Table 4. Administrative Information

This Order was adopted by the California Regional Water Quality Control Board, Los Angeles Region on:	November 8, 2012
This Order becomes effective on:	December 28, 2012
This Order was amended by the State Water Resources Control Board on:	June 16, 2015
This Order was amended by the California Regional Water Quality Control Board, Los Angeles Region on:	September 8, 2016
This Order expires on:	December 28, 2017
In accordance with Title 23, Division 3, Chapter 9 of the California Code of Regulations and Title 40, Part 122 of the Code of Federal Regulations, each Discharger shall file a Report of Waste Discharge as application for issuance of new waste discharge requirements no later than:	180 days prior to the Order expiration date above

In accordance with section 2235.4 of Title 23 of the California Code of Regulations, the terms and conditions of an expired permit are automatically continued pending issuance of a new permit if all requirements of the federal NPDES regulations on continuation of expired permits are complied with. Accordingly, if a new order is not adopted by the expiration date above, then the Permittees shall continue to implement the requirements of this Order until a new one is adopted.

I, Samuel Unger, Executive Officer, do hereby certify that this Order with all attachments is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on November 8, 2012; and amended by the State Water Resources Control Board by Order WQ 2015-0075 on June 16, 2015; and amended by the California Regional Water Quality Control Board, Los Angeles Region, on September 8, 2016.

Samuel Unger,	Executive Officer

Revisions to Part VI.E.5 of Order No. R4-2012-0175

5. Water Quality-Based Effluent Limitations for Trash

Permittees assigned a Waste Load Allocation in a trash TMDL shall comply as set forth below.

- **a. Effluent Limitations**: Permittees shall comply with the interim and final water quality-based effluent limitations for trash set forth in Attachments L through R for the following Trash TMDLs:
 - i. Lake Elizabeth Trash TMDL (Attachment L)
 - ii. Santa Monica Bay Nearshore and Offshore Debris TMDL (Attachment M)
 - iii. Malibu Creek Watershed Trash TMDL (Attachment M)
 - iv. Ballona Creek Trash TMDL (Attachment M)
 - v. Machado Lake Trash TMDL (Attachment N)
 - vi. Los Angeles River Trash TMDL (Attachment O)
 - vii. Peck Road Park Lake Trash TMDL (Attachment O)
 - viii. Echo Park Lake Trash TMDL (Attachment O)
 - ix. Legg Lake Trash TMDL (Attachment O)

b. Compliance

- i. Pursuant to California Water Code section 13360(a), Permittees may comply with the trash effluent limitations using any lawful means. Such compliance options are broadly classified as *full capture*, *partial* capture, institutional controls, or minimum frequency of assessment and collection, as described below, and any combination of these may be employed to achieve compliance:
 - (1) Full Capture Systems:
 - (a) The Basin Plan authorizes the Regional Water Board Executive Officer to certify full capture systems, which are systems that meet the operating and performance requirements as described in this Order, and the procedures identified in "Procedures and

- Requirements for Certification of a Best Management Practice for Trash Control as a Full Capture System."1
- (b) Permittees are authorized to comply with their effluent limitations through certified *full capture systems* provided the requirements of paragraph (c), immediately below, and any conditions in the certification, continue to be met.
- (c) Permittees may comply with their effluent limitations through progressive installation of full capture systems throughout their jurisdictional areas until all areas draining to Lake Elizabeth, Santa Monica Bay, Malibu Creek, Ballona Creek, Machado Lake, the Los Angeles River system, Legg Lake, Peck Road Park Lake, and/or Echo Park Lake are addressed. purposes of this Order, attainment of the effluent limitations shall be conclusively presumed for any drainage area to Lake Elizabeth, Santa Monica Bay, Malibu Creek (and its tributaries), Ballona Creek (and its tributaries), Machado Lake, the Los Angeles River (and its tributaries), Legg Lake, Peck Road Park Lake, and/or Echo Park Lake where certified full capture systems treat all drainage from the area, provided that the full capture systems are adequately sized and maintained, and that maintenance records are up-to-date and available for inspection by the Regional Water Board.
 - (i) A Permittee shall be deemed in compliance with its final effluent limitation if it demonstrates that all drainage areas under its jurisdiction and/or authority are serviced by appropriate certified *full capture systems* as described in paragraph (1)(c).
 - (ii) A Permittee shall be deemed in compliance with its interim effluent limitations, where applicable:
 - 1. By demonstrating that *full capture systems* treat the percentage of drainage areas in the watershed that corresponds to the required trash abatement.
 - Alternatively, a Permittee may propose a schedule for installation of *full capture systems* in areas under its jurisdiction and/or authority within a given watershed, targeting first the areas of greatest trash generation, for the Executive Officer's approval. The Executive Officer

¹ The Regional Water Board currently recognizes eight *full capture systems*. These are: Vortex Separation Systems (VSS) and seven other Executive Officer certified *full capture systems*, including specific types or designs of trash nets; two gross solids removal devices (GSRDs); catch basin brush inserts and mesh screens; vertical and horizontal trash capture screen inserts; and a connector pipe screen device. See August 3, 2004 Los Angeles Regional Water Quality Control Board Memorandum titled "Procedures and Requirements for Certification of a Best Management Practice for Trash Control as a Full Capture System.

shall not approve any such schedule that does not result in timely compliance with the final effluent limitations, consistent with the established TMDL implementation schedule and applicable State policies. A Permittee shall be deemed in compliance with its interim effluent limitations provided it is fully in compliance with any such approved schedule.

