Ventura, CA 93002
Contact: Mr. Rick Raives

PROJECT DESCRIPTION

The City of San Buenaventura proposes to install 8-inch and 12-inch water lines, and to construct a storm drain with catch basins and manholes, as part of the Thompson Boulevard Improvement Project. The project is located at Thompson Boulevard and Santa Cruz Street in Ventura. Groundwater dewatering will occur during the construction.

VOLUME AND DESCRIPTION OF DISCHARGE

The City of San Buenaventura proposes to discharge up to 15,000 gallons per day of groundwater during the construction project. The groundwater will be discharged to a storm drain (Latitude 34° 16' 20", Longitude 119° 17' 08"), then to Prince Barranca (Miscellaneous Ventura Coastal Streams), a water of the United States. See Figure 1 for a site location map.

FREQUENCY OF DISCHARGE

Discharge from the construction will begin in July 2002, and will last for three months.

REUSE OF WATER

Use for dust control and discharge to a sewer were considered. However, neither are feasible; therefore, the wastewater will be discharged to Prince Barranca.
