The California Regional Water Quality Control Board, Central Valley Region, finds that the Board adopted the following Orders and Resolutions, which are no longer applicable for the reasons shown:

Waste Discharge Requirements Order No. 97-071 for Viken Industries, Inc. (Discharger), regulates the discharge of inert wastes generated by construction activities to the Discharger’s proposed Huntsman Avenue Solid Waste Disposal Site. The Discharger has been issued notices of non-payments for 2006-2007 annual fees. The facility property, which was never developed for accepting solid wastes, was sold and is now under new ownership. The new property owner has no plans for developing the site for solid waste disposal. Rescission of the Order is appropriate. (DEE)

Order No. 99-085, adopted 11 June 1999, prescribes requirements for the discharge of industrial effluent from a former printing facility and treated domestic effluent from Sequoia Voting Systems, Inc. An inspection by Regional Water Board staff confirmed that the Class II surface impoundment at the facility has been closed in accordance with the approved closure plan. The domestic package treatment plant still in operation is now regulated by General Waste Discharge Requirements for Discharges to Land by Small Domestic Wastewater Treatment Systems, Water Quality Order No. 97-10-DWQ. As the Class II waste management unit has been closed and the treated domestic effluent is now regulated under a separate order, Order No. 99-085 should be rescinded. (AM)

Waste Discharge Requirements Order No. R5-2002-0012 (NPDES No. CA0081566) adopted in June 2002, authorizes a discharge from the Calpine Greenleaf Inc. Unit No. 1 gas cogeneration plant in Sutter County. The Discharger has implemented one-hundred percent recycling of all treated wastewater from the facility, eliminating the surface water discharge. For this reason, the NPDES permit is no longer necessary. (DCM)

Order No. R5-2002-0061, adopted on 26 April 2002, prescribes requirements for Bar-Vee Dairy to irrigate silage and fodder crops using recycled water from the City of Turlock Water Quality Control Facility (WQCF). On 10 December 2007 the City of Turlock WQCF reported that Waste Discharge Requirements would no longer be renewed. Subsequent phone conversation verified that Bar-Vee Dairy will no longer be receiving recycled water. Order No. R5-2002-0061 is being rescinded since it no longer serves any purpose. (RTM)

Order No. R5-2002-0066, adopted 26 April 2002, prescribes requirements for the discharge of crude oil production wastewater to three surface impoundments (sumps) for Chevron U.S.A. Inc. (Chevron) at the Boots Lease in the NE ¼ of Section 9, T29S, R28E, MDB&M, Kern River Oil Field, Kern County. An inspection confirmed that discharge to the sumps has been discontinued and the sumps have been properly closed. Chevron is currently piping all
wastewater produced on the Boots Lease to the Chevron Station 36 wastewater treatment plant. (RW)

Waste Discharge Requirements Order No. R5-2002-0213 (NPDES No. CA0081931) prescribed requirements for the discharge of treated groundwater from the Defense Logistic Agency's Defense Distribution Depot San Joaquin (Sharpe Army Depot) to surface waters. The Facility ceased discharging treated groundwater to surface waters on 4 December 2006. Since that date, all treated groundwater has been discharged to land under the Record of Decision (ROD) for the Facility. The NPDES permit is no longer needed.

Waste Discharge Requirements Order No. R5-2003-0087 (NPDES No. CA0079171), and Cease and Desist Order No. R5-2003-0088, adopted 16 June 2003, authorize discharge of treated municipal wastewater from the City of West Sacramento WWTP in Yolo County. A pipeline to convey all municipal wastewater from the City of West Sacramento service area for treatment and disposal at the Sacramento Regional County Sanitary District wastewater treatment plant in Sacramento County has been recently put into operation. Therefore, the NPDES Permit for the City of West Sacramento WWTP is no longer necessary. (DCM)

Order No. R5-2007-0120, adopted on 14 September 2007, prescribes requirements for the North Fork Aggregate quarry in Shasta County. The facility is no longer planning to conduct gravel washing operations and therefore requested rescission of its waste discharge requirements. Coverage under the general Industrial Storm water permit remains applicable. Order No. R5-2007-0120 is being rescinded because it is no longer necessary. (BJS)

IT IS HEREBY ORDERED that the above waste discharge requirements Orders and Resolutions are rescinded.

I, PAMELA C. CREEDON, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Central Valley Region, on 25 April 2008.

PAMELA C. CREEDON, Executive Officer