- (2) Partial Capture Devices and Institutional Controls: Permittees may comply with their interim and final effluent limitations through the installation of partial capture devices and the application of institutional controls.²
 - (a) Trash discharges from areas serviced solely by *partial capture devices* may be estimated based on demonstrated performance of the device(s) in the implementing area.³ That is, trash reduction is equivalent to the *partial capture devices*' trash removal efficiency multiplied by the percentage of drainage area serviced by the devices.
 - (b) Except as provided in subdivision (c), immediately below, trash discharges from areas addressed by *institutional controls* and/or *partial capture devices* (where site-specific performance data is not available) shall be calculated using a mass balance approach, based on the daily generation rate (DGR) for a representative area. The DGR shall be determined from direct measurement of trash deposited in the drainage area during any thirty-day period between June 22nd and September 22nd exclusive of rain events⁵, and shall be re-calculated every year thereafter unless a less frequent period for recalculation is approved by the Regional Water Board Executive Officer. The DGR shall be calculated as the total amount of trash collected during this period divided by the length of the collection period.

DGR = (Amount of trash collected during a 30-day collection period⁶ / (30 days)

The DGR for the applicable area under the Permittees' jurisdiction and/or authority shall be extrapolated from that of the representative drainage area(s). A mass balance equation shall be used to estimate the amount of trash discharged during a

⁶ Between June 22nd and September 22nd

² While interim effluent limitations may be complied with using *partial capture devices*, compliance with final effluent limitations cannot be achieved with the exclusive use of *partial capture devices*.

³ Performance shall be demonstrated under different conditions (e.g. low to high trash loading).

⁴ The area(s) should be representative of the land uses and activities within the Permittees' authority and shall be approved by the Executive Officer prior to the 30-day collection period.

⁵ Provided no special events are scheduled that may affect the representative nature of that collection period.

storm event.⁷ The *Storm Event Trash Discharge* for a given rain event in the Permittee's drainage area shall be calculated by multiplying the number of days since the last street sweeping by the DGR and subtracting the amount of any trash recovered in the catch basins.⁸ For each day of a storm event that generates precipitation greater than 0.25 inch, the Permittee shall calculate a *Storm Event Trash Discharge*.

Storm Event Trash Discharge = [(Days since last street sweeping*DGR)] - [Amount of trash recovered from catch basins]⁹

The sum of the *Storm Event Trash Discharges* for the storm year shall be the Permittee's calculated annual trash discharge.

Total Storm Year Trash Discharge = ∑Storm Event Trash Discharges from Drainage Area

- (c) The Executive Officer may approve alternative compliance monitoring approaches for calculating total storm year trash discharge, upon finding that the program will provide a scientifically-based estimate of the amount of trash discharged from the Permittee's MS4.
- (3) Combined Compliance Approaches:

Permittees may comply with their interim and final effluent limitations through a combination of *full capture systems*, *partial capture devices*, and *institutional controls*. Where a Permittee relies on a combination of approaches, it shall demonstrate compliance with the interim and final effluent limitations as specified in (1)(c) in areas where *full capture systems* are installed and as specified in (2)(a) or (2)(b), as appropriate, in areas where *partial capture devices* and *institutional controls* are applied.

(4) Minimum Frequency of Assessment and Collection Approach:

If allowed in a trash TMDL and approved by the Executive Officer, a Permittee may alternatively comply with its final effluent limitations by implementing a program for *minimum frequency of assessment and collection* (MFAC) in conjunction with BMPs. To the satisfaction of the Executive Officer, the MFAC/BMP program must meet the following criteria:

⁷ Amount of trash shall refer to the uncompressed volume (in gallons) or drip-dry weight (in pounds) of trash collected.

⁸ Any negative values shall be considered to represent a zero discharge.

⁹ When more than one storm event occurs prior to the next street sweeping the discharge shall be calculated from the date of the last assessment.

