3. Fidelity Federal Bank operates an office building at 600 North Brand Avenue, Glendale, California, and discharges up to 5,000 gallons per day of cooling tower bleed-off and overflow to a storm drain in Brand Avenue. The wastes flow to Los Angeles River, a water of the United States, at Dover Street, above the tidal prism.

Bacteriostat and algaecide (Formula GCO-10) for controlling bio-fouling organisms is added to the cooling tower system.
4. The Board adopted a revised Water Quality Control Plan for the Los Angeles River Basin on November 27, 1978. The Plan contains water quality objectives for the Los Angeles River.
5. The State Water Resources Control Board adopted a Water Quality Control Plan for Inland Surface Waters of California on April 11, 1991. The Plan contains numerical and narrative water objectives for inland surface waters.
6. The beneficial uses of the receiving water are: ground water recharge, water contact and non-contact recreation, warm freshwater and wildlife habitat, and (within the tidal prism) industrial service supply, ocean commercial and sport fishing, preservation of rare and endangered species, marine habitat, and saline water habitat.
