Project Name:

SFPP, LP Line Section 111 (20") Right-of-Way Repair Project

WDID No. 7B133022001

Receiving Water:

Unnamed ephemeral washes draining to the Salton Sea

Location:

City or Area: Between Durmid and Fink

Counties: Imperial and Riverside

Longitude/Latitude: Sections 33 and 34 of Township 8S, Range 11E; Sections 2, 3, 4, 11, and 12 of Township 9S, Range 11E; Sections 7, 17 and 18 of Township 9S, Range 12 E.

Project Description:

SFPP, L.P. owns and operates a 20-inch pipeline that transports petroleum products from Colton, California to the Yuma, Arizona area. An approximately 9-mile long section of the Right-of-Way (ROW) access road has recently experienced high volume stormwater flows, which have washed out the access road in 20 locations. In order to alleviate future erosion and protect the existing facilities, SFPP is proposing to place 20 foot long, 20-inch diameter, galvanized, corrugated metal pipe (CMP) culverts at 20 ephemeral drainage crossings along the 9 mile segment of the existing ROW access road. Construction activities at each site would include hand digging in order to establish pipeline elevation, inspection and repair of the pipeline coating (if necessary), excavation of the washout, installation of the CMP culverts, backfill and compaction using native material from on-site, and finally restoration of the road grade above the culverts. These repairs would facilitate stormwater flows beneath the access road thereby protecting the access road and pipeline from future erosion, and re-allowing maintenance and emergency vehicles to access to the ROW.