- (a) The MFAC/BMP Program includes an initial minimum frequency of trash assessment and collection and suite of structural and/or nonstructural BMPs. The MFAC/BMP program shall include collection and disposal of all trash found in the receiving water and shoreline. Permittees shall implement an initial suite of BMPs based on current trash management practices in land areas that are found to be sources of trash to the water body. The initial minimum frequency of trash assessment and collection shall be set as specified in the following TMDLs:
 - (i) Malibu Creek Watershed Trash TMDL
 - (ii) Machado Lake Trash TMDL
 - (iii) Legg Lake Trash TMDL
- (b) The MFAC/BMP Program includes reasonable assurances that it will be implemented by the responsible Permittees.
- (c) MFAC protocols may be based on SWAMP protocols for rapid trash assessment, or alternative protocols proposed by Permittees and approved by the Regional Water Board Executive Officer.
- (d) Implementation of the MFAC/BMP program should include a Health and Safety Program to protect personnel. The MFAC/BMP program shall not require Permittees to access and collect trash from areas where personnel are prohibited.
- (e) The Regional Water Board Executive Officer may approve or require a revised assessment and collection frequency and definition of the critical conditions under the MFAC:
 - (i) To prevent trash from accumulating in deleterious amounts that cause nuisance or adversely affect beneficial uses between collections;
 - (ii) To reflect the results of trash assessment and collection;
 - (iii) If the amount of trash collected does not show a decreasing trend, where necessary, such that a shorter interval between collections is warranted; or
 - (iv) If the amount of trash collected is decreasing such that a longer interval between collections is warranted.
- (f) At the end of the implementation period, a revised MFAC/BMP program may be required if the Regional Water Board Executive Officer determines that the amount of trash accumulating between collections is causing nuisance or otherwise adversely affecting beneficial uses.
- (g) With regard to (4)(e)(i), (4)(e)(ii), or (4)(e)(iii), above, the Regional Water Board Executive Officer is authorized to allow

responsible Permittees to implement additional structural or non-structural BMPs in lieu of modifying the monitoring frequency.

- ii. Additional Compliance Provisions and Alternatives for revised Ballona Creek and Los Angeles River Trash TMDLs: For the Ballona Creek and Los Angeles River Trash TMDLs, Permittees may employ alternative compliance options for FCS; partial capture devices and the application of institutional controls; or scientifically based alternative compliance approaches as detailed below. If using an alternative compliance option, Permittees shall submit a revised Watershed Management Program, a revised Enhanced Watershed Management Program, or a separate TMDL implementation plan if the Permittee does not have an approved WMP or EWMP, for Executive Officer approval prior to use of the alternative compliance option.
 - (1) FCS Technical Infeasibility: As an alternative to subpart b.i(1)(c)(i) above, in drainage areas where the vast majority of catch basins are retrofitted with FCS, the FCS are properly sized, operated, and maintained, and retrofit of the remaining catch basins is technically infeasible, a Permittee may request that the Executive Officer make a determination that the Permittee is in full compliance with its final WLA if all of the following criteria are met:
 - (a) 98% of all catch basins within the Permittee's jurisdictional land area in the watershed are retrofitted with FCS (or, alternatively, 98% of the jurisdiction's drainage area is addressed by FCS) and at least 97% of the catch basins (or, alternatively, drainage area) within the Permittee's jurisdiction in the subwatershed (the smaller of the HUC-12 equivalent area or tributary subwatershed) are retrofitted with FCS.
 - (b) The Permittee submits to the Regional Water Board a report for Executive Officer concurrence, detailing the technical infeasibility of FCS retrofits in the remaining catch basins and evaluating the feasibility of partial capture devices, and the potential to install FCS or partial capture devices along the storm drain or at the MS4 outfall down gradient from the catch basin.
 - (c) The Permittee submits to the Regional Water Board a report for Executive Officer approval, detailing the partial capture devices and/or institutional controls that are currently and will continue to be implemented in the affected subwatershed(s), including an assessment of the effectiveness of the partial capture devices and/or institutional controls using existing data and studies representative.

In addition, the Permittee shall re-evaluate the effectiveness of institutional controls and partial capture devices and report the findings to the Regional Water Board for confirmation or change to the determination, if significant land use changes occur in the affected subwatershed (based on permits for new and significant re-development) or if there is a significant change in the suite of implemented partial capture devices and/or institutional controls (e.g., reduced frequency of implementation, reduced spatial coverage of implementation, change in technology employed). Such re-evaluation shall occur within one year of the identification of the significant changes.

(2) Mass Balance Equivalency: Compliance with interim and final effluent limitations through the installation of partial capture devices and the application of institutional controls. Permittees employing partial capture devices or institutional controls shall use a mass balance approach based on the trash daily generation rate (DGR), to demonstrate compliance.

The DGR shall be reassessed annually. Permittees may request a less frequent assessment of its DGR for Executive Officer approval when the final WLA has been met (as described below) and the responsible jurisdiction continues to implement at the same level of effort partial capture devices and institutional controls. A return to annual DGR calculation shall be required for a period of years to be determined by the Executive Officer after significant land use changes.

