Project Name:

California Department of Transportation - Wister Wash Bridge Repair Project
WDID No. 7A133034001

Receiving Water:

Salton Sea

Location:

Unincorporated (near the Salton Sea area) in Imperial County; Longitude/Latitude:
Lat. 33° 18' 57.62"N;
Township/Range: T10S, R13E;
Long 115° 36' 14.16"W.

Project Description:

California Department of Transportation proposes repairing cracks in the columns by injecting epoxy into cracks. The plan includes excavating 5 feet of soil to get access to perform work proposed underneath bridge. Approximately 444 cubic yards will be excavated for access. This work will require a backhoe to excavate the initial portion adjacent to the bridge. To get directly underneath the bridge, a small ramp may be built for a Bobcat Loader which will excavate the remaining portion. The excavation area will extend 20 feet upstream and 20 feet downstream of the bridge. Once the columns are repaired, the excavation area will be back-filled with the original soil.

Action:

Pending
