GOAL 13

To plan for small, neighborhood-oriented convenience commercial areas which provide goods and services that may meet the daily needs of nearby residents.

POLICY 13.1

Neighborhood convenience commercial areas should be located so that residents in each neighborhood may meet their daily needs for commercial goods and services.

POLICY 13.2

Neighborhood commercial areas shall in general be limited to five acres or less.

POLICY 13.3

Neighborhood centers should be designed to minimize impacts on adjacent uses through site design, access and parking, landscaping and lighting standards.

POLICY 13.4

Neighborhood commercial areas may be adjacent to future public transit stations.

POLICY 13.5

In general, the height of buildings in a neighborhood commercial center shall not exceed two stories. The combined floor area ratio of all buildings on site shall not exceed .5:1, and 30 to 40 percent lot coverage.

POLICY 13.6

Neighborhood commercial centers shall be developed under the Planned Development Process.

GOAL 14

To plan for and preserve specialty commercial areas.

POLICY 14.1

The City should preserve and enhance the historic business district centered on Sutter Street. The purpose of the district is to provide a tourist-oriented location for businesses offering goods and services consistent with the historic setting of the area. An historic district plan for the area should be prepared by the City containing:

1. Design guidelines for the restoration and/or modification of buildings or sites identified as having historic or cultural significance and for the design and placement of buildings within or adjacent to identified historic buildings or sites.

2. The City should adopt design guidelines to ensure that signage is consistent and harmonious with the theme of the historic business district.

POLICY 14.2

The City should provide for offices, retail, and restaurant uses associated with a hospital when appropriate.

POLICY 14.3

Additional specialty commercial centers for specified commercial uses containing a grouping of businesses offering one or several related goods or services may be considered according to the following standards:

1. The commercial center must serve a purpose not fulfilled by the central commercial district, the regional commercial center, or other designated commercial areas.

2. A plan for the area proposed for commercial uses must be submitted by the landowner(s) clearly stating the purpose of the commercial area; the location of proposed commercial uses, public improvements, landscaping, parking, and open spaces; and a proposed circulation plan.

3. New specialty commercial areas will not be designated on the Folsom General Plan Land Use Map in advance of a specific request for such a designation.

4. The commercial center may not be a "strip" commercial project characterized by one or more long, shallow lots, multiple curb cuts, and a variety of unrelated businesses.

5. Access to and from the commercial center is via an arterial street.

6. The proposed commercial area shall be located and designed to minimize negative traffic, noise, and visual impacts on nearby residential areas.

GOAL 15

To plan for community commercial areas providing goods and services for large neighborhood areas.

POLICY 15.1

Community commercial centers shall in general range in size from five to ten acres.

POLICY 15.2

Community commercial centers should be designed to minimize impacts on adjacent uses through site design, access and parking, landscaping and lighting standards.

POLICY 15.3

Community commercial centers should be developed adjacent to future public transit stations.

POLICY 15.4

Community commercial centers should be developed adjacent to higher density residential, offices, and public uses.

POLICY 15.5

Community commercial centers shall be developed under the Planned Development Process.

POLICY 15.6

In general, the height of buildings on a community commercial center shall not exceed two stories. The combined floor area ratio of all buidings shall not exceed .5:1 and 30 to 40 percent lot coverage.

GOAL 16

To allow for public and quasi-public land uses meeting the governmental service, education, cultural, recreational, and religious needs of Folsom residents.

POLICY 16.1

Fire and Police department substations shall be planned and located so that a maximum response time goal as set by the City Council can be maintained.

POLICY 16.2

Public facilities, such as utility substations, water storage or treatment plants, pumping stations, and sewer treatment plants, should be located, designed, and maintained so that noise, light, glare, or odors associated with these facilities will not negatively impact nearby land uses. Building materials and landscaping shall be used to make these land uses less visually obtrusive from neighboring properties.

POLICY 16.3

The City shall work closely with the school district(s) serving Folsom to ensure that school sites are dedicated or reserved for purchase by the district(s) so that:

1. Each residential neighborhood will contain or have access to the appropriate elementary school according to school district standards.

2. Children do not have to cross an uncontrolled intersection on an arterial road to reach an elementary school.

3. The school can be reached on foot by most of the neighborhood's residents (for elementary schools only).

4. A joint park/school site can be developed wherever possible.

POLICY 16.4

The acreage recommended for new schools should be set according to school district standards.

POLICY 16.5

If a school will serve more than one development, and the subject development will not contain the school site, the applicant must clearly show that a school site has been or will be dedicated elsewhere or that a school already exists with capacity to serve the project and is accessible to the project according to the standards in Policy 16-3.

POLICY 16.6

In determining the number and location of new school sites, standards established by the district shall be used. These standards are based on the assumed average number of students per household for each grade level (varies for different types of housing) and the average size of an elementary school, junior high school, and high school.

POLICY 16.7

The City shall develop standards for the location of proposed private schools. Standards will address:

1. Required off-street parking and street frontage for the dropping off and picking up of students.

2. Access to the proposed school via City streets.

3. Noise, according to the Noise Element of the Folsom General Plan.

4. Size of the parcel on which a proposed school is to be located in relation to the pupil capacity of the school.

5. Required landscaping and other visual/noise barriers if the proposed school is to be located in a residential area.

POLICY16.8

Utility company rights-of-way may be considered for their use as public or private open space, trails, parkland, or other compatible recreational uses.

POLICY 16.9

Religious institutions may be allowed in residential neighborhoods if sufficient off-street parking is provided and the design of the facility is consistent with the residential character of the neighborhood, and includes:

1. Access to the property via an arterial or collector street.

2. The screening of parking with landscaping and/or materials that will blend with surrounding natural and constructed features of the neighborhood.

3. The shielding of adjacent residential properties from direct light and glare from the property.

POLICY 16.10

Clubs and fraternal organizations shall generally be limited to commercial areas. The use of a single family home in a residential area for a club or fraternal organization may be permitted subject to the following standards:

1. Noise levels shall meet the requirements of the Noise Element of the Folsom General Plan.

2. One small exterior sign will be allowed, subject to City standards.

3. No external modification to the house will be permitted except to provide handicapped access.

4. Off-street parking will be required, according to City parking standards for clubs and fraternal organizations.

21.5 IMPLEMENTATION

SPECIFIC PLANS AND MASTER PLANS FOR LARGE DEVELOPMENT AREAS

Specific plans meeting the requirements of State Planning Law and implemented by local guidelines. Large properties generally over 100 acres will utilize Specific Plans as an implementation tool.

Procedures, requirements and contents of specific plans shall be incorporated into the Folsom Municipal Code.

The specific plans must include the following:

1. The proposed land uses for all areas covered by the plan.

2. The types and configurations of building to be included in all developments within the plan area.

3. The location of and types of streets.

4. Public facilities and infrastructure required to serve developments within the specific plan areas.

5. A parking and circulation plan for off-street parking areas showing the location of parking lots, the approximate number of spaces, and the approximate location of entrances and exits.

6. Proposed conservation, open space and/or recreation areas, if any.

7. In the Historic Folsom area, an historic preservation program and building design guidelines to ensure compatibility of new construction with the existing land uses.

8. Any other programs, guidelines, or standards that are appropriate for the area covered by the plan.

IMPLEMENTS: GOALS 2, 3, 11, 12 AND 14

- Funding:General Fund and Plan Fees (from land owners within the specific plan areas)

- Responsible Agencies

  Community Development Department
  Public Works Department

- Implementing Agency

  Community Development Department

- Target Dates: Start: January 1989
  Complete: March 1990 (Historic Folsom)
  June 1990 (Central Commercial District)
  September 1990 (Regional Commercial Center)

ESTIMATED COST

$40,000-$100,000 per plan, depending on area covered and level of detailed required.

GRADING ORDINANCE - SUBSTANTIAL GRADING

The existing City Grading Ordinance will be amended to prohibit the substantial grading of land prior to the approval of a tentative map, planned development, or use permit. Performance bond requirements will be specified in greater detail and required time periods for commencement of construction will be added. Substantial grading will be defined in the amended Ordinance and should be based on the volume and area of land to be graded, any changes in topography, and any removal of existing trees or vegetation.

IMPLEMENTS: GOAL 2 - POLICY 2.4

- Folsom Municipal Code: Title 14

REVISION OF ZONES AND ZONING STANDARDS

Revise the Zoning Code and Zoning Map to reflect the new Land Use Element of the General Plan. Where possible, existing zoning categories and boundaries will be retained if they correspond with the General Plan designations to which the zoning categories are applied. New Zoning Code Standards will be developed to reflect the types of allowed uses for each district and the General Plan policies for height, density, and other development standards.

IMPLEMENTS: GOALS 8, 10, 11, 12, 13, 14, 15 AND 16

- Responsible and Implementing Agency

  Community Development Department

- Target Dates: Start: January 1989
  Complete: January 1990

ESTIMATED COST

Person Hours/ Dollars	Printing	Direct	Total	Funding
1,000/$45,000	$4,500	-	$49,500	General Fund

SPECIALTY COMMERCIAL DISTRICT

Specialty commercial zones will be included in the new Zoning Code. Initially, three specialty commercial areas will be zoned: the Sutter Street Historic business district and the Folsom Auto Plaza, and the business professional facilities district. Zoning standards will be based on the following considerations:

1. Design guidelines for the restoration of and/ or modifications to historic buildings.
2. Guidelines for the design of new buildings in keeping with the historic character and architectural styles of the district.
3. The height and bulk of existing buildings in the district.

For other specialty commercial areas:

1. The specialty commercial area will be limited to one or more businesses or institutions providing related goods and services (such as the Folsom Auto Plaza). Supporting commercial services may also be included (such as child care establishment for employees in the district or a restaurant).
2. A specialty commercial area may be designated only in response to a specific proposal by a landowner or his/her representative.
3. The commercial center may not be a strip commercial area characterized by long, shallow lots, multiple curb-cuts, and a number of unrelated businesses.

4. The proposed commercial area shall be located and designed to minimize negative traffic, noise, and visual impacts on nearby residential areas.

The Zoning Code will also contain procedures for designating new specialty commercial areas. A development plan will be required which states the purpose of the district, the location and type of proposed commercial uses, proposed public improvements, landscaping, parking, internal circulation, access to public rights-of-way, and proposed open spaces.

IMPLEMENTS: GOAL 14

- Funding: General Fund and Permit Fees (for project review)
- Folsom Municipal Code: Title 17
- Responsible and Implementing Agency

  Community Development Department
- Target Dates: Start: January 1989
  Complete: January 1990
- Estimated Cost

  Part of Zoning Code revision cost.

COMMERCIAL DISTRICTS

New commercial uses or conversions of existing commercial buildings will be allowed in arterial-oriented commercial districts. These commercial areas will not be allowed to expand beyond their current boundaries, however. New commercial uses will be subject to design and parking standards to be included in the Zoning Code for:

1. The number and location of allowed curb-cuts.
2. Landscaping of parking areas.
3. The location, size, number and construction of signs.
4. The configuration and exterior design of the buildings themselves.

IMPLEMENTS: GOAL 15

- Funding: General Fund and Permit Fees (for project review)
- Folsom Municipal Code: Title 17
- Responsible and Implementing Agency

  Community Development Department
- Target Dates: Start: January 1989
  Complete: January 1990
- Estimated Cost

  Part of Zoning Code revision cost.

USE PERMITS

The revised Zoning Code will contain standards for the conditional permit approval of private schools, religious institutions, and fraternal organizations and social clubs in residentially zoned areas.

IMPLEMENTS: GOAL 16 - POLICIES 16.7; 16.9; AND 16.10

- Funding: General Fund and Permit Fees (for project review)
- Folsom Municipal Code: Title 17
- Responsible and Implementing Agency

  Community Development Department
- Target Dates: Start: January 1989
  Complete: January 1990
- Estimated Cost

  Part of Zoning Code revision cost.

PLAN REVIEW PROCEDURES

Development Plan Review Procedures:

Expand the Development Plan Review procedures of the Community Development Department and Building Inspection Department to

address physical facilities which are necessary for the handling of hazardous materials.

IMPLEMENTS: GOAL 41 - POLICY 41.10

- Folsom Municipal Code: Title 17
- Cross Referenced To: Title 13 and Title 9

PLANNED DEVELOPMENT PROCESS

Amend the current planned development provisions of the Zoning Code to reflect the policies of the revised General Plan. The overriding purpose of the planned development process is to encourage the comprehensive planning of a large area under one ownership. The planned development process will be used for individual developments, whereas the specific plan process will be used for multiple projects on sites that have more than one owner. The planned development process will allow flexibility in the location of residences, schools and other public facilities, and neighborhood commercial areas to be included in a development. Residential densities may be distributed within the planned development area differently than would otherwise be permitted for each individual property.

The planned development provisions in the Zoning Code will contain standards to address the criteria in Policy 9.2.

IMPLEMENTS: GOAL 9

- Folsom Municipal Code: Title 17
- Responsible and Implementing Agency

  Community Development Department
- Target Dates: Start: January 1989
  Complete: January 1990

ESTIMATED COSTS

40/$1,800	Included in Zoning Code Revision		$1,800	General Fund

PRE-ZONING PROCEDURES

The City shall adopt procedures governing the pre-zoning of areas within Folsom's Sphere of Influence to be annexed to the City. These procedures shall be included in the revised Zoning Code. Criteria for pre-zoning shall consider existing land uses, if any, on the site to be annexed, existing County zoning, the land uses, if any, on sites adjacent to or nearby the area to be annexed, existing circulation patterns, and environmental conditions on and near the site to be annexed.

IMPLEMENTS: GOAL 7 - POLICY 7.2

UPDATE DEVELOPMENT STANDARDS

The City of Folsom Development Standards will be revised to include greater detail in the following areas:

1. Street standards, including roadway width, right-of-way width, bike lanes, moving and parking lane dimensions, sidewalks, median strips and turn lanes, and planting strips.

2. The bulk and height of buildings in relation to surrounding uses and topography, vehicular entrances and exits on commercial and industrial properties, and the incorporation of natural landscaping features and vegetation into new developments.

3. Location and design criteria for public facilities: utility substations, water or sewage storage, water or sewer treatment plants, and similar facilities.

4. Screening of any mechanical equipment or processes within buildings, behind landscaping, or behind walls or fences of approved design.

5. Establishment of minimum setbacks or lot line distances for any mechanical equipment or processes that may impact the adjoining properties visually through objectionable odors, or through noise.

6. Use of filters, building design, or other processes or materials to reduce excessive noise or odors from the facility.

7. Location and design of exits and entrances to parking lots on non-residential developments to minimize the use of residential streets in adjoining neighborhoods.

8. Screening of refuse facilities behind walls, fences, or landscaping or within solid enclosures of an approved design.

9. Lighting and landscaping districts or similar maintenance programs shall be provided where feasible in order to provide long term maintenance.

IMPLEMENTS: GOALS 2, 3, 8, 11, 12, 13, 14, 15, 16 AND 17

- Funding: General Fund
- Responsible Agency

INTER-AGENCY REVIEW AND COMMENT

The City will submit a standing written request to receive timely copies of any draft plans, policies, regulatory documents, development applications, or other similar documents which could affect land use and circulation in the City of Folsom. The City will comment on such documents in an appropriate manner, including attendance and testimony at public meetings or hearings if necessary.

IMPLEMENTS: GOAL 5 - POLICY 5.2

- Funding: General Fund
- Responsible and Implementing Agency

  Community Development Department
- Target Dates: Current and On-Going
- Estimated Cost

  Depends on the number and type of plans and regulatory documents to respond to, several hours of staff time per month.

SACRAMENTO AREA COUNCIL OF GOVERNMENTS

The City will continue to contribute financially to the Sacramento Area Council of Governments (SACOG) and provide a representative from the City to serve on the Council and on the Sacramento County Local Agency Formation Commission (LAFCO). According to the Joint Powers Authority and the Folsom/Isleton/Galt Agreements, such appointments to LAFCO will be made.

IMPLEMENTS: GOAL 5 - POLICY 5.3

- Funding: General Fund
- Target Dates: Current and On-Going

COORDINATION WITH SCHOOL DISTRICT

The City will review residential subdivision proposals for their impact on the school system. The Folsom-Cordova School District will be consulted to determine the location and acreage needed for new school sites. School district standards will be used in determining school space needs. To obtain subdivision approval, an applicant will have to provide evidence that existing schools can accommodate the expected number of students from the proposed development or that a new school has been planned for to serve the residents of that subdivision.

Locational criteria in Policy 16.4 shall apply to the determination of an appropriate school site.

IMPLEMENTS: GOAL 16 - POLICIES 16.5; 16.6 AND 16.7

- Funding: General Fund
- Folsom Municipal Code: Title 16
- Responsible and Implementing Agency

  Community Development Department
- Target Dates: Part of application review process.
- Estimated Cost

  Staff time to be recovered from permit fees for application review.

REGIONAL CONTROL STRATEGIES

Continue to participate through the political process to work for a regional approach to air pollution control.

1. Continue to participate in SACOG and support those programs which will provide methods of air pollution control on a regional basis.

2. Continue to cooperate with the Sacramento County Air Pollution Control District, State Air Resources Board, CALTRANS and U.S. Environmental Protection Agency on development project review and incorporate recommended mitigation measures into project design and conditions of approval.

3. Support the adoption of more stringent vehicle emission standards and enhancements to the Smog Check program through active participation in hearings held by the State Legislature, the California Air Resources Board and the Bureau of Automotive Repair.

ENVIRONMENTAL REVIEW PROCESS

The City will continue to use the environmental review process and EIRs to identify the environmental and economic impacts of developments, including effects on the natural environment, traffic, housing needs, public facilities, and other City resources and to identify and recommend appropriate mitigation measures.

IMPLEMENTS: GOALS 1, 2 AND 3

- Funding: General Fund and Permit Fees
- Responsible and Implementing Agency

  Community Development Department
- Target Dates: Current and On-Going
- Estimated Cost

  Varies depending on the type and complexity of the EIR

USE OF UTILITY EASEMENTS

The City will evaluate each proposal for use of utility company rights-of-way for open space, park, or recreational areas based on the conditions related to each proposal.

IMPLEMENTS: GOAL 16 - POLICY 16.8

- Funding: General Fund
- Responsible and Implementing Agency

Community Development Department

- Target Dates: Current and On-Going
- Estimated Cost

  Cost included in Component #1: Parks and Recreation Element, Master Plan and Ordinance.

SPHERE OF INFLUENCE STUDY

The City will prepare a study for the expansion of Folsom's Sphere of Influence south of Highway 50 and east of Hazel Boulevard. The study will recommend new Sphere of Influence boundaries, Folsom's ultimate service area over the next 15 to 30 years, and guidelines for the annexation and servicing of lands currently outside the City Limits. The study should address general municipal service needs for the area to be included in the Sphere of Influence, existing and potential land uses, and any relationships to developed areas adjacent to or near the new Sphere of Influence boundaries.

IMPLEMENTS: GOAL 6

- Funding: General Fund and Contributions from Affected Landowners
- Responsible Agencies

  Community Development Department
  Public Works Department

- Implementing Agency

  Community Development Department

- Target Dates: Start: January 1989
  Complete: January 1990
- Estimated Cost

  Varies depending on scope and area of study.

CAPITAL IMPROVEMENT PROGRAM

The City will prepare a five-year capital improvement program for the construction, extension, and improvement of arterial and collector streets. The capital improvement program will include a description of the streets to be constructed, extended, widened, or improved over a five year period, an estimated cost of the work described, sources of funding to pay for the work, and an approximate time frame for completing the work. Any City funds or fees collected from developers for street improvements shall be clearly earmarked for this purpose and expenditures accounted for separately from other source of funding. The capital improvement program shall be updated every two years after its initial adoption by the City Council.

IMPLEMENTS: GOAL 17 - POLICY 17.8

- Responsible and Implementing Agencies

  Public Works Department
  Community Development Department

- Target Dates: Start: January 1989
  Complete: June 1989

ESTIMATED COST

Person Hours/ Dollars	Printing	Direct	Total	Funding
150/$6,750	$250		$7,000	General Fund

REDEVELOPMENT PLAN

The City will revise the Folsom Redevelopment Plan to reflect policy and program changes in the General Plan. Specifically, the Redevelopment Plan will be revised to reflect changes in land uses and circulation, policies for the historic business district, and the development of a central commercial district.

IMPLEMENTS: GOAL 2 - POLICY 2.2

100/$5,000	$250	$300	$5,550	General Fund Redevelopment Tax Increment Funds

FOLSOM TOWNSHIP PLAN

The City will prepare and adopt a Plan for the original Folsom Township area, that is intended to:

1. In order to further the quality of life goals and provide a method to preserve the unique nature of the original Folsom Township Area.

2. Provide appropriate levels of devleopment that will allow for preservation of the original Township Area.

3. Provide for coordination between Historic District Plan, Redevleopment Plan and a transition to the newly developing areas of the City.

4. Provide for a transportation and circulation system appropriate to the original Township Area.

The requirement may be satisfied by an expansion of the Historic District Plan currently being prepared so long as that plan carries out the above-listed goals.

IMPLEMENTS: GOAL 1 - POLICIES 1.6; 1.7 AND 1.8 -GOAL 2 - POLICIES 2.1 AND 2.2- GOAL 26 - POLICIES 26.1 AND 26.2

22.5 IMPLEMENTATION 13

TRANSPORTATION & CIRCULATION

22.1 INTRODUCTION

The Transportation and Circulation Element of the General Plan establishes the policies and programs for the movement of people and goods through the City of Folsom. This Element addresses the City's streets and highway system; the private, commercial, and public transit system; future public transit via fixed rail; transportation related facilities; and bicycle and pedestrian movement.

Circulation is more than the movement of vehicles on City streets. It is the very essence of how social and economic interactions take place in a community. The Transportation and Circulation Element must, therefore, address all related aspects of the system of movement of goods and people. These related aspects include the parking of vehicles, transportation terminals and other facilities, bus stops, commercial delivery policies, sidewalks, bicycle trails and more.

The Transportation and Circulation Element is closely related to the Land Use Element in that the type, density, and distribution of land uses determine the network and needed roads. Conversely, constraints on transportation improvements will affect the City's ability to accommodate the development envisioned under the General Plan.

22.1.1 STATE POLICY AND AUTHORIZATION

Section 65302(b) of the California Government Code requires a Circulation Element to consist of the general location and extent of existing and proposed major thoroughfares, transportation routes, terminals, and other local public utilities and facilities, all correlated with the Land Use Element of the Plan. This statutory requirement clearly requires that the Circulation Element treat all related aspects of circulation (not just roads), and that a balance be achieved between proposed land uses which generate traffic demand and the facilities required to adequately serve that traffic.

22.1.2 RELATED STATE REGULATIONS

BRIDGE AND MAJOR THOROUGHFARE FEES (SECTION 66484 OF THE GOVERNMENT CODE)

Local jurisdictions may assess fees as a condition of subdivision approval to pay for bridges or major thoroughfares provided a Circulation Element has been adopted which addresses the facility for which the fee is being charged.

22.1.3 RELATIONSHIP TO THE GENERAL PLAN

The Transportation and Circulation Element most closely affects, and in turn is most closely affected by the Land Use Element. Land use and circulation are inseparable, especially parking and roadway relationships to land uses in our private vehicle-dominated society. This Element is also closely related to the Public Facilities Element, which establishes standards and funding mechanisms for roads and other facilities. Bicycle circulation policies and programs in this Element also relate to the Parks and Recreation Element as most bicycling in Folsom is currently for recreation-oriented purposes.

22.2 SETTING/ASSUMPTIONS/ISSUES

22.2.1 SETTING

The setting for traffic and circulation comes largely from the Folsom Area Traffic Study, completed in December 1987, and supplemented in July 1988. Additional information on environmental conditions affecting circulation can be found in Chapters 2 and 5 of the MEA and Environmental Element of the General Plan. The setting for transportation and circulation is summarized below.

STREETS

Major sources and destinations of traffic in Folsom include:

1. Commuters along Highway 50, a four lane freeway at Folsom. The average daily traffic volume along Highway 50 between Folsom

Boulevard and Scott Road is 29,500. During the summer months, this volume increases to 33,500 due to visitors at Folsom Lake and the City's Historic Business District.

2. Folsom Prison, which employs over 2,000 staff members.

3. El Dorado County commuters using Green Valley Road (which becomes East Natoma Street at the Folsom City Limits). Traffic along this road will increase as approved projects in El Dorado Hills are completed.

4. Placer County and East Sacramento County commuters using Folsom-Auburn Road, Madison Avenue, Greenback Lane and Santa Juanita Road.

5. Visitors to Folsom's Historic Business District and Folsom Lake, many of whom use Folsom Boulevard, cross Rainbow Bridge, and turn onto Folsom-Auburn Road. During the summer months, weekend visitor traffic can be especially heavy.

Folsom's existing system of highways, major thoroughfares (arterial roads) streets consists of the following:

1.U.S. Highway 50
2.Folsom Boulevard
3.Natoma Street-East Natoma Street
4.East Bidwell Street
5.Folsom-Auburn Road
6.Greenback Lane
7.Oak Avenue Parkway (Under Construction)
8.Blue Ravine Road
9.Sibley Street/Prairie City Road
10. Riley Street
11. American River Canyon Drive
12. Madison Avenue
13.Folsom Dam Road

The Land Use Map shows the location of these existing roads and their designation as highways and arterial roads. In addition to these existing roads, a number of new arterial roads would have to be constructed in conjunction with new development. The Land Use Map also shows the general location and proposed designation of these new roads. They include:

1. Completion of the Oak Avenue Parkway.

2. Construction of a new arterial road parallel to U.S. Highway 50.

3. Construction of a new arterial road roughly parallel to the County Line.

4. Extension of Glenn Drive to Folsom Boulevard.

5. Construction of a network of collector streets to serve new developments in East Folsom, the South Area Assessment District, and American River Canyon.

6. Extension of Riley Street southward from Blue Ravine to Oak Avenue Parkway, extended.

The Transportation Study reviewed traffic patterns at 45 intersections in Folsom, as well as probable traffic patterns in developing areas of the City. To accommodate the build out of land uses allowed under the Land Use Element, the following road widths (see Figure 22-1) would be needed based on the adopted General Plan:

Six Lanes
- U.S. Highway 50
- Folsom Boulevard
- Blue Ravine Road
- East Natoma Street
- American Aggregates Extension (arterial parallel to U.S. Highway 50)
- Russell Ranch Road (arterial parallel to County Line)
- Oak Avenue Parkway (except as noted below)
- Folsom-Auburn Road
- Greenback Lane
- Prairie City Road
- East Bidwell Street - Blue Ravine Road to Highway 50

Four Lanes
- Riley Street
- Glenn Street Extension
- Sibley Street - Glenn Street extension to Blue Ravine Road
- East Bidwell Street (To Blue Ravine Ro
- Oak Avenue Parkway (Blue Ravine to Natoma Connector)

- Connector Road Between Russell Ranch Road and Blue Ravine/East Natoma Intersection
- Sibley Street - Bidwell Street to Glenn Street Extension
- Natoma Street - From City Hall West
- Natoma Connector

Collector Street

- Oak Avenue Parkway - Natoma Street to Natoma Connector (Willow Creek Drive): This street extension is feasible with two lanes, however, a feasibility study will be necessary to determine if four lanes can be constructed.

At buildout of the adopted General Plan, the City can expect 423,500 daily trips, 43,900 trips during the A.M. peak and 51,500 during the P.M. peak. Table 22-1 shows projected traffic volume/capacity ratios and levels of service for the 45 intersections analyzed in the Transportation Study.

Source: Wilbur Smith Associates; July 1988

As reflected by Policy 17.17, the City has "maintained" a policy of achieving a Level of Service C or better at all intersections. As shown on Table 22-2, the following intersections would not meet this Level of Service objective at buildout of the adopted General Plan.

TABLE 22-2

STREET	LEVEL OF SERVICE	PEAK PERIOD
Blue Ravine - Folsom Boulevard	F	PM Peak
Blue Ravine - East Bidwell	D	PM Peak
East Bidwell - U.S. 50 Eastbound	D-F	AM and PM Peaks

New Parallel Road - Sibley Road	F	AM and PM Peaks
Folsom Boulevard - New Bridge Approach	D	PM Peak
Folsom Boulevard - American Aggregate Extension	E	AM and PM Peaks
Prairie City Road - American Aggregate Extension	E	AM Peak

BRIDGES

There is presently one two-lane bridge (Rainbow Bridge) across the American River in Folsom, and an additional part time crossing along Folsom Dam Road. The Traffic Study recommended a need for two new six-lane bridges, one at Oak Avenue Parkway and one connecting Folsom Boulevard with Folsom-Auburn Road, to serve east/west and north/west local and regional traffic respectively. The American River Crossings Alternative Study dated January 1988 provides more information and analysis of other alternative crossings which were studied.

INTERCHANGES

There are presently three interchanges in Folsom along U.S. Highway 50: at Folsom Boulevard, at Prairie City Road, and at East Bidwell Street (Scott Road). To accommodate the expected traffic increase at build-out, the interchanges Folsom Boulevard, at Prairie City Road and East Bidwell Street would have to be upgraded. Two additional interchanges would have to be constructed: one at Oak Avenue Parkway and one at the Sacramento-El Dorado County Line. The Land Use Map indicates the locations of these proposed interchanges.

BICYCLE PATHS

Folsom contains a portion of the American River bikeway, which begins at Discovery Park in Sacramento and ends at Folsom Lake. There are opportunities for the creation of additional bicycle paths or routes along Folsom's other waterways and scenic arterial roads (such as Folsom Boulevard the proposed Humbug/Willow Creek Parkway and Blue Ravine Road). Preparation of a Bicycle Master Plan is currently underway in connection with the preparation of the Parks and Recreation Element of the General Plan. The Bicycle Master Plan will provide facilities necessary to serve those who commute by bicycle to places of employment as well as those who seek recreational enjoyment.

PEDESTRIAN CIRCULATION

There are a number of recreational pedestrian paths along the American River and Folsom

Lake. There is presently no pedestrian pathway system, although an opportunity exists to create such a system in conjunction with designation open spaces. Historic Folsom is predominantly a pedestrian-oriented commercial district. The commercial core along East Bidwell Street is not laid out to encourage pedestrian circulation among the various retail centers.

PUBLIC TRANSIT

Folsom is currently served by a City operated fixed-route bus system, Folsom Stage Line. The system provides scheduled service, six days a week, throughout the City. Connections to Regional Transit are made at the intersection of Main Avenue and Madison Avenue in Orangevale. The City also operates a daily commuter bus to downtown Sacramento. A second bus is planned to be added in the near future. Daily bus service to Sacramento and South Lake Tahoe is also provided by Greyhound Bus Line.

RAIL TRANSIT

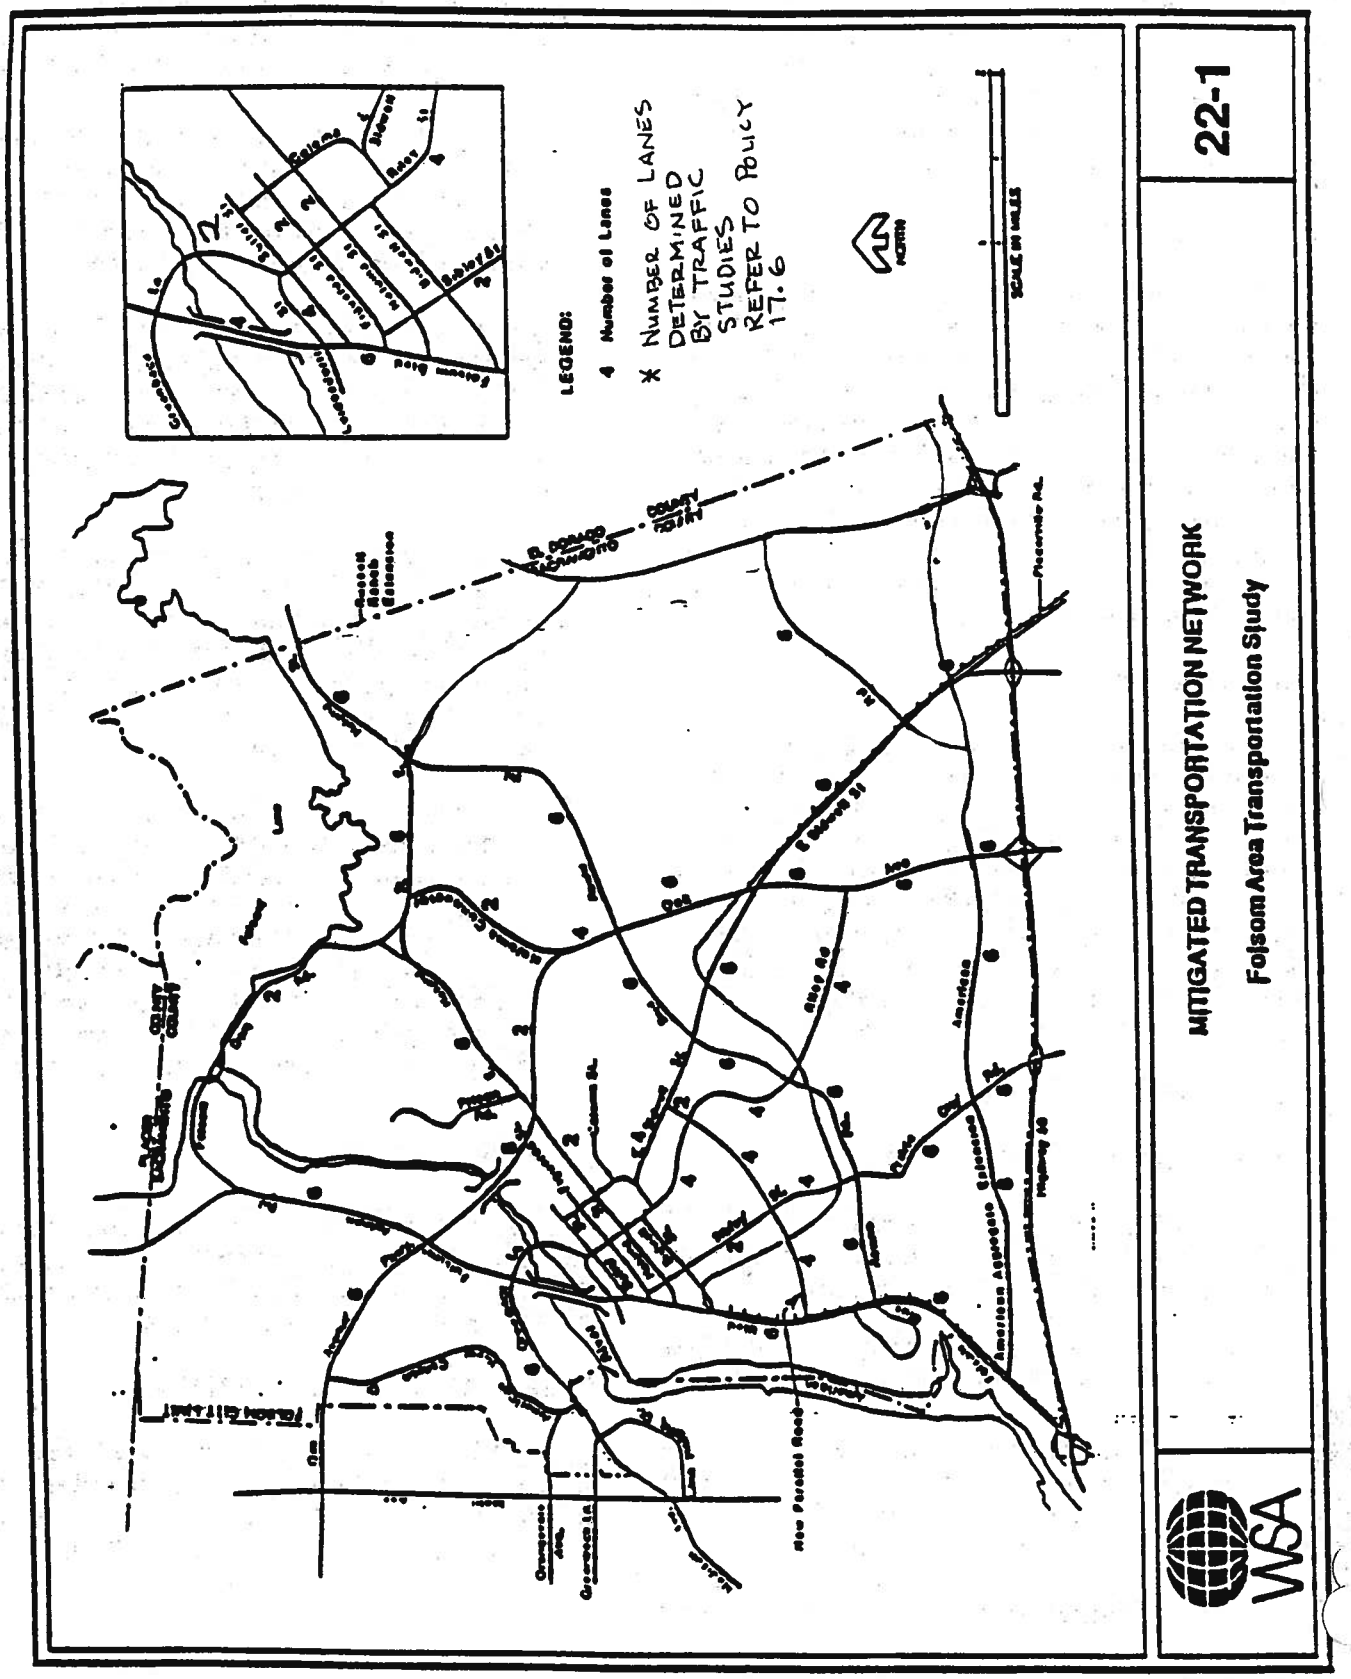
Folsom is served by a spur of the Southern Pacific Railroad. The line meanders through the southern portion of the City, with a side line that ends in Folsom's Historic Commercial District. The rail line is not presently in use for regularly scheduled commercial traffic. This line should, at some future time, be linked to Regional Transit's light rail line along Folsom Boulevard (this line currently ends at Butterfield, well short of Folsom but is proposed to be extended to Hazel).

22.2.2 ASSUMPTIONS

FOLSOM AREA TRAFFIC STUDY

The methodology and assumptions utilized in preparing the traffic analysis upon which this Circulation Element is based include:

- Comprehensive survey of 1986 traffic counts on all major roadways within the City.
- Assumed buildout of the land use designations depicted on the adopted General Plan would be in addition to the 1986 baseline traffic information.
- The assumed residential density (du/acre) and commercial/industrial intensity (employees or square footage/acre) at buildout of the adopted General Plan are based on factors contained in the Housing and Land Use Elements of the General Plan.
- Since traffic generation rates are based on "Net" Acres of development, the "gross" acre calculations derived from buildout of the adopted General Plan were reduced by 25 percent for each land use category.
- Traffic generation rates for each land use category are applied based on case studies from the Institute of Traffic Engineer (ITE). Rates used represent the "average" density or intensity of development permitted by each land use category.
- The resulting total trip generation for the community is reduced by a factor of 29 percent to account for naturally occurring traffic ~~reduction~~ REDUCTION and differences in "peaking" characteristics when the specific "project" level data from ITE is applied to the community as a whole.
- The resulting total "corrected" trip generation from buildout of the adopted General Plan is then applied to the roadway system shown on Figure 22-1. Approximately 50 percent of the total generated traffic will have both an origin and destination within the community (internal trips), and the remaining 50 percent of traffic generation will either be external or regional through trips.



U.S. HIGHWAY 50

The California Department of Transportation will add two lanes to Highway 50 and will approve the interchange upgrades and additions needed to meet projected traffic increases.

EXISTING ARTERIAL ROUTES

Rights-of-way can be acquired and the arterials engineered to accommodate the additional lanes recommended in the Transportation Study (see Figure 22-1).

Figure 22-1

LEGEND:
4 Number of Lanes
* NUMBER OF LANES DETERMINED BY TRAFFIC STUDIES REFER TO POLICY 17.6
MITIGATED TRANSPORTATION NETWORK
Folsom Area Transportation Study
22-1
WSA

NEW ARTERIAL ROUTES

Rights-of-way will be dedicated through the subdivision process to construct the new arterial roads recommended in the Transportation Study (see Figure 22-1).

FINANCING OF ROADS AND OTHER IMPROVEMENTS

A facilities plan and five-year capital improvement program will be adopted to address the financing of needed roadway, bridge, interchange, light rail and public transit improvements.

PUBLIC TRANSIT

Folsom will be served by a level of bus and other public transit services adequate to accommodate the demand created by buildout of the General Plan. The Southern Pacific Railroad right-of-way will be acquired for future public transit or other appropriate use.

BRIDGES

Additional American River crossings can be engineered and necessary rights-of-way and financing acquired.

AREA PLANS

Specific Plans (as defined by State Law) will be prepared for large scale development proposals to link land uses with transportation and circulation improvements consistent with the policies and standards contained within the General Plan and the circulation improvements designated on the Plan Map.

22.2.3 ISSUES

REGIONAL TRAFFIC CONSIDERATIONS

The City Council has gone on record opposing the construction of "any routing of freeway extension which would bisect the City of Folsom" (see Resolution No. 1907, February 18, 1986). This position was expanded by Resolution No. 1955 (August 4, 1986), to oppose proposed "beltway" alignments which would bisect the City. The roadway system proposed by this Circulation Element (see Figure 22-1) contains numerous six lane arterials and two new bridges over the American River which could serve as a "de facto" "beltway" if constructed.

In particular, the philosophy of the City is to not overbuild a transportation system within the community to serve "regional" through traffic, but to route that traffic around the periphery of the community (particularly the older parts of town). As a result, through traffic from 1) South Placer County entering the community by way of Santa Juanita and Folsom-Auburn Roads, and 2) El Dorado County entering by way of Green Valley Road (East Natoma Street) must be given particular attention. The "Policy Decision" posed within the Setting section of this Circulation Element should be addressed before the issue of further bridge crossings of the American River (capacity and location) is resolved and the General Plan adopted.

RECREATIONAL USE OF SENSITIVE HABITATS

Many of the proposed open space corridors could also serve as pedestrian and bicycle recreation areas. However, where sensitive natural habitats exist, bicycle and pedestrian routes must be carefully planned to minimize possible environmental conflicts.

BRIDGE COSTS

The tremendous cost of even modest bridge crossings of the American River will make it difficult for the City to finance such projects. The City may need partial funding from federal, State and County to pay for their construction.

PUBLIC TRANSIT

There is no definite timetable for expansion of bus service or Light Rail Transit to Folsom. There is no guarantee that money will be available to extend the light rail line to Folsom or construct the system within the timeframe of the General Plan.

INTERCHANGES

CALTRANS has not yet formally approved the concept of two additional interchanges in Folsom or the improvements of existing interchanges. The City will have to work with CALTRANS to

ensure these interchanges can meet CALTRANS standards. Current State policies and funding constraints will require that design and construction of the interchange projects be funded by the City or private sector sources.

22.3 TRANSPORTATION AND CIRCULATION ELEMENT GOALS AND POLICIES

GOAL 17

To develop a comprehensive transportation/ circulation system which includes as a minimum:

1. Freeways, highways, and/or expressways designed to route through-traffic away from Folsom's neighborhoods.

2. Arterial roads which provide access among Folsom's neighborhoods, major cross-town links, and links between Folsom and adjacent communities.

3. Additional crossing(s) over the American River.

4. Pathways and designated routes for bicycle and pedestrian traffic.

5. Designated routes for commercial vehicles.

6. The protection of residential neighborhoods from through-traffic.

7. Public transportation routes.

POLICY 17.1

The City shall plan for an integrated circulation system which provides for travel by private vehicles, commercial vehicle routes, a public transportation system, and for pedestrian and bicycle routes.

POLICY 17.2

The City should establish a hierarchy of roads consisting of the following:

1. Freeways or limited access highways. Such roads shall be grade separated at each intersection with another road. The major purpose of such roads is to route traffic around Folsom, with as few interruptions to the surface street system as possible. U. S Highway 50 currently meets the definition of a freeway. The City has made a firm commitment that a new freeway would not bisect the City.

2. Expressways. Allow for moderate- to high-speed travel within the City. The purpose of an expressway is to carry cross-town traffic from other communities or between neighborhoods within the City. An expressway may contain some grade-separated intersections, but this type of road would be mainly a surface street. Expressways should be located to allow for controlled intersections spaced at one-half mile intervals or more. Only arterial and collector roads should intersect with an expressway.

3. Arterial roads (or major streets). Serve to connect neighborhoods within the City and the City with surrounding communities. Arterials would normally define the boundaries of neighborhoods, not provide internal access to a neighborhood.

4. Collector (or secondary) roads. Serve to route traffic from local streets within a neighborhood to an arterial road. Collector streets would not normally serve as "through" roads for more than one area, but would circulate throughout a neighborhood.

5. Local (or tertiary) roads. Serve a portion of a neighborhood only and route traffic to a collector street.

6. Street-ends (cul-de-sacs, dead-end streets, etc.). Limited in length and serve only a few residences.

POLICY 17.3

Arterial roads serving new developments shall be aligned with existing arterial roads whenever possible.

POLICY 17.4

Routes for additional bridge crossings ov the American River shall be designated on t Plan Map. Because the Proposed Oak Avenue

and Folsom-Auburn Road crossings will serve a significant amount of regional through traffic with distinctly different origins and destinations, financing and construction of the bridges should be considered as a package rather than separately.

POLICY 17.5

The City should locate and improve existing arterial roads to provide direct access between a central commercial district, a regional commercial center, and major public institutions (hospital site, community college site, Civic Center).
Policy 17.6

The City should require that new arterial roads or extension widening of existing arterial roads that are need to serve a new development are planned and constructed in accordance with the Plan Map and standards contained herein or traffic studies completed to the satisfaciton of Public Works Department and approved by the City of Folsom. Land must be set aside by dedication for sufficient rights-of-way and landscaping in accordance with standards contained herein, and a planting strip or other buffer shall be required in single famliy developments to ensure that homes do not back directly onto the arterial road. Resolution No. 3798.

POLICY 17.7

The City shall require the establishment of landscape maintenance assessment agreements or districts for new developments adjacent to arterial roads to ensure that planting strips are required and properly maintained.

POLICY 17.8

A five-year Capital Improvement Plan (CIP) for road improvements should be prepared and implemented by the City. The road improvement plan shall be updated at least every other year subsequent to its initial adoption. The road improvements plan shall establish a schedule for needed road repair and construction and identify sources of funding for road improvements. The five-year CIP should be consistent with the Fiscal Element of the General Plan which will be prepared to identify total Citywide public facility funding mechanisms.

As part of this program the City should update the Folsom Area Traffic Study on a regular basis (at least annually) as part of a regular traffic monitoring program to attempt to achieve that at least a traffic Level of Service "C" is achieved throughout the City.

POLICY 17.9

The City should plan for the expansion of future public transit routes (bus and fixed rail service).

1. **Transit routes should coincide with major destinations for employment and shopping, the location of major institutions, concentrations of multifamily housing, and other land uses likely to attract public transit ridership.**

2. **The City should preserve existing railroad rights-of-way for their potential future use as public transit routes. The City should work with Regional Transit to determine other rights-of-way which could be preserved for rail transit use. Proposed light rail alignments and station locations are designated on the Plan Map and dedication of land for the required right-of-way shall be required as part of the approval process for development of adjoining parcels.**

3. **Bus routes should follow major roads with service to residential neighborhoods via collector streets.**

POLICY 17.10

The City should develop and maintain a bikeways and pedestrian master plan that links residential developments with sources of employment, public open spaces, parks, schools, neighborhood shopping areas, the central commercial district, other major recreational destinations, and adjoining communities.

1. **The City should ensure that new residential developments incorporate pedestrian and bicycle paths or routes when there are nearby schools, parks, public open spaces, sources of employment or other destinations for such travel. Such paths or routes should be designed so that schools and parks are accessible to area residents. Pedestrian/ bicycle over- or under-crossings may be provided when necessary to cross arterial roads or expressways.**

2. The existing bicycle and pedestrian paths along the American River shall be preserved.

3. The City should establish and maintain an internal pathway system that links parks sources of employment and public open spaces using rights-of-way and parkways.

4. Where on-street bikeways are not feasible, the City should provide for Class I off-street bikeways.

5. The City should endeavor to provide routes paralleling the major arterial routes for long distance bicycle travel.

6. The City should endeavor to provide routes for recreational travel, providing access to important recreational areas of the City, including Folsom Lake.

POLICY 17.11

Whenever any major repair, alteration, or construction of roads are undertaken, immediate consideration of incorporating and providing bicycle routes and facilities should occur, as designated by the City of Folsom Bikeway Master Plan, and state specifications for bikeways.

POLICY 17.12

The City of Folsom should establish an ongoing public education program on bicycle safety and encourage bicycle safety programs for cyclists and motorists.

POLICY 17.13

The Master Plan includes four typical bike lane cross sections which shall be used where appropriate.

1. Class-1 bikeways, separated bicycle paths will be the preferred bikeway, wherever feasible. This form of bike lane will be encouraged in areas such as the Willow Creek-Humbug Creek Parkway, and along the Lake Natoma frontage, and along major boulevards, such as Folsom Boulevard.

2. Class-2 bike lanes, which include a five foot stripped bike lane on the outside of an eight foot parking lane, will be encouraged in areas where on-street parking is likely to occur. Such areas would be in the vicinity of apartment complexes and condominium complexes.

3. Class 3 & 4 bike lanes, which include four foot and eight foot stripped bike lanes on the edge of pavement, should be utilized on city arterial, collector, and other roads as indicated on the bikeways master plan.

POLICY 17.14

The City shall require facilities for parking bicycles in accordance with the Zoning Code.

POLICY 17.15

The City shall review parking requirements to ensure that adequate off-street parking can be provided for new development projects.

POLICY 17.16

The City shall designate locations for park and ride lots and adopt standards for their development. Several such lots are designated on the Plan Map and dedication of land for each site shall be required as part of the approval process for development of adjoining parcels.

Policy 17.17

The City should strive to achieve at least a traffic Level of Service "C" throughout the City. During the course of Plan buildout it may occur that temporarily higher Level of Service result where roadway improvements have not been adequately phased as development proceeds. However, this situation will be minimized based on annual traffic studies or project specific traffic studies as approved by the City of Folsom and monitoring programs. Resolution No. 3798.

POLICY 17.18

The City will work with the California Department of Transportation in planning for and funding freeway interchange improvements and additional interchanges along U.S. Highway 50. A specific study should be prepared by the City to determine the required phasing of construction of freeway and interchange improvements based upon buildout of land uses designated on the Plan Map.

POLICY 17.19

Because the Traffic Studies upon which this Circulation Element are based shows various intersections which will not achieve Level of Service "C", the City should adopt a mandatory TSM program that applies to existing as well as future development and will ensure the assumed reduction in peak hour trips. Prior to adoption of the Program by the City, all discretionary development permits issued by the City should require the applicants to participate in the TSM program when enacted. Specific Studies should be conducted to determine the most desirable methods for achieving the required level of trip reduction.

POLICY 17.20

The City shall develop a long range public transit plan for Folsom. Such a Plan shall be developed in coooperation with SACOG and Regional Transit, and shall include a study to determine the feasibility and financing requirements of:

1. Continued City operated intra-community bus service.

2. Continued City operated commuter bus service to downtown Sacramento and/or service to the nearest RT Metro Rail Station.

3. Extending RT Metro service to Folsom and the preservation of future rights-of-way.

POLICY 17.21

Establishment of speed limits for streets within residential areas should include consideration of the potential traffic noise reduction which may be achieved through lower speeds. In some cases it may be appropriate to establish a lower speed limit than may be allowed by roadway design to accomplish the goal of maintaining acceptable traffic noise levels within a neighborhood.

POLICY 17.22

The City shall require a minimum two lanes of arterial roads to be installed adjacent to or in the vicinity of new subdivisions.

22.5 IMPLEMENTATION

PUBLIC TRANSIT PLAN

The City will work with Regional Transit and SACOG to develop a long range public transit program. Public transit will take three forms: commuter lines, which could be served by buses, light rail transit, or a combination of the two; intra-City transit, and special public transit for elderly and handicapped individuals (such as "dial-a-ride").

To implement public transit policies, the City will do the following:

1. Preserve the existing railroads rights-of-way in the City by not permitting development within the right-of-way or seek to create alternative future rights-of-way in conjunction with Regional Transit recommendations.

2. Prepare a study for intra-City public transit to determine the financial feasibility and cost of three alternative: continued City operation of intra-City and shuttle buses to commuter lines, assumption of intra-City service by Regional Transit, and the assumption of intra-City service by a private transit company.

3. Establish standards for turn-outs and bus stops along arterial and collector streets. Developers will be required to construct turn-outs and bus shelters along identified transit routes on arterial streets. The City's street design and development standards will contain standards for the construction of public transit facilities along public right-of-ways. Existing Regional Transit standards will be used as applicable.

4. Work with Regional Transit to identify locations for bus stops and park-and-ride lots. These stops and lots will coincide with major employment and commercial destinations, public institutions public transit corridors, and higher density residential locations.

PEDESTRIAN AND BICYCLE MASTER PLAN

The City will update its Bicycle Master Plan and include a pedestrian and equestrian components, showing the location and type of route/links to schools and parks, sources of employment and other recreational destinations.

The City's Development Standards will include design standards for pedestrian and bicycle paths, lanes, and routes. Road improvements or extensions shall be designed to include bicycle and pedestrian paths, lanes, or routes where these are indicated in the Master Plan. Bicycle paths, lanes, and routes will be clearly marked. The County of Sacramento will continue to be responsible for maintenance of the American River bicycle, pedestrian, and equestrian trails.

SUBDIVISION STREET STANDARDS

The City shall continue to enforce engineering standards for the development of new streets and the extension of existing roads. Collector or arterial roads in new developments shall be aligned with existing collector or arterial roads that are adjacent to the development. Street standards shall be based on the following considerations:

1. For local streets, right-of-way width that would be necessary to accommodate two lanes of traffic, on-street parking on each side of street, and sidewalks on each side of the street. Exceptions may be granted for street segments that end in cul-de-sacs or that provide access for a few homes only, for developments that will provide designated areas for guest parking (either as part of the street design or off-street), or where alternative pedestrian paths are provided.

2. For collector streets, the minimum right-of-way width needed for a local street plus additional width need for bicycle lanes, planter strips and/or planter median and right/left turn lanes at intersections with other collector streets or with arterial streets.

3. For arterial streets generally, sufficient right-of-way width to accommodate four lanes of moving traffic, bicycle lanes, sidewalks on each side of the street, planter strips and/ or planter medians, and at least one right and left turn lane at major intersections. The City may approve variations from this general profile of an arterial street or require additional lanes based on the amount of traffic the street is expected to accommodate at build out.

Plans for streets and circulation, including connections with existing streets, will continue to be required for all development applications. Detailed street design plans will continue to be required as part of a final subdivision map or prior to the issuance of grading permits for street construction.

PARKING REQUIREMENTS

Parking requirements will be reviewed in light of actual parking demand for different types of existing or proposed development in Folsom. The City will contact other jurisdictions to obtain information on actual parking demand developed in a manner compatible with surrounding land uses for different types of developments and survey the parking demands of developments in Folsom. Any changes in parking requirements will be included in the revised Zoning Code.

BRIDGE STUDY

The Folsom Area Transportation Study identifies additional crossings needed to accommodate future traffic from new developments. The City will prepare economic and environmental feasibility analysis to determine:

1. The approximate design and construction costs of each of the bridges.

2. Possible engineering problems or design problems.

3. The potential environmental effects, including any grading, cutting, or filling that might be necessary; the alteration of views to and from the American River; the elimination or alteration of important natural habitats or historic sites; and other similar considerations.

4. EIR/EIS and Federal Permits if required.

6,000/$300,000	$5,000		$305,000	General Fund Developer Fees County funds CALTRANS

FINANCING AND CONSTRUCTION OF NEEDED ROAD IMPROVEMENTS

The City will prepare, as part of its municipal facilities plan, a five-year, biennially-updated road improvement plan. This plan will contain a schedule for road repair, widening, and construction. The plan will also contain a schedule for U.S. Highway 50 interchange improvements and additions. The City will plan jointly with CALTRANS for these improvements. The plan will also identify funding sources.

HOUSING

23.1 INTRODUCTION

23.1.1 Relation and Consistency with General Plan and other Elements

The Folsom General Plan is the City's comprehensive statement describing how lands should be developed and serviced, how citizens and workers will be able to travel throughout the City, how open spaces and natural resources will be conserved, how citizens and workers will be protected from excessive noise and natural hazards, and how adequate housing will be provided to meet the City's current and future needs.

This chapter is the housing portion, or Housing Element, of the Folsom General Plan. The Housing Element is a vital part of the General Plan because it addresses housing as one of the three basic human needs. As such, the City's Housing Element defines the current and future housing needs of Folsom residents, identifies areas for future housing development, contains policies to preserve the existing housing stock, seeks to ensure that no one is denied access to housing based on arbitrary factors, and contains programs to address the housing needs of Folsom's very low-, low-. and moderate-income residents.

For the General Plan to be a workable document, the elements of the plan must be consistent with one another. The internal consistency of the General Plan elements means that policies support and do not contradict one another, that no one element takes precedence over any other element, and that any subsequent amendment to a General Plan element must also be consistent with the other elements.

The City of Folsom has determined that the Housing Element is consistent with the other General Plan elements in the following way:

Land Use Element. The Land Use Element identifies the existing and proposed uses of land for housing, business; industry, and open space. This includes land used for agriculture, natural resources, recreation, and enjoyment of scenic beauty, education, public buildings and grounds, solid and liquid waste disposal facilities, and other categories of public and private uses of land. The amount of land zoned for residential use, and the densities at which housing can be constructed under the various General Plan categories, should be sufficient to accommodate the range of housing types necessary to meet the City's regional share of housing need under the housing allocation plan prepared by the Sacramento Area Council of Governments. (See Tables 23-29.)

Circulation. This Element identifies the proposed thoroughfares and the circulation network that will be implemented along with uses outlined in the Land Use Element. The City has adopted policies to ensure that adequate circulation can be provided at the densities and land uses proposed in the Land Use Element. The City will also pursue policies to mitigate the financial impact of required transportation improvements on affordable housing developments that contribute to the City's low- and moderate-income housing supply.

Open Space, Conservation, and Recreation Element. This Element contains policies for the preservation of important open spaces, the conservation of environmentally sensitive plants and animals, the conservation of important natural resources, and the designation of present and future park lands. but these policies would not create a barrier to production of housing. In consideration of the amount of land designated for open space. the City has determined that the amount of land and the land use densities allocated to residential use will be sufficient to meet the

City's regional housing needs. (See Tables 28 and 29.)

Safety Element. The Safety Element contains policies for the protection of the community from natural and human hazards, including fire, flood, toxic or hazardous materials, earthquake, and landslides. City policy is to direct intense development, particularly residential development, away from those areas with the highest hazards. No natural hazards were identified that would represent barriers to the supply of housing.

Noise Element. This Element contains policies to protect noise sensitive land uses, such as residences, from excessive exterior and interior noise. Existing and future noise is and will be primarily from surface traffic. There should be little impact of noise attenuation policies on the City's ability to accommodate its regional share of housing as the City has few sources of noise that impact residentially-designated areas of the City.

Public Facilities and Services Element. This Element addresses the facilities and services needs of new development. The City has prepared community facilities plans and established community facilities districts to finance needed infrastructure and services for new residential development. Although the financing of required services and facilities will have a substantial overall impact on the cost of housing in Folsom, the City has adopted policies to mitigate the effect of these costs on housing developments for lower-income households.

23.1.2 State Law Requirements

The California Legislature adopted requirements in 1980 for the contents of Housing Elements. Among these legislative requirements is the mandate that:

"The Housing Element shall consist of an identification and analysis of existing and projected housing needs and a statement of goals, policies, quantified objectives, and scheduled programs for the preservation, improvement, and development of housing...The Housing Element shall make adequate provision for the existing and projected needs of all economic segments of the community."

This Housing Element serves two main purposes which are based on the legislative requirements mentioned above. First, it contains information describing the City's residents and their homes in sufficient detail to evaluate current and future housing needs. Second, the Element contains recommended policies and programs aimed at meeting the identified housing needs.

Specifically, the element must contain:

(a) An assessment of housing needs and an inventory of resources and constraints relevant to the meeting of these needs, including:

1) Analysis of population and employment trends;

2) Analysis and documentation of household/housing characteristics;

3) Inventory of land suitable for residential development;

4) Analysis of potential and actual government constraints;

5) Analysis of potential and actual non-governmental constraints;

6) Analysis of special housing needs (including Homeless^Ineeds);

7) Analysis of opportunities for energy conservation; and

8) The preservation or replacement of dwelling units in subsidized housing projects which are affordable to low-income households and which may convert to market-rate rents.

(b) A statement of the community's goals, quantified objectives, and policies relative to the maintenance, improvement, and development of housing. The total housing needs identified in (a) may exceed the available resources and the community's ability to satisfy those needs.

(c) A program which sets forth a five-year schedule of actions the local government is undertaking or intends to undertake to implement the policies and achieve the goals and objectives of the housing element, including:

1) Identification of adequate sites that will be made available;

2) Assisting in the development of housing affordable to low-income (80% or less of median) and moderate-income (80-120% of median) households;

3) Addressing, and where possible, removing governmental constraints;

4) Conservation of and improvement in the condition of existing affordable housing stock; and

5) Promotion of housing opportunities for all persons (fair housing program).

23.1.3 How the Requirements of State Law Relate to Folsom's Most Critical Housing Issues

Among the provisions of California Housing Element Law are requirements that:

- the City adopt, as a minimum goal, a share of the projected regional growth in low- and moderate-income households as determined by the Council of Governments operating within the region (Sacramento Area Council of Governments [SACOG] for Sacramento County);
- financial resources be identified that can make the construction of low- and moderate-income feasible; and
- existing housing affordable to low- and moderate-income households be conserved, especially federally or state subsidized housing that may convert to market-rate housing within the timeframe of the housing element.

These requirements of state law will likely be the most challenging ones for Folsom to meet. They address the most critical effects of the public actions that the City is pursuing.

To date, Folsom has pursued a market-based strategy to meeting its residents' housing needs. The City has designated lands for various types of housing at several density levels, including land for multifamily housing which could meet a portion of the low- and moderate-income housing need. The City does not require developers to construct housing at the maximum allowed density, however. Nor does the City dictate whether multifamily-zoned land will used exclusively for housing affordable to low- or moderate-income households or whether single family-zoned land should include affordable housing.

Market decisions made by individual developers determine timing and types of housing constructed. Folsom would cooperate with developers, private and/or non-profit, interested in building affordable housing projects, and help them identify economic incentives and government subsidies which could be used. However, the City does not dictate that any particular development contain specified percentage of low- and moderate-income households.

23.1.4 Regional Nature

The provision of adequate housing is a regional problem, and Folsom cannot implement a housing program without recognizing how land use and transportation decisions made by other

jurisdictions will affect Folsom's regional share of the area-wide housing needs. Conversely, land use actions taken by the City of Folsom may also have extra-territorial effects which should be recognized. Because of the regional nature of housing needs in the greater Sacramento area, the City's housing program will require coordination with Sacramento, El Dorado, and Placer counties; with the Sacramento Housing and Redevelopment Agency; and with the Sacramento Area Council of Governments.

23.1.5 Data Sources

As required by state law (Government Code Section 65584), the principal source of information used to determine future housing need is the Regional Housing Needs Allocation Plan (RHNAP) adopted by the Sacramento Area Council of Governments (SACOG). The most recent version of this report was adopted by SACOG in November, 1990.

A majority of the information used in the analysis of Folsom's population and existing housing stock was taken from Summary Tape File 1 of the 1990 Federal Census, which was released in June, 1991. 1990 Census data on household income had not been released at the time this Housing Element was prepared. The only current available information on income levels in the Folsom area are the California Department of Housing and Community Development estimates of Sacramento County median income levels. These estimates are based on Federal Department of Housing and Urban Development figures.

Additional sources of information include the City of Folsom Building and Community Development Departments, the City of Folsom Housing and Population Capacity Analysis report. the Folsom Chamber of Commerce. Folsom Prison. State Department of Rehabilitation, local special needs service agencies. developers. consultants. and property owners. Every attempt was made to collect the most current and accurate information available.

23.1.6 Contents

This Housing Element is divided into the following parts:

I **Introduction.** An introduction into the Housing Element's relation to the General Plan, state housing law requirements, General Plan consistency, regional nature of housing, and pertinent data sources used for the report. This section also includes a summary of element, a historical background of the City of Folsom, definitions used throughout the element, and guidelines for public participation in adoption of the element. This section also summarizes the City's goals, policies, and quantified objectives.

II **Housing Needs Assessment.** A detailed discussion of population characteristics, projected future housing needs, and existing housing needs.

III **Resource Inventory.** A discussion of existing housing stock characteristics, an analysis of the condition of the housing stock, an inventory of lands suited for residential uses, a description of additional areas with residential potential, and a discussion of the potential loss of residential units.

IV **Housing Constraints.** Areas of potential housing constraints include environmental concerns, municipal facilities, governmental constraints, and financial constraints.

V **Conservation.** This section analyzes the potential for residential energy and water conservation in the City.

VI **Equal Housing Opportunity.** Attempts made by the City to ensure that all

segments of the population have equal opportunity to find adequate housing.

VII **Review of Previous Housing Element.** This section summarizes the programs, policies, and goals established in the previous Element and discusses the extent to which the City was successful in meeting these standards. Reasons for not obtaining goals are discussed as well as ways to ensure that those goals which still apply are obtained over the next five years.

VIII **Definitions.** These are words with meanings specific to the Housing Element.

IX **Programs.** Programs, policies, and goals for the five year period covered by the Housing Element.

23.1.7 Summary

This section will summarize the major findings of the Housing Element, including the Quantified Objectives.

1. Folsom has met and exceeded its apportioned regional share of housing for the 1985 to 1990 period. The amount of housing construction during the past several years indicates that there is a strong regional housing demand evident in Folsom distinct from local employment growth.

2. The number of multifamily dwelling units represents an increasingly smaller percentage of the total housing stock in Folsom. So long as the private market prefers single family over multifamily dwelling units, and proposes lower density developments on lands zoned for multifamily housing, it will be difficult for the City to maintain an adequate supply of multifamily land. The City recognizes this dilemma and has developed a program to address the problem (see Program 2)."

3. The total number of needed units affordable to lower- and moderate-income residents have not been constructed due to economic factors beyond Folsom's control. As a result of this, the current median average home price in the City was reported by the Census Bureau in 1990 as $210,600.

4. Substantial employment growth is anticipated from commercial and industrial projects approved during the past five years. The City's General Plan would allow for a sufficient number of housing units to meet the demand from this employment growth over the next five years, although it is unlikely that enough units can be constructed that are affordable to workers of lower- or moderate-income persons without some form of government subsidy.

5. Additional employment growth can be expected on commercial and industrial-zoned properties for which development proposals are pending. Depending on the amount and type of development, it is possible that within the next 10 to 15 years there would be insufficient land, at current densities, to provide enough housing units for workers in these projects.

6. Certain constraints make it infeasible for builders to provide a sufficient number of units affordable to all income levels. These constraints include:

   - A limit of Folsom's current water allocation.

   - Land and development costs. The policies and programs contained in this Housing Element, and the higher residential densities allowed under the 1988 General Plan, address land and development cost factors which have historically increased the difficulty of producing affordable housing in Folsom"

7. Folsom can implement certain measures to preserve the existing stock of affordable housing and allow for some new housing affordable to lower- and moderate-income residents. These measures include:

23.1. 8 Historical Context

As late as 1960, Folsom was a small, isolated, semi-rural community, whose character was defined primarily by Folsom Prison, Folsom Dam, and the historic district centered on Sutter Street. At that time, the City was home to just under 4,000 residents. Up until 1960, the City's population varied between 1,000 and 2,000 permanent residents (excluding Folsom Prison). While the City was constantly growing and changing during this period, the changes were relatively small and incremental, and did not substantially alter the City's character.

Up until the 1970s, housing costs were relatively low in Folsom, and the majority of the City's residents earned modest incomes. Most employment was provided by the Prison, local retail and service establishments, and tourist-oriented businesses in the historic business district.

Beginning in the 1970s, the City's character began to change as growth and development accelerated. Between 1970 and 1980, the City's population nearly doubled. Most of the housing that was constructed at this time consisted of single family homes of modest cost affordable to first-time homebuyers, duplexes, and rental apartments affordable to low- and moderate-income households. The growth that Folsom experienced at this time was typical of the other communities experiencing the outward expansion of the Sacramento region into the eastern county and southwest Placer County.

During the 1980s, growth in the City accelerated further, more than doubling the City's population between 1980 and 1990. (Part of the City's growth was due to the doubling of Folsom Prison's capacity, but even after subtracting the prison population from the total population, the City more than doubled in size.) The development that Folsom experienced at this time, however, was significantly different than during the previous decade.

During the 1980s, the City attempted to create a more balanced community in Folsom by attracting more middle- and upper-income residents and commercial development to serve an expanding local and regional population. As a consequence, over 4,300 single family homes were constructed, while just 800 new multifamily housing units were constructed (mostly rental apartments).

During the early part of the decade (1980-84) most of the single family homes constructed were priced for moderate- and middle-income households, particularly first-time home buyers. During the latter part of the 1980s, and to the present time, most of the single family homes were priced for middle- and upper-income households. Typical housing prices ranged from $125,000 to $160,000 between 1985 and 1988. Since 1988, typical housing prices were $150,000 to $250,000, with a substantial number of new homes in the $250,000 and above price range. As the market for homes priced at $200,000 and above weakened beginning in 1990, home builders throughout the Sacramento area sought to alter their plans to construct more homes for first-time homebuyers and middle-income households looking for homes priced in the low- to mid-$100,000 range.

This shift in Folsom's housing market during the 1980s resulted from a combination of City policies to attract more higher-cost housing to the City and from market forces which responded to the intense demand for such housing in suburban locations. Folsom's location at the transition between the valley and foothills, its abundant open spaces and interesting natural habitats, its convenient location adjacent to a major freeway, and City policies to facilitate development created

the favorable conditions necessary to attract such residential development.

