## 2. Progressive Enforcement

Progressive enforcement is a series of defined and reproducible enforcement actions whereby consequences of non-compliance increase with each incremental enforcement steps. Progressive enforcement includes procedures to coordinate enforcement between the Regional Water Board and Permittees. As the Regional Water Board is the agency responsible for implementing the NPDES program, it has the authority to step in when enforcement actions of Permittee are unsuccessful in bringing dischargers into compliance with the permit. As such, progressive enforcement is an effective strategy to achieve timely compliance with permit requirements. Order No. 01-182 included requirements for a progressive enforcement strategy that are carried over to this Order, with some modifications. This Order includes supplemental documentation requirements for site acreage and Risk Factor rating, when making a referral to the Regional Water Board for MS4 permit non-compliance of a discharger under the construction general permit. This requirement is necessary information for the Regional Water Board consideration. Moreover, this Order eliminates the provision within Order No. 01-182 that allows the Regional Water Board and Permittees to form a storm water task force. This provision was removed because the ability for coordinated enforcement between the Regional Water Board and Permittees is adequately established through remaining provisions within Part VI.D.2 of this Order.

#### 3. Modifications/Revisions

This Order requires each Permittee to modify its storm water management programs, protocols, practices, and municipal codes to be consistent with this Order. This provision is necessary to ensure that each Permittee takes all the steps necessary to update the core and ancillary programs that are required to ensure compliance with this Order. A significant change from Order No. 01-182 is that this obligation now rests with each individual Permittee rather than the Principal Permittee.

## 4. Public Information and Participation Program

#### a. Legal Authority

NPDES regulation 40 CFR section 122.26(d)(2)(iv)(A)(6) provides that the proposed management program include "A description of a program to reduce to the maximum extent practicable, pollutants in discharges from MS4s associated with the application of pesticides, herbicides, and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications, and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities."

NPDES regulation 40 CFR section 122.26(d)(2)(iv)(B)(6) provides that the proposed management program include " A description of education activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials."

To satisfy the Public Education and Outreach minimum control measure, the Permittees need to implement a Public Information and Participation Program (PIPP) that has the following objectives: (1) measurably increase the knowledge of the target audiences about the MS4, the adverse impacts of storm water pollution of receiving waters and potential solutions to mitigate the impacts, (2) measurably change the waste disposal and storm water pollution generation behavior of target audiences by developing and encouraging implementation of appropriate activities, and (3) involve and engage a diversity of socio-economic groups and ethnic communities in Los Angeles County to participate in mitigating the impacts of storm water pollution.

# b. Background

Implementation of a PIPP is a critical BMP and a necessary component of a storm water management program. The State Water Board Technical Advisory Committee "recognizes that education with an emphasis on pollution prevention is the fundamental basis for solving nonpoint source pollution problems." The USEPA Phase II Fact Sheet 2.3 (Fact Sheet 2.3) finds that "An informed and knowledgeable community is critical to the success of a storm water management program since it helps insure the following: (i) greater support for the program as the public gains a greater understanding of the reasons why it is necessary and important, and (ii) greater compliance with the program as the public becomes aware of the personal responsibilities expected of them and others in the community, including the individual actions they can take to protect or improve the quality of area waters."³¹

Furthermore, the public can provide valuable input and assistance to a municipal storm water management program and, therefore, should play an active role in the development and implementation of the program. An active and involved community is essential to the success of a storm water management program because it allows for:

³¹ Storm Water Phase II Final Rule - Public Education and Outreach Minimum Control Measure. USEPA Fact Sheet 2.3, January 2000.

- Broader public support since residents who participate in the development and decision making process are partially responsible for the program and, therefore, are more likely to take an active role in its implementation;
- Shorter implementation schedules due to fewer obstacles in the form of public and legal challenges and increased sources in the form of residents volunteers;
- A broader base of expertise and economic benefits since the community can be a valuable, and free, intellectual resource; and
- A conduit to other programs as residents involved in the storm water program development process make important cross-connections and relationships with other community and government programs. This benefit is particularly valuable when trying to implement a storm water program on a watershed basis.

## c. PIPP Implementation

It is generally more cost-effective to have numerous operators coordinate to use an existing program than each developing its own local programs. Therefore, Permittees are encouraged to participate in a County-sponsored PIPP or in one or more Watershed Group sponsored PIPPs supplemented with additional information specific to local needs.

Permittees are required to: (a) conduct storm water pollution prevention public service announcements and advertising campaigns; (b) provide public education materials on the proper handling or potential storm water pollutants; (c) distribute activity specific storm water pollution prevention public education materials to points of purchase; (d) maintain storm water websites or provide links to storm water websites via the Permittees website, which contain educational material and opportunities for the public to participate in storm water pollution prevention and clean-up activities; and (e) provide independent, parochial, and public schools within each Permittee's jurisdiction with materials, including, but not limited to videos, live presentations, and other information. Permittees are required to use effective strategies to educate and involve ethnic communities using culturally effective methods.

The intent of these changes is to provide an increase in public knowledge of storm water pollution prevention practices in an effective and cost efficient manner, while still providing flexibility for the Permittees to implement the requirements on a watershed group basis.

The Order requires outreach to ethnically diverse communities using culturally effective strategies. The USEPA, Tailoring Outreach Programs to Minority and Disadvantaged Communities and Children Fact Sheet finds that, "many residents of ethnically and culturally diverse communities don't speak English. English messages contained in public education outreach materials may not be effectively reaching a significant portion of some communities. The intent of this

provision is to encourage behavior changes that reduce pollutants in storm water to a portion of the population who might otherwise be overlooked.

### 5. Industrial/Commercial Business Program

### a. Legal Authority

The Phase I regulations require, in part, that the applicant: (i) develop adequate legal authority, (ii) perform a source identification, and (iii) develop a management program to reduce the discharge of pollutants to the MEP using management practices, control techniques and system design and engineering methods, and such other provisions which are appropriate. Specifically, with regards to industrial controls, the management plan shall include the following.

"A description of a program to monitor and control pollutants in storm water discharges to municipal systems from municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), and industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system. The program shall:

- i. Identify priorities and procedures for inspections and establishing and implementing control measures for such discharges.
- **ii.** Describe a monitoring program for storm water discharges associated with industrial facilities [...]"
  - (40 CFR section 122.26(d)(2)(iv)(C))

The provisions contained in this Order pertaining to the inspection and facility control program requirements for industrial and commercial facilities, as well as construction sites (as discussed below in Part VI.7.b.) are also based on the requirements found in the previous permit, Order No. 01-182. Those requirements, among others, were the subject of litigation between several permittees and the Regional Water Board. In that case, the Los Angeles County Superior Court upheld the inspection and facility control program requirements for industrial/commercial facilities and construction sites in Order No. 01-182. The Court determined that "[t]he Permit contains reasonable inspection requirements for these types of facilities. [Citation.] The Permit requires each permittees to confirm that operators of these facilities have a current waste discharge identification number and is effectively implementing Best Management Practices (BMPs) in compliance with County and municipal ordinances, Regional Board Resolution 90-08 and the Stormwater Quality Management Plans (SQMPs). [Citation.] Addressing pollution after it has entered the storm sewer system is not working to meet legislative goals. More work is required at the source of pollution, and that is partially the basis on which this Court finds that the Permit's inspection requirements are reasonable, and not

onerous and burdensome." (*In re L.A. Cnty. Mun. Storm Water Permit Litig.,* No. BS 080548 (L.A. Super. Ct. Mar. 24, 2005), at 17.)

