Good Morning Rosario,

I have been a resident of Oxnard for 30 years. I have lived in the harbor for most of that time, and chose this place to live because of the quality of life it gave my family, and my children in particular. I am extremely alarmed and saddened by the fact that the water is no longer the clean, pristine water that my children grew up with. The water was teeming with sea life and my children swam and played in the harbor all the time. The closure of the NRG plant, and their pumps has caused an ecological disaster. The water no longer flows properly and has contributed to an accelerated algae bloom that threatens the water, the sea life and the community at large that enjoys using the water to play, swim, paddleboard, kayak etc. There is substantive evidence the cause of this disaster is the shut-down of the pumps from the NRG plant and the lack of proper water circulation. PLEASE, PLEASE, PLEASE help us restore the water of the harbor.
