PROJECT DESCRIPTION:

Tesoro Petroleum Companies Inc. (Tesoro) proposes to discharge wastewater from the soil and groundwater cleanup project located at 2169 Redondo Beach Boulevard, California. Groundwater beneath the site is impacted with gasoline and TBA. The facility is a former gasoline station, and is now a parking lot for a Target Corporation store. Prior to discharge, the contaminated groundwater will be treated by passing it through an air stripper system and/or through granular activated carbon (GAC) system.

VOLUME AND DESCRIPTION OF DISCHARGE:

Up to 28,800 gallons per day of treated groundwater will be discharged into the storm drain located along Redondo Beach Boulevard (Latitude: 33° 53' 00", Longitude: 118° 18' 45") that drains to Dominguez Channel, above the Estuary, a water of the United States. The vicinity map and process flow diagram are shown in Figures 1 and 2, respectively.

FREQUENCY OF DISCHARGE:

The discharge of treated groundwater will be intermittent.

REUSE OF WATER:

It is not feasible to reuse the water due to limited quantity of groundwater to be generated.
