Alternate Compliance Plan

December 15, 2017

Los Angeles River Watershed Trash TMDL
Prepared Pursuant to Resolution No. R15-006

Prepared By:

Executive Summary

This Alternate Compliance Plan has been prepared with specific application to the California Regional Board, Los Angeles Region Resolution R15-006, commonly referred to as the Los Angeles River Trash TMDL Amendment.

As documented in reports annually submitted to the Regional Board, Glendale has demonstrated continued compliance with the Trash TMDL (R07-12) since the original effective date in 2008. The Trash TMDL Amendment, adopted in 2015, provides Los Angeles River MS4 permittees with several options to demonstrate compliance with the final WLA. As described in this Report, Glendale has achieved compliance for the reporting year in accordance with the Amendment.

Background

The Los Angeles Regional Water Quality Control Board (RWQCB) approved the Trash TMDL for the Los Angeles River watershed on September 19, 2001. This TMDL was subsequently rescinded on July 17, 2006. On September 3, 2008 the current Trash TMDL (Resolution 07-012) became effective. This TMDL established a nine-year schedule for reducing trash discharges from sources along the Los Angeles River to meet the numeric target of zero discharged by September 30, 2016.

An Amendment to the Trash TMDL (Resolution No. 15-006) was approved by the Regional Board on June 11, 2016, and was subsequently approved by the State Water Resources Control Board on November 17, 2015, and the USEPA on June 30, 2016. This Amendment provides five approaches for permittees subject to this TMDL to demonstrate compliance with the final zero trash waste load allocation (WLA). These approaches are:

1. 100% of all conveyances discharging to the Los Angeles River are retrofitted with trash “full capture” systems (FCSs).
2. 98% of all catch basins within the agency’s jurisdictional land area in the watershed are retrofitted with FCSs¹. This approach requires a report on the technical infeasibility for the remaining catch basins and a report documenting partial capture devices and institutional control effectiveness.
3. 99% or greater reduction of the baseline load attained through a combination of FCS, partial capture devices, and institutional controls, calculated using a mass balance approach based on a trash daily generation rate (DGR) study. This approach requires all FCSs, partial capture devices, and institutional controls be properly sized, operated, and maintained. Continued DGR studies are also required for compliance reassessment.
4. 97% or greater reduction of the baseline load for two or more consecutive years, attained through a combination of FCS, partial capture devices, and institutional controls, and calculated using a mass balance approach based on a trash daily generation rate (DGR) study. This approach requires an evaluation of institutional control effectiveness and any potential enhancements, and a demonstration that opportunities to implement partial capture devices have been fully exploited. Continued DGR studies are also required for compliance reassessment.
5. A scientifically based alternative as approved by the Regional Board.

¹ 98% of all catch basins within the agency’s jurisdictional land area in the watershed are retrofitted with FCS or, alternatively, 98% of the jurisdiction’s drainage area is addressed by FCS and at least 97% of the catch basins (or, alternatively, drainage area) within the agency’s jurisdiction in the subwatershed (the smaller of the HUC-12 equivalent area or tributary subwatershed) are retrofitted with FCS.

Alternative approaches #2 through #5 also require responsible jurisdictions to 1) demonstrate that existing studies of institutional controls and partial capture devices are representative and transferable to the implementing area, 2) provide a schedule for periodic effectiveness demonstrations and evaluations and 3) properly size, operate, and maintain FCSs and partial capture devices consistent with sizing, operation, and maintenance schedules used to determine their effectiveness.

Compliance Approach

The completion of the City of Glendale's 2017 DGR study has demonstrated the City is in compliance with Approach #3. For the most recent reporting year of 2016-2017 Glendale reported a 99.42% percent compliance level. For the reporting year of 2015-2016 Glendale reported a compliance level of 99.68%.

Requirements for Compliance Approach #3 and City Compliance Status

Pursuant to the Amendment to the Los Angeles River Watershed Trash TMDL, responsible jurisdictions may achieve compliance with the final WLA when they:

"...employ institutional controls or a combination of full capture systems, partial capture systems, and institutional controls [which result in a] reduction of trash from the jurisdiction's baseline load...between 99% and 100% as calculated using a mass balance approach, and the [trash capture] devices are properly sized, operated, and maintained."