Permittees employing institutional controls or a combination of full capture systems, partial capture devices, and institutional controls shall be deemed in compliance with the final WLAs when the reduction of trash from the jurisdiction's baseline load, in Attachment M and Attachment O, is between 99% and 100% as calculated using a mass balance approach, and the FCS and partial capture devices are properly sized, operated, and maintained.

Alternatively, a Permittee may request that the Executive Officer make a determination that a 97% to 98% reduction of the baseline load, as calculated using a mass balance approach, constitutes full compliance with the final WLA if all of the following criteria are met:

(a) The Permittee submits to the Regional Water Board a report for Executive Officer approval, including, two or more consecutive years of data showing that the Permittee's compliance was at or

- above a 97% reduction in its baseline trash load; an evaluation of institutional controls in the jurisdiction demonstrating continued effectiveness and any potential enhancements; and demonstration that opportunities to implement partial capture devices have been fully exploited.
- (3) Scientifically Based Alternative: A Permittee(s) employing an alternative compliance approach shall conduct studies of institutional controls and partial capture devices for their particular subwatershed(s) or demonstrate that existing studies are representative and transferable to the implementing area for Executive Officer approval. The Permittee(s) shall also provide a schedule for periodic compliance effectiveness demonstration and evaluation. FCS and partial capture devices shall be properly sized, operated, and maintained consistent with sizing, operation, and maintenance schedules used to determine their effectiveness.
- **iii.** If a Permittee is not in compliance with its applicable interim and/or final effluent limitation as identified in Attachments L through R, then it shall be in violation of this Order.
 - (1) A Permittee relying on *partial capture devices* and/or *institutional controls* that has violated its interim and/or final effluent limitation(s) shall be presumed to have violated the applicable limitation for each day of each storm event that generated precipitation greater than 0.25 inch during the applicable storm year, except those storm days on which it establishes that its cumulative Storm Event Trash Discharges has not exceeded the applicable effluent limitation.
 - (2) If a Permittee relying on *full capture systems* has failed to demonstrate that the *full capture systems* for any drainage area are adequately sized and maintained, and that maintenance records are up-to-date and available for inspection by the Regional Water Board, and that it is in compliance with any conditions of its certification, shall be presumed to have discharged trash in an amount that corresponds to the percentage of the baseline waste load allocation represented by the drainage area in question.
 - (a) A Permittee may overcome this presumption by demonstrating (using any of the methods authorized in Part VI.E.5.b) that the actual or calculated discharge for that drainage area is in compliance with the applicable interim or final effluent limitation.
- iv. Each Permittee shall be held liable for violations of the effluent limitations assigned to their area. If a Permittee's compliance strategy includes full or partial capture devices and it chooses to install a full or partial capture device in the MS4 physical infrastructure of another public entity, it is responsible for obtaining all necessary permits to do

so. If a Permittee believes it is unable to obtain the permits needed to install a full capture or partial capture device within another Permittee's MS4 physical infrastructure, either Permittee may request the Executive Officer to hold a conference with the Permittees. Nothing in this Order shall affect the right of that public entity or a Permittee to seek indemnity or other recourse from the other as they deem appropriate. Nothing in this subsection shall be construed as relieving a Permittee of any liability that the Permittee would otherwise have under this Order.

- v. Los Angeles County Flood Control District Compliance for Ballona Creek and Los Angeles River Trash TMDLs: For the Ballona Creek and Los Angeles River Trash TMDLs, the LACFCD is not assigned a Waste Load Allocation, since Waste Load Allocations are based on jurisdictional area. However, the LACFCD is responsible for performing storm drain operation and maintenance, including but not limited to: catch basin labeling, catch basin label inspections, and open channel signage; open channel maintenance that includes removal of trash and debris; and implementation of activity specific BMPs, including those related to litter/debris/graffiti in compliance with this Order. The LACFCD may be held responsible with a Permittee for non-compliance with Waste Load Allocations where it has either:
 - (a) without good cause denied entitlements or other necessary authority to a responsible jurisdiction or agency for the timely installation and/or maintenance of full and/or partial capture trash control devices for purposes of TMDL compliance in parts of the MS4 physical infrastructure that are under its authority, or
 - (b) not fulfilled its obligations regarding proper BMP installation, operation, and maintenance for purposes of TMDL compliance within the MS4 physical infrastructure under its authority,

thereby causing or contributing to a responsible jurisdiction and/or agency to be out of compliance with its interim or final Waste Load Allocations.

