STATE WATER BOARD ORDER APPROVING A TEMPORARY URGENCY CHANGE (TUC) IN LICENSE AND PERMIT TERMS AND CONDITIONS REQUIRING COMPLIANCE WITH DELTA WATER QUALITY OBJECTIVES IN RESPONSE TO DROUGHT CONDITIONS, AND PUBLIC WORKSHOP REGARDING THE TEMPORARY URGENCY CHANGE PETITION FOR THE CENTRAL VALLEY AND STATE WATER PROJECTS AND STATE WATER AVAILABILITY ACTION

RE: Patrick Porgans & Associates (P/A) Response to State Water Board’s (SWB) TUC CONCLUSIONS

My name is Patrick Porgans, Solutionist and Principal of Porgans & Associates (P/A), here today representing our client, Planetary Solutionaries (P/S), a not for profit organization, which serves as a de facto public trustee; assisting, and, when necessary compelling government to perform its respective duties and Public Trust mandates, accordingly.

P/A has a long history of interacting with the SWB on matters pertaining to its jurisdictional responsibilities and powers it exercises over the permits and licenses issued to the California Department of Water Resources (DWR) for the operation of the State Water Project (SWP), and the federal Bureau of Reclamation’s Central Valley Project (CVP).

Before commenting on the TUC there are several points that are in need of clarification. The executive director’s TUC order issued on 31 Jan 2014 limited the SWP/CVP Delta exports to 1,500 cfs for a period of 180 days, subject to change, depending on weather conditions. However, subsequent to SWB’s announcement it rain, and that SWP/CVP export limitations had been “temporarily” postponed. Data posted on government websites late last week revealed that combined SWP/CVP Delta exports were around 5,500 cubic feet per second. There are questions regarding the source of the water DWR and Reclamation are currently pumping, which is not being released from storage.

Scope and breadth of the TUC, and the implications of its implementation, is rife with major uncertainties, assumptions, and conclusions that raise more questions than answers. For that and many other reasons, on behalf of our client, and in the public interest, P/A request that the SWB schedule and hold an evidentiary hearing as soon as possible; taking into account the urgency of the Governor’s Proclamation of a Drought State of Emergency and issuance of the TUC.

In the interim, P/A offers the following observations, comments, and suggestions to the SWB, as a means to put the matter in some relative perspective, beginning with the executive director’s conclusions in the TUC and the circumstances leading up to his action.

Sequence of events subsequent to Gov. Brown’s 17 Jan 2014 Proclamation of a drought State of Emergency; on 29 January DWR and Bureau of Reclamation file a petition with SWB, which requested permission for “temporary” changes of their water right permits; on 31 January SWB’s executive officer, Tom Howard approved the petition.

Water officials publicly announced that 2013 as the driest year since the state began measuring rainfall back in 1849. However, as a rule, water accounting is not based on a calendar year; rather as a water-year (October through September of the following year) that indicates the State was less than four months into the water-year. The Governor’s Proclamation claims that 2014 will be the driest year, which has been branded as part of a
500-year drought cycle. The media has ran with the “500-year drought” story; heightening, public fears. [http://gov.ca.gov/news.php?id=18368] “We are on track for having the worst drought in 500 years,” said B. Lynn Ingram, a professor of earth and planetary sciences at the University of California, Berkeley.

Present day climate models rely on limited measureable data (about 150 years of recorded data) and to a greater degree on “tree rings” dating back to the 1500’s. “With the right selection of trees, the thickness of annual growth rings indicates the wetness of the season. Tree ring widths are not a perfect match (they did not reproduce the 1976-1977 droughts) but have been useful to investigate how the measured runoff or precipitation record compares with a longer sweep of history”, according to the California Department of Water Resources (DWR).¹

**Executive Officer’s CONCLUSIONS** (Page 13 of 15)

The State Water Board has adequate information in its files to make the evaluation required by Water Code section 1435.

1435. (a) Any permittee or licensee who has an urgent need to change a point of diversion, place of use, or purpose of use from that specified in the permit or license may petition for, and the board may issue, a conditional, temporary change order without complying with other procedures or provisions of this division, but subject to all requirements of this chapter. [Emphasis added]

I [Tom Howard, Executive Officer] conclude that, based on the available evidence:

1. The permittee has an urgent need to make the proposed changes;
2. The petitioned changes, as conditioned by this Order, will not operate to the injury of any other lawful user of water;
3. The petitioned changes, as conditioned by this Order, will not have an unreasonable effect upon fish, wildlife, or other instream beneficial uses; and,
4. The petitioned changes, as conditioned by this Order, are in the public interest.