The Court also addressed the permittees' claims that the requirements in Order No. 01-182 shifted the Regional Water Board's inspection responsibility under State Water Board issued general NPDES permits for these types of facilities onto the local agencies. The Court disagreed, stating: "The Court agrees with [the Regional Water Board] and Intervenors that the United States EPA considered obligations under state-issued general permits to be separate and distinct. Despite the similarity between the general permits and the local storm water ordinances, both must be enforced. [Citations.] EPA requires permittees to conduct inspections of commercial and industrial facilities, as well as of construction sites. [Citation.].....This Court finds that the state-issued general permits do not preempt local enforcement of local storm water ordinances. (See State Board Order No. 99-08, [citation].) [¶] Therefore, this Court finds that requiring permittees to inspect commercial and industrial facilities and construction sites is authorized under the Clean Water Act, and both the Regional Board and the municipal permittees or the local government entities have concurrent roles in enforcing the industrial, construction and municipal permits. The Court finds that the Regional Board did not shift its inspection responsibilities to Petitioners. [¶] ... The Court further notes that the Permit issued to local entities, who are Petitioners here, does not refer to any inspection obligations related to state-issued permits. [Citation.] There is no duplication of efforts and no shifting of inspection responsibility in derogation of the Regional Board's responsibility here. The Regional Board is not giving up its won responsibilities, and there is nothing arbitrary or capricious about the Permit's inspection provisions." (*Id.* at 17-18.)

It is also important to note that similar controls for industrial/commercial facilities and constriction sites, including inspection activities, required by this Order were also required in the 2002 San Bernardino County MS4 permit issued by the Santa Ana Regional Water Quality Control Board (Santa Ana Regional Water Board). Like Order No. 01-182, that permit was also subject to litigation. In that case, the City of Rancho Cucamonga claimed that the Santa Ana Regional Water Board improperly delegated to it and other permittees the inspection duties of the State and Regional Water Boards and that it was being required to conduct inspections for facilities covered by other state-issued general NPDES permits. (City of Rancho Cucamonga v. Regional Water Quality Control Board- Santa Ana Region (2006) 135 Cal.App.4th 1377, 1389.)Like the Los Angeles County Superior Court, the California Court of Appeal rejected this argument. The Court of Appeal upheld the Santa Ana Regional Water Board's requirements, finding that "Rancho Cucamonga and the other permittees are responsible for inspecting construction and industrial sites and commercial facilities within their jurisdiction for compliance with and enforcement of local municipal ordinances and permits. But the Regional Board continues to be responsible under the 2002 NPDES permit for inspections under the general permits. The Regional Board may conduct its own inspections but permittees must still enforce their own laws at these sites. (40 C.F.R. § 122.26, subd. (d)(2) (2005).)" (Id. at 1390.)

RB-AR4377

#### b. Background

Municipalities are required to control the storm water discharges associated with industrial activities and other commercial facilities identified as significant contributors of pollutants through the implementation of a mandatory baseline minimum set of source control BMPs; performance of an inspection program to verify the adequacy of BMPs implementation in the field and compliance with the municipal ordinances; and assist the Regional Water Board in ensuring that industrial activities subject to regulations are covered by the general industrial stormwater permit. Regional Water Board will also assist the municipal ordinances and state and federal laws and regulations.

The municipality is ultimately responsible for discharges from the MS4. Because industrial awareness of the program may not be complete, there may be facilities within the MS4 area that should be permitted under an industrial storm water permit but are not (non-filers). In addition, the Phase I regulations that require industries to obtain permit coverage for storm water discharges is largely based on Standard Industry Classification (SIC) Code. This has been shown to be incomplete in identifying industries that may be significant sources of storm water pollution ("industries" includes commercial businesses). The word "industries" is used in a broad sense. Another concern is that the permitting authority may not have adequate resources to provide the necessary oversight of permitted facilities. Therefore, it is in the municipality's best interest to assess the specific situation and implement an industrial/commercial inspection/site visit and enforcement program to control the contribution of pollutants to the MS4 from all high risk sources.

In the preamble to the 1990 regulations, USEPA clearly states the intended strategy for discharges of storm water associated with industrial activity:

"...Municipal operators of large and medium municipal separate storm sewer systems are responsible for obtaining system-wide or area permits for their system's discharges. These permits are expected to require that controls be placed on storm water discharges associated with industrial activity which discharge through the municipal system." The USEPA also notes in the preamble that "... municipalities will be required to meet the terms of their permits related to industrial dischargers."

Similarly, in the USEPA's Guidance Manual (Chapter 3.0), USEPA specified that MS4 applicants must demonstrate that they possess adequate legal authority to:

- i. Control construction site and other industrial discharges to MS4s;
- ii. Prohibit illicit discharges and control spills and dumping;
- iii. Carry out inspection, surveillance, and monitoring procedures.

The document goes on to explain that "control," in this context means not only to require disclosure of information, but also to limit, discourage, or terminate a storm water discharge to the MS4. Further, to satisfy its permit conditions, a municipality may need to impose additional requirements on discharges from permitted industrial facilities, as well as discharges from industrial facilities and construction sites not required to obtain permitts.

In the same Guidance Manual (Chapter 6.3.3), USEPA states that the municipality is ultimately responsible for discharges from their MS4. Consequently, the MS4 applicant must describe how the municipality will help the USEPA and authorized NPDES States to:

- i. Identify priority industries discharging to their systems;
- **ii.** Review and evaluate storm water pollution prevention plans (SWPPPs) and other procedures that industrial facilities must develop under general or individual permits;
- **iii.** Establish and implement BMPs to reduce pollutants from these industrial facilities (or require industry to implement them); and
- iv. Inspect and monitor industrial facilities discharging storm water to the municipal systems to ensure these facilities are in compliance with their NPDES storm water permit, if required.

## c. Industrial/Commercial Business Program Implementation

The requirements in this Order clarify the scope and frequency of inspections. For commercial facilities, in general, frequencies have modified to require inspections of a facility twice during the five year permit tem provided that the first mandatory compliance inspection takes place no later than two years after the date this Order is adopted with a minimum interval of six months between the first and second inspection. The scope of the inspections for each of the facility types was clarified by specifying in tables what BMPs should be implemented at that facility to ensure that pollutant generating activity does not occur. The tables include a range of BMPs that are anticipated to be needed at select industrial and commercial facilities. The BMP categories are based on BMPs identified in the 2003 California Stormwater BMP Handbook, Industrial and Commercial as well as BMPs identified in Regional Water Board Resolution No. 98-08.

For industrial facilities, an initial mandatory compliance inspection must be completed at all industrial facilities no later than 2 years after the date this Order is adopted. If after the initial inspection, the facility was determined to as having exposure of industrial activities to storm water then the permit requires a second mandatory compliance inspection with a minimum interval of 6 months between the first and second mandatory compliance inspection. For facilities determined not to have exposure of industrial activities to storm water during the initial inspection, Permittees must conduct second compliance inspections yearly at a minimum of 20% of the facilities.

A provision was added to the Order relieving Permittees of the responsibility to inspect industrial facilities that the Regional Water Board has inspected within the previous 24 months.

In regards to the level of inspection, this Order clarifies that the Permittees are expected to check during inspections for a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity, and that a SWPPP is available on site or that the owner/operator of the facility has applied for and has a current No Exposure Certification (and WDID number). In addition Permittees are expected to check during inspections for compliance with the implementation of minimum BMPs, as previously approved by Board Order 98-08, and compliance with the local storm water ordinances.

The inspection requirements in this Order provide greater clarification concerning the scope of enforcement. A progressive enforcement procedure was outlined including minimum steps that Permittees must take in their program to enforce their municipalities' storm water requirements. In recognition of some of the Permittees concerns regarding the resource intensive efforts needed to elevate enforcement actions, a mechanism was provided through which Permittees can refer cases to the Regional Water Board, and for violations of the State Water Board's General Industrial Activities Storm Water NPDES permit, the referral can be expedited, referral can occur after a single inspection and one written notice rather than referral after two inspections and two written notices.

# 6. Planning and Land Development Program

### a. Legal Authority

The permit application requirements described in 40 CFR section 122.26(d) have formed the basis for MS4 permits and remain applicable as elements in a storm water program. 40 CFR section 122.26(d)(2)(iv), requires in part, that the large and medium MS4 system applicant develop a management plan. Specifically, with regards to planning and land development and post-construction controls, the management plan shall include the following:

"(A) A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls. At a minimum, the description shall include:

(1) A description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers;

(2) A description of planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal separate storm sewers which receive discharges from areas of new development and significant redevelopment. Such plan shall address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed.

(3) A description of practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems

(4) A description of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal from storm water is feasible."

