FACILITY ADDRESS

Foster Park Wellfield
Foster Park
Ventura, CA 93001

FACILITY MAILING ADDRESS

PO Box 99
Ventura, CA 93002

PROJECT DESCRIPTION

The City of San Buenaventura proposes to construct up to four temporary groundwater wells in Foster Park adjacent to the Ventura River for the assessment of hydrogeologic conditions. Groundwater generated from wells will be discharged directly to the gravelly bed of the Ventura River.

VOLUME AND DESCRIPTION OF DISCHARGE

A maximum of 720,000 gallons per day of groundwater will be discharged from each well. The discharge will be evenly dissipated at the point of discharge to prevent erosion. The location of the Foster Park Wellfield is shown on Attachment D. The point of discharge is located at Latitude: 34° 21' 25" N, Longitude: 119° 18' 39" W in the Ventura River, a water of the United States.

FREQUENCY OF DISCHARGE

Discharge will occur one time for each well and will occur for approximately 24 hours.

REUSE OF WATER

Because of the short-term nature of the discharge, there is no feasible reuse option for the water at the site.