Another substantial change during the 1980s was the City's effort, through redevelopment and other policies, to attract new commercial and industrial growth to Folsom. At the same time that the City experienced tremendous housing growth, Folsom also experienced a substantial increase in employment, primarily in service, retail, medical, and assembly related jobs. Folsom Prison more than doubled its capacity during the 1980s, increasing employment in prison-related positions, as well.

As a result of the City's growth during the 1980s, land values rose dramatically, and public facilities had to be expanded to accommodate the new growth. These and other factors greatly increased single family lot costs in the City. Because of higher development costs, City policies favoring single family development, and the housing market's natural propensity in Folsom to concentrate on single family housing, very little housing was constructed that could be afforded by low- and moderate-income households (who represent a substantial percentage of the newly employed workers in the City).

The high rate of growth also caused increasing concerns among the citizenry about the ability of the City to sustain this growth, the quality of development occurring in Folsom, traffic congestion and school overcrowding, and other side-effects that typically accompany rapid expansion. Over the past year, the City has received some reprieve from the rapid pace of development, owing to an economic recession which has substantially decreased building activity. This period has provided the City with an opportunity to ponder its future with respect to the amount and type of development it wishes to attract, the ultimate character of the City that Folsom residents desire to achieve, and the balance between commercial and residential development.

This Housing Element has been prepared in the context of Folsom's growth and development over the past decade. The most important issues that the City will face over the period covered by this Element (1991 to 1996) are:

- The ability of the City to sustain a reasonable rate of growth, yet maintain the high level of environmental quality that has attracted so many to the City.

- The relative balance between non-residential and residential development. The pace of commercial and industrial development has fallen below City expectations, and some landowners holding commercially-zoned properties have requested City approval for residential development.

- The ability of the City to provide for a reasonable share of housing affordable to low- and moderate-income households attracted to the newly created jobs in Folsom.

23.1.9 Public Participation

The public participation program adopted by City included a Public Workshop on June 3 and 17, 1992, a Planning Commission Hearing on July 22, 1992, and a City Council Hearing on August 25, 1992. The hearings and workshops were advertised through the newspaper, notices posted in public places, and notices mailed to community groups with an interest in the housing element. The notices and advertisements were be intended to encourage public participation and involvement in the adoption process, and specifically attempted reach organizations serving low-income and special housing needs groups.

SUMMARY OF CITY HOUSING OBJECTIVES

	SACOG Share 1989 - 1996	Units Produced 1989 - 1991*	Remaining Share 1991 - 1996	Objectives 1991 - 1996	Total Need Met	Percent

Moderate/ Above Moderate	N/A	N/A	N/A	285		

* Based on the following: 2,143 single family dwelling units produced. 100% affordable to above moderate-income households: 744 multifamily dwelling units produced. 45% affordable to low-income households and 55% to moderate-income households (see page 78 for documentation).

The City believes that the programs and objectives described in this section represent the maximum effort the City can make to accommodate housing for all income groups. In developing these quantified objectives, the City has considered:

1) development costs for market-rate housing and how the City can reduce these costs, still provide necessary public services and facilities, and maintain a minimum acceptable standard of development quality;

2) the zoning densities which are appropriate to accommodate lower-income housing yet which are still sensitive to the City's environmental character and existing residential neighborhoods;

3) available local financial and staff resources to implement the City's housing program (the City does not anticipate having sufficient funding to provide more than one-half staff position to support the City's housing program);

4) available state and federal sources of funding for affordable housing developments; and

5) the ability of the private sector to assist the City in implementing proposed housing programs. Folsom does not anticipate that it will be financially feasible, given the incentives it can provide, to include affordable housing in every housing development. The housing program makes a conservative estimate, therefore, of the number of market rate and government-assisted housing units affordable to very low-, low- and moderate-income households that could be provided from the programs described above.

The quantified objectives shown above assume that the needs of very low-, low-, and many moderate-income households in Folsom can only be met through various types of multifamily housing (rental apartments, condominiums, townhouses, and duplex units). Land, land development, and construction costs documented in this Housing Element have lead the City to conclude that governmental subsidies and regulatory incentives will be necessary to stimulate the production of housing affordable to very low-income households and most low-income households.

Home builders may be able to produce attached single family dwelling units or detached units on small lots that are affordable to some moderate-income households, if such units are priced at less than $150,000. There are several types of regulatory and financial incentives, discussed in this document, the City could use to allow home builders to provide single family housing within this price range. All multifamily rental housing produced in Folsom, to-date, has been affordable to moderate-income households and is assumed to remain so in the future.

Folsom does not anticipate that home builders will be able to provide very low-income housing without deep public subsidies and/or the participation of a non-profit housing corporation. The new construction objectives established for very low-, low-, and moderate-income housing represent the maximum number of dwelling units the City believes could be produced under programs 7 and 8 (density bonuses), 9 (use of state and federal subsidies), 10 (mortgage bonds), and 13 (second units). Specific numerical objectives have been assigned to each of these programs, as explained in the "Expected Results" section for each program.

In addition to the low- and moderate-income new construction objectives shown in these programs, the City estimates that 150 market-rate (unsubsidized) rental units can be produced by the private sector which are affordable to low-income households, and 400 market-rate rental and/or ownership units can be produced that are affordable to moderate-income households. It is possible that 100% of the remaining low- and moderate-income need could be met if the programs proposed in this Element are successful in stimulating homebuilders to produce more multifamily housing.

23.2 . HOUSING NEEDS ASSESSMENT

23.2.1 Population Characteristics

The City of Folsom presents an appealing residential environment, due, in part, to its historic background, location on the American River, varied topography, semirural characteristics, and sense of community. The high level of growth experienced in the City since 1980 has caused substantial changes in the characteristic makeup of the population. This section of the Housing Element identifies some of the demographic changes which have taken place in Folsom over the past ten years.

In 1990, the total population in the City of Folsom was 29,802 persons. Of this total, 23,082 persons, or 77.45% of the population, were members of households. In the County, the percent of population that are also members of households was 97.87%, or 1,019,079 persons. The table below shows population and household statistics for the City of Folsom.

Table 23-1
POPULATION AND HOUSEHOLD FIGURES (1990)

	Folsom		Sacramento County	
	1990	1992	1990	1992
Population	29,802	36,507	1,041,219	1,099,058
Households	8,757	10,731	394,530	411,848
Household Population	23,082	28,990	1,019,079	1,075,904

Nursing Homes	105	*****		
Other	6	*****		
Total	6,720	7,517		

* These figures are included in the Total Population figure.
Sources: U.S. Census, 1990; Cal. Dept. of Finance. 1992; Folsom Prison.

As the table shows, a small percentage of the population within the City is due to the prison inmates at the City of Folsom State Prison facility. The prison was recently expanded (1986), increasing the maximum number of inmates from approximately 3,000 to well over 6,000 persons. In 1985, the total persons in the prison (including both inmates and prison personnel) exceeded 3,800 persons; by June of 1991 the total persons in the prison had increased to 7,131, and then declined to 6,619 by May 1992.

The prison does not expect an increase in prison capacity in the near future and the current facility is presently filled to maximum capacity. The percent of the population therefore represented by the prison will become increasingly smaller over the next five years as the City continues to grow.

Because the majority of prison inmates are males between the age of 18 and 35, the total number of inmates could potentially represent a large share of the City population between the ages of 21 and 35 which has increased dramatically since 1980. The statewide average of prison inmates is 29, and officials at the Folsom State Prison feel that this age is very representative of the average Folsom inmate.

The annual average growth rate in the City of Folsom has increased significantly in the 30-year time period since 1960. In 1970, the total population of the City increased by 48.02% since 1960 with an average annual growth rate of 4.00%.

Table 23-2
POPULATION GROWTH RATES

Year	Ave Annual Population	Ave Annual Increase	Growth Rate	Time Period
1960	3,925			
1970	5.810	189	4.00%	1960-1970
1980	11.003	519	6.59%	1970-1980
1990	29,802	1.879	10.48%	1980-1990
1992	36,507	3.352	22.49%	1900-1992

Sources: U.S. Census Bureau 1960, 1970, 1980, 1990;
California Department of Finance, 1992.

In the ten year period 1970-1980.the total population increased by 89.38% with an average annual growth rate of 6.59%. The greatest total and annual change, however, occurred during the ten year period 1980-1990, with a total population increase of 170.85% and average annual growth rate of 10.48%. During this last decade the population in the City more than doubled for the first time in the City's history. These statistics are shown in the table above.

The California Department of Finance reported 36,507 persons in the City of Folsom in 1992 (January 1). This is an increase of 6,705 persons from the 1990 Census and represents a population percentage increase of 22.5%. The large increase in population reported by DOF is based in its assumption regarding the occupancy of dwelling units completed during 1990. With the substantial reduction in construction during 1991, the Department's 1992 population will likely show a much smaller increase.

DOF also reported a total of 1.099.058 persons in Sacramento County in 1992. DOF reported a City-wide vacancy rate of 4.59% and 2.70 persons per household. The DOF reported a vacancy rate of 5.30% and 2.61 persons per household in Sacramento County.

The following table indicates an almost across the board increase in the percentage of persons younger than forty-four years of age and a decrease in the percentage of persons above the age of forty-five. The only exception is a decrease in the percentage of persons in the fifteen to nineteen year age group. The greatest change was in the persons in the 25-34 age group (7.79% increase since 1980) and the 35-44 age group (6.32% increase since 1980). These two age groups together combined for almost half of the population (46.23) in 1990, a significant increase from 1980 when these two groups combined for approximately only one third (32.11%) of the population.

Table 23-3
AGE CHARACTERISTICS

	1980		1990		Percent

* These figures include Folsom Prison population figures.
Source: U.S. Census Bureau. 1980. 1990.

This statistic, combined with the dramatic increase in total persons in the City and the decreasing older persons in the City could signify a substantial increase in working age adults, with and without families. However, as mentioned above, this change could also represent an increase in the number of inmates at Folsom prison during that same period in the 25-34 age group. The table above shows age characteristics in the City during the last ten years.

An increase in working families would also be reflected in a changing City school enrollment profile. In the 1991-92 school year, the Folsom-Cordova Unified School District reported a total of 4,584 students enrolled in the City of Folsom.

This number is more than twice as many children as enrolled in the 1985-86 school year, when there were 2,180 students. A certain percentage of this increase in the first six grades is due in part to the addition of three elementary schools in the City after the 1985-86 school year. The number of students in each grade are shown in the table below.

Table 23-4
SCHOOL DISTRICT ENROLLMENT CHARACTERISTICS

	1985-86		1991-92

Ethnic Characteristics

In 1980 persons of white ethnic background represented almost 96% of the population (95.9%). In 1990 this number had decreased to 84.0%, indicating a slight diversification of persons within the city. Significant changes also occurred among the percentage of hispanic and Black persons. The table below shows the ethnicity statistics for the City in both 1980 and 1990.

Table 23-5
ETHNICITY

Year	White	Black	RACE (%) Am.Ind.	[1]Asian	[2]Other	Hispanic[3]
1980	95.9	0.2	1.2	1.1	1.6	5.9

[4] Includes American Indian, Asian, and Other categories.

Source: U.S. Census Bureau, 1980, 1990.

It should be noted that the age and ethnic characteristics of the Folsom Prison population skews the Census Bureau report on the City as a whole. The numbers in parentheses in Table 5 represent the percent of the City's population in each ethnic category after subtracting the Folsom Prison population. The adjusted figures in parentheses more accurately reflect the composition of the City's year-round household population.

Employment Characteristics

The City of Folsom has traditionally been a net exporter of workers to other parts of Sacramento County and the region. The City has served as a residential suburb and historic commercial center. The chief "industry" in Folsom for many years was the state prison.

As late as 1980, only one of every four Folsom residents worked within the City limits, of a total labor force of 3,662 workers. Another 400-600 workers had jobs in the surrounding communities, based on their reported travel time. Most workers commuted to Sacramento or other distant locations to work, however. Fifty-eight per cent of those workers reported a 20-minute or longer commute time.

As Folsom has developed new commercial and industrial land uses, the ratio of jobs to housing has increased, although population growth has still far outpaced employment growth in the City.

Employment in 1980. The employment distribution in Folsom has been integrally linked to regional trends. In 1980, 27% of City was employed in the government and education sector. 23% were employed in the services/finance sector, and approximately 22% were employed in the wholesale/retail sector. Overall, wholesale and retail trade, services and finance, and government/education accounted for about 3/4 of the Folsom work force in 1980, about the same

county-wide. Only 9% of the workforce was involved in manufacturing industries.

Employment Trends 1980-1985. The California Employment Development Department (EDD), in its 1986 Annual Planning Information report, estimated Sacramento County's total employment in 1985 at 378,600, an increase of 12% since 1980. According to EDD, employment growth since 1980 has occurred primarily in government, private services, and wholesale and retail trade. These employment sectors accounted for 83% of Sacramento area jobs in 1985. Manufacturing jobs actually declined by about 1,000, while construction employment declined by about 1,500 jobs. The county-wide trend, then, is for office and service sector employment to continue to expand.

The employment trends in Folsom, however, will be somewhat different. In the early 1980s, Folsom began an effort to plan for services and municipal facilities for large commercial and industrial parks that were anticipated to develop in Folsom. A number of Bay Area firms and other large, national corporations, especially those involved in the research, development, and manufacturing of electronics components, expressed an interest in locating regional offices and manufacturing facilities in Folsom.

23.2.2 Projected Needs

Economic Development and Employment Characteristics

The commercial and industrial development expected to occur in the Folsom area over the next five years will have a significant impact on the extent to which people working in Folsom are able to find affordable housing in Folsom. If future jobs in the Folsom area are relatively low-paying positions, an increasing number of workers will be forced to commute to their jobs from surrounding communities. Possible results include higher traffic and commuting levels, increased pollution, and a diminished overall quality of life.

It appears that the majority of jobs to be created by the commercial and industrial development proposed for Folsom will be retail and assembly-type positions. Preparation for the development of a regional mall, for example, is in progress. If this project is completed, a substantial number of low- and moderate-paying retail jobs will be created. In addition, several new retail/commercial centers have been completed or are under construction since 1986.

The Intel Corporation, which employs 2,500 persons, plans to expand to 10,000 employees by the year 2010. If this expansion takes place linearly over the next twenty years, an estimated 1,975 jobs will be created over the life of the Housing Element. Although it is likely that these new employees will have a wide range of salary levels, many of them will be assembly-type workers in relatively low-paying positions.
One of the unknowns, since only part of the 1990 Census results has been released, is the proportion of households with two workers or more. This information is important in evaluating the balance of jobs to housing for two reasons:

1) To the extent that a higher percentage of households have two or more workers, the number of dwelling units needed to meet the housing demand from new workers would be lower; and

2) The higher the percentage of two-income households, the greater the number of households that can afford housing in Folsom, even among lower-paid employees. Low-paying jobs do not necessarily translate, one-for-one, into low-income households if a substantial number of households have two or more workers.

Because the general trend over the past twenty years has been for an increasing number of households to have two workers, it would be a gross miscalculation to assume that each new job created causes a demand for a new dwelling unit, and that each new low- and moderate-income job created will automatically create a demand for a

dwelling unit affordable to a low- or moderate-income household.

In addition, there is a substantial capacity for the existing population within Folsom and in the nearby unincorporated area to fill new job positions. There will always be a substantial percentage of the existing population that is unemployed and looking for work or that would fill new job positions if they became available. Taking into account these factors, the number of dwelling units needed to accommodate job growth will be substantially less than the number of jobs created.

Jobs/Housing. Information regarding the jobs/housing balance in the City is not available. However, if the 6,073 housing units which are currently under construction or approved for construction are completed over the next five years, it is unlikely that there will be an imbalance of housing in relation to employment growth. The major shortcoming of the jobs/housing analysis is that it does not take into account housing affordability. As stated in the previous section, until more of the 1990 Census results are available, it will not be possible to analyze the relationship between housing cost, housing availability, job creation, and income from new jobs.

Of the units currently under construction, ready to begin construction in 1992, or planned for construction between 1991 and 1996, it is unlikely that more than a small percentage of these units (probably less than 10%) would be affordable to low-income households. About 15% to 20% of these units would be rental apartments, and less than half of these units are projected to be affordable, at market rates, to low-income households.

A model which measures commute distances, such as the Commute Shed Model established by Sacramento County, could supplement the 1990 Census in providing information on commuting patterns of Folsom residents.

Folsom's Housing Needs Allocations. The following tables were adopted by the Sacramento Area Council Of Governments (SACOG) in 1990 as part of its Regional Housing Needs Allocation Plan (RHNAP). Table 6 provides estimates of existing and projected households by income group. Each jurisdiction is required by state law (Government Code Section 65584) to use the Regional Housing Needs Allocations as a basis for determining future housing need. The following steps were taken to determine the number of units which need to be constructed for each income group between 1991 and 1996.

1) The SACOG RHNAP identifies the increase in households by income category in Folsom between 1989 and 1996 and the corresponding percentage of increase in households for each income category (see Table 5).

2) The Basic Construction Need is calculated using the methodology provided by SACOG and 1990 Census data figures for total housing units (Table 6).

3) Total Basic Construction Need by Income Group is calculated by applying the percentage of increase in households by income category (Table 5) to the basic construction need figure calculated in Table 6.

The amount of housing which must be constructed over the period covered by the Housing Element in order to provide for household growth, required vacancy rates, and expected housing unit removals is defined by the Total Basic Construction Need, a figure which is provided in SACOG's Regional Housing Needs Allocation Plan.

Table 8 summarizes the remaining housing need for each income group for the period 1991 to 1996. The remaining need was calculated by subtracting from the total need for the 1989-1996 period the number of dwelling units constructed or approved for construction between 1989 and 1991.

In distributing these dwelling units by income groups, the City has determined that approximately 50 percent of rental apartments constructed during this period are affordable to low-income households, and approximately 50 percent are affordable to moderate-income households. In addition, it is assumed that approximately 25 percent of dwelling units constructed in medium-density multifamily zones during this period are affordable to moderate-income households (based on cost information collected for these units).

23.2.3 Existing Needs

Median Income. Household income levels are generally expressed in terms of percentage of median income for the County in which a community is located. The definitions used by HCD are as follows:

Income Category	Definition
Very Low-Income	Less than 50% of median area income
Low-Income	50% to 80% of median area income
Moderate-Income	80% to 120% of median area income
Above Moderate-Income	over 120% of median area income

The most current income information available for Folsom is the 1991 HCD median income figures for the Sacramento County area. It is unlikely that these figures are as accurate as 1990 Census data, but since the Census Bureau is not expected to release income data until late 1992, the HCD figures will be used to calculate maximum housing payment affordability levels.

Incidence of Overpayment. The California State Department of Housing and Community Development (HCD) has determined that, in general, housing costs in excess of 30 percent of household income cause an undue financial burden on a household. Households spending in excess of 30 percent of the household income are considered to be overpaying.

Since it is impossible to determine who is living in which housing unit, the extent of overpayment cannot be determined. However, the results of this comparison provide an idea of the parity between housing costs and ability to pay. The following methodology provides a comparison between housing costs and income levels.

1) Maximum affordable housing payments are calculated by multiplying the income level for each household size and income group by 30 percent.

2) Maximum housing payments for the average size household at each income level are calculated at 30% of income.

3) Maximum housing payments are compared with 1990 Census data on housing costs to determine the percentage of the City's housing units which are affordable to each income category.

4) The percentage of units affordable to each income category is multiplied by the 1990 Census estimate of the total number of housing units to determine the number of units affordable to each income group.

5) The number of households in each income group is calculated by multiplying the 1989 SACOG estimates of percentage of households at each income level by 1990 Census household count.

6) The number of affordable units in each income group is compared to the number of households in each income group.

Using 1990 Census data and 1990 SACOG information in the manner prescribed above, it can be calculated that 2,564 households in Folsom spend more than 30 percent of their incomes on

housing costs. This represents 29.2 percent of Folsom's households. The following tables contain the information used to make these calculations.

Table 9 provides income levels and maximum housing payments for households of different sizes based on the above definitions and median income figures provided by HCD for the Sacramento County area. Table 10 identifies the payments required for loans of varying amounts at varying interest rates.

Because the Census information is not yet available on housing price by size of the house, and the housing payment affordability levels in Table 10 are based on the size of the household, the average size household and its maximum affordable rent must be compared to housing costs. Table 11 provides the maximum housing payments for the average size household (2.64 persons per household, as determined by the 1990 Census).

Table 23-9

Table 23-11
MAXIMUM HOUSING PAYMENTS FOR THE AVERAGE SIZE HOUSEHOLD

HH Size	VERY LOW Income	Payment	LOW Income	Payment	MEDIAN Income	Payment	MODERATE Income	Payment
2.64*	$16.184	$ 404	$25,920	$ 648	$32,400	$ 811	$38.880	$ 972

* 1990 Census determined that the average household size in Folsom is 2.64.

Based on the maximum average housing payments for the average size household and certain assumptions (10% down, 9% APR), a very low-income household can only afford a housing unit with a value $55.625. Under these same guidelines, a low-income household can afford a maximum value of $88,889,and a moderate-income household can afford a maximum value of $121.341.

These estimates indicate that many of the housing units in the City are not affordable to certain income groups. The table below shows the maximum purchase price for very low-, low-, and moderate-income households.

Table 23-12
MAXIMUM HOME PURCHASE PRICE BY INCOME CATEGORY

VERY LOW	LOW	MODERATE
$55.625	$88.889	$121,341

Assumptions: 10 percent down payment.
9.0 percent a.p.r. financing.
2.64 persons per household.

Market Response to Housing Demand. There are currently many new homes being completed and under construction in the City of Folsom. Much of this new construction is in the area of Folsom referred to as Natoma Station. Although the size of the subdivisions vary, most range between 80 to 100 lots with most home prices well into the $200.000 range. A number of the new subdivisions are also located in the Lexington Hills area, south of Folsom Lake in the City.

The average home size in these new subdivisions has a minimum of four bedrooms and many times the homes have as many as five bedrooms. Of the listed home sellers below, none offer a three bedroom unit and very few have any models that are available under $200.000. This average price creates affordability constraints on the homebuyer. The table below shows some of the new developments in the City and the range of prices and home sizes each project offers.

Table 23-13
NEW HOME CHARACTERISTICS

PROJECT NAME	SIZE	PRICE	DESCRIPTION

Source: Marketing brochures from Folsom area developments. 1991, 1992.

The information presented in Table 13 includes only those prices for homes actually available for sale at the time of the survey and is not, therefore, a complete listing of homes sold in Folsom during 1991 and 1992. Many of the home builders listed in Table 13 have produced smaller single family homes selling between $130,000 and $160,000. These homes tend to be sold very quickly, however, and none were available for sale at the time of the 1991 or 1992 surveys. As a consequence, the information shown in Table 13 tends to overstate the average selling prices of new single family homes for sale in Folsom.

The Census reported a median home value of $210,600 in the City of Folsom in 1990. The Census report, which categorizes single family owner-occupied homes, indicates that over half of the homes surveyed are valued at more than $200,000 (55.4%). Only 6.2% of the homes are valued at less than $100,000, and the remaining housing units are valued between $100,000 and $200,000. The Census figures are consistent with the asking home prices in new subdivisions in both Natoma Station and Lexington Hills, which both offer homes well into the $200,000 range. The table below shows the distribution of owner-occupied homes in the City by home value.

The Census reported a median contract rent of $555 in the City in 1990. Table 15 shows the rents received by rental bracket group.

An important consideration in analyzing housing prices and rental payments is to determine the degree of overpayment by low- and very low-income households. Unfortunately this information will not be available from the 1990 Census until after the adoption of this element. Therefore, the only accurate analysis of household overpayment in the City is from the 1980 Census report.

At the time of the 1980 Census. there were about 400 rental units available at $170 or less, equal to 25% of a very low-income household's monthly earnings. In 1980, there were 638 very low-income households in the City of Folsom.

Many of these households, approximately 200, were homeowners. There were about 450 owners whose monthly housing expenses (excluding utilities) were $170 per month or less.

There were approximately 530 rental units affordable to lower-income Folsom residents, units renting for between $170-$274. There were 300 homeowners who paid $170-$274 in housing expenses (excluding utilities) in 1980. In 1980, there were 518 lower-income households and 160 of these were owner-occupants.

It appears that Folsom's housing market. then. was roughly in balance in 1980, with sufficient rental or ownership units at housing costs affordable to very low- and lower-income

households. It is obvious, though, from the Census data on housing costs as a percentage of income that most very low- and lower-income households did not actually reside in these lower-cost units. Two reasons are likely:

1) Very low- and lower-income households often compete for the same lower-cost units as moderate- and some above-moderate households.

2) Lower-cost housing units are most likely to be studio, one- or two- bedroom homes, which may not be suitable to lower-income families, especially large families.

Since 1980, Folsom has evolved into a "dual" housing market, with a sizeable stock of older, lower-cost housing and newer units affordable mainly to moderate- and above moderate-income residents. Some evidence of this duality existed in 1980. The Census showed the median cost of housing varied significantly with the age of a home.

Homes constructed the year prior to the Census had a median price of $130,000, whereas homes constructed prior to 1960 had estimated median values of $50,000 to $60,000. In between were homes constructed during 1970-1978. These homes had estimated median values of $80,000-$100.000 in 1980.

Changes in housing costs in Folsom since 1980 reflect four underlying factors:

3) Regional housing demand pressures which have caused property values and rents to rise,

4) The price mix of new housing units built,

5) The growing desirability of Folsom as a residential environment, and

6) Increased costs of construction, including land prices and development costs, and facilities that serve new residences.

The following table uses information on the maximum housing payments for the average size household and the housing cost information presented in the above tables to estimate the number of housing units affordable to each income group.

Table 17 shows SACOG's estimate of housing affordability by household income level throughout the City in 1990. Based on these estimates, only 34.3% of the units are affordable to very low-income households. Each of the remaining income levels have a higher percentage of affordability with moderate-income households being the next most in demand of affordable housing at 60.3%.

*** Ratio of affordable units to households for each income level.

Housing Age and Condition. In 1987, over half (58%) of Folsom's housing was constructed since 1975 and over 80% since 1960. Less than 6% of the City's housing predates 1940, and these numbers have only become greater in the five years since.

Given the relative newness of Folsom's housing, one should not expect to find a significant problem of substandard housing. In fact, an exterior housing conditions survey conducted in 1991 identified only 88 housing units in need of rehabilitation.

The exterior conditions survey did not include several homes which were in the process of being repaired by their owners. It should be noted that the survey was not an extensive "walk through" inspection of each unit; therefore, it is possible that many of these units may be in need of internal repairs.

Also, it is highly likely that other homes are substandard internally, although the outward appearance might not show a need for substantial home repairs. Details of the housing conditions survey are discussed later in this document.

Special Housing Needs. This section will identify the housing needs of special population groups such as the elderly and mobility impaired. The table below summarizes 1990 Census data for householders over the age of 65, female householders, large families, and overcrowded households.

Table 23-18
GENERAL HOUSEHOLD CHARACTERISTICS

Residents 65 Years of Age or Older. The 1990 Census determined that there were 2,590 persons over the age of 65, and 1,619 households with a head of household 65 or older, in the City of Folsom. Although the actual number of persons within this age group has increased, the proportion of the total population 65 years and older has decreased by more than six percentage points.

Nearly four in five (79.4%) of Folsom's older households own their homes. Most of these households do not have trouble meeting their basic housing costs because the mortgage has been paid in full. However, other housing costs, particularly utilities and maintenance, continue to increase, making it increasingly difficult for those households who depend primarily on Social Security and income from pensions to meet these

costs. As these older homeowners find they do not have the necessary funds to maintain their homes, they defer maintenance. When this occurs over a period of years, many homes become dilapidated and no longer provide a safe or healthy living environment.

Only one of five (20.6%) households 65 years or older rents its unit. These households face a much more difficult housing situation, however, regarding unit availability and affordability. There is no readily available data which can identify the number of older renters in need of housing assistance. However, these older households are included in the total number of low-income renter households identified as needing housing assistance.

Large Families. There were 755 large families (five or more members) living in Folsom in 1990. Information is not yet available from the 1990 Census regarding the income levels of these families. To keep from being overcrowded, these families need housing units with five or more rooms.

There are 7,094 housing units in the City with five or more rooms (1990 Census), but the Census does not identify the housing costs associated with these housing units.

Based on the available information, it is assumed that the housing needs of above moderate-income and most moderate-income large families are being met. Given the small supply of rental units, particularly rental apartments, with three or four bedrooms that are affordable to very low- and low-income households, the City would need to expand the supply of such units to meet the needs of lower-income large families.

The extent of this supply imbalance cannot be quantified until 1990 Census data is available to allow a comparison of rental rates by number of bedrooms with household income for large families. The tables below show the total rooms per housing unit and the total household size by household status and tenure.

Mobility Impaired. Persons with physical handicaps that limit their mobility need a housing plan that addresses the problems of accessibility within the handicapped person's private residence. Accessories such as handrails, ramps, wider doorways, and non-skid flooring are necessary for many mobility-impaired persons in order to have maximum use of their home.

The Sacramento Easter Seals Foundation, Sacramento County Social Services, the Association for Retarded Citizens, the State Department of Rehabilitation, and the Alta Regional Center were contacted in order to determine the needs of individuals in Folsom with physical conditions which require special housing design.

The Alta Regional Center, a state-funded non-profit agency which provides services for the developmentally disabled, indicated that they are providing services for 45 persons in the Folsom area. According to the Center, the housing needs of this group are mainly financial assistance needs. The City could provide housing for this group through the implementation of policies and programs aimed at assisting in the development of affordable housing.

Both the Easter Seals Foundation and Placer County Social Services agree that it is very difficult to quantify the physically handicapped population because members of this population do not congregate towards specific programs. However, the 1980 Census data identifies 324 individuals within Folsom as having a disability involving work or public transportation. It is assumed that a large percentage of these individuals are members of low-income households, since their disabilities preclude them from working. It is also assumed that these households require housing assistance, particularly rental assistance.

Financing for disabled accessibility improvements is also available through the City's Community Development Block Grant Program for those homeowners whose family income falls below 80% of the median income. Encouraging investors to add accessibility features to single-family rental units is a difficult proposition, however, as any permanent alteration could affect the units' marketability to non-disabled persons.

Homeless. There are no homeless facilities in Folsom. Furthermore, there is no information which is readily available regarding the nature of the homeless population in Folsom. None of the primary social service agencies that provide homeless services in Sacramento County (Volunteers of America, Catholic Social Services, Traveler's Aid, and the Salvation Army) are aware of any significant number of residents from Folsom, or individuals passing through Folsom, who require emergency shelter. City officials are aware that homeless transients passing through Folsom will occasionally camp at Negro Bar State Park campgrounds temporarily, but they have also concluded that the City's relative distance from central Sacramento, from an operating railroad line, and from Highway 50 would make it unlikely that a significant number of homeless individuals would seek shelter in Folsom.

Female Householders. The 1990 Census determined that 21.2 percent of the households in Folsom (1,854 households) are headed by women. Four hundred twenty-nine of these householders are single and have children. Information regarding the income levels of these households is not available, but it can be assumed that they have income levels below the median area income.

Interviews with the Placer Women's Center indicate that housing affordability is the number one problem concerning female householders. The second major concern is the availability of apartment owners who will rent to single mothers. The Placer Women's Center suggests that increased affordable housing and educational programs for single mothers would help substantially.

Housing programs aimed at increasing the stock of lower-income housing would benefit this group. In addition, multifamily housing with child day-care facilities would benefit female householders with children. A multifamily housing survey could identify complexes with this type of facility.

Incidence of Overcrowding. The Census Bureau defines an overcrowded household as one which has more than one person per room, excluding bathrooms, kitchens, closets, and hallways.

The 1990 Census counted 208 overcrowded households (2.4%) in Folsom, 124 of which (1.4%) were rental households. The table below shows the number of persons per room in the City as reported by the Census. The income levels of these households cannot be determined at this time. Furthermore, it is not clear whether these households are overcrowded because they cannot afford to rent housing with sufficient numbers of rooms, or if there are simply not enough multiple-room rental units in the City. A multifamily housing survey would answer part of this question.

Table 23-21

Source: U.S. Census Bureau, 1990.

Farmworkers. The City of Folsom is not an agricultural community. Since there is no known community of farmworkers in Folsom, there is no identifiable need for farmworker housing or other facilities. However, the 1980 Census reported that 30 individuals were employed in agricultural pursuits.

The Census did not report specifically on whether these 30 individuals were seasonal laborers, ranch-
hands, farm or ranch owner-operators, or "hobby" farmers. It is possible that some or all of these individuals may be employed in agricultural or ranching pursuits in the El Dorado Hills area, in the apple orchards in El Dorado County, in El

Dorado County vineyards, or in agriculture or ranching southeast of Folsom.

Because there are no large agricultural operations nearby that would attract a substantial seasonal farmworkers population, there does not appear to be a need for special farmworker housing in Folsom. If any individuals employed in agriculture in Folsom require housing assistance due to their economic status, their need can be met through other housing assistance programs targeted for lower-income households in general.

23.3 RESOURCE INVENTORY

23.3.1 Housing Stock Characteristics

Housing Type and Tenure

The table below provides 1990 Census data on housing types and vacancy in the City of Folsom. Since 1990, the California Department of Finance reported (January 1992) that the City's housing stock has increased to 11,247 dwelling units, of which 7,973 are single family homes, 492 are dwelling units in buildings of 2 to 4 units, 1,895 are dwelling units in buildings of 5 or more units, and 886 are mobilehomes.

Vacancy Status

There were 645 vacant housing units in 1990, a vacancy rate of 6.8 percent in the City. Of those, 175 units were vacant for rent, and 297 units were vacant and for sale. An additional 86 units were sold or rented and awaiting occupancy, and 87 other units were vacant for other reasons but not available for occupancy.

The effective vacancy rate in the City, therefore, was 5.1 percent in 1990 (4.4% for owner-occupied housing and 7.2% for rental housing). The overall percent of units unoccupied declined from 6.8% in 1990 to 4.6% in 1992.

For a typical community with moderate growth and turnover in housing units, a vacancy of 2% for owner-occupied housing and 5% for rental housing is considered adequate to ensure sufficient choice and movement by households looking for housing.

These vacancy rates indicate that, at the time of the Census, the City of Folsom had adequate vacancy rates, and that, overall, there is no housing shortage in the City. These general statistics do not reveal, however, the relative availability of housing that meets the needs of low- and moderate-income households.

Table 23-22
HOUSING STOCK CHARACTERISTICS

	Total Units	Percent	Occupied Units Owner	Percent	Renter	Percent
Housing Types

23.3.2 Condition of Housing Stock

A 1986 survey of housing conditions found approximately 100 dwelling units in need of rehabilitation. All of these units were located in the City's redevelopment area, in the central portion of the community developed prior to 1970. A follow-up survey of housing conditions conducted in 1991 found that eighty-eight (88) dwelling units are need of repair. The level of repair needed is summarized below:

- 58 minor repairs
- 30 moderate repairs
- 0 substantial repairs
- 0 are dilapidated (not feasible to repair)

The decrease in the level of units in need of rehabilitation was primarily due to the City's housing rehabilitation program, in operation since 1988.

23.3.3 Residential Lands Inventory

The purpose of the Residential Lands Inventory is to summarize the City's total residential holding potential. The resulting number of potential units can then be compared with expected growth patterns to determine if it is possible to construct housing in sufficient quantities for households of all income levels.

To compute the total number of residential dwelling units which could realistically be built, the report first totaled the units which are either under construction, have been approved, or for which proposals have been submitted. This number was added to the total number of units which could potentially be built in the remaining undeveloped residential areas under a medium-density development assumption (this density level is the most likely considering current City policies).

The total residential potential under this assumption is then adjusted to reflect the extent to which recent residential development (projects which are either under construction or have been approved) has taken advantage of densities allowable under the medium density scenario. Table 18 calculates a construction ratio by dividing the projected number of units allowed at the "midpoint" density level into the actual units approved and under construction. For example, single family housing developments are currently being constructed at approximately 108 percent of allowable densities under the Medium Density scenario.

The majority of the information used in this analysis was taken from the City's Housing and Population Capacity Analysis report. This report defines three scenarios for potential growth according to different density levels; low, medium, and high. These density levels represent ranges established in the City's General Plan. The density ranges were applied to housing types as follows:

Housing Type	Low	Medium	High
Single Family Low	2.0	3.0	3.9
Single Family High	4.0	5.5	6.9
Multi Family Low	7.0	9.5	11.9
Multi Family Medium	12.0	15.5	17.9
Multi Family High	18.0	21.5	25.0*

* Could only be achieved with a density bonus.

Land Inventory

A land use inventory was updated for the City in October 1991. The survey shows that about half the City's land has already been developed or is under development.

The results of the survey are shown below. The first table shows the developed land in the City and the second table shows the undeveloped land in the City.

Table 23-23
LAND INVENTORY
Developed By Use Land Designation

General Plan Designation	Acres	Percent
Single Family Residential	3,999.26	26.36%

* Potentially affordable to this income group at the allowed density range only with local regulatory incentives and/or financial subsidies.

NOTE: This Table shows land use designations as included in the General Plan at the time of adoption of the Housing Element. A proposal is pending to redesignate industrial land in the East Area to residential use.

Source: City of Folsom Community Development Department, 1991.

Table 29 indicates that the City could accommodate its remaining regional share of housing for all income groups based on existing General Plan densities if it adopts programs to stimulate the production of affordable housing (see Goals, Policies, and Programs). Folsom's remaining SACOG regional housing share between 1991 and 1996 is 1,905 dwelling units affordable to very-low income households, 922 dwelling units affordable to low-income households. 1,135 dwelling units affordable to moderate-income households, and 710 dwelling units affordable to above moderate-income households. There is more than sufficient land designated for single family development to meet the remaining above moderate-income housing need (710 dwelling units), even if all such development occurred at the bottom of the density range. To meet low-

and moderate-income housing needs, many multifamily developments would have to occur at the mid-point or higher density range. To meet very low-income housing needs, multifamily developments would need to occur at the upper end of the density range in the medium and high density multifamily categories.

It is not necessary that every development on multifamily-zoned land will occur at the highest density allowed and include only low- and moderate-income housing to meet the City's lower- and moderate-income housing needs. There is sufficient capacity within the three multifamily categories to ensure that enough developments could be accommodated to meet these needs in projects containing a mixture of dwelling units for all income groups.

The City is presently revising its zoning code to reflect the 1988 General Plan categories. The zoning code revision is a high priority and should be completed by July, 1993. Pending the zoning code revision, the City is allowing developments that reflect the current General Plan density ranges, and does not anticipate that the lack of an updated zoning code will represent a constraint to development during the updating period.

The types of dwelling units that could potentially be constructed in each land use category are based on the density ranges shown on page 44. These densities are established by the Land Use Element (see Table 21-4). For the purpose of projecting the total number of dwelling units and population, public facilities, and community services needs, the City has assumed that development, on the average, will occur at the mid-range of the allowed densities, although the highest density is allowed for projects which incorporate low- and moderate-income housing.

Section 21.2.4 of the Land Use Element contains policies used by the City for judging whether densities above the minimum should be allowed. The low end of the density range for each residential land use category is allowed by right. The higher end of the range is allowed if a development incorporates "special benefits", such as additional park or open space, on-site recreational facilities, additional trees or landscaping, or transit facilities or services. The City can also permit higher densities for other "special benefits" which are not specifically named in the General Plan. One of these other benefits for which the City allows developments at the higher density is the provision of senior, low- or moderate-income housing.

The City does not use the special benefits policy to discourage higher density projects, but to assure that developments with higher densities contain offsetting benefits that address the impacts of those higher densities. In fact, it is not difficult for developers to qualify for the higher densities, and several developments have been approved at densities higher than the mid-range density since the General Plan was adopted in 1988.

Because the City will allow developments which include low- and/or moderate-income housing to qualify for the highest density within the applicable residential category, the General Plan has a built-in density bonus program. The "bonus", in this case, is the ability to develop at the high end of the density range in exchange for providing at least 10% very low-income housing, 20% low-income housing, 25% moderate-income housing, or senior housing (see Programs 7 and 8 for details). The effect is to provide a density "bonus" of between 39% to 70% over the minimum density allowed, depending on the residential category. This is more generous than the 25% density bonus required by state law. Program 8 contains conditions on the moderate-income density bonus to ensure that it does not discourage very low- and low-income housing proposals.

A review of the average development densities of projects approved since 1988 indicates that most were proposed at the mid-point density range or less. The lower densities reflect market conditions, the desire of home builders to

construct mostly single family dwelling units (although townhouses have been proposed and two apartment developments have been completed recently). The City has not discouraged higher density housing, but the local housing market, as perceived by homebuilders active in Folsom, does not seem to support substantial multifamily development at the present time.

Several home builders have produced smaller, single family dwelling units priced at less than $150,000 for first-time home buyers and moderate-income households. More such homes are proposed as these units sell quickly. An evaluation of proposed building plans indicates that most include three- or more-bedroom single family homes priced at more than $150,000, however. This trend could change as builders try to address the large, unmet demand for low- and moderate-income housing, which represents a potentially larger market at the present time than the "move-up" single family home market.

City land use policies favoring a variety of housing types is a necessary condition for the production of affordable housing. Favorable City land use policies can not guarantee, however, that builders can and will respond to low- and moderate-income housing needs if there is a strong local market for other types of housing. The City cannot control, and has no desire to dictate, how home builders respond to the needs of the housing market.

The City can use General Plan policies, regulatory incentives, and financial incentives to encourage home builders to propose a wider variety of housing types. The City can also cooperate with other governmental entities and non-profit housing corporations to produce housing for low- and moderate-income households. Folsom does not believe, however, that the City's role should include the adoption of mandatory "inclusionary" housing policies which require home builders to produce a specified percentage of low- and moderate-income housing.

Because the City cannot "control" the decisions of homebuilders, and does not consider a mandatory inclusionary housing program appropriate, the Housing Element includes a program (see Program 2) to monitor development proposals on multifamily-designated land and to determine, annually, if any changes in land use policy are necessary to encourage more proposals for housing affordable to low- and moderate-income households.

Analysis of Zoning

It is generally agreed upon that densities in excess of 20 units per acre are required for new multifamily units to be affordable to lower-income households, particularly in high-cost areas. The "realistic potential" number of units in land use category MF High (Multifamily High Density) in the above table is based on the midpoint density level of 21.5 units per acre. This is the most likely scenario for average density levels (as calculated in Housing and Population Capacity Analysis for the City of Folsom, California study conducted by the City of Folsom), not a maximum allowable density. The maximum allowable density for this land use category is 25 units per acre. However, builders seeking approval of projects in excess of midpoint density levels must prove that the project offers substantial benefit to the City. The provision of affordable housing would be one benefit that would induce the City to offer a density bonus so that the 25-units-per-acre density could be achieved.

The City provides additional housing opportunities by allowing elderly housing in medical commercial zones. Two elderly housing proposals are pending before the City include a combination of congregate care facilities and individual apartments.

If it is assumed that densities of 21.5 units per acre are sufficient, in conjunction with other City incentives and government subsidies, to accommodate affordable housing for lower-income households, then it can be concluded that the

1,793 potential multifamily high density units are sufficient to meet the needs of the 1,445 very low-income households expected to reside in Folsom by 1996. This leaves a surplus of 348 multifamily high-density units which can be used by low-income households.

According to this analysis, zoning should not be a constraint to the production of affordable housing for very low- and low-income residents over the next five years, provided that other factors which affect the financial feasibility of constructing affordable housing are addressed (such as infrastructure requirement and development fees, construction costs, financing costs, etc.).

The City recognizes, however, that zoning density is just one, albeit an important, factor that determines the cost of housing. Higher residential densities, by themselves, will not guarantee the financial feasibility of affordable housing, although they are the primary determinant of whether the City could accommodate such housing. The City believes that its present zoning will not hinder the construction of such housing if other cost factors that affect the financial feasibility of providing housing for very low-income households can be addressed.

SACOG projects that 952 additional low-income households would need to be accommodated in Folsom by 1996. If 348 of these households are able to find housing in the MHD land use category, and the balance of 604 households are able to find housing in the MMD land use category, then it can be concluded that there is a sufficient amount of appropriately zoned land available to accommodate the 2,397 very low- and low-income households expected to reside in Folsom by 1996. The mid-range density for the MMD category, 15.5
dwelling units per acre, is typical for garden apartments and condominiums.

An informal survey conducted of the apartments constructed since 1986 concluded that 45 percent of the units, most of which are medium-density projects, are affordable to low-income households. This suggests that incentives and governmental subsidies would be necessary in addition to higher densities to provide affordable housing.

Should the City find that the present multifamily densities, governmental incentives and subsidies are insufficient to reduce the cost of providing rental housing affordable to low-income households, the City will re-evaluate its maximum densities to determine if higher densities would increase the financial feasibility of providing such housing.

Zoning, however, could present development constraints to mobilehome park proposals within the City. The City of Folsom defines mobilehome parks in its Title 17 chapter, Zoning, as follows:

Mobilehome parks as used in this part, means any tract of land where space is rented or held out for rent to one or more owners of mobilehomes. Mobilehome parks shall be located in residential mobilehome zones known as RMH Zones and shall be subject to issuance of a Use Permit. (Ord. 262 Sec. 1, 1970: Ord. 258 Sec. 2 (part), 1970).

There are only a few mobilehome parks in the City of Folsom, due in part to zoning regulations and identified sites. Among the regulations are:

1) A minimum of two 10 feet by 20 feet parking spaces for each mobilehome.

2) A minimum entrance of at least 36 feet.

3) All roadways within the mobilehome park will be paved with asphalt or concrete and have adequate curbs and/or gutters.

4) Each mobilehome park will provide a minimum recreation area or areas within the park of not less than two hundred square feet per mobilehome site.

5) Where mobilehome units are situated adjacent to public roadways, they shall be set back a minimum of 25 feet.

6) Mobilehome sites shall be so situated that no mobilehome shall be closer than 10 feet from another mobilehome or permanent structure.

Analysis of Public Facilities and Services

Most vacant areas of Folsom do not currently have roads and municipal facilities in place. This is a primary concern in evaluating the development potential of these vacant lands during the five-year time period of this Housing Element. The city of Folsom relies on area facilities fees and development funding mechanisms to provide municipal facilities that benefit new residential development. The lack of most facilities is not a growth constraint, so long as the City and developers can agree on the timetable for installing required improvements. Since very little of the City's vacant land contains "development-ready" facilities, these must be installed as development proceeds.

There are several long-term concerns regarding the ability of the City to accommodate new development. These include sources of drinking water, the capacity of the regional sewer plant, and the capacity of the City's traffic circulation system, especially the bridges. None of these concerns should be serious enough to limit development over the next five years, but solutions to these concerns must be identified during this period so that they can be implemented over the next 10 to 20 years.

These factors, as well as other constraints such as the fixed size of the City limits and the City's Sphere of Influence, are important in projecting the amount of development the City will allow during the next five years. One of the primary effects of the City's fixed Sphere of Influence is that it is very difficult for the City to annex land. and, therefore, the City must maximize its use of existing land.

The major constraint to future development in Folsom is the availability of water. The 1988 Folsom General Plan EIR estimated that existing water supplies should support 11,600 households and a total population of approximately 32,000. Since SACOG projects a total of 14,392 households in Folsom by 1996 (nearly 38,000 residents at the present average household size), it is obvious that water is a constraint to housing development. The City is trying to procure additional water supplies through the federal bureau of Reclamation and other sources.

All of the South Area Assessment District is already served by, and the East Area Specific Plan can be connected to (by the end of 1995), major off-site public facilities needed prior to development, including sewer, water, and roads. Internal roads and facilities would have to be provided by the developer.

A financial constraint to housing development exists due to the relative lack of existing infrastructure in the undeveloped portions of the City. The majority of undeveloped residential land in Folsom does not have the infrastructure needed for development.

The streets, sewer lines, power, and drainage facilities are generally developed as needed in the newer areas of the City. The financing of internal as well as regional facilities required for new development is generally accomplished through assessment districts and developer fees. The costs associated with these improvements are then passed along to the homeowner or renter, thereby causing higher housing costs than would be experienced in areas with existing infrastructure.

Given the reality of municipal financing under the present property tax system, there is no practical method for the City to issue general obligation bonds or use current tax revenues to pay for the expansion of needed infrastructure in

developing areas of the City. Infrastructure costs must be paid, therefore, either by the developer (who would pass these costs along up-front to the consumer) or through an assessment district (in which case new homeowners would pay additional taxes to cover the assessments and renters would pay higher rents to cover the rental owner's added tax cost).

Since water lines, sewer lines, drainage, roads, and other municipal services must be provided regardless of the type of housing developed, the City cannot waive these requirements for affordable housing projects. The City could reduce the financial impact of these necessary facilities and services, however, by adopting alternative standards for affordable housing, reducing or waiving certain impact fees, and providing partial subsidies.

Additional Uses

Aside from single-family and multifamily owner-occupied and rental housing, the residential lands mentioned in the vacant lands table above can be used for factory-built housing, mobilehomes, emergency shelters, and transitional housing, as needed, to meet the City's housing goals and needs.

23.3.4 Areas with Residential Potential

The City of Folsom has very little flexibility in its use of land due to the fact that the city limits and the Sphere of Influence are essentially one and the same. Because these limits are synonymous, the City cannot annex land from outside its city limit. Therefore, land with residential potential must be located on the undeveloped land within the city. The Willow Springs subdivision converted land designated as industrial in the City of Folsom General Plan to residential, but there are very few additional opportunities for the City to convert land uses previously designated non-residential.

23.3.5 Potential Loss of Units

Assisted (At-Risk) Units

"Assisted" dwelling units are subsidized multifamily rental dwelling units which are under contract with either local, state or federal agencies to provide housing at below market rates. State law requires local jurisdictions to identify and determine the status of federally subsidized units; at-risk units are those assisted units which will be eligible to terminate their use restrictions over the next ten years. The following table identifies the assisted units in Folsom.

Table 23-25
ASSISTED UNITS IN FOLSOM

Complex Name And Address	Total Units	Elderly Units	Earliest Termination	Government Program
Bidwell Gardens 1201-1212 Bidwell	14	-0-	6/16/90	Section 8
Folsom Gardens I 613 Stafford Street	48	8	1/14/91	FHA Section 236 (J)(1)
Folsom Gardens 613 Stafford Street	48	16	9/19/93	FHA Section 236 (J)(1)

Source: 1990 Updated Inventory of Federally Subsidized Low-Income Units at-Risk of Conversion.

Table 30 indicates that there are 110 low-income housing units in Folsom which are in danger of being converted to market-rate housing over the next five years. The 14 at-risk units in the Bidwell Gardens complex are currently being assisted by the Section 8 program. The complex owner intends to keep the units at the below-market rate indefinitely by renewing the Section 8 contract in 1995. The contract would be renewed automatically in 1995 unless the owner chooses to opt out of the contract at least one year in advance of the expiration date. This development could be at-risk in the future, however, if the owner decides to voluntarily terminate the contract or if the federal government does not provide sufficient appropriations to renew all expiring Section contracts.

Folsom Gardens Apartments I and II are owned and managed by FPI Real Estate Group in Sacramento. In December 1990, FPI filed a Notice of Intent to Prepay Mortgage. FPI states that it would like the units to remain affordable to lower-income households and has contacted the City of Folsom about purchasing the units. The City's current position on the matter is that property management and ownership is better accomplished in the private sector. The City has not made any plans to purchase the properties. Rural California Housing Corporation, a nonprofit organization, has shown interest in purchasing the properties and will pursue the matter further when the Department of Housing and Urban Development establishes guidelines for prepayment.

The proposed sale of Folsom Gardens I is proceeding under the requirements of the Low-Income Housing Preservation and Resident Homeownership Act of 1990, which contains a number of procedural requirements relating to public notice, right of first refusal by a qualified public agency or non-profit, and other requirements that must be met before a sale can occur on the open market. CDBG funds may be used a source of funds to preserve the affordability of the dwelling units.

Replacement cost for these units can be approximated by the cost to build a similar multifamily complex. Interviews with the developer of a recently completed multifamily apartment complex in Folsom indicated that the total development cost was approximately $80,000 per unit. If these units were replaced with other rental units developed with governmental financial incentives, the cost per unit would potentially be decreased to as little as $68,000, for a total replacement cost of between $7,480,000 and $8,800,000.

The cost of maintaining the affordability of these units can also be determined by comparing the subsidized rental rates with market rental rates. The difference between these two figures represents the subsidy needed to maintain affordability.

The proposed sale of Folsom Gardens I is proceeding under the requirements of the Low-Income Housing Preservation and Resident Homeownership Act of 1990, which contains a number of procedural requirements relating to public notice, right of first refusal by a qualified public agency or non-profit, and other requirements that must be met before a sale can occur on the open market. CDBG funds may be used a source to preserve the affordability of the dwelling units."

Rancho Cordova-based Affordable Homes for Americans has applied for a "bridge" loan from the Sacramento Housing and Redevelopment Agency to purchase these at-risk developments. Folsom has submitted letters of support to SHRA.

Table 31 summarizes the total subsidies required to maintain the affordability of the units.

Table 23-26
MONTHLY SUBSIDIES REQUIRED TO MAINTAIN AFFORDABILITY OF AT-RISK RENTAL DWELLING UNITS

Complex Name	Market Rate	Subsidized Rate	Difference (Subsidy)	# of Units	Total
Bidwell Gardens	$ 450	$ 424	$ 26	14	$ 364
Folsom Gardens I	$ 290 (1BR)	$ 200 *	$ 90	16	$ 1,440
	$ 330 (2BR)	$ 200 *	$ 130	32	$ 4,160
Folsom Gardens II	$ 296 (1BR)	$ 200 *	$ 96	16	$ 1,536
	$ 347 (2BR)	$ 200 *	$ 147	32	$ 4,704
Total Monthly Subsidy					**$ 12,204**
Total Yearly Subsidy					**$ 146,448**

* Subsidized rate varies according to tenant's income. These figures were provided by the complex manager as estimated averages.

Demolitions

The loss of housing units due to demolition has not been a problem in Folsom. Over the last five years, the City estimates that no more than three units have been demolished.

23.4 HOUSING CONSTRAINTS

Previous chapters have identified development trends and housing needs in the City of Folsom. This chapter describes potential impediments to the production of affordable housing in Folsom. There are several factors which can affect the level and cost of housing production. These factors can be grouped into four categories.

1) Environmental characteristics of land which affect the cost and suitability of the land for residential development.

2) The capacity of municipal facilities and services to accommodate new residential development.

3) Economic factors affecting the level and cost of housing production.

4) Government policies, plans, programs, and regulations affecting housing.

While these factors may not always have substantial negative impacts on the level of housing production in Folsom, they can influence housing cost and availability to certain population groups.

23.4.1 Environmental Considerations

A number of environmental considerations must be addressed in the development process in Folsom. Some of the environmentally-related development standards imposed by the City are in direct response to state and federal requirements to protect wetlands, endangered species, and other environmental assets located with the City. Other standards reflect purely local environmental concerns. While these environmental considerations do not always represent as constraint on the number of housing units which can be built, they can affect the configuration and placement of dwelling units on a site.

More importantly, these requirements may add incidental costs to the total cost of development. These incidental costs, while not significant by themselves, could become a significant factor in conjunction with other development costs in the financial feasibility of affordable housing.

To mitigate the possible negative effects of these costs, the City would need to evaluate how its development standards affect affordable housing development costs on a case-by-case basis and make a policy decision in each case of whether to allow alternative standards that are less costly.

Environmental considerations addressed by the City's development standards include the protection of creeks and other waterways, the preservation of significant trees, the protection of hillsides and hillside views, and the use of landscaping for shading and to screen residential developments. With careful site planning, a developer can meet these environmental design guidelines without reducing the number of housing units allowed under the General Plan, except perhaps in steep, hilly terrain.

Sensitivity to these factors has been an essential component of the attempt to retain a quality living environment and to avoid the negative effects of development. Of particular concern is the water runoff from development. The majority of the General Plan area's runoff flows into Lake Natoma, which has been identified by the State Department of Fish and Game as a unique wildlife and fisheries habitat.

23.4.2 Municipal Facilities Constraints

Infrastructure

Most vacant areas of Folsom do not currently have roads and municipal facilities in place. The City of Folsom relies on facilities fees and other developer funding mechanisms to provide municipal facilities for new residential development.

The City of Folsom adopted an Urban Development Policy in 1983 to implement its General Plan. According to Section VI (Municipal Services and Facilities), the City will require developers to provide facilities (streets, storm drains, sewer lines, water lines, etc.) and equipment that serve their developments. Folsom has also adopted a municipal facilities fees schedule to cover the costs of many off-site improvements and has established the Folsom South Area Assessment District to finance the installation of municipal facilities in most of South Folsom between Folsom Boulevard and East Bidwell Street.

Folsom has set forth a procedure in its Urban Development Policy for preparing area facilities plans in other parts of the City. Such plans must identify municipal service and facility needs of the area covered by the plan, provide a cost estimate of the improvements, propose a procedure for apportioning costs among the benefitted properties, and set up the administrative funding mechanism.

As long as the City and developers can agree on the timetable for installing required improvements, the lack of facilities is not a growth constraint. Since very little of the City's vacant land contains "development-ready" facilities, these facilities must be installed as development proceeds. Due to the cost of infrastructure development, new residential development in areas without infrastructure will be more expensive than areas with infrastructure. A majority of these costs are likely to be passed on to the homebuyer.

Water/Sewer

Water Facilities. The water supply for most of the City of Folsom comes exclusively from Folsom Lake via the Bureau of Reclamation pipeline to City-owned facilities. Water is treated at the City's filtration plant and is then fed into the distribution system. The City is currently divided into three separate pressure zones.

The design capacity of the water treatment plant has been expanded from 10 to 20 million gallons per day (mgd). The actual capacity of the expanded plan may prove to be up to 50% greater than the design capacity due to the reasonable conservative surface loading rate that has been used for design. The plan must be fully tested in operations before the actual maximum capacity can be established. The plan has been planned for another 10 mgd (design capacity) expansion increment, when ultimately required.

The City of Folsom's water entitlement from Folsom Lake limits the City to 22,000 acre-feet per year. The city is currently attempting to increase this water entitlement, but competition for additional water entitlements is great from throughout Central California, and there is no guarantee that the City will be able to contract for additional water.

The city has contracted to supply up to 5 million gallons per day of raw water to Aerojet in addition to supplying up to 3 million gallons per day of treated water to Aerojet through facilities constructed as part of the Folsom South Assessment District and the Nimbus Water Assessment District. The contract with Aerojet will remain in effect until December 31, 2036.

Recent water usage data for the City through the year 1985 is presented in Table 32.

Water usage projections for ultimate buildout within the study area (undeveloped portions of the City, excluding 1,000 acres annexed in 1984) have been developed using "per-acre" usage factors

based on the type of usage and density of development. These factors were generally abstracted from a report prepared by City staff dated November 1983 and were updated for consistency with anticipated use types in this area. These water consumption factors, shown in the table below, are thought to be realistic for the Sacramento and Folsom areas.

Note that the following restrictions currently exist on water supply:

1) Maximum annual usage = 22,000 acre-feet.

2) Maximum treatment = 20 mgd. with current expansion complete.

3) Ultimate treatment = 30 mgd (to 45 mgd), with planned "ultimate" expansion. This expansion of treatment capacity may not be possible at the existing site.

Table 23-27
WATER USAGE DATA

Year	Yearly* Consumption Treated Water (Acre-Feet)	Treated** Water Maximum Day (mgd)	Raw Water (Acre-Feet) (Including Aerojet)	Yearly Usage Total (Acre-Feet)
1981	3,500	7.8	5,000+	8,500
1982	3,500	7.8	6,500***	10,000
1983	2,600	5.8	6,500***	9,100
1984	2,750	6.1	6,500***	9,250
1985	3,165	---	-----	------

* Based on metered water production at water treatment plant.
** Estimate based on assumed peaking factors.
*** Rough estimate of current usage.

Source: Yearly consumption of treated water based on City of Folsom records.

Note: The treated water consumption declined in 1983 because a portion of the system (Ashland) was served by other sources (San Juan Suburban Water District) as of late 1992.

Table 23-28
WATER CONSUMPTION FACTORS

Land Use	Density	Water Duty (Acre-Feet/Year)
Residential		
Low Density	2 units/acre	2.8
Medium-Low Density	3 units/acre	3.0
Medium Density	4-6 units/acre	3.8
Medium Density	7-10 units/acre	4.1
Multi	10-15 units/acre	4.5
Multi	16-25 units/acre	6.0

Industrial		
Light		2.5
Heavy		2.5
Office Park (Heavy Landscape)		4.5
Parks		3.0

Source: City of Folsom Staff Report, Water Supply and Disposal. November 1983 (as revised).

Folsom's present water allocation is sufficient to serve the area within the former City limits (prior to the annexation in 1984 of 3,689 acres) at the current General Plan land use densities. The City has sought an increased allocation from the Bureau of Reclamation of 22.000 to 25.000 acre feet as well as opened negotiations with San Juan suburban water district for additional participation in their system.

Sewerage Facilities. The City of Folsom and Folsom Prison are served by a series of City and regional interceptor sewers which transport wastewater to Sacramento County's Regional Wastewater Treatment Plant. Collection, lateral, and certain interceptor sewers which feed from various areas of the City into the regional facilities are owned by the City of Folsom.

The collector sewer capacity is, in itself, a relatively minor concern to the overall issue of Folsom's development capacity because sufficient sewer capacity can be financed through the regional sewer district to meet the City's future housing needs.

The capacity of individual segments of the City's various interceptor lines is an important consideration in planning for new development, however. These capacities range from 3 million gallons per day to 12.5 million gallons per day. The peak dry weather flow for the entire community in 1984 was 3.6 million gallons per day as measured by the City's metering station, and the peak wet weather flow was 6.5 million gallons per day.

The City has recently upgraded its pump station capacity to 12.5 million gallons per day (average daily flow). This capacity would be sufficient to handle Folsom's sewerage needs under the current General Plan land use designations.

In sum, if the City works closely with Sacramento County to plan for sewerage flow increases, any acute capacity shortage and delays of development approval can be avoided. Developers will be required to provide adequate sewer lines to serve their developments and contribute to the improvement of interceptor lines.

23.4.3 Economic Factors

Land Costs

Precise information regarding land and improvement cost differences between Folsom and surrounding cities is not readily available. However, interviews with local developers have yielded the following estimated costs for a 6,000 square foot "finished" lot.

City	Estimated Cost
Folsom	$ 60 - 65,000
Roseville	$ 45 - 50,000
Sacramento (Laguna Area)	$ 37 - 42,000

In 1991, a custom home, "construction ready" lot (12 thousand square feet) in the City may sell for approximately $78,000.

Sacramento Title Company reported on the characteristics of sixty four vacant residential lots located throughout the City were reported. The majority of these lots were zoned single-family residential and have been transferred or sold during 1991. The lots, originally assessed from $6,100 to $171,965, sold from $50,000 to upwards of two and a half million. The majority of the subdivision lots, originally assessed at $40,219, were selling from $77,000 to $103,500.

The above information suggests that single family lot costs are higher in Folsom than in other developing parts of Sacramento and south Placer County and that the cost of land in Folsom could be an impediment to the production of ownership housing affordable to moderate- or middle-income households. The effects of land costs on the ability of homebuilders to provide rental housing affordable to low- and moderate-income households will depend primarily on the density allowed by the City and whether substantial amounts of non-residentially zoned land is rezoned for residential use.

Building Costs

Interviews with local developers suggest that there is no noticeable difference between building costs in Folsom, and the building costs in surrounding communities. The construction cost of housing in Folsom, therefore, would depend on the square footage of, and types of amenities included in, new housing units.

Financing

Interviews with several developers in the Folsom area have indicated that financing is a constraint to development regardless of the community in which the project is located. There do not appear to be any particular areas in Folsom, or types of projects, for which financing is less readily available than in other parts of the region. The availability of financing for housing development tends to be cyclical and follow the general economic cycle. While many developers are facing difficulties in finding financing for their projects, as the economy improves, financing should become more readily available.

Structural changes in federal laws governing financial institutions (as a result of the recent crisis in the savings and loan industry) will likely create some long-term problems with the availability of

development financing, but many homebuilders are seeking to overcome this problem by searching for alternative sources of capital, particularly from lenders in foreign countries.

The cost of money to finance housing developments is as important to the feasibility of housing construction as is the supply of financing. Affordable housing projects are particularly hard hit by the high financing rates that have characterized real estate lending throughout much of the 1980s.

Interest rates have declined dramatically since the early 1980s; typical interest rates for real estate loans to homeowners have varied between 8.25% and 8.75% between Fall of 1991 and Spring of 1992 for fixed, thirty year loans, and even lower for fifteen-year and variable-rate loans. These are the lowest rates since the mid-1970s. It does not appear that interest rates will decline to the lower levels that characterized the 1960s and early 1970s, but if they remain relatively stable at just under 9%, a substantial number of additional households will be able to afford home purchases. Even though interest rates have declined, they remain at a level which can present an impediment to the construction of affordable housing for lower-income households. Interest rate subsidies of two to four percentage points are often necessary to make a low-income housing project "pencil out".

Although the City of Folsom cannot control interest rates, it can help to reduce the financial impact of interest rates on affordable housing projects by using its powers to issue tax-exempt bonds or providing interest-rate subsidies from Redevelopment Agency housing set-aside funds.

23.4.4 Governmental Constraints

It is difficult if not impossible, to disassociate the market "cost" of housing production from the effects of government policies, exactions, and fees. A substantial portion of the development cost of housing cited in the previous sections relates directly to fees for, or the required installation of, such facilities as roads, sewers, drainage systems, schools, and parks. These are essential requirements for the health, safety, and welfare of Folsom residents. Additional City requirements relate to landscaping and the design of housing.

Residential Development Fees

The information provided in Table 34 below indicates that fees imposed on new residential development in Folsom are moderate in comparison to other communities, but nonetheless substantial as a percentage of the cost of new single family home or rental apartment. The effect of these fees on the financial feasibility of affordable housing will depend on the type of project.

For a typical multifamily rental housing project, these fees can represent between 10 percent and 20 percent of the final cost of rental housing. It would undoubtedly be in the interest of a developer of low-income housing to avoid this additional cost, but the City faces the dilemma of having to provide for the financing of necessary facilities and services while not precluding the construction of affordable housing. Some of the fees cited below are charged by other public agencies not under the control of the City. Three ways in which the City can address this dilemma are to:

1) evaluate changes in development requirements that might reduce the costs of providing needed infrastructure.

2) find sources of financing to partially subsidize these development costs, and

3) find sources of revenue or provide other incentives that can reduce other aspects of the development cost to offset the increased cost from infrastructure requirements.

Table 23-29
RESIDENTIAL FEE COMPARISONS

	West Sac	Davis	Rocklin	Roseville	Sac Co	Folsom
Value	$103,608	$116,460	$128,637	$128,637	$128,637	$128,637

NOTE: The fee comparisons shown above do not account for all costs imposed on new developments to pay for public services and facilities. This table does not show, for example, dedication requirements, subdivision improvement requirements, or special assessments paid by homeowners bi-annually with their other property taxes.

Development Standards

Construction activity in Folsom is subject to development standards adopted by the City in 1985. These standards address residential development requirements for landscaping, street lighting, fences and walls, solar energy use, and parking. The City adopted these standards to ensure that minimum levels of design and construction quality are maintained and adequate levels of street and facility improvements are provided.

The City does not believe that its development standards exceed the level necessary to ensure adequate circulation and

parking. drainage. environmental protection. and protection from potential visual nuisances. The City's standards are summarized below. The standards included in this summary are those with the greatest potential to affect housing costs.

Fences and Walls. Materials should be textured solid surface compatible with architecture of building. Property owner(s) should be responsible for maintenance of perimeter fences and walls.

Landscaping. Street trees (minimum ten-gallon size) are required. One or two trees per lot frontage should be used in residential areas. Existing significant trees should be preserved. Folsom's climate should be considered in the selection of landscaping materials.

Parking Lots. Parking lots serving residential uses should have one major exit/entrance point. Parking areas should be screened by an earth mound landscape, a low decorative wall, or by lowering the grade of the parking area.

Residential Streets. Street patterns should be indirect and should minimize through traffic. Greenbelts or landscaped setbacks maintained by homeowner associations are encouraged. Street width reductions will be considered on private streets where adequate access for emergency vehicles and off-street parking can be shown.

Building Codes

The City of Folsom follows the requirements of the Uniform Building Code (UBC) and the additions to that Code adopted by the State of California. Folsom has not amended UBC requirements nor added its own requirements.

One could argue that the minimum requirements of the UBC and other model codes have, over the past thirty years, added substantially to the cost of housing. Governmental agencies at all levels, as well as organizations representing building officials, have decided, however, that these changes are necessary to achieve a minimum level of health and safety. Few would disagree that dwelling units built today offer health and safety features that are real improvements over homes built a generation ago. As the accepted standards of "health and safety" have changed over the years, however, the cost of these changes has not been evaluated for its impact on the ability of homebuilders to produce affordable housing.

Open Space and Park Requirements

Folsom follows Quimby Act requirements (Government Code Section 664477 et. seq.) for park land dedications in new subdivisions. The City does not believe that the amount of open space set aside in the General Plan nor the City's park dedication requirements represent excessive constraints on residential development. These requirements would not impede the City's ability to meet is overall share of the region's housing needs. In conjunction with other development requirements, however, there is a land or dollar cost involved. This cost can be mitigated for affordable housing developments if the City were to allow additional dwelling units to compensate for units that cannot be built on land dedicated for park use.

The Planning and Permit Process

While local government can have little impact on market-oriented constraints and obstacles, such as the cost of materials, cost of labor and consumer preferences, it can respond to those constraints over which it has direct control, such as codes and ordinances affecting project design and processing procedures.

