Actions taken by the State Water Resources Control Board (State Water Board) and the Regional Water Quality Control Boards (Regional Water Boards) to prevent pesticides from migrating to groundwater of the State are as follows:

A. State Water Board

State Water Board staff participated in the following activities:

- Regularly attended meetings sponsored by the Department of Pesticide Regulation (DPR), including the interagency Pesticide Registration and Evaluation Committee (PREC) and Pest Management Advisory Committee (PMAC).

- Participated in ongoing consultations with DPR staff, University of California (UC) scientists, and pesticide manufacturers to design monitoring studies and Best Management Practices (BMPs).

- Participated in discussions with U.S. Geological Survey (USGS) scientists on studies dealing with pesticides and water quality.

- Reviewed, on an ongoing basis, DPR Notices of "Materials Entering Evaluation" and advised DPR on potential water quality impacts of pesticide registration and use decisions.

- Reviewed and commented on DPR’s proposed studies on pesticide and water quality pursuant to the Management Agency Agreement (MAA) with DPR.

- In coordination with the USGS and Lawrence Livermore National Laboratory (LLNL), the State Water Board is implementing the Groundwater Ambient Monitoring and Assessment Program (GAMA). To date, the GAMA – Priority Basins Project has sampled over 2,000, mostly public water supply wells, for various chemicals and parameters, including pesticides, herbicides and their degradates. The water quality results for the following study units are summarized in Table 12: Southern and Central Sierra, East-Central San Joaquin Valley, Southeast San Joaquin Valley, North San Joaquin Valley, South Sacramento Valley, Middle Sacramento Valley, Upper Los Angeles Basin, North San Francisco Bay, Salinas-Monterey, San Diego, Mojave and Kern County, and sampled during the 2009-2010; Coastal Los Angeles, Owens and Indian Wells Valleys, Santa Ana, Coachella Valley, Santa Clara river Valley, San
Francisco Bay, Tahoe/Martis, Colorado river, North Sacramento Valley, Antelope Valley, Madera-Chowchilla, South Coast Ranges Interior, and Sierra Regional.

B. **Regional Water Boards**

Actions taken by the Regional Water Boards are identified in Tables 1 – 11.
Table 1. Actions taken by the Regional Water Quality Control Board, North Coast (Region 1), in FY 2009-2010.

<tr>
<td>Orange</td>
<td>Great Lakes Chemical Corporation (formerly Great Western Savings), Irvine</td>
<td>1,2-D, EDB, 1,2-DCE</td>
<td>On-site full-scale multi-phase vacuum extraction system is continuing. GLCC now discharges to County Sanitation District of Orange County under Special Purpose Discharge Permit as of 12/2001. GLCC was issued a CAO by RWQCB on 4/17/97 for off-site remediation of impacted groundwater. GLCC is operating an on-and off-site groundwater extraction and treatment system. The full treatment system has been operating continuously since December 2001. Waste Discharge Requirements (Order No. 0025) was rescinded in April 2002. Treated groundwater is discharged to sewer line.</td>
</tr>
<tr>
<td>Riverside</td>
<td>Sunnymead Mutual Water Company (North and South Well)</td>
<td>DBCP</td>
<td>Both wells were sold to Eastern Municipal Water District in February 1991. Customers are being served by the new District from other supply sources. North Well has been completely rehabilitated. South Well will be used for emergency purposes only.</td>
</tr>
<tr>
<td>Arlington Basin</td>
<td>DBCP</td>
<td>Construction of a 7-MGD reverse osmosis plant with partial flow through a GAC unit for treatment of TDS, NO₃, and DBCP was completed in September 1990. About 1.0 MGD of groundwater is treated and 0.5 MGD is bypassed. Treated water is mixed with the bypassed water and discharged to the Arlington Channel for ground water recharge purposes by the Orange County Water District. Salt brine (0.2 MGD) is discharged to the Santa Ana Regional Interceptor, which discharges to the ocean via the Orange County Sanitation District. A second parallel transmission line has been completed to bring extracted groundwater from three wells to the reverse osmosis unit. Sale of this water to Cities of Norco and Jurupa Community Services District.</td>

Impacts to soil and ground water is managed under Naval Base San Diego, Installation Restoration Program (IRP), pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (42 U.S.C. sections 9601 et seq., “CERCLA”)

Ground water monitoring activities will be conducted to determine fluctuations of pesticide concentrations with time across the site. Most concentrations detected in ground water to date do not exceed established concentrations that are protective of human health and the environment. Two instances exceed MCLs and they were detected in 1992 and 1993 only. Currently under investigation by DTSC and RWQCB.