The City's WLA reduction is between 99% and 100%

City Status: For the most recent reporting year of 2016-2017 Glendale reported a 99.42% percent compliance level. This was determined through a DGR Study conducted during the summer of 2017, as explained in Attachment A.²

Summary of Full Capture Systems, Partial Capture Systems, and Institutional Controls

The results obtained during the 2017 DGR study indicated an effective implementation of institutional control measures such as anti-littering statutes, street sweeping, catch basin cleaning, trash/recycling pick-up, public outreach, and community clean-up programs. A highlight of these institutional controls is the City's recently adopted ordinance banning plastic bags. This ban reached full implementation in July, 2014. Details on this measure, as well as a quantification of its potential benefits, is included in Attachment B. Summaries of all remaining implemented institutional controls are also included in Attachment B³. The City of Glendale expects a similar reduction through the continued implementation of its plastic bag ban.

The City has installed full-capture screens in city-owned catch basins large enough to accommodate them. The only catch basins that remain "open", are those that 1) are located in sump conditions, 2) cannot be retrofitted due to technical infeasibilities, and 3) are not owned by the City. Out of the approximate 1,045 are city-owned catch basins draining to the Los Angeles River, 960 city-owned catch basins have been retrofitted.

² Attachment A City of Glendale, Daily Generation Rate Study 2017

³ Attachment B City of Glendale, Currently Implemented Institutional Controls 2017

Characterization

Daily Generation Rate

The Daily Generation Rate (DGR) method is identified in the 2007 LAR Trash TMDL as a method for measuring the effectiveness of the institutional control measures. This method uses a mass balance approach based on a daily trash generation rate for representative drainage areas in the watershed. The DGR study is broken down into two phases, which consists of: 1) physically collecting the trash, and 2) quantifying the collected materials. Collection routes are selected in different designated land-use areas. Representative study areas are selected to include five priority land-use types:

- Commercial
- High/Low Density Residential
- Industrial
- Public Facilities and Educational Institutions
- Open Space and Recreation

At the conclusion of each route, the trash collected from the streets in the commercial, residential, industrial, public facilities/ educational institutions, and open space/recreation areas is delivered directly to a City facility where the trash is quantified per route.

Quantification

The collected trash from each individual land-use area is quantified and classified by weighing 5-gallon buckets and sorting the contents into five categories, according to material type.

- Plastic: bags, bottles, jugs, Styrofoam
- Paper: bags, newspaper, scraps, wrappers
- Glass: bottles, scraps, broken windows
- Metal: aluminum, steel, copper
- Other: cigarette butts, food, cloth, miscellaneous

The visually estimated composition of the trash loads was averaged for each land-use and is summarized in Table 1.

Table 1: Trash Collected by Material Type

Land Usage	Plastic	Paper	Glass	Metal	Other
Commercial	50%	40%	1%	7%	2%
Residential	37%	57%	0%	5%	1%
Industrial	37%	53%	0%	3%	7%
Public Facilities/Educational Institutions	50%	40%	0%	6%	4%
Open Space/ Recreation	42%	48%	1%	4%	5%

An estimate of the trash produced for each land-use area was calculated by taking the amount of trash collected and extrapolating that value to the remaining number of curb miles for that land-use area. Table 2 lists the DGRs by land use.

Table 2: Daily Generation Rates by Land Use

Land Usage	DGR per Curb Mile (lbs/mile)
Commercial	0.196
Residential	0.016
Industrial	0.079
Public Facilities/ Educational Institutions	0.166
Open Space/ Recreation	0.041

The 2017 DGR study showed an annual trash discharge into the City’s storm drain system of 1,692 lbs. This equates to a 99.42% reduction of trash from the City’s baseline WLA. Together, the mass balance approach coupled with structural catch basin compliance and institutional control measures demonstrate that the City has effectively met the compliance target of the Los Angeles River Trash TMDL.