Over the past several years, the City of Folsom's planning processes have been streamlined as much as possible under the constraints of CEQA review period requirements. Occasional delays have been experienced in preliminary review phases, particularly when the workloads are heavy in relation to available staffing levels. This situation could be a

significant problem in the future if the rate of submission of new development proposals increases. Any additional staff would have to be supported by application fees.

The City's General Plan land use policies are viewed by some to be a constraint in providing more affordable units. The City's General Plan, revised in 1988, provides residential development densities for a population of about 69,000. It is the City's decision-makers' position that approval of increased densities cannot be given without proof that the project will provide "special community benefits". The development of additional water sources would also allow for the development of additional dwelling units, which could either be accomplished by increased residential or an increase in the amount of land developed for residential use, or both.

The 1988 General Plan revision contained several substantial residential land use changes. Most significantly, the total number of acres designated for residential uses decreased from 7,393 acres to 6,132 acres, although the overall density of residential uses increased, such that 23 percent more homes could be built. Multi-family use densities were increased, and the total number of multi-family units that could be built increased by about 20 percent.

Despite the increases in densities allowed under the 1988 General Plan, builders still express concerns that City land use policies and allowable residential densities adversely affect the cost of housing. The approach taken by the City is to balance the concern of housing affordability with other concerns, such as environmental quality, energy conservation, and the provision of adequate services.

The amount of land available for residential development would be less of a concern if a substantial amount of land presently zoned for commercial use is rezoned for residential use. The City has approved just such a rezone for the Willow Springs and would be receptive to other rezone requests if land owners can show that the demand for commercial land is less than the amount of land zoned for such use. There are several such requests pending. The City will decide whether to rezone parcels for residential use based on its evaluation of the demand for commercial development.

Permit Processing Times

The City of Folsom makes every effort to meet the permit processing deadlines specified under Government Code Section 65950. Development proposals are approved or denied within the six-month (for Negative Declaration) or one year periods (for EIR preparation) required by State Law.

Once a development is approved, the City expedites building permit applications so that construction is not unreasonably delayed. The City often completes application reviews and approves development projects in less time than required under the California Permit Streamlining Act. Because the City meets state-set deadlines in virtually every case, the time required for development approval is not considered a constraint to development. To further reduce total development review time, the City will evaluate, as part of its zoning code update, whether some presently discretionary decisions can be made by the Community Development Director as ministerial decisions.

Folsom contains a number of unique natural habitats, including riparian habitats and vernal pools. These areas often contain plants and animals recognized as "endangered species" by the State of California or the federal government, such as the long-horned elderberry beetle and the tri-colored blackbird. If such species are present within an area proposed for development, environmental review and mitigation may cause a delay in development approval and additional expense to mitigate the habitat loss. The City cannot avoid this problem since it must follow the requirements of state and federal law.

Folsom can, however, mitigate the potentially negative impact on the production of affordable housing by using specific plans to identify such areas prior to development, by allowing planned development proposals that cluster development at higher densities in more suitable areas, and by using master environmental assessments for the entire City as part of the General Plan to balance environmental and affordable housing concerns. In fact, Folsom has used all of these approaches.

23.5 ENERGY CONSERVATION

Since the time of the petroleum shortages of the early 1970s, Californians have become increasingly aware of the benefits of energy conservation. Despite the recent, short-term tumble of oil prices, the overall trend in energy prices has been one of steady increases and sometimes sharp changes in prices. Energy "awareness" has been ingrained in our collective conscious and institutionalized in government practices. This awareness of the need to conserve energy has important implications for homebuilders as consumers increasingly demand energy conservation features in new homes.

23.5.1 State Requirements

The provision of energy conservation features in new homes has been reinforced by State laws for minimum levels of energy efficiency. In 1975, the Warren-Alquist Act took effect and created the California Energy Commission.

The Commission's task was to develop and implement cost-effective energy-saving requirements that would reduce Californians' energy consumption yet minimize the cost of the additional construction requirements. The Energy Commission adopted its first set of energy conservation standards in 1977; these were revised in 1982 and again in 1985.

The standards differ for each of 16 "climate zones" identified in the state. Folsom is located in Climate Zone 12, the requirements of which are influenced by the characteristic Sacramento area climate of cool, wet winters and warm, dry summers with cool evening breezes.

Builders can comply with the energy conservation standards in one of two ways: by complying with a list of prescriptive requirements or by meeting a specified point score (or energy budget) which would achieve the same level of energy conservation as the prescriptive requirements. Local governments are required to enforce the State's standards.

23.5.2 Local Guidelines

The City of Folsom adopted guidelines in 1985 for developers to follow in meeting City requirements for landscaping, walls and fences, streets, signs, and other aspects of development. These guidelines included solar energy standards. The City encourages the use of solar energy devices and requires that new developments be designed so that access for passive or active solar energy measures can be maintained for individual homes in a development.

23.5.3 Opportunities for Energy Conservation

Of the 9,418 housing units in the City of Folsom, approximately 3,500 (37.1%) were constructed prior to the year state requirements for energy conservation took effect. Of these units, about 1,200 are more than 25 years old and could potentially benefit from an energy conservation retrofit program. This is not to suggest that all 1,200 units are in need of repair, but many otherwise sound older units can benefit from minor alterations such as weatherization and insulation of the home and appliances.

In July, 1986, a housing conditions survey determined that approximately 100 units were in need of some sort of rehabilitation. Based on

some obvious external signs of inadequate weather protection, about two-thirds of the housing units in that survey could benefit from some form of energy conservation retrofitting.

Additional information on the need for energy conservation can be obtained from the 1980 Census, which reported on home energy expenditures as a percentage of income. The majority of Folsom residents had no difficulty managing the energy costs in 1980, according to the Census. The majority of all renters (60%) and homeowners (74%) paid less than 5% of their income for energy costs. Another 24% (268 households) of the rents and 16% (401 households) of the homeowners paid between 5% and 9% of their income for energy.

Of most concern from the 1980 Census data, however, are the 185 renters (16% of all renters) and 243 homeowners (10% of all homeowners) who devoted 10% or more of their income for energy costs in 1980. These households might be special targets of a program to assist lower-income residents in making energy conservation improvements to their homes. Unfortunately, similar income and payment data will not be available from the 1990 Census until after the adoption of this element.

Another indication of the need for energy efficiency improvements is the type of heating system used in Folsom's homes. According to the 1980 Census, 117 Folsom houses did not have a permanent heating system, and another 370 homes used wall-mounted or room heaters as the primary method of heating.

The City routinely enforces the residential and nonresidential energy standards set forth by the California Energy Commission as part of its duties to enforce the UBC. In addition, the development standards adopted by the City include solar energy standards. These standards encourage the use of solar energy devices and also require that new developments be designed so that access for passive or active solar energy measures can be maintained for individual homes in a development.

Pacific Gas and Electric provides gas services and the Sacramento Municipal Utility District (SMUD) provides electricity services for the City of Folsom. The energy conservation programs offered by PG&E and SMUD are available in the Folsom area.

Weatherization

The availability of low-cost or free weatherization services is especially important to low-income and elderly households who would not otherwise obtain these services. Currently, the Community Development Block Grant program and non-profit housing corporation, known as "Project Go", provide basic weatherization services to low-income households as long as state funding is available. PG&E has developed programs to educate homeowners about conserving energy, to perform weatherization services in communities receiving gas or electric services from PG&E and, in some instances, install wall heaters and water heaters in low-income households.

23.6 EQUAL HOUSING OPPORTUNITY

The City of Folsom acts as a referral agency for persons seeking to file equal housing opportunity complaints. Anyone seeking information about housing discrimination or related housing matters is referred to the appropriate public service agency. Some of the local agencies available to assist in this area are: Legal Services of Northern California; Housing and Urban Development's Sacramento Service Office; California State Department of Fair Employment and Housing; and the U.S. Civil Rights Commission.

23.7 REVIEW OF PREVIOUS HOUSING ELEMENT

The Housing Element adopted by the City in 1987 established a set of action plans to be used in an attempt to meet the goals set forth by the Element. This section summarizes the extent to which these action plans were completed, discusses possible reasons for failures, and suggests ways in which these plans might be completed in the future. Throughout the following discussion, the goal topics are numbered as they were in the previous Element, and a synopsis of each goal or plan is presented in bold type.

23.7.1 New Housing Production

Plan for the construction of approximately 7,800 homes between 1987 and 1991.

This goal was established based on the number of development proposals approved by and pending before the City in 1987. Based on the SACOG allocation for this period, as pro-rated (the 1983 SACOG allocation for Folsom was for a seven-year period), the City's housing construction need between 1985 and 1990 was 1,182 units. The Housing and Population Capacity Analysis For the City of Folsom, California estimated that a total of 3,869 housing units were constructed over this period. The breakdown by type of unit and the estimated units constructed over the life of the previous Housing Element is provided in the following table.

Although the City did plan for the construction of 7,800 dwelling units, the slow-down in housing construction between 1989 and 1991 resulted in substantially fewer dwelling units being constructed during this period.

The number of units constructed, however, was still three times the number allocated to Folsom as its regional share during this period.

The affordability of housing constructed since the previous Housing Element was adopted in 1987 can be approximated using information about housing which was constructed during the period 1985 to 1990.

For-Sale Housing

Because of the typical market prices of new homes in Folsom, very low- and low-income households are not capable of purchasing homes in Folsom. Moderate-income households may be able to afford a small amount of the for-sale housing in Folsom. The 121 single- family high-density homes (in general, these homes will be less expensive than the single-family low density homes) built between 1987 and 1991 were affordable to moderate-income households earning between 100% and 120% of median income. The 1990 Census determined that 81.7 percent of the single family homes in Folsom are owner-occupied. If this percentage were applied to the number of single family units constructed in the high-density category, then ninety-nine single family purchase homes were built from 1987 to 1991 and were affordable to moderate-income households.

Rental Housing

The City collected information on rental rates charged for 941 multifamily units at four apartment complexes which were built between 1986 and 1991. The results of this survey are shown below.

Table 23-30
HOUSING UNITS CONSTRUCTED FROM 1985 TO 1990

Type of Unit	1985	1990	1985-1990	Yearly	1987-1991

	730	16	mod-income
	670	40	low-income
	700	72	mod-income
	710	80	mod-income
Total		**941**	
Affordable to Low- and Moderate-Income		**426 (45%)**	
Affordable to Moderate-Income Only		**515 (55%)**	

Notes: Affordability is based on two persons per 1-bedroom apartment and three persons per 2-bedroom apartment.

Maximum affordable rents are taken from Table 9.

Using the results outlined above, the following conclusions can be drawn regarding the affordability of multifamily units built in Folsom from 1987 to 1991.

1) No multifamily units were built which are affordable to very low-income households.

2) Forty-five percent of the units surveyed are affordable to low-income households. Table 23 indicates that 986 multifamily units were built between 1987 and 1991. Thus. 444 multifamily units built between 1987 and 1991 are affordable to low-income households (.45 x 986 = 444).

3) Fifty-five percent of the units surveyed are affordable to moderate-income households. Of the multifamily units built between 1987 and 1991.

542 are affordable to moderate income households (.55 x 986 = 542).

23.7.2 Provision of Public Services

Plan for the provision of public services and facilities to serve 5,870 housing units between 1986 and 1990. [NOTE: The difference in the number of dwelling units referred to in this objective and objective number 1 is due to the difference in time frames for these two objectives.]

a. Pursuit of additional water allocation from the Bureau of Reclamation.

The City recently requested an additional 50.000 acre feet of water from the Federal Bureau of Reclamation to be used in two 25,000 acre feet increments over the next twenty years. The Bureau of Reclamation has not yet responded to the request for 50,000 acre-feet, but is in the process of approving an additional 7,000 acre feet for the City. According to City staff involved in acquiring the additional water, it appears likely that the City will receive this additional 7,000 acre feet. The City is also negotiating for additional water from other water purveyors. Although Folsom is pursuing options to guarantee long-term sources of water, the City does not anticipate any shortage of water supply through 1996.

b. Establishment of facilities plans funded through collection of fees.

The East Area Facilities Plan is the only facilities plan which has not been completed, and it is scheduled for completion by the end of 1992. The City has, therefore, successfully responded to the need to create funding mechanisms for infrastructure to allow for development to proceed.

c. Collection of development fees to pay for essential off-site improvements benefitting new development, including temporary school facilities.

The City continues to charge fees on all new development. The Folsom-Cordova School District collects school fees which can be used for temporary school facilities. and the County regional sewer agency assesses fees for regional sewer facilities. The City has been successful in ensuring that the fees it collects are adequate to meet the public facilities needs of new development. but the added cost to new housing does pose an affordability barrier to low-income households. The City would need to find ways of partially subsidizing these costs and looking at alternative requirements to mitigate the cost impact of necessary infrastructure on affordable housing. A blue-ribbon committee headed by Folsom Councilman Holderness has been established to investigate alternatives to developer fees.

Continued enforcement of development standards addressing internal improvements in new development.

The City continues to enforce its development standards, which have substantially improved the quality of development in Folsom. Although these standards are necessary to carry out important environmental and aesthetic goals, the standards can be implemented in a way that allows for some flexibility for affordable housing developments.

Coordination with Sacramento County to ensure that additional wastewater collector capacity is constructed in an adequate fashion. to serve Folsom.

The facilities plans outline the manner in which the City will coordinate with the County in an effort to ensure that there is sufficient collector capacity for new development. To date. the City does not anticipate any difficulties in meeting the sewer system demands imposed by new development in the City.

Establishment of a finance program for needed bridge expansion.

The Environmental Impact Report for this program is in the draft stage. Once the City Council adopts the EIR, staff will prepare the actual finance plan. The impact of such a finance plan on new development has yet to be determined.

23.7.3 Revise General Plan

In October, 1988, the City adopted a revised General Plan, which made substantial changes in land use designations in order to reflect changes in anticipated housing, commercial, and industrial land use demands. Specifically, residential densities were increased across the board to allow for increased affordable housing opportunities. The previous Housing Element suggested the following changes.

Designate areas that are appropriate for higher density residential development.

Maximum residential densities in all areas of the City were increased as a result of the General Plan Update.

Listed below are the densities allowed under the previous General Plan and under the current General Plan.

Designate enough sites between 1986 and 1990 at sufficient densities to allow private builders to provide 636 additional units of housing affordable to lower-income households.

As previously identified, 444 multifamily housing units affordable to lower-income households were constructed between 1987 and 1991. It was also assumed that there were not any single-family homes built during the same period that were affordable to lower-income households.

If the current General Plan Residential densities were in place over the entire period, it is possible that 636 affordable units would have been constructed. In fact, it is likely that projects built up to two years after the General Plan was adopted reflect densities prescribed by the previous Plan. However, it is more likely that other reasons for the shortfall of affordable units exists. The primary reason was the difficulty of financing multifamily rental developments after changes in federal tax policies took effect in 1987.

Land Use	Previous G.P.	Current G.P.
SF Very Low	1 unit/20 acres	N/A
SF Low	2 units/acre	2.0-3.9 units/acre
SF Low	3-5 units/acre	N/A
SF Medium	5 units/acre	N/A
SF High	N/A	4.0-6.9 units/acre
MF	12 units/acre	N/A
MF Low		7.0-11.9 units/acre
MF Medium	N/A	12.0-17.9 units/acre
MF High	N/A	18.0-25.0 units/acre

As another example, although the maximum number of units per acre in multifamily high density areas is twenty-five, although the number of units which will be constructed is only eighteen typical maximum density has, historically, been twelve dwelling units per acre. Considering this fact, the City may need to encourage higher density development in the multifamily high density zone to accommodate very low-income households.

Several programs have been proposed by the City (see Goals, Policies, and Programs) to encourage multifamily developments at 18-25 dwelling units per acre.The City's inability to produce a sufficient amount of affordable housing is largely a result of factors discussed throughout this section. To be able to meet it lower-income housing goals through 1996, the City would need to consider how it can improve the financial feasibility of affordable housing through higher densities and other development incentives. A range of 18 to 25 dwelling units per acre would give developers of affordable housing greater options for proposing financial feasible projects.

Specific areas of the City that would be studied for higher residential densities are: the City's redevelopment area; the residential areas between Blue Ravine Road, the Southern Pacific Railroad line, Sibley Street, and Bidwell Street; three parcels of land north and east of the proposed community college site; and residential lands between the SPRR lines on the north and Highway 50 on the south.

As mentioned above, maximum residential densities have been increased throughout the City as a result of the General Plan Update process.

23.7.4 Housing Rehabilitation

Establish a housing repair and rehabilitation program in cooperation with the Sacramento Housing and Redevelopment Agency to conserve Folsom's stock of affordable housing. Repair the fifty single-family homes, forty apartment units, and six duplex units identified in the housing conditions survey by 1990, and retrofit up to thirty to fifty homes per year to increase their accessibility to disabled individuals. To accomplish this, the City will undertake the following six specific programs.

Although the lack of proper record-keeping procedures precludes the possibility of determining if the above goals have been met, it is likely that the City has fallen substantially short. The objective set for this program was unrealistic in light of the amount of city and Sacramento Redevelopment Agency funding available between 1986 and 1991.

However, the City's Redevelopment Agency is beginning to accumulate a substantial amount of 20 percent set aside funds which can be used for housing rehabilitation. This source of funding will allow the City to sustain its present rate of residential rehabilitation in the future, which appears to be sufficient to meet the demand. The City should continue to set goals for rehabilitation and will devote more effort to its rehabilitation program.

a. Housing repair and rehabilitation program for low-income homeowners City-wide.

Folsom has been receiving CDBG entitlement funds from the Sacramento Housing and Redevelopment Agency for residential rehabilitation purposes since at least 1987. This program requires recipients to be lower-income households. In 1990, the City spent about $70,000 of CDBG entitlement funds on residential rehabilitation, the total amount available from SHRA.

b. Housing maintenance and minor repair program for low-income homeowners.

There is no specific program aimed at housing maintenance and minor repair for low-income households because CDBG funds are available for this purpose. This activity should be covered

under the city's overall housing rehabilitation program, so that it is not necessary to designate minor repair as a separate program.

c. Emergency home repair program.

No specific program has been adopted for this purpose because emergency health and safety repairs are covered under the City's housing rehabilitation program. There is no need for a separate program for emergency repairs.

d. Housing retrofit program.

No specific energy conservation retrofit program has been adopted because this type of home improvement is covered under the City's housing rehabilitation program. There is no need for a separate program for emergency repairs.

e. Low interest loan housing repair program.

(See above CDBG program description.)

f. Rental housing rehabilitation program.

Since 1987, the City's Redevelopment Agency has provided financial assistance for the rehabilitation of fourteen multifamily housing units. These units are affordable to low-income households. Because this program provides a vital source of financing for rental housing in need of rehabilitation, this activity should be continued (see discussion of CDBG rehabilitation).

23.7.5 Economic Feasibility of Affordable Housing

Between 1987 and 1991, increase the supply of units affordable to very low-income households by 200 units, lower-income households by 575 units, and moderate-income households by 1,400 units.

There were no housing units constructed between 1987 and 1991 which were affordable to very low-income households. Between 1987 and 1991, as previously mentioned, 444 rental units affordable to low-income households were constructed and 542 multifamily rental units were constructed which were affordable to moderate-income households. One hundred twenty-one (121) single family homes were built between 1987 and 1991 which were affordable to moderate-income households. There are three primary reasons that no housing affordable to very low-income households was constructed:

1) Even with density bonuses and regulatory incentives, new rental housing requires governmental subsidies to be affordable to very-low income households, either in the form of lower interest rates, partial subsidy of development cost, or direct subsidy to the very low-income renter.

2) Because of staff limitations, the City could not devote sufficient staff time to identifying governmental subsidies that could be used in Folsom, applying for those subsidies, and seeking an interested developer to construct rental units affordable to very-low income households. Part of this work has been accomplished, however, with the preparation of a report by the Community Development Department on multifamily housing, submitted to the City Council in 1989. This report investigated options for increasing the supply of affordable housing and whether or not those options could work in Folsom to implement the 1988 General Plan.

3) Because of the intense demand for single-family housing and because of land development costs in Folsom, it was unlikely that home builders would propose rental housing projects affordable to very low-income households without strong encouragement and active participation by the City.

To overcome these obstacles in the future, Folsom would need to assign staff time to

researching appropriate subsidies for very low-income housing, seeking a committed developer (for-profit or non-profit), and making available local incentives to improve the financial feasibility of developing such housing.

The most practical method for the City to increase the supply of very low- and low-income housing is to work with developers to use government financing and regulatory incentives to include a percentage of such units in new multifamily rental projects. Such an approach would stop short of a mandatory requirement ("inclusionary zoning") but would use a negotiated process to strongly seek commitments from home builders. By mixing low-, moderate-, and middle-income housing in new rental projects, the financial feasibility of supplying affordable housing increases and the over-concentration of low-income housing is avoided.

Substantial governmental subsidies would still be required, however, to make housing affordable to the poorest residents of Folsom.

In setting future objectives for affordable rental housing, the City should account for the financial "gap" that makes affordable housing infeasible in Folsom without substantial financial incentives.

a. Institute a density bonus program.

The City has not formally adopted a density-bonus ordinance but follows the requirements of state law. The City has, historically, considered density bonus requests on a case-by-case basis. Developer interest in a density bonus program was not high between 1986 and 1991, however, and there have not been any requests for density bonuses. The housing market has undergone some important changes since the late 1980s, however, and developer interest in density bonuses may warrant the adoption of an ordinance within the next year. The lack of interest by the development community can be attributed to homebuilders' focus on the upper end, "move-up" segment of the single-family market between 1987 and 1991. For the predominant type of housing constructed during this period, density bonuses were not of concern.

The interest in affordable housing for which density bonuses would be requested may be on the increase, however, as the upper end of the market becomes saturated and home builders look for other opportunities. The housing recession, which began in 1990, has forced many builders to reorient their product to the first-time homebuyer. To sell such units, builders must emphasize affordability, and density bonuses may become an important consideration in reducing housing development costs.

The City could also become more aggressive in searching out interested home builders to construct affordable rental housing. The City should not, therefore, abandon the concept of adopting a density bonus program tailored to its own needs.

b. Coordinate the issuance of tax-exempt bonds.

The City has not issued tax-exempt bonds due to the lack of available City staff time to coordinate the necessary tasks preceding the issuance of bonds and the absence of specific development projects for which the bonds could be used. Tax-exempt financing represents an attractive alternative for home builders interested in affordable housing, and so the City should not abandon this option. To increase the likelihood of success in the future, the City should first identify one or more builders interested in using tax-exempt financing for affordable housing projects, apply for an allocation to issue bonds, and then determine the most feasible approach to the use of that allocation (i.e., issuing bonds through a City-sponsored program only, forming a joint powers agreement with another jurisdiction to share costs and expertise, or issuing mortgage credit certificates in place of bonds).

c. Actively seek builder participation in California Housing Finance Agency (CHFA) programs.

The City has not aggressively pursued the use of CHFA loans because the purchase cost of housing in Folsom is substantially higher than the maximum home purchase price currently allowed for CHFA loans in Sacramento County ($126,200). If the purchase price of homes in Folsom begins to approach the CHFA limits, the City will reevaluate the CHFA possibilities. One method of improving the possibility of using CHFA programs is to seek home builder commitments for less costly forms of ownership housing, such as townhouses, condominiums, and small lot single family homes.

d. Actively seek builder or nonprofit agency participation in state/federal programs for elderly and family affordable rental housing.

The City has not done this because of the lack of available City staff time and the absence of interested developers to construct such housing. The probability of constructing affordable rental housing for elderly persons and families could increase if the City were to take a more aggressive posture in its development negotiations and offer regulatory and financial incentives to increase the financial feasibility of producing such housing. However, the success of such an approach will depend on the interest of home builders and whether there are other home building opportunities that can avoid the complications of developing affordable housing.

One such developer, FPI Real Estate, has expressed an interest in developing an elderly housing project in Folsom, but will require City support in making use available local, state, and/or federal resources to help finance such a project.

e. Seek the participation of one or more large corporate employers to provide low-cost financing and/or a land-buy-down subsidy for the development of housing affordable to lower- and moderate-income residents.

City staff recently contacted the Intel Corporation to investigate the possibility of enlisting the company's assistance in providing affordable housing for their employees. Intel responded positively, but no specific plans have been developed. A substantial amount of City staff time would need to be allocated to this project to achieve an agreement with Intel. This program should be continued, as there is a strong possibility that the City could successfully negotiate some form of participation by Intel and other large corporate employers in Folsom in the production of housing affordable to its workers.

23.7 6. Preserve Mobilehome Parks

Maintain the existing zoning/General Plan mobilehome park designations and provide technical assistance to interested mobilehome park owners who wish to convert to cooperative ownership.

The General Plan adopted in 1988 maintained the land use designation allowing for mobilehomes (designated as Single Family High Density/Mobilehomes). Since the City staff does not have to expertise to assist mobilehome park residents who wish to convert to cooperative ownership, these residents are referred to special interest groups that are actively involved in this area.

23.7.7 Mortgage Revenue Bonds

Participate in future County issues of single-family mortgage revenue bonds.

The City passes a resolution each year declaring that the City will participate in this program. However, staff has been unable to ascertain whether or not the County has made any Mortgage Revenue Bond funds available in the

Folsom area. To increase the probability that such funds would be used in Folsom, the City could enter into a joint-powers agreement with Sacramento County to apply for an allocation and to issue bonds or mortgage credit certificates. The City is not in a position, at present, to issue bonds on its own for affordable housing, but may be able to jointly issue bonds with one or more other agencies. The implement this program, the City would need to recruit interested builders before the bonds are issued.

23.7.8 Condominium Conversion Ordinance

Prepare an ordinance governing the conversion of apartment buildings to condominium units.

The City's General Plan contains a policy regarding condominium conversions, and the City has not adopted an ordinance to implement this policy. There have not been any requests to convert apartments to condominiums, however.

23.7.9 Housing Assistance Program Referrals

Continue to provide interested individuals with information and referrals on housing assistance programs.

The City has, historically, relied on the Sacramento Housing and Redevelopment Agency and other community organizations in Folsom to make information available on Section 8 assistance, federally assisted below-market-rate rental units, weatherization programs, and housing rehabilitation programs. For the housing rehabilitation program managed by the City, the Folsom has made information available directly to the public. Because of Folsom's distance from the Housing Authority offices, the City could better serve its residents if made information from the Housing Authority available at City Hall.

23.7.10 Fair Housing Law Compliance

Maintain information on fair housing laws, refer housing discrimination complaints to the Sacramento County Human Rights and Fair Housing Commission or the California Fair Employment and Housing Department, and organize a fair housing workshop.

The City refers housing discrimination complaints to the appropriate agencies, but the City has not organized a fair housing workshop. Interviews with several City employees indicate that there have not been any housing discrimination complaints made to the City since 1986. For this reason, the City has not made the availability of housing discrimination information at City Hall a high priority. If housing discrimination becomes a problem in the future, City staff will take action to organize a workshop. The need for such a workshop is questionable at this time, however. The City could provide information to interested individuals on fair housing laws. To do so, it could rely on information available from the Sacramento County Housing and Redevelopment Agency, or from community-based housing organizations that specialize handling discrimination complaints.

23.7.11 Urban Development Policies

Continue to implement Folsom's urban development policies and standards.

The City continuously enforces these standards as part of the development review process. The City has been successful in increasing the quality of project designs and the environmental sensitivity of development proposals through its policies and standards.

23.7.12 Monitor Employment Growth

Report to the Planning Commission and City Council at least every two years.

A report was made to the Planning Commission and City Council 1988 in the form of the General Plan Update, in 1990 in the form of a report entitled Housing and Population Capacity Analysis For the City of Folsom, and in July 1991. Each of these reports addressed the subject of employment growth and the population growth and housing demand that could be expected as a result of job creation. The City should continued to periodically evaluate the relationship between jobs and housing as part of the Housing Element review.

23.7.13 Annual Review of Housing Element

Review the Housing Element annually to monitor the City's progress in implementing its housing programs and report to the Planning Commission and City Council.

The City did not implement this action in the past, mainly due to the lack of available City staff time, but is now monitoring its progress annually as required by state law. To carry out this review, the City will need to allocate staff time to this activity and make the Housing Element evaluation a higher priority.

23.7.14 Second Unit Ordinance

Adopt an ordinance allowing second units in single-family zones subject to specific criteria.

The City's General Plan contains a policy regarding second units, but the City has not adopted an ordinance for second units, per se. The City's Zoning Code allows accessory structures without kitchens designed for human occupancy. There have not been any requests to build second units. The City will adopt an ordinance if there is a request, but the lack of City staff time needed to prepare an ordinance precludes this from being completed until it actually becomes an issue. At the present time, therefore, the standards set forth in state law would regulate the construction of second units in the City.

23.7.15 Permit Review Process

Study the City's planning and building permit process to determine if there are process changes that could be made to improve the handling of development applications.

This is an ongoing process. Over the past several years, the following improvements have been made in the Community Development and Building departments:

1) development of informational materials for public use to help speed up the process;

2) concurrent processing (Building and Community Development departments can process applications concurrently) has been implemented;

3) the building permit process has been computerized;

4) a "fee committee" was established to ensure compliance (facilitates project completion for larger projects); and

5) development fees are reviewed regularly to ensure that they reflect actual costs incurred by the City.

With these improvements in the development review process, the City is able to handle a higher volume of development proposals more efficiently. The City will continue to monitor its development review processes to evaluate if further changes are warranted.

23.7. 16 Identification of Possible Locations for Emergency Housing Shelters

The section of this Element which addresses the homeless population discusses the reasons why Folsom does not currently need emergency housing shelters for the homeless. Local service agencies who deal with homeless issues do not believe that there is a significant homeless population in Folsom. For this reason, the City

has not made the identification of sites for homeless facilities are high priority. Until such a need is evident, the City will not attempt to designate any particular locations for homeless facilities. The City will, however, review its zoning requirements to ensure that a homeless facility could be sited within the City should the need arise.

23.8 DEFINITIONS

23.8.1 Affordability

Homeowner Households

For households purchasing their units, maximum housing costs should not exceed the maximum percentage of gross income allowed by mortgage lenders in qualifying home buyers. This is estimated to be in the 30 percent to 35 percent range. For the purposes of this Element, 30 percent is used as the maximum amount.

Renter Household

Very low- and low-income households should not spend more than 30% of their gross income on housing costs. This figure has been adopted by the federal and state governments and is being implemented in their housing programs.

It has been determined that moderate- and above moderate-income households do not require rental housing assistance and should pay whatever they decide is appropriate for rent.

23.8.2 Housing Costs and Responsibilities

Home Ownership

Housing costs include principal, interest, taxes, and insurance payments paid by the homeowner. In evaluating the affordability of ownership housing, however, one should also consider the income tax savings that homeowners realize from the deduction of mortgage interest and property taxes from the calculation of taxable income.

Renter

Housing costs include payments for rent and utilities.

23.8.3 Housing Types

Single-family Detached

One housing unit per lot, serving the needs of one family.

Single-family Attached

One housing unit per lot, serving the needs of one family, but sharing a common wall with a single-family attached home on an adjacent lot.

Duplex

Two single family-attached homes on one lot.

Multi-family

Housing complexes consisting of more than three units per lot.

23.8.4 Income Categories

Very Low

Household income is 50% or less of the median income for households of similar size.

Low

Household income is between 50% and 80% of median income for households of similar size.

Moderate

Household income is between 80% and 120% of median income for households of similar size.

Above Moderate

Household income is greater than 120% of median income for households of similar size.

23.8.5 Median Income

Median income, the most commonly used measure for federal and state housing programs, is that level of income at which 50% of the households earn more and 50% earn below the annual dollar amount determined to be the median. The Housing Element uses federal Department of Housing and Urban Development (HUD) income figures (as published by the state Department of Housing and Community Development) for the Sacramento Metropolitan Area to determine median income levels for Folsom. The HUD figures are updated approximately every 18 months.

23.9 HOUSING GOALS, POLICIES, AND PROGRAMS

This section of the Housing Element contains the City's goals, policies, and proposed programs implement the City's housing program. The goals and policies reflect the needs identified previously in the Element. Each proposed implementation program contains a description of the intended action, an explanation of the agency responsible for administering the program, possible sources of funding (if applicable), the timeframe during which the program would take effect, and anticipated results. Whenever possible, the anticipated results have been expressed in quantified terms.

The programs contained in this Element are based on the philosophy that the City's proper role is one of facilitator of the private sector and non-profit housing corporations. When necessary to meet low- and moderate-income housing needs, Folsom will use its redevelopment tax increment housing set-aside funds, provide regulatory incentives, and use available state and federal programs. In the past, the City's role has been severely limited by a lack of local staffing and financial resources to accomplish its housing agenda.

During the period covered by the prior Housing Element the City had available only a small amount of redevelopment tax increment funds for housing program. The small amount of money available was directed to housing rehabilitation in the blighted area identified in Redevelopment Plan (the Montrose-Talisman area). A number of duplexes and small apartment buildings have been rehabilitated in this area.

Beginning with the 1992-93 fiscal year, the City will be able to institute a formal housing program by dedicating staff time on an on-going basis to housing programs and by expanding the use of local redevelopment funds. The availability of staff time for housing program implementation will allow the City to take advantage of state and federal programs and other housing strategies which were formerly beyond the City's capabilities.

23.9.1 Assumptions

1) The proposed policies and programs are based upon the assumption that Folsom's proper role in the development of housing is one of facilitator in the development of housing.

2) The City will pursue a planning role for housing construction which provides a favorable regulatory environment for housing.

3) Financial assistance from state and federal agencies will be pursued.

4) The City will use redevelopment housing set aside funds to support affordable housing programs.

5) The City will encourage interested builders to work with the City on alternative housing developments that will promote affordability for low- and moderate-income households.

6) Whether or not appropriate amounts and types of housing are constructed, however, will depend primarily on the decisions of home builders and non-profit housing corporations. The City, itself, is not in the business of building housing.

7) In developing its proposed housing strategy, the City has decided not to pursue a mandatory inclusionary housing program, required land dedications for affordable housing, or required contributions to a housing trust fund in lieu of building affordable housing. The City's reasons are as follows:

a. Folsom does not believe it is in a position to dictate builders' responses to the housing demand.

b. Given the reduced level of state and federal subsidies to support affordable housing development, the City does not want affordable housing units in an inclusionary program to be subsidized by higher prices/costs on market-rate units. This internal development subsidy could substantially affect the availability of housing affordable to moderate- and middle-income households.

c. The City does not want builders to offset the costs associated with land dedications or contributions to a housing trust fund by raising their prices on market-rate housing.

d. Given the great variation in financial, environmental, and locational considerations among residential development proposals, the City does not believe it is appropriate or desirable to require a fixed percentage of affordable housing in all new residential developments.

e. The City believes that in the long run, it can achieve a reasonable balance between the needs of its low- and moderate-income residents and the ability and willingness of the private market to respond to those needs through voluntary approaches.

For a full discussion of the advantages and disadvantages of voluntary versus mandatory approaches to providing affordable housing, see the Appendix, "SUMMARY OF APPROACHES TO AFFORDABLE HOUSING REQUIREMENTS FOR NEW DEVELOPMENT". As Folsom monitors its progress annually in meeting its quantified objectives, it may re-examine the costs and benefits of mandatory affordable housing programs.

23.9.2 HOUSING ELEMENT GOALS AND POLICIES

GOAL 18

To provide for the City's regional share of new housing for all income groups.

POLICY 18.1

Maintain sufficient land zoned at a range of residential densities to accommodate the City regional share of housing.

POLICY 18.2

Identify sites that are suitable for multifamily housing and residential redevelopment.

POLICY 18.3

To encourage home builders to use multifamily-designated land for the highest allowed density housing consistent with the City low- and moderate-income housing needs.

GOAL 19

To encourage the provision of affordable housing.

POLICY 19.1

The City will make use of state and federal programs for which it would be the applicant and work with non-profit and for-profit developers to make use of those programs for which the developer must be the applicant. As one of its first implementation actions, the City will identify available, funded programs, determine which of those programs could be used in Folsom (based on the purpose and eligibility requirements for each program), and determine the most appropriate public agency or private entity to take primary responsibility for applying for funding.

POLICY 19.2

The City will also investigate the feasibility of issuing tax-exempt bonds or mortgage credit certificates to provide low-interest financing for affordable housing.

POLICY 19.3

The City will provide density bonuses to home builders proposing to include at least 10% very low-income housing or 20% low-income housing in their residential developments.

POLICY 19.4

The City will work with non-profit organizations, to identify potential projects and sources of funding to develop low- and moderate-income housing.

POLICY 19.5

The City will identify surplus government property that could be used for construction of housing affordable to low- and moderate-income households and encourage interested developers to make use of such land.

POLICY 19.6

The City will develop a plan for the use of redevelopment tax increment funds set-aside for the construction and rehabilitation of housing for low- and moderate-income households.

GOAL 20

To improve the existing supply of housing

POLICY 20.1

Provide property owners with assistance to inspect and identify code violations in residential buildings.

POLICY 20.2

Continue to apply for state and federal assistance for housing rehabilitation for low-income households. Rental housing that is repaired with government assistance shall remain affordable to low-income households for a specified period of time.

POLICY 20.3

Require the abatement or demolition of substandard housing that is not economically feasible to repair and which represents a health and safety threat.

POLICY 20.4

Seek, through code enforcement, the private rehabilitation of substandard dwelling units and provide financial assistance, when available, to owners of dwelling units occupied by low-income households. In applying this policy, the City shall seek to avoid the displacement of low-income households.

POLICY 20.5

Periodically survey housing conditions in the to maintain a current data base on housing repair needs.

POLICY 20.6

Allocate a portion of the City's redevelopment tax increment set-aside funds for preserving substandard housing occupied by lower-income households.

GOAL 21

To ensure equal housing opportunity

POLICY 21.1

The City will provide information and referral to individuals with fair housing complaints.

GOAL 22

To promote energy conservation

POLICY 22.1

Continue to implement state energy-efficient standards.

POLICY 22.2

Include energy conservation guidelines as part of the development standards for the specific plan area.

POLICY 22.3

Provide weatherization assistance to low-income households.

GOAL 22-A

To promote the preservation of historic residences

POLICY 22-A.1

The City will encourage the preservation of residential buildings with historic or architectural value.

GOAL 22-B

To develop a plan for the use of redevelopment housing set aside funds.

POLICY 22-B.1

The City will prepare a plan to guide the use of redevelopment tax-increment funds set-aside to support low- and moderate-income housing programs.

23.9.3 PROGRAMS

PROGRAM 1 Provide Adequate Sites for Housing

Description. The City will continue its planning programs to accommodate new housing development as expeditiously as possible. Given the financial constraints discussed above over which the City has no control, and little ability to mitigate, it is unlikely that 100% of the needs of lower-income households can be met, even with a concerted effort by the City to work with for-profit and non-profit housing developers to use a number of techniques to supply affordable housing. The City's quantified objectives for low- and moderate-income housing are discussed in the following section.

The City will accomplish this program through an annual review of the composition of the housing stock, the types of dwelling units under

construction or expected to be under construction during the following year, and the anticipated mix, based on development proposals approved, or under review, by the City of housing to be developed during the remainder of the period covered by the Housing Element. This analysis will be compared to the City's remaining "fair share" housing need to determine if any changes in land use policy are warranted.

The City contains approximately 1,088 acres of undeveloped land designated for single-family residential use and 322 acres of for multifamily see (excluding approved development projects and projects presently under construction).

Folsom's allocation between 1989 and 1996 is 7,559 dwelling units, of which 2,572 units were constructed between 1989 and 1991 (see Table 8). The remaining need through 1996 is 1,905 very low-income dwelling units, 1,038 low-income dwelling units, 924 moderate-income dwelling units, and 1,220 above moderate-income dwelling units. Folsom has adequate vacant land (including land in developments presently under construction) to accommodate 100% of its SACOG regional housing needs (see Tables 23-26).

The City believes that its General Plan and zoning densities are sufficient, in combination with density bonuses, to provide adequate densities for housing for all income groups. Adequate zoning densities will not, by themselves, guarantee the economic feasibility of producing affordable housing, however.

There may be financial constraints that would prohibit home builders from being able to address the needs of low- and moderate-income households, even with the residential densities permitted by the City. For example, the ability of the private sector to provide housing affordable to these groups could be substantially affected by interest rates, federal tax-policies and incentives for lower-income housing, the availability of state and federal housing development and operation subsidies, and housing development costs. With the exception of housing development costs, the City has no control over these other factors that affect the ability of home builders to deliver housing affordable to low- and moderate-income households.

The City can affect housing development costs, in part, through its zoning policies, its development permit procedures, its subdivision and development standards, its requirements for public services and facilities for new development, and the methods it adopts to finance those services and facilities. These aspects of the City's influence on development costs were discussed in Chapter IV, Housing Constraints.

Administration/Funding. Community Development Department and City Council.

Timeframe. Current and ongoing.

Expected Results. Periodic updating of the City's vacant land use inventory with an annual comparison of needed units by income/density category and remaining vacant land by General Plan/zoning category. This regular updating and comparison may lead to a periodic refinement of City's land use regulations to reflect changes in housing need.

PROGRAM 2. Sites for Multifamily Rental Housing

Description. Although the City cannot control the market conditions conducive to the production of multifamily housing, the City can, through its General Plan policies and development permit procedures, ensure that land designated for multifamily use is not prematurely committed to single-family development and that the total development potential for affordable housing is maintained. Should a developer propose single-family housing on multifamily-designated land, the City will undertake one or more of the following actions to mitigate the loss of that land for

potential use for housing affordable to low- and moderate-income households:

1) Determine whether there is sufficient remaining multifamily-zoned land to meet the City's low- and moderate-income housing needs and, if so, allow the project for single family use (the burden would be on the applicant to document the sufficiency of remaining multifamily-zoned land);

2) Find that the project will have negative implications for the supply of land for affordable housing, and request the project proponent to include affordable housing in the development plan;

3) Find that the project will have negative implications for the supply of land for affordable housing, and request the project proponent to work with the City in developing affordable housing on another site;

4) Instigate a rezone to multifamily use of undeveloped single family-zoned or other land elsewhere in the City to offset the loss of multifamily land; or

5) Seek to ensure that developers of other multifamily-zoned sites submit proposals with densities that are closer to the maximum allowed under the General Plan to assure that the total number of potentially affordable multifamily units to be developed can be maintained.

One of the most critical needs in the City, as identified in a staff report to the City Council (see Multifamily Housing Report prepared for the City of Folsom in 1990 by Loretta McMaster), is for affordable multifamily rental housing and large family housing. This includes both rental apartments for lower-income households and ownership housing for moderate-income households. Nearly 60% of the City's remaining housing needs between 1991 and 1996, according to the SACOG housing allocation plan, is for housing affordable to low-income households. Most of these low-income households cannot afford, are not expected to be able to purchase, single family homes or condominiums, even with the programs included in this Element which seek to reduce housing costs.

The provision of adequate sites for multifamily rental housing is included in this Element as a separate program from sites in general because state housing law imposes an affirmative obligation on local governments to designate sufficient land to meet their housing needs, including sites for multifamily rental housing.

The City should make the most effective use of these sites it has designated for multifamily use to promote the construction of housing affordable to low- and moderate-income households.
The documentation of the sufficiency of remaining land to meet the City's housing needs would be based on the City's annual review of its Housing Element objectives, as updated by information provided by an applicant for a rezone.

Multifamily rental housing does not typically provide dwelling units for large families, and so the City will encourage that a percentage of new multifamily dwelling units contain three and four bedrooms. The City will require the provision of three- and four-bedroom units in family housing projects that it participates in through state and federal funding.

Administration/Funding. The Community Development Department will carry out this program as part of its on-going planning activities.

Timeframe. July 1991 to June 1996.

Expected Results. Designation of sufficient land to accommodate 3,962 units of multifamily housing, including rental apartments, townhouses, condominiums, and single family attached dwelling units. The City will monitor the remaining vacant land annually to determine Folsom's ongoing ability to meet is housing needs and whether any changes in land use are

warranted. It is expected that at market rates, 150 units could be developed at costs that are affordable to low-income households and 400 units would be affordable to moderate-income households. Whether or not the full 3,962 dwelling units can be developed will depend on market factors beyond the City's control. The City monitor the availability of multifamily-designated land through its annual Housing Element review.

PROGRAM 3. Provision of Public Services

Description. The City will continue to plan for and develop financing plans to finance the provision of public services and facilities that are needed to serve new residential development. These include streets, intersection and interchange improvements, a new bridge across the American River, water and sewer facilities, additional water allocations, drainage facilities, emergency services, educational services and facilities, recreational services and facilities, and general municipal governmental services.

The City has employed, and will continue to employ, a number of methods for identifying needed services and facilities. These include the preparation of specific plans to govern the development of large areas of land designated for a mixture of uses, the preparation of financing plans to accompany the public facilities and service components of specific plans, the preparation and periodic updating of a city-wide Capital Improvements Plan. In establishing minimum standards for public services and facilities, the City will seek to balance the need for assuring that residents of new development enjoy a high quality of public services and facilities with the need to mitigate the cost-effects of public service and facility requirements on the ability of home builders to provide affordable housing.

To finance needed services and facilities, the City will seek to reduce the up-front housing costs impacts as much as possible by charging development fees only for the cost of those services and facilities which must be in place prior to, or shortly after, the completion of a development and for which long-term financing options are unavailable. Whenever possible, the City will seek financing solutions that allow costs to be stretched over a period of ten or more years. Among the long-term financing options are the creation of special assessment districts with the power to issue bonds that would be repaid by annual assessments levied on properties in the district based on the level of benefit received from the services and facilities. Mechanisms that allow the costs of needed infrastructure to be financed at lower municipal borrowing rates, rather than at the home loan interest rate, will ultimately reduce the cost to the consumer.

Administration/Funding. Community Development Department and Public Works Department will be responsible for identifying needed services and facilities. Finance Department and City Manager's Office would be responsible for coordinating any City participation in the financing (issuing bonds, conducting elections to establish an assessment district, etc.).

Timeframe. July 1991 to June 1996.

Expected Results. Provision of adequate services and facilities to accommodate City's regional share of housing needs.

PROGRAM 4. Sites for Special Group Housing

Description. There are a number of special population groups which the state has identified as in need of a residential living environment for their proper physical and mental fulfillment. These groups include mobility, developmentally, and mentally impaired individuals; elderly residents in need of 24-hour care; persons with mental illnesses; and individuals recovering from substance abuse. Group homes of six individuals serving these and other special population groups

will be allowed as a residential use in any residential zone in the City.

Administration/Funding. The Community Development Department will review applications for such homes as part of its development permit processing responsibility. The purpose of the review is to assure that proposed group homes meet state and federal criteria for siting. The City will continue to apply a conditional use permit process for group homes of more than six persons.

Timeframe. July 1991 to June 1996, and on-going.

Expected Results. No quantifiable estimate is available, as the number of individuals benefitted will depend on the interest by public agencies or non-profit groups operating such facilities. In qualitative terms, a more enriched living environment will be provided to these special population groups.

PROGRAM 5. Housing for Older Adults

Description: The City will cooperate with non-profit and for-profit housing developers who propose to construct housing for older adults by providing assistance in applying for governmental funding and offering density bonuses and other local incentives (see affordable housing programs under Goal Two). There are a number of types of housing which could meet the needs of older adults, including rental housing apartments designed specifically for seniors, group homes, congregate care facilities, and mobilehome park/manufactured housing subdivision with recreational facilities for older adults.

The City currently allows housing development which is specifically designed for the lifestyle, physical, and medical needs of older adults in multifamily zones. There is a need for additional housing to meet the needs of this age group, particularly those who are low-income. The number of City residents most likely to need special housing accommodations because of age-related physical and economic conditions has nearly doubled since 1980 and is projected to increase further during the 1990s.

Administration/Funding. The Community Development Department will be responsible for project review and consistency with development standards.

Timeframe. July 1991 to June 1996.

Expected Results. Depends on development proposals submitted to City.

PROGRAM 6. Housing for Single Parents With Children

Description. In its participation in housing programs, the City will investigate state and federal programs, and activities by non-profit housing sponsors, that can address the affordable housing requirements of single mothers as well as their child care needs. This program includes two specific actions:

1) Encouragement of development proposals that integrate affordable housing and child care services.

2) Review of the City's Zoning Code to ensure that City requirements do not overly restrict the location of child care services.Single parents with children have difficulty in arranging child care that is conveniently located with respect to work and their place of residence.

Single mothers, in particular, have the greatest difficulty in affording housing and child care because the majority of single mother are low-income (this group also has the highest incidence of impoverishment).

Administration/Funding. The Community Development Department will be responsible for Zoning Code and development review. Although

the City will not impose a requirement that a developer construct a child care facility, it will request that developers include in their proposals spaces in proposed buildings or sites on which such facilities could be developed or leased by a child care operator.

Timeframe. Cooperate in the development of one or more projects which integrate affordable housing and child care services between 1993 and 1996.

Expected Results. Increase in affordable housing and child care services and options for single mothers.

PROGRAM 7. Density Bonuses and Other Incentives

Description. Density bonuses provide a developer with additional dwelling units in exchange for the provision of housing affordable to lower-income households and specified senior citizen developments. State law provides that if a developer proposes to include at least 20% of the dwelling units in a project at rents/prices that are affordable to low-income households (households earning 50%-80% of median income) or 10% of the dwelling units in a project at rents/prices that are affordable to very low-income households (50% or less of median income), the local jurisdiction must permit a 25% density bonus and offer other development incentives.

In addition, the City must offer at least one economic or regulatory incentive that will help to reduce the development cost of the affordable housing project. Examples of incentives are financial contributions to development costs. development permit or fee waivers or reductions. expedited permit processing, allowance of cost-saving alternative development standards. application on a developer's behalf for state or federal subsidies. and the issuance of tax-exempt bonds to provide low-cost financing.

The City will offer a 25% density bonus for any project in which at least 20% of the units are affordable to low-income households and/or at least 10% of the units are affordable to very low-income households. In addition, the City will offer one or more of the following incentives to projects meeting the above criteria:

1) fee reductions, the amount of the reduction depending on the financial need of the project to maintain the affordability of dwelling units.

2) priority permit processing,

3) low-interest financing (if available as a result of a successful tax-exempt bond issue),

4) a contribution from the City's redevelopment fund consistent with a plan for the use of such funding,

5) the use of alternative subdivision standards that will result in cost savings to be passed on to the occupants of a new development, provided such alternative standards can achieve a similar level of design and service performance as standard subdivision requirements, or

6) the enlisting of financing from private lenders under the federal Community Reinvestment Act.

PROGRAM 8. Density Bonuses for Moderate-Income Housing.

Description. If a developer proposes to provide at least 25% of the dwelling units in a project at costs affordable to moderate-income households (80% to 120% of median income), the City would consider a 25% density bonus. This is an option the City would grant on a case-by-case basis based on the need for moderate-income housing. and is not required by state law.

Affordable density bonus units granted under this program must contain affordable guarantees.

The City will adopt an ordinance setting forth affordability requirements for density bonus units.

For Programs 7 and 8:

Administration/Funding. The Community Development Department will implement the provisions of program 7 and 8 as part of its planning and development permit processing responsibilities. Financial and regulatory incentives will be approved by the City Council and the Redevelopment Agency on a case-by-case basis.

Timeframe. Approve density bonuses on an on-going basis. Adopt density bonus ordinance by January 1993.

Expected Results. Development of 250 moderate-income, 350 low-income, and 105 very low-income density bonus units. Units to be provided in conjunction with other programs that provide financial incentives or subsidies for affordable housing. Although the City did not have a density bonus ordinance in place between 1988 and 1992, the General Plan policies for approving the high end of the density range for senior, low-, and moderate-income housing functions as the equivalent of a density bonus, and is more generous than the 25% density bonus required by state law.

PROGRAM 9. Pursue Funding Under State and Federal Programs

Description. There are a number of state and federal programs which provide low-cost financing or subsidies for the production of low- and moderate-income housing, although funding levels have decreased substantially over the past decade. Certain programs require an application and participation by a local public agency; other programs are for use by non-profit housing corporations and housing authorities, and the remaining programs require application and direct participation by a private developer.

9(a) Folsom will provide assistance to non-profit and private housing developers to make use of other programs which require their application and participation. The use of the programs listed below is predicated upon reaching agreements with interested non-profit or private developers to construct low- and/or moderate-income housing.

Programs which the City or the Redevelopment Agency may pursue directly are:

a. State Predevelopment Loan Program

b. State Rental Housing Construction Program

c. Development Assistance Program

d. Community Development Block Grant Program

e. Federal loan guarantees for senior and handicapped housing developments

f. Federal loan guarantees for low-income family housing developments

g. HOME program (a new federal program)

These are the most readily available programs at the present time. Should the City identify other state or federal programs for which it is eligible, these other sources of funds will be considered as well.

9(b) There are a number of other programs which provide direct subsidies, mortgage insurance, or low-interest loans to non-profit housing sponsors. Agencies providing this assistance include the California Department of Housing and Community Development, the California Housing Finance Agency, the U. S. Department of Housing and Urban Development, and the U. S. Farmers Home Administration. Included in these programs are:

1) Technical assistance grants for project feasibility and development

2) Subsidies for shared housing for seniors. congregate housing, senior housing, self-help housing, transitional housing for homeless individuals, and other targeted groups

3) Mobilehome park purchase and rehabilitation

4) Project loans and loan insurance

5) Federal funds for the acquisition, conversion, rehabilitation, or construction of publicly owned or managed housing (funding is extremely limited)

9(c) The City will encourage interested non-profit and private developers, and other private entities to make use of these other programs. These other private entities could include major employers in Folsom who are interested in working with developers to finance affordable housing development for their workers.

The City will also cooperate with for-profit or non-profit developers by lending City support to, or local assistance in preparing funding applications, grant density bonuses, and apply for complementary programs that can help reduce land or site development costs for such projects. providing that development proposals are consistent with Housing Element.

Administration/Funding. The Community Development Department and the Redevelopment Agency will coordinate their efforts to make use of available state and federal programs. and to solicit participation by non-profit and private developers. The City will also cooperate with the Sacramento Housing and Redevelopment Agency for identifying suitable sites in Folsom for at least one small. scattered-site public housing development should additional funding be available from the federal government.

Timeframe. July 1991 and on-going.

Expected Results. Provision of 125 very low-income dwelling units, 250 low-income dwelling units. and 250 moderate-income dwelling units. These objectives are based on the following assumptions:

1) That the City can successfully apply for state or federal funding (HCD or HUD) for two rental housing development projects that will include at least 10% of the dwelling units affordable to very low-income households, at least 25% of the units affordable to low-income households, and at least 25% of the units affordable to moderate-income households.

2) That the City will be successful in soliciting participation by developers in at least four CHFA-financed development projects (two ownership and two multifamily rental) in which a percentage of the units will be affordable to very low-, low-, and moderate-income households.

3) That the City will be successful in working with a non-profit housing developer to develop at least two small scattered-site rental housing projects for low- and moderate-income households.

4) That the City will be able to "piggy-back" financial incentives under its density bonus program and to provide financial assistance under its redevelopment tax-increment set-aside plan.

PROGRAM 10. Tax-Exempt Bond Financing

Description. Public agencies can issue revenue bonds. the interest on which is exempt from income taxation. Because the bonds are issued through a public agency, the investors pay no income tax on the interest earned. and the bonds carry a lower interest rate than would otherwise be available to the borrower. Housing financed through tax-exempt bonds can be of two types:

1) Ownership housing, typically single-family homes, in which income qualified first-time home buyers receive a discounted mortgage interest rate.

2) Multifamily rental housing, in which the project owner receives below-market-interest-rate financing in exchange for reserving a specified percentage of dwelling units for low- and/or moderate-income households.

To use this program, a public agency must first locate an interested developer, apply for and receive an allocation from the State Mortgage Revenue Bond Allocation Committee, and locate a bond underwriter to assist in the issuance of the bonds. The process typically takes one year to 18 months from the initial application to the availability of funds for project development/financing.

The City will pursue applications for the authority to issue two tax-exempt bonds. In the event the City determines that it would be infeasible to issue bonds, it will pursue the alternative option of mortgage credit certificates, which may be issued to qualified borrowers. Mortgage credit certificates provide tax credits to borrowers, which have the equivalent effect of low-interest-rate financing. One requirement of the program is that the applicant make a deposit of 1/2 of one percent of the bond allocation being requested.

The City will seek an interested developer to take advantage of the mortgage revenue bond program and explore the cost and feasibility of issuing tax-exempt bonds. Because the size of a likely project would be small, it may not be financially feasible for the City to issue tax exempt bonds individually. In such a case, the City would look for one or more other interested public agencies to form a joint powers authority to issue bonds jointly.

Administration/Funding. The Community Development Department would work with the Folsom Redevelopment Agency in applying for a bond allocation. The Community Development Department would take the lead in locating an interested developer. The City Manager and City Attorney would take the lead in setting up necessary legal mechanisms to issue and administer the bonds. Funding for the required deposit would have to be provided by the developer, and administrative costs of issuing the bonds could be covered through arbitrage (the difference between the interest rate paid to bond holders and the interest rate charged to the developer or home buyers).

Timeframe. Determine feasibility and locate interested developer(s), if any, for potential bond issues in 1993 and 1995. Develop affordable housing projects in 1994 and 1996. (The City would not pursue this program until one or more interested developers can be identified).

Expected Results. Finance at least two projects with tax-exempt bonds, or provide mortgage credit certificates for borrowers in at least one project. The City will specify a minimum percentage of dwelling units to be affordable to low- and/or moderate-income households. Objective is for 25 very low-income, and 75 low-income, and 150 moderate-income housing units.

PROGRAM 11. Community Reinvestment Act

Description. Folsom will identify financial institutions operating in the City that fall under the requirements of this act and request that these institutions develop specific programs for providing financing for low- and moderate-income housing.

The Community Reinvestment Act directs federal regulatory and deposit insurance agencies to encourage the institutions they regulate or insure to assist in meeting the credit needs of their communities, including low- and moderate-income needs. Federal agencies are supposed to evaluate compliance with the intent of this act when reviewing applications by financial

institutions for charters, new branches, mergers, relocations, and other regulated transactions. Until recently, the provisions of this act were not widely implemented.

Administration/Funding. The Community Development Department will be responsible for assisting public agencies, non-profit organizations, and private developers seeking commitments from financial institutions willing to assist in the financing of affordable housing projects.

Timeframe. January 1, 1993 and ongoing.

Expected Results. Financing of one or more affordable housing project(s) at favorable terms. Objectives for this program are included in programs 1-4 above.

PROGRAM 12. Permit and Development Fee Reductions

Description. Development and building permit fees represent a substantial portion of the cost of housing. The City will decide, on a case-by-case basis, to waive or reduce fees for affordable housing projects. This decision will be based, in part, on the availability of alternatives means of financing the services or facilities for which the fees are being charged, and the ability of the City to absorb the revenue loss from fee waivers or reductions. The City will also request waivers or reductions from other agencies which have independent authority to charge fees.

Administration/Funding. The Community Development Department will recommend to the City Council fee waivers or reductions on a case-by-case basis. The Council will be responsible for approving fee waivers or reductions for those fees over which it has jurisdiction.

Timeframe. On going, and reviewed on a case by case basis.

Expected Results: Cost savings for affordable housing projects.

PROGRAM 13. Second Units in Single-Family Neighborhoods.

Description. The City will permit second units in single-family neighborhoods according to the requirements of state law. The City will implement the second unit standards in state law until it adopts it own second unit ordinance.

This program is designed to allow additional affordable housing opportunities in neighborhoods in which lot and dwelling unit sizes are sufficiently large to permit the creation of small second unit. City standards for the location and design of such units will ensure that homes with second units are not readily distinguishable from other homes in a single-family neighborhood.

The adoption of a second unit ordinance will encourage the creation of second units in two ways: 1) it will provide an established process with standards by which interested residents can construct such units, and 2) it will provide a process by which units created prior to the adoption of an ordinance. without the proper permits, can be brought into compliance with City standards.

Administration/Funding. Community Development Department and Building Department to review applications and ensure compliance with City standards.

Timeframe. Implementation of state standards current and on-going. City will adopt second unit ordinance by July 1, 1993.

Expected Results. Creation of 25 dwelling units, 10 affordable to very low- and 15 affordable to low-income households.

PROGRAM 14. Voter Authorization for Specified Rental Housing Programs

Description. The City will request Folsom residents to authorize the use of local, state, and federal funds for a sufficient number and types of dwelling units to meet that portion of its very low- and low-income quantified objectives that can only be met by government funded programs that are covered by the state constitutional requirement for voter approval.

The State Constitution requires that local voters authorize the use of public funds for certain publicly-subsidized rental housing developments. Voter approval is not required for specific developments, but a local jurisdiction must have voter authorization to use public funds for a specified number of dwelling units, the general types and locations of which must also be approved.

Administration/Funding. City Council will approve ballot measure to be submitted to local voters. Community Department will prepare recommendation regarding the number, types of units, and general locations within the City for which voter approval should be sought.

Timeframe. City Council to approve submission to voters in time for first election after January 1, 1993.

Expected Results. Voter approval of the use of public funds for a sufficient number of dwelling units that will allow the City to pursue those state and federal programs which require voter authorization.

PROGRAM 15. Inspection Program.

Description. The City of Folsom will, on a request basis, arrange for an inspection of residential properties building code violations which should be corrected. A more comprehensive voluntary building code inspection would be performed by the Building Department for an inspection fee that covers the cost of this service.

Administration/Funding. The Building Department will administer the code inspection program, to be funded from inspection fees.

Timeframe. July 1992 to June 1996.

Anticipated Results. Depends on the number inspection requested.

PROGRAM 16. Code Enforcement and Abatement

Description. Upon request of a property owner or occupant, the City will identify dwelling units that are unsafe to occupy and initiate appropriate action to have those units brought into compliance with building code standards or removed.

This action would be taken only in the most extreme cases in which the owner of the dwelling units is unable or unwilling to make necessary repairs, in which repairs are not feasible, or in which the dwelling unit has been abandoned.

A 1991 housing conditions survey did not locate any dwelling units in a state of disrepair requiring demolition.

Administration/Funding. The Building Department will enforce code requirements and order unsafe units to be vacated (and demolished, if necessary).

Timeframe. July 1991 to June 1996.

Anticipated Results. Repair of dwelling units which are feasible to rehabilitate and removal of dwelling units, if any, which may be infeasible to repair.

PROGRAM 17. Rehabilitation of Substandard Dwelling Units

Description: To encourage private rehabilitation efforts, the City will apply for and/or assist eligible households in applying for various private, state and federal sources of funding for housing rehabilitation and home repairs, which would include the correction of health and safety hazards, weatherization, and the addition of space to alleviate overcrowding. The City will also allocate a portion of its redevelopment tax-increment funds for housing rehabilitation.

The City has identified 88 dwelling units in need of immediate rehabilitation based on the exterior deterioration of these units. Based on the number of dwelling units constructed prior to 1960 (about 900), it is reasonable to assume that in addition to the 88 dwelling units with obvious exterior repair needs, there are a number of other dwelling units with interior deficiencies or which could require rehabilitation within the next two to five years if not property maintained (patching of stucco, repainting, roof patching, etc.). The survey results did not include dilapidated mobilehomes located in mobilehome parks at Folsom Boulevard and Natoma Street and on Sibley Street (the Sibley Street park has been upgraded since the survey was completed).

Most of these substandard dwelling units are occupied by low-income households. Most low-income owner-occupants lack sufficient financial resources to obtain private funding for home repairs. Owners of rental units occupied by low-income households often cannot financially support repairs to dwelling units from the rents they can charge.

Administration/Funding. The City will apply annually, or as frequently is needed, based on housing rehabilitation demand, for funding under the Community Development Block Grant Program, and the California Housing Rehabilitation Program. In addition, the City will provide information to, and assist owners of, rental properties in applying for funding under the California Housing Rehabilitation Program, from the California Housing Finance Agency, and from the U. S. Department of Housing and Urban Development.

In some cases, several of the above-mentioned programs will be combined to undertake home repairs. Owners of rental properties who are assisted in financing the rehabilitation of their dwelling units will be required to rent the units to low-income households and to sign a rent limitation agreement.

Timeframe. Current and on-going program.

Expected Results. Rehabilitate 75 dwelling units between 1991 and 1996.

PROGRAM 18. Relocation Assistance

Description. The City of Folsom will require owners of rental property to pay for the relocation expenses of low-income residents displaced as a result of the condemnation or required vacation of dwelling units due to code violations. The City will require that displaced residents be given the right of first refusal to return to the dwelling units upon their repair.

Administration/Funding. The Building Department will administer this program as funds permit. City Council will adopt an ordinance to implement this program.

Timeframe. Adopt ordinance by January 1, 1993; implement thereafter and ongoing.

Expected Results. Provide relocation assistance to the estimated households displaced by the code enforcement and abatement program.

PROGRAM 19. Housing Demolition Mitigation

Description. State law requires that all dwelling units occupied by lower-income households which are demolished or converted by public actions in a redevelopment area be replaced, and 75% of the replacement units must be available at comparable cost to the units removed. The City will follow the requirements of state law regarding the demolition or conversion of dwelling units occupied by lower-income households in the City's redevelopment area. At the present time, the City has not identified any specific dwelling units to be demolished or converted.

Administration/Funding. The Redevelopment Agency is responsible for implementing the requirements of state law.

Timeframe. Ongoing program.

Expected Results. Provision of replacement dwelling units within the redevelopment area. At present, no dwelling units have been demolished in the City's redevelopment area nor are there any plans for the demolition of dwelling units.

PROGRAM 20. Maintenance of Housing Condition Data Base

Description. The City will continue to maintain current information on the condition of dwelling units by periodically updating its housing conditions data base. Approximately every 2-3 years, the City will resurvey housing conditions to ensure the currency of its housing conditions information.

Administration/Funding. The Community Development Department will direct these surveys.

Timeframe. Conduct surveys in 1991 and 1994.

Expected Results. One survey update completed in 1991 and one survey update in 1994.

PROGRAM 21. Zoning Flexibility For Housing Rehabilitation.

Description. To avoid discouraging rehabilitation efforts, the City will allow non-conforming dwelling units to be rehabilitated so long as the rehabilitated dwelling units meets the Folsom Zoning Code requirements for non-conforming structures.

Many dwelling units in need of rehabilitation were constructed prior to adoption of current zoning standards. As a consequence, some of these dwelling units are non-conforming as to lot size, set-backs, yard requirement, location, and other zoning requirements.

Administration/Funding. The Community Development Department will determine the zoning status of dwelling units to be rehabilitated based on inspection information provided by the Building Department. The staff time required for the determination of zoning status will be included in any permit fees, except that the City may waive any extra charges for low-income households.

Timeframe. Current and on-going.

Expected Results. Zoning status to be determined for properties rehabilitated under Programs One through Four.

PROGRAM 22. Preservation of Subsidized Housing Units.

Description. (a) The City will work with interested private entities a non-profit housing corporation with the capacity to manage and maintain the dwelling units.

b) The City will assist the interested entity in applying for available state or federal assistance to purchase the properties and to continue their

operation as low-income housing. If state or federal funds are insufficient to offset acquisition costs, the City may consider using redevelopment tax-increment funds to provide a low-interest or deferred loan to cover the financing "gap".

There are two federally subsidized (no state or local) rental housing developments whose owners could prepay their federal loans and convert their units to market-rate housing between 1991 and 1996. There is, in addition, one rental housing development with a Section 8 contract which expires in 1995. The owner of one development containing 48 dwelling units has already issued a notice of intent to prepay. Under such circumstances, the owner must give a public or non-profit entity the right of first refusal to acquire the units for continued operation as low-income housing. The total potential loss of affordable housing is 110 dwelling units.

Administration/Funding. Either Community Development Department to seek interested non-profit or private entities or Redevelopment Agency to provide partial financing if needed and if funds are available at the anticipated time of sale.

Timeframe. Current and ongoing as needed.

Estimated Results. Preservation of 110 dwelling units as affordable housing.

PROGRAM 23. Manufactured Housing on Single-Family Lots

Description. State law requires local governments to allow manufactured homes on land zoned for residential use, subject to the same development standards as site-built housing. The City will continue to implement the requirements of state law.

Administration/Funding. Community Development Department and Building Department will process applications.

Timeframe. Current and ongoing.

Expected Results. Increase in opportunities for manufactured housing constructed to HUD code as a lower-cost alternative to site-built housing. It is anticipated that not more than five applications will be received for manufactured housing.

PROGRAM 24. Preservation of Mobilehome Parks.

Description. The City will seek to preserve mobilehomes in mobilehome parks which have the potential to provide sound housing. Of the nearly 900 mobilehomes in mobilehomes parks in Folsom approximately 10% were constructed prior to 1974 HUD standards and have been determined by the City to be dilapidated. The City will not, however, seek to preserve those mobilehomes which do not have the potential to provide safe and sound housing. Rather, the City will assist these owners in finding suitable replacement and, if necessary, provide low-interest loans to purchase replacements.

Administration/Funding. Community Development Department to identify dilapidated mobilehomes with the assistance of the Building Department. Redevelopment Agency to provide relocation assistance.

Timeframe. Beginning July 1, 1992, assist approximately 90 low-income residents in finding suitable replacement mobilehomes as current homes become uninhabitable.

Expected Results. Assist 90 residents in finding replacement mobilehomes. Preserve approximately 800 mobilehomes.

PROGRAM 25. Homeless Services

Description. The City of Folsom will continue to cooperate with regional homeless shelter providers and meet the needs of individuals and

families without permanent housing. At present, there is no identified need for a permanent homeless or transitional housing facility in the City. Should such a need arise in the future, the City would identify appropriate locations for homeless or transitional housing facilities according to the City's Zoning Code. Homeless/transitional housing facilities are presently allowed in multifamily high density and commercial zones.

Administration/Funding. The Community Development Department will be responsible for reviewing compliance with City zoning requirements.

Timeframe. Timeframe for homeless or transitional housing facility depends on the timing of proposals presented to the City.

Expected Results. Increased capacity to serve homeless persons and creation of housing opportunities to return homeless persons to permanent housing.

PROGRAM 26. Fair Housing Program

Description. The City will seek information from state and county agencies, and community organizations which have produced information on state and federal fair housing requirements. The City will make such information available at a designated office in City Hall. The City will also assist individuals with complaints in contacting the appropriate agency and filing a complaint.

