PROJECT DESCRIPTION:

Harrison/Roberts Environmental Management (Discharger) operates a groundwater treatment system at 7228 Beverly Boulevard in the City of Los Angeles (See Figure 1 for the site location). The treatment system comprises of two bag filters and two liquid phase activated carbon vessels to remove petroleum hydrocarbons and other pollutants in the contaminated groundwater (See Figure 2 for treatment process). The treated groundwater from the site is discharged into a nearby storm drain under the General NPDES Permit CAG834001, Order No. R4-2002-0125. Order No. R4-2007-0021 supersedes Order No. R4-2002-0125 and continues the facility enrollment under the General NPDES permit.

VOLUME AND DESCRIPTION OF DISCHARGE:

Approximately 1,000 gallons per day of groundwater is discharged from the facility to Discharge Point 1 (Latitude: 34° 04' 41", Longitude: 118° 20' 08"). The discharge flows into Ballona Creek, a water of the United States.

FREQUENCY OF DISCHARGE:

The groundwater discharge will be intermittent for the duration of the treatment system operation.

REUSE OF WATER:

Offsite disposal of the groundwater is not feasible due to high cost of disposal. The property and the immediate vicinity have no landscaped areas that require irrigation using the groundwater. Since there are no feasible reuse options, the groundwater will be discharged to the storm drain.