Future Compliance

Following the recommendation in Section 2.2 of the June 15, 2015, LARWQCB Staff Report, *Reconsideration of Certain Technical Matters of the Trash TMDLs for the Los Angeles River Watershed and the Ballona Creek Watershed*, the City requests to “reduce the frequency of DGR calculations from annually to once every five years as long as there are no reductions in implementation of partial capture devices and institutional controls over the time period and no significant changes in land use that would render the last DGR calculation unrepresentative of current land uses and trash controls within the agency’s jurisdiction.”

The City will continue to properly maintain its trash capture devices and institutional controls and anticipates a continued compliance level above 99% in the future.

CITY OF GLENDALE

DAILY GENERATION RATE 2017

Executive Summary

This report summarizes the activities and findings of the Daily Generation Rate (DGR) study conducted in the City of Glendale during the summer of 2017. The DGR was calculated in order to determine the effectiveness of the institutional control measures put in place to comply with this year's Trash Total Maximum Daily Loads (TMDLs) for the Los Angeles River Watershed. The TMDL requires that by 2016 all municipal permittees reduce trash discharges to the LA River to zero. However, the 2015 Los Angeles River Trash TMDL Amendment provides permittees several other options to demonstrate compliance. The City's strategy for compliance is based on Approach #3, which includes all of the following—full exploitation of the capture systems, evaluation of institutional controls, and a waste load allocation (WLA) reduction between 99% and 100%. The results of the study discussed herein indicate that the City of Glendale is in compliance with the Trash TMDL for this year.

TMDL Background

In August 2007, due to levels of trash in the LA River exceeding water quality objectives, the Los Angeles Regional Water Quality Control Board (RWQCB) adopted the LA River Trash Total Maximum Daily Loads (TMDLs). Subsequently, in December 2009 the RWQCB incorporated the LA River Trash TMDL into the Municipal Stormwater Permit, making the numerical trash limits enforceable. The Trash TMDL established a seven year schedule for reducing trash discharges from sources along the Los Angeles River to meet the numeric target of zero trash in the water. The Baseline Waste Load Allocation for the City of Glendale by the Trash TMDL is 293,498 pounds and the allotted 100% goal for the 2017 year is not to exceed 0 lbs. However, an Amendment to the Trash TMDL (Resolution No. 15-006), approved by the Regional Board on June 11, 2016, provides alternate approaches to demonstrate compliance.

Daily Generation Rate

The DGR Study consisted of two phases: first the field collection of trash, and then its quantification. Collection routes were outlined in different designated land use areas. Representative study routes within five priority land type uses were selected at random. The land type uses were:

- High/Low density residential
- Commercial
- Industrial
- Open space and recreation
- Public/ Educational Facilities

Precise curb miles and collection routes were developed (see Figures).

Field Collection:

Once the collection routes were designated, a manual pick-up was performed. To facilitate this process, a pick-up reaching tool was used. Only pieces of trash ¼ of an inch and greater were collected, since anything smaller than that is not subject to the trash TMDL. Trash accumulated within catch basins along the study route was removed, weighed, and incorporated into the DGR calculation. At the conclusion of each collection route, the trash collected from each of the Commercial, Residential, Industrial, Public Facilities/ Educational Institutions, Open Space/Recreation areas was then delivered to a City facility where the trash was quantified. The collected street litter was placed in separate piles to avoid mixing. Detailed maps and street sweeping routes are located on Pages 8-10, and summarized in Table 1.

Picture 1: Trash being collected

Table 1: Land Usage Miles

Land Usage	Estimated Total Curb Miles	Designated Curb Miles	Field Collection Dates
<i>Commercial</i>	80	1.6	Aug. 10 th –Aug. 31 st
<i>Residential</i>	569	10.1	Aug. 16 th –Sept. 6 th
<i>Industrial</i>	15	1.1	Aug. 21 st –Sept. 10 th
<i>Public Facilities/ Education Institutions</i>	7	1.1	Aug. 14 th –Sept. 4 th
<i>Open Space/ Recreation</i>	26	2.0	Aug. 7 th –Sept. 4 th

Quantification:

This phase consisted of the evaluating and weighing the trash which took place at a City facility. The loads of trash were delivered from the routes and separated by individual land use area.

