---

In the 90s 800,000 ac/ft, in the 2000s 300,000 ac/ft , now another 300,000 ac/ft. And where is your accountability as to where it all went? If the first 1.1 million ac/ft hasn't been effective what makes you think that another 300,000 ac/ft will help? And how does MWD have access to 68,000 ac/ft when it's coming out of our area? And go ahead and pass this legislation and when it fails to produce results as in the past you will still have your job or a nice state retirement while you leave us in the Merced area high and dry. Flash News! Flood releases to make room for the Big Storm! All that extra water wasted and not one storage facility has been increased, Shame on you.