# b. Background

Land development and urbanization have been linked to the impairment of aquatic life beneficial uses in numerous studies. Poorly planned new developments and re-development have the potential to impact the hydrology of the watershed and the water quality of the surface waters. Development without proper controls, often result in increased soil compaction, changes in vegetation and increased impervious surfaces. These conditions may lead to a reduction in groundwater recharge and changes in the flow regime of the surface water drainages. Historically, urban development has resulted in increased peak stream flows and flow duration, reduced base flows, and increased water temperatures. Pollutant loading in storm water runoff often increases due to post-construction use and because the storm water runoff is directly connected to the storm drain system or to the surface water body, without the benefit of filtration through soil and vegetation.

In a natural water body (i.e., a water body that has not been armored for flood control or channel stability), increased peak flows and flow duration can cause stream bank erosion, changes in channel geomorphology and bed sediment composition and stability.

When development infringes upon natural riparian buffers, the additional impacts may include further stream bank instability, increased nitrogen loadings to the water body—which would have been intercepted by native riparian vegetation, loss of shading resulting in further increase in water temperature, and a loss of woody debris and leaf litter, which provide food and habitat for some aquatic species.

Low Impact Development (LID) strategies are designed to retain storm water runoff on-site by minimizing soil compaction and impervious surfaces, and by disconnecting storm water runoff from conveyances to the storm drain system. This Order establishes criteria for the volume of storm water to be retained on-

E N T A T I V

site as required to meet water quality goals and to preserve pre-development hydrology in natural drainage systems.

In California, hydromodification studies have focused on the erosive effects of storm water runoff flows and the resulting changes in geomorphology and bed sediment. As described in Hawley et al., southern California streams may be especially susceptible to geomorphic changes due to steep topography, flashy flow regimes, high sediment loads and largely non-resistant stream bed material. This recent study assessed the impact of urbanization on peak flow and the duration of lower flows capable of moving bed sediment. The results of the study showed that, urbanization resulted in proportionally-longer durations of all geomorphically-effective flows, with a more pronounced effect on the durations of low to moderate flows.

A study performed by United States Geological Survey (USGS) researchers at nine different metropolitan areas within the United States, found that adverse impacts to macroinvertebrate benthic communities were observed in drainages with 5 percent impervious area. The authors concluded that there appears to be no percent impervious area threshold below which benthic communities are not adversely impacted

The Grand River (lower) Surrogate Flow Regime Total Maximum Daily Load (TMDL), prepared for the Ohio Environmental Protection Agency (OEPA), examined the impacts of impervious cover and flow regime changes on aquatic life beneficial uses. The TMDL was approved by USEPA on April 12, 2012. The TMDL analysis showed that aquatic community health (as measured by biological indices) decreased as impervious cover increased. Flow alteration and impervious cover were determined to be the stressors impairing aquatic life. Riparian buffers were identified as a mitigating factor. Peak flow, runoff volume, and flashiness were considered as surrogates. However, for this watershed, flow regime was selected because it addresses the full spectrum of flow conditions (i.e., peak flow and flow duration and base flow). In this watershed, low flow and increased water temperature presented a threat to cold-water fish species. Increased peak flow and flow duration were linked to impairment of aquatic life beneficial uses due to increased pollutant loading and the impact of channel scouring. A flow duration curve was developed for a reference watershed, based on unit area to allow for comparison of varying-sized streams. The criteria for selecting the reference watershed were: (1) the water body was fully supporting aquatic life beneficial uses, (2) location (ecoregion), (3) size (4) land cover (5) riparian buffer and (6) soils. The flow regime TMDL compares flow duration curves for the impaired stream and the reference stream. The TMDL is expressed as the difference between the impaired stream's flow and the reference stream's flow during all flow conditions. The TMDL report recommends protection strategy numeric targets of no more than 6 percent EIA with a forested (70 percent coverage) riparian buffer of 100 feet from the top of each stream bank (200 feet total).

In Los Angeles County, development has infringed upon or eliminated natural riparian buffers and existing development exceeds recommended percent impervious area in many watersheds. In addition, many water bodies have been armored or converted to engineered channels to manage flood hazards. Because of the hydrologic differences between engineered channels and natural water bodies, the Regional Water Board approaches each situation differently. Where development occurs in drainages to water bodies that have been converted to engineered channels, the Regional Water Board's regulatory approach is designed to reduce storm water runoff -- the most effective method for reducing pollutant loading. Alternatively, where development occurs in drainages to natural water bodies, the Regional Water Board regulatory approach aims to reduce pollutant loading conveyed by storm water runoff and to preserve or restore the pre-development hydrology. As a result of past development, it is likely that retrofitting of existing development will be necessary to restore watershed hydrology to pre-development conditions.

### c. Applicability

New development and re-development projects subject to these requirements are described in Part VI.D.6.b. of this Order. Although not defined for large and medium MS4s, 40 CFR section 122.34 requires programs for small MS4s to include all projects that disturb an area equal to or greater than 1 acre of land and add more than 10,000 square feet of impervious surface area. The list of new development projects subject to requirements, specified in this Order in Parts VI.D.1.c.i(1)(a) through (k) were either carried over from Order No. 01-182 or were developments and redevelopments in this Order. Clarification is provided for developments in progress during formulation of this Order (Part VI.D.c.i(1)(4)).

New development/re-development projects are subject to either the Water Quality/Flow Reduction Resource Management Criteria in Part VI.D.6.c.i or potentially more stringent Hydromodification (Flow/ Volume/ Duration) Control Criteria. Note that hydromodification controls apply only to projects that drain to a natural water body that is a stream, creek or a river. Hydromodification controls do not apply to discharges to lakes, estuaries, or to the ocean, which are not susceptible to channel erosion.

i. Integrated Water Quality/ Flow Reduction /Resources Management Criteria (Part VI.D.6.c.i). Projects located in drainages to water bodies that are now engineered channels are subject to Integrated Water Quality/Flow Reduction/Resources Management Criteria. These projects must be designed to minimize the footprint of the impervious area and to use low impact development (LID) strategies to disconnect the runoff from impervious area. The project must be designed to retain on-site the storm water runoff equal to the storm water quality design volume (SWQDv), unless it is determined that it is technically infeasible or there is an opportunity to contribute to an off-site regional ground water replenishment project. The SWQDv is defined as the storm water runoff resulting from either:

- the 0.75 inch per 24 hour storm or
- the 85th percentile storm as defined in the Los Angeles County 85th percentile, 24-hour storm isohyetal map, whichever is greater.

This Order establishes a minimum design volume based on the 0.75 inch, 24hour storm event as defined in the previous Los Angeles County MS4 permit (Order No. 01-182). This requirement is to prevent backsliding from the previous Order. The 85th percentile storm is the design storm used throughout most of the State of California for storm water treatment and LID BMPs designed for water quality protection.

Using detailed local rainfall data, the County of Los Angeles Hydrologist has developed the 85th percentile storm event isohyetal map, which exhibits the size of the 85th percentile storm event throughout Los Angeles County. Since this map uses detailed local rainfall data, it is more accurate for calculating the 85th percentile storm event than other methods which were included in Order No. 01-182. The other methods found in Order No. 01-182 were included as options to be used in the event that detailed accurate rainfall data did not exist for various locations within Los Angeles County. Therefore, they have not been carried over into this Order.

Storm water runoff may be retained on-site by methods designed to intercept rain water via infiltration, bioretention, and harvest and use. Examples of LID Best Management Practices (BMPs) that may be employed to meet the storm water retention requirements include rain gardens, bioswales, pervious pavement, green roofs, and rainwater harvesting for use in landscape irrigation.

- ii. Alternative Compliance for Technical Infeasibility or Opportuntity for Regional Ground Water Replenishment (Part VI.D.6.c.ii). This Order defines conditions that may make on-site retention of the SWQDv technically infeasible. These conditions include measures to:
  - Ensure that on-site soils (*in-situ* or amended) have adequate infiltration rates for successful operation of infiltration BMPs,
  - Protect groundwater and drinking water wells from contamination,
  - Prevent infiltration that might exacerbate potential geotechnical hazards,
  - Accommodate smart growth and infill or redevelopment.

