PROJECT DESCRIPTION:

Arco Terminal Services Corporation (Arco) proposes to discharge hydrostatic test water from Tank No. 345 located at Marine Terminal, 1400 Pier C Street, Long Beach. The hydrostatic testing will be conducted after the tank upgrade. Arco will use potable water supplied by the City of Long Beach.

VOLUME AND DESCRIPTION OF DISCHARGE:

A total of approximately 5.2 million gallons of hydrostatic water will be discharged into the Long Beach Inner Harbor, Channel No. 3 (Latitude: 33° 46' 15", Longitude: 118° 12' 30"), a water of the United States. The discharge will occur over a period of seven days at a rate of up to 0.7 million gallons per day. The site plan location is shown in Figure 1.

FREQUENCY OF DISCHARGE:

The discharge will be intermittent. Arco expects to begin hydrostatic testing in November 2001.

REUSE OF WATER:

The reuse of hydrostatic test water at the facility was evaluated. Only a very small portion of water can be used for irrigation. Therefore, the majority of the hydrostatic test water will be discharged into the storm drain.
