Wilmington, CA 90744

PROJECT DESCRIPTION:

Paktank Corporation proposes to discharge hydrostatic test water from Tank No. 404 located at Los Angeles Terminal, 2200 East Pacific Coast Highway, Wilmington. The hydrostatic testing will be conducted after the tank upgrade. Paktank will use potable water supplied by the City of Wilmington during the hydrostatic testing.

VOLUME AND DESCRIPTION OF DISCHARGE:

A total of approximately 3.15 million gallons of hydrostatic water will be discharged to the Dominguez Channel (Latitude: 33° 47' 28", Longitude: 118° 13' 30") a water of the United States. The discharge will occur over a period of four days at a rate of up to 1.0 million gallons per day. The site vicinity map is shown in Figures 1.

FREQUENCY OF DISCHARGE:

The discharge will be intermittent.

REUSE OF WATER:

The reuse of hydrostatic test water at the facility was evaluated. The facility has no available connection to publicly owned treatment works. Recycling is not a viable option due to the location of the test site, the large volume of water involved and the fact that the tank must be emptied of water as quickly as possible in order to return to service for bulk petroleum storage. Because there is no available reuse option of wastewater at the site, the hydrostatic test water will be discharged into the storm drain.