A determination that compliance with the Integrated Water Quality/Flow Reduction/Resources Management Criteria is technically infeasible at the New Development/Re-development project site must be based on a sitespecific hydrologic assessment or design analysis conducted and endorsed by a registered professional engineer, geologist, architect or landscape architect. This requirement is the same as contained in the Ventura County MS4 permit, and is necessary to ensure that a competent determination is conducted.

The criteria for technical infeasibility contained in Part VI.D.6.c.ii(2)(a) is necessary to ensure that the *in-situ* soil has adequate permeability to accommodate infiltration, and to ensure against premature failure of infiltration BMPs. A minimum infiltration rate of 0.15 inches per hour under saturated conditions is specified for infiltration BMPs (e.g., dry well, pervious pavement). Infiltration BMPs are restricted to Hydrologic Soil Groups A and B, by other California storm water regulatory agencies. For example, the Contra Costa County Program's Stormwater LID Design Guidebook prohibits routing storm water runoff to a dry (infiltration) well, developed in Hydrologic Soil Groups C and D³². Infiltration rates for the lower permeability B soil group ranges between 0.30 and 0.15 inches per hour (USEPA, 2009, Appendix A)³³. This criterion is specified to ensure the viability of infiltration systems, which may be depended upon to meet the storm water design volume criteria.

Infiltration BMPs are distinguished from bioretention BMPs, which may be implemented in all soils types. Bioretention BMPs are constructed using a manufactured/imported media that must meet strict specifications. The media specification for bioretention facilities is the same as specified for biofiltration systems. The difference between bioretention and biofiltration is that biofiltration systems are designed with an underdrain, which may allow for the discharge of a significant portion of the design storm volume, as described below under Alternative Compliance Measures. Bioretention BMPs may not include an underdrain.

The criteria for determining Technical Infeasibility described in Part VI.D.6.c.ii.(2)(b)-(f) are the same as contained in the Ventura County MS4 permit, except that (2)(b) "locations where seasonal high ground water is *within 5 feet of the surface*", was expanded to" 5 to 10 feet" of the surface, to be consistent with local LID Manuals developed by the City of Santa Monica and the City of Los Angeles.

**iii.** Alternative Compliance Measures (Part VI.D.6.c.iii.). This Order provides equally weighted alternatives to on-site retention of the SWQDv. One alternative is to employ infiltration at off-site locations, including regional groundwater replenishment projects. In an effort to promote retrofitting of existing development, alternative compliance measures may include the use of infiltration, bioretention, rainfall harvest and/or biofiltration at an existing development with similar land uses and where storm water runoff is expected to exhibit pollutant event mean

³² Contra Costa County Clean Water Program. 2010. Stormwater C.3 Guidebook, Stormwater Quality Requirements for Development Applications. Fifth Ed. October 20, 2010. p. 18. < www.cccleanwater.org>.

³³ USEPA. 2009. (United States Environmental Protection Agency). Technical Guidance on Implementing the Stormwater Runoff Requirements for Federal Projects under Section 438 of the Energy and Independence and Security Act. Office of Water. December 2009.

**RB-AR4385** 

ORDER NO. R4-2012-XXXX NPDES PERMIT NO. CAS004001

concentrations (EMCs) that are comparable to or higher than the proposed new development re-development project. As another alternative the project proponent may comply with the Integrated Water Quality/Flow Reduction/Resources Management Criteria using biofiltration on the project site. The volume of storm water to be treated with biofiltration is 1.5 times the difference between the SWQDv and the volume of storm water runoff that can be reliably retained on the project site. The 1.5 multiplier is based on the finding in the *Ventura County Technical Guidance Manual* that biofiltration of 1.5 times the design volume will provide approximately the same pollutant removal as retention of the design volume on an annual basis.³⁴

The volume of storm water runoff to be intercepted at an off-site mitigation project is equal to the difference between the SWQDv and the volume of storm water runoff that can be *reliably retained* on the project site. The estimate of the volume that can be reliably retained on-site shall be based on conservative assumptions including permeability of soils under saturated conditions. When rainfall harvest and use is linked to irrigation demand, the demand shall be estimated based on conditions that exist during the wet weather, winter season.

Mitigation at off-site projects shall be designed to provide equal or greater water quality protection to the surface waters within the same subwatershed as the proposed project. Preferably, the mitigation site will be located within the same Hydrologic Unit Code (HUC)-12 drainage area as the proposed new development or re-development. However, the mitigation project may be located within the expanded HUC-10 drainage area, if approved by the Executive Officer of the Regional Water Board.

As described in the Ventura County Technical Guidance Manual, a biofiltration system as defined in this Order, including Attachment L, allows for incidental interception of approximately 40 percent of the treatment volume and treatment of the remaining volume through filtration, and aerobic and anaerobic degradation. The effectiveness of the biofiltration system is greatly impacted by the volume of storm water runoff that is intercepted through incidental infiltration. For this reason, biofiltration as defined in this Order, does not include flow-through planter box or vault type systems with impervious bottom layers. In addition, biofiltration systems as defined in this Order, must meet the specifications for drain placement and planting media provided in Attachment L if they are to be credited as meeting the water quality/flow reduction requirements of the Alternative Compliance Measures of this Order. Attachment L provides a compilation of recent information contained in the Contra Costa County C3 Guidebook and Order R2-2011-083, adopted by the California Regional Water Quality Control Board, San Francisco Bay Region, on November

ENTATIV

³⁴ Ventura Countywide Stormwater Management Program. 2011. Ventura Technical Guidance Manual, Manual Update, 2011. Appendix D. July 13, 2011.

28, 2011. These specifications are based on experiences in the San Francisco Bay Region and are designed to ensure optimum pollutant removal and to prevent premature failure of infiltration components of the biofiltration system.

- iv. Water Quality Mitigation Criteria (Part VI.D.6.c.iv.) When off-site mitigation is performed, the storm water runoff from the project site must be treated prior to discharge. Volume-based treatment BMPs are to be sized to treat the runoff from the 85th percentile, 24-hour storm event, as described above for storm water retention BMPs. Flow through treatment BMPs are to be sized based on a rainfall intensity of 0.2 inches per hour or the one year, one-hour rainfall intensity as determined from the Los Angeles County isohyetal map, whichever is greater. A minimum flow design of 0.2 inches per hour is consistent with Order No. 01-182 and is included to prevent back sliding. The one year, one-hour rainfall intensity is the flow requirement specified in the Los Angeles River Trash Total Maximum Daily Loads (TMDL) and other Trash TMDLs established in the Region. The Los Angeles County isohyetal map of the one-year, one-hour storm intensity provides an accurate measure of variable storm intensity throughout the County. The one-year, one-hour rain intensity within the County ranges from approximately 0.2 inch/hour to 1.1 inches per hour.
- v. Hydromodification (Flow/ Volume/ Duration Control Criteria (Part VI.D.6.v.). New development/re-development projects located in a drainage to a natural stream/creek/river water body shall be required to meet the water quality/flow reduction criteria and/or hydromodification control criteria, whichever are more stringent. (Hydromodification controls do not apply to discharges to lakes, estuaries or to the Pacific Ocean as these types of water bodies are not susceptible to hydromodification impacts.) This Order provides Interim Hydromodification Control Criteria to be employed until the State Water Board or Regional Water Board adopts a final Hydromodification Policy. The purpose of the hydromodification controls is to preserve or restore pre-development hydrology.

Part VI.D.6.v.(b) of this Order describes New Development/Redevelopment projects that are exempted from hydromodification controls. These projects include maintenance and replacement activities and other projects that do not increase EIA within the subwatershed and therefore are not expected to add to the hydromodification effects. Also exempted are projects located within drainages to waterbodies that are not susceptible to channel erosion or other hydromodification effects.

This Order anticipates the issuance of a State-wide Hydromodification criteria or guidance within the term of this Order, but provides interim criteria for New Development/Re-development projects that are permitted pending the issuance of State-wide Guidance. This Order also identifies

preliminary tasks to be conducted within 24 months after the effective date of this Order. The results of these preliminary tasks will support the development of a final Subwatershed Hydromodification Plan. The final Subwatershed Hydromodification Plan must be completed within 12 months after the issuance of the State-wide Guidance, unless the compliance period is extended by the Executive Officer of the Regional Water Board.