This study uses the definition of litter as defined by the California Government Code Section 68055.1(g):

“Litter means all improperly discarded waste material, including, but not limited to, convenience food, beverage, and other product packages or containers constructed of steel, aluminum, glass, paper, plastic, and other natural and synthetic materials, thrown or deposited on the elands and water of the state, but not including the properly discarded waste of the primary processing of agriculture, mining, logging, sawmilling or manufacturing.”

Picture 2: Weighing the trash.

The collected trash from each individual land use area was then manually quantified and classified using the following procedures:

1. Gardening gloves were utilized to grab the trash, from only one specific load, and placed onto 5-gallon buckets.
2. The bucket was suspended from a hand-held device that measured total weight. The weight of the bucket was subtracted from the total weight.
3. The trash was sorted into five categories, according to material content/type, and approximately quantified (by %).

Standard safety precautions were followed during the trash weighing process. This was repeated for the remainder of the unloaded trash. Trash collected from each area was quantified separately. All piles were kept separated to avoid combining the trash from the five different areas.

Measuring

A digital scale was used to weigh the trash, and a 5-gallon bucket was used to estimate its volume. Each full bucket of anthropogenic trash was weighed separately, concluding with a final characterization by different type of constituents.

Picture 3: Trash collected during this study.

Results

Data collected from the trash sorting is summarized in Table 2:

Table 2: Trash Collected per Land Usage Area

Land Usage	Designated Curb Miles	Trash (lbs)	Days Since Last Sweeping
<i>Commercial</i>	1.6	10.2	13
<i>Residential</i>	10.1	5.0	13
<i>Industrial</i>	1.1	2.7	13
<i>Public Facilities/Educational Institutions</i>	1.1	5.9	13
<i>Open Space/ Recreation</i>	2.0	3.1	13
Total	15.9	26.9	

Characterization

The characterization of trash was done by separating it according to the following constituents.

- Plastic: bags, bottles, jugs, Styrofoam
- Paper: bags, newspaper, scraps, wrappers
- Glass: bottles, scraps, broken windows
- Metal: aluminum, steel, copper
- Other: cigarette butts, food, cloth, miscellaneous

The visually estimated composition of the trash loads was averaged for each land-use and is summarized in Table 3:

Table 3: Composition

Land Usage	Plastic	Paper	Glass	Metal	Other
<i>Commercial</i>	50%	40%	1%	7%	2%
<i>Residential</i>	37%	57%	0%	5%	1%
<i>Industrial</i>	37%	53%	0%	3%	7%
<i>Public Facilities/Educational Institutions</i>	50%	40%	0%	6%	4%
<i>Open Space/ Recreation</i>	42%	48%	1%	4%	5%

DGR per Land Use Area

An estimate of the trash produced for each land use area was calculated by taking the amount of trash collected for the study and extrapolating that value to the remaining number of curb miles for that land use area. The DGR was then determined by converting the trash per week (dependent on street sweeper’s schedule) to trash collected per day. The final DGR value represents the amount of the trash generated for the entire city per day.

Table 4: DGR

Land Usage	DGR (lbs/day)
<i>Commercial</i>	15.6
<i>Residential</i>	8.9
<i>Industrial</i>	1.2
<i>Public Facilities/Educational Institutions</i>	1.2
<i>Open Space/ Recreation</i>	1.1
Total	28.0

Trash Discharge Levels

The annual amount of trash that is being discharged into the storm drain system on a yearly basis was determined using the DGR values and the number of rain events during the year.