Administration/Funding. The Community Development Department will disseminate information on fair housing laws and assist individuals in filing complaints.

Timeframe. Current and ongoing.

Expected Results. Resolution or referral of fair housing complaints.

PROGRAM 27. Implement State Energy Conservation Standards.

Description. Applicants for building permits must show compliance with the state's energy conservation requirements at the time building plans are submitted.

The State of California has adopted a number of energy conservation requirements for residential dwelling units. These conservation standards apply to all newly constructed dwelling units and additions to existing dwelling units. Conservation requirements address insulation; the amount and orientation of glazing; shading by landscaping, mechanical, and architectural devices; heating and cooling system efficiency; the amount and placement of thermal mass (materials that absorb heat during the daytime and release heat at night); and other aspects of building energy efficiency.

Administration/Funding. The City Building Department is responsible for implementing the state's energy conservation standards. This includes the checking of building plans and other written documentation showing compliance and the inspection of construction to ensure that dwelling units are constructed according to those plans. The cost of enforcement is paid for from fees paid at the time plans are submitted.

Timeframe. Current and on-going.

Expected Results. Checking of all building plans for compliance with state energy conservation requirements. Increase in energy efficiency will save an unspecified amount of energy and natural resources.

PROGRAM 28. Site Development Standards

Description. The City will implement the requirements of the California Subdivision Map Act regarding design solar access, landscaping to reduce energy use, appropriate orientation and

configuration of buildings on a site, and other site design factors affecting energy use.

The state energy conservation requirements address energy conservation in the construction of dwelling units. Additional energy conservation can be obtained from development patterns which encourage conservation.

Administration/Funding. Community Development Department.

Timeframe. To be implemented at the time of review of tentative subdivision maps.

Expected Results. Improved energy conservation in new residential developments. Energy savings cannot be estimated at this time.

PROGRAM 29. Energy Conservation Assistance for Low-Income Households

Description. The City will provide information to homeowners seeking financial assistance in retrofitting their homes for energy conservation.

Substantial energy conservation, and reduced utility payments, can be realized from weatherizing and insulating older dwelling units. Many low-income households and owners of rental units lack the financial resources. however, to undertake such home improvements. There are several programs that can provide financial assistance to low-income homeowners and rental unit owners whose tenants are low income: Community Development Block Grant Program, California Housing Rehabilitation Program, Pacific Gas & Electric, SMUD, Special Circumstances Grants (specified homeowners on Social Security only), and "Project Go".

Administration/Funding. The Community Development Department will include weatherization and energy conservation as eligible activities under CDBG and CHRP programs which it administers. The Agency will provide information and refer eligible property owners to other programs.

Timeframe. Current and on-going.

Expected Results. Weatherization and insulation of 100 dwelling units between 1991 and 1996.

PROGRAM 30. Preservation of Historic Residences

Description. To preserve historically and architecturally significant buildings, the City will undertake the following actions:

1) When considering development or rehabilitation activities, the City will evaluate the potential impact of such activities on historic properties. Higher priority in funding decisions for CDBG, redevelopment, or other state or federal funds will be given to eligible projects whose objectives include the preservation of properties identified as historic by a federal, state, or local agency.

2) The City will continue to designate certain areas as historic districts and may adopt guidelines for historic structures. The City has established on such historic district (see the Historic District Specific Plan).

3) Property owners who wish to alter or convert historic structures on local, state, or federal lists will be required to follow state historic preservation guidelines. The demolition of such structures will not be allowed unless the property owner has first offered the property for sale to a public or private organization to preserve the property, and there has been no willing buyer; or unless the property represents an immediate threat to public health and safety.

4) In public meetings and hearings on proposed activities involving the use of public funds for development or rehabilitation, the City

will invite the public to comment on the potential impact of such activities on historically significant sites. Notices of such meeting and hearings will include language inviting such public comment.

The City may exempt property owners from specific historic preservation requirements, to the extent it has the authority to do so, if such requirements would conflict with handicapped access, energy conservation, seismic safety retro-fitting, or if the strict application of historic preservation requirements would impose an unreasonable economic hardship on the property owner. Any such
decision would be made on case-by-case basis.

Administration/Funding. The Community Development Department will review applications.

Timeframe. Adopt historic preservation requirements by July 1993. Implement thereafter as part of the City's permit process.

Expected Results. Preservation of residential buildings with historic or architectural value.

PROGRAM 31. Redevelopment Housing Set-Aside Plan

Description. The City will prepare a plan which shows how the City intends to meet the requirements of redevelopment law concerning the percentage of newly constructed or rehabilitated dwelling units within the redevelopment area that must be affordable to low- and moderate-income households. The plan will also contain a strategy for the use of the City's tax-increment housing set-aside funds to assist low- and moderate-income households.

The City had approximately $300,000 accumulated in its housing set-aside fund as of July 1992, and anticipates that $1.5 million in additional housing set-aside funds will be generated between 1992 and 1997.

Administration/Funding. Folsom Redevelopment Agency, assisted by the Community Development Department.

Timeframe. Redevelopment Agency to adopt plan by January 1993.

Expected Results. Improvement in City's ability to prioritize the expenditure of its redevelopment housing set-aside funds.

PROGRAM SUMMARY AND PRIORITY LIST

Prgrm #	Description	Timeframe	Recommended Priority	Timeframe Change Rec
1	Provide Adequate Sites for Housing	ongoing	1	
2	Sites for Multifamily Rental Housing	7/91-6/96	1	
3	Provision of Public Services	7/91-6/96	1	
4	Sites for Special Group Housing	7/91-6/96	2	
5	Housing for Older Adults	7/91-6/96	1	
6	Housing for Single Parents With Children	1993-1996	2	
7	Density Bonuses and Other Incentives (ordinance)	12/93	1	1/93
8	Density Bonuses for Moderate-Income Housing (ordinance)	12/93	1	1/93
9	Pursue Funding Under State and Federal Programs	7/91-ongoing	1	
10	Tax-Exempt Bond Financing	1993-1996	2	
11	Community Reinvestment Act	1/93-ongoing	2	
12	Permit and Development Fee Reductions	ongoing	1	
13	Second Units in Single-Family Neighborhoods (ordinance)	7/93	3	
14	Voter Authorization for Specified Rental Housing	After 1/93	1	
15	Inspection Program	7/92-6/96	3	
16	Code Enforcement and Abatement	7/91-6/96	3	
17	Rehabilitation of Substandard Dwelling Units	ongoing	1	
18	Relocation Assistance (ordinance)	1/93-ongoing	2	7/93
19	Housing Demolition Mitigation	ongoing	2	
20	Maintenance of Housing Condition Data Base	1991/1994	2	
21	Zoning Flexibility For Housing Rehabilitation	ongoing	2	
22	Preservation of Subsidized Housing Units	ongoing	1	
23	Manufactured Housing on Single-Family Lots	ongoing	3	
24	Preservation of Mobilehome Parks	7/92-ongoing	1	
25	Homeless Services	none	3	
26	Fair Housing Program	ongoing	1	
27	Implement State Energy Conservation Standards	ongoing	3	
28	Site Development Standards	ongoing	2	
29	Energy Conservation Assistance for Low-Income HH	ongoing	1	
30	Preservation of Historic Residences	7/93-ongoing	3	
31	Redevelopment Housing Set-Aside Plan	1/93-ongoing	1	

NOTE: The level of priority recommended for the programs above is based on the urgency of program implementation to meet low- and moderate-income housing objectives.

23.10 APPENDIX

Summary of Approaches to Affordable Housing Requirements For Development

There are three general approaches to affordable housing requirements for new residential developments:

1) the traditional mandatory approach (often referred to as "inclusionary zoning"),

2) the negotiated development approach, and

3) the strictly voluntary approach.

23.10.1 Mandatory Approach

Under a mandatory approach to affordable housing, often called "inclusionary zoning", a city or county requires that a specified percentage of housing be set aside for low- and moderate-income households. The percentage set aside and the income group for whom affordable units must be set aside typically varies depending on the type of housing project (for example, multifamily rental versus single-family ownership). "Affordability" is defined as a percentage of income, usually 30%, and the low- and moderate-income groups are usually defined based on the state definition (very low-income = 50% or less of median, low-income = 50-80% of median, and moderate-income = 80-120% of median).

Cities and counties that have adopted mandatory approaches to affordable housing requirements usually set up administrative procedures for monitoring compliance. These include:

1) rent restrictions on the affordable rental units to ensure that rents stay within certain limits for a specified period of time (this is typically accomplished through a recorded rent limitation agreement),

2) occupant screening to ensure that households benefitting from the program are from the targeted income group.

3) sales price restrictions on the affordable for-sale units to ensure that prices are within the range affordable to the designated income group, and

4) resale controls, to ensure the continued affordability of the for-sale units (resale controls are not imposed in most programs).

In addition, some programs have recapture requirements on for-sale housing to recover a portion of any governmental subsidy provided to a homeowner. This is not a universal practice, however.

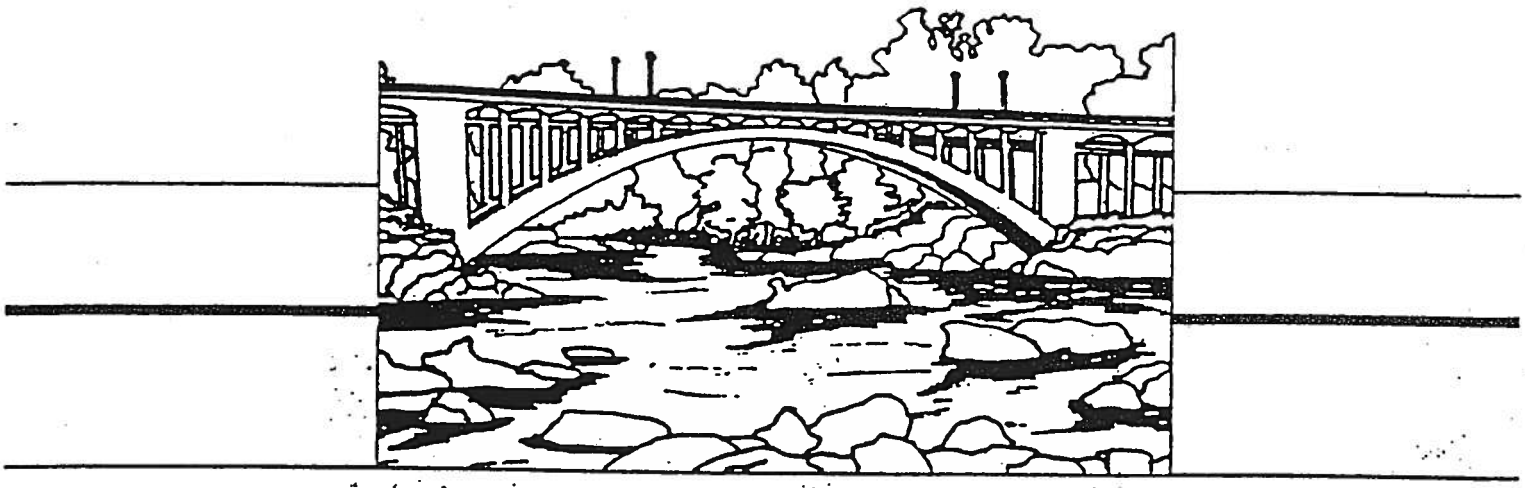
Affordability is determined by calculating the appropriate percentage of income that should be devoted for housing expenses (usually 30%) and subtracting an allowance for utility costs (and property taxes and homeowner's insurance for ownership housing). The affordable housing price determined on for-sale housing is calculated according to the monthly mortgage which a low- or moderate-income household could afford (after subtracting other housing expenses), and estimating, at the prevailing interest rate, the maximum loan for which such a household could qualify.

Mandatory affordable housing programs often provide exemptions for small projects, allow developers to pay in-lieu fees to an affordable housing fund, or donate land in-lieu of building housing. These exemptions are usually made on the basis of the feasibility or desirability of providing the affordable housing in a specific project.

To assist developers in providing affordable housing, some cities and counties provide financial and regulatory incentives, such as density bonuses, low-cost financing, fee reductions, expedited permit processing, and

assistance in applying for state or federal subsidies. Most communities, however, still require a developer to meet the affordable housing goals regardless of the availability of such incentives.

23.10.2 Negotiated Development



Under a negotiated development process, cities and counties set affordable housing goals on a case-by-case basis depending on project size, characteristics, location, and other factors. The features of negotiated development programs are very similar to mandatory inclusionary programs, except that there is no absolute percentage of affordable housing specified in advance for which all development must provide.

The implementation techniques for negotiated development programs are also similar to mandatory programs. Some communities require affordability guarantees through rent limitation agreements or sales price restrictions, and occupants may be screened for income eligibility.

The responsible party for screening households varies: some communities perform the screening themselves, others require the developer or property manager to screen households, while still others delegate this responsibility to another entity, such as a housing authority or a community-based non-profit housing corporation. Specific development and regulatory incentives are also negotiated for each project.

23.10.3 Voluntary Approach

A voluntary approach to affordable housing production allows the developer to choose whether or not to include a specified percentage of affordable housing in a residential development. The jurisdiction would strongly encourage home builder participation in its affordable housing program, and offer regulatory and financial incentives to interested home builders in providing affordable housing within their new developments. A voluntary approach, as the term suggests, cannot compel home builders to participate in an affordable housing program, however.

24.5 IMPLEMENTATION 10

OPEN SPACE & CONSERVATION

24.1 INTRODUCTION

Because of the close relationship between conservation of the City's resources and maintenance of open space, these two State required Elements are combined into a single Element, the Open Space and Conservation Element.

The conservation segment of the Element identifies the community's resources and establishes policy for their conservation, development and/or utilization.

The open space segment of the Element identifies the community's open space resources and establishes policy for their preservation, maintenance and/or use.

24.1.1 STATE POLICY AND AUTHORIZATION

Government Code Section 65302(d) requires a Conservation Element for the conservation, development, and utilization of a community's natural and manmade resources. The Conservation Element is required to address the following:

1. The reclamation of land and waters.
2. Flood control.
3. Prevention and control of the pollution of streams and other waters.
4. Regulation of the use of land in stream channels and other areas required for the accomplishment of the conservation plan.
5. Prevention, control and correction of the erosion of soils, beaches and shores.
6. Protection of watersheds.
7. The location, quantity and quality of rock, sand and gravel resources.

Government Code Section 65560 requires the adoption of an Open Space Element. Open space land is any parcel or area of land or water which is essentially unimproved and devoted to an open space use and which is designated on a local, regional or State open space plan as any of the following:

1. Open space for the preservation of natural resources.
2. Open space used for the managed production of resources.
3. Open space for outdoor recreation.
4. Open space for public health and safety.

The State has found:

1. That the preservation of open space land, is necessary not only for the maintenance of the economy of the State, but also for the assurance of the continued availability of land for the production of food and fiber, for the enjoyment of scenic beauty, for recreation and for the use of natural resources.

2. That discouraging premature and unnecessary conversion of open space land to urban uses is a matter of public interest and will be of benefit to urban dwellers because it will discourage noncontiguous development patterns which unnecessarily increase the costs of community services to community residents.

3. That the anticipated increase in the population of the State demands that Cities, Counties and the State, at the earliest possible date, make definite plans for the preservation of valuable open space land and take positive action to carry out such plans by the adoption and strict administration of laws, ordinances, rules and regulations as authorized by this chapter or by other appropriate methods.

4. That in order to assure that the interests of all its people are met in the orderly growth and development of the State and the preservation and conservation of its resources, it is necessary to provide for the development by the State, regional agencies, Counties and Cities, including charter Cities, of Statewide coordinated plans for the conservation and preservation of open space lands.

24.1.2 RELATED STATE AND FEDERAL REGULATIONS

CALIFORNIA SURFACE MINING AND RECLAMATION ACT[1]

The Surface Mining and Reclamation Act (SMARA) was enacted to ensure that:

1. Adverse environmental effects are prevented or minimized and that mined lands are reclaimed to a usable condition.

2. The production and conservation of minerals are encouraged, while giving consideration to values relating to recreation, watershed, wildlife, range and forage, and aesthetic enjoyment.

3. Residual hazards to the public health and safety are eliminated.

CALIFORNIA ENDANGERED SPECIES ACT

The State of California has adopted the California Endangered Species Act (CESA) as a mechanism to insure and/or encourage consultation with the California State Department of Fish and Game (DFG) when and where proposed projects may potentially affect State listed threatened or endangered species. Project sponsors or lead agencies other than a State lead agency may informally consult with DFG on any project. However, where a State agency is acting as the lead agency pursuant to the California Environmental Quality Act (CEQA), CESA requires the DFG to issue written findings regarding the effects of the proposed project, whether habitat destruction, taking of, or jeopardy to any threatened or endangered species may occur. CESA further requires State lead agencies to adopt reasonable and prudent alternatives, or if those are found infeasible, reasonable mitigation and enhancement measures for projects which would minimize adverse impacts to the listed species or its habitat.

To the extent that State listed threatened or endangered species, or their habitats, as now exist or are determined to exist within the Folsom General Plan Area, the provisions of this act will apply.

CALIFORNIA ENVIRONMENTAL QUALITY ACT

The adoption of a General Plan, Element or amendment constitutes a project under the CEQA and the State EIR Guidelines. If it is determined from the initial study that any aspect of the proposed General Plan document or amendment either individually or cumulatively, may significantly affect the environment, the City must prepare an EIR.

FEDERAL CLEAN WATER ACT

The U.S. Clean Water Act was derived through the 1977 addition of certain amendments to the Federal Water Pollution Control Act. The stated objectives of this combined legislation is to restore and maintain the chemical, physical, and biological integrity of the Nation's waters. As an implementation effort of the amended act, Congress adopted Sections 402 and 404. Section 402 provides for an administrative review and permit procedure for the discharge of any pollutant or combination of pollutants, into the Nation's waters. Section 404 provides for a review and permit procedure for the discharge of dredged or fill material into the Nation's navigable waterways. Through the adoption of administrative codes by the Army Corp of Engineers and the combined influences of several separate litigations, Clean Water Act Section 404 permits are now required for the placement of fill and/or dredged material in the Nation's navigable waterways and their associated wetlands.

Wetlands, although variously definable by scientists and resource managers, are presently determined by the Army Corp of Engineers for the purposes of asserting Section 404 permit authority by using the following combined criteria: frequency of inundation, soil type, character and chemistry, and vegetation. Unfortunately, many wetlands areas have not been formally reviewed under these criteria. In fact, determinations are not routinely made by the Army Corp of Engineers unless a specific request is made.

Therefore, to the extent that wetlands do now exist or are determined to exist in the Folsom General Plan Area, a Section 404 permit issued by the Army Corp of Engineers will be a prerequi-

[1]Public Resources Code Section 2712.

site for construction of any project which proposes to place fill or dredged material in waterways of their associated wetlands.

FEDERAL ENDANGERED SPECIAL ACT

The U.S. Endangered Species Act (as amended in 1982) states as its purpose "to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes to the treaties and conventions set forth in Subsection 1 of this section". To achieve this goal, the act, pursuant to Section 9 as contained therein, it is unlawful for any person subject to the jurisdiction of the United States to:

1. Import any such species into, or export any such species from the United States.

2. Take any such species within the United States or the territorial sea thereof.

3. Possess, sell, deliver, carry, transport, or ship, by any means whatsoever any such species taken in violation thereof.

In this regard, the term to "take" is specifically defined as follows:

Section 3(19). The term "take" means to harass, harm, pursue, hunt, shoot, wound, trap, capture, or attempt to engage in any such conduct.

Further, administrative interpretations of harass or harm have extended statutory protection to the habitats of threatened or endangered species. Violations of the act may result in criminal or civil penalties or both.

To the extent that federally listed threatened or endangered species, or their habitats, do now exist or may be shown to exist within the Folsom General Plan Area, the provisions of this act will apply.

24.1.3 RELATIONSHIP TO THE GENERAL PLAN

The Open Space and Conservation Element of the General Plan directly effects the Land Use Element, Parks and Recreation Element and indirectly effects the Safety Element.

24.2 SETTING/ASSUMPTIONS/ISSUES

24.2.1 SETTING

Volume III, Chapter 82.0 of the General Plan and the Master Environmental Assessment (MEA) describe the setting of the Folsom area and the data base upon which the General Plan has been prepared. This section briefly summarizes the community setting and highlights those resources and open spaces identified for preservation, maintenance and conservation.

Resources identified as requiring preservation, management and/or enhancement in the City of Folsom are:

1. The quality and quantity of ground water.

2. The quality and quantity of surface water including Folsom Lake, the American River, Humbug Creek, Blue Ravine Creek and Willow Creek and other known wetland areas.

3. Woodland vegetation, including Valley Oaks and Blue Oaks.

4. Sensitive habitats including but not limited to: riparian vegetation, including that found along Humbug Creek; Blue Ravine Creek, Willow Creek, Hinkle Creek, and the American River; vernal pools and potential pool habitats including but not limited to those found in the lower Mormon Island Marsh Area; and remnant Valley Bunch Grasslands such as those known to occur near the confluence of Humbug and Blue Ravine Creeks.

5. Wildlife, including such sensitive species as the Valley Elderberry Longhorn Beetle, Swainson's Hawk, Tricolored Blackbird and Tiger Salamander.

6. Fisheries, including Folsom Lake, Lake Natoma, the American River, Humbug Creek, Blue Ravine Creek and Willow Creek.

7. Minerals identified by the State Division of Mines and Geology, including lode gold, placer gold, copper and zinc.

8. Rock and gravel.

9. Energy, electricity and natural gas.

10. Air (see Chapter 32, Air Quality Element).

11. Historic and cultural resources, including the Folsom Historic District, Coloma Road/ Pony Express route, Old Folsom Power House, Folsom Gold Mining District, Prairie City, Cohn House, Folsom Depot, First California Passenger Railroad (Sacramento Valley - Placerville), and other sites as identified by the California Archaeological Inventory dated June 1, 1987.

Those open space's identified as requiring preservation are:

1. American River Corridor
2. Humbug Creek
3. Blue Ravine Creek
4. Hinckle Creek
5. Willow Creek
6. Lake Natoma
7. Folsom Lake
8. Willow Hill Reservoir, if feasible

24.2.2 ASSUMPTIONS

QUALITY OF LIFE

Folsom's quality of life is characterized by:

1. The diverse natural setting, including the American River, tributary streams, natural vegetation, topography, native wildlife, and other unique features of the landscape.

2. Developed parks and open space.

3. The Historic District and other historic places throughout the community.

4. The State Prison site, which provides a large, visual open area in the City.

5. The physical form of Folsom's neighborhoods.

6. Ease of movement.

7. Access to pedestrian and bicycle trails.

WILDLIFE

Wildlife to be protected include, but are not limited to the following sensitive species:

1. Tricolored blackbird
2. Swainson's Hawk
3. Tiger Salamander
4. Valley Elderberry Longhorn Beetle (Federally Listed as Endangered)

HABITATS

Sensitive habitats to be protected include but are not limited to:

1. Northern Hardpan Vernal Pools
2. Valley Bunch Grasslands
3. Freshwater Marshlands
4. Riparian Forests and Woodlands
5. Oak Savannah and Woodlands
6. Permanent and Seasonal Wetlands

RECREATIONAL LANDS

Recreational amenities such as rivers, streams, lakes, undisturbed clusters of trees, wildlife habitats and the passive and active recreational opportunities they represent are, if protected and managed, a resource to be enjoyed by future generations. Reasonable public visual and physical access to these resources is essential.

PUBLIC SHALL BENEFIT

When trade offs are made between the preservation of identified resources/open spaces and development, the City and the public shall cumulatively receive the greater short term and long term benefits of such trade.

24.2.3 ISSUES

Issues identified during the preparation of the Open Space and Conservation Element include but are not limited to:

LOSS OF RESOURCES

As development of the City proceeds, natural resources and open space as identified in Section 24.2.2 may be substantially reduced, or in a worst case, be eliminated.

COST OF PROTECTION

How does the City pay for acquisition, rehabilitation, enhancement, maintenance and operation of its resources and open spaces.

PRIVATE DEVELOPMENT/PUBLIC NEED BALANCE

If land is preserved for the protection of resources and open space, this limits the ability of property owners to develop their land. Development incentives may be required to make the preservation of the City's resources viable to the property owner.

24.3 OPEN SPACE AND CONSERVATION ELEMENT GOALS AND POLICIES

GOAL 23

To preserve existing heritage trees through a City Ordinance.

POLICY 23.1

The City shall continue to enforce the Tree Preservation/Landscape Ordinance and identify heritage trees to be preserved. Site designs shall consider building and parking configurations which will preserve as many heritage trees as possible.

POLICY 23.2

Replacement trees shall be required whenever existing trees are removed.

POLICY 23.3

The City may allow proposed development to be concentrated on a portion of a site and include taller buildings or smaller lot sizes to preserve a greater number of existing trees.

GOAL 24

To ensure that projects contain landscaping and trees that compliment the City's natural character.

POLICY 24.1

Development projects shall contain landscaping of common or public areas, surface parking areas, and streets bordering the project.

POLICY 24.2

Prior to the granting of a building permit, a project must have an approved landscaping plan showing the location, type, and proposed maintenance of landscaping.

POLICY 24.3

The developer or property owners shall be responsible for maintaining landscaping required as part of the project approval for residential developments where there are common areas, and for all commercial and industrial developments. The City will require the establishment of a landscaping maintenance district or other legally binding maintenance agreement and will reserve the power to enforce the maintenance agreement through appropriate means.

POLICY 24.4

The City shall adopt a landscaping ordinance with standards for:

1. Preferred types of plants and materials.
2. Agreements to ensure the continued maintenance of landscaped areas.
3. Minimum size of trees upon planting.
4. Amount of landscaping area.

GOAL 25

Wherever feasible, to preserve, acquire, rehabilitate, enhance and maintain the identified resources for the use and enjoyment of present and future generations. The identified

resources include, but are not limited to:

1. Northern Hardpan Vernal Pools and Associated Sensitive Flora
2. Valley Bunch Grasslands and Associated Sensitive Flora
3. Freshwater Marshlands and Associated Sensitive Flora
4. Riparian Forests and Woodlands and Associated Sensitive Flora
5. Oak Savannah and Woodlands and Associated Sensitive Flora
6. Permanent and Seasonal Wetlands and Associated Sensitive Flora
7. American River Corridor
8. Humbug Creek
9. Blue Ravine Creek
10. Hinkle Creek
11. Willow Creek
12. Lake Natoma
13. Folsom Lake
14. Willow Hill Reservoir, if feasible
15. Tricolored Blackbird
16. Swainson's Hawk
17. Tiger Salamander
18. Valley Elderberry Longhorn Beetle
19. Folsom Boulevard Scenic Corridor, from Highway 50 to Sutter Street
20. Greenback Lane Scenic Corridor, from the Folsom City Limits to Riley Street
21. East Natoma Street Scenic Corridor, from Oak Avenue Parkway to the El Dorado County Line
22. Folsom-Auburn Road Scenic Corridor, from the Folsom City Limit or to Greenback Lane

POLICY 25.1

The surface and groundwater quality of Folsom shall not be degraded from City standards.

POLICY 25.2

The City may obtain fee title or protective easements of identified resources.

POLICY 25.3

Sensitive habitat areas and open space shall have their borders defined by public access ways, and/or shall have views from adjacent buildings oriented toward the areas.

POLICY 25.4

The City shall require that a qualified biologist conduct a vegetative/wildlife field survey, and analysis prior to consideration of development applications for projects within or adjacent to sensitive habitat areas and potential habitats for sensitive wildlife and floral species.

POLICY 25.5

The City shall adopt standards for the designation, enhancement and maintenance of identified sensitive habitat areas.

POLICY 25.6

The City shall establish a vegetation preservation ordinance which:

1. Specifies native or "naturalized" vegetation which should be given highest priority for preservation.

2. Requires an applicant to show the approximate location of existing priority vegetation.

3. Specifies the quantity and manner of vegetation which must be planted for replacement.

POLICY 25.7

Trees and other vegetation comprising riparian or other special habitats targeted for preservation should be preserved regardless of whether they are heritage trees.

GOAL 26

The City shall actively encourage the restoration and maintenance of historic buildings or sites.

POLICY 26.1

Identification and publication of available federal, state and private funding sources and incentive programs.

POLICY 26.2

The City should adopt consistent standards for development, public improvements, alley utilization, and frontage improvements for the original 50' x 140' lots situated within the original town boundaries, including the area generally bounded by Bidwell Street, Riverway, Stafford Street and Folsom Boulevard.

GOAL 27

To preserve, acquire, rehabilitate, enhance and maintain the City's identified open spaces for passive and active recreational uses.

POLICY 27.1

The City shall encourage the improvement of public access to recreational facilities and open spaces through:

1. The publication of a trails and recreation guide which maps the trails, open spaces, and parks within the City of Folsom and shows the interconnection with trails and facilities in adjoining communities. The guide shall describe the facilities and hours of operation.

2. The City should require the new parks and open spaces shall be easily accessible to the public, including the mobility impaired.

POLICY 27.2

The City shall develop parkway plans for each identified sensitive habitat area and should include:

1. Provision for pedestrian, bike and/or equestrian trail(s) with connections to adjacent trail systems.

2. Provision for trailhead/parking areas spaced along parkways.

3. Consideration of the development of interpretive centers or trails within parkways.

POLICY 27.3

The City shall adopt a Scenic Corridor Plan for the identified scenic corridors including but not limited to:

1. Folsom Boulevard Scenic Corridor, from Highway 50 to Sutter Street.

2. Greenback Lane Scenic Corridor, from the City Limits to Riley Street.

3. East Natoma Street Scenic Corridor, from the proposed Oak Avenue Parkway to the El Dorado County Line.

4. Folsom-Auburn Road Scenic Corridor, from the City Limits to Greenback Lane.

POLICY 27.4

The City shall encourage land owners to consolidate identified habitats, open space and park lands between separately owned development projects and individually owned properties where feasible.

GOAL 28

To provide for the production of natural resources when compatible with the goals and policies of this General Plan.

POLICY 28.1

The City should adopt water conservation measures which reduce water consumption, by user type.

POLICY 28.2

The quality and quantity of surface water runoff from a property shall not exceed existing flows or existing quality or shall comply with City standards for off-site drainage. The City shall implement a surface-runoff water quality monitoring program to insure compliance with City standards.

POLICY 28.3

The City should maintain existing and develop new sources of water to ensure adequate, long term and high quality water supplies.

POLICY 28.4

The City shall when feasible require new development on dredge tailings to reclaim the tailings in conformance with the guidelines and regulations of the California Division of Mines and Geology.

POLICY 28.5

Where feasible, the City shall protect existing or future mining and/or gravel extraction sites from encroachment of non-compatible uses through phasing of development and performance standards. The City recognizes that, as a practical matter, the prospects for mining and/or gravel extraction are extremely unlikely in view of the restrictions upon the issuance of surface mining permits imposed by Ordinance No. 613 adopted in response to an initiative measure.

POLICY 28.6

The City shall encourage community wide recycling in an effort to conserve natural resources and reduce solid waste disposal. This may be established through the development of recycling programs promoted and sponsored by the City with non-profit groups. These programs could include but not be limited to curbside recycling programs, siting of a recycling center or drop off collection centers.

PARKS AND RECREATION ELEMENT UPDATE

Update the Parks and Recreation Element to include applicable goals and policies of the Open Space and Conservation Element and to exclude specific development standards which are to be contained in the Parks, Recreation and Open Space Master Plan (see program 5.2.1).

IMPLEMENTS: GOAL 27

- Resource Groups/Agencies/Organizations

  Sacramento County Department of Parks and Recreation
  State of California Department of Parks and Recreation
  California State University at Sacramento
  University of California at Davis
  Local Community Colleges

- Responsible Agencies

  Community Development Department
  Public Works Department

- Implementing Agencies

  Community Development Department
  Public Works Department
  Planning Commission
  City Council

- Target Dates: Start: June 1989
  Complete: October 1989

ESTIMATED COSTS PER YEAR

Person Hours/ Dollars	Printing	Direct	Total	Funding
120/$6,000	$200	$500	$6,700	General Fund Developer Fees

PARKS, RECREATION AND OPEN SPACE MASTER PLAN

A Master Plan for Parks, Recreation and Open Space shall be prepared which contains specific requirements and criteria for development, access, use and maintenance of parks, open space and natural areas within the City including:

1. Provision for improving public access to recreation areas and open space with guidelines and standards for the design of access ways making provision for access by all segments of the community including the mobility impaired.

2. Guidelines and standards for the improvement of parks and open space areas which define the appropriate level of maintenance, access, and improvements in sensitive habitat and open space areas.

3. Guidelines for incorporating educational activities and interpretive centers into the open space and sensitive habitat areas.

4. A plan for consolidation of identified open space, natural habitat areas and park l

5. Landscape requirements for parks and open space including design standards for improvements (trails, fences) in open space areas.

6. In order to preserve special habitats develop management plans for identified sensitive/special habitat areas.

IMPLEMENTS: GOAL 27 - POLICIES 27.1; AND 27.2; GOAL 25 - POLICIES 25.5; 25.6; AND 25.7

- Resource Groups/Agencies/Organizations

  Sacramento County Department of Parks and Recreation
  State California Department of Parks and Recreation
  California State University at Sacramento
  University of California at Davis
  Community College

UPDATE LANDSCAPE ORDINANCE.

Adopt a Landscape Ordinance which includes:

1. Tree Preservation Ordinance (existing Tree Preservation Ordinance to be evaluated and modified as necessary to comply with General Plan Goals and Policies) including but not limited to:

A. Requirements for replacement of trees removed from a site (size, type, number of trees to be replaced).

B. Allowance for concentration of development on a site in order to preserve trees in accordance with adopted guidelines and standards. Require specific plans for development under this provision on sites of five acres or more.

2. Landscape plans for new developments shall comply with adopted guidelines and standards (to be referenced in the ordinance) including but not limited to:

A. Standards and guidelines for landscaping of common and public areas, surface parking areas, and streets.

B. Guidelines and standards for sizes, quantities and types of landscaping materials which compliment the City's natural character and are suitable to the Folsom area.

C. Method of irrigation and maintenance.

D. Bonding mechanisms and agreements to assure the installation and long term maintenance of landscape areas.

IMPLEMENTS: GOAL 23 - POLICIES 23.1; 23.2; 23.3 - GOAL 24 - POLICIES 24.1; 24.2; 24.3; AND 24.4

LANDSCAPE STANDARDS AND GUIDELINES

Develop and adopt Landscape Standards which include:

1. Tree preservation guidelines (existing Tree Preservation Ordinance to be evaluated and modified as necessary to comply with General Plan Goals and Policies) including but not limited to:

A. Guidelines for replacement of trees removed from a site (size, type, number of trees to be replaced).

B. Guidelines and standards to allow the concentration of uses on a site in order to preserve trees.

C. Water conservation practices in landscape irrigation practices, irrigation systems and landscape materials which are low water consumers.

2. Criteria for evaluation of landscape plans including but not limited to:

A. Standards and guidelines for landscaping of common and public areas, surface parking areas and streets.

B. Guidelines and standards for sizes, quantities and types of landscaping materials which compliment the City's natural character and are suitable to the Folsom area.

C. Method of irrigation and maintenance.

IMPLEMENTS: GOAL 23 - POLICIES 23.1; 23.2; AND 23.3 - GOAL 24 - POLICIES 24.1; 24.2; 24.3; AND 24.4 - GOAL 28 - POLICY 28.1

OPEN SPACE PRESERVATION

1. The City shall investigate methods of preserving open space including the formation of a City Open Space District, the formation of a local land holding trust, or the use of existing conservation organizations. Methods of preservation shall be evaluated using the following factors:

A. Match the preservation needs of each identified area with a suitable preservation method.

B. Determine which mechanisms of holding land (fee title, easements etc.) will be mutually acceptable to the property owner and the City.

C. Identify funding mechanisms and determine the financial feasibility for each preservation method.

2. In evaluating potential conservator organizations to hold open space the City should consider the following factors:

A. Each group's criteria for accepting land, match the preservation needs of each identified area with a suitable conservator group.

B. Which mechanisms of holding land will be mutually suitable to the property owner, City and conservator group.

C. The financial feasibility for placing each area in a conservancy program and possible funding mechanisms.

IMPLEMENTS: GOAL 25 - POLICIES 25.2; AND 25.6

25.4 RELATED GOALS AND POLICIES 3

25.5 IMPLEMENTATION 5

SAFETY ELEMENTS

25.1 INTRODUCTION

The Safety Element of the City of Folsom aims at reducing death, injuries, damage to property and economic and social dislocation resulting from fire, flood and geological hazards. Chapters 2, 3 and 4 of the MEA provide background data on the City's geological, soils and hydrological resources. These chapters also identify, through text and illustrations, the City's seismic, geological and flooding hazards and are incorporated herein by reference.

Hazardous wastes and toxics are addressed in the Hazardous Materials Element, Chapter 34.

25.1.1 STATE POLICY AND AUTHORIZATION

The Safety Element is a mandatory element of the General Plan under Section 65302(i) of the Government Code. The Element is required to address the protection of the community from fires and geological hazards including features necessary for such protection as evacuation routes, peak load water supply requirements, minimum road widths, clearances around structures and geological hazard mapping areas of known geological hazards.

25.1.2 RELATED STATE AND FEDERAL REGULATIONS

CALIFORNIA SURFACE MINING AND RECLAMATION ACT[1]

The Surface Mining and Reclamation Act SMARA) was enacted to ensure that:

1. Adverse environmental effects are prevented or minimized and that mined lands are reclaimed to a usable condition.

2. The production and conservation of minerals are encouraged, while giving consideration to values relating to recreation, watershed, wildlife, range and forage, and aesthetic enjoyment.

3. Residual hazards to the public health and safety are eliminated.

The Alquist-Priolo Special Studies Zones Act requires Cities and Counties containing designated fault zones to include policies and standards in their General Plans for new development withhin the fault zones.

25.1.3 RELATIONSHIP TO THE GENERAL PLAN

The Safety Element of the General Plan is directly related to the Land Use Element and Conservation and Open Space Element.

25.2 SETTING/ASSUMPTIONS/ISSUES

25.2.1 SETTING

The Folsom Planning Area is located east of the City of Sacramento in the lower foothills on the eastern edge of the Sacramento Valley, adjacent to the American River Canyon. The setting provides for a number of safety issues to be addressed.

The City of Folsom is adjacent to Folsom Lake and several dams which are fed by the American River, therefore the threat of flooding is present. Earthquake faults are located within the region along the Sierra Foothill Range and subsequent seismic shaking could affect areas of Folsom. The State Department of Mines places Folsom in Zone 1 (low severity) on its Earthquake Intensity Map and low in the Landslide category. Some housing areas are located adjacent to open range land; wildfire could be a threat. Downtown Folsom contains some older commercial areas which are not constructed in accordance with contemporary fire codes and some land uses contain hazardous or flammable materials. Folsom is a growing and expansive area and the City must provide adequate emergency services. Since the City of Folsom is located adjacent to the American River Canyon, there is limited outside access for emergency services through the canyon. Evacuation plans and the movement of emergency equipment and materials need to be coordinated with surrounding agencies and communities.

[1]Public Resources Code Section 2712.

25.2.2 ASSUMPTIONS

Some of the hazards and problems concerning safety are:

1. Dam failure and subsequent flooding.
2. Flooding of the American River and Folsom Lake.
3. Earthquakes and damage following seismic shaking.
4. The destruction of older downtown commercial areas by fire.
5. The destruction of housing areas adjacent to open range land.
6. The lack of proper emergency services for an expanding community.
7. Diminished evacuation capacities during an emergency.

25.2.3 ISSUES

1. Providing adequate fire protection for all areas considering the potential hazards that exist.

2. How does the City plan for the threat of floods and the subsequent damage that might arise?

3. What are the evacuation plans and procedures that need to be initiated within and outside the community to ensure a successful evacuation in the event of a disaster?

4. What is the level of emergency services needed to keep pace with an expanding community and will the City keep pace?

25.3 SAFETY ELEMENT GOALS AND POLICIES

GOAL 29

To protect lives and property from unacceptable risks resulting from natural and man-made hazards.

POLICY 29.1

Fire and Police Department personnel/resident population ratios shall be maintained at adequate levels as defined by the City Council.

POLICY 29.2

The City shall maintain a fire prevention and retention program for buildings.

POLICY 29.3

The City shall develop standards for building within the 100 year floodway to assure that the water flows above stream and downstream from a property will not be altered from existing levels.

POLICY 29.4

The City shall work with the U.S. Army Corp of Engineers in developing standards for development within the inundation boundary resulting from a failure of Folsom Dam or the dikes retaining Folsom Lake.

POLICY 29.5

The City shall prepare, publish and coordinate an emergency response plan which addresses medical care, escape routes, mutual aid agreements, temporary housing and communications.

POLICY 29.6

The City shall encourage the preparation and distribution to the general public of a safety guide for the use and enjoyment of Folsom's resources.

POLICY 29.7

The City shall cooperate with SMUD's efforts in preparing and publishing an emergency evacuation plan for Rancho Seco Nuclear Power Plan.

PUBLIC SAFETY CODE REVIEW

Review existing City Codes with public safety provisions and update codes as necessary to comply with the Goals and Policies of the General Plan as follows:

1. Adopt prescribed ratios of personnel to population for Fire and Police Departments.

2. Adopt a fire prevention program for areas with high fire risk such as the Sutter Street historic area and grasslands and natural habitat areas within the City.

3. Adopt standards for development in the 100-year and 500-year floodways which will ensure that such development will not alter stream flows.

4. In cooperation with the U.S. Army Corps of Engineers, adopt standards for development within areas subject to inundation from a failure of Folsom Dam or the dikes retaining Folsom Lake.

5. Prepare, publish and coordinate an emergency response plan which addresses medical care, escape routes, mutual aid agreements, temporary housing and communications.

NOISE

26.1 INTRODUCTION

The purpose of the Noise Element is to mitigate noise conflicts where they presently exist and to minimize future noise conflicts by the adoption of policies and implementation measures designed to achieve land use compatibility for proposed development.

The contents of a Noise Element and the methods used in its preparation have been determined by the requirements of Section 65302(f) of the California Government Code and by the "Guidelines for the Preparation and Content of Noise Elements of the General Plan (Reference 1) adopted and published by the California Office of Noise Control (ONC) in 1976. The ONC Guidelines require that certain major noise sources and areas containing noise sensitive land uses be identified and quantified by preparing generalized noise exposure contours for current and projected conditions within the community. Contours may be prepared in terms of either the Community Noise Equivalent Level (CNEL) or the day-night average level (Ldn)[1], which are descriptors of total noise exposure at a given location for an annual average day. It is intended that the noise exposure information developed for the Noise Element be incorporated into the General Plan to serve as a basis for achieving land use compatibility within the community. It is also intended that noise exposure information be used to provide baseline levels for use in the development and enforcement of a local noise control ordinance to address noise produced by non-preempted noise sources.

26.1.1 STATE POLICY AND AUTHORIZATION

Section 65302(f) of the California Government Code mandates that the General Plan for each City contain a Noise Element which is designed to identify and appraise noise problems in the community.

The State Office of Noise Control has established guidelines which require that current and projected noise levels be analyzed and quantified for the following noise sources:

1. Highways and freeways.
2. Primary arterials and major local streets.
3. Passenger and freight on-line railroad operations and ground rapid transit systems.
4. Commercial, general aviation, heliport, helistop, and military airport operations, aircraft overflights, jet engine test stands, and all other ground facilities and maintenance functions related to airport operation.
5. Local industrial plants, including, but not limited to, railroad classification yards.
6. Other ground stationary noise sources identified by local agencies as contributing to the community noise environment.

Noise contours are required for these sources, stated in terms of the CNEL or Ldn, and may be used as a guide for establishing a pattern of land uses that minimizes the exposure of community residents to excessive noise.

26.1.2 RELATED STATE REGULATIONS

Other State Laws and regulations regarding noise control are directed toward aircraft, motor vehicles and noise in general.

California Administrative Code, Title 21, Subchapter 6, establishes noise level criteria for airports in California. These regulations apply to the airport operator, and are enforced by the County in which the airport is located. A Noise Impact Boundary based upon the 65 CNEL contour is established, and measures are specified to attain land use compatibility with respect to aircraft/airport noise.

The California Vehicle Code sets noise emission standards for new vehicles, including autos, trucks, motorcycles and off-road vehicles. Performance standards are also applied to vehicles operated on public streets and roadways. Section 216 of the Streets and Highways Code regulates traffic noise as received at schools near freeways. The Harbors and Navigation Code regulates noise emissions from new motorboats and those operated in or upon inland waters.

[1]For an explanation of terminology used in this report refer to the Glossary.

Title 24 of the California Administrative Code regulated interior noise levels within multiple-occupancy dwellings affected by noise from traffic, aircraft operations, railroads and industrial facilities. The State Penal Code (Section 415) prohibits loud and unusual noise that disturbs the peace, while the Civil Code defines public nuisance which may be caused by noise. The California Environmental Quality Act includes noise as one of the factors in determining environmental impacts.

26.1.3 RELATIONSHIP TO THE GENERAL PLAN

The Noise Element is most related to the Land Use and Circulation Elements of the General Plan. Its relationship to the Land Use Element is direct in that the implementation of either Element has the potential to result in the creation or elimination of a noise conflict between differing land uses. The Land Use Element must be consistent with the Noise Element by preventing the development of incompatible adjacent land uses, preventing impacts upon noise sensitive uses and preventing encroachment upon existing noise-producing facilities.

26.2 SETTING/ASSUMPTIONS/ISSUES

26.2.1 SETTING

Based on discussions with the City of Folsom staff regarding potential major noise sources, it was determined that there are several potentially significant primary sources of community noise within Folsom. These sources include traffic on major roadways and highways, railroad operations, aircraft operations at Mather Air Force Base, and industrial activities.

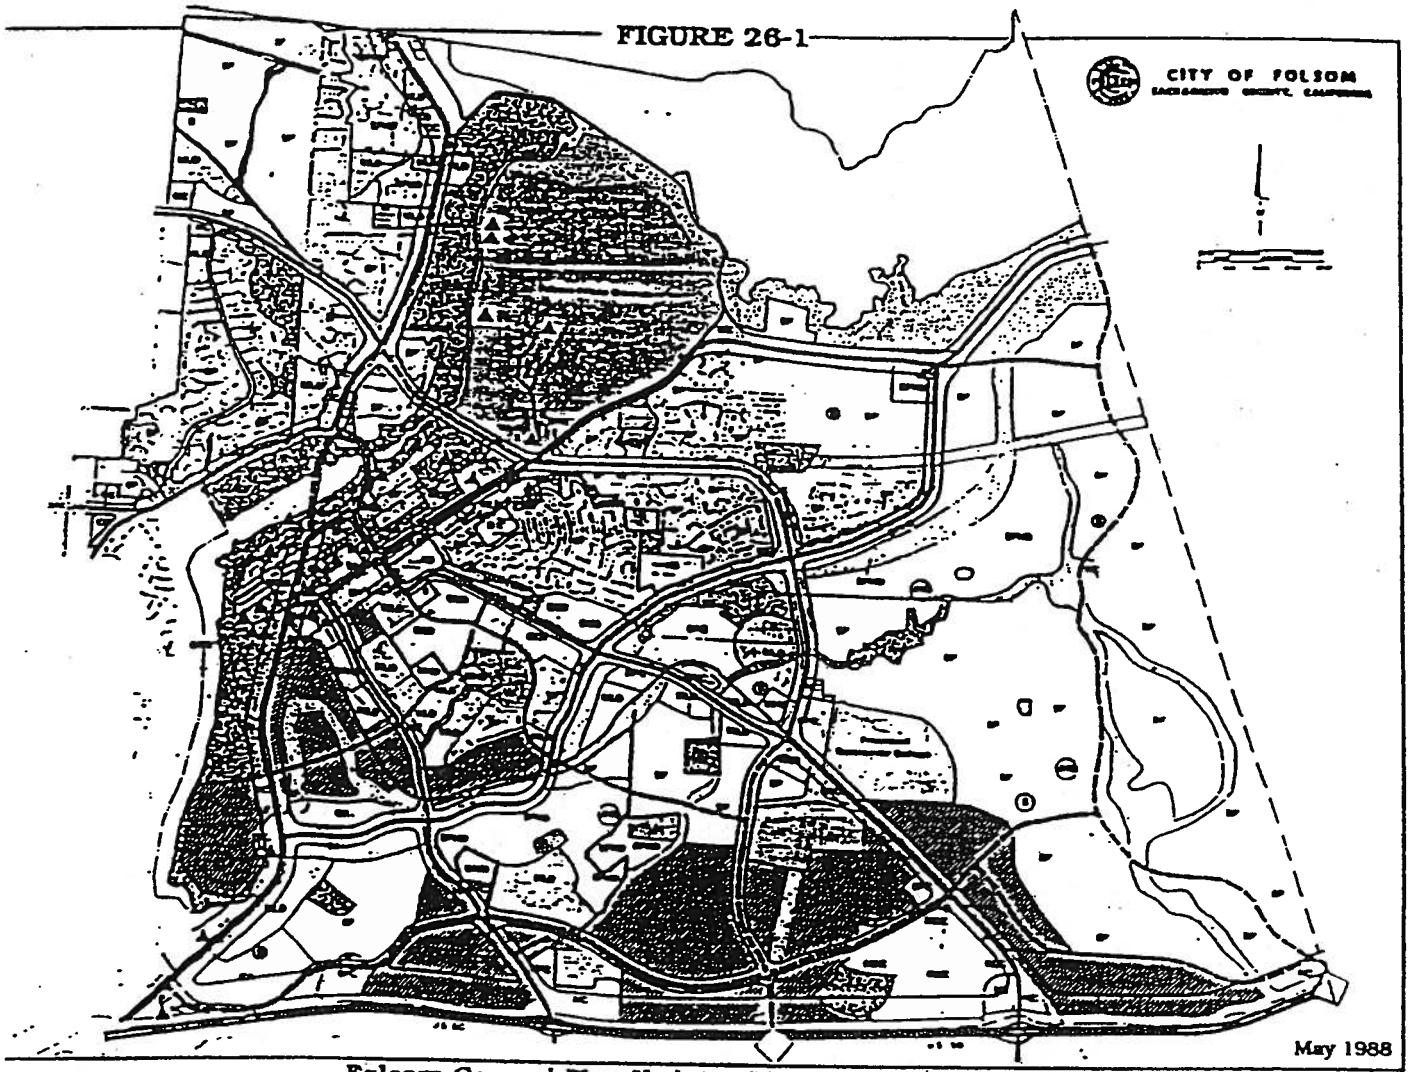
Analytical noise modeling techniques and noise measurements were used to develop generalized Ldn noise contours for the major roadways, railroads and industrial noise sources of the City of Folsom for existing (1986) and future (2006) conditions.

Analytical noise modeling techniques make use of source-specific data including average levels of activity, hours of operation, seasonal fluctuations, and average levels of noise from source operations. Analytical methods have been developed for a number of environmental noise sources including roadways, railroad line operations, railroad yard operations, industrial plants and aircraft/airport operations. Such methods will produce reliable results as long as data inputs and assumptions are valid for the sources being studied. The analytical methods used in this report closely follow recommendations made by ONC, and were supplemented where appropriate by field-measured noise level data to account for local conditions. It should be noted that the noise exposure contours presented in this report are based upon annual average conditions, and are not intended to be site-specific where local topography, vegetation or intervening structures may significantly affect noise exposure at a particular location.

A community noise survey was conducted to describe existing noise levels in noise-sensitive areas within the City of Folsom so that noise level performance standards could be developed to maintain an acceptable noise environment.

26.2.2 ASSUMPTIONS

ROADWAYS



The Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA-RD-77-108) was used to develop Ldn contours for Highway 50 and major roadways in Folsom. The FHWA Model is the analytical method presently favored for traffic noise prediction by most State and local agencies, including CALTRANS. The FHWA Model is based upon reference energy emission levels for automobiles, medium trucks and heavy trucks, with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver and the acoustical characteristics of the site. The FHWA Model was developed to predict hourly LEQ values for free-flowing traffic conditions, and is generally considered to be accurate within 1.5 dB. To predict Ldn values it is necessary to determine the hourly distribution of traffic for a typical 24-hour day and adjust the traffic volume input data to yield an equivalent hourly traffic volume.

Traffic data representing annual average traffic volumes for existing and future conditions were obtained from CALTRANS and Wilbur Smith and Associates as summarized in the General

Plan data base. The day/night distribution of traffic and the truck mix was based upon CALTRANS file data and Brown, Buntin and Associates (BBA) estimates. Using the General Plan data and the FHWA methodology, traffic noise levels as defined by Ldn were calculated for existing (1986) and projected future (2006) traffic volumes. Distances from the center of the roadway to Ldn contour values of 60 and 65 dB are summarized in Table 26-1. Input data are presented in the data base of the General Plan.

It should be noted that since calculations did not take into consideration shielding caused by local buildings or topographical features, the distances reported in Table 26-1 should be considered as worst-case estimates of noise exposure along roadways in the community. Noise contour maps were prepared from the data contained in Table 26-1 to allow implementation of this Noise Element. See Figure 26-1 for noise contours designated on Land Use Map.

AIRCRAFT OPERATIONS

Aircraft/airport noise exposures typically consist of a number of brief, relatively noisy events punctuated by long periods of relative quiet between aircraft overflights. The annoyance due to aircraft noise exposures is reasonably well predicted by using the CNEL descriptor, which averages the total noise exposure over an annual average day. In California, the 65 dB CNEL contour is defined by the Administrative Code (Title 21) as the Noise Impact Boundary for airport noise exposures, although there is some speculation that a CNEL of 60 dB is a better indicator of adverse public reaction for small general aviation airports.

For the Noise Element, airport noise exposures should be evaluated by comparison to the CNEL contours developed for Mather Air Force Base reported by the Mather Air Force Base Comprehensive Land Use Plan prepared by Sacramento Area Council of Governments (SACOG), or by the latest AICUZ report for Mather Air Force Base. These noise contours have been plotted on a map of the City, and should be considered in evaluating noise impacts in the vicinity of Mather Field.

RAILROADS

The Southern Pacific Transportation Company (SPRR) operates a switch engine locomotive on a twice-weekly scheduled basis between Sacramento and the MCLRR yard in Placerville. Called the "Placerville Local", this train carries a small number of cars between the two Cities, usually on Wednesdays and Saturdays. The cumulative daily noise exposure from this operation is less than 60 dB Ldn at 50 feet from the track centerline, based upon BBA noise measurement data obtained in the Sacramento area. On a single event basis, the maximum noise level during a train passage is about 92 dBA at 50 feet if the horn is used. SPRR line operations do not presently create a significant noise impact in the City of Folsom. No estimates of future operational levels are available from the SPRR.

INDUSTRIAL FACILITIES

The production of noise is an inherent part of many industrial processes, even when the best available noise control technology is applied. Noise production within an industrial facility is controlled indirectly by Federal and State employee health and safety regulations (OSHA and CAL-OSHA), but exterior noise emissions from industrial operations have the potential to exceed locally acceptable standards at noise sensitive land uses.

Industrial noise control issues focus upon two objectives: to prevent the introduction of new noise-producing uses in a noise sensitive area, and to prevent encroachment of noise sensitive uses upon existing industrial facilities. The first objective can be achieved by applying performance standards to proposed new industrial uses. The second objective can be met by requiring that new noise sensitive uses in proximity to existing industrial facilities include mitigation measures to ensure compliance with the same performance standards.

REPRESENTATIVE INDUSTRIAL SOURCES

The following descriptions of existing industrial noise sources in Folsom are intended to be representative of the relative noise impacts of such uses, and to identify specific noise sources which should be considered in the review of development proposals in their environs. The locations of these noise sources are shown by Figure 26-1.

J & M Cabinets: 9477 Greenback Lane: The primary noise source associated with the operation is a fan and cyclone unit used to control sawdust. This equipment operates from 7:30 a.m. to 4:30 p.m. weekdays, and occasionally for four hours of Saturdays. The noise level at the nearest residence is about 51-52 dBA. The estimated location of the 60 dB Ldn contour is shown on the noise contour maps on file at the City of Folsom.

Contact: Tom Barnett, Co-Owner (May 28, 1987)

Fischer Cabinets: 804 Reading Way: The primary noise source associated with this operation is a fan and cyclone unit which operates from 7:30 a.m. to 4:30 or 5:30 p.m. weekdays. The noise level at the nearest residence is about

57-58 dBA. The 60 dBA Ldn contour for this facility lies within 50 feet of the fan and cyclone unit.

Contact: Linda Waller, Office Manager (May 28, 1987)

• Intel Corporation: Prairie City Road at Highway 50: There are no significant noise sources associated with the Intel facility. A large cooling tower located in the southwest portion of the site produces a noise level of about 54-55 dBA at a distance of 400 feet. The 60 dB Ldn contour lies within the property boundaries.

• American River Aggregates: North of Prairie City Road: This operation consists of processing dredge-tailings for rock and asphalt production. An asphalt batch plant and a rock plant are present, each of which is a significant noise source. The facility is typically open 7:00 a.m. to 4:00 p.m., with rock processing beginning as early as 6:00 a.m. Days of operation are usually Monday through Friday, although weekend operations may occur.

According to the Plant Manager, this facility has perhaps two years remaining to operate under the current lease, as the property is proposed to be developed as an industrial park. If development occurs as proposed, the aggregate processing operation would no longer be a significant noise source. If development plans change so that the aggregate plant remains in operation, proposed noise-sensitive land uses in the plant vicinity should be evaluated for potential noise impacts.

Contact: John Kemp, Plant Manager

• Pacific Gas and Electric Substation: South of Scott Road: The noise produced by this electrical substation consists of a steady "hum" producing a constant noise level of 52 DBA at a distance of about 100 feet. The 60 dB Ldn contour for this facility lies within 100 feet of the nearest transformers and fans.

• Bay City Building Materials and Teichert Industries Ready Mix Plant: Levy road: These cement batch plant operations are capable of producing noise due to on-site front loader and heavy truck movements in delivering and arranging cement mix materials. The primary noise sources, however, are cement truck engines, which must be run at relatively high speeds to spin the cement mixing drum as the ready mix materials are loaded from the batch plant. Current operations occur during daytime hours and the Ldn 60 dB contours are located within the site boundaries and the adjacent open space. Noise levels from the cement loading operations would exceed the performance standards of the Noise Element at the property lines, however. Noise sensitive land uses should therefore not be placed in close proximity to these facilities unless an acoustical analysis has been prepared to ensure compliance with the performance standards.

• Aerojet General Corporation: Folsom Boulevard at Aerojet Road: Although located outside the Folsom City Limits, the Aerojet facility conducts noise producing operations which may affect areas within Folsom. Noise sources involved in Aerojet operations include testing of rocket engines, large hovercraft fans and high-pressure fire nozzles. Other engine testing could occur in the future. Noise produced by rocket engine testing typically include a brief loud impulsive noise at ignition, followed by several second of sustained lower noise levels. Fan and nozzle testing may consist of sustained noise levels. Testing is usually conducted during daytime hours.

Because of the variability in the nature of noise-producing Aerojet activities, it is not possible to develop representative noise level contours to address all potential noise impacts. It may be supposed, however, that noise from Aerojet operations would primarily affect the southwest portion of the City, along Highway 50. For this reason, noise sensitive development proposed for the South Folsom Planning Area between Folsom Boulevard and Prairie City Road should be required to include consideration of Aerojet noise impacts in any acoustical analysis prepared to address the noise exposures of Highway 50 and Mather Air Force Base. Aerojet has provided two noise studies to the City that are incorporated into the EIR and should be referenced in appropriate noise studies.

COMMUNITY NOISE SURVEY

As required by the ONC Guidelines, a community noise survey was conducted to document noise exposure in areas of the community containing noise sensitive land uses. The following noise sensitive land uses were identified within the City of Folsom:

1. All residential uses.
2. Schools.
3. Long-term care medical facilities, such as hospitals, nursing homes, etc.

sion integrating sound level meter fitted with a 1/2 inch microphone, a Larson-Davis Laboratories Model 700 environmental noise analyzer, and a Metrosonics dB 604 environmental noise analyzer. The measurement systems were calibrated in the field prior to use with acoustical calibrators, and comply with all pertinent requirements of the American National Standards Institute (ANSI) for Type 1 (Precision) sound level meters. The community noise survey results indicate that typical noise levels in noise sensitive areas of Folsom are in the range of 45-55 dB Ldn. Noise from traffic on roadways is the controlling factor for background noise levels in the City. In general, the areas of Folsom which

*Long-Term Monitoring Site
LD LEQ during day time hours (7:00 a.m. to 10:00 p.m.)
LN LEQ during night time hours (10:00 p.m. to 7:00 a.m.)

Noise monitoring sites were selected to be representative of typical conditions in areas of the community where such uses are located. Short-term noise monitoring was conducted during three periods of the day and night on May 28, and May 29, 1987, so that reasonable estimates of Ldn could be prepared. Three long-term noise monitoring sites were established to establish day night statistical trends during the same period. The data collected included the LEQ and other statistical descriptors. Noise monitoring sites, measured noise levels and estimated Ldn values of each site are summarized in Table 26-2; monitoring sites are shown by Figure 26-2.

Community noise monitoring equipment consisted of a Bruel and Kjaer Type 2230 preci-

contain noise sensitive uses are relatively quiet except along major roadways.

Figures 26-3 and 26-4 illustrate ambient noise levels at the long-term monitoring sites over typical 24-hour weekdays.

26.2.3 ISSUES

NORTHWEST FOLSOM

Light industrial operations on Greenback Lane have the potential to result in noise conflicts at nearby residential receiver locations. Activities at the BLM and Folsom Lake SRA Corporation Yards could affect future residential development in that area. Enforcement of a noise

control ordinance would address most current concerns.

CENTRAL FOLSOM

Light and heavy industrial activities in existing industrial parks have the potential to result in noise conflicts at nearby residential areas. Noise complaints have been received regarding cabinet shops and auto buffers. Enforcement of a noise control ordinance would address most current concerns.

Activities at the Folsom Rodeo grounds have the potential to result in noise conflicts at adjacent residential areas and residential areas located across the American River. City permits for use of this facility should consider the potential noise impacts of loudspeaker systems for rodeos or concerts and other noise-producing activities.

NORTH CENTRAL FOLSOM

Aside from future traffic on major roadways, there are no apparent noise concerns in this area at present, but future developments in the adjoining East Folsom Area could affect residential receivers near Blue Ravine Road. Implementation of the specific policies of the Noise Element will minimize the creation of noise conflicts within this portion of the City.

SOUTH FOLSOM

Future residential ares within this Planning Area may be affected by noise from traffic on major roadways, aircraft operations at Mather Air Force Base, Aerojet activities and future industrial development. Implementation of the specific policies of the Noise Element will minimize the creation of noise conflicts within this portion of the City.

EAST FOLSOM

Future residential areas within this Planning Area may be affected by noise from traffic on major roadways, aircraft operations at Mather Air Force Base, and future industrial developments. Implementation of the specific policies of the Noise Element will minimize the creation of noise conflicts within this portion of the City.

FIGURE 26-3

26.3 NOISE ELEMENT GOALS AND POLICIES

GOAL 30

To protect the citizens of Folsom from the harmful effects of exposure to excessive noise and to protect the economic base of Folsom by preventing the encroachment of incompatible land uses within areas affected by existing noise-producing uses.

POLICY 30.1

Provide sufficient noise exposure information in the General Plan data base so that existing and potential noise impacts may be effectively addressed in the land use planning and project review processes.

POLICY 30.2

Develop and implement effective strategies to abate and avoid excessive noise exposures in the City by requiring that effective noise mitigation measures be incorporated into the design of new noise-generating and new noise-sensitive land uses.

POLICY 30.3

Protect areas within the City where the present noise environment is within acceptable limits.

POLICY 30.4

Areas within the City of Folsom shall be designated as noise impacted if exposed to existing or projected exterior noise levels exceeding 60 dB Ldn/CNEL or the performance standards of Table 26-3 of the Noise Element.

Each of the noise level standards specified above shall be reduced by five dBA for simple tone noises, noises consisting primarily of speech or music, or for recurring impulsive noises.

Noise from single occurrences such as the passage of locomotives; heavy trucks or aircraft should also be evaluated in terms of single event noise levels. The maximum noise level created by such an event may have the potential to result in activity interference even though the cumulative noise exposure in terms of Ldn is within acceptable limits. The potential for sleep disturbance is usually of primary concern in such cases, and should be evaluated on a case-by-case basis.

TABLE 26-3

NOISE LEVEL PERFORMANCE STANDARDS FOR NEW PROJECTS AND DEVELOPMENTS

Noise created by non-transportation-related noise sources associated with new projects or developments shall be controlled so as not to exceed the noise level standards as set forth below as measured at any affected residentially designated lands or land use situated in either the incorporated or unincorporated areas. New residential development shall not be allowed where the ambient noise level due to non-transportation-related noise sources will exceed the noise level standards as set forth below:

EXTERIOR NOISE LEVEL STANDARDS, DBA

CATEGORY	CUMULATIVE NUMBER OF MINUTES IN ANY ONE-HOUR TIME PERIOD	DAYTIME 7:00 A.M TO 10:00 P.M.	NIGHTTIME 10:00 P.M. TO 7:00 A.M.
1	30	50	45
2	15	55	50
3	5	60	55
4	1	65	60
5	0	70	65

POLICY 30.5

New development of residential or other noise sensitive land uses will not be permitted in noise impacted areas unless effective mitigation measures are incorporated into the project design to reduce noise levels to:

1. For noise due to traffic on public roadways, railroad line operations and aircraft: 60 dB Ldn/CNEL or less in outdoor activity areas, and interior noise levels to 45 dB Ldn/CNEL or less. Where it is not possible to reduce exterior noise due to these sources to 60 dB Ldn/CNEL or less by incorporating a practical application of the best available noise-reduction technology, an exterior noise level of up to 65 dB Ldn/CNEL will be allowed. Under no circumstances will interior noise levels be permitted to exceed 45 dB Ldn/CNEL with the windows and doors closed.

2. For non-transportation related noise sources: achieve compliance with the performance standards contained within Table 26-3.

3. If compliance with the adopted standards and policies of the Noise Element will not be achieved, a statement of overriding considerations for the project must be provided.

POLICY 30.6

When industrial, commercial land uses or other uses including non-transportation related noise sources are proposed which would affect areas containing noise sensitive land uses, noise levels generated by the proposed use shall not exceed the performance standards contained within Table 26-3.

POLICY 30.7

Prior to approval of proposed development of residential or other noise-sensitive land uses in a noise impacted area, an Acoustical Analysis may be required. The acoustical analysis shall:

1. Be the responsibility of the applicant.

2. Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics.

3. Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions.

4. Include estimated noise levels in terms of Ldn/CNEL and/or the standards of Table 26-3 for existing and projected future (20 years hence) conditions, with a comparison made to the adopted policies of the Noise Element.

5. Include recommendations for appropriate mitigation to achieve compliance with the adopted policies and standards of the Noise Element. Where the noise source in question consists of intermittent single events, the report must address the effects of maximum noise levels in sleeping rooms in terms of possible sleep disturbance.

6. Include estimates of noise exposure after the prescribed mitigation measures have been implemented.

POLICY 30.8

The City of Folsom shall endeavor to develop and employ procedures to ensure that requirements imposed pursuant to the findings of an acoustical analysis are implemented as part of the project review and building permit processes. The appropriate time for requiring an acoustical analysis would be as early in the project review process as possible so that noise mitigation may be an integral part of the project design.

POLICY 30.9

Noise level criteria applied to land uses other than residential or other noise sensitive uses shall be consistent with the standards in Figure 26-5.

POLICY 30.10

The City of Folsom shall enforce the State Noise Insulation Standards (California Administrative Code, Title 24) and Chapter 35 of the Uniform Building Code (UBC). Title 24 requires that an acoustical analysis be prepared for all new developments of multi-family dwellings.

condominiums. hotels and motels proposed for areas within the 60 dB Ldn/CNEL contour of a major noise source for the purpose of documenting that an acceptable interior noise level of 45 dB Ldn/CNEL or below will be achieved. UBC Chapter 35 requires that common wall and floor/ceiling assemblies within multi-family dwellings comply with minimum standards concerning the transmission of airborne sound and structure-borne impact noise.

POLICY 30.11

The City of Folsom shall adopt a community noise control ordinance to address noise complaints and to provide local industry with performance standards for future development and equipment modifications. The ordinance should be consistent with the model noise control ordinance contained in the data base of the General Plan.

POLICY 30.12

The City of Folsom shall actively enforce existing sections of the California Vehicle Code relating to adequate vehicle mufflers and modified exhaust systems.

POLICY 30.13

The findings and specific policies of the Noise Element shall be incorporated into the City of Folsom Zoning Code as appropriate.

POLICY 30.14

The City of Folsom shall periodically review and update the Noise Element to ensure that noise exposure information and specific policies are consistent with changing conditions within the community and with noise control regulations enacted after the adoption of this Element.

POLICY 30.15

If noise barriers are required to achieve the noise level standards contained within this Element, the following construction practices are recommended:

1. Noise barriers exceeding six feet in height relative to the roadway should incorporate an earth berm so that the total height of the solid portion of the barrier (such as masonry or concrete) does not exceed six feet.

2. The total height of a noise barrier above roadway elevation should normally be limited to 12 feet.

3. The noise barriers should be designed so that their appearance is consistent with other noise barriers in the project vicinity.

26.5 IMPLEMENTATION PROGRAM

26.5.1 LAND USE COMPATIBILITY CRITERIA

The ONC "Guidelines for the Preparation and Content of Noise Elements of the General Plan", include recommended exterior and interior noise level standards for local jurisdictions to identify and prevent the creation of incompatible land uses due to noise. The ONC guidelines contain a land use compatibility table which describes the compatibility of different land uses with a range of environmental noise levels in terms of Ldn or CNEL.

