RE: Notice to Thomas DiCiolli, Plant Manager Dated June 28, 2018 Mandalay Generating Station Tentative Termination of WDRs etc., Oxnard CA

Ms. Aston and Water Board Commissioners:

Please revisit your decision allowing the shutdown of the NRG circulation pumps prior to the legally-mandated shutdown date in order to provide the City of Oxnard time to provide a viable solution for maintaining the harbor's water circulation issues.

The change in the harbor – color, smell, etc, has changed dramatically since NRG stopped the circulation pumps. I would hate to think that NRG did this with malicious intent due to decisions regarding building more power plants on our coast, but my understanding is that they did not notify the city of their shutdown plans, and they were aware the shutdown would negatively impact the harbor and the residents of the city of Oxnard if the city did not have an alternative up and running.

Thank you,

Diane