<u>Under these circumstances, the LACFCD's responsibility shall be limited to non-compliance related to the drainage area(s) within the jurisdiction where the LACFCD has authority over the relevant portions of the MS4 physical infrastructure.</u>

Reporting Requirements for Santa Monica Bay WMA TMDLs

Deliverable	Description	Due Date(s)
	Santa Monica Bay Beaches Bacteria TMDL	
Monitoring Results	Monthly data summary reports shall be submitted to the Regional Water Board by the last day of each month for data collected during the previous month. Two agencies will submit the monthly reports on behalf of all Permittees: City of Los Angeles, Department of Public Works, Bureau of Sanitation, Environmental Monitoring Division (on behalf of Jurisdictional Groups 1 through 6, 8, and 9); and Los Angeles County Sanitation Districts (on behalf of Jurisdictional Group 7).	Monthly on the last day of the month.
_	Santa Monica Bay Nearshore and Offshore Debris TI	
Trash Monitoring and Reporting Plan (TMRP)	Permittees shall develop a Trash Monitoring and Reporting Plan (TMRP) for Regional Water Board Executive Officer approval that describes the methodologies that will be used to assess and monitor trash in their responsible areas within the Santa Monica Bay WMA or along Santa Monica Bay. The TMRP shall include a plan to establish a site specific trash baseline water quality-based effluent limitation if Permittees elect to not use the default baseline effluent limitation. Requirements for the TMRP shall include, but are not limited to, assessment and quantification of trash collected from source areas in the Santa Monica Bay WMA, and shoreline of the Santa Monica Bay. The monitoring plan shall provide details on the frequency, location, and reporting format. Permittees shall propose a metric (e.g., weight, volume, pieces of trash) to measure the amount of trash discharged from their jurisdictional areas.	Submit an IMP or CIMP plan concurrently with the Permittee's draft WMP, or If a WMP or IMP or CIMP will not be developed then submitted the TMRP 12 months after the effective date of this Order.
Implement TMRP	Implement TMRP	If TMRP is submitted by September 20, 2012, then implement the TMRP 6 months from receipt of letter of approval from Regional Water Board Executive Officer, or the date a plan is established by the Executive Officer; or If an IMP or CIMP is submitted, then monitoring shall commence within 30 days

		after approval of the IMP or CIMP plan by the Executive Officer.
Plastic Pellets Monitoring	Permittees identified as responsible jurisdictions and agencies for	September 20, 2013, or

Revisions to Attachment E, Part XIX.D

Reporting Requirements for the Los Angeles River WMA TMDLs

Deliverable	Description	Due Date(s)				
	Los Angeles River Watershed Trash TMDL					
Reporting	Report compliance with the installation of full capture systems and/or installation/implementation of partial capture devices and institutional controls.	December 15, 2013, and annually thereafter.				
Trash Monitoring and Reporting Plan / Update CIMP or IMP	Permittees shall propose and implement a Trash Monitoring and Reporting Plan (TMRP) for Executive Officer approval. The Regional Board's Executive Officer will have full authority to review, to modify, to select alternate monitoring sites, and to approve or disapprove the monitoring plans. Permittees may report receiving water monitoring through a separate TMRP annual report, if approved by the Executive Officer, or in conjunction with annual reporting under MS4 permits. Receiving water monitoring shall be consistent with prescribed elements listed in the Surface Water Ambient Monitoring Program's Rapid Trash Assessment or shall be an alternative protocol proposed by the Permittees and approved by the Executive Officer. Monitoring Plan: Permittees will submit a TMRP with the proposed receiving monitoring sites and at least two additional alternate monitoring locations. The TMRP must include maps of the proposed monitoring locations and rationale for their selection. Trash monitoring shall focus on visible trash at representative and critical locations.	December 30, 2016				

		T
	Sampling Site and Frequency: The TMRP shall detail the monitoring frequency and number and location of sites, including	
	at least one monitoring station per reach and tributary. Each	
	sampling evaluation should consider trash levels over time and	
	under different seasonal conditions. Sampling assessment shall	
	be repeated at the same site where trash was collected during	
	the previous assessment(s) unless an alternate location has been	
	approved.	
	Permittees shall either submit a revised Integrated Monitoring	
	Program or Coordinated Integrated Monitoring Program	
	incorporating the TMRP requirements or a stand-alone TMRP (if	
	the Permittee does not have an approved IMP or CIMP) for	
	Executive Officer approval by December 30, 2016.	
Plastic Pellet	Permittees shall prepare a Plastic Pellet Monitoring and	By December 28, 2017 or as
Monitoring and	Reporting Plan (PMRP) to (i) monitor the amount of plastic pellets	part of its first adaptive
Reporting Plan	being discharged from the MS4; (ii) establish triggers for	management process if the
	increased industrial facility inspections and enforcement of	Permittee is participating in an
	SWPPP requirements for industrial facilities identified as	approved WMP or EWMP
	responsible for the plastic pellet WLA herein; and (iii) address	
	possible plastic pellet spills. The PMRP shall include protocols for	
	a timely and appropriate response to possible plastic pellets spills	
	within their jurisdictional area, including notification to the	
	Regional Water Board, and a comprehensive plan to ensure that	
	plastic pellets are contained.	
	<u> </u>	
	Permittees will fall into one of the following three categories for	
	requirements of a PMRP:	
	requirements of a r with .	
	Permittees that have industrial facilities or activities related	
	to the manufacturing, handling, or transportation of plastic	
	pellets within their jurisdiction must prepare a PMRP.	

