1) Link to CIWQS Reports from program sites (NPDES, Stormwater, and Land Disposal). Enforcement already has a link.

2) If you click "More" on the menu on the Home page there is a Reports link that takes you to: Site Specific Water Quality Objectives - (8/22/03) - Draft Compilation of Existing Guidance for the Development of Site-Specific Water Quality Objectives in the State of California California Leaking Underground Fuel Tank (LUFT) Historical Case Analyses I think we should have a CIWQS Reports link here.

The LUFT info should be shoved to the "storage tanks" heading and the WQO language should be moved to "Permit/Licensing."

The existing data and database section should be left, more or less, as-is. But the new reports area should be used exclusively as a direct link to data reporting tools. This could be SWAMP data, CIWQS data (i.e., an improvement of the old 'run reports' list of reports for the public), Geotracker, enforcement, water rights, etc., but not to store static reports (baseline enforcement, strategic planning, etc).

3) Anytime the web site says CIWQS, define it as "Permit, regulatory, and compliance information." For example, when you click "Water Quality Data" CIWQS is the top link, but what is it?

4) I think we should include a link in the main menu called "Who we regulate" and have it go to a page that describes how to get wastewater discharger info and stormwater info, etc. Like, "the Water Boards regulate wastewater dischargers to both surface water (rivers, ocean, etc.) and to land. To find information on the facilities we regulate and their compliance data use the programs' 'NPDES' and 'Nonsubchapter15.'"

It would also be helpful to have some automatic lists of who we regulate, as a response to the most frequently asked questions. For example, a list of WWTPs, or landfills, or ocean discharges, etc.