This Order offers three options for meeting the interim hydromodification controls for projects that will disturb greater than 1 acre but less than 50 acres:

- The project is designed to retain the storm water runoff from the 95th percentile, 24-hour-hour storm. This criterion is based on the recommendations from the USEPA's *Technical Guidance on Implementing the Stormwater Runoff Requirements for Federal Projects under Section 438 of the Energy Independence and Security Act* (USEPA, 2009).
- The runoff flow rate, volume, velocity and duration does not exceed the pre-development condition for the 2-year, 24-hour rainfall event. Research has determined that the maximum point of the effective work curve occurs in the 1 to 2-year frequency (Leopold, 1964, as cited in the South Orange County Hydromodification Plan, 2011)³⁵. Furthermore, the effects of development are greatest during smaller storm events. Under natural conditions, the storm water runoff from smaller storms would have been largely intercepted by vegetation, canopy, infiltration and/or evapotranspiration. During large storms, the soils become saturated and runoff occurs even under natural conditions.
- The Erosion Potential (Ep) in the receiving water channel will approximate 1, as determined by the Hydromodification Analysis Study and the Equation presented in Attachment J. This provision is the same as the requirement in the Ventura County MS4 permit (Order No. R4-2010-0108). By maintaining an Ep of approximately 1, the bed sediment of the channel is in an equilibrium state.

For projects disturbing more than 50 acres, compliance with the interim controls may be achieved by similar means. However, the plans must be supported by more comprehensive hydrologic modeling.

The elements of the Interim Subwatershed Hydromodification Plan are:

³⁵ South Orange County. 2011. South Orange County Hydromodification Management Plan. < <u>http://www.waterboards.ca.gov/sandiego/water_issues/programs/stormwater/docs/oc_permit/updates_031212/South_Orange</u> <u>County%20HMP.pdf</u> > Accessed April 25, 2012.

- Screening to assess which subwatersheds exhibit changes in geomorphology.
- Identify natural drainage systems within the subwatershed that are susceptible to hydromodification impacts,
- Identify areas critical to the hydrology (e.g., groundwater recharge areas, riparian buffers and wetlands) of the subwatershed and identify potential protection strategies for such areas,
- Conduct or access bioassessment monitoring data to assess whether aquatic life uses are being fully supported,
- Prepare preliminary protection strategies for subwatersheds that are fully supporting aquatic life beneficial uses,
- Prepare preliminary retrofit strategies for subwatersheds that exhibit the effects of hydromodification and are not fully supporting aquatic life beneficial uses,
- Identify candidate reference sub-watersheds that are supporting aquatic life beneficial uses and develop a flow duration curve that may serve as a standard for flow duration controls in water bodies that have aquatic life impairments linked to changes in the flow regime. This approach is as described in the recently approved OEPA, Grand River (lower) Flow Regime TMDL.

# 7. Development and Construction Program

### a. Introduction

Soil disturbing activities during construction and demolition exacerbate sediment losses. Sediment is a primary pollutant impacting beneficial uses of watercourses. Sediments, and other construction activity pollutants must be properly controlled to reduce or eliminate adverse impacts.

# b. Legal Authority

40 CFR section 122.34(b)(4) states that with respect to construction site storm water runoff control for small MS4s, which is analogous to that for large MS4s:

"(i) [the permittee] must develop, implement, and enforce a program to reduce pollutants in any storm water runoff to your small MS4 from construction activities that result in a land disturbance of greater than or equal to one acre. Reduction of storm water discharges from construction activity disturbing less than one acre must be included in your program if that construction activity is part of a larger common plan of development or sale that would disturb one acre or more. If the NPDES permitting authority waives requirements for storm water discharges associated with small construction activity in accordance with § 122.26(b)(15)(i), you are not required to develop, implement, and/or enforce a program to reduce pollutant discharges from such sites. (ii) Your program must include the development and implementation of, at a minimum: (A)

An ordinance or other regulatory mechanism to require erosion and sediment controls, as well as sanctions to ensure compliance, to the extent allowable under State, Tribal, or local law; (B) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices; (C) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality; (D) Procedures for site plan review which incorporate consideration of potential water quality impacts; (E) Procedures for receipt and consideration of information submitted by the public, and (F) Procedures for site inspection and enforcement of control measures."

The inspection requirements for construction sites contained in this Order are also based on the requirements found in Order No. 01-182. As noted above in Part VI.C.5.a, the inspection requirements contained in Order No. 01-182 for construction sites were the subject of litigation between several permittees and the Regional Water Board. As provided in more detail above, the Los Angeles County Superior Court upheld the inspection requirements for industrial/commercial facilities and construction sites in Order No. 01-182, finding that the "[t]he Permit contains reasonable inspection requirements for these types of facilities." (In re L.A. Cnty. Mun. Storm Water Permit Litig., No. BS 080548 (L.A. Super. Ct. Mar. 24, 2005), at 17.) As also noted above, the Superior Court also rejected the permittees' claims that the requirements in Order No. 01-182 shifted the Regional Water Board's inspection responsibility under State Water Board issued general NPDES permits for these types of facilities onto the local agencies, finding that "[r]equiring permittees to inspect commercial and industrial facilities and construction sites is authorized under the Clean Water Act, and both the Regional Board and the municipal permittees or the local government entities have concurrent roles in enforcing the industrial, construction and municipal permits. The Court finds that the Regional Board did not shift its inspection responsibilities to Petitioners." (Id. at 17-18.)

### c. Construction Activity Applicability

Any construction or demolition activity, including, but not limited to, clearing, grading, grubbing, or excavation, or any other activity that results in a land disturbance of equal to or greater than one acre.

Construction activity that results in land surface disturbances of less than one acre if the construction activity is part of a larger common plan of development or sale of one or more acres of disturbed land surface.

Construction activity related to residential, commercial, or industrial development on lands currently used for agriculture including, but not limited to, the construction of buildings related to agriculture that are considered industrial pursuant to USEPA regulations, such as dairy barns or food processing facilities.

Construction activity associated with linear underground/overhead project (LUPs) including, but not limited to, those activities necessary for the installation of underground and overhead linear facilities (e.g., conduits, substructures, pipelines, towers, poles, cables, wires, connectors, switching, regulating and transforming equipment and associated ancillary facilities) and include, but are not limited to, underground utility mark-out, potholing, concrete and asphalt cutting and removal, trenching, excavation, boring and drilling, access road and pole/tower pad and cable/wire pull station, substation construction, substructure installations, pipeline installations, welding, concrete and/or pavement repair or replacement, and stockpile/borrow locations.

Discharges of sediment from construction activities associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities.

Storm water discharges from dredge spoil placement that occur outside of U.S. Army Corps of Engineers jurisdiction³⁶ (upland sites) and that disturb one or more acres of land surface from construction activity are covered by this General Permit. Construction projects that intend to disturb one or more acres of land within the jurisdictional boundaries of a CWA section 404 permit should contact the appropriate Regional Water Board to determine whether this permit applies to the project.

# d. Development Construction Program Implementation

Permittees must implement a construction program that applies to all activities involving soil disturbance with the exception of agricultural activities. Minimum requirements have been established for construction activity less than one acre and for those activities equal or greater than one acre. Activities covered by the permit include but are not limited to grading, vegetation clearing, soil compaction, paving, re-paving, and LUPs. The construction program should be designed to: (1) prevent illicit construction-related discharges of pollutants into the MS4 and receiving waters; (2) implement and maintain structural and non-structural BMPs to reduce pollutants in storm water runoff from construction sites; (3) reduce construction site discharges of pollutants to the MS4 to the MEP; and (4) prevent construction site discharges to the MS4 from causing or contributing to a violation of water quality standards.

³⁶ A construction site that includes a dredge and/or fill discharge to any water of the United States (e.g., wetland, channel, pond, or marine water) requires a permit from the U.S. Army Corps of Engineers pursuant to CWA section 404 and a Water Quality Certification from the Regional Water Board or State Water Board pursuant to CWA section 401.

Each permittee shall use an site system to track grading permits, encroachment permits, demolition permits, building permits, or construction permits (and any other municipal authorization to move soil and/ or construct or destruct that involves land disturbance) issued by each permittee. To satisfy this requirement, the use of a database or GIS system is recommended.

