

APPENDIX D—LOWER SAN JOAQUIN RIVER WATER COMPREHENSIVE MONITORING GUIDE

Introduction

This appendix contains a summary of monitoring information for the Lower San Joaquin River Basin, focused primarily on downstream mainstem sites in the San Joaquin River to the Delta. Table D1 contains an overall summary of monitoring programs and agencies monitoring in this area of the basin. Table D2 contains a key to the sites indicated on the map in Figure D1, along with additional information about the sites and monitoring programs. Tables D3 through D10 contain constituent level information on general water quality parameters, pathogens, nutrients, organics, metals and trace elements, nutrients, pesticides and toxicity. A populated cell in a column representing a group of constituents (e.g. organics) means that at least one constituent in the group is monitored, but not necessarily all.

The information presented in this summary is based on data collected from best-known available resources. Since much of the information pertains to other programs and agencies, Central Valley Water Board staff does not guarantee the accuracy of the information contained in this summary. A full list of references used to create this summary is listed at the end of this appendix.

3	SJR at Fremont Ford	GBP	DCRT	WDR/Various GBP Monitoring	541MER538	37.3094	-120.9292	GBP is a collaborative monitoring effort between several agencies in which responsibility for testing a given constituent is rotated between the agencies. D/W sites are tested daily with a 24-hour composite sample and weekly with a grab sample. M/BW sites are sampled monthly during the non-irrigation season (Sept-Feb) and every other week during the irrigation season (Mar-Aug). Monitoring for constituents that are required for WDR 5-01-234 did not start until June 2011.