P/A agrees with the executive director’s comment that the SWB has adequate information in its files to make the section 1435 evaluation requirements; however,

---

unless P/A were misinformed, the available evidence that Mr. Howard prefaced his decision was information submitted by the petitioners, DWR and the Reclamation.

If, that is a fact, then, we respectfully suggest that the SWB hold an evidentiary hearing and provide itself and those impacted by the issuance of the TUC an opportunity to review the SWB’s files and examine the historical performance and track-record of the SWP/CVP operational and water quality compliance activities during previous to prior “droughts”. Unfortunately, however, prefaced on the EO’s conclusions, there are signs that the SWB has not fully availed itself of the wealth of information in the files, and respectfully suggest it do so with due diligence.

As pointed out here in my presentation, had the EO availed himself of the evidence contained in the SWB files, he or staff would have noticed that there is a pattern as to how DWR and Reclamation schedule and deliver water prior to, during, and subsequent to a drought. This type of operating procedure exacerbates naturally occurring drought condition; i.e., making record-breaking water deliveries during such events; emptying storage reservoirs in the north to fill terminal and storage facilities south of the Delta and then come back petitioning the SWB for a relaxation in the permits. It would behoove the SWB to conduct a review of its previous drought and use change petitions made by DWR and Reclamation.

HISTORICAL SWP/CVP PRE-POST DROUGHT CONDITIONS: The records attest to the fact, that prior to, during, and subsequent to the three previous droughts, DWR and Reclamation officials managed to made record-breaking Delta water exports. This water was exported to SWP/CVP agricultural and urban contractors in central and southern California. During each of those events, P/A, as a de facto public trustee, apprised the SWB and staff of the fact that DWR and Reclamation’s operational, management, and water delivery scheduling have been used to exacerbate drought conditions.

Essentially, DWR/BOR drains SWP/CVP northern California reservoirs and exports the water to their reservoirs south of the Delta. Afterwards, they petition the SWB for a relaxation in the Delta water standards in effect for the SWP/CVP for the use of temporary fixes, such as barriers, in an attempt to make up for DWR’s failure to provide water right and flood protections mandated by State law and a vote of the people 53 years ago. Ironically, even though the SWB granted each of DWR/BOR’s prior petitions,
the records attest to the fact that DWR and Reclamation officials even violated minimum Delta water quality requirements.

Regarding the EOs conclusions “... based on the available evidence. In the absence of a list of the evidence upon which the EO prefaced his conclusions, it places a protestant in a difficult position to discern if his findings are prefaced upon conjecture or on the basis of the all of the relative “evidence” contained in the record. P/A is quite familiar with the SWB records and files, as we have spent countless days, over the years, going through the files, and placing documents into the record, to support our assertions.

Comments regarding the Executive Officer’s (EO’s) conclusions:

(1): P/A concurs with the EO that an emergency of sorts, does exist, however, evidence in the SWB’s files will support the fact that in the past three (3) droughts experienced in California since the mid-1970s were exacerbated by the manner in which DWR/BOR operated, managed, and schedule water deliveries to their respective SWP/CVP contractors south of the Delta.

In fact, P/A provided SWB members and personnel documentation as far back as 1976, the first year that the SWP and CVP were put to the test. There was no doubt that 1976 and 1977 water years were classified as “critically dry”. However, in 1976, DWR opted to provide 600,000 acre-feet of “surplus” water from the SWP Oroville facilities to its contractors in Kern County for $2.95 per acre foot delivered! P/A advised DWR and the SWB that was not a good idea, and protested DWR’s action. History, and evidence contained in the SWB files attest to the folly of DWR’s decision, as the following year proved to be a back-to-back critically dry year; simultaneously, DWR/BOR petitioned the SWB have previous water right decisions to protect the Delta relaxed.

(2): EO’s comment“... will not operate to the injury of any other lawful user of water;”

There again, it is difficult to place any confidence in the executive director’s statement “... will not operate to the injury of any other lawful user of water”. The project operators have and continue to cause injury to private property, loss of sustainable farm lands, and destruction of public trust resources; including species that are currently listed on the Endangered Species Act (ESA).
As the executive officer knows, the SWB’s performance, enforcement policies, and historical Board adopted Delta water quality standards/objectives, pertinent to the operation of the SWP/CVP, have routinely been violated by DWR and BOR personnel.