For construction activity equal or greater than one acre, the Permittee must establish review procedures for construction site plans to determine potential water quality impacts and ensure the proposed controls are adequate. These procedures should include the preparation and submission of an Erosion and Sediment Control Plan (ESCP) containing elements of a Storm Water Pollution Prevention Plan (SWPPP) prior to issuance of a grading or building permit as well as a review of individual pre-construction site plans to ensure consistency with local sediment and erosion control requirements. The requirement that ESCP/SWPPPs must be developed by a Qualified SWPPP Developer (QSD) is new for this iteration of the permit. This requirement ensures the development of high quality ESCP/SWPPPs that protect water quality to the MEP.

A SWPPP must be appropriate for the type and complexity of a project and will be developed and implemented to address project specific conditions. Some projects may have similarities or complexities, yet each project is unique in its progressive state that requires specific description and selection of BMPs needed to address all possible generated pollutants. The Permittee must ensure that construction site operators select and implement appropriate erosion and sediment control measures to reduce or eliminate the impacts to receiving waters. To help guide their Construction Program and ensure consistency regarding BMP selection, the Permit requires the Permittee to develop or adopt BMP standards for a range of construction related activities. The list of activities is based on California Stormwater Quality Association's (CASQA) Construction BMP handbook. The ESCP/SWPPP must include the rationale used for selecting or rejecting BMPs. The project architect, or engineer of record, or authorized qualified designee, must sign a statement on the ESCP/SWPPP to the effect:

"As the architect/ engineer of record, I have selected, appropriate BMPs to effectively minimize the negative impact of the project's construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity."

The Permittee is responsible for conducting inspection and enforcement of erosion and sediment control measures at specified times and frequencies during construction including prior to land disturbance, during grading and land development, during streets and utilities activities, during vertical construction, and during final landscaping and site stabilization. The Permittees' Municipal Inspectors must be adequately trained and Permittees are encouraged to offer opportunities for inspectors to enroll in the State Water Board sponsored Qualified Storm Water Pollution Prevention Plan (SWPPP) Practitioner (QSP)

certification program. A progressive enforcement policy has been integrated into this iteration of the permit to ensure that adequate penalties are in place and to ensure the protection of receiving water quality.

Prior to approving and/ or signing off for occupancy and issuing the Certificate of Occupancy for all construction projects subject to post-construction controls, each permittee shall inspect the constructed site design, source control and treatment control BMPs to verify that they have been constructed in compliance with all specifications, plans, permits, ordinances, and this Order. The initial/ acceptance BMP verification inspection does not constitute a maintenance and operation inspection.

The Permittee must ensure that staff has proper training. In addition, the Permittee must develop and distribute training and educational material and conduct outreach to the development community. To ensure that the construction program is followed, construction operators must be educated about site requirements for control measures, local storm water requirements, enforcement activities, and penalties for non-compliance.

### 8. Public Agency Activities Program

### a. Background

Publically-owned or operated facilities serve as hubs of activity for a variety of municipal staff from many different departments. Some municipalities will have one property at which all activities take place (e.g., the municipal maintenance yard), whereas others will have several specialized facilities such as animal control facilities, chemical storage facilities, composting facilities, equipment storage and maintenance facilities, fueling facilities, hazardous waste disposal facilities, incinerators, landfills, materials storage yards, pesticide storage facilities, public buildings, public parking lots, public golf courses, public swimming pools, public parks, public marinas, recycling facilities, solid waste handling and transfer facilities, and flood control facilities.

### b. Program Implementation

# i. Public Construction Activities Management

The Permittee is required to implement BMPs and comply with the Planning and Land Development Program requirements in Part VI.D.6 of this Order and the Development Construction Program requirements in Part VI.D.7 of this Order at applicable Permittee-owned or operated (i.e., public or Permittee sponsored) construction projects. These requirements ensure that Permittee-owned or operated construction and development occurs in an equally protective manner as private development. The Permittee is also required to implement an effective combination of erosion and sediment control BMPs from Table 13 (see Construction Development Program, minimum BMPs) at those public sites that disturb less than one acre of soil. Last, the Permittee is required to obtain separate coverage under the State

Water Board's Construction General NPDES Permit for all Permittee-owned or operated construction sites that require coverage.

## ii. Public Facility Inventory

A comprehensive list of publically-owned or operated facilities will help staff responsible for storm water compliance build a better awareness of their locations within the MS4 service area and their potential to contribute storm water pollutants. The inventory should include information on the location, contact person at the facility, activities performed at the facility, and whether the facility is covered under an industrial general storm water permit or other individual or general NPDES permit, or any applicable waivers issued by the Regional or State Water Board pertaining to storm water discharges. Incorporation of GIS into the inventory is encouraged. The facility inventory should be updated at least twice during the permit term and will serve as a basis for setting up periodic facility assessments and developing, where necessary, facility storm water pollution prevention plans. By developing an inventory of Permittee-owned facilities that are potential sources of storm water pollution helps to ensure that these facilities are monitored and receiving water quality is protected.

### iii. Inventory of Existing Development for Retrofitting Opportunities

Each Permittee is required to maintain an updated inventory of all Permittee-owned or operated (i.e., public) facilities within its jurisdiction that are potential sources of storm water pollution. This requirement is similar to the requirement of Order No. 01-182. In this Order, the incorporation of facility information into a GIS is recommended as this has been proven effective for effectively inventory and management of facilities and associated BMPs. Given that facility operation, condition, and practices can change over a five year period, the Permittees are required to update its inventory at least twice during the term of this Order.

In addition to developing an inventory of publically-owned or operated facilities, in this Order, Permittees are required to develop an inventory of existing development for retrofitting opportunities. The intention of adding this requirement to the permit is to encourage the use of retrofit projects that reduce storm water pollutants into the MS4 that are a result of impacts from existing development. Permittees are also required to evaluate and rank these retrofitting opportunities.

### iv. Public Agency Facility and Activity Management

Each Permittee is required to manage its facilities in accordance with the State Water Board's Industrial General NPDES Permit, where applicable, and shall ensure the implementation and maintenance of appropriate BMPs at all facilities with a potential to pollute stormwater. Therefore, Permitees shall obtain separate coverage under the State Water Board's Industrial General NPDES Permit for all Permittee-owned or operated facilities where

industrial activities are conducted that require coverage under the Industrial General NPDES Permit and shall implement and maintain activity specific BMPs listed in Table 19 (BMPs for Public Agency Facilities and Activities).

Many municipalities use third-party contractors to conduct municipal maintenance activities in lieu of using municipal employees. Contractors performing activities that can affect storm water quality must be held to the same standards as the Permittee. Not only must these expectations be defined in contracts between the Permittee and its contractors, but the Permittee is responsible for ensuring, through contractually-required documentation or periodic site visits, that contractors are using storm water controls and following standard operating procedures. Therefore, the Permittee shall ensure all contractors hired by the Permittee to conduct Public Agency Activities including, but not limited to, storm and/or sanitary sewer system inspection and repair, street sweeping, trash pick-up and disposal, and street and right-of-way construction and repair shall be contractually required to implement and maintain the activity specific BMPs listed in Table 18.

## v. Vehicle and Equipment Washing

Specific BMPs for all fixed vehicle and equipment washing; including fire fighting and emergency response vehicles have been incorporated into this Order and must be implemented. In addition, specific BMPs for wash waters from vehicle and equipment washing. These requirements effectively prohibit the occurrence of illicit discharges resulting from unauthorized washing activities.

# vi. Landscape, Park, and Recreational Facilities Management

Specific BMPs for public right-of-ways, flood control facilities and open channels, lakes and reservoirs, and landscape, park, and recreation facilities and activities have been included this Order, similar to those in Order No. 01-182 and the more recently adopted Ventura County MS4 Permit, and must be implemented. These requirements are reflective of current environmentally responsible practices.

### vii. Storm Drain Operation and Maintenance

Specific BMPs for storm drain operations and maintenance have been carried over from Order No. 01-182 into this Order.

Permittees must prioritize catch basins for cleaning activities based on the volume of trash or debris.

