I would like to comment on the revised Bay-Delta Plan Admendment & SED.

The proposed medium of 40 percent of unimpaired flow to the San Joaquin River from it's tributaries: the Stanislaus , Tuolumne and Merced Rivers from Feb-June is an "excellent" idea. This is a compromise that should work. The health of the southern Delta is critical to the environment and farming in that region. The Bay-Delta ecosystem has been under stress due to a reduced inflow of fresh water for a long time. The B/D Plan Admendment & SED as proposed would be a positive step in reversing the degradation of that region. Thank you for all that is being done to bring about a healthy long term solution.

Respectfully,
Richard G. Beaudreau
