Brenda,

The Staff Report cites two sources of these data. The data were provided by James Tyler, Environmental Health and Safety Program Manager, County of Sonoma Department of Health Services, Public Health Division. Environmental Health & Safety Section, Santa Rosa. (707) 565-6562. Please find attached two excel spreadsheets: One that contains the data provided by Mr. Tyler, the second is one that compiles the data into a single data table for the staff report. Also attached is the 2014 Beach advisories. The Staff Report does not present 2015 data that you cite below. We choose to simplify the large amount of data into a single data table for information purposes.

Can you respond to Brenda? I don't know the answer to her questions.

Subject: Beach advisories

Charles:

Can you tell me where the information came from in Table 3.9 on page 3-22 on health advisories? Do they actually post beach signs for 1-3 days? In 2015, but for one exceedance at Johnson's Beach, all exceedances were at Cloverdale. (attached) Since the lower river is receiving most of the attention in this process, wouldn't it be misleading to lump all advisories together and make it appear as though the problem is worse in the lower river than it is? Can you tell me how advisories were determined? (I used to have many of the beach monitoring charts but after multiple email crashes, all but this year seems to have disappeared into the stratosphere.)

Brenda