The materials removed from catch basins may not reenter the MS4. The material must be dewatered in a contained area and the water treated with an appropriate and approved control measure or discharged to the sanitary sewer. The solid material will need to be stored and disposed of properly to

avoid discharge during a storm event. Some materials removed from storm drains and open channels may require special handling and disposal, and may not be authorized to be disposed of in a landfill.

### viii. Streets, Roads, and Parking Facilities Maintenance

Permittees must prioritize streets and/or street segments for sweeping activities based on the volume of trash generated on the street or street segments. Based on these established priorities, Permittees must conduct street sweeping twice per month on the highest priority streets (Priority A), once per month on the medium priority streets (Priority B), and as needed but not less than once per year on the lowest priority streets (Priority C). In addition parking facilities must be cleaned using street sweeping equipment no less than two times per month and inspect no less than two times per month to determine if cleaning is necessary.

Specific BMPs for road reconstruction have been incorporated into this Order and must be followed during road repaying activities.

### ix. Emergency Procedures

Permittees are required to conduct repairs of essential public service systems and infrastructure in emergency situations. These requirements ensure the protection of water quality. BMPs must be implemented to reduce the threat to water quality and the Regional Water Board must be notified of the occurrence, an explanation of the circumstances and measures taken to reduce the threat to water quality within 30 business days after the emergency has passed.

# x. Municipal Employee and Contractor Training

Permittees are required to ensure that training is provided for employees and contractors that have job duties or participate in activities that have the potential to affect storm water quality. The training should promote a general understanding of the potential for activities to pollute storm water and include information on the identification of opportunities to require, implement, and maintain BMPs associated with the activities they perform. In addition training specific to employees or contractors that use or have the potential to use pesticides or fertilizers should be provided. This training should instruct employees and contractors on the potential for pesticiderelated surface water toxicity, the proper use, handling and disposal of pesticides, the least toxic methods of pest prevention and control, and the overall reduction of pesticide use.

Many municipalities use third-party contractors to conduct municipal maintenance activities in lieu of using municipal employees. Contractors performing activities that can affect storm water quality must be held to the same standards as the Permittee. Not only must these expectations be defined in contracts between the Permittee and its contractors, but the Permittee is responsible for ensuring, through contractually-required documentation or periodic site visits, that contractors are using storm water controls and following standard operating procedures.

## 9. Illicit Connection and Illicit Discharge Elimination Program

### a. Legal Authority

A proposed management program "shall be based on a description of a program, including a schedule, to detect and remove (or require the discharger to the municipal storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer," per 40 CFR section 122.26(d)(2)(iv)(B). A Permittee must include in its proposed management program "a program, including inspections, to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the municipal storm sewer," per subsection (1) of the above federal regulation.

USEPA stormwater regulations define "illicit discharge" as "any discharge to a municipal separate storm sewer that is not composed entirely of stormwater" except discharges resulting from fire fighting activities and discharges from NPDES permitted sources (see 40 CFR section 122.26(b)(2)). The applicable regulations state that the following non-stormwater discharges may be allowed if they are not determined to be a significant source of pollutants to the MS4: water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at 40 CFR section 35.2005(20)), uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water. If, however, these discharges are determined to be a significant source of pollution then they must be prohibited.

Examples of common sources of illicit discharges in urban areas include apartments and homes, car washes, restaurants, airports, landfills, and gas stations. These so called "generating sites" discharge sanitary wastewater, septic system effluent, vehicle wash water, washdown from grease traps, motor oil, antifreeze, gasoline and fuel spills, among other substances. Although these illicit discharges can enter the storm drain system in various ways, they generally result from either direct connections (e.g., wastewater piping either mistakenly or deliberately connected to the storm drains) or indirect connections (e.g., infiltration into the storm drain system, spills, or "midnight dumping"). Illicit discharges can be further divided into those discharging continuously and those discharging intermittently.

# b. Illicit Discharge Source Investigation and Elimination

Section 402(p)(3)(B)(ii) of the CWA requires MS4 permits to "effectively prohibit non-stormwater discharges into the storm sewers." The permit implements this requirement, in part by requiring the development of procedures to investigate and eliminate illicit discharges. The permittee must develop a clear, step-by-step procedure for conducting the investigation of illicit discharges. The procedure must include an investigation protocol that clearly defines what constitutes an illicit discharge and what steps shall be taken to identify and eliminate its source. In many circumstances, sources of intermittent, illicit discharges are very difficult to locate, and these cases may remain unresolved. The permit requires that each case be conducted in accordance with the procedures developed to locate the source and conclude the investigation, after which the case may be considered closed. These procedures should be completed per the Progressive Enforcement Policy identified in Part VI.D.2 of this Order and should include enforcement as necessary to ensure the elimination of the illicit discharge/connection.

Illicit discharges may also originate in upstream jurisdictions and therefore this Order establishes procedures for communicating with upstream entities and providing information that may prove helpful in their investigation of its source(s).

If a Permittee is unable to eliminate an ongoing illicit discharge following full execution of its legal authority and in accordance with its Progressive Enforcement Policy, or other circumstances prevent the full elimination of an ongoing illicit discharge, including the inability to find the responsible party/parties, the Permittee shall provide for diversion of the entire flow to the sanitary sewer or provide treatment. In either instance, the Permittee shall notify the Regional Water Board in writing within 30 days of such determination and shall provide a written plan for review and comment that describes the efforts that have been undertaken to eliminate the illicit discharge, a description of the actions to be undertaken, anticipated costs, and a schedule for completion. The goal of these requirements is to provide a permanent solution for ongoing illicit discharges.

# c. Identification and Response to Illicit Connections

Illicit connections to the MS4 can lead to the direct discharge or infiltration of sewage or other prohibited discharges into the MS4. Permitees have been conducting illicit connection screening throughout the term of Order No. 01-182 and this Order requires a continuation of response efforts once an illicit connection is identified. This Order establishes unique obligations for the LACFCD and for the individual Permitees. The requirements for LACFCD are based on the unique obligations and infrastructure of a regional flood control district. Requirements for the individual Permittees require the investigation and follow-up of all illicit connections within 21 days of identification and elimination within 180 days.

# d. Public Reporting of Non-Storm Water Discharges and Spills

Each Permittee needs to promote a program to help in the identification and termination of illicit discharges. This Order establishes requirements for the Permitees, individually or as a group, to develop public education campaigns and reporting numbers which are intended to promote public reporting of illicit discharges. Specifically, a stormwater hotline can be used to help permittees become aware of and mitigate spills or dumping incidents. Spills can include everything from an overturned gasoline tanker to sediment leaving a construction site to a sanitary sewer overflow entering into a storm drain. Permittees must set up a hotline consisting of any of the following (or combination thereof): a dedicated or non-dedicated phone line, E-mail address, or website.

This Order also requires development of written procedures for receiving and responding to calls from the public and for maintaining documentation about reported illicit discharges and spills and their investigation and remedy. These requirements are intended to ensure that reliable and consistent practices are deployed to address this persistent problem.

## e. Spill Response Plan

Spills, leaks, sanitary sewer overflows, and illicit dumping or discharges can introduce a range of stormwater pollutants into the storm system. Prompt response to these occurrences is the best way to prevent or reduce negative impacts to waterbodies. The permittee must develop a spill response plan that includes an investigation procedure similar to or in conjunction with the investigation procedures developed for illicit discharges in general. Often, a different entity might be responsible for spill response in a community (i.e. fire department), therefore, it is imperative that adequate communication exists between stormwater and spill response staff to ensure that spills are documented and investigated in a timely manner.

# f. Illicit Connection and Illicit Discharge Education and Training

The permit requires each Permittee to train field staff, who may come into contact or observe illicit discharges, on the identification and proper procedures for reporting illicit discharges. Field staff to be trained may include, but are not limited to, municipal maintenance staff, inspectors, and other staff whose job responsibilities regularly take them out of the office and into areas within the MS4 area. Permittee field staff are out in the community every day and are in the best position to locate and report spills, illicit discharges, and potentially polluting activities. With proper training and information on reporting illicit discharges easily accessible, these field staff can greatly expand the reach of the IDDE program.

