Technical Report Submission – Request for an Extension

Dear Mr. Cwikla,

The purpose of this letter is to request an extension of the submittal of the Technical Report requested in the December 18th letter. This letter is requesting that we compile a very significant amount of data in a short amount of time. If I am to prepare a proper report pursuant to your request, then I respectfully request that I am allowed to submit this to you on January 29th.

It is important to note that neither Anterra producing well has a sump, pit or pond associated with it. With both the Oxnard well and the Tapia well, we pump the oil/produced water mixture from the wells into what we call a “wash tank”. The wash tank is then used to separate out the oil water mixture. The oil is pumped into another tank where it is shipped off for sale. In Oxnard, the produced water is pumped into another tank prior to discharge into our injection well whereas in Tapia, the produced water stays in the wash tank until it is disposed into our injection well.

However, based on our phone conversation, it sounds like you still want us to try to obtain analytical data from municipal water wells located within a half mile radius of our production well. Since receiving your letter, I have contacted the Ventura County Watershed Protection District, the City of Oxnard Water Department, Los Angeles County Dept of Public Works and the Newhall County Water District. In all cases agency representatives are happy to help identify municipal water wells in the vicinity of our producing wells and then if any are found, provide us with available analytical data. However, it is the holiday and many people are taking time off and have indicated it will take a few weeks to get this data. Furthermore, our environmental consulting firm, Sespe, who will be preparing the maps with the site features labeled as requested in your letter, had indicated they will “try” to get these maps prepared within a couple of weeks. Finally, I can get our contract analytical laboratory out to sample next week and their turn around- time for these test results will be two to three weeks.

Therefore, even though I believe that your request does NOT apply to the Anterra facilities because we do not discharge into sumps, I will still abide by your interpretation of this letter and will gather and submit this Technical Report to you as quickly as I can. I believe that I will be able to compile this data by January 29th and I request an extension to that date. Your consideration in this matter is appreciated. Please contact me at 805 981 4053 or scoleman@anterraservices.com if you have any questions.

Thank you.