Even in cases where it was documented at SWB hearings such as during the 1987-1992 six-year drought event, DWR/BOR resorted to violating both the SWB and North Delta Water Agency agricultural water quality standards and in so doing rustle up some 500,000 acre feet of water with an estimated value of $29 million. P/A apprized the SWB of DWR/BOR’s illegal activities, which, to its credit it held a hearing on the violations; however opted not to take an enforcement action against the SWP/CVP operators. Ironically, while the violations were taking place the SWB was holding Phase I of the hearings to improve Delta water quality standards!

The records attest to the fact that DWR/BOR made record-breaking water exports during the first four years of the 1987-1992 “drought”. In 1990, DWR dropped its SWP Oroville Reservoir by 30 feet and sent that water south of the Delta for delivery or storage in their respective storage facilities. Subsequently, DWR/BOR submitted a petition to the SWB to have the Delta water quality standards relaxed, primarily because they had limited amounts of water left in their north state reservoirs. The SWB has approved previous DWR/BOR’s petition and allowed for a reduction in water quality for all other beneficial uses and users in the Delta. Again, although the standards were relaxed, the project operators failed even to meet the minimum standard.

In light of the fact that there is very limited data to quantify and qualify the adverse impacts that SWP/CVP exports have on other Delta water users and the dramatic decline in the Bay-Delta Estuary, which have yet to be fully identified and/or mitigated,

P/A takes exception to the EO’s conclusion two (2). The SWB files and records contain documentation to corroborate our assertions. Public trust resources have and continue to be significantly impacted by the mismanagement of the operations of the SWP and CVP. The record attest to the fact the projects continue to effect the rights and uses of other beneficial users and uses; which heretofore, have gone unabated, and even sanctioned by SWB actions and/or failure to act, in fulfilling its regulatory, statutory and Public Trust mandates.

Neither the water officials nor fishery agencies personnel have yet to quantify or qualify the vast numbers of aquatic species that have and continued to be killed as a result of
SWP/CVP Delta exports and that DWR and Reclamation’s management tactics have already taken thousands of acres of productive farmland out of production, as a result of the historical management and current joint-operations of the SWP/CVP failure to meet SWB adopted water quality standards.

**Fisheries Experts and computer modeling have repeatedly wrong.** The SWB files are replete with documents that attest to the fact that DWR/BOR and the fisheries agencies have expended billions of dollars, primarily from public sources, in their decades of failure to increase and/or double salmonid populations (CVPIA) to offset the impacts of pre-existing, and yet to be fully assessed and/or mitigated impacts upon fish, wildlife, or other instream beneficial uses. Albeit, P/A understands that SWB members rely heavily on the fisheries agencies and the project operators information and advice; however, as stated, the state of the resources are indicative of their lack-luster “performance”.

(4) As a de facto public trustee, with four decades of interaction with SWB personnel, on matters specifically related to DWR/BOR’s historical request for “temporary” relaxation of SWB Delta water right decisions designed to protect all beneficial uses and users in the legally define Delta we cannot find the basis in fact of Mr. Howard’s assurances that approval of the TUP is in the “public’s interest”

**P/A’s Conclusions:** (1) The TUC, as approved, presents serious uncertainties that the SWB needs to resolve, and unless reconciled, will only further exacerbate this and future drought. (2) We concur with the E.O. that an urgency does exists; however, the difference is in how and why the urgency exists and the events leading up to the extraordinary turn-around time involved in SWP approval and the lack of factual data to support the petitioners’ and/or the executive officer’s conclusions. (3) Issuance of the TUC, as written, provides the project operators with too much latitude, and send the wrong message; and, as has been the case with the “temporary barriers” that have seemingly become permanent, and the need for them are the result of the DWR’s 53 year failure to provide the Delta with water rights and flood protection 54 years ago.

**P/A’s Recommendation:** We respectfully request that the SWB schedule an evidentiary hearing on the subject matter forthwith to ascertain and discern the facts upon which the SWB executive officer based his decision; otherwise, the public’s perception of the
TUC will remain in doubt, and the Order and the drought, construed as another Delta water grab via “abandoned” water and water transfers.

Patrick Porgans, Solutionist

P.S. P/A are forwarding our written comments to the SWB; during my presentation, I was suffering with a migraine headache and did not hand my written comments to the Board members.