	 Permittees that have no industrial facilities or activities related to the manufacturing, handling, or transportation of plastic pellets may not be required to conduct monitoring at MS4 outfalls, but must have a response plan in place to address plastic pellet spills. If satisfactory documentation is provided that shows there are no industrial facilities or activities related to plastic pellets within the jurisdiction, the Permittee may be excused of the requirement to monitor MS4 outfalls. LACFCD will be in this category. Permittees that only have residential areas within their respective jurisdictions, and have limited commercial or industrial transportation corridors (including railways and roadways), may be exempted from the requirements of preparing a PMRP. In order for a responsible jurisdiction to be exempted from this requirement, sufficient documentation including municipal zoning plans must be submitted to the Regional Water Board and approved by the Executive Officer. 	
	Los Angeles River Nitrogen Compounds and Related Effects	TMDL
Reporting	Annual reporting of monitoring results to the Regional Water Board.	December 15, 2013, and annually thereafter.
	Los Angeles River and Tributaries Metals TMDL	
Annual Monitoring	Permittees shall submit annual monitoring reports as detailed in	December 15, 2013, and
Report	the approved coordinated monitoring plan to the Regional Water Board.	annually thereafter.
	Los Angeles River Watershed Bacteria TMDL	

Bacteria Coordinated Monitoring Plan

Permittees shall submit a Bacteria Coordinated Monitoring Plan (CMP), which shall be submitted for Regional Water Board Executive Officer approval. The CMP shall detail: the number and location of sites, including at least one monitoring station per each river segment, reach and tributary addressed under this TMDL; measurements and sample collection methods; and monitoring frequencies. Permittees may also include in the CMP, for Executive Officer consideration, other meteorological stations which may be more representative of the existing hydrology and climate.

Each segment, reach, and tributary addressed under this TMDL shall be monitored at least monthly until the subject segment, reach or tributary is at the end of the execution part of its first implementation phase (i.e. 7 years after beginning the segment or tributary-specific phase), to determine compliance with the interim water quality based effluent limitations. Each segment, reach and tributary addressed under this TMDL shall be monitored at least weekly to determine compliance with the instream targets after the first implementation phase.

For parties pursuing a Load Reduction Strategy (LRS), intensive outfall monitoring will be conducted before and after implementation of the LRS. Pre-LRS monitoring will be used to estimate the *E. coli* loading from MS4 outfalls to the segment or tributary, and identify the outfalls and types of implementation actions that are expected to be necessary to attain the water quality based limits. Post-LRS monitoring will be used to evaluate compliance with the interim water quality based limits and to plan for additional implementation actions to meet the final water quality based limits, in a second implementation phase, if necessary.

When applicable, outfall monitoring shall including *E. coli* by USEPA- approved methods and flow rate at *all* MS4 outfalls

March 23, 2013, or

Submit an IMP or CIMP plan concurrently with the Permittee's draft WMP.

	("snapshots") that are discharging to a segment or tributary or across jurisdictional boundaries during a given monitoring event. For each LRS, at least six (6) snapshots shall be conducted for pre-LRS monitoring, and at least three (3) snapshots shall be conducted for post- LRS monitoring. For MS4s that choose to follow a non-LRS implementation approach, but choose to demonstrate compliance with Equivalent Conditions, at least six (6) snapshots shall be conducted.	
Implement CMP	Permittees shall begin implementation actions to attain water quality-based effluent limitation, as necessary.	30 days after approval of the CMP
Annual Monitoring Report	Annual reporting of monitoring results to the Regional Water Board.	December 15, 2013, and annually thereafter.
Implementation Plan	Permittees shall submit an Implementation Plan for wet weather with interim milestones for approval of the Regional Water Board Executive Officer.	March 23, 2022
	Legg Lake Trash TMDL	
TMRP Reports MFAC	Report compliance with the approved MFAC program.	December 15, 2013, and annually thereafter
L	ong Beach City Beaches and Los Angeles River Estuary Bacter	ria TMDL
Compliance Monitoring	To evaluate compliance with numeric targets, monitoring shall take place at existing monitoring sites as well as any new monitoring locations in the ambient water. For beach monitoring locations, daily or systematic weekly sampling in the wave wash at all major drains and creeks, existing monitoring stations at beaches without storm drains, and freshwater outlets is recommended to evaluate compliance. At all beach locations, samples should be taken at ankle depth and on an incoming wave, consistent with section 7961(b) of title 17 of the California Code of Regulations. At locations where there is a freshwater outlet, during wet weather, samples should be taken as close as possible to the wave wash, and no further away than 10 meters down current of the storm drain or outlet. A robust monitoring program shall be developed for the LAR Estuary. Available data includes bi-weekly monitoring from May through September of 2009, and 2010. Monitoring shall be	Submit an IMP or CIMP plan concurrently with the Permittee's draft WMP, or If a WMP or IMP or CIMP will not be developed then submitted the Monitoring Plan 12 months after the effective date of this Order.