FIGURE 26-5
LAND USE COMPATIBILITY COMMUNITY NOISE ENVIRONMENTS

CONSIDERATIONS IN DETERMINATION OF NOISE - COMPATIBLE LAND USE

A. NORMALIZATION NOISE EXPOSURE INFORMATION DESIRED

Where sufficient data exists, evaluate land use suitable with respect to a "normalized" value of CNEL or L_{dn}. Normalized values are obtained by adding or subtracting the constants described in Table 1 to the measured or calculated of CNEL or L_{dn}.

B. NOISE SOURCE CHARACTERISTICS:

The land use-noise compatibility recommendations should be viewed in relation to specific source of the noise. For example, aircraft and railroad noise is normally made up of higher single noise events than auto traffic but occurs less frequently. Therefore, different sources yielding the same composite noise exposes do not necessarily create the same noise environment. The State Aeronautics Act uses 65 dB CNEL as the criterion which airports must eventually meet to protect existing residential communities from unacceptable exposure to aircraft noise. In order to facilitate the purposes of the Act, one of which to encourage land compatible with the 65 dB CNEL criterion wherever possible, and in order to facilitate the ability of airports to comply with the Act, residential uses located in Community Noise Exposure Areas greater than 65 dB should be discouraged and considered located within normally unacceptable areas.

C. SUITABLE INTERIOR ENVIRONMENTS

One objective of locating residential units relative to a known noise source is to maintain a suitable interior noise environment at no greater than 45 dB-CNEL of L_{dn}. This requirement, coupled with the measured or calculated noise reduction performance of the type of structure under consideration, should govern the minimum acceptable distance to noise source.

D. ACCEPTABLE OUTDOOR ENVIRONMENTS

Another consideration, which in some communities is an overriding factor, is the desire for an acceptable outdoor noise environment. When this is the case, more restrictive standards for land use compatibility, typically below the maximum considered "normally acceptable" for that land use category, may be appropriate.

Source: California Office of Noise Control

Figure 26-5 is provided as a guide concerning the sensitivity of different land uses to their noise environment. It is intended to illustrate the range of noise levels which will allow the full range of activities normally associated with a given land use. For example, exterior noise levels in the range of 50-60 dB Ldn are generally considered acceptable for residential land uses, since these levels will usually allow normal outdoor and indoor activities such as sleep and communication to occur without interruption. Industrial facilities, however, can be relatively insensitive to noise and may often be located in a noise environment of up to 75 dB Ldn without significant adverse effects.

Noise compatibility criteria based upon Ldn values are to be applied to evaluating proposed noise sensitive land uses with respect to established transportation noise sources such as traffic on public roadways, railroads and airports. The applicability of Ldn based criteria for such sources has been well documented in terms of expected public response and legal responsibilities.

The noise standards in Table 26-3 are to be applied as performance standards for proposed industrial and commercial land uses and other land uses involving new locally-regulated noise sources which may affect noise sensitive land uses. Similarly, the noise standards in Table 26-3 are to be applied to determine whether a proposed noise sensitive use is compatible with an existing locally-regulated noise source.

26.5.2 SPECIFIC POLICIES

ANNUAL UPDATE

The City will update all Elements of the General Plan. An annual report will be made to the Planning Commission and City Council on the status of the General Plan Program.

IMPLEMENTS: GOAL 30 - POLICY 30.14

- Resource Groups/Agencies/Organizations

  State Office of Noise Control
  State Office of Planning and Research
  State Office and Housing and Community Development

- Responsible Agency

  Community Development Department

120/$1,000	$200	$500	$6,700	General Fund, Developer Fees

NOISE CONTROL

Revise the City's Building Code as necessary to:

1. Require effective noise mitigation measures be incorporated into the design and construction of new noise-generating and new noise-sensitive land uses.

2. Require compliance with mitigation measures identified in acoustical analyses.

3. Enforce Noise Insulation Standards (California Administrative Code, Title 24) and Chapter 35 of the UBC.

4. Adopt building standards and guidelines for development in noise impacted areas.

IMPLEMENTS: GOAL 30 - POLICIES 30.2; 30.5; 30.6; 30.8; AND 30.10

- Folsom Municipal Code: Title 14

ESTIMATED COST

Person Hours/ Dollars	Printing	Direct	Total	Funding
20/$900	$200	$200	$1,300	

NOISE ORDINANCE

Adopt a Noise Ordinance to be consistent with the model noise control ordinance contained in the data base of the General Plan and which implements the specific policies of the Noise Element of the General Plan including the following measures:

1. Procedure for addressing noise complaints.

2. Provide local industry with performance standards for future development and equipment modifications.

3. Require that effective noise mitigation measures be incorporated into the design of new noise-generating and new noise-sensitive land uses.

4. Protect areas within the City where the present noise environment is within acceptable limits.

5. Designation of noise impacted areas within the City according to Policy 30.4 of the Noise Element.

6. New development of residential or other noise sensitive land uses will not be permitted in noise-impacted areas unless effective mitigation measures are incorporated into the project design to reduce noise levels to:

   - Aircraft: 60 dB Ldn/CNEL or less in outdoor activity areas.
   - Interior noise levels to 45 dB Ldn/CNEL or less.

Where it is not possible to reduce exterior noise due to these sources to 60 dB Ldn/CNEL or less by incorporating a practical application of the best available noise-reduction technology, an exterior noise level of up to 65 dB Ldn/CNEL will be allowed. Under no circumstances will interior noise levels be permitted to exceed 45 dB Ldn/CNEL with the windows and doors closed.

7. Adopt performance standards contained within Table 26-3 of the Noise Element for non-transportation related noise sources.

8. Noise level criteria shall be consistent with the Noise Element Policy 30.9.

Enforcement of the State Noise Insulation Standards (California Administrative Code, Title 24) and Chapter 35 of the UBC. Title 24 requires that an acoustical analysis be prepared for all new developments of multi-family dwellings, condominiums, hotels and motels proposed for areas within the 60 dB Ldn/CNEL contour of a major noise source for the purpose of documenting that an acceptable interior noise level of 45 dB Ldn/CNEL or below will be achieved. UBC Chapter 35 requires that common wall and floor/ceiling assemblies within multi-family dwellings comply with minimum standards concerning the transmission of airborne sound and structure-borne impact noise.

9. Require acoustical analyses in accordance with the above paragraph and prior to consideration of proposed development of residential or other noise-sensitive land uses in a noise-impacted area. An acoustical analysis shall:

   - Be the responsibility of the applicant.
   - Be prepared by a qualified person experienced in the fields of environmental noise assessment and architectural acoustics.
   - Include representative noise level measurements with sufficient sampling periods and locations to adequately describe local conditions.
   - Include estimated noise levels in terms of Ldn/CNEL and/or the standards of Table 26-3 for existing and projected future (20 years hence) conditions, with a comparison made to the adopted policies of the Noise Element.
   - Include recommendations for appropriate mitigation to achieve compliance with the adopted policies and standards of the Noise Element. Where the noise source in question consists of intermittent single events, the report must address the effects of maximum noise levels in sleeping rooms in terms of possible sleep disturbance.
   - Include estimates of noise exposure after the prescribed mitigation measures have been implemented. If compliance with the adopted standards and policies of the Noise Element will not be achieved, a statement of overriding considerations for the project must be provided.

10. New equipment and vehicles purchased by the City of Folsom shall comply with noise level performance standards consistent with the best available noise reduction technology.

IMPLEMENTS: GOAL 30 - POLICIES 30.2; 30.3; 30.4; 30.5; 30.6; 30.7; 30.8; 30.9; 30.10; 30.11; 30.12; 30.13; AND 30.14

GENERAL PLAN DATABASE MAINTENANCE

Maintain and update on a regular basis the database prepared for the General Plan, including but not limited to the following areas:

NOISE

Develop and continually update a database as part of the General Plan Program containing noise exposure information for the City so that noise related issues can be addressed in the land use planning process.

GROUND WATER MONITORING

Cooperate with the County of Sacramento in developing a computerized, county-managed database on water quality. Seek funding to provide for a County assisted testing program, to continue to improve information about water quality in the City.

MEDICAL STATISTICS

Cooperate with the Sacramento County Health Department to compile statistics on medical problems potentially related to hazardous materials, and support efforts to gather this information on a statewide basis..

- Resource Groups/Agencies/Organizations

PARK & RECREATION

31

31.1 INTRODUCTION

Recreation is the self-rewarding voluntary use of leisure time for refreshment, diversion or renewal of the individual.

The Parks and Recreation Element identifies Folsom's diverse recreational facilities and activities and establishes policy for acquisition, development, administration and utilization of Folsom's parks and recreation resources. All park and recreation facilities shall be located, constructed, operated and maintained in accordance with the goals, policies and standards contained herein.

31.1.1 STATE POLICY AND AUTHORIZATION

- Government Code Section 65300

The Park and Recreation Element is an optional element of the Folsom General Plan and has been prepared in accordance with Government Code Section 65300 et. al. Local governments are allowed to adopt "any other elements or address any other subjects which...relate to the physical development of the county or city" (Government Code Section 65303). Optional elements have the same force and effect as mandatory ones, including required consistency of proposed zoning, subdivisions, public works and specific plans. The Land Use Element, the Open Space and Conservation Element, and Circulation Element are required to address issues related to the development and operation of parks and recreation facilities.

31.1.2 RELATED STATE AND FEDERAL REGULATIONS

- Quimby Act (Government Code Section 66477)

The Quimby Act allows local agencies to establish ordinances requiring residential subdivision developers to provide land or in-lieu fees for park and recreation purposes, and specifying acceptable uses or restrictions on the expenditure of such funds. The Act requires that the City adopt a Recreation Element if it is to enact a parkland dedication/fee ordinance.

- California Environmental Quality Act

The adoption or amendment of the general plan and its elements constitutes a project under the California Environmental Quality Act (CEQA) and the State EIR Guidelines. If any aspect of the proposed general plan document or amendment, individually or cumulatively, may significantly affect the environment, the City must prepare an Environmental Impact Report (EIR).

31.1.3 RELATIONSHIP TO THE GENERAL PLAN

The Parks and Recreation Element directly effects the Land Use Element, Open Space and Conservation Element, Circulation Element, Public Facilities Element and indirectly effects the Housing Element and Noise Element.

31.1.4 RELATIONSHIP TO ADJACENT JURISDICTIONS

The following agencies own and/or administer recreation facilities within and/or adjacent to the City of Folsom:

United States - Bureau of Reclamation
State of California - Division of Parks and Recreation
State of California - Division of Fish and Game
State of California - Department of Corrections
County of Sacramento - Parks and Recreation
County of El Dorado - Parks and Recreation
Folsom-Cordova School District
Los Rios Community College District

31.2 SETTING/ASSUMPTIONS/ISSUES

31.2.1 SETTING

Volume III, Chapter 82.0 of the General Plan and the Master Environmental Assessment (MEA) describe the setting of the Folsom area and the data base upon which the General Plan has been prepared. The following tables summarize the recreation facilities of the City of Folsom.

TABLE 31-1
RECREATION FACILITIES

		Total -	117
Nature Areas/ Parkways	2	Nature Areas/ Parkways	

31.2.2 ASSUMPTIONS

OPEN SPACE AND BIKEWAYS

The open space for preservation of natural resources and the open space for trails are listed in this element for purposes of a complete description of recreation related facilities. Policies affecting open space for preservation are contained in the Open Space and Conservation Element. Policies affecting bikeways and trails are contained in the Transportation and Circulation Element.

JOINT USE AGREEMENTS

The City of Folsom and the Folsom Cordova Unified School District have a Joint Use Facility Agreement which allows the City and the District to share facilities. These agreements are assumed to continue. Approximately sixty percent of all City recreation programs are held at school facilities. Due to scheduling constraints, school facilities are currently at maximum use levels. Joint use with other agencies is encouraged.

INCREASED DEMAND FOR RECREATION

Residents are more health conscious and recognize the benefits of recreational activities. Demands are increasing on recreation facilities and programs because of this awareness. This trend is assumed to continue through the planning period.

LATCH KEY KIDS

There has been an increase in families where both parents work. This has created a demand for youth recreation activities. The State is presently assisting with grants to cover the start-up cost of developing before and after school programs. It is assumed that the number of latch key kids will continue to increase in Folsom.

COMMUNITY SUPPORT

The City receives strong support from the community in developing and maintaining the parks and recreation system. This community support is anticipated to continue.

IMPACTED FACILITIES

The City of Folsom is growing rapidly with a corresponding increase in the demand for recreation services and facilities. The growth has surpassed the availability of present facilities and programs. This growth is assumed to continue.

HUMBUG CREEK/WILLOW CREEK PARKWAY

The State Department of Fish and Game (DFG) is assisting in the preservation of the Humbug Creek/Willow Creek Parkway as an ecological reserve. Standards and policies for this area have been developed, based upon past actions by the City Council and the DFG. It is assumed that Fish and Game will continue to lead the preservation effort.

CITY FOCUS

It is assumed that the City will focus its planning, development and maintenance operations on mini parks, neighborhood parks, school/parks, special use areas and community parks. Within the City boundaries the City will work with the state, Sacramento County and Los Rios Community College District in the development and operation of Regional Parks and open space/parkways.

ACTIVE RECREATION ACREAGE

Active recreation acreage is defined as land which can be developed into high use facilities. High use facilities include, but are not limited to such facilities as, soccer fields, hardball diamonds, softball fields, football fields, gymnasiums, tennis courts, and swimming pools.

PASSIVE RECREATION ACREAGE

Passive recreation acreage is defined as land designed for a low activity level. Passive recreation acreage includes, but is not limited to, picnic barbecues areas, shaded turfed area, tot lots, shaded pavilion areas, walking trails, and nature trails.

CHANGE IN RECREATION NEEDS

It is assumed that as the community grows and diversifies the recreational and leisure needs of the community will change.

31.2.2 ISSUES

Issues identified during the 1988 preparation of the Parks and Recreation Element include but are not limited to:

RESPONDING TO CHANGING RECREATION PROGRAM NEEDS

As new residents settle in Folsom, the City is having to adjust the recreation programs and facilities to meet the communities needs. As an example, more youth now live in Folsom and there is a significant demand on youth activities.

MAINTENANCE AND DEVELOPMENT

The development of new facilities have been delayed because funds may not be available for their ongoing maintenance.

COST OF DEVELOPING PARKLANDS

While the City receives land or fees for parklands, significant parcels of parkland are not developed. Funds are limited for the construction of facilities and therefore dedicated parklands are not being utilized for their intended purpose. It may take years to develop these parklands.

KEEPING PACE WITH GROWTH

The City continues to lag in the development of parks and recreation facilities and staff in relation to its growth in population.

CHANGE IN PROGRAMING, POLICIES AND PROCEDURES

As the demands on the Parks and Recreation staff and facilities increase, the City has had to resort to more elaborate tracking and administrative procedures for organized use of facilities and programs. This increase in paperwork, in order to insure equity, is making it more time consuming and cumbersome for persons and groups to sign up to use facilities. Residents perceive that these procedures less friendly.

COST OF PROGRAMS AND MAINTENANCE

There are limited dollars within the City's general fund for recreation programs and maintenance of parks and recreation facilities. New sources of funding need to be obtained.

31.3 PARKS AND RECREATION ELEMENT GOALS AND POLICIES

A complete listing of Folsom's Goals and Policies listed is in Chapter 13. The Goals and Policies of the Parks and Recreation Element are presented below followed by related goals and policies of the Folsom General Plan.

The first goal of the General Plan establishes the tone and direction of all subsequent goals and policies. Goal 1 is restated here to set the tone of this Parks and Recreation Element.

GOAL 1

To retain and enhance Folsom's quality of life, separate identity and sense of community. Folsom's identity and quality of life are defined by:

1. The diverse natural setting, including the American River, its tributary streams, natural vegetation, topography, native wildlife, and other unique features of the landscape.
2. Developed parks and open space.
3. The historic district and other historic places throughout the community.
4. The State prison site, which provides a large, visual open area in the City.
5. The physical form of Folsom's neighborhoods.
6. Ease of movement.
7. Public access to pedestrian and bicycle trails.

POLICY 1.1

New development shall preserve and/or enhance to the maximum degree feasible, the existing natural vegetation, landscape features and open space, consistent with the Goals and Policies of this Plan.

POLICY 1.2

Existing viewsheds and opportunities for viewsheds shall be incorporated into the design of new developments.

POLICY 1.3

Each residential neighborhood shall be planned with at least one park/ recreational/ school area within one half mile of each residential unit.

POLICY 1.4

Each new residential development shall provide pedestrian and bicycle access to parks or schools located within or near the development.

1-5 Each new residential development shall be designed with a system of local streets, collector streets, and access to an arterial road that protects the residents from through-traffic. Street improvements that would enhance circulation in existing developments shall also be identified.

POLICY 1.6

Folsom's historic district shall be enhanced and maintained through the improvement of public facilities.

POLICY 1.7

Historic buildings or locations shall be preserved or incorporated into the design of new developments whenever possible.

POLICY 1.8

The City shall prepare an inventory of historically and culturally significant buildings and sites. At the conclusion of the inventory, if it is determined that there are buildings or sites of local, state or national significance, the City or other concerned parties (such as the State or the Historical Society) shall be given the first right of refusal for the purchase of the site and/or building in the event that development of the site will result in the demolition or significant alteration of the structure.

POLICIES 1.9

The riparian habitats of the American River, its tributaries, other watercourses, ponds and reservoirs in Folsom, shall be preserved in their natural state and/or in conformance with a Department of Fish and Game approved development and management plan.

POLICY 1.10

When development incentives are requi for the preservation of identified resources a...

open spaces, the City and public shall cumulatively receive the greater short-term and long-term benefits of such incentives.

The goals and policies of the Parks and Recreation Element are:

31

GOAL 35

To achieve and maintain quality parks which provide optimum satisfaction to the leisure and recreation needs of the citizens.

POLICY 35.1

The City shall construct parks with originality and innovation in design that provide challenge and self-renewal to the user and viewer.

POLICY 35.2

The City shall develop a listing of equipment standards and design guidelines for parks and recreation facilities.

POLICY 35.3

The City shall maintain its parks and recreation facilities in accordance with City adopted maintenance standards.

POLICY 35.4

The City shall encourage, where appropriate, the inclusion of bikeways, walkways, and equestrian trails in parks, parkways, and open space acreage.

POLICY 35.5

Where feasible, park sites throughout the City shall be integrated with the Bikeways Master Plan and bicycle trails outside the City such as the American River Bike Path.

POLICY 35.6

The City shall encourage the development of parks with night-use capability.

POLICY 35.7

The City shall encourage construction of shelters, such as pavilions, arbors, lattice canopies, etc. to form shade and shelter for year round use. In conjunction with the shelters, the planting of trees shall be encouraged to increase the shade areas and aesthetics of the parks.

POLICY 35.8

Park sites shall be accepted by the City if judged to be useful for passive and/or active uses. Land constrained by drainage, slopes, and structures which limit the full recreational use of the site shall not be accepted as parkland acreage. Such lands may be accepted as open space or parkway acreage. Credit or partial credit for constrained lands may be allowed if they are found to be useable or can be made useable in compliance with the standards for parkland dedication included in the Parks and Recreation Master Plan and Parkland Dedication Ordinance.

POLICY 35.9

Easements and designated openspace/natural areas shall not be credited as parkland acreage. These areas may be used for parkland but shall not be credited for Parkland pursuant to the parkland dedication ordinance.

These easements, natural areas and designated openspaces are an existing resource within Folsom as identified in the General Plan and that to credit these lands for Parkland would reduce the full potential of open space that the City requires in order to achieve and maintain the desired quality of life.

POLICY 35.10

The City shall actively encourage the protection and preservation of natural habitats identified in the Open space and Conservation Element.

POLICY 35.11

The City shall strive to acquire and develop parklands within existing neighborhoods which comply with the standards of this Element and the General Plan.

POLICY 35.12

The following standards are the minimum acceptable standards for parks, open space and recreation facilities in the City of Folsom:

MINIMUM STANDARDS FOR PARKS AND RECREATION FACILITIES

• **Parkland Acreage Standard**

Five acres per thousand population (5 acres/ 1,000 persons).

• **PARKLAND**

Generalized areas are designated on the Land Use Map of the General Plan for park acreage credit. Those lands which are consistent with the goals and policies of this element and the general plan shall be credited as parkland. Utility easements, floodplains and parkway acreages, those lands already committed to a use shall not be credited as parkland.

• **PARK CATEGORIES**

In order to provide a balance, parks have been categorized in terms of their function and sizes. The acreages listed are approximate desirable sizes. The categories are:

- **Mini Parks** (1 to 2 acres) - Specialized facilities that usually serve a concentrated or limited population or specific group such as tots or senior citizens. Mini parks may feature children's play areas, quiet game areas, landscaping and some sport activities such as multi-purpose courts if space allows. Ideal in close proximity to apartment complexes, townhouses, or elderly housing. May be used to enhance beauty of the city.

- **Neighborhood Parks** (10 to 20 acres) - A recreation area which provides for indoor and outdoor programs and activities. Neighborhood recreation parks should serve one neighborhood, and be centralized within that neighborhood, a park which can be

- **Special Use Areas** (undetermined) - Within the City there are special use areas which do not fit easily in the other categories.

• **Community Parks** (20 to 60 acres) - A recreation area which provides recreational opportunities for several neighborhoods. Community parks should avoid duplication of facilities already provided in neighborhood recreation parks, and where suitable, be cated adjacent to a secondary school. should include such facilities as an aquatic center, provision for evening recreation, indoor facilities, amphitheater, specialized athletic fields, tennis, handball, basketball courts, large and small picnic areas, and barbecue facilities, convenient parking, tot play apparatus and restrooms.

- **Regional Parks** (200 + acres) - A recreation area which provides some remoteness from the urban setting or has features of regional significance including opportunities not possible in other parks within the city park system. This type of park serves a population within a large region - usually those within an hour's travel time. A regional park may be the joint effort of more than one government agency. It should be developed to preserve existing natural areas, areas of great scenic beauty, or areas of historical interest. A regional park could include such facilities as arboretums, camping areas, boating and fishing facilities, bicycling, equestrian and hiking trails, and ot[illegible] special use facilities.

- **Open space/Natural Areas/Parkways** (undetermined) - Natural habitat areas, stream courses, utility easements or other corridors designated in the Open space and Conservation Element and/or Circulation Element for purpose of preservation of natural features or circulation. Open space is clearly distinguished from park acreage and shall not be calculated or credited as parkland acreage. Parkways shall be preserved in their natural state with a network of trails for walking, cycling and horseback riding. Parkways are classified as open space for the preservation of natural resources and shall not be credited as parkland acreage.

SPACE STANDARDS

Park sites and related standards are based on Table 31-2. User distribution, user preference, accessibility, availability, and economic factors are to be individually considered.

TABLE 31-2

PARK ACREAGE STANDARDS

PARK CATEGORY	SERVICE AREA	DESIRABLE SIZE	ACRES/1000 POPULATION	POPULATION
Mini Park	Less than 1/4 mile radius	1-2 acres	.5 to 1 acre	1,000-2,000
Neighborhood Park	1/4-1/2 mile radius	15 acres	2.5 to 3.5	2,000-5,000
Community Park	Several Neighborhoods 1-2 miles	45 acres	2.5 to 3.5	12,000-25,000
Special Use Recreation Area/ Natural Area/ Wildlife Area/ Parkway	Not applicable standard	Variable depending on desired size	Variable	Within community 25,000 - 50,000
Regional	Several communities within one hour driving time radius	200 + acre	5 to 10	Contiguous to or encompassing natural resources

GOAL 36

To acquire and improve land and facilities for recreational use in pace with local needs.

POLICY 36.1

The City shall acquire and develop sufficient lands to meet the recreational needs of the citizens.

POLICY 36.2

The City shall encourage the creation of a series of parks that serve as focal points for surrounding neighborhoods.

POLICY 36.3

The City shall encourage the development of parkways and greenbelts as an integral link between the city-wide park system.

POLICY 36.4

The City shall monitor the condition of all facilities in order to repair and replace equipment as needed, and insure that state safety standards and guidelines are being met.

POLICY 36.5

The City shall develop programs to identify and attain alternative sources of funding for the acquisition and development of parklands and financing of recreation programs.

POLICY36.6

The City shall improve undeveloped and developed parkland as financially feasible.

POLICY 36.7

The City shall develop and maintain a capital improvement program for long term and short term recreation projects.

GOAL37

To achieve and maintain quality recreation activities which provide optimum satisfaction to the leisure and recreation needs of the citizens.

POLICY 37.1

The City shall encourage the provision of programs and activities designed to meet the recreational needs of the residents of Folsom.

POLICY 37.2

The City shall continue to develop facilities and programs for indoor and outdoor activities directed toward the needs of the neighborhoods served.

POLICY 37.3

The City shall encourage the incorporation into parks and recreation planning the needs of all age groups, handicapped, and special interest groups.

POLICY 37.4

The City shall encourage the expansion of services to senior citizens and latch key kids.

POLICY 37.5

The City shall encourage and/or co-sponsor various ethnic programs and activities of local interest.

POLICY 37.6

The City shall encourage that residents of Folsom be given first priority in participation of recreation sponsored programs, activities, and leagues.

POLICY 37.7

The City shall encourage or co-sponsor programs that involve the entire family, e.g. Family Fun Faire, Sports & Field Day, community picnics, and Kite Day.

GOAL 38

To involve and inform the residents, merchants, and visitors of the need for public participation in planning, development, and proper maintenance of recreation facilities.

POLICY 38.1

The City shall strive to implement registration procedures which require minimal paperwork for individuals and groups.

POLICY 38.2

The City shall encourage citizen participation in park and recreation planning through the Park and Recreation Commission.

POLICY 38.3

The City shall encourage neighborhood beautification projects, anti-pollution drives, recycling and other conservation activities that enhance the environment.

POLICY 38.4

The City shall develop a handbook of facility use and maintenance for groups and individuals using City facilities.

POLICY 38.5

The City shall continue to publish and advertise recreation programs, leagues and special events at a minimum of three times per year.

GOAL 39

To effectively use the resources of the City of Folsom and other governmental entities (such as school districts, county , state, and federal agencies) to accomplish coordinated, effective planning of recreation and leisure activities.

POLICY 39-1

The City shall encourage those agencies actively providing recreational programs and activities to continue those programs and activities.

POLICY 39.2

The City shall encourage the use of college interns in all areas of parks and recreation.

POLICY 39.3

The City shall encourage the use of community residents to instruct special interest programs; e.g. fishing, fly-tying, gun safety, dance, etc. The City may serve as coordinator for such programs by providing facilities, public relations, instructors, and by paying instructor fees.

POLICY 39.4

The City shall encourage the aid of State or County park rangers, i.e. Folsom Lake State Recreation Area, to provide leadership in programs that inform the community on topics such as conservation and fire-safety.

POLICY 39.5

The City shall continue the execution of a joint use, and development arrangement with the Folsom Cordova Unified School District and encouraging an agreement with the Los Rios Community College District.

POLICY 39.6

The City shall work cooperatively with the County Department of Parks and Recreation, State Department of Parks and Recreation, State Department of Corrections and State Department of Fish and Game in coordinating facility development and program offerings.

PARKS AND RECREATION MASTER PLAN

A Master Plan for Parks and Recreation shall be prepared which contains specific requirements and criteria for development, access, use and maintenance of parks, open space and natural areas within the City including:

1. provision for improving public access to recreation areas and open space with guidelines and standards for the design of access ways making provision for access by all segments of the community including the mobility impaired;
2. guidelines and standards for the improvement of parks and open space areas which define the appropriate level of maintenance, access, and improvements in sensitive habitat and open space areas;
3. guidelines for incorporating educational activities and interpretive centers into the open space and sensitive habitat areas;
4. a plan for consolidation of identified open space, natural habitat areas and park lands;
5. landscape requirements for parks and open space including design standards for improvements (trails, fences) in open space areas;
6. develop management plans for identified sensitive/special habitat areas in order to preserve special habitats.

IMPLEMENTS: GOAL 27 - POLICIES 27.1; AND 27.2 GOAL 25: - POLICY 25.5; 25.6; AND 25.7

PEDESTRIAN AND BICYCLE MASTER PLAN

The City shall update its bicycle master plan and include a pedestrian and equestrian components, showing the location and type of routes/ links to to schools and parks, and other recreational destinations. The City's Development Standards will include design standards for pedestrian and bicycle paths, lanes, and routes. Road improvements or extensions shall be designed to include bicycle and pedestrian paths, lanes, or routes where these are indicated in the master plan. Bicycle paths, lanes, and routes will be clearly marked. The County of Sacramento will continue to be responsible for maintenance of the American River bicycle, pedestrian, and equestrian trails.

AIR QUALITY

32

32.1 INTRODUCTION

The Air Quality Element of the General Plan establishes the policies and programs available to the City that are intended to assist in the reduction of emission sources and enhancement of air quality within the City. This Element also emphasizes cooperation among the various jurisdictions involved in regional air quality improvement efforts.

Supporting data can be found in the Technical Appendices.

32.1.1 STATE POLICY AND AUTHORIZATION

The Air Quality Element is an Optional Element of the General Plan.

32.1.2 RELATED STATE AND FEDERAL REGULATIONS

Legislative efforts to control air pollution sources and enhance air quality are present at both federal and state levels. The California Air Resources Board (CARB) was created in 1968, and the Federal Air Quality Act was enacted in 1977. Each has established federal and state air quality standards for a variety of pollutants.

32.1.3 RELATIONSHIP TO THE GENERAL PLAN

The Air Quality Element of the General Plan is most related to the Circulation Element and the Land Use Element. Its relationship to the Circulation and Land Use Elements is direct, in that the implementation of portions of those Elements may directly impact air quality.

32.2 SETTING

Meteorological Setting

This section provides a general description of the climatological and meteorological characteristics of the Folsom/Sacramento area.

The climate of the Sacramento Valley is characterized by hot, dry summers and cool, rainy winters. California is situated on the east side of the prevailing Eastern Pacific high pressure cell which lies over the northeastern Pacific Ocean between Hawaii and the southwestern United States. This high pressure area, characterized by dry, subsiding air and generally fair weather, is strongest during the summer. In the winter, the high pressure cell moves southward and intermittently exerts its influence over California.

Temperatures in the Sacramento/Folsom area exhibit relatively large seasonal and daily variations which are typical of inland locations. Table 32-1 shows mean maximum and minimum temperatures during winter and summer for Sacramento (downtown) and Placerville (no long-term surface temperature data is available for Folsom). As expected, Placerville which lies in the Sierra foothills at an elevation of approximately 2,000 feet, exhibits slightly lower surface temperatures than Sacramento (20 feet). Folsom, which lies between these sites, experiences similar temperatures.

TABLE 32-1
MEAN MINIMUM AND MAXIMUM TEMPERATURES IN THE FOLSOM AREA

	MAXIMUM	MINIMUM
January: Sacramento	54o	40o
Placerville	58o	24o
July: Sacramento	94o	59o
Placerville	92o	55o

SOURCE: California Climatological Data (1985). National Oceanic and Atmospheric Administration, Volume 89.

Due to the winter storm systems, most of the precipitation in the Sacramento/Folsom area occurs during the winter months. Approximately 90 percent of the annual precipitation falls from November through April. Folsom (Represa) receives approximately 21 inches of precipitation annually. West of Folsom, annual

rainfall across the valley floor is quite uniform: Sacramento (downtown) averages nearly 18 inches per year. East of Folsom, the orographic (lifting of air) effects of the Sierras cause annual precipitation amounts to increase with elevation. Placerville experiences mean annual precipitation of 37 inches.

During the summer, the typical trajectory of air in Sacramento County flows northeastward from the Delta, then diverges either eastward into the Sierras or northward up the valley. In the winter, the intrusion of marine air into the valley is not as strong. Airflow throughout the Sacramento/Folsom region is generally directed northward (and slightly westward) toward Marysville and Chico where it converges with air flowing down the valley from the north. Figures 32-1 and 32-2 illustrate the prevailing regional airflow patterns.

During the summer of 1980, the CARB funded a comprehensive study of the origin and fate of air pollutants within the Sacramento Valley (Lehrman, 1981). In this field study, detailed meteorological measurements were taken and pollutant monitoring was conducted in conjunction with the release and tracking of a "tracer" gas. Several tracer releases were made, both in downtown Sacramento and northeast of Sacramento (Auburn Boulevard and Watt Avenue) to determine the fate of Sacramento emissions. These tests showed a variety of trajectories, ranging from eastward to northward. The data clearly indicate that during "typical" summertime conditions, the Sacramento emissions plume can often impact the Folsom area.

In summary, the meteorological conditions that exist in the Sacramento area are conducive to high ozone and carbon monoxide concentrations in Folsom.

During the winter, the combination of cool weather, atmospheric temperature inversions, and low wind speeds can contribute to high carbon monoxide concentrations in the vicinity of congested intersections. In the summer, the high temperatures and prevailing winds maximize the extent to which Folsom experiences high ozone levels caused by emissions occurring in the more heavily populated up-wind areas.

32.3 NATIONAL AND STATE AMBIENT A QUALITY STANDARDS

National and State Ambient Air Quality Standards (NAAQS), have been established for a variety of pollutants. The air quality standards are generally considered the definition of "clean air"; however, there has been considerable debate as to whether the levels of the national air quality standards have been appropriately established.

The "primary" national ambient air quality standards are those which are intended to prevent adverse health effects. For some pollutants, there are also more stringent "secondary" standards which are intended to prevent adverse "welfare" impacts, such as degraded visibility or agricultural damage. There is only one category of state air quality standards, with no distinction between health and welfare impacts. However, some state standards have been adopted exclusively based on health impacts (e.g., carbon monoxide), some exclusively based on "welfare" impacts (e.g., visibility), and some based on both health and welfare impacts (e.g., oxidant).

NAAQS have been established for six pollutants. They are:

- Ozone
- Carbon Monoxide
- Nitrogen Dioxide
- Sulfur Dioxide
- Suspended Particulate Matter
- Lead

In addition to these six pollutants, state air quality standards have also been established for sulfates, hydrogen sulfide, vinyl chloride, and visibility reducing particles.

All of the state and federal air quality standards are presented in Table 32-2. The maximum allowable concentrations of the various pollutants are listed, along with the specified averaging time over which the concentration is to be measured. As the table shows, the state standards are consistently more stringent than the federal standards.

The Clean Air Act provides that NA cannot be exceeded more than once each y

Areas which exceed the standard for a particular pollutant twice or more during a year are designated as non-attainment areas for that pollutant. (The only exceptions to the one exceedance allowances are standards which are based on an annual average concentration of a pollutant. For annual average standards, and exceedance in a single year's average results in a non-attainment designation.)

The non-attainment designation subjects an area to more stringent planning and control requirements. Once an area has been designated non-attainment for a pollutant, the area must show 12 consecutive calendar quarters without any exceedances in order to be redesignated as an attainment area. (The Folsom area is currently designated as non-attainment for ozone, carbon monoxide and suspended particulate matter.)

NOTES: REF. TABLE 32-2

1. California standards, other than carbon monoxide, sulfur dioxide (one hour), nitrogen dioxide and particulate matter - PM10, are values that are not to be equaled or exceeded. The carbon monoxide, sulfur dioxide (one hour), nitrogen dioxide and particulate matter - PM10 standards are not to be exceeded.

2. National standards, other than ozone and those based on annual averages or annual geometric means, as not to be exceeded more than once a year. The ozone standard is attained when the expected number of days per calendar year with maximum hourly average concentrations above the standard is equal to or less than one.

3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parenthesis are based upon a reference temperature of 25oC and a reference pressure of 760 mm of mercury. All measurements of air quality are to be corrected to a reference temperature of 25oC and a reference pressure of 760 mm of mercury (1,013.2 millibar); ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

4. Any equivalent procedure which can be shown to the satisfaction of the Air Resources Board to give equivalent results at or near the level of the air quality standard may be used.

5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health. Each State must attain the primary standards no later than three years after the State's implementation plan is approved by EPA.

6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant. Each State must attain the secondary standards within a "reasonable time" after the implementation plan is approved by EPA.

7. Reference method as described by EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by EPA.

8. Prevailing visibility is defined as the greatest visibility which is attained or surpassed around at least half of the horizon circle, but not necessarily in continuous sectors.

9. At locations where the State standards for oxidant and/or suspended particulate matter are violated. National standards apply elsewhere.

10. Measured as ozone.

32.4 AIR QUALITY ELEMENT GOALS AND POLICIES

GOAL 31

To improve the air quality of the City of Folsom including:

1. Achievement and maintenance of ambient air quality standards established by the U.S. Environmental Protection Agency and the California Air Resources Board.

2. Minimizing public exposure to toxic or hazardous air pollutants.

3. Limiting visibility reducing particulate matter in the atmosphere.

4. Minimizing public exposure to air pollutants which create a public nuisance through irritation to the senses or unpleasant odor.

POLICY 31.1

Because the City of Folsom shares the air basin with other jurisdictions, and suffers from poor air quality due to regional ozone violations, the City shall work cooperatively with other members of the Sacramento Area Council of Governments, the Sacramento County Air Pollution Control District, the California Air Resources Board, CALTRANS, and the U.S. Environmental Protection Agency toward the development of a consistent and effective approach to the regional air pollution problem. The City will participate in the updating of the 1982 Air Quality Plan, and incorporate Air Quality Plan update measures into the General Plan.

POLICY 31.2

The City shall use consistent and accurate procedures approved by the California Air Resources Board in the review of projects which may have air quality impacts. Comments on the analysis shall be solicited from the Sacramento County Air Pollution Control District and the Air Resources Board.

POLICY 31.3

The City shall encourage the adoption of more stringent vehicle emission standards and enhancements to the Smog Check program through active participation in hearings held by the State Legislature, the California Air Resources Board and the Bureau of Automotive Repair.

POLICY 31.4

To minimize air quality impacts mitigation measures shall be required for transportation emissions associated with all development estimated to generate 2,000 or more trips per day. Measures may include:

1. Project proponent funding of roadway improvements.

2. Commercial/industrial project proponent sponsorship of van pools or club buses.

3. Project proponent funded transit subsidies sufficient to reduce emissions from transit through the substitution of diesel-fueled buses with buses powered by alternative fuels, such as methanol and electric.

4. Commercial/industrial project sponsored daycare and employee services at the employment site.

5. Park and ride lots.

POLICY 31.5

The City shall work with the Air Resources Board or Sacramento County Air Pollution Control District in establishing a carbon monoxide monitoring program in order to accurately determine the status of carbon monoxide air quality and to quantify the impacts of growth and development in the Folsom area.

POLICY 31.6

Non-retail industrial and non-retail commercial projects which directly emit air pollutants should be located in areas designated for industrial development, and separated from residential mixed use areas.

POLICY 31.7

All employers of 50 or more full time employees per shift shall develop and implement

incentive-based trip reduction programs for their employees. Incentives may include:

1. Provision of reserved and preferentially located parking spaces for the exclusive use of employees who actively participate in ridesharing.

2. Provision of secure bicycle storage facilities.

3. Provision of shower and locker facilities for use by employees who commute by non-motorized means.

4. Distribution by employers of current information regarding the availability, cost and schedules of public transit.

5. Employer provision of economic incentives to maximize the use of transit, ridesharing, van pooling and non-motorized transportation.

POLICY 31.8

The City shall participate in the development of a regionally consistent transportation emissions accounting system so that transportation emission reductions are accounted for, and those responsible receive appropriate credit.

POLICY 31.9

The City should encourage bicycle usage through the development and maintenance of a safe and comprehensive bikeway system which includes:

1. The provision of securely anchored bicycle racks.

2. Sidewalks in residential development with protective curbing and adequate lighting.

POLICY 31.10

The City of Folsom shall develop, as part of its transportation plan and the Transportation and Circulation Element of the General Plan, a transit development plan so that Folsom residents may safely and conveniently use transit for work, school, shopping, recreational and other trips within the City and outside of the City.

GOAL 32

To minimize public exposure to toxic or hazardous air pollutants.

POLICY 32.1

Reference Policy 31.6.

GOAL 33

To minimize visibility-reducing particulate matter in the atmosphere.

POLICY 33.1

Reference Policy 31.7.

POLICY 33.2

Reference Policy 31.9.

GOAL 34

To minimize public exposure to air pollutants which create a public nuisance thro irritation to the senses or unpleasant odor.

32.6 IMPLEMENTATION

AIR AND HAZARDOUS MATERIALS TECHNICAL ADVISORY BOARD

Establish an Air Pollution and Hazardous Materials Technical Advisory Board composed of representatives from all City Departments and the Sacramento County Health Department, which will seek technical information and input from State, local and federal regulating agencies in order to develop the City's hazardous materials management program.

1. The City shall seek a Memorandum of Understanding (MOU) with the State Department of Health Services to obtain authority for the regulation of hazardous waste generators in Folsom. Currently, resource limitations prevent the Department of Health Services from performing all the State's inspection duties. Since these inspections are vital to protecting public health and preventing improper use or disposal of hazardous materials, Folsom should take over this responsibility while seeking supporting funds from the State.

2. Underground storage tank program: Coordinate with the Sacramento County Health Department and the State to increase review of permit applications, and monitoring of tank testing programs and leaking tank clean-ups.

IMPLEMENTS: GOAL 31 - POLICIES 31.1; AND 31.2; GOAL 41 - POLICIES 41.1; 41.3; 41.4; 41.6; 41.7; 41.10; AND 41.11

33.0 PUBLIC FACILITIES ELEMENT

Prepared By The City of Folsom
Community Development Department

October 31, 1988

PUBLIC FACILITIES

TABLE OF CONTENTS

PAGE

33.1 INTRODUCTION 2

33.2 CONTENTS OF AREA FACILITIES PLANS 2

33.3 EXISTING PUBLIC FACILITIES. 3

33.4 POLICIES AND STANDARDS FOR THE PROVISION OF PUBLIC FACILITIES AND SERVICES .....

33.5 PUBLIC FACILITIES ELEMENT GOALS AND POLICIES 6

33.6 IMPLEMENTATION PROGRAM 12

PUBLIC FACILITIES

33.1 INTRODUCTION

The Public Facilities Element is an optional element of the General Plan, as set forth in Section 65303 of the State Planning, Zoning and Development Laws. This Element is prepared to address the public facility needs of the City of Folsom and to provide a plan for the provision of an appropriate level of public facilities and services to existing and newly developing areas within the General Plan area.

33

The major content of the Element are the Area Facilities Plans. Initially, four areas have been identified as needing an Area Facilities Plan as required by the Urban Development Policy of the Folsom General Plan that was adopted on June 6, 1983, by Resolution no. 1616. These areas are Allied North, Folsom South, Rancho Creek and East Folsom, as depicted ont he attached map (list page of this Element). The Allied North area Facilities Plan was adopted in conjunction with the American River Canyon Units 4-9 project on September 15, 1986. The Folsom South Area Facilities Plan was adopted in conjunction with the Folsom South Area Assessment District project on January 10, 1984. A fifth plan the Folsom East Area Facilities Plan was adopted in 1992. These plans are incorporated in this Element by reference. For the Willow Creek Estates, Rancho Diablo, and Willow Creek Estates East subdivisions of the Rancho Creek Area, the subdivision improvement plans were deemed acceptable substitutes for an Area Facilities Plan. This Element may be amended from time to time to require the preparation of Area Facilities Plans for other areas within the City's adopted Sphere of Influence and/or areas newly annexed to the City.

RESO # 3798

As an optional versus mandated Element of the General Plan, this Element may be amended as often as deemed necessary by the City Council to reflect the changing public facilities needs of the community and the specific areas of development. From time to time a suitable substitute to an Area Facilities Plan, as provided for in Section VII of the Urban Development Policy, may be approved and would be included in this document.

33.2 CONTENTS OF AREA FACILITIES PLANS

In addition to the policies contained in Sections VI and VII of the Urban Development Policy, an Area Facilities Plan shall include, but not be limited to, the following topics:

1. Description of the plan area, the basis for selection of the proposed boundaries, and the development potential of the area which is based on a comprehensive land use map.

2. A statement of the plan's consistency with the Folsom General Plan and the City's Urban Development Policy.

3. Identification of the nature and extent of facilities necessary to serve the area and a schedule of estimated time within which facilities must be constructed.

4. Engineer's estimate of the total cost of such improvements (including plan preparation).

5. A plan for the equitable apportionment of costs among benefited properties and adjustments thereof based upon the time such costs are paid.

6. The nature of the obligation of each land owner or developer.

7. Discussion of the options available to finance the improvements, including, but not limited to, construction by developers, an assessment district, fees, or a combination of these and/or other provisions.

8. Provision for amendments to the plan, which may result from changes in the plan area, development patterns, etc.

9. Provisions to refund or reimburse landowners who construct facilities with excess capacity, beyond the ultimate need of their developments.

10. A statement which recognizes that the financial commitments required pursuant to such plans are not in lieu of other municipal service and facilities fees. The financial commitments of landowners/developers shall be taken into account by the City in determining the extent of the imposition of such other municipal service and facilities fees.

11. A statement which recognizes that the Area Facilities Plan is not intended to be responsible for the provision of all possible public facilities that will be needed in the future and that there are or may be additional costs/fees established by the City and other jurisdictions (such as school districts) that may apply to the area. However, the plan must address the need for all public facilities which may reasonably be assumed to be necessary during buildout of the area.

12. Provisions for the administration of the area plan and the collection and distribution of funds.

33.3 EXISTING PUBLIC FACILITIES

The City of Folsom currently provides the following municipal services and resources:

SCHOOLS

The City of Folsom is part of the Folsom Cordova Unified School District. The District currently operates three elementary schools (Grades K through six), one junior high (Grades seven through eight) and one high school (Grades nine through twelve) in the City. Locations of the existing schools are shown in Figure 33-1. For further discussion of the existing and proposed schools in the City, refer to the MEA Chapter 13, pages 13-13 to 13-16.

POLICE PROTECTION

The City of Folsom Police Department is currently headquartered at City Hall in somewhat cramped facilities, including a temporary office trailer. There are currently 22 sworn officers and eight non-sworn personnel in the Department. It is the goal of the Department to achieve a staffing level of two sworn officers per every 1,000 population. Assuming a current population of 14,000 for the City without the Prison, the police force is about six men short. Locations of existing stations are shown in Figure 33-2. For further discussion of the existing and projected needs of the Police Department, refer to the MEA, Chapter 13, page 13.6.

FIRE PROTECTION

The City of Folsom is served by its own Fire Department, headquartered in Station at 48 Natoma Street, next to City Hall. Th... are two other fire stations in operation current... in the City and a third one is under construction. Locations of these stations are shown in Figure 33-2. Refer to the MEA, Chapter 13, pages 13-16 to 13-19 for more discussion on the Fire Department projected needs to serve future City growth.

WATER

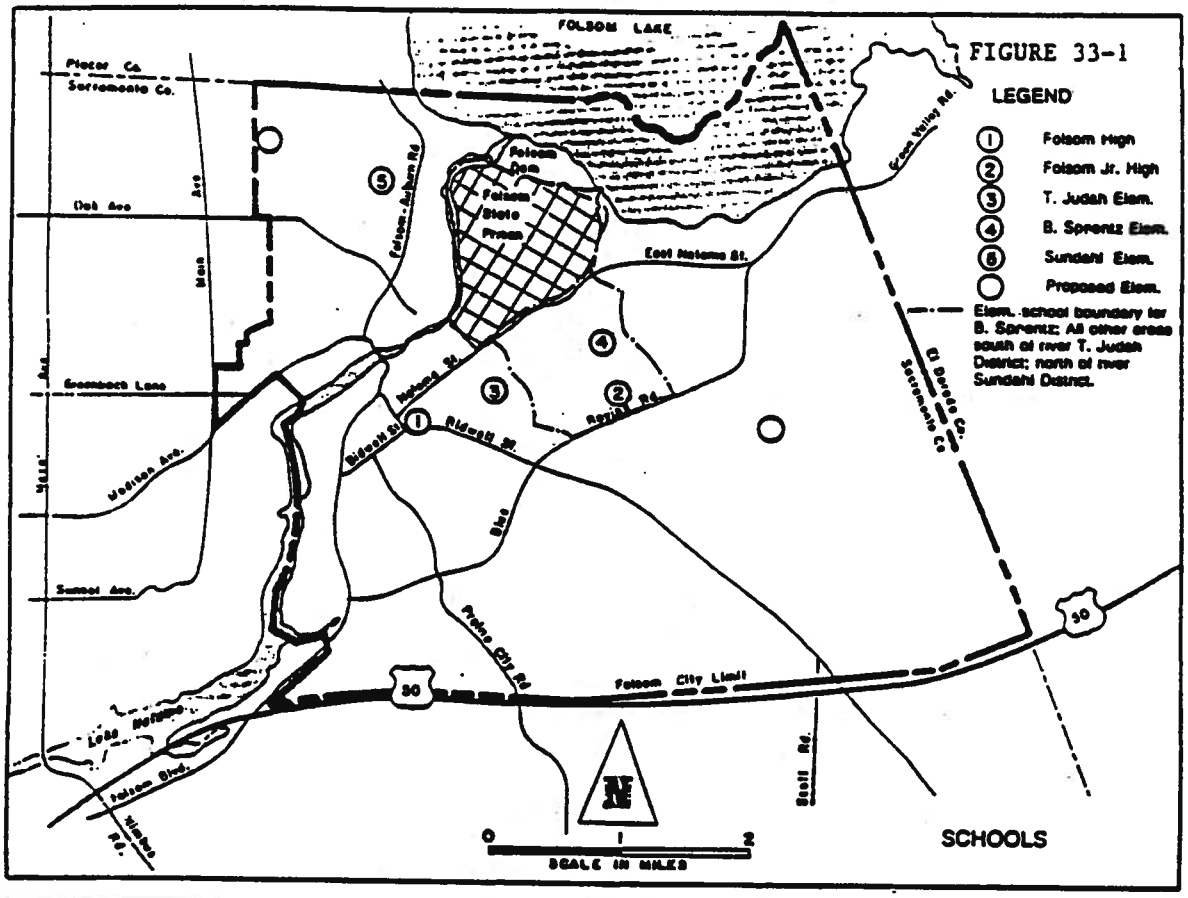
Currently, the City of Folsom obtains its water supply primarily from Folsom Lake under an entitlement from the U.S. Bureau of Reclamation for 22,000 acre-feet per year or approximately 19.6 million gallons per day (MGD) on an annual average basis.

In addition to the Folsom Lake water supply, the City also purchases water from the San Juan Suburban Water District (SJSWD) under contract to supply a minimum of 700 acre-feet per year of water to the Ashland area of the City, north of the American River. Figure 33-3 summarizes the quantities of water received by the City during 1984-1986. Refer to the MEA, C... ter 13, pages 13-1 to 13-8 for further discus... of City on water supply and consumption.

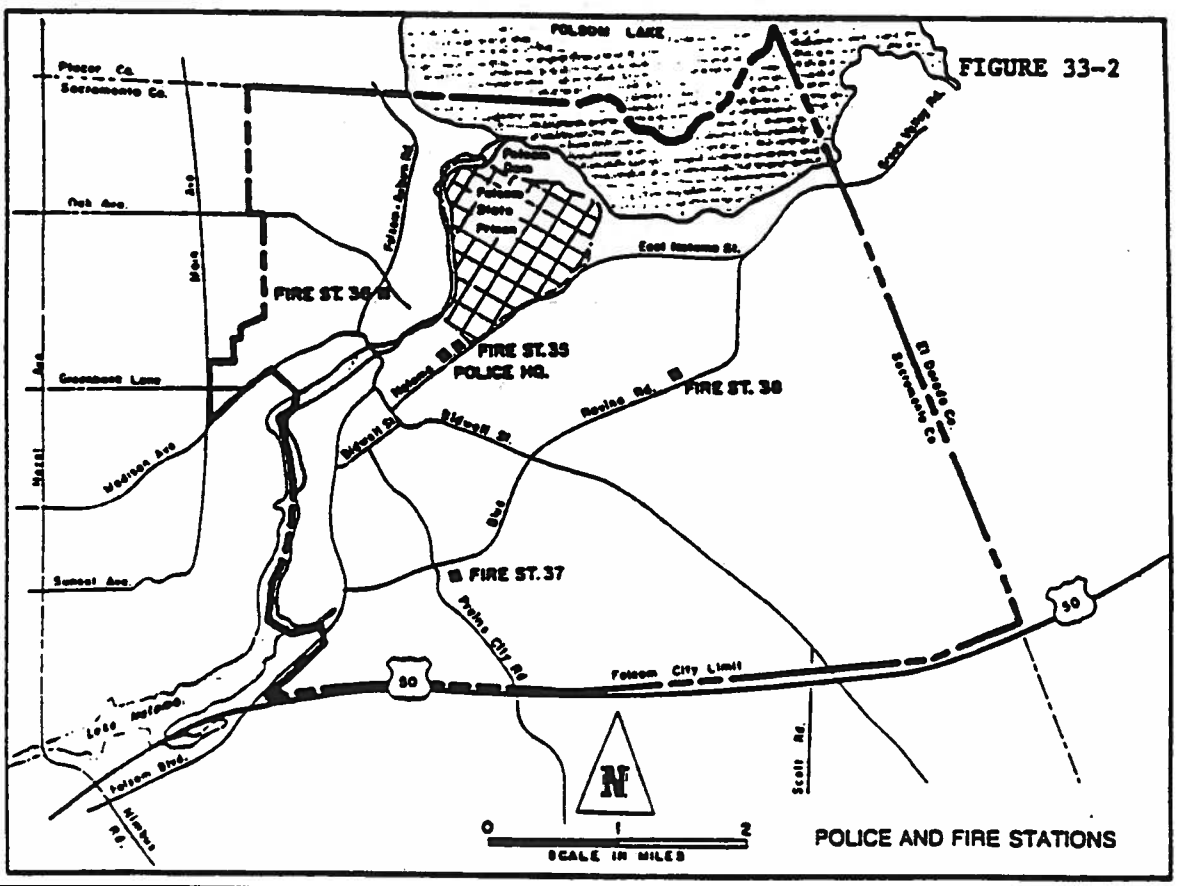
SEWER

The City of Folsom is served by separate sanitary sewer (waste water) and drainage (storm water) collection and disposal systems. Figure 33-4 illustrates the existing sewer system of the City. Refer to the MEA, Chapter 13 pages 13-8 to 13-10 for existing and projected demands of the City's sewer sanitary system.

SOLID WASTE



The City has its own solid waste pick-up service. The waste is transported to the County Landfill Site.



TELEPHONE

Local telephone service is provided by Pacific Bell.

CABLE

The City is served by Sacramento (... e Company.

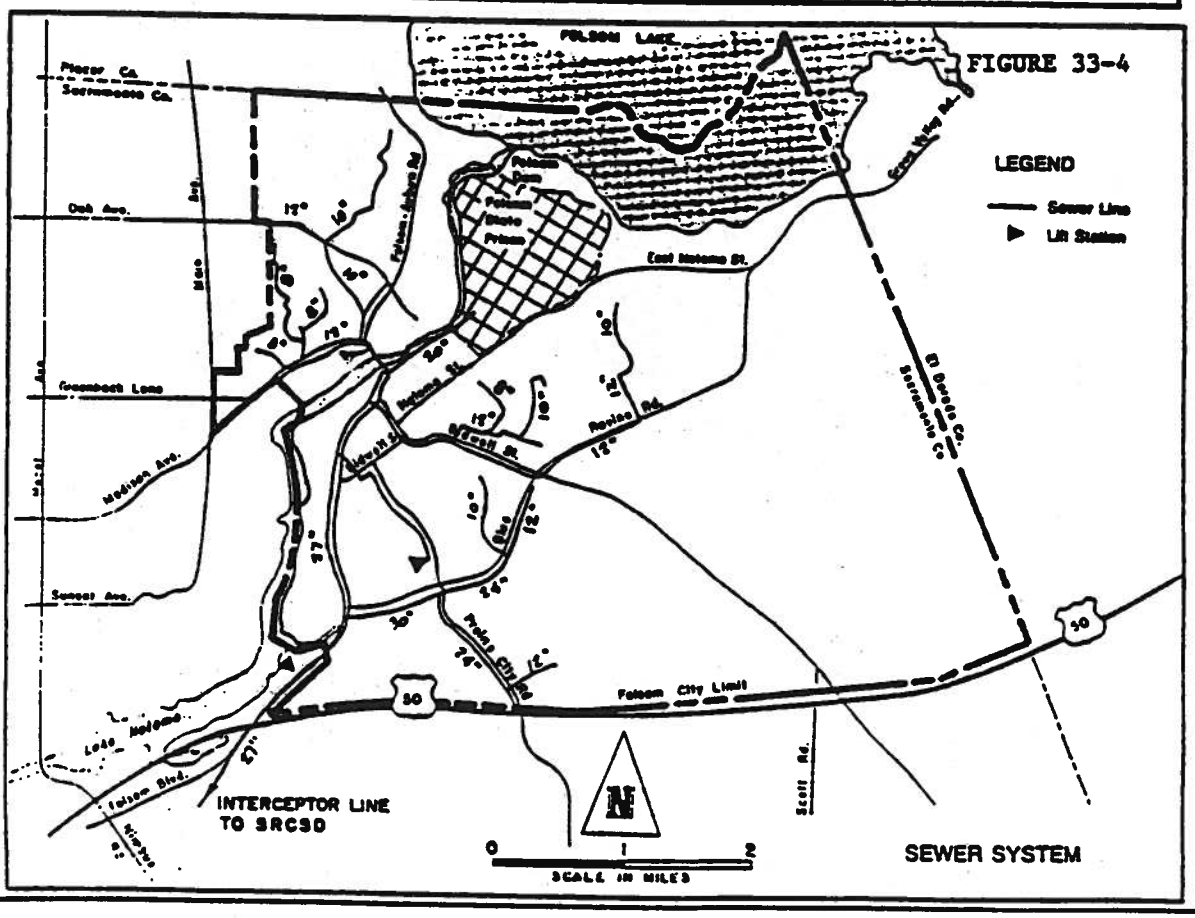

FIGURE 33-4

GAS

The Pacific Gas and Electric Company (PGandE) provides natural gas to the City. The utility company anticipates no major problems in serving newly developing areas in the City.

ELECTRIC

The Sacramento Municipal Utility District (SMUD) provides electric power to the City.

LIBRARY

The City of Folsom is served by the Sacramento City and County Public Library system. A small branch is presently located in a shopping center at 608 East Bidwell Street. With the City's present growth rate, this facility will soon be inadequate; therefore, the City strongly supports construction of a permanent facility to serve the long-term needs of the community. This facility would ideally be located in the central commercial mixed-use district.

33.4 POLICIES AND STANDARDS FOR THE PROVISION OF PUBLIC FACILITIES AND SERVICES.

The following is a brief summary of the current and/or proposed City standards for public facilities and services including water, sewer, fire, police and schools.

WATER

The MEA (Chapter 13.2) and EIR (Section 50.13.2) discuss in detail the City's existing water supply and estimated demands for future water supply. Table 33-1 lists the existing water supply and consumption for the City. Table 33-2 lists the ultimate water demands at buildout based on the Preferred Alternative Land Use Map.

SEWER

The MEA (Chapter 13.2) and the EIR (Section 50.13.3) discuss the sewer capacity at existing and proposed buildout levels. Figure 33-5 presents the existing average flow capacity for the City.

FIRE PROTECTION

Table 33-3 summarizes existing fire fighting staff in the City. The EIR and MEA thoroughly discuss the projected needs for fire protection and staffing. The MEA uses a rough estimate of two firemen per 1,000 population to project the number of firemen required at buildout population.

POLICE PROTECTION

The Police Department for the City of Folsom is currently under staffed. The goal of the department is to have two sworn officers per 1,000 population (see MEA page 13-16). The City with a current population of approximately 14,000 (excluding prison population) is understaffed by six men. For a more detailed explanation of projections for police protection see Section 50.13.6 of the EIR.

SCHOOLS

The MEA and the EIR address the school district needs (see Chapter 13 of each document) in detail. Table 33-4 presents the enrollment and capacity level for the existing schools within the City.

LIBRARY

While the City does not have direct control over the library system, the City encourages and will facilitate the construction of a permanent library in the central commercial mixed use district, to meet the long-term needs of Folsom citizens. If no site in the central business district is feasible, other sites within the city limits may be considered.

33.5 PUBLIC FACILITIES ELEMENT GOALS AND POLICIES

GOAL 40

To set targets for the ultimate build-out of the City, to plan for the provision of public facilities and services to meet this level of development, and to phase development according to the capacity of public facilities and services to meet those targets.

TABLE 33-1

POLICY 40.1

No permit for construction shall be issued for any new development not served by existing municipal facilities until the following conditions have been met:

1. The applicant can provide for the installation and/or financing (through fees or other means) of needed public facilities.

2. The project is included in the area covered by an existing facilities plan approved by the City.

3. The project can be served by on-site or private facilities meeting City and County health and safety requirements.

POLICY 40.2

The City shall require the preparation of a facilities plan for an identified area when:

1. Development of an area necessitates the provision, extension, and/or expansion of municipal services and facilities which are not customarily constructed by a developer; or

2. There is a need for services or facilities not otherwise funded by regular City fees; or

3. The construction of the necessary services and facilities cannot be logically or economically provided by one landowner/developer in the normal sequence of orderly development.

POLICY 40.3

An area facilities plan shall include, but not be limited to the following:

1. Description of the plan area, the basis for the selection of the proposed boundaries, and the development potential of the area which is based on a comprehensive land use map.

2. A statement of the plan's consistency with the Folsom General Plan and the City's Urban Development Policy.

3. Identification of the nature and extent of facilities necessary to serve the area and a schedule of estimated time within which facilities must be constructed.

4. Engineer's estimate of the total cost of such improvements (including plan preparation).

5. A plan for the equitable apportionment of costs among benefitted properties and adjustments thereof based upon the time such costs are paid.

6. The nature of the obligation of each landowner or developer.

7. Discussion of the options available to finance the improvements, including, but not limited to, construction by developers, an assessment district, fees, or a combination of these and/or other provisions.

8. Provisions for amendments to the plan, which may result from changes in the plan area, development patterns, etc.

9. Provisions to refund or reimburse landowners who construct facilities with capacity beyond the ultimate need of their developments.

10. A statement which recognizes that the financial commitments required pursuant to such plans are not in lieu of other municipal service and facilities fees. The financial commitments of landowners/developers shall be taken into account by the City in determining the extent of the imposition of such other municipal service and facilities fees.

11. A statemant which recognizes that the area facilities plan is not intended to be responsible for the provision of all possible public facilities that will be needed in the future and that there are or may be additional costs/fees established by the City and other jurisdictions (such as school district) that may apply to the area. However, the plan must address the need for all public facilities which may reasonably be assumed to be necessary during buildout of the area.

12. Provisions for administration of the area plan and the collection and distribution of funds.

POLICY 40.4

All new development projects shall be planned for an urban level of services:

33

1. Sidewalks, gutters, and storm drains constructed to standards established by the City, except for residential estates and other projects when appropriately excluded.

2. Sanitary sewer lines of appropriate size to accommodate the project and that will tie into the City's main lines.

3. Public or private roads that can accommodate at least two lanes of traffic.

4. Parking and circulation systems that accommodate emergency vehicles and equipment.

POLICY 40.5

The City shall annually monitor the City's available municipal water supply to ensure adequate reserves exist to serve projected water demand. In the event projected demand exceeds supply, the City may take the following actions to prevent the anticipated shortfall.

1. Condition development approvals on the availability of identified water supplies.

2. Building permits covered by the former General Plan area should be restricted until such time as the City determines adequate supplies exist to allow unrestricted hookups to the municipal water system.

3. Seek to renegotiate municipal water contracts with large water demand users.

4. Within the area known as the East Area Facilities Plan Area consisting of approximately 3,900 acres, and any area south of U.S. Highway 50 which could be annexed to the City, the City shall not approve a final subdivision map or final parcel map, or other entitlement which would permit the commencement of construction until such time as the City has acquired an additional water supply which is adequate to supply such development as required under the Urban Development Policy.

SEE PAGE 33-12 A

33.6 IMPLEMENTATION PROGRAM

The major portion of the implementation program for the Public Facilities Element will be through the preparation and adoption of Area Facilities Plans. The Plans will be used to insure that areas of future development will be adequately served by the needed facilities. The Plans will provide for: 1) options available to finance the improvements, 2) the provisions to reimburse or refund landowners who construct facilities with excess capacities, and 3) provisions for amendments to the plan if necessary due to changes in the plan area.

General Plan Amendment - 33.0 - (Public Facilities Element) 33.5
(Public Facilities Element Goals and Policies)

Goal 40 - Policy 40.5 (4)

4. For any area south of U.S. which could be annexed to the City or the area known as the East Area Facilities Plan area consisting of approximately 3,900 acres, the City shall no approve a final subdivision map or final parcel map. or other entitlement which would permit the commencement of construction until such time as the City has acquired an additional water supply which is adequate to supply such development as required under the Urban Development Policy. This prohibition shall not preclude the approval of final parcel maps covering all or a portion of the property covered by an approved tentative subdivision map, where multiple final subdivision maps are to be filed pursuant to Government Code Section 66456.1

   A. Additional water supply as discussed above may include water conservation programs as may be established by the City of Folsom.

   B. That it is not necessary that the entire additional water supply be available at one time. Policy 40.5 contemplates that development may be staged and it is only necessary that there is sufficient supply to service the proposed development. For example, if a proposed development creates a demand for 3,000 acre feet, such development is entitled to proceed once the City has acquired an additional 3,000 acre feet supply.

   C. Acquired water supply shall mean portable water contractually committed or available on demand.

HAZARDOUS MATERIALS

34.1 INTRODUCTION

Hazardous materials are found in every gas tank, under kitchen sinks, in commercial transports, and in most places of employment. Likewise, hazardous waste creates disposal questions for every part of today's society, ranging from households to industry. Over the past two decades, concern over the proper use and handling of hazardous materials has prompted a wide array of regulations from different levels of government. As budget crises have cut back inspection and enforcement capabilities at the state and federal levels, more of the responsibility for carrying out programs has been shifted to local governments.

34.1.1 STATE POLICY AND AUTHORIZATION

This Hazardous Materials Element is an optional Element of the General Plan and supplements the Safety Element presented in Chapter 25.

34.1.2 RELATED STATE AND FEDERAL REGULATION

Legislative efforts to control hazardous materials began in the last century as the federal government moved to protect waterways from pollution. Today, several dozen major state and federal acts serve to regulate hazardous materials in California.

In diverse areas such as air pollution, water pollution, underground tanks, disclosure ordinances, hazardous waste, and worker protection, California has passed legislation that advanced or significantly expanded the scope of hazardous materials regulation.

LOCAL GOVERNMENT AUTHORITY

Local government agencies interact with the network of regulations covering hazardous materials in six ways. Each determines the ability of local government to act to address a problem. These situations are:

1. Mandate: Some federal or state regulations require local agencies to implement a program, and often provide little freedom to modify the program to suit local resources or needs. This is true of the underground storage tank programs. Local governments are often placed in the position of having to collect fees or otherwise provide for the funding for a state-mandated program.

2. Conditional Authority: Local government may be given the authority over a regulatory program, provided certain conditions are met. (Typically, the local government has to be capable of administering the program and has to request the authority.)

3. De Minimis: Strictly interpreted, this phrase means that state and federal governments will not concern themselves with small matters. Practically speaking, it means local governments may have an opportunity to impose more restrictive standards or requirements than are contained in state or federal regulations.

4. Unregulated Area: An area or program not mentioned at all in federal or state statutes. The federal Constitution leaves unregulated matters to the states. The California Constitution provides local governments the authority to regulate unmentioned areas.

5. Exemption: Some products or areas may be specifically exempted from federal or state regulations, and local governments are precluded from imposing any restrictions.

6. Pre-emption: The authority to regulate some areas is specifically reserved by higher levels of government, and local governments are unable to impose any restrictions, even within their own communities. For example, the authority to regulate the commercial use and transportation of high-level radioactive materials is reserved by the Federal Nuclear Regulatory Commission, which delegates the authority to the State of California.

34.1.3 RELATIONSHIP TO THE GENERAL PLAN

This Element is directly related to the Safety

and Land Use Elements and indirectly to the Open Space and Conservation Element.

34.2 SETTING/ASSUMPTIONS/ISSUES

HAZARDOUS MATERIALS PROBLEMS

Chemical substances play a major role in the high standard of living we enjoy. Among other things, these substances have made improvements possible in our clothing, food, shelter, transportation and entertainment. Yet the last few years have been full of reminders that these benefits are not without cost.

DEFINITION

For the purposes of this Element, Folsom will use the definition of "hazardous materials" used by the State of California Department of Health Services. Section 66084 of the California Administrative Code states[1]:

1. "Hazardous material" means a substance or combination of substances which, because of its quantity, concentration, or physical, chemical, or infectious characteristics may either:

A. Cause or significantly contribute to an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or

B. Pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported, or disposed of, or otherwise managed.

2. Unless expressly provided otherwise, the term "hazardous material" shall be understood to also include extremely hazardous material.

This definition is also applied to hazardous waste in Section 25117 of the Health and Safety Code. This definition is not limited to just those chemicals with long-term detrimental effects. It also includes materials which present a hazard because of their physical nature (explosive, corrosive, flammable, etc.). This General Plan Element addresses all types of hazardous materials and refers to individuals or firms that manufacture, store, use, ship, recycle, or dispose of these materials as handlers.

SAFETY AND EXPOSURE STANDARDS

It is important to understand that there are legally enforceable standards of safety for only a fraction of the hazardous materials in the marketplace and little agreement on acceptable levels of exposure. For example:

- The Federal Food and Drug Administration has set an action level (which is not legally enforceable) for mercury in the edible portion of fish at 1.0 ppm, while the National Academy of Science's recommended guideline for mercury is 0.5 ppm in the whole fish. Other nations have set standards for mercury in fish that range between 0.1 and 1.0 ppm. (State Water Resources Control Board, "1983 Toxic Substances Monitoring Program", Water Quality Monitoring Report No. 85-1-WQ.)

