Notice of Proposed ReInjection
Former Remco Hydraulics Facility
934 South Main Street
Willits, California

Mendocino County

Comment Period begins: February 7, 2012

Comment Period ends: March 7, 2012

The Willits Environmental Remediation Trust (WERT) is proposing to inject reducing agents in accordance with existing Waste Discharge Requirements Order No. R1-2009-0001 for In-Situ Treatment of Groundwater (WDRs). The WDRs sets out a process for reinjection that requires the submittal of: a) a workplan proposal to the Executive Officer for review and concurrence; b) a proposed groundwater monitoring program; c) a revised contingency plan; and d) a 30-day notification and comment period to the public and all involved agencies. If the Executive Officer finds no new significant impacts or issues, the Executive Officer may concur with the reinjection proposal. The discharger may then conduct additional injections in accordance with the terms of this Order.

The WERT is proposing to inject reducing agents (treatment solutions) to dechlorinate volatile organic compounds (VOCs) in the former paint shop area of the site. The workplan includes groundwater sampling in the injection area and downgradient of the injection area. The workplan detailing the injection proposal is available upon request or on Geotracker at the following link:
http://geotracker.waterboards.ca.gov/esi/uploads/geo_report/2812926530/T0604593324.PDF. The report can also be found on the Willits Environmental Remediation Trust website at www.willitstrust.org.

Document is titled: Work Plan for In-Situ Remediation of VOCs in Shallow Groundwater, Former Remco Hydraulics Facility, Willits, California, January 13, 2012