expanded to include year round monitoring requirements, and at least three monitoring locations within the Estuary. We understand that adequate data to establish a reference estuary approach is currently not available. If in the future, adequate data from reference estuary studies become available, it may be appropriate to consider a reference estuary approach to evaluate compliance with these TMDLs.

Addition of Part VI.D.5 to Attachment F

5. TMDL Revisions Incorporated after November 8, 2012

Part VI.A.7 of this Order contains reopener and modification provisions that allow for the permit to be modified, revoked, reissued, or terminated under certain circumstances. Subpart a.iv. provides that a cause for taking such actions includes incorporating provisions as a result of TMDL reconsiderations.

a. <u>Permit Modification Related to Revised Los Angeles River Watershed and Ballona Creek Watershed Trash TMDLs</u>

On June 11, 2015, the Regional Water Board adopted Resolution No. R15-006, an amendment to the Water Quality Control Plan for the Los Angeles Region to revise the Los Angeles River Watershed Trash TMDL and the Ballona Creek Watershed Trash TMDL. The revised TMDLs were subsequently approved by the State Water Resources Control Board (State Water Board) by Resolution No. 2015-0068 on November 17, 2015; the Office of Administrative Law on May 4, 2016; and the U.S. Environmental Protection Agency (U.S. EPA) on June 30, 2016. The revised TMDLs became effective upon approval by U.S. EPA.

This Order has been modified consistent with the revisions to these TMDLs, as described below.

Alternative Methods for Demonstrating Compliance with Final Effluent Limitations

Provisions are included in Part VI.E.5.b to provide Permittees alternatives for demonstrating compliance with the final effluent limitations prescribed to achieve the Los Angeles River Watershed Trash TMDL and the Ballona Creek Watershed Trash TMDL. The Staff Report for Resolution No. R15-006 describes the practical considerations that these alternatives address. For example, regarding responsible agencies that have chosen to use full capture systems (FCS) to achieve compliance, the Staff Report notes that:

Exclusive use of full capture systems provides advantages and many responsible agencies have chosen to use full capture systems exclusively to achieve their WLAs. However, some of these responsible agencies have found that there are some catch basins for which retrofitting with a full capture system, or even a partial capture device, is technically infeasible due to the configuration of the catch basin (i.e., usually too shallow to accommodate a full capture system). In these cases, installation of a full capture system would create a flood risk or would require significant expense to redesign the catch basin and the connected storm drain system that may be out of proportion with the reduction in trash that would be achieved.

To address these practical considerations, in drainage areas where the vast majority of catch basins are retrofitted with Full Capture Systems (FCS); the FCS are properly sized, operated, and maintained; and retrofit of the remaining catch basins is technically infeasible, Permittees may request that the Executive Officer make a determination that the agency is in full compliance with its final WLA if three criteria are met as specified in Part VI.E.5.b.ii.(1).

In these instances, Part VI.E.5.b.ii.(1) of the Order also requires Permittees to re-evaluate the effectiveness of institutional controls and partial capture devices and report the findings to the Regional Water Board for confirmation or change to the determination, if significant land use changes occur in the affected subwatershed (based on permits for new and significant redevelopment) or if there is a significant change in the suite of implemented partial capture devices and/or institutional controls (e.g., reduced frequency of implementation, reduced spatial coverage of implementation, change in technology employed). The Order requires such reevaluation to occur within one year of the identification of the significant changes.

The TMDL revisions addressed similar practical considerations for Permittees employing institutional controls or a combination of full capture systems, partial capture devices, and institutional controls. According to the TMDL revisions, Permittees employing these strategies shall be deemed in compliance with the final WLAs when the reduction of trash from the jurisdiction's baseline load is between 99% and 100% as calculated using a mass balance approach, and the FCS and partial capture devices are properly sized, operated, and maintained.

Alternatively, Permittees may request that the Executive Officer make a determination that a 97% to 98% reduction of the baseline load as calculated using a mass balance approach, constitutes full compliance with the final WLA if the criteria set forth in Part VI.E.5.b.ii.(2) are met.

Finally, Permittees may demonstrate compliance with interim and final WLAs through a scientifically based alternative compliance approach as described in Part VI.E.5.b.ii.(3).

Permittees employing alternative compliance options for FCS, partial capture devices, and the application of institutional controls, or employing a scientifically based alternative compliance approach shall submit a revised Watershed Management Program (WMP) or Enhanced Watershed Management Program (EWMP) or separate TMDL implementation plan if the Permittee does not have an approved WMP or EWMP, for Executive Officer approval prior to use of these alternative compliance options.