- The State of California Maximum Concentration Level (MCL) for Trihalomethanes in public water systems with publicly-owned treatment works is 100 ppb. The EPA Suggested No Adverse Response Level (SNARL) for Trihalomethanes in drinking water is only 0.19 ppb, one five-hundredth of State level. (Burt Ellsworth, DOHS)

- Federal and State standards for concentrations of certain substances in air, water, and tissue have been set using generally accepted methods which use lab animals for test subjects. In very few instances are we absolutely confident that the results from these tests on animals can be related directly to human health. Test results for many more substances either can not be positively related to human health, or are not entirely clear. Worse still, complete tests have been performed on only ten to 20 percent of the over 70,000 chemicals that are in the marketplace.

Despite this uncertainty, regulations attempt to set standards or action levels that will keep human health impacts at acceptable levels.

[1] Source: California Administrative Code, Title 22, Division 4 "Environmental Health", Chapter 30, Article 1, Definitions, Section 66084

Agencies responsible for worker safety often allow higher exposure levels of toxic substances in the workplace than other agencies allow in the general environment. In California, the approach is to set conservative ambient standards that reduce the risk of cancer to one case per million population. Workplace standards are seldom as stringent. This method accounts for the fact that workplace exposure typically occurs for only eight-hour periods, with recovery times in between. It is also worth noting that in many cases exposure limits are more a reflection of economically practicable control technologies than human health knowledge.

The standards that have been set also do not account for the possibility of synergistic effects or recombinations. Synergism occurs when two or more substances in combination cause damage greater than the simple sum of their individual effects. Recombination occurs when two chemicals present in a medium combine together to form a third substance. The newly created material may have properties which are different from the parent substances. An example of this is the creation of potent carcinogens called trihalomethanes when water with low levels of organic contaminants is treated with chlorine for municipal consumption.

RISK MANAGEMENT

Risk management is a technique for evaluating the benefits and costs of safety regulations. It functions to aid decision making and prioritize possible courses of action. In recent years, it has been used to examine pollution standards and exposure levels. This is done not only to balance costs and benefits of control programs, but to weigh the relative merits of different programs so that limited financial resources may be put to the best use. Before risk management is applied, a risk assessment must be completed. Risk assessment is a term which describes the methods used to estimate human health impacts from bioassay or epidemiological data. This is a very complex task which is only partially completed for many common chemicals. For example, there are 35,000 to 40,000 pesticide products in use with federal registration. These products are formulated out of approximately 2,500 different active ingredients. A recent National Academy of Sciences review of EPA records revealed that complete health effect studies have been submitted on less than ten percent of these active ingredients. In California, roughly 13,000 pesticide products have been registered, formulated from a total of 850 different active ingredients. The California Department of Food and Agriculture reports that very few of these active ingredients have complete health study documentation as required by the California Birth Defect Prevention Act, but nearly 80 percent have at least some scientific evidence supporting their registration.

A detailed explanation of risk assessment is beyond the scope of this Element, but several factors make it an imperfect science at best. These include:

- Our poor understanding of the true risk of illness, cancer, or death from exposure to many chemicals. This uncertainty makes it impossible to exactly quantify risk.

- The impossible task of isolating the effects of a single chemical from the thousands we are all exposed to in our lives. Sunlight, campfire smoke, and trace elements in water supplies are all potentially harmful. Low levels of many chemical agents are present in our food, drink, clothing, and air. Most individuals live in several places during their lifetimes, hold several jobs and routinely use a variety of potentially harmful household or garden products. In any of these situations, a person may be exposed to a substance that harms them, though the harm may not be apparent for years. This is particularly true of cancers and problems with fertility.

- The need to place dollar values on environmental damage, aesthetics, and human death or illness. Many people resist this effort strongly, and feel that impacts to the environment or human health must be avoided at any cost.

- The fact that even if risk management were a perfect, quantitative science, its application is in the political arena. The decision which results may not be that suggested by the analysis.

- The use of risk assessment to set standards and choose programs will always raise these issues and others. One of the most difficult is that allowing a certain level of pollution or choosing not to implement a program with high costs and low returns may condemn some unknown individuals to illness or death. (Risk management as defined here should not be confused with risk management as an organization applies it to determine insurance needs.)

- Risk management is best used by federal or state agencies to set action levels or standards, since local governments will seldom have the research resources to develop the necessary information.

COORDINATION WITH SACRAMENTO COUNTY

Regulations developed by different levels of government seldom work in perfect harmony. Hazardous material legislation is no exception to this rule. The combined effect of programs imposed by federal, state, and local government agencies varies from well coordinated to inconsistent, duplicative, or incomplete.

For example, in a society like ours where materials are extremely mobile, transportation is best regulated by higher levels of government. This avoids an inconsistent and confusing multitude of local regulations that would make compliance difficult for transporters crossing jurisdictional boundaries. Similarly, exposure standards should be set at the federal level because they reflect our understanding of the impacts of these substances on human health.

These impacts will not change in different parts of the country. Also, few state and local jurisdictions have the resources to perform health impact tests on the thousands of substances in use.

There are, however, many programs which are best carried out at the local level. Certainly this is true of those requiring routine inspections or monitoring, such as programs for underground storage tanks or business emergency plans. Local fire or health departments already have inspection programs which can be expanded to cover these additional concerns. Federal regulation in recent years has shown a trend to turn programs over to state governments for implementation. Similarly, agencies from the State of California have been turning over some hazardous material programs to local governments through either direct legislative mandate or memoranda of understanding (MOU). An MOU between two or more agencies delineates responsibility and authority for program implementation. Often a program can be better implemented with a local agency's faster response and knowledge of local conditions. Where appropriate, Folsom intends to pursue the localization of hazardous materials programs and enforcement.

The intent of this Hazardous Materials Element and the programs which will be derived from it is to act where it is most appropriate for a local government to act, and where the most good can be accomplished with the effort. Therefore, the following sections of this Element focus on areas where local government programs are appropriate. In most areas the Sacramento County Health Department will have primary responsibility for hazardous materials programs at the local level. The City of Folsom will continue to coordinate with the County in the development and implementation of plans and programs which affect the City and will take a pro-active role in protecting the health and welfare of the citizens of Folsom in this regard.

34.3 HAZARDOUS MATERIALS ELEMENT GOALS AND POLICIES

GOAL 41

To protect the health and welfare of the residents of Folsom through the management and regulation of hazardous materials in a manner that will focus on preventing problems.

POLICY 41.1

The City shall endeavor to work with industry, community groups, and government agencies to develop an effective, workable, and fair hazardous materials management system.

POLICY 41.2

As much as feasible, the City shall provide information to the general public and interested parties on technical and administrative developments in the field of hazardous materials management.

POLICY 41.3

The City shall endeavor to develop and implement with Sacramento County, a comprehensive hazardous materials management program.

POLICY 41.4

The City shall expand and strengthen existing Folsom programs where appropriate, to fill in gaps in the current federal, state and local hazardous materials management efforts.

POLICY 41.5

The City shall encourage the effective implementation of workplace safety regulations, and to assure that hazardous material information is available to users and employees.

POLICY 41.6

The City shall improve cooperation, information gathering, and information availability within existing Folsom programs.

POLICY 41.7

The City shall support a household hazardous waste disposal program.

POLICY 41.8

The City shall endeavor to develop land use standards that will reduce the risk of health or environmental damage through industrial or commercial use of hazardous materials.

POLICY 41.9

The City shall endeavor to protect residents and sensitive facilities from avoidable incidents n the transportation of hazardous materials in he county.

POLICY 41.10

The City shall endeavor to protect residents from avoidable accidents and mishandling of hazardous materials in industrial and commercial facilities.

POLICY 41.11

The City shall support local enforcement of hazardous materials regulations.

AIR AND HAZARDOUS MATERIALS TECHNICAL ADVISORY BOARD

Establish an Air Pollution and Hazardous Materials Technical Advisory Board composed of representatives from all City Departments and the Sacramento County Health Department, to develop a hazardous materials management program for adoption by the City Council.

1. For those areas which the above-referenced program finds to be in need of regulation at the local level in order to protect the citizens of Folsom (potentially, some of the state's inspection duties which are presently unfunded), the City shall seek a MOU with the State Department of Health Services to

obtain authority for the regulation of hazardous waste generators in Folsom.

2. The City shall coordinate with the Sacramento County Health Department and the state to increase review of permit applications, and monitoring of underground storage tank testing programs and leaking tank clean-ups.

IMPLEMENTS: GOAL 41 - POLICIES 41.1; 41.3; 41.4; 41.6; 41.7; 41.10; AND 41.11

FACILITIES PERMITTING PROCEDURES - HAZARDOUS MATERIALS INCLUDING HAZARDOUS WASTE

With input of the Air and Hazardous Material Technical Advisory Board, develop a permit program for facilities which handle hazardous materials, including hazardous waste, and revise the Zoning Code and business license procedures accordingly:

1. Determine which handlers of hazardous materials would fall under the permit requirement.

2. Develop procedures to review project applications for site suitability, environmental hazards, risk to sensitive facilities, and other factors pertaining to hazardous materials.

3. Develop an ordinance to cover all storage of hazardous materials including requirements for above ground containment, leak testing and monitoring.

4. Perform a constraints analysis of hazardous materials impacts considering transportation, ground water supply, residential areas, environmental protection, and sensitive facilities.

5. Adopt, in conjunction with Sacramento County, a hazardous waste management plan and implementing ordinances.

6. Develop a review procedure for existing facilities so that facilities or locations which are inappropriate would be conditionally permitted, periodically reviewed, and/or phased out.

7. Revise business licensing procedures to complement the hazardous materials permitting procedure, including home occupations.

IMPLEMENTS: GOAL 41 - POLICIES 41.8; 41.10; AND 41.11

HAZARDOUS MATERIALS DISCLOSURE ORDINANCE

Update the existing Disclosure Ordinance to complement the hazardous materials permitting procedure, including the following provisions:

1. Develop a list of occupations that will potentially involve hazardous materials.

2. Develop business license review procedures to identify operations that involve hazardous materials and include a comprehensive list of chemicals on the business license application which will require compliance with the Disclosure Ordinance.

3. Prepare a handout statement about a firm's potential financial and criminal liability if a routine or accidental release of undisclosed toxic chemicals should harm emergency personnel, employees, or the public.

4. Bring all the appropriate firms in Folsom into the disclosure program, by having all City and County personnel (Building Inspectors, County Health Department Personnel, Fire Inspectors, etc.) report the undisclosed use of hazardous materials to the Environmental Health Branch of the County Health Department and to the appropriate permitting agency.

5. Include compressed gases over 200 cubic feet in volume in the disclosure requirement.

6. Provide for Health Department review of business license applications as appropriate.

7. Provide for staffing to inspect facilities and handling practices.

8. Develop a cost recovery fee schedule that is based on a fixed rate for the basic inspection (depending on the size or complexity of the operation), with a negotiated surcharge if additional staff time is necessary to resolve problems. This strategy is currently used by the APCD and the Underground Storage Tank program.

9. Design the fee schedule to also cover costs for emergency response training and development of the state mandated area plans (AB 2185).

HAZARDOUS MATERIALS TRANSPORTATION PROGRAM

Develop standards for transportation of hazardous materials, including wastes, which complement the City's permitting programs and the regulations of other levels of government.

1. Identify firms and land uses requiring hazardous material shipping access.

2. Identify sensitive facilities (schools, hospitals, etc.) and environmentally sensitive areas.

3. Identify appropriate transportation routes which would avoid sensitive land uses.

4. Evaluate accident probability and severity.

5. Identify emergency responses.

6. Restrict hazardous materials transportation to appropriate routes and time periods.

IMPLEMENTS: GOAL 41 - POLICY 41.9

HOUSEHOLD HAZARDOUS MATERIALS AND WASTE PROGRAM

Develop a household hazardous materials and waste program.

1. Implement an educational and public awareness program aimed at reducing the use and mis-use of household products containing hazardous materials or generating hazardous waste and promoting recycling.

2. Implement a household hazardous waste program including regular collection times at established sites throughout Folsom for hazardous wastes and hazardous waste containers.

IMPLEMENTS: GOAL 41 - POLICIES 41.1; 41.3; 41.4; 41.6; AND 41.7

- Resource Groups/Agencies/Organizations

  California Waste Management Board
  Sacramento County Health Department
  State Department of Health Services

- Responsible and Implementing Agency

  Public Works Department

- Target Dates: Start: March 1989
  Complete: October 1989

ESTIMATED COSTS PER YEAR				
Person Hours/ Dollars	Printing	Direct	Total	Funding
48/$2,160	$50	$500	$2,710	General Fund

HAZARDOUS MATERIALS MONITORING

Develop a monitoring and enforcement program to control dumping of hazardous materials into the municipal sanitary and storm sewer systems:

1. Develop an educational program to inform residential and commercial customers of the impacts of sewer dumping.

2. Develop a monitoring and enforcement program to control dumping of hazardous materials into the municipal sewer and storm drain systems.

A. Increase Folsom's ability to respond to complaints.

B. Establish an enforcement link with the District Attorney's Office.

C. Provide funding for periodic sampling on a rotating basis to identify contamination problems.

D. Mitigate contamination sources where identified.

IMPLEMENTS: GOAL 41 - POLICIES 41.4; 41.10; AND 41.11

- Resource Groups/Agencies/Organizations

  California Waste Management Board
  State Department of Health Services
  Sacramento County Health Department

- Responsible and Implementing Agency

  Public Works Department

- Target Dates: Start: October 1989
  Complete: May 1990

ESTIMATED COSTS PER YEAR				
Person Hours/ Dollars	Printing	Direct	Total	Funding
100/$4,500	$500	$1,100	$6,100	General Fund, Fines

EMERGENCY RESPONSE PROCEDURES

Existing emergency response plans shall be reviewed and updated as needed. The emergency response plans shall be published, shall provide for agency coordination and shall address medical care, escape routes, mutual aid agreements and temporary housing and communications in the event of fire, flooding, inundation, earthquake, hazardous materials spill or other emergency situation.

IMPLEMENTS: GOAL 29 - POLICY 29.5; GOAL 41 - POLICIES 41.9; AND 41.10

- Folsom Municipal Code: Title 9

- Resource Groups/Agencies/Organizations

  State Department of Health Services
  Sacramento County Health Department
  Sacramento General Services Department
  California Highway Patrol
  CALTRANS
  U.S. Army Corps of Engineers

• Responsible Implementing Agencies

Public Works Department
Fire Department
Police Department

• Implementing Agency

Police Department

• Target Dates: Start: July 1989
Complete: January 1990

ESTIMATED COSTS PER YEAR

Person Hours/ Dollars	Printing	Direct	Total	Funding
40/$1,800	$100	$200	$2,100	General Funds

SPILL RESPONSE

The City shall cooperate with nearby jurisdictions to:

1. Respond promptly to any spills within the City's jurisdiction or as may be appropriate under mutual aid agreements.

2. Institute a policy of civil recovery of spill clean-up costs from responsible parties.

3. Seek the allowable state reimbursements for spill clean-up expenses that are not recovered from a responsible party.

IMPLEMENTS: GOAL 41 - POLICIES 41.3; AND 41.11

• Resource Groups/Agencies/Organizations

State Department of Health Services
Sacramento County Health Department

• Responsible Agencies

Public Works Department
Fire Department
Police Department

• Implementing Agency

Fire Department

• Target Dates: Start: March 1989
Complete: October 1989

ESTIMATED COSTS PER YEAR

Person Hours/ Dollars	Printing	Direct	Total	Funding
40/$1,800	$100	$400	$2,300	State General Fund

LOCAL CONTROL STRATEGIES FOR TOXIC AIR CONTAMINANTS

Inventory and develop control strategies for toxic air contaminants in Folsom.

IMPLEMENTS: GOAL 31 - POLICIES 31.1; 31.2; AND 31.3; GOAL 32 - POLICY 32.1; GOAL 41 -POLICIES 41.8; 41.9; AND 41.10

• Resource Groups/Agencies/Organizations

State Air Resources Board
Sacramento County Air Pollution Control District
Sacramento Area Council of Governments
State Department of Health Services
Sacramento County Health Department

• Responsible and Implementing Agencies

Community Development Department
Public Works Department

Target Dates: Start: January 1989
Complete: On-Going

ESTIMATED COSTS OVER SIX MONTHS

Person Hours/ Dollars	Printing	Direct	Total	Funding
48/$2,160	$50	$500	$2,710	Development Fees, User Fees

GENERAL PLAN DATABASE MAINTENANCE

IMPLEMENTS: GOAL 30 - POLICY 30.1; GOAL 41 - POLICY 41.6

Maintain and update on a regular basis the database prepared for the General Plan, including but not limited to the following areas:

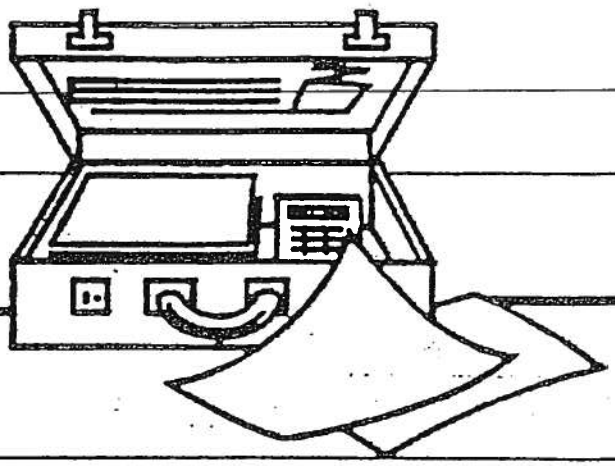
1. Noise: Develop and continually update a database as part of the General Plan program containing noise exposure information for the City so that noise related issues can be addressed in the land use planning process.

2. Ground Water and Surface Water Monitoring: Cooperate with the County of Sacramento in developing a computerized data base on water quality and seek funding for a County-assisted testing program to continue to improve information about water quality in the City.

3. Medical Statistics: Cooperate with the Sacramento County Health Department to compile statistics on medical problems potentially related to hazardous materials, and support efforts to gather this information on a statewide basis.

- Resource Groups/Agencies/Organizations

  State Department of Health Services
  Sacramento County Health Department
  State Office of Noise Control

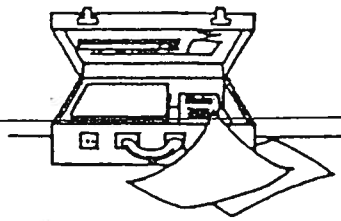


- Responsible and Implementing Agencies

  Public Works Department
  Community Development Department

- Target Dates: Start: January 1989
  Complete: On-Going

ESTIMATED COSTS OVER SIX MONTHS



Person Hours/ Dollars	Printing	Direct	Total	Funding
36/$1,620	$100	$400	$2,120	General Fund, Development Fees, EIRs

40.0 AREA PLANS AND SPECIFIC PLANS

40.2.2 Historic District Plan 2
40.2.3 Central Commercial District Plan 2
40.2.4 Humbug Creek/Willow Creek Parkway Plan 2

40.3 SPECIFIC PLANS 3

40.3.1 Russell Ranch Specific Plan 3
40.3.2 Eastgate/ Broadstone Project 3
40.3.3 Sobrato Development 3

AREA PLANS AND SPECIFIC PLANS

The purpose of this Section is to list and inventory the Area Facilities Plans, Area Plans, and Specific Plans.

The City has, through its Urban Development Policy, adopted and proposed a number of Area Facilities Plans.

40.1.1 FOLSOM SOUTH ASSESSMENT DISTRICT

The first such adopted Area Facilities Plan accompanied the Folsom South Assessment District. This area adjacent to Highway 50, included a 2,000-acre assessment district area with an additional 1,000 acres of study area. The Facilities Plan and related documents are on file with the Community Development Department or Public Works Department.

40.1.2 AMERICAN RIVER CANYON UNITS 4-9

This area, also known as the Allied North Facilities Area, had an approved Plan adopted with a 440-acre project known as American River Canyon Units 4-9. This project, taken over by Elliot Homes Inc., encompasses a number of land uses including approximately 1,540 dwelling units and a ten-acre commercial site, a park site and school site.

40.1.3 FOLSOM EAST AREA FACILITIES PLAN

The East area Facilities Plan covers the Russell Ranch, Teichert Property, Broadstone II and Broadstone III. The total area is 3,900 acres. The Facilities plan provides a more refined depiction and description of facilities required for the East Area. References on maps, or descriptions in text of the East Area Facilities Plan (EAFP), are for general information purposes only. Additional detailed plans will be reviewed and adopted as part of each individual specific plan. the more refined plans will be reviewed for overall compatibility with other facilities needed within the East Area Facilities Plan (EAFP). Resolution No. 3798.

40.1.4 RANCHO CREEK-BRIGGS PROPERTY

This is the fourth Area Facilities Plan and encompasses an area around East Natoma Street. The area is primarily residential and is largely developed. One parcel of approximately 200 acres known as the Briggs Ranch or Briggs Estate, will be reviewed during late 1988 and 1989 for development permit approvals and approval of the Area Facilities Plan.

40.2 AREA PLANS

40.2.1 FOLSOM REDEVELOPMENT AGENCY/CENTRAL FOLSOM REDEVELOPMENT DISTRICT

In 1983, the City formed a Redevelopment Agency which encompasses 1,050 acres in the older part of the town. The purpose of formation of the Folsom Redevelopment District was to provide parking for the Historic District, upgrade certain housing areas in the City and provide for public improvements and beautification of East Bidwell Street. The Agency is currently, as of 1988, in its fifth year and has tax increment of over $350,000 per year. The City has sold bonds in 1987 for $2 million in public projects. The projects will be centered on the three areas that were the reasons the Agency was formed. As a result of the General Plan adoption, an amendment to the Redevelopment Plan will be necessary in order to bring the land uses in line with the 1983 Plan.

40.2.2 HISTORIC DISTRICT PLAN

The City Redevelopment Agency has authorized the preparation of a Specific Plan for the Folsom Historic District. During the review of the implementation program in the General Plan's Land Use Element, the Planning Commission recommended that the Historic District Plan Area be expanded to encompass the entire Folsom Township area. The Plan will be completed in 1989 and will be on file with the Community Development Department.

40.2.3 CENTRAL COMMERCIAL DISTRICT PLAN

The policies in the Land Use Element that refer to the Central Commercial District discuss a need to formulate a plan for this area. The City's Redevelopment Agency has contracted with a landscape architect, Earth Art Inc., to prepare an East Bidwell Beautification Project which is to upgrade and provide consistency in the develop-

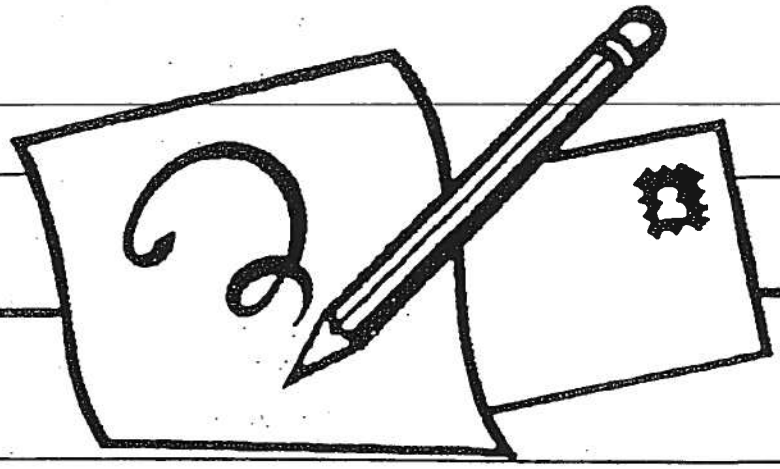
ment along East Bidwell Street. It is expected that this concept, which will include landscaping, street furniture, signage and other amenities, should be expanded to include the entire Central Commercial District. This type of Plan will be implemented through the Redevelopment Agency and with revisions to the Zoning Code and should provide for a quality development of this area.

40.2.4 HUMBUG CREEK/WILLOW CREEK PARKWAY PLAN

Several Sections of the General Plan discuss this Plan Area. The Plan is to be a linear park system and will run from Lake Natoma eastward to the El Dorado County Line following the Humbug Creek and Willow Creek drainage areas. The Plan is expected to accommodate several issues, including recreation and open space needs, floodway issues, wildlife issues and enhancement of development projects adjacent to the streams. The wetlands issues that have been raised recently will, to some degree, be resolved through the development of this Plan by encouraging the consolidation of wetlands along the two watersheds, in order to maintain an overall balance of open space, wildlife areas and wetlands in the City. This Plan is expected to be developed in late 1988 and 1989 and integraed into adjacent projects with long term mainitenance and construction provided in the adoption of the Plan.

40.3 SPECIFIC PLANS

40.3.1 RUSSELL RANCH SPECIFIC PLAN

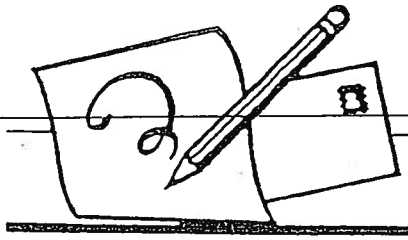


The Russell Ranch is part of the East Area Facilities Plan and encompasses 1,700 acres. The Ranch covers approxtmately 800 acres in El Dorado County and 400 acres south of U.S. 50 in addition to the 1,700 acres in the Folsom city limits. A conceptual plan has been prepared by the developer, River West Developments. The purpose of the conceptual plan is to introduce the project and provide some basis for which to provide a more definitive Specific Plan at some point in the future. The conceptual Russell Ranch plan, will be reviewed for consistency with the General Plan and revised based on an application which will be reviewed following the Plan adoption.

40.3.2 EASTGATE/BROADSTONE PROJECT

The Eastgate Project, at the intersection of Highway 50 and East Bidwell off of Scott Road on the northwest corner, encompasses approxtmately 1000 acres. Similar comments apply to this as with the Russell Ranch Project in that a number of steps should be taken prior to summarizing all of the information needed to develop the property into a format of a Specific Plan. The project includes a regional mall and accessory uses and is expected to be a very large scale project that will take one or two years of planning in order to actually begin development.

40.3.3 SOBRATO DEVELOPMENT



The Sobrato project encompasses 160 acres and has been earmarked as a Specific Plan Area through the General Plan hearings. The property is expected to be a mixed-use development and is included in the Redevelopment Area boundaries. Substantial benefits are expected to be derived to the Redevelopment Agency due to the development that is anticipated on this parcel. The Specific Plan will be developed between the City and developer and also include aspects of the Humbug Creek drainage plan area.

IMPLEMENTATION

60.1 IMPLEMENTATION PROGRAMS

60.1.1 INTRODUCTION

This section of the Folsom General Plan is an overview of the Plan's implementation program, consistency aspects and its relationship with other adopted plans. It is primarily oriented to the individual wanting to know if a proposed development project meets the City's goals and policies, and as a guide for making the Plan a responsive and current document. Sections 60.7 and 60.8, Public Information and Agency Coordination, describe the role and function of public input in the local planning process.

The discussion on implementation explains what "tools" are available to implement the General Plan, and identifies programs and work tasks to keep the General Plan a useful and current policy document for the City. Implementation of the Plan is achieved by various methods the City has at its disposal through state and local law. The most commonly used is the City's Zoning Code (Folsom Municipal Code Chapter 17). Table 60-1 illustrates compatible zoning and land use designations. Section 60.5 discusses this in greater detail.

Consistency focuses on how the General Plan is used to evaluate both public and private development and improvement projects. State law mandates consistency between a local jurisdiction's General Plan and its zoning, subdivision, capital improvements programs and other development regulations and land use decisions.

The relationship of other adopted plans to the General Plan is discussed in Sections 60.3 and 60.4, Specific Plans/Master Plans and Redevelopment Plans respectively. It defines what land use and policy provisions of the adopted redevelopment plan, area plans and specific/master plans are to be used in evaluating projects and programs against City policy.

60.2 GENERAL PLAN

A section describing implementation measures and programs is contained in each Element. Implementing actions/products, responsible/implementing agency, time frame, costs and funding sources are presented for each measure. In addition, Section 60.15 provides a summary of each Element's implementation program. A summary table is also included which provides easy reference to the Plan's complete implementation program.

60.3 SPECIFIC PLANS/MASTER PLANS

Perhaps the most versatile method of implementing the General Plan, specific/master plans can address a variety of issues and serve a variety of functions. Specific/master plans offer the advantage of blending land use with zoning by providing an overall development concept for a project. The City, through the Planned Development process, encourages large landowners/developers to prepare specific plans. As an overall development plan, these address land use, open space/parkland, circulation, financing mechanisms and public facilities/services.

The environmental work required for these plans is an excellent vehicle for updating the General Plan's MEA. Subsequent planning efforts can use the MEA as a base document and supplement it with new and updated information data as necessary.

TABLE 60-1
LAND USE
AND
ZONING CONSISTENCY

GENERAL PLAN DESIGNATION	ZONING
Single Family	R-1-L, R-1-ML,
Single Family High Density	R-1-M, R-2,RMH
Multi-Family Low Density	R-M, R-2
Multi-Family Medium Density	R-M, R-3
Multi-Family High Density	R-M, R-4
Neighborhood Commercial	C-1
General Commercial	C-2, C-3
Community Commercial	C-1, C-2
Central Commercial Mixed Use District	C-2
Regional Commercial	C-3, CH
Specialty Commercial	C-3, HD, BP.
Industrial/Office Park	M-1, M-2, ML, MF, BP
Public	*
Park/Open Space	OSC, A-1-A
All Designations	PD, A-1-A, OSC

*A variety of zones are consistent with this land use.

The City also uses specific plans for facilities planning in developing areas of the City. These are particularly useful in planning, financing and construction-timing of major public facilities and services. Such plans could also be used for future transportation/circulation studies and improvements. Section 40 further describes Specific Plan requirements and opportunities.

60.4 REDEVELOPMENT PLAN

Redevelopment is another effective tool for implementing the General Plan. It allows for direct City involvement in implementing the Plan through land use and fiscal activities. All redevelopment projects and activities are reviewed for General Plan consistency. The City's redevelopment efforts to date have concentrated on providing development incentives, assisting developers in assembling properties, and financing mechanisms (loans, grants, assessments, and issuing revenue bonds). The City's older areas and the designated central commercial district, have been the focus of redevelopment activities.

The City also coordinates with Sacramento Housing and Redevelopment Agency (SHRA) in county-wide programs for funding sources and housing needs.

60.5 MUNICIPAL CODE

The Folsom Municipal Code (FMC) is the primary implementation tool available to the City. Regulations relating to planning and development can be found in the following chapters:

- Chapter 12 Streets and Sidewalks
- Chapter 13 Water and Sewage
- Chapter 14 Building and Construction
- Chapter 16 Subdivision
- Chapter 17 Zoning

Within these chapters are the various ordinances and regulations (i.e., zoning, subdivision, grading, environmental review procedures) that govern all public and private development projects within the City. As such, they implement the various General Plan goals and policies and must be consistent with the Plan.

State Planning Law specifically requires zoning and subdivisions to be consistent with the General Plan. In doing so, the General Plan land use categories have been developed in a manner to allow the broadest range of a particular type of use within the designation. Specific uses and density ranges are identified by zoning. Further refinement of land uses and development guidelines are provided on some properties through the adoption of specific development plans.

Subdivision activity, through the local subdivision ordinance, implements and must be consistent with the General Plan. Government Code Section 66473.2 provides that no local agency shall approve a subdivision map unless the map, together with its design and improvements, is consistent with the local General Plan.

60.6 DEVELOPMENT STANDARDS

City standards/regulations for development projects are found in various chapters of the FMC (see Section 60.5 discussion). General Plan policies also address development standards through the application of building intensities (i.e., density, lot sizes, area and height restrictions). Standards are also referred to in the implementation program for the Land Use Element.

The City has chosen to rely not only on the zoning and subdivision ordinances and other regulations, but is also strongly encouraging the preparation of specific plans for large development proposals. General Plan policies encourage innovative planning and site design, retention of open space, and mixing of compatible land uses. Development guidelines and an overall development plan are a requirement of the planning development process. This process allows flexibility in interpreting zoning code standards.

60.7 PUBLIC INFORMATION

Public information and education programs are important functions of a local planning agency. Several implementation measures call for preparation and distribution of informational handouts on zoning and building regulations, code enforcement activities, development guidelines, and parks and recreation facilities. The primary purpose of these publications is to assist and inform residents and developers of the planning agency's functions and responsibilities.

Another aspect of a public information program involves the periodic review and monitoring of the General Plan. The City will establish and implement a system for monitoring development, implementation programs and plan amendments. As an annual task, such a report would provide the basis for understanding current growth trends, effectiveness of implementation actions, and land use balances.

Noticing and public review/comment opportunities on development projects is another component of a successful public information program. The City shall continue to follow state law noticing and public review/comment requirements, and shall encourage citizen participation on local boards, commissions and committees involved with planning issues.

60.8 AGENCY COORDINATION

Coordination among various local, regional, state and federal agencies governing Folsom's growth and development will be encouraged. The City will continue to coordinate with and participate in regional planning efforts designed to address growth and environmental issues that impact Folsom's quality of life. Several of the General Plan's implementation programs can only be implemented through inter-jurisdictional cooperation. The Plan calls for the City to work with neighboring jurisdictions in solving regional problems, e.g., traffic, air quality, housing, etc.

Agency coordination also refers to the various City Departments. Review of public works projects, special studies and plans, and maintenance of public service levels require staff expertise from all City Departments.

60.9 ADMINISTRATIVE/PROJECT REVIEW

Administrative review refers to review and monitoring of the General Plan itself. Portions of the Plan will be periodically reviewed and recommended for revision if necessary. Plan policies will be reviewed and offered for amendment if no longer applicable or reinforcement is deemed necessary. Implementation activities will also be closely monitored and amended or supplemented if necessary. Administrative review is also an effective means of maintaining internal consistency among the various elements and components of the General Plan.

Review of public and private projects is another effective General Plan implementation tool. Development projects should reflect and embody Plan goals and policies through their implementation at the project-specific level. Project review should also focus on plan-project consistency issues. Plan consistency review is an important step in the project review process. If inconsistencies exist between the Plan and project, revisions to the project should be called for. If the General Plan is amended for individual projects, local officials must consider the amendment's impact on the entire community, what is "in the public interest", and its consistency impact on the remainder of the General Plan.

60.10 DATA BASE/SPECIAL STUDIES

The Master Environmental Assessment (MEA), General Plan data base document, will be periodically updated through special studies, project EIRs, and regional data gathering efforts (i.e., Air Quality). The MEA provides an excellent source document for baseline data on which future EIRs may be "tiered" (Government Code Section 15152). Future studies and environmental work will be used to periodically update the MEA.

Special studies (i.e., traffic, vegetation/wildlife, cultural resources) will be required of development proposals as the City builds out. These future studies will provide City staff and local officials with the latest available information necessary when reviewing and conditioning projects.

60.11 ENFORCEMENT/COMPLAINTS

Enforcement of the Municipal Code, and the various building and development regulations, is the objective of the City's Code enforcement program. Enforcement and abatement is handled on a City or complaint initiated basis. Zoning regulations, sign enforcement, nuisance abatement, and business license matters all fall within the jurisdiction of the code enforcement program and implementation of the General Plan.

60.12 MONITORING

A monitoring program will be established and coordinated through various City agencies (Community Development, Public Works, Building, Parks and Recreation, Finance). It will focus on development activity including such things as development trends, building permit activity, business license renewals, impacts on municipal services, and land use balances. The City's computer system will be utilized to connect the various departments to track these activities. This program will also analyze the effectiveness of the General Plan implementation measures.

60.13 ACQUISITION/ABANDONMENT

Real property to be acquired or disposed of by the City is another tool the City uses in implementing the General Plan goals and policies. In addition, these properties are submitted to the Community Development Department for General Plan consistency review.

60.14 CAPITAL IMPROVEMENT PROGRAM

All capital improvements proposed for the ensuing fiscal year by the City are listed and classified, and a coordinated program is developed for review and recommendation to the City Council. The City's Planning Commission annually reviews the proposed CIP for General Pl consistency and implementation.

60.15 IMPLEMENTATION PROGRAM SUMMARY

This section briefly summarizes the implementation measures developed to follow-through with the goals of the General Plan as presented in the established policies for each specific goal.

The table summarizes the implementation measures that have been established for the mandatory and optional Elements. Specific implementation measures along with estimated cost and funding sources are provided for each element. Those measures are also referred to in more detail at the back of each Element section.

Included, also, as part of the Implementation Program Summary is a chart listing the Goals of the General Plan and the implementation measures that relate to each specific goal. This chart is useful to aid in determining the corresponding goals and implementation programs for specific projects related to all levels development and services in the City.

GENERAL PLAN
IMPLEMENTATION WORK PROGRAM

WORK TASK	DEPARTMENT	TIME FRAME	HOURS	COST	REMARKS
LAND USE					
1. Special Plans/Master Plans	A, C	1/89-9/90	-	$120,000-$300,000	$40,000-$100,000 (Cost/Plan)

GLOSSARY

GLOSSARY

Active Recreation Acreage:

Active recreation acreage is defined as land with less than five percent slope which can be developed into high use facilities. High use facilities include, but not limited to such facilities as soccer fields, hardball diamonds, softball fields, football fields, gymnasiums, tennis courts, tot lots and swimming pools.

Affordable:

Capable of being purchased or rented by a household with very low, low or moderate income, based on a household's ability to make monthly payments necessary to obtain housing. Housing is considered affordable when a household pays no more than 30 percent of its gross monthly income (GMI) for housing.

Arterial Street:

Relatively-high-speed (40-50 mph), relatively-high-capacity (up to 50,000 average daily trips) roads providing access to regional transportation facilities and serving relatively long trips, or medium-speed (30-40 mph), medium-capacity (10,000-35,000 average daily trips) roads which provide intra-community travel and access to the countywide arterial highway system. Access to arterials should be provided at collector roads and local streets, but some direct access onto arterials exists.

Buffer or Buffer Zone:

An area designed to provide a separation between two, sometimes incompatible land uses.

Central Commercial District:

The primary commercial area serving the needs of entire community. The district includes retail commercial uses, such as one or more community-level retail centers, professional and corporate offices, financial and real estate services, cultural and entertainment uses, public buildings, and high density residential uses.

Cluster Homes:

Homes grouped in close association on a portion of a parcel of land.

Collector Street:

Relatively-low-speed (25-30 mph), relatively low volume (5,000-20,000 average daily trips) street, typically two lanes, which provides circulation within and between neighborhoods. Collectors usually serve relatively short trips and are meant to collect trips from local streets and distribute them to the arterial network.

Combined (Mixed) Use Building:

A building which contains more than one type land use, such as a multilevel residential building with shops on the ground floor.

Community Noise Equivalent Level (CNEL):

A 24-hour energy equivalent level derived from a variety of single-noise events, with weighing factors of five and ten dBA applied to the evening (7:00 to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) periods, respectively, to allow for the greater sensitivity to noise during these hours.

dB:

Decibel: a unit used to express the relative intensity of a sound as it is heard by the human ear. The decibel measuring scale is logarithmic. Zero (0 dB) on the scale is the lowest sound level that a normal ear can detect under very quiet (laboratory) conditions and is referred to as the "threshold" of human hearing. On the logarithmic scale, ten decibels are ten times more intense, 20 decibels are 100 times more intense, and 30 decibels are 1,000 times more intense than one decibel.

dBA:

The "A-weighted" scale for measuring sound in decibels; weights or reduces the effects of low and high frequencies in order to simulate human hearing.

Density:

The degree of crowding together of people or buildings. For housing, density is the number of permanent residential dwelling units per acre of land. All densities specified in the General Plan are expressed in maximum number of units per

LOSSARY

ss developable acre. (See "Developable Acres, ıss".) Density can be controlled through zoning he following ways: minimum lot-size requirents. floor area ratio. land use-intensity ratio. ɔack and yard requirements. minimum house- : requirements. ratios comparing number and es of housing units to land area. limits on ts per acre. and other means. Maximum rwable density often serves as the major dis- :tion between residential districts.

nsity Bonus:

The allocation of development rights that rw a parcel to accommodate additional square tage or additional residential units beyond the xtmum for which the parcel is zoned. usually exchange for the provision or preservation of amenity at the same site or at another loca- ı. (See "Transfer of Development Rights".)

nsity Transfer:

A way of retaining open space by increasing nsities - usually in compact areas adjacent to sting urbanization and utilities - while leaving changed historic. sensitive. or hazardous areas.

'elling Unit: A residence.

lerly Housing:

Typically one- and two-bedroom apartments signed to meet the needs of persons 62 years ıge and older. and restricted to occupancy by m. In Folsom. such units will be constructed non-institutional settings. in proximity to mmunity amenities and public transporta- n.

:eway:

High-speed. high-capacity. limited-access nsportation facility serving regional and intywide travel. Generally used for long trips ween major land use generators. Major streets ss at a different grade level. U.S. Highway 50 he only such facility in Folsom.

al:

A general. overall. and ultimate purpose. ı. or end toward which the City will direct ɔrt.

:enbelt:

A strip of land reserved for open space or :kland between two developed areas. often viding pedestrian or bicycle connections be- :en the developed areas.

Historic:

Associated with an important local. state. or national event. or representing an outstanding example of an architectural period.

Home Occupation:

A residence which is used by the occupant to conduct a business wholly within the residence. The business use is secondary to the use of the home as a residence.

Implementation:

Actions. procedures. programs. or techniques that carry out policies.

INCOME LEVELS:

Very Low Income: 50 percent or less of the Sacramento County median household income.

Lower Income: 50 to 80 percent or less of the Sacramento County median household income.

Moderate Income: 80 to 120 percent or less of the Sacramento County median household income.

Above Moderate Income: More than 120 percent of the Sacramento County median household income.

Industrial Park:

An industrial subdivision in which several establishments are located on a project site with common roads. unified building design. common open space areas. and landscaping.

Landscaping:

Any ornamental plantings or fixtures. including trees. shrubs. grasses and other vegetation; planters. fences. walls. gatehouses. and similar structures in a common area or bordering a site; and rocks. boulders. woodchips. and other non-living earthen materials.

Ldn:

Day-night average sound level. The A-weighted average sound level for a given area measured in decibels (dB) during a 24-hour period with a ten dB weighting applied to nighttime sound levels. The Ldn is approximately numerically equal to the CNEL for most environmental settings.

Level of Service:

A scale that measures the operating capacity likely to be encountered on a roadway or at the intersection of roadways, based on a volume-to-capacity ratio, with levels ranging from A to F, with A representing the lowest volume-to-capacity ratio and the highest level of service. (See "Volume-to-Capacity Ratio".)

Level of Service A: Indicates a relatively free flow of traffic, with little or no limitation on vehicle movement or speed. Usually denotes a volume-to-capacity ratio of 0.00 to 0.60.

Level of Service B: Describes a steady flow of traffic, with slight delays in vehicle movement and speed, with a volume-to-capacity ratio of 0.61 to 0.70.

Level of Service C: Denotes steady, high-volume flow of traffic, with significant limitations on movement and speed and a volume-to-capacity ratio of 0.71 to 0.80.

Level of Service D: The level where traffic nears an unstable flow, in which there is little freedom of movement, with a volume-to-capacity ratio of 0.81 to 0.90. Queues develop and short delays occur.

Level of Service E: Traffic characterized by slow movement and momentary stoppages. This type of congestion is not uncommon at peak traffic hours, with a volume-to-capacity ratio of 0.91 to 1.00.

Level of Service F: Very congested traffic with frequent stoppages. Indicates forced flow or operation, with a volume-to-capacity ratio of 1.00+.

Local Street:

A road of limited length, often terminating in a dead-end or cul-de-sac, serving a portion of a neighborhood.

Low Income Household:

A household with an annual income of no more than 80 percent of the Sacramento County median household income by household size, as determined by a survey of incomes conducted by the City or by Sacramento County, or in the absence of such a survey, based on the latest available findings for the County as provided by the U.S. Department of Housing and Urban Development (HUD).

Mitigate:

To ameliorate, alleviate, or avoid to the extent reasonably feasible. According to CEQA, mitigations include: a) avoiding an impact by not taking a certain action or parts of an action; b) minimizing an impact by limiting the degree or magnitude of the action and its implementation; c) rectifying an impact by repairing, rehabilitating, or restoring the environment affected; d) reducing or eliminating an impact by preserving and maintaining operations during the life of the action; e) compensating for an impact by replacing or providing substitute resources or environments.

Moderate-Income Household:

A household with an annual income of between 80 and 120 percent of the Sacramento County median household income by household size, as determined by a survey of incomes conducted by the City or Sacramento County, or in the absence of such a survey, based on the latest available findings for the County as provided by the U.S. Department of Housing and Urban Development (HUD).

Multiple Dwellings:

A structure composed of no more than four attached dwelling units which share any common building components, including, but not limited to, foundations, roofing and structural systems. Such multiple dwelling units shall be of woodframe construction and not more than two stories and basement in height.

Naturalized:

In reference to vegetation which is not native to Folsom but which has, through time, become associated with the native environment.

Neighborhood Commercial Center:

A convenience shopping center serving residents in the immediate vicinity, typically 1,000 to 2,000 residents within a radius of one-half mile.

Neighborhood:

An area with a distinct identity owing to natural or artificial boundaries, the character of land uses in that area, and transportation patterns. A neighborhood may or may not have precise boundaries.

Noise:

Noise is often defined simply as unwanted sound, and thus is a subjective reaction to

haracteristics of a physical phenomenon. Re-
:archers for many years have grappled with the
roblem of translating objective measurements
sound into directly correlatable measures of
ublic reaction to noise. The descriptors of
ommunity noise in current use are the results
these efforts, and represent simplified, practi-
al measurement tools to gauge community
:sponse.

oise Attenuation:

Reduction of the level of a noise source
sing a substance, material, or surface, such as
arth berms and/or solid concrete walls.

oise Contour:

A line connecting points of equal noise level
s measured on the same scale. Noise levels
reater than the 60 Ldn contour (measured in
BA) require noise attenuation in residential
evelopment.

pen Space:

An area with few or no paved surfaces or
uildings, which may be primarily in its natural
ate or improved for use as a park.

pen Space Acreage:

Although open space is an integral part of
ie parks and recreation system, it must be
early distinguished from park acreage. Open
pace acreage is land or water which is essen-
ally unimproved and devoted to the preserva-
on and conservation of scenic beauty and natu-
l resources. Open space acreage will not be
lculated or credited as park acreage. (See
pen Space and Conservation Element)

rkways:

Designed as a natural linear park to con-
ct schools, parks and other trail systems
roughout the City. Parkways shall be pre-
rved in their natural state with a network of
ils for walking, cycling and horseback riding.
rkways will be classified as open space for the
eservation of natural resources. Therefore,
rkways will not be figured into or credited as
tive park. The State Department of Fish and
me (DFG) is assisting in the preservation of
e Humbug Creek/Willow Creek Parkway as an
ological reserve. Standards and policies for
is area have been developed, based upon past
tions by the City Council and the DFG.

ssive Recreation Acreage:

Passive recreation acreage is defined as land designed for low activity level. Passive recreation acreage includes, but is not limited to picnic barbecue areas, shaded turfed area, shaded pavilion areas, walking trails, and nature trails.

Planned Development:

A relatively large area in which the entire system of buildings, parks, schools, other public facilities, and roads are established by a master plan for that area.

Performance Standards:

Zoning regulations that admit uses based on a particular set of standards of operation rather than on the particular type of use. Performance standards may be established to limit noise, air pollution, emissions, odors, vibration, dust, dirt, glare, heat, fire hazards, wastes, traffic generation, and visual impact of a use.

Performance Zoning:

The performance approach to zoning regulates development mainly on the basis of four variables: open space ratio, impervious surface ratio, density, and floor area ratio. The first two standards apply to all land uses, whereas density is applicable only to residential uses. For non-residential uses, the floor area factor is utilized in place of density.

Policy:

A specific statement of principle or of guiding actions which implies clear commitment but is not mandatory. A general direction that the City will follow in order to meet its goals and objectives by undertaking specific action programs.

Project:

A proposal which involves physical changes to one or more parcels of land for which a plan showing the proposed changes has been prepared for all such parcels.

Regional Commercial Center:

A primarily retail district serving Folsom residents and residents outside the community, with one or more full-line department stores, specialty stores, and restaurants.

Residential Estate:

A home on a large parcel of land, usually one or more acres.

Riparian:

Referring to the wildlife associated with a river or stream.

Single Family Dwelling:

A freestanding unattached dwelling of woodframe construction not more than two stories and basement in height. Such a single family dwelling shall not share any common building components, including but not limited to, foundations, roofing and structural systems, with any other structure or dwelling.

Sound:

Sound is defined as any pressure variation in air that the human ear can detect. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and hence are called sound. The number of pressure variations per second is called the frequency of sound, and is expressed as cycles per second, now called Hertz (Hz) by international agreement. The speed of sound in air is approximately 770 miles per hour, or 1,130 feet/second. Knowing the speed and frequency of a sound, one may calculate its wavelength, the physical distance in air from one compression of the atmosphere to the next. An understanding of wavelength is useful in evaluating the effectiveness of physical noise and control devices such as mufflers or barriers, which depend upon either absorbing or blocking sound waves to reduce sound levels. To measure sound directly in terms of pressure would require a very large and awkard range of numbers. To avoid this, the decibel scale was devised. The decibel scale uses the hearing threshold as a point of reference, defined as 0 dB. Other sound pressures are then compared to the reference pressure, and the logarithm is taken to keep the numbers in a practical range. Use of the decibel scale allows a million-fold increase in pressure to be expressed as 120 dB.

Specific Plan:

A tool for detailed design and implementation of a defined portion of the area covered by a General Plan. A specific plan may include all detailed regulations, conditions, programs, and/or proposed legislation which may be necessary or convenient for the systematic implementation of any General Plan Element(s) or a portion thereof.

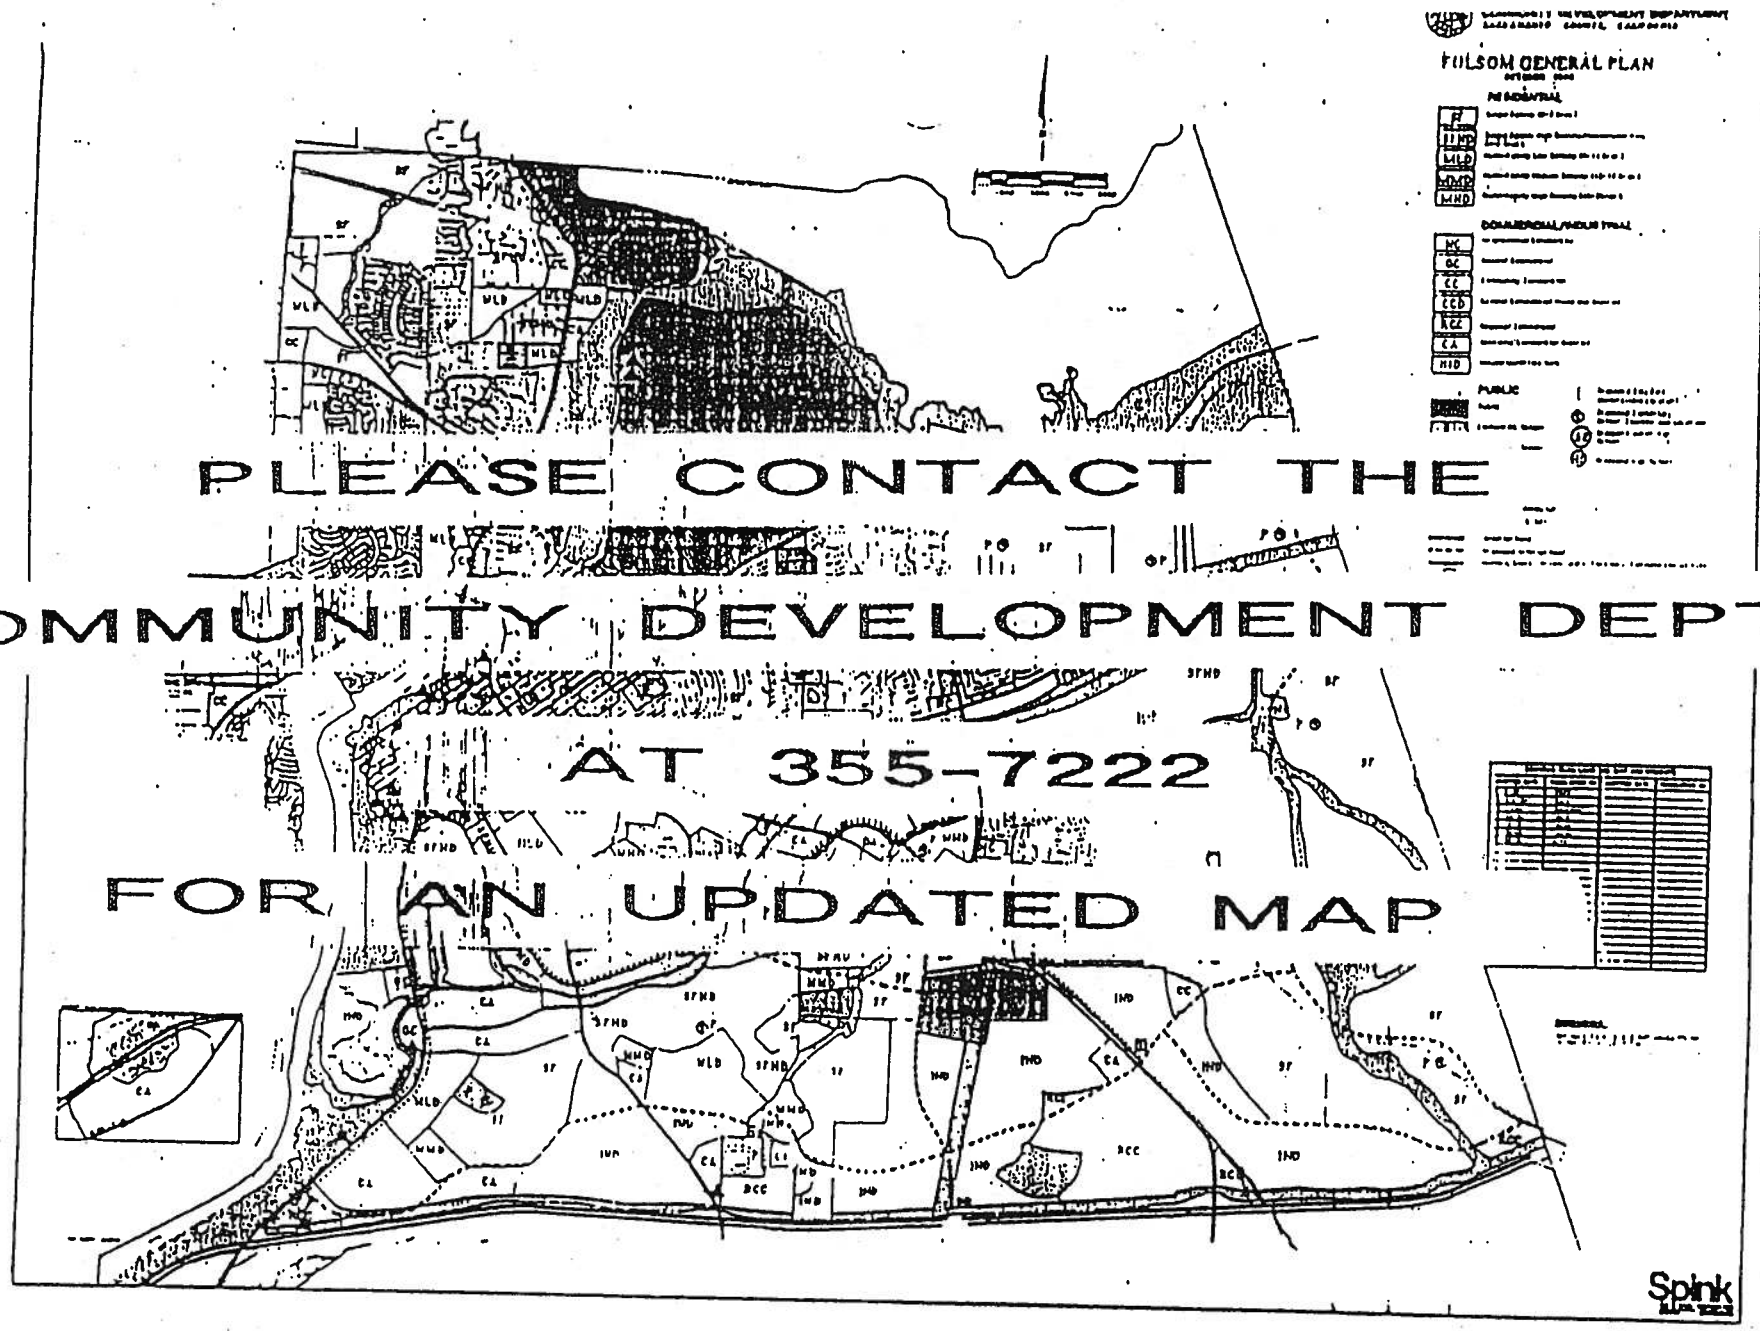
Strip Commercial:

A commercial area characterized by multiple businesses located on a long, shallow lot to maximize street frontage. Buildings are typically set back from the street to allow for parking in front.

Suburban:

A level of development in which buildings are mostly one or two stories and residential neighborhoods are dominated by single family homes and garden apartments.

Through-Traffic:



Denoting motor vehicles whose destination is beyond the immediate vicinity of the road the vehicle is on.

Urban:

In the context of development, describing projects which contain curbs, gutters, sidewalks, storm drains, underground sewer lines, paved roads, and other public improvements.

Zero Lot Line:

A type of development in which one wall of a house coincides with one of the boundaries of the parcel on which it is located.

TITLE(S)

Stormwater Quality Treatment Facility Access and Maintenance Agreement Between the City of Folsom and _____[Legal Name of Property Owner].

STORMWATER QUALITY TREATMENT FACILITY
ACCESS AND MAINTENANCE AGREEMENT

This Agreement is entered into this _____ day of _____ 2008, by and between the City of Folsom, a Municipal Corporation of the State of California ("City"), and _____[insert Legal Name of Property Owner] ("Owner").

RECITALS

The following Recitals are hereby incorporated and made part of this Agreement:

WHEREAS, Owner is developing real property within the City, known as ("Project"), located at_____, Folsom, California, further described by APN No (s). ____and depicted in Exhibit "A", of which is attached hereto and incorporated herein by reference (the "property" or "real property"); and

WHEREAS, Owner is the owner of said real property described hereinabove; and

WHEREAS, the City is required by NPDES Permit CAS052897 (Provision C.22) to require developments to provide verification of maintenance provisions for post-construction structural and treatment control facilities or devices; and

WHEREAS, the City's Stormwater Management and Discharge Control Ordinance ("Stormwater Ordinance"; Folsom Municipal Code 8.70) authorizes the City to establish development standards for post-construction treatment of runoff; and

WHEREAS, the Project is subject to certain conditions (including the requirement to include one or more post-construction stormwater quality treatment facilities to reduce pollutants in site runoff), as approved by the City on _____[insert date] (See Condition_____, Project No. PN __-___), made a part of this Agreement by reference; and

WHEREAS, Owner has chosen to install the following post-construction stormwater quality treatment facility(ies): _____("Stormwater Quality Facility(ies)"), to minimize pollutants in site runoff; and

WHEREAS, said Stormwater Quality Facilities are being installed in accordance with plans and specifications acceptable to the City; and

WHEREAS, said Stormwater Quality Facilities, with installation on private property and draining only private property are private facilities with all inspection, maintenance or replacement, therefore, being the sole responsibility of the Owner in accordance with the terms of this Agreement; and

WHEREAS, the Owner is aware that periodic and continuous inspection and maintenance is required to assure peak performance of Stormwater Quality Facilities in accordance with the maintenance procedures prepared for the Stormwater Quality Facilities, which are attached hereto as Exhibit "B" and incorporated herein; and

WHEREAS, such maintenance activity must comply with all Local, State, or Federal laws and regulations, including those pertaining to confined space and waste disposal methods, in effect at the time such maintenance occurs;

NOW THEREFORE, in consideration of the mutual promises contained herein, City and Owner hereby agree as follows:

1. **Stormwater Quality Facility(ies):** Owner and City agree to the installation of the Stormwater Quality Facility identified as _____(the "Stormwater Quality Facility" or "Facility") on the Property by Owner, all pursuant and subject to the terms and conditions of this Agreement.

2. **Access by City and Other Public Entities:** To the fullest extent allowed by law, Owner hereby provides to the City, its authorized agents and employees, the Sacramento County Environmental Management Department, the Sacramento-Yolo Mosquito and Vector Control District, and the Regional Water Quality Control Board, complete access to the Stormwater Quality Facilities and its immediate vicinity as deemed necessary by any of the foregoing entities to verify compliance with the City's Stormwater Ordinance and to protect public health and safety. These entities may enter the premises at any reasonable time to inspect the premises and operation of the Stormwater Quality Facilities, to inspect and copy records related to stormwater regulatory compliance, to collect samples and take measurements, and to perform emergency maintenance as needed. Whenever possible, these entities will provide notice prior to entry. These entities shall make every effort at all times to minimize or avoid interference with Owner's use of the Property. This right of access shall be irrevocable by the owner during the entire time this Agreement is in effect.

3. **Term:** This Agreement shall remain in full force and effect until terminated by either (1) 90 days' written notice of termination by the City to the Owner; or (2) mutual agreement of the City and the Owner. Owner shall have no right to unilaterally terminate this Agreement.

4. **Owner Responsibility to Maintain:** Owner shall maintain the Stormwater Quality Facilities pursuant to the requirements in Exhibit "B," in a manner assuring peak performance at all times, during the time the Agreement is in effect. All reasonable precautions shall be exercised by Owner and Owner's representatives in the removal and extraction of material(s) from the Stormwater Quality Facilities. Cleaning operations and disposal of the material(s) must be done in a manner consistent with all relevant Local, State and Federal laws and regulations in effect at the time of removal. As may be requested from time to time by the City, Owner shall provide the City with documentation describing maintenance dates and maintenance performed, and identifying

the material(s) removed, the quantity, and disposal destination.

5. **Failure to Maintain:** In the event Owner, or its successors or assigns, fails to accomplish the necessary maintenance contemplated by this Agreement in accordance with Exhibit "B", with not less than 72 hours prior notice to the Owner, the City is hereby authorized to cause any maintenance necessary to be done under the requirements specified in Exhibit "B". In the event of an emergency, as determined by the City, notice is not required. The City shall charge the entire cost and expense of such work to the Owner or Owner's successors or assigns, including administrative costs and interest thereon, at the rate of ten percent (10%) per annum from the date of written notice of expense until paid in full. The City is under no obligation to maintain, repair or monitor the Stormwater Quality Facilities, and this Agreement may not be construed to impose any such obligation on the City.

6. **Security:** If the Owner fails to maintain the Stormwater Quality Facilities as required to the standards specified in Exhibit "B", the City may require the Owner to post security in a form, for a time period, and in an amount sufficient and satisfactory to the City, to guarantee the performance of the obligations stated herein. Should the Owner fail to perform the obligations under this Agreement, the City may, in the case of a cash security deposit, act for the Owner using the proceeds from it, or in the case of a surety bond, require the sureties to perform the obligations of the Agreement and/or pursue any other remedy authorized by law.

7. **Agreement Binding On Successors In Interest:** This Agreement is an instrument affecting the title to or the possession of the real property. All terms, covenants and conditions herein imposed shall be binding upon and inure to the benefit of the successors in interest of Owner. Upon any sale or division of the real property, the terms of this Agreement shall apply separately to each parcel, and the Subdivider and/or Owner of each parcel shall succeed to the obligations imposed on Owner by this Agreement. As used in this Agreement, the term "Owner" shall include, respectively, not only subdivider and the present owner of the real property but also heirs, successors, executors, administrators and assigns.

8. **Recording of Agreement:** This Agreement shall be recorded in the Office of the Recorder of Sacramento County, California and shall constitute notice to all successors and assigns of the title to said Property of the obligation herein set forth.

9. **Notice to Successors:** The obligations herein undertaken shall be binding upon the heirs, successors, executors, administrators and assigns of the parties hereto. The term "Owner" shall include not only the present Owner, but also its heirs, successors, executors, administrators, and assigns. Owner shall notify any successor to title of all or part of the Property about the existence of this Agreement. Owner shall provide notice of the Agreement to any successor obtaining an interest in all or part of the Property. Owner shall provide a copy of such notice to the City at the same time such notice is provided to the successor. The failure of the owner to give notice shall not impair the effectiveness of this Agreement or its binding effect on successors.

10. **Notice:** Any notice to a party required or called for in this Agreement shall be served in

person, or by deposit in the U.S. Mail, certified or first class postage prepaid, to the address set forth below. Notice(s) shall be deemed effective upon receipt, or seventy-two (72) hours after deposit in the U.S. Mail, whichever is earlier. A party may change a notice address only by providing written notice thereof to the other party.

OWNER: _____

_____

_____

ATTENTION: _____[Insert Name and Title]

CITY: Director of Public Works
City of Folsom Public Works Department
50 Natoma Street
Folsom, CA 95630

11. **Indemnity:** To the fullest extent permitted by law, the Owner agrees to defend, indemnify and holds harmless the City, its officials, employees and its authorized agents from any and all damages, accidents, casualties, occurrences or claims which might arise or be asserted against the City and which are in any way connected with the construction, operation, presence, existence, inspection or maintenance of the Stormwater Quality Facilities by the Owner, or from any personal injury or property damage that may result from the City or other public entities entering the Property.

12. **Attorneys' Fees:** If a dispute arises between the parties concerning the performance of obligations under this Agreement or the meaning or interpretation of any provision of it, the prevailing party to such dispute shall be entitled to the recovery of all costs and expenses incurred by the other party, including costs and reasonable attorney and expert witness fees.

13. **General Provisions:**

a. **Entire Agreement.** The parties declare and represent that this Agreement contains the entire agreement of the parties pertaining to the subject matter hereof.

b. **Modifications.** Any changes to this Agreement whether by additions, deletions, waivers, amendments or modifications, may only be made in writing and must be signed by all parties in order to be effective.

c. **Waiver/estoppel.** No waiver by any party of any breach of any term or provision of this Agreement shall be construed to be a waiver of any proceeding, concurrent or succeeding breach of the same, or any other term or provision thereof. No waiver shall be binding unless in writing and signed by all parties to this Agreement. Failure of any party to enforce any right provided by this Agreement

shall not constitute a waiver or estoppel of said right. Any waiver by any party of any term or provision of this Agreement shall not be deemed a waiver of any other term or provision of this Agreement

d. **Execution in Counterparts.** This Agreement may be executed in counterpart copies, which together shall constitute one and the same instrument.

e. **Severability**. If any part of this Agreement is held to be illegal or unenforceable by a court of competent jurisdiction, the remainder of this Agreement shall be given effect to the fullest extent reasonably possible.

IN WITNESS THEREOF, the parties hereto have affixed their signatures as of the date first written above.

TITLE(S)

Stormwater Quality Treatment Facility Access and Maintenance Agreement Between the City of Folsom and _____[Legal Name of Property Owner].

STORMWATER QUALITY TREATMENT FACILITY
ACCESS AND MAINTENANCE AGREEMENT

This Agreement is entered into this _____ day of _____ 2008, by and between the City of Folsom, a Municipal Corporation of the State of California ("City"), and _____[insert Legal Name of Property Owner] ("Owner").

RECITALS

The following Recitals are hereby incorporated and made part of this Agreement:

WHEREAS, Owner is developing real property within the City, known as ("Project"), located at_____, Folsom, California, further described by APN No (s). ____and depicted in Exhibit "A", of which is attached hereto and incorporated herein by reference (the "property" or "real property"); and

WHEREAS, Owner is the owner of said real property described hereinabove; and

WHEREAS, the City is required by NPDES Permit CAS052897 (Provision C.22) to require developments to provide verification of maintenance provisions for post-construction structural and treatment control facilities or devices; and

WHEREAS, the City's Stormwater Management and Discharge Control Ordinance ("Stormwater Ordinance"; Folsom Municipal Code 8.70) authorizes the City to establish development standards for post-construction treatment of runoff; and

WHEREAS, the Project is subject to certain conditions (including the requirement to include one or more post-construction stormwater quality treatment facilities to reduce pollutants in site runoff), as approved by the City on _____[insert date] (See Condition_____, Project No. PN __-___), made a part of this Agreement by reference; and

WHEREAS, Owner has chosen to install the following post-construction stormwater quality treatment facility(ies): _____("Stormwater Quality Facility(ies)"), to minimize pollutants in site runoff; and

WHEREAS, said Stormwater Quality Facilities are being installed in accordance with plans and specifications acceptable to the City; and

WHEREAS, said Stormwater Quality Facilities, with installation on private property and draining only private property are private facilities with all inspection, maintenance or replacement, therefore, being the sole responsibility of the Owner in accordance with the terms of this Agreement; and

WHEREAS, the Owner is aware that periodic and continuous inspection and maintenance is required to assure peak performance of Stormwater Quality Facilities in accordance with the maintenance procedures prepared for the Stormwater Quality Facilities, which are attached hereto as Exhibit "B" and incorporated herein; and

WHEREAS, such maintenance activity must comply with all Local, State, or Federal laws and regulations, including those pertaining to confined space and waste disposal methods, in effect at the time such maintenance occurs;

NOW THEREFORE, in consideration of the mutual promises contained herein, City and Owner hereby agree as follows:

1. **Stormwater Quality Facility(ies):** Owner and City agree to the installation of the Stormwater Quality Facility identified as _____(the "Stormwater Quality Facility" or "Facility") on the Property by Owner, all pursuant and subject to the terms and conditions of this Agreement.

2. **Access by City and Other Public Entities:** To the fullest extent allowed by law, Owner hereby provides to the City, its authorized agents and employees, the Sacramento County Environmental Management Department, the Sacramento-Yolo Mosquito and Vector Control District, and the Regional Water Quality Control Board, complete access to the Stormwater Quality Facilities and its immediate vicinity as deemed necessary by any of the foregoing entities to verify compliance with the City's Stormwater Ordinance and to protect public health and safety. These entities may enter the premises at any reasonable time to inspect the premises and operation of the Stormwater Quality Facilities, to inspect and copy records related to stormwater regulatory compliance, to collect samples and take measurements, and to perform emergency maintenance as needed. Whenever possible, these entities will provide notice prior to entry. These entities shall make every effort at all times to minimize or avoid interference with Owner's use of the Property. This right of access shall be irrevocable by the owner during the entire time this Agreement is in effect.

