PROJECT DESCRIPTION:

Kinder Morgan SFPP, L.P. proposes to discharge hydrostatic test water from two newly installed petroleum pipeline located at Nogales and Valley Boulevard, West Covina. Hydrostatic testing is required at the facility to test the pipelines for leaks and structural integrity. The wastewater from the pipelines will be discharged to a nearby storm drain located along Nogales Street and Arenth Avenue. Potable water supplied by the Rowland Water District will be used for the hydrostatic testing.

VOLUME AND DESCRIPTION OF DISCHARGE:

Approximately 28,800 gallons per day of hydrostatic test water will be discharged to a storm drain located along Arenth Avenue (Latitude: 34° 53' 15", Longitude: 117° 00' 04"). From the storm drain, the discharge flows into San Jose Creek, a water of the United States. The site location is shown in Figure 1.

FREQUENCY OF DISCHARGE:

The discharge will be intermittent. Kinder Morgan SFPP, L.P. anticipates conducting the hydrostatic testing in August 2004.

REUSE OF WATER:

Reuse of water at the facility for irrigation and dust control was evaluated, and found to be infeasible at the site. Therefore, the hydrostatic test water will be discharged into the storm drain.