<u>Provisions Related to Permittee Responsibilities Relative to the Los Angeles River Watershed</u> and Ballona Creek Watershed Trash TMDLs

Updates to the list of Permittees subject to the Los Angeles River Watershed Trash TMDL and Ballona Creek Watershed Trash TMDL have been made to Attachment K, Tables K-3 and K-5, to ensure that compliance with the interim and final water quality-based effluent limitations and related permit provisions is appropriately determined.

First, consistent with the revised Los Angeles River Watershed Trash TMDL, the City of Santa Clarita was removed as a responsible Permittee for the TMDL and is therefore no longer subject to the effluent limitations for trash assigned to MS4 discharges for the Los Angeles River watershed. The City of Santa Clarita was originally assigned effluent limitations for discharges of trash from its MS4 because a small area within the city's jurisdiction is in the Los Angeles River Watershed. However, as noted in the Staff Report to Resolution No. R15-006, the Los Angeles Water Board has established that the area of the city within the Los Angeles River watershed is undeveloped open space and contains no storm drains or other MS4 infrastructure. The City of Santa Clarita has been removed from Table K-5 in Attachment K and Part A.3 of Attachment O.

Second, the Los Angeles County Flood Control District (LACFCD) has been added as a responsible Permittee subject to the Los Angeles River Watershed Trash TMDL and the Ballona Creek Watershed Trash TMDL. The LACFCD is not assigned a waste load allocation, since waste load allocations are based on jurisdictional area. However, given the LACFCD's separate authority over the MS4, and the fact that some of the key compliance strategies for trash TMDLs rely on installation within the LACFCD's infrastructure, permit provisions affirming and outlining the LACFCD's responsibilities are necessary. Provisions have been added to Part VI.E.5.b.v. pertaining to the LACFCD's responsibilities with respect to the effluent limitations for trash and how the LACFCD may be held responsible with a Permittee for non-compliance with the trash effluent limitations.

<u>Provisions for Plastic Pellet Monitoring for Permittees Subject to the Los Angeles River Watershed Trash TMDL</u>

Permittees subject to the Ballona Creek Watershed Trash TMDL are already addressing plastic pellets as part of the requirements related to the Santa Monica Bay Debris TMDL to which they are also subject. The addition of similar provisions for Permittees subject to the Los Angeles River Watershed Trash TMDL ensures consistency among trash TMDLs.

Specifically, Attachment E, Part XIX.D requires that Permittees that are subject to the Los Angeles River Watershed Trash TMDL and which do not meet the exemption criteria (as set forth in Attachment E, Part XIX.D) prepare a Plastic Pellet Monitoring and Reporting Plan (PMRP) to (i) monitor the amount of plastic pellets being discharged from the MS4; (ii) establish triggers for increased industrial facility inspections and enforcement of Storm Water Pollution Prevention Plan (SWPPP) requirements for industrial facilities identified as responsible for the plastic pellet WLA herein; and/or (iii) address possible plastic pellet spills. Permittees subject to the Los Angeles River Trash TMDL must submit a PMRP to the Regional Water Board either (i) by December 28, 2017 or (ii) as part of its adaptive management process if the Permittee is participating in an approved WMP or EWMP.

Provisions for Receiving Water Monitoring for Trash

Incorporation of receiving water monitoring requirements allows for an objective evaluation of the effectiveness, and continued effectiveness, of the implementation actions to control trash discharges from the MS4 throughout the two watersheds.

Attachment E, Parts XIX.B and XIX.D require that Permittees propose for Executive Officer approval, and implement, a Trash Monitoring and Reporting Plan (TMRP). To meet this requirement, Permittees must submit a revised Integrated Monitoring Program (IMP) or Coordinated Integrated Monitoring Program (CIMP) incorporating the TMRP requirements or a stand-alone TMRP (if the Permittee does not have an approved IMP or CIMP) for Executive Officer approval six months after the effective date of the TMDL (i.e., December 30, 2016).

Revisions to Attachment O, Part A

A. Los Angeles River Watershed Trash TMDL

- **1.** Permittees subject to the provisions below are identified in Attachment K, Table K-5.
- 2. Permittees shall comply with the final water quality-based effluent limitation of zero trash discharged to the Los Angeles River no later than September 30, 2016 and every year thereafter.
- 3. Permittees shall comply with interim and final water quality-based effluent limitations for trash discharged to the Los Angeles River, per the schedule below:

Los Angeles River Watershed Trash Effluent Limitations¹¹ per Storm Year¹² (gallons of uncompressed trash)

Permittees	Baseline	2012 (30%)	2013 (20%)	2014 (10%)	2015 (3.3%)	2016 ¹³