3. **Term:** This Agreement shall remain in full force and effect until terminated by either (1) 90 days' written notice of termination by the City to the Owner; or (2) mutual agreement of the City and the Owner. Owner shall have no right to unilaterally terminate this Agreement.

4. **Owner Responsibility to Maintain:** Owner shall maintain the Stormwater Quality Facilities pursuant to the requirements in Exhibit "B," in a manner assuring peak performance at all times, during the time the Agreement is in effect. All reasonable precautions shall be exercised by Owner and Owner's representatives in the removal and extraction of material(s) from the Stormwater Quality Facilities. Cleaning operations and disposal of the material(s) must be done in a manner consistent with all relevant Local, State and Federal laws and regulations in effect at the time of removal. As may be requested from time to time by the City, Owner shall provide the City with documentation describing maintenance dates and maintenance performed, and identifying

the material(s) removed, the quantity, and disposal destination.

5. **Failure to Maintain:** In the event Owner, or its successors or assigns, fails to accomplish the necessary maintenance contemplated by this Agreement in accordance with Exhibit "B", with not less than 72 hours prior notice to the Owner, the City is hereby authorized to cause any maintenance necessary to be done under the requirements specified in Exhibit "B". In the event of an emergency, as determined by the City, notice is not required. The City shall charge the entire cost and expense of such work to the Owner or Owner's successors or assigns, including administrative costs and interest thereon, at the rate of ten percent (10%) per annum from the date of written notice of expense until paid in full. The City is under no obligation to maintain, repair or monitor the Stormwater Quality Facilities, and this Agreement may not be construed to impose any such obligation on the City.

6. **Security:** If the Owner fails to maintain the Stormwater Quality Facilities as required to the standards specified in Exhibit "B", the City may require the Owner to post security in a form, for a time period, and in an amount sufficient and satisfactory to the City, to guarantee the performance of the obligations stated herein. Should the Owner fail to perform the obligations under this Agreement, the City may, in the case of a cash security deposit, act for the Owner using the proceeds from it, or in the case of a surety bond, require the sureties to perform the obligations of the Agreement and/or pursue any other remedy authorized by law.

7. **Agreement Binding On Successors In Interest:** This Agreement is an instrument affecting the title to or the possession of the real property. All terms, covenants and conditions herein imposed shall be binding upon and inure to the benefit of the successors in interest of Owner. Upon any sale or division of the real property, the terms of this Agreement shall apply separately to each parcel, and the Subdivider and/or Owner of each parcel shall succeed to the obligations imposed on Owner by this Agreement. As used in this Agreement, the term "Owner" shall include, respectively, not only subdivider and the present owner of the real property but also heirs, successors, executors, administrators and assigns.

8. **Recording of Agreement:** This Agreement shall be recorded in the Office of the Recorder of Sacramento County, California and shall constitute notice to all successors and assigns of the title to said Property of the obligation herein set forth.

9. **Notice to Successors:** The obligations herein undertaken shall be binding upon the heirs, successors, executors, administrators and assigns of the parties hereto. The term "Owner" shall include not only the present Owner, but also its heirs, successors, executors, administrators, and assigns. Owner shall notify any successor to title of all or part of the Property about the existence of this Agreement. Owner shall provide notice of the Agreement to any successor obtaining an interest in all or part of the Property. Owner shall provide a copy of such notice to the City at the same time such notice is provided to the successor. The failure of the owner to give notice shall not impair the effectiveness of this Agreement or its binding effect on successors.

10. **Notice:** Any notice to a party required or called for in this Agreement shall be served in

person, or by deposit in the U.S. Mail, certified or first class postage prepaid, to the address set forth below. Notice(s) shall be deemed effective upon receipt, or seventy-two (72) hours after deposit in the U.S. Mail, whichever is earlier. A party may change a notice address only by providing written notice thereof to the other party.

OWNER: _____

_____

_____

ATTENTION: _____[Insert Name and Title]

CITY: Director of Public Works
City of Folsom Public Works Department
50 Natoma Street
Folsom, CA 95630

11. **Indemnity:** To the fullest extent permitted by law, the Owner agrees to defend, indemnify and holds harmless the City, its officials, employees and its authorized agents from any and all damages, accidents, casualties, occurrences or claims which might arise or be asserted against the City and which are in any way connected with the construction, operation, presence, existence, inspection or maintenance of the Stormwater Quality Facilities by the Owner, or from any personal injury or property damage that may result from the City or other public entities entering the Property.

12. **Attorneys' Fees:** If a dispute arises between the parties concerning the performance of obligations under this Agreement or the meaning or interpretation of any provision of it, the prevailing party to such dispute shall be entitled to the recovery of all costs and expenses incurred by the other party, including costs and reasonable attorney and expert witness fees.

13. **General Provisions:**

a. **Entire Agreement.** The parties declare and represent that this Agreement contains the entire agreement of the parties pertaining to the subject matter hereof.

b. **Modifications.** Any changes to this Agreement whether by additions, deletions, waivers, amendments or modifications, may only be made in writing and must be signed by all parties in order to be effective.

c. **Waiver/estoppel.** No waiver by any party of any breach of any term or provision of this Agreement shall be construed to be a waiver of any proceeding, concurrent or succeeding breach of the same, or any other term or provision thereof. No waiver shall be binding unless in writing and signed by all parties to this Agreement. Failure of any party to enforce any right provided by this Agreement

shall not constitute a waiver or estoppel of said right. Any waiver by any party of any term or provision of this Agreement shall not be deemed a waiver of any other term or provision of this Agreement

d. **Execution in Counterparts.** This Agreement may be executed in counterpart copies, which together shall constitute one and the same instrument.

e. **Severability**. If any part of this Agreement is held to be illegal or unenforceable by a court of competent jurisdiction, the remainder of this Agreement shall be given effect to the fullest extent reasonably possible.

IN WITNESS THEREOF, the parties hereto have affixed their signatures as of the date first written above.

CERTIFICATION
for the
Stormwater Quality Improvement Plan
April 30, 2009

I certify under penalty of law that the Sacramento Stormwater Quality Improvement Plan (regional and Sacramento City-specific activities), dated April 30, 2009, and all associated attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted.

Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

MEMORANDUM

DATE: April 27, 2009

TO: California Regional Water Quality Control Board

FROM: Steven P. Rudolph
Galt City Attorney

RE: **City of Galt - Statement of Legal Authority**

This Statement is provided on behalf of the City of Galt pursuant to the "Waste Discharge Requirement for County of Sacramento and Cities of Citrus Heights, Elk Grove, Folsom, Galt and Sacramento Storm Water Discharges from Municipal Separate Storm Sewer Systems Sacramento County, NPDES No. CAS082597, Order No. R5-2008-0142," issued by the California Regional Water Quality Control Board Central Valley Region on September 11, 2008 (hereafter referred to as the "Order").

Order NO. R5-2008-0142

Section C.6. of the Order provides as follows:

"Each Permittee shall provide to the Regional Board a statement certified by its chief legal counsel that the Permittee has adequate legal authority to implement and enforce each of the requirements contained in 40 CFR § 122.26(d)(2)(i)(A-F) and this Order, including any modifications thereto in effect when the certified statement is provided. This statement, which shall be included in Permittees' revise SQIP, shall include the following:

a. Citation of urban runoff related ordinances adopted by the Permittee and the reasons the ordinances are enforceable;

b. Progressive enforcement policy and how it will be effectively implemented;

c. Identification of the local administrative and legal procedures available to mandate compliance with urban runoff related ordinances and therefore with the conditions of this Order.

d. Description of how these ordinances are implemented and how enforcement actions under these ordinances may be appealed; and

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions.

f. Description of the Permittee's storm water management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities.

Legal Authority

a. Urban runoff related ordinances adopted by the Permittee and the reasons the ordinances are enforceable:

The principle ordinance governing discharges to the City's municipal separate storm sewer system (MS4) is Chapter 16.10 of the Municipal Code, Storm Water Protection. In addition, the City's Grading Ordinance, Chapter 16.30 of the Municipal Cade, regulates grading projects and sets conditions for approval. Copies of these ordinances are attached as Exhibits A and B, respectively.

These ordinances were duly adopted by the Galt City Council and constitute valid municipal enactments pursuant to the City's police power. The California Constitution provides that a city "may make and enforce within its limits all local, police, sanitary, and other ordinances and regulations not in conflict with general laws." (Cal. Const. Art XI, § 7.) A general law city's police power within its own territory is subject to preemption by the State, but "otherwise is as broad as the police power exercisable by the legislature itself." (Birkenfield v. City of Berkley, 17 Cal. 3d. 129, 140 (1976).)

b. Progressive enforcement policy and how it will be effectively implemented:

Chapter 16.10 of the Municipal Code, Storm Water Protection, authorizes and provides City enforcement officers with a range of enforcement options, including issuing notices to clean and abate, directing the preparation of storm water pollution prevention plans, establishing best management practices for specific properties, developing compliance schedules, issuing cease and desist orders, undertaking the abatement of discharges, or pursuing civil or criminal lawsuits. Additionally, City enforcement officers may impose administrative penalties pursuant to Chapter 21.01 of the Municipal Code, Violations, Penalties and Enforcement, and Chapter 21.02 of the Municipal Code, Administrative Citations. Copies of these ordinances are attached as Exhibits C and D, respectively.

City enforcement officers will assess any violations of urban runoff regulations, and will utilize the enforcement mechanism most suited to the situation. Repeat violators will be subject to increasing administrative fines in accordance with Chapter 21.02, and the City will seek court-issued injunctions.

c. Identification of the local administrative and legal procedures available to mandate compliance with urban runoff related ordinances and therefore with the conditions of this Order:

The Galt Municipal Code sets forth a variety of mechanisms that can be utilized by the City to ensure compliance with storm water related ordinances. The Storm Water Protection ordinance provides that persons violating the ordinance are subject to monetary penalties, charges and cleanup costs, judgments and associated costs, and costs of containment, treatment or disposal necessary to abate adverse impacts on water quality. (Section 16.10.060.) Administrative penalties are set forth in Chapters 21.01 and 21.02 of the Municipal Code. In addition, the City's enforcement officer may issue cease and desist orders, order abatement of any discharge, undertake to abate the discharge in emergency circumstances, and arrest or cite any person violating the ordinance for committing a misdemeanor. (Section 16.10.108.)

In addition, the City has the authority to inspect property, take samples and require any person to conduct monitoring and submit the results to the City. (Section 16.10.150.) The City may also bring a civil action against violators for, among other things, injunctive relief, cost recovery and civil penalties of up to $25,000 per day. (Section 16.10.200.)

The Grading Ordinance includes similar enforcement provisions. (See Section 16.30.240.)

d. How the ordinances are implemented and how enforcement actions under these ordinances may be appealed:

The storm water protection ordinances are implemented by the Director to Public Works, or his or her designee, and authorized enforcement officers, defined as the Director, the code enforcement officer, and the building official and their designees. (Section 16.10.180; Section 16.10.030.) The ordinance sets forth the enforcement mechanisms the enforcement officer may use, including compliance schedules, cease and desist orders, abatement order, criminal citations and declaration of public nuisance. (Section 16.10.180.) Any person served with any of these administrative orders may appeal by providing to the City Manager or his or her designee, a written request for hearing within seven days of the effective date of service of the notice. (Section 16.10.190.) The City Manager shall set a date for hearing before a hearing officer, and notify the party requesting the hearing in writing of the time, date and place for hearing at least 10 calendar days before the hearing. Procedures for conduct of the hearing are set forth in the Code (Section 16.10.190(C).) The hearing officer's decision must be in writing, and can be appealed pursuant to Government Code Section 53069.4. (Section 16.10.190(F)-(G).)

The Grading Ordinance is implemented by the Director of Public Works and the Building Official. The ordinance requires written notice to violators and provides that a person served with a notice may request a hearing. (Section 16.30.240(D)-(F).) The City Manager shall set a date for hearing before a hearing officer, and notify the party requesting the hearing in writing of the time, date and place for hearing at least 10 calendar days before the hearing. Procedures for conduct of the hearing are set forth in the Code. (Section 16.30.240(F).) The hearing officer's decision must be in writing, and can be appealed pursuant to Government Code Section 53069.4 (Section 16.30.240(F) –(G).)

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions:

The City's administrative enforcement powers under the Storm Water Protection ordinance are described in Section 16.10.180. As noted above, these powers include the issuance of various administrative order and notices, including compliance schedules, cease and desist orders, abatement orders, criminal citations and declaration of public nuisance. The Code also authorizes the filing of a civil action to enforce the ordinance and provides that the City may seek, among other remedies, injunctive relief. (Section 16.10.200.)

The City has similar authority under its Grading Ordinance. (Section 16.30.240.) The powers include the issuance of stop work notices, denial of future grading permits, and the abatement of nuisance conditions. (Section 16.30.090; Section 16.30.230.)

Further administrative enforcement authority is described in Chapters 21.01 and 21.02, as discussed under paragraph b, above.

f. Description of the Permittee's storm water management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities:

The Director of Public Works has primary responsibility for the development, implementation and enforcement of the various components of the urban runoff program. When other city officials, such as code enforcement officers, become aware of illicit discharges or other violations of the storm water regulations, they communicate this information to the Department of Public Works, who will undertake corrective action.

Additional Legal Authority / Clarification of Legal Authority

The City's authority under its ordinances is quite broad, and sufficient to address the pollutant sources set forth in the Order. To the extent that any activities become a cause for concern, and are not explicitly addressed in the City ordinances, the City has the ability to amend such ordinances as necessary.

Section 16.10.010 Title.

This Chapter shall be known as the storm water protection ordinance of the city of Galt, and shall be referred to herein as the "storm water protection ordinance."
(2002-05, Added, 07/02/2002)

Section 16.10.020 Purpose.

A. The intent of this Chapter is to protect and enhance the water quality of the city's watercourses, water bodies, and wetlands pursuant to, and consistent with, the Federal Water Pollution Control Act (Clean Water Act, 33 USC section 1251 et seq.), Porter-Cologne Water Quality Control Act (California Water Code section 13000 et seq.) and National Pollutant Discharge Elimination System (NPDES) permit no. CA0082597 issued by the California Regional Water Quality Control Board, as such permit is amended and/or renewed.

B. The purpose of this Chapter is to ensure, protect, and promote the health, safety, general welfare, and protection of property for city of Galt citizens by:

1. Regulating non-storm water discharges to the city storm drain system;

2. Controlling the discharge to city storm drain systems from spills, dumping, or disposal of materials other than storm water;

3. Reducing pollutants in storm water discharges from the city storm drain system to the maximum extent practicable;

4. Minimizing damage to surrounding properties and public rights-of-way, the degradation of the water quality of watercourses, and the disruption of natural or city authorized drainage flows caused by the activities of clearing and grubbing, grading, filling, and excavating of land, and sediment and pollutant runoff from other construction related activities, and to comply with the provisions of the city's npdes permit. Significant grading activities are further regulated in Chapter 16.30, grading ordinance.
(2002-05, Added, 07/02/2002)

Section 16.10.030 Definitions.

The following words and phrases when used in this Chapter shall be defined herein. Words and phrases used in this Chapter and not otherwise defined shall be interpreted as defined in the regulations of the United States Environmental Protection Agency to implement the provisions of the Federal Clean Water Act, and as defined by the State Water Resources Control Board to implement the Porter-Cologne Act in the state water code.

Authorized enforcement officer: shall include the city of Galt director of public works or his/her designee, code enforcement officer, and building official or his/her designee.

Best management practice (bmps): means schedules of activities, prohibitions of practices, general good housekeeping practices, maintenance procedures, educational programs, and other management practices to prevent or reduce the discharge of pollutants directly or indirectly to water of the united states or groundwater.

City: means the city of Galt.

City standards: means the city improvement standards, city standard construction specifications, city erosion and sediment control standards, and other standards included in applicable city ordinances, regulations and manuals, as amended from time to time and adopted by the city.

Civil engineer: means a professional engineer in the branch of civil engineering holding a valid certificate of registration issued by the state of California.

Council: means the city council of the city of Galt.

Director: means the city of Galt director of public works or his/her designee.

Discharge: means any release, spill, leak, pumping, flow, escape, dumping, or disposal of any gas, liquid, semi-solid, or solid substance.

Erosion control measures: means seeding, mulching, vegetative buffer strips, sod, plastic covering, burlap covering, watering, and other measures, which control the movement of the ground surface or soil.

National pollutant discharge elimination system (NPDES) permit: shall mean a discharge permit issued by the State Regional Water Quality Control Board, in compliance with section 402(p) of the Federal Clean Water Act.

Noncommercial vehicle washing: means the washing and rinsing of passenger vehicles on private property in which no commercial enterprise is being conducted in the washing of those vehicles.

Non-storm water discharge: means any discharge to the storm drain system that is not entirely composed of storm water.

Person: means any natural person, firm, association, club, organization, corporation, partnership, business trust, company or other entity, which is recognized by law as the subject of rights or duties.

Pollutant: means those pollutants defined in section 502 of the Federal Clean Water act (33 USC), or incorporated into California water code section 13373. Pollutants include, but are not limited to anything, which causes the deterioration of water quality such that it impairs subsequent and/or competing uses of the water. Pollutants include paints, oil and other petroleum hydrocarbons, soil, rubbish, trash, garbage, debris, refuse, waste, fecal coliform, fecal streptococcus, enteroccus, metals (such as cadmium, lead, zinc, copper, silver, nickel, chromium), nonmetals (such as phosphorus and arsenic), hazardous wastes, chemicals, fresh concrete, yard waste from commercial landscaping operations, animal wastes, materials that result from the process of constructing a building or structure, noxious or offensive matter of any kind. Pollutants also include hazardous materials, hazardous wastes, and any material that the enforcement agency has a reasonable basis for believing would be harmful to the environment if it were released into the municipal storm water system. Pollutant also means any contaminant, which can degrade the quality of the receiving waters by altering ph, total suspended or settleable solids, biochemical oxygen demand, chemical oxygen demand, nutrients, or temperature.

Sediment: means soil or earth material deposited by water.

Sediment control measures: means dikes, sediment detention traps, sediment detention basins, filters, fences, barriers, swales, berms, drains, check dams, and other measures which control sediment.

Storm drain system: means a conveyance or system of conveyances owned or operated by the city designed or used to convey storm water to waters of the united states. Storm drain systems include, but are not limited to, rockwells, roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, manmade channels or storm drains.

Storm water: means water that originates from atmospheric moisture (rainfall, hail, snow or snow melt) and that falls onto land, water or other surfaces.

(2002-05, added, 07/02/2002)

Section 16.10.040 Consistency.

This Chapter shall be construed to assure consistency with the requirements of the Federal Clean Water Act and acts amendatory thereof or supplementary thereto, applicable implementing regulations, and any existing or future municipal NPDES permits and any amendments, revisions or reissuance thereof. In the event of any conflict between this Chapter and any federal or state law, regulation, or permit, that requirement which establishes the higher standard shall govern. To the extent permitted by law, nothing in this Chapter shall preclude enforcement of any other applicable law, regulation, order, or permit.

(2002-05, added, 07/02/2002)

Section 16.10.050 Ultimate responsibility of the discharger.

The standards set forth herein and promulgated pursuant to this Chapter are minimum standards; therefore, this Chapter does not intend nor imply that compliance by any person will ensure that there will be no contamination, pollution, or unauthorized discharge of pollutants into the water of the united states caused by said person. This Chapter shall not create liability on the part of the city or any agents or employee thereof, for any damages, claims, or liabilities that result from any discharger's reliance on this chapter or any administrative decision, lawfully made hereunder. (2002-05, added, 07/02/2002)

Section 16.10.060 Liability.

In the event that any person does not comply with the provisions of this Chapter and wastes or pollutants are discharged to the city's storm drain system that causes or threatens to cause an adverse impact on the water quality or a receiving stream or the groundwater, that person shall be liable for any or all of the following:

A. Any and all monetary penalties, charges, fees, cleanup costs, and other costs that may be imposed on the city by state or federal regulatory agencies as a result of threatened or actual violation(s), including administrative and legal fees;

B. Any and all judgments and associated costs that may be awarded to individuals or entities as a result of threatened or actual violation(s);

C. The total costs of containment, cleanup, treatment or disposal that the director may deem necessary to abate threatened or actual adverse impact on water quality of a receiving stream or the ground water, including consulting and administrative fees.

(2002-05, added, 07/02/2002)

Section 16.10.070 Prohibited activities.

A. Discharge of pollutants (illicit discharge). A non-storm water discharge to the city storm drain system is prohibited. All discharges of material other than storm water must be in compliance with a NPDES permit issued for the discharge.

B. Discharge in violation of permit. Any discharge that would result in or contribute to a violation of the city's existing or future municipal NPDES permit and any amendment, revision or reissuance thereof, either separately considered or when combined with other discharges, is a violation of this Chapter and is prohibited. Liability for any such discharge shall be the responsibility of the person(s) causing or responsible for the discharge, as well as the parcel owner on whose property the discharge occurs, who shall be strictly liable for its consequences, and such persons and/or owners shall defend, indemnify and hold harmless the city in any administrative or judicial enforcement action relating to such discharge.

C. Illicit connections. It is a violation of this Chapter to establish, use, maintain, or continue illicit connections to the city storm drain system, and to commence or continue any illicit discharge to the city storm drain system. This prohibition against illicit connections is retroactive and applies to unpermitted connections made in the past, regardless of whether permissible under the law or practices applicable or prevailing at the time of the connection.

D. Roof run-off. New construction, renovations, and alterations of domestic roof drain leaders may not be directly connected to sidewalks and gutters. Any practical method must be administered to discharge roof run-off into landscaped areas.

E. Private drains. Storm water or surface water, which is causing flooding on private property served by an on-site storm drainage system, may not be discharged to the city's storm drainage facilities.

F. Swimming pool water. Discharge of water from a swimming pool or fountain filter into an open channel is prohibited. Discharge of water, if dechlorinated, from a swimming pool into the street drain inlet or underground storm drainage facilities is allowed only with the written permission of the director. Such discharge may not cause flooding of the street. Water from pumping out a swimming pool or fountain filter backwash may be discharged into the sanitary sewer.

G. Food-related wastes. Food-related waste such as fats, oils, grease and fish processing water may not be discharged to the storm drain system. Restaurant kitchen mat and trash bin

waste water may be discharged to the sanitary sewer.
(Ord. 2003-11, Amended, 10/07/2003; 2002-05, added, 07/02/2002)

Section 16.10.080 Exceptions to discharge prohibition.

The following discharges are exempt from the prohibition set forth in section 16.10.070 above:

A. Any discharge or connection regulated under a NPDES permit issued to the discharger provided that the discharger is in compliance with all requirements of the permit and all other applicable laws and regulations;

B. Discharges from the following activities which do not cause or contribute to the violation of any standard:

1. Water line flushing and other discharges from potable water sources,

2. landscape irrigation and lawn watering (except as prohibited under the water conservation ordinance),

3. rising ground waters or springs,

4. passive foundation and footing drains,

5. water from crawl space pumps and basement pumps,

6. air conditioning condensate,

7. noncommercial vehicle washing,

8. natural flows from riparian habitats and wetlands,

9. lows from fire suppression activities, including fire hydrant flows,

10. diverted stream flows,

11. untreated ground water,

12. waters from street cleaning equipment during street cleaning operations.

C. Any discharge which an authorized enforcement officer, the local health officer, or the Regional Water Quality Control Board determines, in writing, is necessary for the protection of the public health and safety, and the environment.

D. Any discharge caused by flooding or other natural disaster, which could not have been reasonably foreseen or mitigated for in advance by the discharger, as determined by the authorized enforcement officer.
(2002-05, added, 07/02/2002)

Section 16.10.090 Reduction of pollutants in storm water.

Any person engaged in activities, which will or may result in pollutants entering the city storm drain system shall undertake all practicable measures to reduce such pollutants. Examples of such activities include ownership and use of facilities, which may be a source of pollutants such as parking lots, gasoline stations, industrial facilities, commercial facilities, stores, etc. The following minimal requirements shall apply:

A. Littering. No person shall throw, deposit, leave, maintain, keep or permit to be thrown, deposited or placed, any refuse, rubbish, garbage or other discarded or abandoned objects, articles or accumulations, in or upon any street, alley, sidewalk, storm drain, inlet, catch basin, conduit, or other drainage structure, business place, or upon any public or private lot of land, so that the same might be or become a pollutant, except in containers or in lawfully established dumping grounds. The occupant or tenant, or in the absence of occupant or tenant, the owner, lessee, or proprietor of any real property in the city in front of which there is a paved sidewalk shall maintain the sidewalk free of dirt or litter to the maximum extent practicable. Sweeping from the sidewalk and driveways shall not be swept, or washed, or otherwise made or allowed to go into the gutter or roadway, but shall be disposed of in receptacles maintained as required for the disposal of solid wastes.

B. Drain inlets and gutters. Owners of properties fronting a city right-of-way shall maintain the drain inlets and gutters adjacent to their property free of debris, leaves, dirt, or other sediment. The owner shall remove debris, leaves, dirt, and other sediment from the drain inlets and gutters adjacent to their properties and disposed of in receptacles maintained as required for the disposal of solid wastes.

C. Animal waste. Waste from dogs, cats, and other animals shall not be washed into the street or storm drain system.

D. Bodies of water. No person shall throw or deposit litter in any fountain, pool, lake, stream, river or any other body of water within the city's jurisdiction.

E. Standards for parking lots, paved areas, and related storm water systems. Persons, owning, operating, or maintaining a paved parking, lot the paved areas of a gas station, a paved private street, alley or road, and related storm water conveyance systems shall clean those structures as frequently and thoroughly as practical in a manner that does not result in the

discharge of pollutants to the city's storm drain system.

F. Outdoor storage areas. In outdoor areas, no person shall improperly store grease, oil or other hazardous substances. In outdoor areas, no person shall improperly store motor vehicles, machine parts, or other objects in a manner that may leak grease, oil, or other hazardous substances. To prevent discharge of hazardous substances from the property, the city may require the installation of a spill containment system.

G. Banned pesticides. No person shall use, store or dispose of any state or federally banned pesticide in a manner that allows the pesticide to be washed into the street or storm drain system.

H. Mobile washing operations: Mobile washing operations may not discharge wash water to the storm drain system. Operations shall be conducted so as to contain discharge runoff for disposal to the sanitary sewer system.

(Ord. 2003-11, Amended, 10/07/2003; 2002-05, added, 07/02/2002)

Section 16.10.100 Separately npdes permitted dischargers.

A. Compliance with NPDES permits and notification of intent. Any industrial discharger, discharger associated with construction activity, or other discharger subject to a storm water NPDES permit issued by the United States Environmental Protection Agency, the State Water Resource Control Board, or the Regional Water Quality Control Board, shall provide a notice of intent to the appropriate permitting agency and comply with all requirements of such NPDES permit. Every person undertaking any activity or use of a premises which may cause or contribute to storm water pollution or contamination, illegal discharges, or non-storm water discharges shall comply with best management practices guidelines or pollution control requirements as stated in their permit and as may be reasonably established by the authorized enforcement officer or this chapter.

B. Storm water pollution prevention plan. The authorized enforcement officer may require any business or construction site, which may directly or indirectly discharge into the city storm drain system that is engaged in activities which may result in pollutant discharges, to develop and implement a storm water pollution prevention plan, which must include an employee training program and any other BMPS, programs, or process descriptions which the authorized enforcement officer deems necessary to prevent a non-storm water discharge. Business activities which may require a storm water pollution prevention plan include, but are not limited to construction maintenance, storage, manufacturing, assembly, equipment operations, vehicle loading or fueling, or cleanup procedures which are carried out partially or wholly out of doors.

(2002-05, added, 07/02/2002)

Section 16.10.110 Construction activities.

A. Best management practices for construction activities. All construction contractors performing work in the city shall conform to adopted city standards. In addition to any adopted BMPS or other requirements for construction projects adopted by the city, the following requirements shall apply to all projects undergoing construction in the city. The requirements set forth below shall apply at the time of demolition of an existing structure or commencement of construction and until the project receives final occupancy/clearance from the city.

1. Sediment, construction waste and other pollutants from construction sites and parking areas, including runoff from equipment at construction sites, shall be retained on the site to the maximum extent practicable.

2. Any sediment or other materials that are not retained on the site shall be removed the same day as the projects are completed. Where determined necessary by the director, a temporary sediment barrier shall be installed.

3. On an emergency basis only, plastic covering may be utilized to prevent erosion of an otherwise unprotected area, along with runoff devices to intercept and safely convey the runoff.

4. Excavated soil or stockpiled base materials shall be located on the site in a manner that minimizes the amount of sediments running into the street or adjoining properties. Soil and materials piles shall be covered until the soil is either used or removed. Soil and materials shall not be placed on paved streets or sidewalks without specific permission of the director.

5. No washing of construction or other industrial vehicles shall be allowed on a construction site or property adjacent to a construction site.

6. Drainage controls shall be utilized as needed, depending on the extent of the proposed grading and topography of the site, including but not limited to the following: detention ponds, sediment ponds, infiltration pits, dikes, filter berms, ditches, down drains, chutes, or flumes.

B. Notification to the director shall be required within twenty-four (24) hours following the failure of authorized measures to prevent erosion or sediment from leaving the construction site; the deposit of debris or material on adjoining property or public rights-of-ways, or; the interference with any existing watercourses or drainage facilities.

(2002-05, added, 07/02/2002)

Section 16.10.120 New development and redevelopment.

The city may establish controls on the volume and rate of storm water runoff from new developments and redevelopments as may be appropriate to minimize the discharge and transport of pollutants. To minimize the discharge and transport of pollutants, the city may require, in its discretion, new development or redevelopment projects to implement designs, which minimize storm water runoff. Acceptable methods and standards for controlling storm water runoff volumes, rates, and pollutant load may include but are not limited to the following: increasing permeable areas, directing runoff to permeable areas, maximizing storm water storage for controlled release and/or reuse, and requiring the construction of sediment basins, ponds and/or other structures to reduce sediments and pollutants. Where treatment devices are installed to reduce pollutants, such treatment devices must be properly operated and maintained.

(Ord. 2003-11, Amended, 10/07/2003; 2002-05, added, 07/02/2002)

Section 16.10.130 Industrial discharges.

A. Coordination with hazardous materials release response plans and inventory. Any business requiring a hazardous materials release response and inventory plan under section 25500 of the California Health and Safety Code shall include in that plan provisions for compliance with this chapter, including the provisions prohibiting non-storm water discharges and illegal discharges, and requiring the release of pollutants to be reduced to the maximum extent practicable.

B. Coordination with hazardous waste generator contingency plan. Any business requiring a hazardous waste generator contingency plan and emergency procedures pursuant to California Code of Regulations, TITLE 22, shall include in that plan provisions for compliance with this chapter, including the provisions prohibiting non-storm water discharges and illegal discharges, and requiring the release of pollutants to be reduced to the maximum extent possible.

C. National categorical storm water effluent limitations. All users listed in 40 CFR Sub-Chapter N shall comply with the effluent limitations guidelines as set forth therein. However, where the city has adopted effluent limitation standards more stringent than those contained in the national categorical water effluent limitations, the specific prohibitions or limits on pollutants or pollutant parameters as developed by the city shall be deemed the applicable pretreatment standards. When local limitations are more stringent than those contained in the act have been adopted, the city shall notify all affected users of the applicable reporting requirements.

(2002-05, added, 07/02/2002)

Section 16.10.140 Inspection authority.

The director may enter and inspect property for which a grading permit, building permit, or improvement plan approval has been issued to determine applicability or compliance with all applicable city ordinances and city standards. The director may also inspect any and all property on which grading, filling, clearing and grubbing or excavating activities are occurring. In addition, whenever necessary to make an inspection to enforce any of the provisions of this Chapter, or whenever an authorized enforcement officer has reasonable cause to believe that there exists in any building or upon any premises any condition which constitutes a violation of this Chapter, the agent may, enter such building or premises to inspect the same or perform any duty imposed upon the officer by this Chapter. If an owner, tenant, occupant, agent or other responsible party refuses to grant the city permission to enter or inspect, the city may seek an administrative inspection warrant pursuant to the procedures provided for in the California Code of Civil Procedure. Routine or area inspections shall be

based upon such reasonable selection processes as may be deemed necessary to carry out the objectives of this Chapter, including but not limited to random sampling and/or sampling in areas with evidence of storm water contamination, illicit discharges, discharge of non-storm water to the storm drain system, or similar factors. With the consent of the owner or occupant or pursuant to a search warrant, any authorized enforcement officer may establish on any property such devices as are necessary to conduct sampling or metering operations. During all inspections as provided herein, the authorized enforcement officer may take any samples deemed necessary to aid in the pursuit of the inquiry or in the recording of the activities onsite.
(2002-05, added, 07/02/2002)

Section 16.10.150 Monitoring, analysis and reporting authority.

Any authorized enforcement officer may request that any person engaged in any activity and/or owning or operating any facility which may cause or contribute to storm water pollution or contamination, illicit discharges, and/or discharge of non-storm water to the storm water system, undertake such monitoring activities and/or analysis and furnish such reports as the officer may specify. The burden, including costs, of these activities, analysis and reports shall bear a reasonable relationship to the need for the monitoring, analysis, and reports and the benefits to be obtained. The recipient of such request shall undertake and provide the monitoring, analysis and/or reports requested. In the event the owner or operator of a facility subject to a monitoring and/or analysis order fails to conduct required monitoring and/or analysis and furnish the required reports in the form required, the authorized enforcement officer may cause such monitoring and/or analysis to be performed and the cost, therefore, including the reasonable additional administrative costs incurred by the city shall be borne by the owner of the property and the cost thereof shall be invoiced to the owner of the property.
(2002-05, added, 07/02/2002)

Section 16.10.160 Notification of spills.

Any person owning, occupying or in charge of a premises or responsible for emergency response for a facility has a personal responsibility to train facility personnel and maintain notification procedures to assure immediate notification is provided to the city of any suspected, confirmed, or unconfirmed release of materials, pollutants or wastes creating a risk of discharge into the city storm drain system. As soon as any person owning, occupying or in charge of the premises or responsible for emergency response for a facility has knowledge of any suspected, confirmed or unconfirmed release, such person shall take all necessary steps to ensure the discovery and containment and cleanup of such release and shall immediately notify the city of the occurrence by telephoning the city public works department or police department and confirming the notification by written correspondence to the director within twenty-four (24) hours of any known or confirmed pollutant.
(2002-05, added, 07/02/2002)

Section 16.10.170 Monitoring fees.

A. Council may, from time to time, establish by resolution a schedule of storm water monitoring activities fees. These fees shall apply to persons performing activities which are required by federal law to obtain a National Pollutant Discharge Elimination System (NPDES) permit regulating the discharge of storm water and surface water from the site of an industrial or construction activity; and shall apply to persons performing any activity which the city may be required to regulate or monitor by the NPDES municipal storm water permit issued to the city. The fees shall correspond to the costs expended by the city in monitoring the discharge from such a site or activity for compliance with the conditions of any applicable NPDES permit, as well as any costs associated with damage to or degradation of city's storm drain system. Every cost, fee, charge, penalty, or other monies collected under this Chapter shall be paid to the city to be used exclusively for storm water and drainage programs.

B. If the City Council and the Sacramento County Board of Supervisors enter into an agreement for Sacramento County to monitor any provisions of this Chapter within the city, Sacramento County may directly charge fees to persons performing activities being monitored in the same manner as the City, to monitor any activity of any provision of this Chapter with respect to such agreement. Such fees shall be

established by Sacramento County and shall correspond to the costs expended by the county in monitoring the discharge from such a site or activity for compliance with the conditions of any applicable NPDES permits
(Ord. 2004-06, Amended, 08/02/2004; 2002-05, added, 07/02/2002)

Section 16.10.180 Enforcement.

A. The enforcement officer may utilize any enforcement powers authorized or provided in this code. These include, but are not limited to, the penalties as set forth in Chapter 21.01 of Title 21 and the penalties as set forth in this Chapter.

B. The enforcement officer may exercise any of the following supplemental enforcement powers as he deems necessary or advisable:

1. Notice to clean and abate. Whenever an authorized enforcement officer finds any oil, earth dirt, cans, rubbish, refuse, waste or any other material of any kind, in or upon the sidewalk abutting or adjoining any parcel of land, or upon any parcel of land or grounds, which may result in an increase in pollutants entering the city storm drain system or natural water course, he or she may give notice to remove and abate such oil, earth, dirt, cans, rubbish, refuse, waste or other material, in any manner that he or she may reasonably provide. The recipient of such notice shall undertake the activities as described in the notice. In the event the owner or operator of a facility fails to conduct the activities as described in the notice, the authorized enforcement officer may cause such required activities as described in the notice and the cost thereof shall be invoiced to the owner of the property.

2. Storm water pollution prevention plan. The director shall have the authority to establish elements of a storm water pollution prevention plan and to require any business to adopt and implement such a plan, as may be reasonably necessary to fulfill the purposes of this chapter.

3. Best management practices. The director may establish the requirements of best management practices for any premises.

4. Compliance schedule. The authorized enforcement officer may develop and implement a schedule for compliance to meet any applicable federal or state standards or regulations covering the discharge of storm water or surface water for any activity not complying with the strictest of said standards and regulations. Failure to complete the compliance schedule by any specified date shall constitute a violation of this chapter.

5. Cease and desist orders. When an authorized enforcement officer finds that a discharge has taken place or is likely to take place in violation of this chapter or, that may lead to such violation, the officer may issue an order to cease and desist such discharge, or practice, or operation likely to cause such discharge and direct that those persons not complying shall: comply with the requirement; comply with a time schedule for compliance; and/or take appropriate remedial or preventive action to prevent the violation from recurring.

6. Nuisance and Abatement. The authorized enforcement officer may order the abatement of any discharge from any source to the storm water drain system when, in the opinion of the authorized enforcement officer, the discharge causes or threatens to cause a condition which presents an imminent danger to the public health, safety, or welfare, or the environment, or a violation of a NPDES permit, and therefore is deemed a public nuisance. In emergency situations where the property owner or other responsible party is unavailable and time constraints are such that service of a notice and order to abate cannot be effected without presenting an immediate danger to the public health, safety, or welfare, or the environment, or a violation of a NPDES permit, the City may perform or cause to be performed such work as shall be necessary to abate said threat or danger pursuant to section 21.01.090. The costs of any such abatement shall be borne by the owner and shall be collectable as provided by sections 21.01.100 and 21.01.110.

7. Criminal citation. Authorized enforcement officers shall have and are hereby vested with the authority to arrest or cite any person who violates any section of this code in the manner provided by the California Penal Code for the arrest or release on citation of misdemeanor infractions as prescribed by Chapter 5, 5c, and 5d of TITLE 3, part 2 of the penal code (or as the same may be hereafter amended). Such authorized enforcement officers may issue a citation and notice to appear in the manner prescribed by Chapter 5 of TITLE 3, part 2 of the penal code, including section 853.6 (or as the same may hereafter be amended). It is the intent of the city council that the immunities prescribed in section 836.5 of the penal code be

applicable to public officers or employees acting the course and scope of employment pursuant to this chapter.

8. In addition to the actions provided herein, any condition caused or permitted to exist in violation of any of the provisions of this Chapter is a threat to the public health, safety and welfare, is declared and deemed a public nuisance.

C. Notices and Orders

1. Notice of Non-Compliance

a. The authorized enforcement officer may issue to the owner, manager, operator, or occupant of any premises, or to any person responsible for any violation of this Title, a Notice of Non-Compliance.

b. The Notice shall identify the provisions of this Title that have been violated, the corrective actions required to achieve compliance, required date of completion of corrective actions to be in compliance, and the right to appeal the matter.

2. Administrative Enforcement Orders

a. If the Director determines that a person has committed, or is committing, a violation of any law, regulation, permit, information request, order, variance, or other requirement that the Director is authorized to enforce or implement pursuant to this Chapter, the Administrator may issue an Administrative Enforcement Order requiring that the violation be corrected and may impose an Administrative Civil Penalty as specified in Section 16.10.20 of this Chapter.

b. The Director shall adopt written procedures for issuing an Administrative Enforcement Order and imposing an Administrative Civil Penalty. In establishing a penalty amount and ordering that the violation be corrected pursuant to this section, the Director shall take into consideration such factors as the nature, circumstances, extent, and gravity of the violation, the violator's past and present efforts to prevent, abate, or clean up conditions posing a threat to the public health or safety or the environment.

c. The Administrative Enforcement Order shall specify a date by which the discharger must be in compliance with this Chapter. The Director may extend the compliance date when good cause exists for such an extension.

d. The Administrative Enforcement Order may state that the City may recover any costs incurred by the City as a result of the violation and may include a demand for recovering costs incurred.

e. An Administrative Enforcement Order may be issued in the same document or separately from any Notice of Non-Compliance and/or any Cease and Desist Order.

f. The Administrative Enforcement Order shall state that the recipient has a right to appeal as set forth in Section 16.10.190 of this Chapter.

3. Cease and Desist Orders

a. The Director may issue a Cease and Desist Order. The Cease and Desist Order may be included in a Notice of Non-Compliance and/or in an Administrative Enforcement Order. A Cease and Desist Order may direct the owner or occupant of any premises, or any other person responsible for any violation of this Chapter, to take any of the following action:

1. Immediately discontinue any prohibited discharge to the City storm water conveyance system.

2. Immediately discontinue any other violation of this Chapter.

3. Clean up the area affected by the violation.

b. The Director may direct by a Cease and Desist Order that any person immediately cease any activity which may lead to a violation of Receiving Water Limitations.

D. If the City Council and the Sacramento County Board of Supervisors enter into an agreement for Sacramento County to administer and enforce any provisions of this Chapter within the City, any administrative or civil enforcement by Sacramento County of any provision of this Chapter with respect to such agreement shall be governed by and conducted pursuant to Chapter 15.12 of the Sacramento County code. Within the terms of any such agreement, Sacramento County and its authorized official(s) and employee(s) shall be authorized to take any action with respect to facilities located within the City, in accordance with the provisions of this Chapter, including the levying and collection of applicable

penalties, fees, and other payments.
(Ord. 2006-07, Amended, 06/06/2006; Ord. 2004-06, Repealed and Replaced, 08/02/2004; 2002-05, added, 07/02/2002)

Section 16.10.190 Appeal.

Any person served with an administrative citation, administrative notice and order, notice to clean and abate, cease and desist order, compliance schedule or who is aggrieved by a decision of the Director or other authorized enforcement officer, may appeal by filing a written request for a hearing with the City Clerk within seven (7) days of the effective date of service of the notice. The hearing shall be set and conducted pursuant to section 21.03.060. The decision of the hearing officer is final. Any person aggrieved by a decision of the hearing officer may obtain judicial review pursuant to section 21.03.070.
(Ord. 2006-07, Amended, 06/06/2006; Ord. 2004-06, Amended, 08/02/2004; 2002-05, added, 07/02/2002)

Section 16.10.200 Civil violation.

In addition to any other remedies provided in this Chapter, any violation of the provisions of this Chapter may be enforced by civil action brought by the city pursuant to sections 21.01.060 and 21.01.080. In any such action, the City may seek any or all of the following remedies:

A. Injunctive relief;

B. Assessment against the violator for the costs of any investigation, inspection, or monitoring survey which led to the discovery of the violation, and for the reasonable costs incurred in preparing and prosecuting the legal action as a result of violations of this chapter;

C. Recovery for costs incurred in removing, correcting, terminating, or preventing adverse effects resulting or likely to result from the violation;

D. Compensatory damages for loss or destruction to water quality, wildlife, fish, and aquatic life; and/or

E. Such other relief as the court may authorize.

Any person who violates any provision of this Chapter, who discharges or causes pollution, or who violates any cease and desist order, state or national law or regulation, or any other order of the director shall be civilly liable to the city in a sum not to exceed twenty-five thousand dollars ($25,000.00) per violation per day. In addition, the city may require the user to pay any excess costs to the system for supplementary treatment systems, facilities, or operations needed as a result of allowing the entry of such discharges into the storm water system. The city may petition the Sacramento County Superior Court to impose, assess, and collect any sums levied pursuant to this chapter and sections 54725, 54739, and 54740, et seq. of the California Government Code. In determining the amount to be recovered, the court shall take into consideration all relevant circumstances including, but not limited to, the extent of the harm caused by the violation, the economic benefit derived through any noncompliance, the nature and persistence of the violation, the length of time over which the violation occurs, and corrective action, if any, attempted or taken by the discharger. Notwithstanding any other provision of law, all civil penalties imposed by the court pursuant to this paragraph shall be distributed to the city. Remedies imposed pursuant to this section are in addition to and do not supersede or limit any and all other administrative, civil, or criminal remedies available at law.
(Ord. 2006-07, Amended, 06/06/2006; 2002-05, added, 07/02/2002)

Section 16.10.210 Criminal violations.

It shall be unlawful for any person to violate any provision or fail to comply with any of the requirements of this Chapter. A violation of any of the provisions or failing to comply with any of the mandatory requirements of this Chapter shall constitute a misdemeanor. Causing, permitting, aiding, abetting or concealing a violation of any provision of this Chapter is unlawful and shall also constitute a misdemeanor. Notwithstanding any other provision with this code, any such violation constituting a misdemeanor under this Chapter may, in the discretion of the City Attorney, be charged and prosecuted as an infraction. Misdemeanors shall be punishable as provided by Section 21.01.050. Infractions shall be punishable as provided by section 21.01.040. Each person shall be charged with a separate offense for each and every day, during which

any violation of any provision of this code is committed, continued or permitted by such person and shall, upon conviction, be punished accordingly.
(Ord. 2006-07, Amended, 06/06/2006; 2002-05, added, 07/02/2002)

Section 16.10.220 Remedies not exclusive.

A. Remedies under this Chapter are in addition to and do not supersede or limit any and all other remedies, civil or criminal. The remedies provided herein shall be cumulative and not exclusive. In addition to any penalty, sanction, fine or imprisonment, any person violating the provisions of this Chapter shall be required to pay any and all expenses of enforcement including those costs necessary to monitor, inspect, remove and/or correct the violation. In addition to all remedies herein contained, the city may pursue all reasonable and legal means in collecting those sums authorized and due.

B. If the costs of enforcement and any penalties assessed are not paid within thirty (30) days of effective date of service of the notice or order demanding payment, such costs may be assessed against the parcel of land pursuant to section 21.01.110, and shall be transmitted to the tax collector for collection and shall be subject to the same penalties and the same procedures and sale in case of delinquency as provided for ad valorem taxes.
(Ord. 2006-07, Amended, 06/06/2006; Ord. 2004-06, Amended, 08/02/2004; 2002-05, added, 07/02/2002)

16.30.230 Abatement.
16.30.240 Penalty and cost of enforcement.

Section 16.30.010 Title.

This Chapter shall be known as the grading ordinance of the city of Galt, and shall be referred to herein as the “grading ordinance.”
(2002-06, Added, 07/02/2002)

Section 16.30.020 Purpose.

The grading ordinance is enacted for the purpose of regulating grading on property within the city limits of the city to safeguard life, limb, health, property and the public welfare; to avoid pollution of watercourses with nutrients, sediments, or other materials generated or caused by surface water runoff; to comply with the city's National Pollution Discharge Elimination System (NPDES) permit no. CA0082597, issued by the California Regional Water Quality Control Board and to ensure that the intended use of a graded site within the city limits is consistent with the city general plan, any specific plans adopted thereto and all applicable city ordinances and regulations. The grading ordinance is intended to control all aspects of grading operations within the city limits of the city.
(2002-06, Added, 07/02/2002)

Section 16.30.030 Definitions.

Unless the particular provision or the context otherwise requires, wherever the following terms are used in the grading ordinance, they shall have the meaning ascribed to them in this section.

Best management practices: Any program, technology, technique, process, siting criteria, operating method, measure or device which controls, prevents, removes or reduces pollution, erosion, and sediment transport.

Building official: The building official for the city of Galt who has responsibility for the application of california building code within the city.

City council: City council of the city of Galt.

City standards: A compilation of administrative procedures, technical standards, and design specifications adopted by the city of Galt.

Director: Director of the public works department of the city of Galt, or his or her authorized designees.

Erosion and sediment control plan (ESC plan): Consists of a set of best management practices or equivalent measures designed to control surface runoff and erosion, retain sediment on a particular site, and prevent pollution of site runoff during the period in which preconstruction and construction related grading and/or soil storage occur, and before final improvements or permanent structures are completed.

Person: Includes any individual, firm, partnership, association, corporation, public district, public agency, public utility, trust,

estate, other political subdivision or any other entity.
(2002-06, Added, 07/02/2002)

Section 16.30.040 Grading approval required.

Except for the specific exemptions listed hereinafter, no person shall do or permit to be done any grading on any site in the city without first obtaining approval of such grading from the director or the building official in accordance with the provisions of the grading ordinance.
(2002-06, Added, 07/02/2002)

Section 16.30.050 Exemptions.

The following grading may be done without obtaining grading approval unless grading approval is required in mitigation monitoring agreements or other conditions of project approval. Exemption from the grading approval requirement shall not be deemed as permission to violate any other provision of this chapter.

A. Minor construction projects, which meet all of the following requirements:

1. The volume of material graded is less than fifty (50) cubic yards,

2. The depth of cuts and fills is less than two feet,

3. Any drainage way is not blocked or obstructed and its storm water carrying capacities are not modified,

4. Slopes are less than ten percent and are not left in an unstable or erodible condition;

B. Single family residential lots less than one-half acre that are not part of a larger common plan and residential infill projects less than one-half acre which also meet the requirements of subsection (A) of this section;

C. Grading necessary for agricultural operations unless the failure of any cut or fill created by such grading could endanger any structure intended for human or animal occupancy or any public road, or could obstruct any watercourse or drainage way;

D. Exploratory excavations of less than three hundred fifty (350) cubic yards under the supervision of a geotechnical engineer;

E. Routine cemetery excavations and fills;

F. Performance of emergency work necessary to protect life or property when an urgent necessity therefore arises. The person performing such emergency work shall notify the director promptly of the problem and work required;

G. Refuse disposal sites controlled by TITLE 23 of the California Code of Regulations;

H. The repair and maintenance of levees for river and local drainage control performed by a governmental agency.
(2002-06, Added, 07/02/2002)

Section 16.30.060 Grading approval.

Grading approval for grading done on a single parcel in conjunction with imminent construction of a building or other structure shall be granted by the building official in accordance with California Building Code and is not further addressed in this ordinance with the exception that section 16.30.150 applies to all grading permits. Grading approval for multiple parcels and single parcels where grading is requested in the absence of construction of buildings or structures, may be issued by the director in connection with the issuance of an encroachment permit, or the approval of improvement plans; or where commencement of grading is desired prior to such issuance or approval, or is performed separately, through the issuance of a separate grading permit. If a building permit, improvement plan or encroachment permit is approved in accordance with other sections of city code, and then a separate grading permit shall not be required. Approval of the building permit, improvement plans, or encroachment permit, constitutes approval of the grading work intended.
(2002-06, Added, 07/02/2002)

Section 16.30.070 Conditions of grading approval.

A. No grading shall be approved unless the project conforms with the city's general plan, any adopted specific or community plans, and applicable city ordinances, including the zoning ordinance and the subdivision ordinance.

B. Where the California Environmental Quality Act (CEQA) requires the preparation and approval of environmental documents concerning a project which will result in grading for which a grading permit is required under this Chapter, no grading shall be approved until all CEQA requirements have been met, including

but not limited to mitigation measures relating to protection of threatened and endangered species under applicable federal and state endangered species laws.

C. Where a proposed grading project requires the filing of a tentative map or the intended use requires approval of a discretionary zoning permit or variance, grading may also require approval from the city planning and building departments.

D. Work shall be performed in accordance with the provisions of this grading ordinance and the applicable criteria set forth in the city standards.

E. Grading approval shall be limited to work shown on the grading plans as approved by the director. The director may impose any condition deemed necessary to protect the health, safety, and welfare of the public, to prevent the creation of a hazard to public or private property, and/or to assure proper completion of the grading.
(2002-06, Added, 07/02/2002)

Section 16.30.080 Liability.

The issuance of a permit hereunder shall not be construed as imposing any liability upon the city or upon any of its officers, employees, or agents by reason of damage or injury to persons or property resulting from any activity, repair, improvement, excavation or obstruction authorized by the permit. Neither issuance of grading approval under the provisions of the grading ordinance nor compliance with the provisions hereof or with any conditions imposed in a permit issued hereunder shall relieve any person from responsibility for damage to any person or property.
(2002-06, Added, 07/02/2002)

Section 16.30.090 Compliance with permits and standards.

The issuance of grading approval shall not be construed as an approval of any action or condition constituting a violation of the provisions of the grading ordinance or of any other applicable laws, ordinances, rules or regulations. Any act done under the authority of a written permit issued pursuant to the provisions of this Chapter shall be done in accordance with the terms and conditions of such permit. All federal and state laws and codes, and the construction standards of the city will be complied with during the execution of work under the permit. All work shall be done and must be constructed in accordance with the standards adopted by the city. The failure of any permittee or person to obey the provisions of this Chapter or the lawful directions of the director of public works or his or her designated representative relative to grading work shall be deemed to be sufficient cause to refuse the request of the person for further permits for work of such character or to cause the stoppage of any work and progress by the director of public works by written notice until the permittee is in full compliance with the terms of this Chapter.
(2002-06, Added, 07/02/2002)

Section 16.30.100 Water obstruction.

No person shall do or permit to be done any grading which may obstruct, impede, or interfere with the natural flow of storm waters, whether such waters are unconfined upon the surface of the land or confined within land depressions, natural drainage ways, unimproved channels, watercourses, improved ditches, channels or conduits, in such manner as to cause flooding where it would not otherwise occur, aggravate any existing flooding condition or cause accelerated erosion except where said grading is in accordance with all applicable laws including, but not limited to, the provisions of the grading ordinance.
(2002-06, Added, 07/02/2002)

Section 16.30.110 Levee work.

No person shall excavate or remove any material from or otherwise alter any levee adjacent to any river, creek, bay, or local drainage control channel, without prior approval of the governmental agency or agencies responsible for the operation and/or maintenance of the levee.
(2002-06, Added, 07/02/2002)

Section 16.30.120 Application for grading permit.

The director shall determine whether the application is complete and may require additional information from the applicant before accepting the application as complete. The

director may require the submission of plans, soil or geological reports, detailed construction recommendations, drainage study or other engineering data prior to and in connection with any work or activity proposed. Grading plans and specifications shall be prepared and signed by a registered civil engineer, except as otherwise provided herein and shall include the information required in the city standards. The director may waive the requirement that all plans and specifications be prepared and signed by a registered civil engineer if the grading would not endanger the public health, safety, or welfare as determined by the director.
(2002-06, Added, 07/02/2002)

Section 16.30.130 Grading prior to issuance of approval of improvement plans.

Approval of a separate grading permit to perform grading prior to issuance of approval of improvement plans shall not prohibit the city from requiring additional grading or changes to grading in accordance with improvement plans once approved. Any additional grading or revisions to work necessitated by conflicts discovered during the improvement plan check, subsequent building plan checks, or subsequent construction will be corrected at the permittee's expense.
(2002-06, Added, 07/02/2002)

Section 16.30.140 Permission of other agencies or owners.

No application for grading approval shall relieve the permittee of responsibility for securing other permits or approvals required for work which is regulated by any other department or other public agency, or for obtaining any easements or authorization for grading on property not owned by the permittee. Proof of applicable public agency permits may be required prior to issuance of grading approval.
(2002-06, Added, 07/02/2002)

Section 16.30.150 Erosion and sediment control plans (esc plan).

An ESC plan shall be prepared for all projects to control surface runoff and erosion and to retain sediment on a particular site and prevent pollution of site runoff during the period when preconstruction and construction related grading activities occur, but before final improvements or permanent structures are complete. The ESC plan shall be prepared and submitted concurrently with the grading plan and shall include all of the information required by city standards.
(2002-06, Added, 07/02/2002)

Section 16.30.160 Modification of approved grading plans.

Any modifications of an approved grading plan shall be submitted in writing to the director, who shall approve or deny such modification at his or her sole discretion.
(2002-06, Added, 07/02/2002)

Section 16.30.170 Permit fees.

Processing fees in an amount established by resolution of the city council shall be paid for permits prior to permit issuance, except where a continuous billing account has been established. Costs incurred by city for processing and checking the application and for inspection shall be billed to the permittee based upon the city fee schedule in effect at the time of permit processing. If grading work is done in violation of the grading ordinance or does not comply with the terms and conditions of a grading approval issued for such grading, a fee covering investigation of any violation and inspection and plan checking of work required to correct such violation shall be charged to the violator to cover all costs actually incurred by the city.
(2002-06, Added, 07/02/2002)

Section 16.30.180 Inspection of work.

The director may inspect any work done pursuant to the grading ordinance at any time during the course of construction. No person shall be deemed to have complied with the grading ordinance until a final inspection of the work has been made by the director. As a condition of any grading approval, the permittee shall provide the city a right-of-entry and reasonable access to the site during the performance of all work and for a minimum period of one year after final inspection pursuant to the grading permit.
(2002-06, Added, 07/02/2002)

Section 16.30.190 Identification of property lines.

Prior to any grading work or related activities, the owner may be required to mark all property corners of the parcel of land to be graded. If the property corners are unknown, or whenever the location of a property line or easement or the title thereto is disputed during the application process or during a grading operation, a survey by a licensed land surveyor or civil engineer, or other resolution of the title dispute, all at the expense of the permittee, may be required by the director. Whenever necessary to enforce the provisions of the grading ordinance, the director may enter the premises at all reasonable times to the extent authorized by law to perform any duty imposed by the grading ordinance. If such entry is refused, the director shall have recourse to every remedy provided by law to secure entry.
(2002-06, Added, 07/02/2002)

Section 16.30.200 Other responsibilities of permittee.

The permittee shall be responsible for the prevention of damage to any public utilities or services, for the prevention of damage to adjacent property, and to prevent discharge of sediment from the site, in quantities greater than before the grading occurred, to any watercourse, drainage system, or adjacent property.
(2002-06, Added, 07/02/2002)

Section 16.30.210 Time limits.

All the work required by the permit or grading approval shall be completed within the time limits specified in the permit or approval. The director may in his or her sole discretion approves or denies a request for time extension. The director may require a new application and fees depending on the time between the expiration date and the extension request, revisions in city regulations, and/or changed circumstances in the immediate area.
(2002-06, Added, 07/02/2002)

Section 16.30.220 Permits nontransferable.

No approval or permit issued under the grading ordinance may be transferred or assigned in any manner whatsoever, without the express written consent of the director.
(2002-06, Added, 07/02/2002)

Section 16.30.230 Abatement.

Any activity contrary to the provisions of this Chapter or contrary to the issued permit or the terms or conditions imposed therein is unlawful and a public nuisance, and the City Manager or his or her designee is authorized to commence in the name of the city actions or proceedings for the abatement and removal and enjoining thereof in the manner provided by sections 21.01.060 and 21.01.080, and shall take such other steps and shall apply to such court or courts as may have jurisdiction to grant such relief as will abate and remove such operation and restrain and enjoin any person, firm or corporation from so operating.
(Ord. 2006-07, Amended, 06/06/2006; 2002-06, Added, 07/02/2002)

Section 16.30.240 Penalty and cost of enforcement.

A. Any person violating the provisions of this chapter or any grading permit issued pursuant to this Chapter is guilty of a misdemeanor.

B. In addition to any other remedies available by law, any person violating the provisions of this Chapter or any grading permit issued pursuant to this Chapter shall be liable to the city for all expenses and damages caused by any such violation.

C. In addition to any other remedies provided by this Chapter or state law, there are hereby imposed the following administrative civil penalties for each violation of this Chapter or the terms and conditions of any grading permit issued pursuant to this Chapter.

1. Any person initiating work within the public road right-of-way without obtaining a grading permit shall be subject to and responsible for a fine in the amount of $500 for a first violation, $750 for a second violation, or $1,000 for a third or subsequent violation.

2. Any person in possession of a valid grading permit that initiates work, but fails to provide notification for inspection as required by the permit shall be subject to and responsible for a fine in the amount of $250 for a first violation,

$1,000 for a second violation, or $1,000 for a third or subsequent violation.

D. Whenever the city manager or his or her designee determines that grading violates the provisions of this Chapter or the terms and conditions of any permit issued pursuant to this Chapter, the city manager or his or her designee shall give written notice of such violation to the alleged violator. The notice shall include the following information:

1. The street address, legal description or other description sufficient to identify the affected property.

2. The penalty imposed as a result of such violation.

3. A statement that the party affected may file a written request for hearing with the director of public works if it objects to imposition of the penalty.

4. A statement that the penalty imposed shall be enforced if the party fails to file a timely written request for a hearing.

E. Notice of any administrative civil penalty shall be served either personally or by mailing a copy of such notice by certified mail, postage prepaid, return receipt requested, to the alleged violator. Service shall be effective for all purposes upon receipt if personally served, or within five (5) days of mailing as herein provided. Proof of service of the notice shall be certified at the time of service by a written declaration under penalty of perjury executed by the person effecting service, declaring the time, date, and manner in which service was made. The declaration, together with any receipt card returned in acknowledgment of receipt by certified mail, shall be affixed to the copy of the notice retained by the city manager or his or her designee. The failure of a party to receive such notice shall not affect in any manner the validity of any proceedings taken pursuant to this chapter.

F. A written request for a hearing must be received by the City Manager or his or her designee within seven (7) days of the effective date of service of the notice. The hearing shall be set and conducted pursuant to Section 21.03.060. The order of the hearing officer shall be in writing resolving the essential issues raised in the hearing and confirming, amending or rejecting the administrative civil penalty imposed by the Director of Public Works.

G. The manner of contesting the final order of the hearing officer concerning any administrative civil penalty is governed by Government Code section 53069.4, or any successor provision thereto. A copy of the notice of appeal authorized by Government Code section 53069.4 shall be served upon the City Clerk.

H. Each party violating any provision of this chapter or any grading permit issued pursuant to this chapter shall be guilty of a separate offense for each and every day on which any such violation is committed, continued, or permitted by any such person.

I. In addition to any penalty, sanction, fine or imprisonment, any person violating the provisions of this Chapter or any grading permit issued pursuant to this Chapter shall be required to pay any and all expenses of enforcement including those costs necessary to inspect, remove and/or correct the violation. In addition to all remedies herein contained, the City may pursue all reasonable and legal means in collecting those sums authorized and due, including, but not limited to the provisions of Chapter 21.01 of Title 21.

(Ord. 2006-07, Amended, 06/06/2006; 2002-06, Added, 07/02/2002)

Chapter 16.50

DRAINAGE UTILITY

Sections:

16.50.010 Purpose.
16.50.020 Findings.
16.50.030 Definitions.
16.50.040 Levy of charge for storm drainage services.
16.50.050 Adjustment of charge.
16.50.060 Bill procedure.
16.50.070 Lien.
16.50.080 Administration and enforcement.
16.50.090 Administrative appeal.
16.50.100 Deposit of collection.
16.50.110 Severability.

Section 16.50.010 Purpose.

The purpose of this Chapter is to establish a drainage utility for managing and funding the operation and maintenance of the City storm water program in order that storm and surface waters may be properly drained and controlled to safeguard the health, safety and welfare of the City's inhabitants; to protect the waters of the United States, and to insure compliance with applicable federal and state laws and permits. This Chapter shall be known as the *drainage utility ordinance* of the City of Galt, and shall be referred to herein as the "drainage utility ordinance."
(Ord. 2002-11, Added, 10/15/2002)

Section 16.50.020 Findings.

The City Council hereby finds as follows:

A. The City maintains a system of storm and surface water management facilities within the incorporated area of the City, including but not limited to inlets, conduits, manholes, channels, ditches, drainage easements, retention and detention basins, infiltration facilities, overland release corridors, and other components as well as natural waterways.

B. Those elements of the City's storm and surface water management system that provide for the collection, storage, treatment, and conveyance of storm drainage are of benefit and provide services to all developed property within the incorporated area of the City.

C. The cost of operating and maintaining the storm water management system, including necessary repairs, should, to the extent practicable, be allocated in relationship to the benefits enjoyed and services received therefrom.

D. Erosion and the discharge of nutrients, metals, oil, grease, and other substances into and through the storm drainage system is resulting in a degradation in water quality.

E. The public health, safety and welfare are adversely affected by poor water quality and flooding resulting from inadequate storm drainage management practices.

F. The storm drainage management practices necessary to protect water quality are largely established by federal and state statutes, regulations and permitting requirements.

G. Real property either uses or benefits from the presence and operation of the storm drainage management system.

H. The use of the storm drainage system is dependent on factors that influence runoff, including land use and impervious area.

I. The City has the authority under applicable law, including, but not limited to, Health and Safety Code section 5471 to prescribe, revise and collect fees, tolls, rates, rentals and other charges for facilities and services furnished by it in connection with its storm drainage system.

J. The Legislature, through the adoption of applicable law, including, but not limited to, Health and Safety Code section 5471, has specifically authorized the City to provide storm drainage services as a utility function for which service charges may be levied.

K. A fee to fund storm drainage services offers a reliable and consistent source of revenue that is locally controlled.
(Ord. 2002-11, Added, 10/15/2002)

Section 16.50.030 Definitions.

The meanings ascribed to the terms set forth in this section shall govern the interpretation of this Chapter.

A. Administrative charge: shall mean the charge imposed by the City's consolidated utility billing service for the actual cost of billing for, and collection of, storm drainage service fees.

B. Director: shall mean the City of Galt Director of Public Works, his/her designee.

C. City: shall mean the City of Galt.

D. City storm drainage system: shall mean the system of storm and surface water management facilities, including but not limited to inlets, conduits, manholes, storm sewers, channels, ditches, drainage easements, retention and detention basins, infiltration facilities, overland release corridors and other components as well as natural waterways, within the unincorporated area that is either owned or operated by the City.

E. Developed parcel: shall mean any parcel of land altered from its natural state by the construction, creation or addition of impervious area.

F. Exempt use: shall mean the use of any public or undeveloped property and the use of any other parcel for any of the following purposes: agricultural land used for crops or pasture, aquatic farms, orchards, City-maintained drainage ditches, property within a floodplain recognized by the City on which improvements are prohibited, and levees.

G. Parcel: shall mean the smallest separately segregated lot, unit or plot of real property having an identified owner, boundaries, and surface area which is documented for property tax purposes and given a tax lot number by the County Assessor.

H. Person: shall mean any individual, firm, company, association, society, partnership, corporation, organization, group or public agency.

I. User: shall mean the owner of a parcel of real property that is charged for storm drainage services.

(Ord. 2002-11, Added, 10/15/2002)

Section 16.50.040 Levy of charge for storm drainage services.

City Council may levy on any parcel, subject to applicable law, within the boundaries of the City of Galt, a storm drainage service fee to be calculated based on the approximate pro-rata cost share impact of the parcel with development on storm drainage. Rates and charges for drainage services shall be fixed from time to time, by resolution of the City Council, subject to applicable law.

(Ord. 2002-11, Added, 10/15/2002)

Section 16.50.050 Adjustment of charge.

A. Whenever the owner of any parcel is subject to a storm drainage service fee, other than parcels classified as a single-family residential use, he/she may file an application with the director to have the fee levied on such parcel reduced by means of one of the following mechanisms: (1) by designing, constructing and maintaining, at the owner's expense, storm drainage detention facilities approved by the director; (2) demonstrating to the satisfaction of the director that less than five percent (5%) of the parcel area drains into a City storm drainage system; or (3) demonstrating to the satisfaction of the director that the actual impervious area of the parcel is at least ten percent (10%) less than that calculated using the impervious factor for the parcel's use classification.

B. After receipt and review of the application, the director shall either deny any reduction in the fee or approve a reduced fee calculated pursuant to subdivision C hereof. The director, in approving any reduction in the otherwise applicable fee, may attach reasonable conditions to any such approval. If the applicant is dissatisfied with the action of the director, he/she may file a petition pursuant to section 16.50.100 hereof.

C. Any storm drainage facilities constructed by a parcel owner pursuant to this section shall meet the standards set forth in the City's improvements standards. Upon approval of any reduction in the otherwise applicable fee pursuant to this section, the revised fee shall be calculated on the basis of the equivalent contributing parcel area.

D. The fee for a parcel may be adjusted for the impact of any additional development on the parcel upon completion of construction.

E. Any adjustment of charges may be initiated by either the director or by the owner of a parcel subject to the storm drainage service fee. If the director denies any adjustment proposed by an owner or an owner objects to an adjustment proposed by the director, any adjustment shall be made pursuant to the procedure set forth in section 16.50.100 hereof.

Any debit adjustments shall be added to the charge in the succeeding billing period. Any credit adjustments shall first be credited against the previous balance and then any remaining credit shall be applied to subsequent charges. No debits or credits shall be made for any period more than three (3) years prior to the date that an adjustment is proposed by the director or requested by the owner of record pursuant to section 16.50.100.
(Ord. 2002-11, Added, 10/15/2002)

Section 16.50.060 Bill procedure.

A. Whenever a storm drainage service fee is levied, it shall be billed as part of the City's consolidated utility billing service in the same manner as for water service in Chapter 13.08. Alternatively, the fee may be collected by any procedure available to the City under applicable law. Specific billing procedures as appropriate, delinquency charges, and deposits will be further detailed in the service fee schedule.

B. The storm drainage service fee shall be based on the use of the parcel as determined by the director. For each parcel of property there shall be only one unit for purposes of billing for storm drainage services. The charge may be divided among tenants of condominium or multi-family residential dwelling units if separate utility accounts exist for water services and if approved by the director.

C. The storm drainage service fee shall be billed to the owner of record of the parcel, to the successor in interest of such person, or to such person's designees if approved by the director and separate water accounts exist. The owner of record shall remain liable for any delinquent fees.

