**PROJECT DESCRIPTION:**

The Shell Oil Products US (Shell) will be upgrading two aboveground storage tank at their facility located at Pier B, Berth 84, Long Beach. Shell proposes to conduct hydrostatic testing of their Tank No. 35002 and No. 80099. The wastewater from the aboveground storage tank will be discharged into the channel. Potable water supplied by the City of Long Beach will be used for the hydrostatic testing.

**VOLUME AND DESCRIPTION OF DISCHARGE:**

Approximately 500,000 gallons per day of hydrostatic test water will be discharged to the Channel No. 2 (Latitude: 33° 46' 20", Longitude: 118° 13' 18"). From the channel, the discharge flows into the Long Beach Inner Harbor, waters of the United States. The location and site plan are shown in Figures 1 and 2.

**FREQUENCY OF DISCHARGE:**

The discharge will be intermittent. The Shell anticipates conducting the hydrostatic testing in June 2003.

**REUSE OF WATER:**

Reuse of water at the facility for irrigation and dust control were evaluated. However, there is no sufficient unpaved areas that will allow percolation of this quantity of water. Therefore, the hydrostatic test water will be discharged into the storm drain.
