Unit Description
Franke filter unit complete with FRX02 cartridge.

General Performance:
The filter housing fitted with an FRX02 filter element provides the user with a point of use device capable of reducing cysts, turbidity and particles contained within a water supply.

The FRX02 element utilises advanced carbon technology to reduce Chlorine (taste and odors) and improve taste. The incorporation of a heavy metal scavenging compound efficiently reduces lead.

A cartridge that has reached the end of its life would be indicated by a reduction in the quality of the filtered water with respect to taste. The cartridge should be replaced in accordance with the rated service capacity, which would typically give a period of six months usage.

Manufactured by:
Fairey Industrial Ceramics Limited
Newcastle, Staffs, ST5 9BT

Tested at Rated Flow; Pressure = 60 psig; pH = 7.5±1; Temp. 10-25°C

The concentration of the indicated substances in water entering the system was reduced to a concentration less than or equal to the permissible limit for water leaving the system as specified in NSF/ANSI Standards 42 and 53.
Installation, Operation and Maintenance:

Detailed installation and operating instructions are provided with each filter unit supplied. For general guidance, however, the main points are summarised below:

1. It is important that local laws and regulations are observed and that fittings comply with such regulations. The filter is to be installed on a cold water line only.

PLEASE NOTE: State of Ma. Follow Mass plumbing code. A licensed plumber is required.

2. For easy servicing of the filter, there should be at least four inches of space below the filter body to allow for removal of the cartridge.

3. When the filter is installed, to ensure that the filter is conditioned to the local water supply, the filter should be flushed for a minimum of 10 minutes, and allowed to stand for 24 hours with a further short flush (10 minutes) of water, after which the filter will be ready to perform at its very best.

Certification:

Tested and Certified to NSF/ANSI Standards 42 & 53 for the following:

- Chlorine reduction; Taste and Odor;
- Nominal Particulate reduction, Class 1;
- Turbidity reduction;
- Cyst reduction (including Giardia and live Cryptosporidium);
- Lead reduction

Do not use where water is microbiologically unsafe or of unknown quality without adequate disinfection before or after the systems.

Systems Certified for Cyst Reduction may be used on disinfected water that may contain filterable Cysts.

The substances reduced by this device are not necessarily in your water and while testing was performed under standard laboratory conditions, actual performance may vary.

Replacement Parts:

The replacement parts for this unit are FRX02 elements (Part No. W9223032).

Only use genuine Franke replacement elements to ensure optimum filter performance.

When Leaving on Vacation and To Winterize the Unit

If you plan to be away from home for extended periods, or the filter housing may be subject to the risk of freezing, carry out stages 19, 20 and 11 on Installation instructions. When the risk of freezing subsides and you wish to use the system again, turn the faucet on. Gradually introduce the main water supply until the flow from the tap has stabilized. Run the filtered water for 10 minutes to flush the system and check carefully for leaks. The system should now be ready for use.

PLEASE NOTE: Allowing the unit to freeze will invalidate the product warranty.