The stormwater discharge for a given rain event was calculated by multiplying the number of days since the last street sweeping by the DGR. The average number of days between a rain event and last street sweeping was estimated to be 3.6 for all areas since sweeping takes place once every other week. The estimated weight of trash draining to catch basins during raining events was obtained by multiplying the average number of days between a rain event and the last street sweeping by the DGR values. The annual weight of trash draining to the catch basins was estimated by multiplying calculated values by the total number of rain occurrences during the 2016-2017 season (17 rain events recorded¹). These values were the estimated final discharge amount of trash being discharged into the storm drain system. The estimated total storm year trash discharge is 1,692 pounds for the 2016-2017 season; this is considered to be the worst-case scenario for the maximum annual weight of trash draining to catch basins from rain events. Table 5 shows the calculated values of trash washed into the storm drain system in 2017.

Table 5: Stormwater Discharge

Land Usage	Discharge (lbs)
<i>Commercial</i>	944.8
<i>Residential</i>	536.4
<i>Industrial</i>	72.3
<i>Public Facilities/Educational Institutions</i>	73.4
<i>Open Space/ Recreation</i>	65.5
Total	1,692

Conclusion

The city’s estimated Total Storm Year Trash Discharge was 1,692 pounds. The baseline waste load allocation for Glendale is 293,498 pounds, so this accounts for a WLA reduction of 99.42%. Since the City’s WLA reduction for the year is greater than 99%, Glendale fulfills Criterion 1 of Compliance Approach #3 in the Trash Amendment.

¹ Value obtained from the National Oceanic and Atmospheric Administration (NOAA) National Weather Service. Only rain events greater than 0.25 inch and not within 3 days of another event were considered

OPEN SPACE/RECREATION AREA ROUTE

Study Mileage: 2.0 curb miles (i.e. survey both sides of street)

CITY OF GLENDALE

Attachment B: Currently Implemented Institutional Controls 2017

Attachment B- Currently Implemented Institutional Controls and Potential Enhancements

Currently Implemented Institutional Controls

Compliance Approach #3 requires “institutional controls shall be deemed in compliance with the final WLA when the reduction of trash from the jurisdiction’s baseline load is between 99% and 100%”. Listed below is an inventory of currently implemented institutional controls. The effectiveness of these institutional controls is demonstrated through the City’s 2017 Daily Generation Rate Study.

Plastic Bag Ban

The City of Glendale adopted a bag ordinance in January of 2013. Similar to LA County’s ordinance, it bans plastic bags and places a 10 cent charge on paper bags. The ordinance became effective in larger stores and farmer’s markets starting July 1, 2013 and expanded to other covered stores January 1, 2014.

There is quantitative evidence of the effectiveness of these bans on decreasing trash discharge to the storm drain system. The City of Los Angeles’ “Quantification Study of Institutional Measures for Trash TMDL Compliance 2012-2013” is an assessment of the City of Los Angeles’ institutional measures and their effectiveness. The study discusses the decrease in the percentage of plastics during trash clean-up events since 2009. The ban on plastic bags is believed to have had a substantial impact; “During Year 1 of this Study (summer 2012), over 1,700 single use plastic grocery bags were collected; however, in Year 2 (summer 2013), just over 850 plastic bags were found within the Study areas, representing a 51 percent reduction in number of items. This number is expected to continue to drop as the City complies with the new ordinance.”

The City of Glendale expects a similar reduction through the continued implementation of its plastic bag ban.

Sweeping

The City of Glendale’s Integrated Waste Management Division currently sweeps the entire city, roughly 800 miles of streets and gutters, once every two weeks. One-third of that sweeping area has posted weekly no-parking signs to facilitate street sweeping and other required maintenance.

Public Outreach

Glendale Clean & Beautiful, Inc. is operated by dedicated volunteers and representatives of the public, private and non-profit sectors who work together to conduct service projects in the city of Glendale. This includes the strategic areas of: Community and Neighborhood Beautification, Recycling and Sustainability, Graffiti Prevention and Eradication, and Litter Prevention and Eradication. *Glendale Clean & Beautiful* and the *Crescent Valley Chamber of Commerce* have provided multiple “Foothill Clean-Up Days” focused on weed abatement and litter removal. The most recent “Foothill Clean-Up Day” was November 4, 2017.