D. Application of fees shall be based on current parcel numbers, square footage and use codes on record in the county assessor's office, unless the director determines that the actual use of the parcel is different than the use reflected in the use codes in which case the fees shall be based on the actual use of the parcel.
(Ord. 2002-11, Added, 10/15/2002)

Section 16.50.070 Lien.

A. The City shall notify the assessee shown on the latest equalized assessment roll whenever delinquent and unpaid fees, which would become a lien on the parcel pursuant to subdivision B remain delinquent and unpaid for sixty (60) days.

B. Whenever a storm drainage service fee and any penalties are levied pursuant to this Chapter, they shall constitute a lien upon the parcel subject to the fee; as provided for in applicable law, including, but not limited to, Health and Safety Code section 5473.11; if the fee remains delinquent for a period of sixty (60) days and the City has notified the assessee of the parcel shown on the latest equalized assessment roll of the delinquent fees and the lien provided by this section.

C. The lien provided herein shall have no force or effect until a certificate specifying the amount of the unpaid fees is recorded with the county recorder.

D. Any delinquent storm drainage service fees and penalties may be collected on the tax roll in the same manner and at the same time as property taxes are collected.
(Ord. 2002-11, Added, 10/15/2002)

Section 16.50.080 Administration and enforcement.

The director shall be responsible for the administration and enforcement of the provisions of this Chapter. The director shall have the authority to adopt rules and regulations not inconsistent with provisions of this Chapter for purposes of carrying out and enforcing the payment, collection and remittance of the fee herein levied.
(Ord. 2002-11, Added, 10/15/2002)

Section 16.50.090 Administrative appeal.

A. Any owner who disputes the amount of a levied storm drainage service fee charged to his/her parcel, the classification of the property in terms of its use, any adjustment proposed by the Director, or any other determination affecting the property made by or on behalf of the City pursuant to this Chapter may appeal with regard to any such issue. Any appeal petition may only be filed once in connection with the issue or issues presented in the petition, except upon a showing of changed circumstances sufficient to justify the filing of such additional petition.

B. Any appeal petition shall be in writing, signed by the owner under penalty of perjury and filed with the City Clerk. The petition shall include the following information: (1) a complete description of the factual basis for the appeal; (2) the legal basis for the appeal; and (3) the remedy sought by the appellant.

C. The hearing shall be set and conducted pursuant to section 21.03.060. The hearing officer shall make and serve by mail written findings of facts based upon all relevant information presented in the appeal petition or at the hearing, shall make a determination of issues based upon such findings and, if appropriate, an order setting forth an appropriate remedy subject to the limitations set forth in subdivision E of section 16.50.060. The determination of the hearing officer shall be final.

(Ord. 2006-07, Amended, 06/06/2006; Ord. 2002-11, Added, 10/15/2002)

Section 16.50.100 Deposit of collection.

There is hereby created in the City treasury a special revenue account. All storm drainage service fees collected by the City shall be deposited in such account. The revenue deposited in such account from any fees collected, shall be used only for management and execution of the City storm water program including prevention of storm water pollution; compliance with drainage related federal and state laws and permits; and the acquisition, construction, reconstruction, maintenance, and operation of drainage facilities.

(Ord. 2002-11, Added, 10/15/2002)

Section 16.50.110 Severability.

If any section, subsection, subdivision, paragraph, sentence, clause or phrase of this Chapter or any part thereof is for any reason held to be invalid, such invalidity shall not affect the validity of the remaining portion of this Chapter or any part thereof. The City Council of the City hereby declares that it would have passed each section, subsection, subdivision, paragraph, sentence, clause and phrase thereof, irrespective of the fact that any one or more sections, subsections, subdivisions, paragraphs, sentences, clauses or phrases be declared invalid.

Public Facilities and Services Element

Introduction

City development is dependent on a complicated network of public facilities and services. Each type of facility or service has a unique set of opportunities and constraints and must adapt to growth and change differently. The Public Facilities and Services Element focuses on water production, treatment, and distribution; sewage collection and treatment; flood protection; parks and recreational open space; storm drainage; solid waste collection and disposal; fire protection and emergency medical service; law enforcement; schools; and other utilities such as gas, electricity, and communications. This element provides guidance for the logical and efficient extension of these services as new development occurs. The City will also provide for the development of major public facilities through capital improvement projects to accommodate growth projected under the General Plan consistent with applicable State and Federal law. Transportation facilities are discussed separately in the Circulation Element.

This element contains goals, policies, and implementation measures related to the following topics:

- Public Facilities and Services Funding
- Water Supply, Treatment, and Delivery
- Wastewater Collection, Treatment, Disposal, and Reuse
- Stormwater Drainage
- Solid Waste Collection and Disposal
- Law Enforcement
- Fire Protection and Emergency Medical Services
- Parks and Recreational Open Space
- Education
- Childcare
- Gas and Electric Services
- Information Technology

Public Facilities and Services Funding

The goal and policies in this section seek to identify funding methods for new facilities and services as new development occurs, and to consider how the ongoing maintenance and operations of these facilities will be funded to ensure that operational levels do not decline. New development is generally responsible for financing and/or providing for the extensions of the services it requires. The City will plan for the development of major public facilities through its Capital Improvement Program, which identifies capital improvement projects to accommodate growth projected under the General Plan consistent with applicable State and Federal law.

Policy PFS-3.8: Sewer Services
The City should not extend sewer service to areas outside the city limits prior to annexation unless the City amends the Utility Services Area with LAFCO. *(City Staff)*

Policy PFS-3.9: Expand Use of Reclaimed Water
The City shall encourage the use of tertiary treated wastewater and household gray water for irrigation of agricultural lands, large landscaped areas, and recreation/open space areas within close proximity to the City's WWTP to help ensure ongoing compliance with RWQCB requirements. *(Draft EIR Analysis)*

Policy PFS-3.10: Point Source Control
The City shall work with the RWQCB to ensure that all point source pollutants are adequately mitigated (as part of the CEQA review and project approval process) and monitored to ensure long-term compliance. *(Final EIR Analysis)*

Stormwater Drainage

The City's storm drainage system consists of collection, conveyance, detention, and pumping facilities. Stormwater is ultimately pumped and discharged into several area waterways. Future development will require the development of new storm drainage and flood protection systems. In addition, Federal and State water quality standards will require examination of the quality of stormwater released into public waterways. Policies of this section require the development of new storm drainage and flood protection systems in the safest and most efficient manner.

Goal PFS-4

To collect and dispose of stormwater in a manner that protects the city's residents and property from the hazards of flooding, manages stormwater in a manner that is safe and environmentally sensitive, and enhances the environment. *(M&A)*

Policy PFS-4.1: Storm Drain Enhancements
The City shall continue to upgrade the storm drainage facilities in the older section of the city, and provide for systems needed in newly developing areas. *(City: I-11)*

Policy PFS-4.2: Conservation/Stormwater
The City shall develop storm water drainage facilities consistent with the policies of the Conservation and Open Space Element. *(City: I-12)*

Policy PFS-4.3: Stormwater Quality
The City shall ensure compliance with Federal and State clean water standards by continuing to monitor and enforce provisions to control non-point source and point source water pollution contained in the U.S. Environmental Protection Agency NPDES program. (*Draft EIR Analysis*)

Policy PFS-4.4: Project Design
The City should encourage project designs that minimize drainage concentrations and impervious surfaces. *(M&A)*

Policy PFS-4.5: Grading During the Rainy Season
The City shall prohibit grading activities during the rainy season, unless adequately mitigated, to avoid sedimentation of storm drainage facilities. *(M&A)*

Policy PFS-4.6: Erosion Control Plan
The City shall require new development projects to prepare an erosion control plan. *(M&A)*

Policy PFS-4.7: Mitigating Stormwater Runoff
The City ~~should~~ shall require projects that have significant impacts on the quantity and quality of surface water runoff to incorporate mitigation measures for impacts related to urban runoff. *(M&A)*

Policy PFS-4.8: Joint Use of Detention Facilities
The City ~~should~~ shall encourage stormwater detention facilities to be designed for multiple purposes, including recreational (e.g., parks, ball fields, etc.) stormwater quality improvement, and/or waterfowl habitat. *(M&A and PC)*

Policy PFS-4.9: Detention Requirements
The City should require detention storage with measured release to ensure that the capacity of downstream creeks and sloughs will not be exceeded. To ensure downstream capacity is not exceeded, the following measures will be applied:

a. Outflow to creeks and sloughs should be designed and constructed to avoid exceeding downstream channel capacities; and

b. Storage facilities should be designed and constructed to prevent problems caused by timing of storage outflows. *(M&A)*

Solid Waste Collection and Disposal

Solid waste collection and disposal and curbside recycling in Galt are provided by a franchise agreement with California Waste Recovery Systems based in Lodi. Waste is disposed at one of several locations, including Foothill-Sanitary Landfill, L-D Landfill, North County Landfill, and Sacramento County Landfill. Policies in this section seek to reduce the amount of waste produced through source reduction, reuse, and recycling, and to ensure safe disposal of waste. The goal of this plan is to reduce the total amount of waste generated and disposed of through source reduction, recycling and composting, and safe transformation and land disposal of solid wastes.

Goal PFS-5 To ensure the safe and efficient disposal and recycling of solid waste generated in Galt. *(M&A)*

Policy PFS-5.1: Waste Collection
The City shall require waste collection in all new developments. *(M&A)*

Policy PFS-5.2: Waste Reduction
The City ~~should~~ shall promote maximum use of solid waste reduction, recycling, composting, and environmentally-safe transformation of wastes. *(M&A)*

Policy PFS-5.3: Solid Waste Facilities
The City shall require that all solid waste facilities be located in areas free of incompatible land uses and prohibit future incompatible land uses on surrounding lands. *(City: B-32)*

Conservation and Open Space Element

Introduction

Galt's environmental resources (water, air, vegetation, wildlife, and open space) contribute to the city's economy and are important elements in the quality of life of Galt's residents. The preservation of these natural resources is frequently in conflict with urban development. The General Plan seeks to balance the need for growth with the need for the conservation and enhancement of the area's natural resources, frequently in cooperation with other agencies.

Modern ecological research shows the value of natural land corridors and large preservation areas instead of small, isolated preserves, in perpetuating complete ecosystems and wildlife habitats. These contiguous linkages between natural community types help protect biologically important transition zones for species higher in the food chain (e.g., mammals, raptors, etc.) When their natural habitat is reduced to isolated patches, and no linkages are available between preserves, the long term viability of the species is severely threatened.

This element contains goals, policies, and implementation measures related to the following topics:

- Water Resources
- Fish and Wildlife Habitat
- Vegetation
- Agriculture, Open Space, and Natural Resource Preservation
- Air Quality–General
- Air Quality–Transportation
- Global Warming and Energy Conservation

Water Resources

The availability, quantity, and quality of water are vital to natural processes and human activities. Water is essential to the development of housing, commerce, industry, and agriculture, to recreation, and to the maintenance of high quality fish and wildlife habitats. Cosumnes River, Laguna Creek, Skunk Creek, Dry Creek, Hen Creek, and Deadman Gulch are all located within the Planning Area. A groundwater aquifer underlies Galt and serves as the City's municipal water supply. Most of these resources are regional in nature and require a cooperative effort to ensure protection of water quality in these bodies.

The goal and policies in this section seek to protect these water resources and maintain the highest quality for human and natural use. Goals and policies related to the City's water supply and delivery system are discussed in the Public Facilities and Services Element.

The goal and policies in this section seek to protect these water resources and maintain the highest quality for human and natural use. Goals and policies related to the City's water supply and delivery system are discussed in the Public Facilities and Services Element.

Goal COS-1 To protect and enhance the qualities of the area's rivers, creeks, sloughs, and groundwater. *(M&A)*

Policy COS-1.1: Flood Control
The City shall require adequate natural floodway design to assure flood control in areas where stream channels have been modified and to foster stream enhancement, improved water quality, recreational opportunities, and groundwater recharge. *(City: A-14 and City Staff)*

Policy COS-1.2: Flood Protection Ordinance
The City shall continue to implement the City's flood protection ordinance. *(City: A-15)*

Policy COS-1.3: Inter-Agency Coordination
The City ~~should~~ shall cooperate with FEMA, California Department of Water Resources, and other appropriate local, State, and Federal agencies to address local and regional flood issues. *(M&A)*

Policy COS-1.4: Storm Flow Impacts
The City will continue to ensure, through the development review process, that future developments do not increase peak storm flows and do not cause flooding of downstream facilities and properties. *(City: A-16)*

Policy COS-1.5: Water Quality Control Board Regulations Compliance
The City shall continue to comply with the Regional Water Quality Control Board's regulations concerning the operation of the City's wastewater treatment plant. *(City: A-17)*

Policy COS-1.6: Underground Storage Tank Law Compliance
The City shall provide continued compliance with the Underground Storage Tank Law and all other laws relating to water quality. *(City: A-18)*

Policy COS-1.7: Stormwater Quality Protection
The City shall, through the development review process, ensure compliance with Federal and State stormwater quality standards and regulations. *(M&A)*

Policy COS-1.8: Septic System Discouragement
The City ~~should~~ shall protect groundwater resources by ~~discouraging~~ protesting urban development with septic systems in the unincorporated County on parcels less than 2 acres on the west side of the Planning Area and ~~larger~~ less than 5 acres on the north and east side of the Planning Area. *(M&A & PC)*

Policy COS-1.9: Streambed Alteration Watershed Regulations Compliance
The City shall require proposed developments to comply with streambed alteration and watershed protection regulations as administered by the California Department of Fish and Game. *(M&A)*

Policy COS-1.10: Ecological Features Retention
The City ~~should~~ shall retain to the extent feasible the ecological features of the creeks, sloughs, and rivers in their natural state. *(M&A)*

Policy COS-1.11: Riparian Corridor Protection
The City ~~should~~ shall endeavor to protect, preserve, and improve riparian corridors. *(M&A)*

Policy COS-1.12: Best Management Practices
The City shall require all new development and redevelopment to implement Best Management Practices (BMPs) to reduce pollutants to the maximum extent practicable. Additionally, the City shall require, as part of its Storm Water NPDES Permit and ordinances, to implement the Grading Plan, Erosion Control Plan, and Pollution Prevention Plan (SWPPP) during construction activities of any improvement plans, new development and redevelopment projects for reducing pollutants to the maximum extent practicable. *(ESA)*

Policy COS-1.13: No Net Loss of Wetlands
The City shall review development proposals in accordance with applicable local, State, and Federal statues protecting jurisdictional wetlands (Section 404 of the Clean Water Act) and require that new developments have no net loss of existing wetland habitats. *(City Staff)*

Policy COS-1.14: Floodplain Dedication
The City should require property owners and developers to dedicate land within 100 year floodplains to the City, or other City-designated entity for biological mitigation credit or similar purpose, when a development project is approved. In addition to the land requirement, the City should require public access adjacent to these areas, but outside the 100 year flood plain, via bicycle and pedestrian trails and related amenities with appropriate signage. *(City staff and PC)*

Policy COS-1.15: Trails and Open Space Access
The City shall provide public access to all City-owned and maintained trails and open space areas in city limits. The City should also provide educational signage in these areas. *(City Staff)*

Policy COS-1.16: Incorporating Parks and Open Space with School Curricular Activities
The City should encourage schools to maximize curricular activities based on their location near parks and open space areas. (*City Staff)*

Policy COS-1.17: Floodplain Visual Accessibility
The City ~~should~~ shall require visual accessibility to floodplains via direct, single frontage roadways, along the length of any particular stream and associated floodplain section being developed (on both sides). (*City: C-3 and City Staff)*

Fish and Wildlife Habitat

Fish and wildlife resources in the Galt area occur in both natural and altered habitats. Habitats altered either by agricultural cultivation or urban development make up most of the Planning Area. Although altered by human activities, these areas may still be valuable for wildlife (e.g., Deadman Gulch, Hen Creek). Natural habitats in and around Galt include Cosumnes River, Dry, Laguna, and Skunk Creeks.

Implementation Programs

Introduction

The section summarizes the implementation programs associated with the goals and policies of the Policy Document. Implementation programs are shown as follows:

- Table IMP-1: Circulation Element Implementation Programs
- Table IMP-2: Community Character Element Implementation Programs
- Table IMP-3: Conservation and Open Space Element Implementation Programs
- Table IMP-4: Economic Development Element Implementation Programs
- Table IMP-5: Historic Resources Element Implementation Programs
- Table IMP-6: Housing Element Implementation Programs
- Table IMP-7: Land Use Element Implementation Programs
- Table IMP-8: Noise Element Implementation Programs
- Table IMP-9: Public Facilities and Services Element Implementation Programs
- Table IMP-10: Safety and Seismic Element Implementation Programs

This page is intentionally left blank

Table IMP-3
Conservation and Open Space Element Implementation Programs

Implementation Programs	Implements What Policies	Who is Responsible	Timeframe			
			Near Term	Mid Term	Long Term	On-going
COS-A: Annual Review The City should annually review General Plan goals, policies, and implementation programs and identify City priorities and any quantifiable objectives that should be addressed for the upcoming fiscal year.	All COS policies	City Council City Manager				■
COS-B: Flood Protection Ordinance The City should monitor and update the flood protection ordinance to assure adequate flood controls.	COS-1.1 COS-1.2	City Manager Public Works Director				■
COS-C: Aquifer Monitoring The City should prepare and regularly update a Water Supply Master Plan to monitor any activities that may degrade the aquifers of Cosumnes River, Laguna Creek, Skunk Creek, and Dry Creek and affect City water supplies.	COS-1.6 COS-1.8	City Manager Public Works Director	■			■
COS-D: Visual Accessibility of Floodplains The City should include in the floodplain ordinance a requirement for direct roadway access of the entire length of any particular stream (perennial or intermittent) and associated floodplain section being developed (both sides). This should include an explanation of the nexus between the requirement and the impact of development.	COS-1.17	City Council Planning Commission Community Development Director	■			
COS-E: Infill Development Priority The City should adopt incentives for implementing infill development near job centers and transportation nodes. Incentives can include, but are not limited to, building permit fee waiver, parking standard reductions, etc.	COS-5.3	City Council Planning Commission Community Development Director	■			
COS-F: City Fleet Vehicles The City should adopt a program for the phased replacement of City fleet vehicles with low-emission technology vehicles, as appropriate.	COS-6.4 COS-6.5	City Council City Manager	■			■

Table IMP-3 Conservation and Open Space Element Implementation Programs						
Implementation Programs	Implements What Policies	Who is Responsible	Timeframe			
			Near Term	Mid Term	Long Term	On-going
COS-G: Support Energy Conservation Legislation The City shall support legislation that promotes cleaner industry, lowest emission technology vehicles, and more efficient-burning engines and fuels.	COS-7.1 COS-7.2	City Council City Manager				■
COS-H: City Facilities The City should upgrade existing City facilities so that energy use can be derived from sustainable energy sources by 2020. This can include, but is not limited to, the installation of solar panels or by purchasing electricity from service providers that use renewable energy sources.	COS-7.9	City Council City Manager				■
COS-I: Energy Efficiency The City should encourage new housing units be constructed to meet and/or exceed LEED Certified energy efficiency standards.	COS-7.11	City Council City Manager				■
COS-J: Energy Conservation Features The City shall coordinate with utility providers to provide City residents with information on a variety of energy conservation features including tree planting programs, energy efficient development, and increased use of renewable energy sources.	COS-7.17	City Manager Community Development Director	■			■
COS-K: Greenhouse Gas Emissions Reduction Plan The City will prepare and adopt a Greenhouse Gas Emissions Reduction Plan.	COS-7.1	City Manager City Council Community Development Director Public Works Director	■			
COS-L: Green Construction The City shall amend the municipal code as necessary to remove barriers to green construction.	COS-7.1 COS-7.18	Community Development Director Public Works Director	■

Storm Drainage System Overview

The City of Galt Public Works Department operates the City's storm drain collection and disposal system. The storm drain system consists of curbs and gutters which collect the storm waters and direct them into catch basins where it enters an underground system of pipes. The underground piping system then directs the storm runoff to one of three drainage channels: Dry Creek, Hen Creek and Deadman's Gulch.

Dry Creek is a natural channel which forms the southern boundary of the City and the boundary between Sacramento and San Joaquin County to the south. Dry Creek, flowing in a westerly direction, flows into the Mokelumne River which then flows to the Delta.

Deadman's Gulch flows in the westerly direction generally through the northern sector of the City. East of SR99, Deadman's Gulch has been designed and reconstructed to serve as a storm water detention facility in addition to a storm water conveyance facility. This occurs as a result of the culvert structure under SR 99 which meters the flow into Deadman's Gulch west of the highway. This allows the storm water flows from the development occurring east of the highway to better match the channel capacity west of the highway.

The City has one other detention basin which serves as a joint use facility/city park. It is located on the west side of town adjacent to the Greer Middle School. After being detained in the detention basin the storm flows are pumped to Hen Creek for ultimate disposal. The lift station at Greer Detention Basin is one of only two stormwater lift stations in the City of Galt. The other is the Wagon Way lift station.

The storm drainage system is comprised of pipelines ranging in size from 8" to 84" in diameter. The larger pipe sizes serve as the outfall structures conveying the storm runoff from the southwest portion of the community to Dry Creek.

The City of Galt has a Phase 1 NPDES stormwater permit. The City joined with Sacramento County and other cities in the County to obtain the permit during the first round of permitting in the early 1990s.

The City funds the operation and maintenance of the storm drainage system through a storm drainage monthly utility rate. For the most part, the monthly utility rate is insufficient to fully fund the operation and maintenance of the system and is augmented with gas tax funding. A storm drainage impact fee is assessed to new development to fund the construction of the major components of the storm drain system. New development is required to construct the storm drainage system associated with their projects.

Sacramento area public agencies, including the County of Sacramento and the Cities of Sacramento, Citrus Heights, Elk Grove, Folsom, Galt, and Rancho Cordova have joined together to form the Sacramento Stormwater Quality Partnership (SSQP). These agencies are regulated by Order No. R5-2002-0206 NPDES No. CAS082597 "Waste Discharge Requirements for County of Sacramento and Cities of Citrus Heights, Elk Grove, Folsom, Galt and Sacramento Storm Water Discharges

From Municipal Separate Storm Sewer Systems Sacramento County" issued by the Central Valley RWQCB. Galt is unlike the other permittees in that its MS4 is non-contiguous with the other MS4s; it is also surrounded by rural and agricultural areas that are not subject to the NPDES regulations. An MS4 (or municipal separate storm sewer system) is a conveyance or system of conveyances owned by a State, City, Town, or other public entity that discharges to waters of U.S. and is: designed or used for collecting or conveying stormwater; not a combined sewer; and not part of a Publicly Owned Treatment Works (POTW). Galt became part of the Phase I Sacramento Storm Water Management Program voluntarily in 1990.

The General MS4 permit requires the discharger to develop and implement a Storm Water Management Plan/Program (SWMP) with the goal of reducing the discharge of pollutants to the maximum extent practicable (MEP). MEP is the performance standard specified in Section 402(p) of the Clean Water Act. The general permit requires regulated Small MS4s to develop and implement a SWMP that describes Best Management Practices (BMPs), measurable goals, and timetables for implementation in the following six program areas.

- Public Education – Educate the public in its permitted jurisdiction about the importance of the storm water program and the public's role in the program;
- Public Participation – Comply with all State and local notice requirements when implementing a public involvement/participation program;
- Illicit Discharge Detection and Elimination – Adopt and enforce ordinances or take equivalent measures that prohibit illicit discharges, and implement a program to detect illicit discharges;
- Construction Site Storm Water Runoff Control – Develop a program to control the discharge of pollutants from construction sites greater than or equal to one acre in size within its permitted jurisdiction. The program must include inspections of construction sites and enforcement actions against violators;
- Post Construction Storm Water Management – Require long term post-construction BMPs that protect water quality and control runoff flow, to be incorporated into development and significant redevelopment projects. Post construction programs are most efficient when they stress (1) low impact design; (2) source controls; and (3) treatment controls.

Impacts and Mitigation Measures

Impact 6.4-1: The Proposed Project could result in increase of erosion during the construction process or cause significant changes in the flow velocity or volume of storm water runoff to cause environmental harm and the potential for significant increases in erosion of the project site and surrounding areas.

Impact Summary

Level of Significance Before Mitigation: ***Potentially Significant***
Required Mitigation: ***Mitigation Measure 6.4-1a: Adopt Revised General Plan Policy PFS-4.3 "Stormwater Quality" to Address Storm Drainage System Impacts and Mitigation Measure 6.4-1b: Adopt Revised General Plan Implementation Program PFS-G to Address Storm Drainage System Impacts.***
Level of Significance After Mitigation: ***Less than Significant***

Impact Analysis

Drainage runoff from developing areas or parcels is dependent on the percent of impervious surface created on individual parcels or projects. Development resulting from the Proposed Project (particularly within currently undeveloped areas) will increase the amount of impervious surfaces, thereby increasing the amounts and speed of runoff. Increased runoff volumes and speeds may increase erosion or siltation and result in localized nuisance flooding in areas without adequate drainage facilities.

The existing drainage channels of Dry Creek, Hen Creek and Deadman's Gulch all serve the drainage sheds of the Study Area south of Twin Cities Road. With continued urbanization under the Proposed Project (including both the Preferred Land Use Alternative and the Circulation Diagram), these existing drainage sheds will continue to increase in runoff requiring additional detention storage to meter downstream flows and prevent flooding. Therefore, future detention sites should be identified early in the process as individual development projects are proposed to provide adequate storm water detention over time.

Under the Proposed Project, urban development is planned north of Twin Cities Road both west and east of SR 99. The drainage shed north of Twin Cities Road is oriented north toward the Cosumnes River. With such an orientation, additional processing and permits would be required to identify locations for drainage outfalls and detention requirements to help meter increased runoff due to the urbanization of land.

Policies and implementation programs included as part of the Proposed Project that would minimize this impact are summarized below by General Plan Element, with a complete description of these policies and programs provided in Appendix C "Policy Document" of this draft EIR.

Public Facilities and Services Element
Policies designed to minimize this water quality impact through adherence to appropriate best management practices designed to address soil erosion include the following:
PFS-4.3 Stormwater Quality PFS-4.4 Project Design PFS-4.5 Grading During the Rainy Season PFS-4.6 Erosion Control Plan PFS-4.7 Mitigating Stormwater Runoff
Policies and implementation programs designed to minimize this impact through management of downstream channel capacities, and allow for development of the City's storm drainage system to prevent flooding include the following:
PFS-1.5 Public Facilities Master Plans PFS-1.6 Capital Improvement Program

PFS-1.7 Public Facility Financing
PFS-1.8 Ultimate Capacity Needs
PFS-4.8 Joint Use of Detention Facilities
PFS-4.9 Detention Requirements
PFS-A Infrastructure Master Plans
PFS-B Capital Improvement Program
PFS-C Development Fee Schedule
PFS-G Stormwater Management Plan
PFS-H Stormwater and Flood Protection Ordinance

Implementation Program PFS-A requires the City to prepare, annually review, and update every five years a Storm Drainage Master Plan and a Pavement Management Plan. The preparation and implementation of a Storm Drainage Master Plan would implement Policy PFS-1.5 by ensuring compatibility with current land use policy, and identifying necessary improvements consistent with State and Federal Laws. PFS-A would also implement Policy PFS-1.2 by establishing areas suitable for development consistent with the location of master planned infrastructure. PFS-A would also implement Policies PFS-1.6 and PFS-1.8 through the identification of needed capital improvements and associated schedule for inclusion in the City's CIP, and by sizing infrastructure facilities to meet ultimate demands. A Storm Drainage Master Plan would identify the ultimate capacity of receiving channels, appropriate locations for joint use detention facilities, and ultimate sizing of major storm drainage conveyance facilities. The implementation of a Storm Drainage Master Plan would identify future drainage facilities that are necessary in order to control flooding in existing and future development areas. The City would then tie Master Planned Drainage Improvements to its CIP which would ensure that funding is dedicated on an annual basis to implement storm drainage infrastructure projects. The preparation of a Storm Drainage Master Plan would also assist the City in evaluating its development impact fees to ensure that they are adequate to finance future drainage facilities required as a result of new development.

Implementation Program PFS-B requires the City to annually review and update its CIP. Annual reviews and updates of the City's CIP would implement Policies PFS-1.3 and PFS-1.7 by establishing the required financing for needed infrastructure improvements, and tying the needed funds to development impact fees. Implementation Program PFS-C requires the City to prepare development fee schedules based on the City's CIP. The preparation of development fee schedules implements Policies PFS-1.4 and PFS-1.9 by assuring that financing mechanisms are in place in order to construct capital infrastructure improvements that are required as a result of new development.

Implementation Program PFS-G also requires the City to prepare and periodically update a Stormwater Management Program (SWMP). Implementation Program PFS-G implements Policy PFS-4.3 by coordinating all storm water discharges with the RWQCB consistent with the requirements of the NPDES permit, and SWMP. Through NPDES compliance and implementation of the SWMP, the City ensures that stormwater discharges are in compliance with Federal and State laws. As previously mentioned, the City has prepared a SWMP in a joint effort with other agencies that establishes a comprehensive Development Standards Plan. The implementation of the comprehensive Development Standards Plan requires proposed development projects to incorporate erosion control measures, BMPs, and other design aspects to improve the water quality of receiving streams and rivers (including reducing erosion and siltation on- and off-site).

Implementation Program PFS-H requires the City to prepare and adopt a Stormwater and Flood Protection Ordinance to implement the updated Storm Drainage and Flood Protection Master Plan to address stormwater runoff and flood protection.

Even with implementation of the above mentioned policies and implementation programs, this impact is considered ***potentially significant***.

Required Mitigation Measures

To address this impact, the City shall implement the following mitigation measures:

Mitigation Measure 6.4-1a: Adopt Revised General Plan Policy PFS-4.3 "Stormwater Quality" to Address Storm Drainage System Impacts:

To mitigate storm drainage system impacts resulting from implementation of the Proposed Project, the City shall incorporate the following revisions to Policy PFS-4.3 "Stormwater Quality" into the Final General Plan.

- **Policy PFS-4.3: Stormwater Quality**. The City shall ensure compliance with Federal and State clean water standards *by continuing to monitor and enforce provisions to control non-point source, and point source water pollution contained in the U.S. Environmental Protection Agency NPDES program. (M&A)*

Mitigation Measure 6.4-1b: Adopt Revised General Plan Implementation Program PFS-G to Address Storm Drainage System Impacts:

To mitigate storm drainage system impacts resulting from implementation of the Proposed Project, the City shall incorporate the following revisions to Implementation Program PFS-G into the Final General Plan.

- **Implementation Program PFS-G: Stormwater Management Plan**. The City shall prepare, ~~and~~ periodically update*, and implement on an ongoing basis, its* Stormwater Management Plan, *in coordination with other member agencies. (M&A)*

Significance after Implementation of Mitigation for Impact 6.4-1

The City's implementation of the Sacramento SWMP, and associated Development Standards Plan would address a variety of erosion generating or water quality impacts associated with the alteration of an existing drainage pattern. As stated above, the City will continue to implement a variety of policies and programs designed to address the provision of needed storm drainage infrastructure and stormwater quality issues. Therefore, implementation of the Proposed Project including the adoption of the revised policy and implementation program described under Mitigation Measure 6.4-1a and Mitigation Measure 6.4-1b (revisions to Policy PFS-4.3 "Stormwater Quality" and Implementation Program PFS-G: "Stormwater Management Plan") would result in a ***less-than-significant*** impact.

Impact 6.4-2: The Proposed Project could result in an increase of the level of pollutants in storm water runoff from the post-construction activities or cause the impairment of the beneficial uses of receiving waters or areas that provide water quality benefit or cause significant harm on the biological integrity of the waterways and water bides by the discharge of stormwater;

Impact Summary

Level of Significance Before Mitigation: *Potentially Significant*
Required Mitigation: *Mitigation Measure 6.4-1a: Adopt Revised General Plan Policy PFS-4.3 "Stormwater Quality" to Address Storm Drainage System Impacts and Mitigation Measure 6.4-1b: Adopt Revised General Plan Implementation Program PFS-G to Address Storm Drainage System Impacts.*
Level of Significance After Mitigation: *Less than Significant*

Impact Analysis

Flood control detention is considered the most viable option for mitigating the increase in runoff from new development areas, with the specific types and locations of these drainage facilities to be determined at the time development applications are submitted. Pollution associated with increased stormwater and urban runoff would affect local and regional surface and groundwater quality conditions. Unlike sewage, which is transported to a treatment plant, urban runoff may flow untreated through the storm drainage system. Anything thrown, swept, or poured into the street, gutter, or a catch basin (the curbside openings that lead into the storm drainage system) flows directly into ponding basins or local channels and creeks. Pollutant loads can be particularly acute at the beginning of the rainy season, but can be a problem at any time due to the improper disposal of products associated with home, garden, or automotive use.

Policies and implementation programs included as part of the Proposed Project that would minimize this impact are the same as those described above under Impact 6.4-1. However, even with implementation of the above mentioned policies and implementation programs, this impact is considered ***potentially significant***.

Required Mitigation Measures

To address this impact, the City shall implement "Mitigation Measure 6.4-1a: Adopt Revised General Plan Policy PFS-4.3 "Stormwater Quality" to Address Storm Drainage System Impacts and Mitigation Measure 6.4-1b: Adopt Revised General Plan Implementation Program PFS-G to Address Storm Drainage System Impacts", which are more fully described above under the description for Impact 6.4-1.

Significance after Implementation of Mitigation for Impact 6.4-2

The City's implementation of the Sacramento SWMP, and associated Development Standards Plan would address a variety of erosion generating or water quality impacts associated with runoff water that exceeds the capacity of existing storm drainage infrastructure

As stated above, the City will continue to implement a variety of policies and programs designed to address the provision of needed storm drainage infrastructure and stormwater quality issues. Therefore, implementation of the Proposed Project including the adoption of the revised policy and implementation program described above under Mitigation Measure 6.4-1a and Mitigation Measure 6.4-1b would result in a ***less-than-significant*** impact.

Impact 6.4-3: The Proposed Project could place housing within a 100-year flood hazard area, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map or place within a 100-year flood hazard area structures which could impede or redirect flood flows.

Impact Summary

Level of Significance Before Mitigation: ***Less than Significant***
Required Mitigation Measures: ***No Mitigation Required***
Level of Significance After Mitigation: ***Less than Significant***

Impact Analysis

A review of applicable FEMA flood maps indicates that there are several areas within the City's Planning Area that are within a 100-year floodplain area. Floodplain lands are found (but not limited to) areas along Dry Creek, Laguna Creek, Skunk Creek, and Deadman Gulch. Additionally, there are small patches of 100-year floodplain areas along Hen Creek in the southwest portion of the Study Area. The Proposed Project (Preferred Land Use Diagram) has identified the floodplain areas around Dry Creek as remaining as open space. Implementation of the Proposed Project (including build-out of the Preferred Land Use Alternative) could expose more people and habitable structures to potential flooding if development occurs within or adjacent to these floodplain areas. The City of Galt has channelized Deadman Gulch and a Letter of Map Revision (LOMR) has been issued from FEMA. The City anticipates that there will be no structures in the floodplains located within the current City limits.

Policies and implementation programs included as part of the Proposed Project that would minimize this impact are summarized below by General Plan Element, with a complete description of these policies and programs provided in Appendix C "Policy Document" of this draft EIR. Specific policies direct the City to preserve floodplain areas (see policies SS-3.1, SS-3.3, COS-1.14, COS-4.2, and Implementation Program COS-A) and limit development in hazardous areas (see policies SS-3.1 and SS-3.2). Additional policies require the City to continue to cooperate with local, state, and federal agencies to address local and regional flood issues (see policy COS-1.3) and continue to enforce the City's Emergency Response Plan (policy SS-1.1) in the event of a flood emergency. Other policies from the Public Facilities and Services Element require the City to prepare, annually review, and update every five years a Storm Drainage Master Plan and a Pavement Management Plan to ensure that adequate levels of storm drainage infrastructure are planned and provisions are made for their development (see policies PFS-1.5, PFS-4.1, and Implementation Programs PFS-A, PFS-G, and PFS-H). With implementation of these policies and implementation programs, this impact is considered ***less-than-significant.***

Safety and Seismic & Land Use Elements	Conservation and Open Space Element
Policies and implementation programs designed to minimize this impact through the preservation of floodplain areas and the management of new development in hazardous areas include the following:	
SS-3.1 Floodplain Mapping SS-3.2 Development in the 100-Year Floodplain SS-3.3 Natural Drainageways Enhancements LU-1.9 Growth in Hazard-Prone Areas	COS-1.1 Flood Control COS-1.2 Flood Protection Ordinance COS-1.4 Storm Flow Impacts COS-1.14 Floodplain Dedication COS-1.17 Floodplain Visual Accessibility COS-4.2 Natural Floodway Protection COS-4.4 Open Space Protection COS-A Flood Protection Ordinance
Policies designed to minimize this impact through the continued coordination with emergency response plans and service providers include the following:	
SS-1.1 City Emergency Operations Plan (EOP) SS-1.2 Inter-Agency Coordination	COS-1.3 Inter-Agency Coordination
Public Facilities and Services Element	
Policies and implementation programs designed to minimize this impact through adherence to appropriate levels of stormwater infrastructure planning, financing and construction include the following:	
PFS-1.4 Financing from New Development PFS-1.5 Public Facility Master Plans PFS-1.6 Capital Improvement Program PFS-1.7 Public Facility Financing PFS-1.8 Ultimate Capacity Needs PFS-1.9 Fair Share Costs on New Developments PFS-1.10 Broad-Based Funding Sources PFS-1.11 Fiscal Impact Analysis for Specific Plans and Significant General Plan Amendments	PFS-4.1 Storm Drain Enhancements PFS-4.2 Conservation/Stormwater PFS-4.4 Project Design PFS-4.7 Mitigating Stormwater Runoff PFS-4.8 Joint Use of Detention Facilities PFS-4.9 Detention Requirements PFS-A Infrastructure Master Plans PFS-G Stormwater Management Plan PFS-H Stormwater and Flood Protection Ordinance

Required Mitigation Measures

This impact is considered ***less-than-significant***. No additional mitigation measures are required.

Impact 6.4-4: The Proposed Project could expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam.

Impact Summary

Level of Significance Before Mitigation: ***Less than Significant***
Required Mitigation Measures: ***No Mitigation Required***
Level of Significance After Mitigation: ***Less than Significant***

Impact Analysis

Flood hazards associated with inundation resulting from levee or dam failure are considered a low threat in the City of Galt. A system of levees and dikes for the streams and creeks draining to the Cosumnes River are generally found in the northwestern portion of the Study Area outside of the General Plan boundary and to the north of the Study Area. Additionally, Laguna Creek may be subject to dam failure inundation in the event of a major dam failure at Rancho Seco Dam, which is located almost 10 miles northeast of the City of Galt. However, the dam inundation area along Laguna Creek and near the City of Galt is located along the northern boundary of the Study Area.

(California OES 1997-2007) No development is proposed for these areas as part of the Proposed Project since they are outside of the City's proposed Sphere of Influence boundary.

Policies and implementation programs included as part of the Proposed Project that would minimize this impact are summarized below by General Plan Element, with a complete description of these policies and programs provided in Appendix C "Policy Document" of this draft EIR. Specific policies direct the City to preserve floodplain areas (see policies SS-3.1, SS-3.3, COS-1.14, COS-4.2, and Implementation Program COS-A) and limit development in hazardous areas (see policies SS-3.1 and SS-3.2). Additional policies require the City to continue to cooperate with local, state, and federal agencies to address local and regional flood issues (see policy COS-1.3) and continue to enforce the City's Emergency Response Plan (policy SS-1.1) in the event of a flood emergency. Other policies from the Public Facilities and Services Element require the City to prepare, annually review, and update every five years a Storm Drainage Master Plan and a Pavement Management Plan to ensure that adequate levels of storm drainage infrastructure and planned and provisions are made for their development (see policies PFS-1.5, PFS-4.1, and Implementation Programs PFS-A, PFS-G, and PFS-H). With implementation of these policies and implementation programs, this impact is considered ***less-than-significant.***

Safety and Seismic & Land Use Elements	Conservation and Open Space Element
Policies and implementation programs designed to minimize this impact through the preservation of floodplain areas and the management of new development in hazardous areas include the following:	
SS-3.1 Floodplain Mapping SS-3.2 Development in the 100-Year Floodplain SS-3.3 Natural Drainageways Enhancements LU-1.9 Growth in Hazard-Prone Areas	COS-1.1 Flood Control COS-1.2 Flood Protection Ordinance COS-1.4 Storm Flow Impacts COS-1.14 Floodplain Dedication COS-1.17 Floodplain Visual Accessibility COS-4.2 Natural Floodway Protection COS-4.4 Open Space Protection COS-A Flood Protection Ordinance
Policies designed to minimize this impact through the continued coordination with emergency response plans and service providers include the following:

Public Facilities and Services Element	
Policies and implementation programs designed to minimize this impact through adherence to appropriate levels of stormwater infrastructure planning, financing and construction include the following:	
PFS-1.4 Financing from New Development PFS-1.5 Public Facility Master Plans PFS-1.6 Capital Improvement Program PFS-1.7 Public Facility Financing PFS-1.8 Ultimate Capacity Needs PFS-1.9 Fair Share Costs on New Developments PFS-1.10 Broad-Based Funding Sources PFS-1.11 Fiscal Impact Analysis for Specific Plans and Significant General Plan Amendments	PFS-4.1 Storm Drain Enhancements PFS-4.2 Conservation/Stormwater PFS-4.4 Project Design PFS-4.7 Mitigating Stormwater Runoff PFS-4.8 Joint Use of Detention Facilities PFS-4.9 Detention Requirements PFS-A Infrastructure Master Plans PFS-G Stormwater Management Plan PFS-H Stormwater and Flood Protection Ordinance

Required Mitigation Measures

This impact is considered ***less-than-significant***. No additional mitigation measures are required.

Impact 6.4-5: The Proposed Project could result in an increase of the discharge of storm water from material storage areas, vehicle or equipment fueling, vehicle or equipment

maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas;

Impact Summary

Level of Significance Before Mitigation: ***Potentially Significant***
Required Mitigation: ***Mitigation Measure 6.4-1a: Adopt Revised General Plan Policy PFS-4.3 "Stormwater Quality" to Address Storm Drainage System Impacts and Mitigation Measure 6.4-1b: Adopt Revised General Plan Implementation Program PFS-G to Address Storm Drainage System Impacts.***
Level of Significance After Mitigation: ***Less than Significant***

Impact Analysis

Development consistent with the build-out of the General Plan could result in stormwater discharges from material storage areas, vehicle or equipment fueling/maintenance areas, loading docks, or other outdoor work areas. Several policies and implementation measures contained in the General Plan are designed to minimize discharge of polluted runoff.

Detention and implementation of other best management practices (BMPs) are considered the most viable option for minimizing the discharge of pollutants to receiving waters. Pollution associated with increased stormwater and urban runoff would affect local and regional surface and groundwater quality conditions. Unlike sewage, which is transported to a treatment plant, urban runoff may flow untreated through the storm drainage system. Anything thrown, swept, or poured into the street, gutter, or a catch basin (the curbside openings that lead into the storm drainage system) flows directly into ponding basins or local channels and creeks. Pollutant loads can be particularly acute at the beginning of the rainy season, but can be a problem at any time due to the improper disposal of products associated with home, garden, or automotive use. The implementation of BMPs on every project helps to reduce the discharge of pollutants to receiving waters.

Policies and implementation programs included as part of the Proposed Project that would minimize this impact are the same as those described under Impact 6.4-1. However, even with implementation of the above mentioned policies and implementation programs, this impact is considered ***potentially significant***.

Required Mitigation Measures

To address this impact, the City shall implement "Mitigation Measure 6.4-1a: Adopt Revised General Plan Policy PFS-4.3 "Stormwater Quality" to Address Storm Drainage System Impacts and Mitigation Measure 6.4-1b: Adopt Revised General Plan Implementation Program PFS-G to Address Storm Drainage System Impacts", which are more fully described above under the description for Impact 6.4-1.

Significance after Implementation of Mitigation for Impact 6.4-5

The City's implementation of the Sacramento SWMP, and associated Development Standards Plan would address a variety of erosion generating and water quality impacts associated with runoff water that exceeds the capacity of existing storm drainage infrastructure.

As stated above, the City will continue to implement a variety of policies and programs designed to address stormwater quality issues. Therefore, implementation of the Proposed Project including the adoption of the revised policy and implementation program described above under Mitigation Measure 6.4-1a and Mitigation Measure 6.4-1b would result in a ***less-than-significant*** impact.

6.5 Solid Waste

This section focuses on impacts resulting from the generation, handling, and storage of solid waste materials associated with implementation of the Proposed Project.

Environmental and Regulatory Setting

Section 15150 of the CEQA Guidelines permits documents of lengthy technical detail to be incorporated by reference in an EIR. Specifically, Section 15150 states that an EIR may "incorporate by reference all or portions of another document which is a matter of public record or is generally available to the public ...." Consistent with the CEQA Guidelines and as a way to avoid creating an overwhelming amount of paper for members of the public and decision-makers to sort through, this draft EIR incorporates by reference information from both the Existing Conditions and Policy Document. Consistent with this approach, the reader is directed to Chapter 4 of the Existing Conditions Report for environmental and regulatory setting information specific to public facilities and services topics (see Appendix B of this draft EIR).

Impact Methodology

Solid waste impacts were evaluated by comparing the expected solid waste generated by the Proposed Project to existing and any planned capacity of the landfills expected to serve the Study Area. Estimates of City-wide average daily solid waste production were calculated using average daily production rates provided by the EPA (4.6 pounds per day) and the estimate of current solid waste production (20,406 tons per year in 2003) provided for the City.

As a result of comments (see Table 1-1 of Chapter 1.0 "Introduction") received during the NOP public scoping phase of the Proposed Project, specific effects from the project relating to solid waste have been considered as part of the impact analysis. For example, the California Waste Recovery Systems suggested that the City should have a solid waste transfer station and that the identification of a transfer station site should be included in the project description of the EIR. To address this concern, the Policy Document includes Policy LU-8.5 "Refuse Transfer Station". This policy requires the City to coordinate efforts with the refuse service provider to locate a new refuse transfer station along the railroad tracks, north of Twin Cities Road.

CHAPTER 8.0
Natural Resources

8.1 Introduction

In preparing the Proposed Project, a common chapter numbering system was used in preparing the key general plan documents to allow readers the ability to easily find related information throughout the various documents. In the Existing Conditions Report, Chapter 8.0 is the "Natural Resources" section. This section provides background information on the existing open space and natural resource conditions of the Study Area, with the draft Policy Document providing the policy framework for the various resources identified under the Proposed Project.

This chapter discusses the potential impacts of the Proposed Project on a variety of natural resources including:

- Hydrology (8.2),
- Biological Resources (8.3), and
- Soils and Agricultural Resources (8.4).

8.2 Hydrology

Hydrology issues include the distribution and circulation of water, both aboveground (surface water) and belowground (groundwater). Water quality deals with the quality of both surface and groundwater resources. Surface water includes all water resources on the surface of the land and includes rivers, lakes, canals, and of course the Sacramento-San Joaquin River Delta (Delta). Hydrologic impacts related to the provision of water supply, wastewater, and storm water drainage services are addressed in Chapter 6.0 "Public Facilities & Services" (see Sections 6.2 "Water Supply", Section 6.3 "Wastewater Systems", and Section 6.4 "Storm Drainage"). Hydrologic impacts related to flooding issues are addressed in Chapter 10.0 "Public Health and Safety" (see Section 10.4 "Flooding").

Environmental and Regulatory Setting

As previously described in the "Readers Guide" (see Chapter 1 of this draft EIR), Section 15150 of the CEQA Guidelines permits documents of lengthy technical detail to be incorporated by reference in an EIR. Specifically, Section 15150 states that an EIR may "incorporate by reference all or portions of another document which is a matter of public record or is generally available to the

public…" Consistent with the CEQA Guidelines and as a way to avoid creating an overwhelming amount of paper for members of the public and decision-makers to sort through, this draft EIR incorporates by reference information from both the Existing Conditions Report and Policy Document. Consistent with this approach, the reader is directed to Chapter 8.0 of the Existing Conditions Report for environmental and regulatory setting information specific to hydrology and water quality topics (see Appendix B of this draft EIR).

Impact Methodology

The provision of ongoing storm water management is currently being accomplished through requirements set forth in the City of Galt Municipal Code. The City of Galt also submitted its Storm Water Management Plan/Program (SWMP) (as a joint effort with other member agencies of the Sacramento Stormwater Quality Partnership) in November 2000 and a subsequent update in December 2003. The SWMP includes program elements that each permittee will implement to reduce the discharge of pollutants in storm water to the maximum extent practicable (MEP), and to effectively prohibit non-storm water discharges into municipal separate storm sewer systems (MS4s) within each permittee's jurisdiction. Each Stormwater Quality Improvement Program (SQIP) is a site-specific modification of the existing comprehensive SWMP required under the previous MS4 permit, Order No. 96-105. The County and the Cities of Citrus Heights, Elk Grove, Folsom, and Galt jointly submitted a SQIP (County SQIP). The City of Sacramento submitted a separate SQIP (City SQIP). The City is required to maintain compliance with National Pollutant Discharge Elimination System (NPDES) requirements that evolve over time.

Impacts associated with hydrologic resources were evaluated using information provided in the General Plan Existing Conditions Report (see Appendix B of this draft EIR). This assessment of impacts to hydrologic resources is a qualitative review of the existing hydrologic conditions within the Study Area and a determination of whether the Proposed Project includes adequate provisions to ensure continued protection of these resources.

As a result of comments (see Table 1-1 of Chapter 1.0 "Introduction") received during the NOP public scoping phase of the Proposed Project, specific effects on groundwater resources have been considered as part of the impact analysis. For example, Michael Eaton recommended that the EIR analysis consider specific impacts to groundwater resources and that the City consider working actively with the South Sacramento County Agricultural Water Authority (SSCAWA) in order to move towards a system of conjunctive water use.

Standards of Significance

The Proposed Project will establish development guidelines against which future projects will be judged for consistency. The significance criteria for this analysis were developed from criteria presented in Appendix G, "Environmental Checklist Form", of the CEQA Guidelines (as amended by the City of Galt to address a variety of water quality issues). The project (or the project alternatives) would result in a significant impact if it would:

- Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (i.e., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted); or

- Violate any water quality standards, waste discharge requirements, or otherwise substantially degrade water quality.

Impacts and Mitigation Measures

Impact 8.2-1: The Proposed Project would have the potential, in the long-term, to deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table.

Impact Summary

Level of Significance Before Mitigation: ***Potentially Significant***
Required Mitigation: ***Mitigation Measure 8.2-1: Adopt General Plan Policy PFS-2.12 "Water Meter Retrofit Program" to Address Water Supply Impacts***
Level of Significance After Mitigation: ***Significant and Unavoidable***

Impact Analysis

Implementation of the Proposed Project (including build out of the Preferred Land Use Alternative and the Circulation Diagram) would result in an increased demand on groundwater supplies for urban and rural uses within the City. Effective implementation of groundwater management practices are necessary to meet future water demands via groundwater extraction, without creating declining groundwater levels, and adversely affecting existing wells. Concerns of declining groundwater levels are heightened by the fact that the City is presently dependent upon groundwater supplies.

The City of Galt relies upon groundwater from the Cosumnes Sub-basin (DWR Groundwater Basin Number 5-22.16) of the San Joaquin Valley Groundwater Basin as its sole source of domestic potable water. The Cosumnes Sub-basin is an un-adjudicated basin that supports both municipal and agricultural users.

The publication, *"California's Groundwater – Bulletin 118, Update 2003"*, published by the California Department of Water Resources contains a wide range of information pertaining to groundwater basins and sub-basins throughout California. The information summarized below was derived from the referenced publication.

> *Cosumnes Sub-Basin: "Montgomery Watson Consultants (Montgomery Watson 1993) developed a groundwater model for Sacramento County. A subsequent model was developed for San Joaquin County by Montgomery Watson as part of*

Statement of Legal Authority

This statement verifies the authority of the City of Rancho Cordova ("City") to comply with certain Federal NPDES Storm Water Regulations and the requirements of the California Regional Water Quality Control Board, Central Valley Region Order No. R5-2008-0142 ("Order"), which also serves as NPDES Permit CAS082597 ("Permit"). The City submits this statement along with its Stormwater Quality Improvement Plan ("SQIP") as required by the Order.

Section D.6 of the Order requires the preparation of a statement "certified by its Chief Legal Counsel," verifying that adequate authority exists to implement the terms of the Order and requirements of federal stormwater regulations. Section D.6 specifies six items that must be included in the statement:

> "6. Each Permittee shall provide to the Regional Board a statement certified by its chief legal counsel that the Permittee has adequate legal authority to implement and enforce each of the requirements contained in 40 CFR 122.26(d)(2)(i)(A-F) and this Order, including any modifications thereto in effect when the certified statement is provided. This statement, which shall be included in Permittees' revised SQIP(s), shall include the following:
>
> a. Citation of urban runoff related ordinances adopted by the Permittee and the reasons the ordinances are enforceable;
>
> b. Progressive enforcement policy and how it will be effectively implemented;
>
> c. Identification of the local administrative and legal procedures available to mandate compliance with the Permittees' storm water related ordinances, which incorporate the conditions of this Order;
>
> d. Description of how these ordinances are implemented and how enforcement actions under these ordinances may be appealed; and
>
> e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions; and

f. Description of the Permittee's storm water management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities.

As required by the Order, a complete discussion of each issue follows.

a. Citation of urban runoff related ordinances adopted by the Permittees and the reasons the ordinances are enforceable.

Chapter 15.12 of the Rancho Cordova Municipal Code (the "City Storm Water Ordinance") is the principal ordinance governing discharges to the municipal separate storm sewer system (MS4) of which the City's storm sewer system is a designated part. The City's Storm Water Ordinances was revised in 2004, in order to ensure the County had the legal authority to implement and enforce the City's Stormwater control program, as well as to provide for the recovery of administrative and regulatory costs incurred by the City or by the County.

The purpose of the City Storm Water Ordinance is to "protect and enhance the water quality of watercourses, water bodies and wetlands within the unincorporated area of the City in a manner consistent with the Federal Clean Water Act, the Porter-Cologne Water Quality Control Act and Municipal Discharge Permit No. CA0082597 by controlling the contribution of urban pollutants to stormwater runoff which enters the County stormwater conveyance system." The provisions of the City Storm Water Ordinance authorize implementation or enforcement of each mandate of the Order or stormwater regulation.

Additionally, the Grading Ordinance regulates grading projects and sets conditions for approval of such projects. This ordinance is specifically designed to minimize the degradation of the water quality of watercourses caused by grading, filling and excavation of land, and to control sediment and pollutant runoff from other construction-related activities. These goals are achieved by establishing administrative procedures, minimum standards of review, and implementation and enforcement procedures for controlling erosion, sedimentation and other construction-related pollution.

These ordinances were properly published, introduced and adopted by the City Council pursuant to California law and constitute enforceable enactments pursuant to the City's police power.

The City's authority under the Grading Ordinance and the City Storm Water Ordinance is very wide-ranging and is sufficient to address the majority of the mandates contained in the Order. The Order requires the Permittees to "carry out all inspections, surveillance, and monitoring necessary to determine compliance and noncompliance with local ordinances and permits, including the prohibition of illegal discharges to the MS4." The City Storm Water Ordinance authorizes inspections and monitoring by the City and requires regular reports from dischargers. Additionally, the Order requires the City to have the legal authority to require "that

treatment control BMPs be properly operated and maintained." City Storm Water Ordinance sections 15.12.200-230 require any person engaged in activities which may result in pollutants entering the storm water conveyance system to implement and maintain BMPs.

b. Progressive enforcement policy and how it will be effectively implemented.

The City's Storm Water Ordinance provides various levels of enforcement, which are discussed further below. The City may issue a notice of violation to any person found in violation of the City's Storm Water Ordinance. If an issue is not resolved voluntarily after the notice of violation, the City has administrative enforcement options, including the ability for the administrator to issue an administrative compliance order which, among other things, sets forth the specific steps and time schedules for compliance and the measures necessary to implement the BMPs in accordance with the City's Storm Water Ordinance. Additionally, if a violation constitutes an immediate threat to public health or safety, including for example, significant harm to human or aquatic life, the City may issue a cease and desist order requiring the immediate end to the activities causing the threat. The City also has the ability to impose administrative civil penalties up to $5,000 for each violation of the storm water ordinance.

c. Identification of the local administrative and legal procedures available to mandate compliance with the Permittees' storm water related ordinances, which incorporate the conditions of this Order.

The City Storm Water Ordinance has several administrative procedures available to mandate compliance with the requirements contained in the ordinance. As discussed further below, these options include issuing notices of non-compliance, administrative enforcement orders and cease and desist orders. In addition to administrative enforcement options, the City may seek civil and criminal penalties against a violator and may seek nuisance abatement through the court system. Lastly, Section 15.12.230 of the City Storm Water Ordinance allows the City's Public Works Director to promulgate regulations for the implementation of the City's Storm Water Ordinance. This section gives the City the ability to further refine its administrative compliance options.

d. Description of how these ordinances are implemented and how enforcement actions under these ordinances may be appealed.

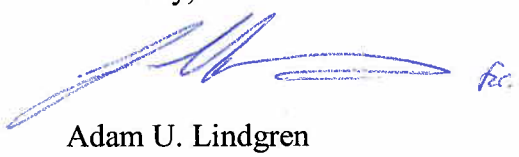
The City will implement the City Storm Water Ordinance through the stormwater program detailed in the SQIP.

The City Storm Water Ordinance sets forth a detailed process for appealing enforcement action brought pursuant to it. Section 15.12.440 provides that any person receiving a notice of non-compliance, an administrative compliance order or otherwise suffers an adverse determination under the ordinance may request an administrative hearing before an administrative hearing officer designated by the City Council. The Ordinance requires the appellant to file, within 30 days of receipt of notice of an adverse determination, a written

request for an administrative hearing, accompanied by an administrative hearing fee as established by resolution of the Council, with the Director. The City will then hold a hearing on the matter before a hearing officer within 45 days of the filing of the written request unless, in the reasonable discretion of the hearing officer and pursuant to a request by the appealing party, a continuance of the hearing is granted. The hearing office must issue his or her final decision within ten days of the hearing.

e. Description of whether the municipality can issue administrative orders and injunctions or if it must go through the court system for enforcement actions.

As stated above, the City Storm Water Ordinance includes an extensive section on enforcement actions (giving the City a wide variety of administrative options in case of violations). The administrative enforcement options include issuing a notice of non-compliance, administrative compliance orders, and cease and desist orders. Issuance of a cease and desist order functions as an injunction in that it allows the City's Public Works Director to direct the owner or occupant of any premises, or any other person responsible for any violation of the proposed ordinance, to take one or more of the following actions: (1) Immediately discontinue any prohibited discharge to the City stormwater conveyance system; (2) Immediately discontinue any other violation of the ordinance; and (3) Clean up the area affected by the violation. The City's Public Works Director may direct by a Cease and Desist Order that any person immediately cease any activity that may lead to a violation of Receiving Water Limitations.



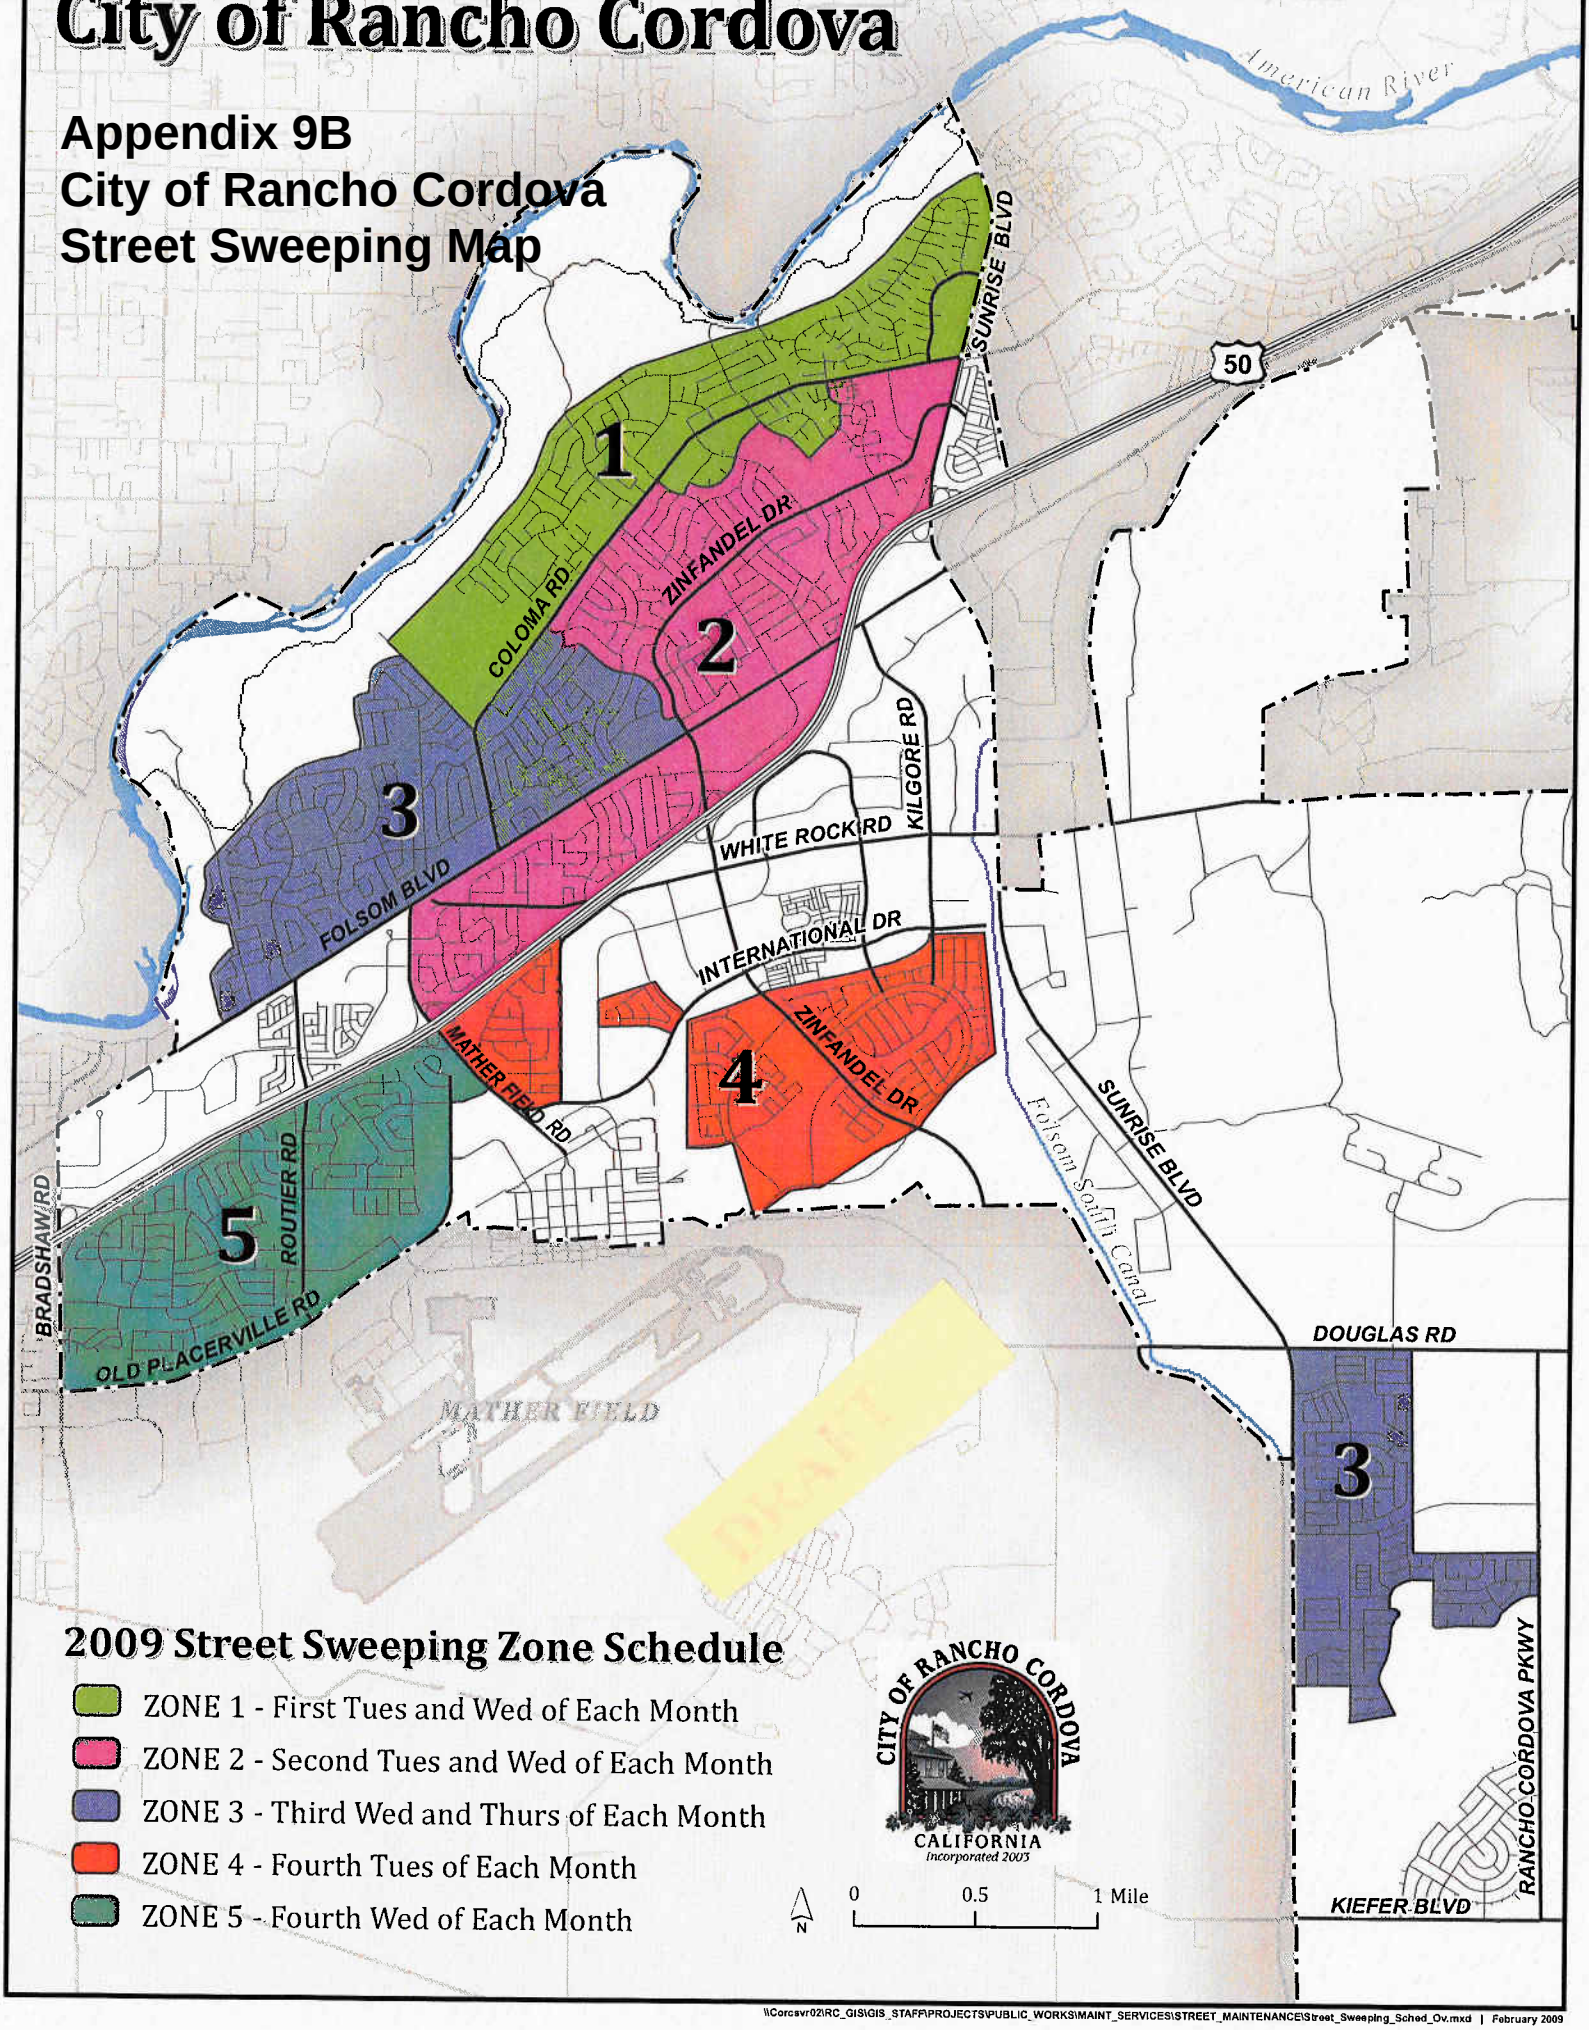
The City has similar authority under the Grading Ordinance. The powers include the issuance of stop work notices, denial of future grading permits and the abatement of nuisance conditions.

f. Description of the Permittee's storm water management structure. There might be different departments that are to develop, implement, and enforce various components of the program. Summarize how the various departments communicate and coordinate activities.

The City's Public Works Department ("PWD") oversees the responsibility for compliance with the Storm Water Quality Improvement Plan and the Order. Members of the City's Planning Staff participate in the implementation and enforcement of the Order by reviewing environmental documents for projects, and conditioning projects to comply with the Order and Permit requirements. The PWD also works closely with the Public Information Officer to conduct outreach to citizens and City employees. While the PWD is the lead department, the City ensures a comprehensive approach to achieve compliance.

Based on the foregoing discussion, the City Attorney respectfully submits this certification. Please do not hesitate to contact me if you need further information.

Sincerely,



Adam U. Lindgren
City Attorney
