5). Meaning that the tables include listings still requiring the development of a TMDL, those that have a completed TMDL approved by USEPA, and those that are being addressed by actions other than a TMDL.

USGS HUC = US Geological Survey Hydrologic Unit Code. Calwater = State Water Resources Control Board hydrological subunit area or even smaller planning watershed.

TMDL requirement status definitions for listed pollutants are: A= TMDL still required, B= being addressed by USEPA approved TMDL, C= being addressed by action other than a TMDL

Dates relate to the TMDL requirement status, so there will only be one applicable date for each listing.

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2010 0040 REVISED

APPROVING THE 303(d) LIST PORTION OF THE PROPOSED 2010 INTEGRATED REPORT, CLEAN WATER ACT SECTION 303(d) LIST OF WATER QUALITY LIMITED SEGMENTS AND CLEAN WATER ACT SECTION 305(b) ASSESSMENT OF SURFACE WATER QUALITY

WHEREAS:

1. Section 303(d) of the federal Clean Water Act (CWA) requires States to identify surface waters that do not meet applicable water quality standards.

2. The list of water quality limited segments identified according to CWA Section 303(d) must include a description of the pollutants not meeting standards and needing to be addressed.

3. The proposed California 2010 Integrated Report is a compilation of the Regional Water Boards' 2008 Integrated Reports with State Water Board staff recommendations for additions, deletions or changes.

4. State Water Board staff and Regional Water Board staff used the Water Quality Control Policy for Developing California's CWA Section 303(d) List (Listing Policy) in developing the changes to the 303(d) List.

5. In developing the proposed 2010 Integrated Report Section 303(d) List, Regional Water Board and State Water Board staff has considered all readily available data and information.

6. State Water Board staff has made recommendations to add, remove, or change the list of water body-pollutant combinations on the proposed 2010 Integrated Report Section 303(d) List.

7. On June 15, 2010 the State Water Board held a workshop to hear comments on the 2010 Integrated Report.

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the 303(d) List portion of the 2010 Integrated Report, which is available on the State Water Board's website at the link below with five changes that are described below: http://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml.

    1.1 Remove the Silviculture source from San Vicente Creek Sedimentation List
    1.2 Do Not List Santa Clara River Reach 5 and Reach 6 for Bioassessment
    1.3 Do Not List either the San Joaquin River or its tributaries, the Merced, the Tuolumne, and the Stanislaus for Temperature
    1.4 Do Not List multiple water bodies for *E.Coli* in Santa Ana Region
    1.5 Do Not List multiple water bodies for Metals in Santa Ana Region

2. Authorizes the Executive Director or designee to transmit the attached 2010 Integrated Report and other supporting information to the U.S. Environmental Protection Agency for approval of the 303(d) List.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 4, 2010.

In 1992 the California State Water Quality Control Board (SWQCB) proposed that the Klamath River be listed for both temperature and nutrients, requiring the development of total maximum daily load (TMDL) limits and implementation plans. The United States Environmental Protection Agency (USEPA) and the NCRWQCB accepted this action in 1993. The basis for listing the Klamath River as impaired was aquatic habitat degradation due to excessively warm water temperatures and algae blooms associated with high nutrient loads, water impoundments, and agricultural water diversions. Upon review of the available data, there was insufficient information to determined if conditions in the Wooley Creek Watershed were different from the rest of the Salmon River Watershed. Additionally, temperature data in the Wooley Creek Watershed showed an exceedance of the evaluation guideline. Therefore, it was determined that the waterbody-pollutant combination should not be removed from the Section 303(d) List because applicable water quality standards for the pollutant are being exceeded. Upon review of the available data, there was insufficient information to determined if conditions in the Wooley Creek Watershed were different from the rest of the Salmon River Watershed. Additionally, temperature data in the Wooley Creek Watershed showed an exceedance of the evaluation guideline. Therefore, it was determined that the waterbody-pollutant combination should not be removed from the Section 303(d) List because applicable water quality standards for the pollutant are being exceeded. The Big River provides habitat for coho salmon and steelhead trout, which are listed as a threatened species under the federal Endangered Species Act. Populations of coho salmon and steelhead trout in the Big River are extremely low compared to historical levels. Recent (1996-2000) temperature data gathered in the Big River watershed indicate that high temperature levels may be a source of impairment of cold water fisheries in the river. A TMDL was completed for the Laguna for ammonia and dissolved oxygen in 1995. The TMDL concluded that high ammonia levels in the Laguna were the result of point and non-point source nitrogen inputs of various forms. Low dissolved oxygen concentrations were a result of inputs of organic matter and nutrients which stimulate algal growth and subsequently cause depressed dissolved oxygen levels when the algae dies and decays. The TMDL took the form of a Waste Reduction Strategy (WRS) which addressed the reduction of nitrogen loading from point and non-point sources. With the implementation of the WRS and operational improvements at the City of Santa Rosa Waste Water Treatment Plant as well as improvements in waste storage and disposal activities at local dairies, nitrogen inputs to the Laguna were significantly reduced. Following implementation of the WRS and the subsequent attainment of nitrogen-ammonia interim concentration goals, as stated in the WRS, the Laguna was removed from the 303(d) List for ammonia and dissolved oxygen in 1998, pursuant to a recommendation by US EPA. However, dissolved oxygen levels in the Laguna continue to fall below the Regional Water Board Basin Plan minimum DO objective of 7.0 mg/L and in many cases fluctuate significantly on a daily and seasonal basis. Based on available information, it appears that phosphorus may contribute to the dissolved oxygen fluctuations. However, the cause of the low dissolved oxygen levels is not certain. While elevated phosphorus levels may contribute to low DO, nitrogen to phosphorus ratios, based on recent Laguna measurements, indicate that nitrogen may be the macronutrient controlling plant growth in the Laguna. A TMDL addressing nutrients (both nitrogen and phosphorus) and dissolved oxygen is necessary for water quality objective attainment.	Internal Nutrient Cycling (primarily lakes)	Natural Sources

The Russian River provides habitat for coho salmon and steelhead trout, which are listed as a threatened species under the federal Endangered Species Act. Temperature data collected from 1997 to 2000 in the Russian River watershed indicate that high temperature levels may be a source of impairment of cold water fisheries in the watershed.