<tr>
<td>San Diego Study Unit</td>
<td>Various GAMA monitoring sites</td>
<td>Pesticides, Herbicides, and Degradates</td>
<td>The GAMA Program has sampled over 1,835 drinking water supply wells for various chemicals, including pesticides, herbicides and their degradates. Fifty-eight wells were sampled in the San Diego, Orange and Riverside counties. Out of 122 pesticides, herbicides and degradates analyzed, Simazine, deethylatrazine, prometon, and atrazine were the most frequently detected at maximum concentrations of 0.181, 0.013, 0.03 and 0.85 μg/L respectively. Seventeen other pesticides, herbicides, and degradates were detected (no concentrations were detected above drinking water standards).</td>
</tr>
<tr>
<td>North San Francisco Study Unit</td>
<td>Various GAMA monitoring sites</td>
<td>Pesticides, Herbicides, and Degradates</td>
<td>Eighty-nine public supply wells were sampled in the Napa, Marine, Sonoma and Solano counties. Out of 122 pesticides, herbicides and degradates analyzed, Simazine was the most frequently detected at maximum concentration of 0.052 μg/L. Chlordiamino-s-triazine and deisopropyl atrazine were both found in two wells at estimated concentration of E0.01 μg/L.</td>
</tr>
<tr>
<td>North San Joaquin Study Unit</td>
<td>Various GAMA monitoring sites</td>
<td>Pesticides, Herbicides, and Degradates</td>
<td>Seventy public supply, irrigation, domestic and monitoring wells were sampled in the San Joaquin, Sacramento, Stanislaus and Contra Costa counties. Out of 122 pesticides, herbicides and degradates analyzed, fifteen were detected. The most frequently detected was Simazine at maximum concentration of 0.058μg/L. Atrazine, Metachlor, Hexazinone, Tebuthiuron, Difenamid, Deethylatrazine, 2,6-diethylaniline, and 3,4-Dichloroaniline were also found at maximum concentrations of 0.081, 0.012, 0.066, 0.03, 0.02, 0.046, 0.004, and 0.045 μg/L, respectively. Two herbicides: DBCP and 1,2-Dibromoethane were found at respective concentrations of 1.43 and 0.14 μg/L, which are above MCL for these chemicals.</td>
</tr>
<tr>
<td>Monterey - Salinas Valley Study Unit</td>
<td>Various GAMA sampled wells</td>
<td>Pesticides, Herbicides, and Degradates</td>
<td>Ninety four public wells and 3 monitoring wells were sampled in the Monterey, Santa Cruz and San Luis Obispo counties. Out of 122 pesticides, herbicides and degradates analyzed, nine were detected. The most frequently detected was Simazine at maximum concentration of 0.02μg/L. Deethylatrazine, Atrazine, Daclath, Metolachlor, Deisopropyl atrazine, Dieldrin, Prometone and Terbuthylazine were found at estimated concentrations of E0.01, 0.035, E0.004, E0.007, E0.004, E0.006, E0.01, and E0.01μg/L, respectively.</td>
</tr>
<tr>
<td>Southern Sierra Study Unit</td>
<td>Various GAMA sampled wells</td>
<td>Pesticides, Herbicides, and Degradates</td>
<td>Forty public wells (5 irrigation, 5 domestic) were sampled in this study unit in Kern and Tulare counties. Out of 63 pesticides, herbicides and degradates, five were detected. Most frequently detected were Atrazine (9), Deethylatrazine (10) and Simazine (6) at maximum concentration of 0.008, E0.012, and 0.008μg/L respectively. Prometone and Fipronil sulfide were found at max. concentrations of E0.01 and E0.005μg/L, respectively.</td>
</tr>
<tr>
<td>Central Sierra Study Unit</td>
<td>Various GAMA sampled wells</td>
<td>Pesticides, Herbicides, and Degradates</td>
<td>Twenty seven public wells and 3 domestic wells were sampled in this study unit (Madera and Mariposa counties). Out of 83 pesticides, four were detected. The most frequently detected was Simazine (4) at max. concentration</td>
