**PROJECT LOCATION**

Pleasant Valley Road and Route 1  
Oxnard, California

**FACILITY MAILING ADDRESS**

680 Flinn Avenue, Suite 32  
Moorpark, CA 93021

**PROJECT DESCRIPTION**

State of California Department of Transportation – District 7 (Cal Trans) designs, constructs, and maintains the State of California highway and freeway systems in Los Angeles and Ventura Counties. Cal Trans proposes to construct an over-crossing road at Pleasant Valley Road and Route 1 in the City of Oxnard. Groundwater dewatering activity will be conducted during the construction.

**VOLUME AND DESCRIPTION OF DISCHARGE**

Up to 200,000 gallons per day of desilted groundwater will be discharged to an existing man-made ditch located south of Sutter Drive. The discharge will then flow northwesterly to the Ventura Flood Control Channel at Olds Road (Latitude 34° 10' 3.4", Longitude 119° 8' 46.5"), then to a miscellaneous Ventura coastal stream. See Figure 1 for the site location.

**FREQUENCY OF DISCHARGE**

Dewatering activity is scheduled to begin in August 2001. Although the construction project will last one year, the dewatering activity will be intermittent and projected to last approximately sixty working days in several one- to two-week intervals.

**REUSE OF WATER**

Several options for reuse of water were considered, such as utilizing of water for construction purposes, dust control, and application to an agricultural field. However, either the cost of pipelines, storage of water, and permits were prohibitive, making the reuse of the groundwater infeasible. Therefore, the wastewater will be discharged to the stream.