“The Great Los Angeles River Clean-Up” is a three-day volunteer event to remove trash from the LA River and surrounding areas of the channel. The *Friends of the Los Angeles River (FoLAR)* and the *Glendale Parks and Open Space Foundation* have scheduled the Glendale Narrows Riverwalk cleanup date on April 16, 2016.

**Attachment B-
Currently Implemented Institutional Controls and Potential Enhancements****Recycling/Garbage**

Residential Curbside Pick-Up is available to residents on scheduled pick-up days accepting: Aluminum, Tin, Metal, Bi-Metal Cans, Beverage cartons, CDs, DVDs, Cardboard, Glass Bottles, Jars, Paper, Plastic Bags, Plastic Bottles, and Scrap Metal.

Drop Off at the Glendale Recycling Center is available seven days a week. The Center accepts: Aluminum cans CRV, plastics #1 - #7, glass CRV, scrap plastic #1 - #7, injection plastic (toys), cardboard, newspaper, magazines, junk mail, white/colored paper, phone books, mixed paper, scrap metal, aluminum, copper/wire, brass, and appliances E-Waste: TV's, computers/towers, printers, radios, CD players, tablets, cell phones, vacuums, cables and batteries.

Hazardous Waste Disposal

Residential drop-off for Hazardous Waste is available Wednesday and Saturday at the Glendale Environmental Management Center including: Fluorescent bulbs and tubes, household cleaners, medications, paint, automotive fluids and all types of batteries, pest control products, drain cleaners, propane, pool care products and sharps (in an appropriate container).

Bulky Item Collection

Residential Bulky and Electronic Item Pickup Services are free and available to residents during the normal schedule garbage pick-up.

		Total Days:			32				1.21	
Open Space / Recreation	26.06	1.99	7/25/17	8/7/17	13	1.06	0	1.06		Open Space & Recreational areas swept 2 or 3 days per month (alternating Mondays). DGR sampling collected weekly by hand, and prior to street sweeping activities (Mondays).
			8/8/17	8/21/17	13	0.19	0	0.19		
			8/22/17	9/4/17	12	1.50	0.40	1.90		
		Total Days:			38				1.08	
Total Area	697.39	15.89					Total Trash (lbs)	26.92		
							DGR (lbs/day)	28.00		
Notes:	* Total collection period must equal 30 days for each representative land use area.									
Col. 1	Land Use Category - Categories based on Baseline Monitoring Program conducted by LACDPW baseline monitoring group. Alternatively, describe land use type as designated by the City.									
Col. 2	Total area of said land use within jurisdiction (fill in once in gray-highlighted row for each land use category). Total area may be accounted for using other approved measurement units, e.g. curb miles.									
Col. 3	Representative area for DGR calculation (fill in once in gray-highlighted row for each land use category). Representative area may be accounted for using other approved measurement units, e.g. curb miles. Collectively, the areas used for DGR calculation should be representative, proportionally, of the land uses within the jurisdiction and must be approved by the EO prior to the 30-day collection period.									
Col. 4	Date of last street sweeping									
Col. 5	Date of DGR sampling (direct measurement of deposited trash) - The DGR collection period(s) must fall between June 22nd and September 22nd									
Col. 6	Length of Collection Period in days - The DGR collection period must be 30 days, total, for each representative land use area									
Col. 7	Trash collection from representative area through street sweeping or other method, lb. or gal.									
Col. 8	Trash cleaned out from catchbasins within the representative area (lb. or gal.). Trash accumulated in the CBs during the DGR collection period must be included in the total trash generated.									
Col. 9	Where CBs are closed off such that no trash can enter them for the purpose of DGR sampling, this value will be zero (0).									
Col. 9	Total amount of trash generated in representative area (sum of Col. 7 and Col. 8), lb. or gal.									
Col. 10	Total Trash Generated within Representative Area (estimated in 30 day period)									
Col. 11	Provide comments, if necessary									
Note: Sampling must be conducted during any 30-day period, starting June 22nd through September 22nd of each year.