# D. Total Maximum Daily Load Provisions

Clean Water Act section 303(d)(1)(A) requires each State to conduct a biennial assessment of its waters, and identify those waters that are not achieving water quality standards. These waters are identified as impaired on the State's Clean Water Act

section "303(d) List" of water quality limited segments. The Clean Water Act also requires States to establish a priority ranking for waters on the 303(d) List and to develop and implement Total Maximum Daily Loads (TMDLs) for these waters. A TMDL specifies the maximum amount of a pollutant that a waterbody can receive and still meet water quality standards, and allocates the acceptable pollutant load to point and nonpoint sources. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7. A TMDL is defined as "the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR § 130.2). Regulations further require that TMDLs must be set at "levels necessary to attain and maintain the applicable narrative and numeric water quality standards with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality" (40 CFR section 130.7(c)(1)). The regulations at 40 CFR section 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading and water quality parameters. Essentially, TMDLs serve as a backstop provision of the CWA designed to implement water quality standards when other provisions have failed to achieve water quality standards.

Upon establishment of TMDLs by the State or the USEPA, the State is required to incorporate, or reference, the TMDLs in the State Water Quality Management Plan (40 CFR sections 130.6(c)(1) and 130.7). The Regional Water Board's Basin Plan, and applicable statewide plans, serves as the State Water Quality Management Plan governing the watersheds under the jurisdiction of the Regional Water Board. When adopting TMDLs as part of its Basin Plan, the Regional Water Board includes, as part of the TMDL, a program for implementation of the WLAs for point sources and load allocations (LAs) for nonpoint sources.

TMDLs are not self-executing, but instead rely upon further Board orders to impose pollutant restrictions on discharges to achieve the TMDL's WLAs. Federal regulations require that NPDES permits must include conditions consistent with the assumptions and requirements of any available waste load allocation (40 CFR section 122.44(d)(1)(vii)(B)). Similarly, state law requires both that the Regional Water Board implement its Basin Plan when adopting waste discharge requirements (WDRs) and that NPDES permits apply "any more stringent effluent standards or limitations necessary to implement water quality control plans..." (Cal. Wat. Code §§ 13263, 13377).

An NPDES permit should incorporate the WLAs as numeric WQBELs, where feasible. Where a non-numeric permit limitation is selected, such as BMPs, the permit's administrative record must support the expectation that the BMPs are sufficient to achieve the WLAs. (40 CFR §§ 124.8, 124.9, and 124.18.) The USEPA has published guidance for establishing WLAs for storm water discharges in TMDLs and their incorporation as numeric WQBELs in MS4 permits.³⁷

³⁷ USEPA (2010) "Revisions to the November 22, 2002 Memorandum 'Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit Requirements Based on Those TMDLs'." Issued by James A. Hanlon, Director, Office of Wastewater Management and Denise Keehner, Director, Office of Wetlands, Oceans and Watersheds. November 12, 2010.

# **RB-AR4400**

Greater Los Angeles County Municipal Separate Storm Sewer System ORDER NO. R4-2012-XXXX NPDES PERMIT NO. CAS004001

As required, permit conditions are included in this Order consistent with the assumptions and requirements of the available WLAs assigned to MS4 discharges, which have been established in thirty-three TMDLs. The Regional Water Board adopted twenty-five (25) TMDLs and USEPA established seven (7) TMDLs that assign WLAs to MS4 Permittees within the County of Los Angeles. In addition, the Santa Ana Regional Water Board adopted a TMDL that assigns WLAs to the Cities of Pomona and Claremont. The TMDLs included in this Order along with the adoption and approval dates are listed in the table below. Permit conditions for two of these TMDLs – the Marina del Rey Harbor Bacteria TMDL and the Los Angeles River Watershed Trash TMDL – were previously incorporated into Order No. 01-182 during re-openers in 2007 and 2009, respectively (Orders R4-2007-0042 and R4-2009-0130). TMDLs are typically developed on a watershed or subwatershed basis, which facilitates a more accurate assessment of cumulative impacts of pollutants from all sources. An overview of each Watershed Management Area, including the TMDLs applicable to it, is provided below.

# **RB-AR4404**

T E N T A T I V

#### ORDER NO. R4-2012-XXXX NPDES PERMIT NO. CAS004001

**Santa Clara River Watershed Management Area.** The Santa Clara River and its tributaries drain a watershed area of 1,634 square miles (sq. miles) (Figure B-1). Santa Clara River Reaches 1, 2, 3, 4A, 4B and major tributaries Santa Paula, Sespe and Piru Creeks are in Ventura County. Santa Clara River Reaches 5, 6, 7, 8 and major tributaries Castaic, San Francisquito, and Bouquet Canyon Creeks are in Los Angeles County. About 40% of the watershed, the Upper Santa Clara River, is located in County of Los Angeles. Approximately, 75% of the Upper Santa Clara River watershed is open space used for recreation in the Angeles National Forest. The remainder of the upper portion of the watershed is characterized by a mixture of residential, mixed urban, and industrial land uses with low density residential more common in the Uppermost areas of the watershed, while high density residential is more prevalent in the City of Santa Clarita.

Various reaches of the Santa Clara River are on the 2010 CWA Section 303(d) List of impaired water bodies for nitrogen, bacteria, chloride, and trash (in lakes), among other pollutants. The excess nitrogen compounds are causing impairments to the WARM, WILD, and GWR designated beneficial uses of the Santa Clara River in Reaches 3, 7 and 8. The elevated bacterial indicator densities are causing impairment of the REC-1 and REC-2 designated beneficial uses for the Santa Clara River Estuary and Reaches 3, 5, 6, and 7. The excessive levels of chloride are impairing the AGR and GWR designated beneficial uses of the Upper Santa Clara River Reaches 4A, 4B, 5 and 6. The trash in Lake Elizabeth is causing impairments to the WARM, WILD, RARE, REC-1 and REC-2 designated beneficial uses.

TMDLs have been adopted by the Regional Water Board to address the impairments due to nitrogen, bacteria and chloride in the Upper Santa Clara River Watershed and for trash in Lake Elizabeth. Each of these TMDLs identifies MS4 discharges as a source of pollutants and assigns allocations to MS4 discharges. In the nitrogen compounds TMDL, storm water discharges were identified as potentially contributing nitrogen loads. Data from land use monitoring conducting under the LA County MS4 Permit from 1994-1999 indicate some concentrations of ammonia from commercial land uses in excess of the 30-day average concentration based WLA of 1.75 mg/l, and potential concentrations of nitrate-N and nitrite-N from residential land uses in excess of the WLA of 6.8 mg/l. Recent data from the 2010-11 annual monitoring report indicate low levels of ammonia and nitrite at the mass emissions station (S29) in the Santa Clara River, and concentrations of nitrate-N ranging from 1.38-1.66 mg/l in dry weather and 0.015-1.86 mg/I in wet weather. In the chloride TMDL, major point sources are assigned a WLA of 100 mg/l. Data from land use monitoring conducted under the LA County MS4 Permit from 1994-99 indicate chloride concentrations ranging from 3.2-48 mg/l, while more recent data from the mass emissions station (S29) indicate concentrations ranging from 116-126 mg/l in dry weather, and 25.1-96.3 mg/l in wet weather. For the bacteria TMDL, the Regional Water Board found that the significant contributors of bacteria loading to the Santa Clara River are discharges of storm water and non-storm water from the MS4. For the trash TMDL, discharges from the MS4 are sources of trash discharged to Lake Elizabeth.

Santa Monica Bay Watershed Management Area. The Santa Monica Bay Watershed Management Area (WMA) encompasses an area of 414 sq. miles (Figure B-2). Its

**RB-AR4405** 

ORDER NO. R4-2012-XXXX NPDES PERMIT NO. CAS004001

borders reach from the crest of the Santa Monica Mountains on the north and from the Ventura-Los Angeles County line to downtown Los Angeles. From there it extends south and west across the Los Angeles plain to include the area east of Ballona Creek and north of the Baldwin Hills. A narrow strip of land between Playa del Rey and Palos Verdes drains to the Bay south of Ballona Creek. The WMA includes several subwatersheds, the two largest being Malibu Creek to the north (west) and Ballona Creek to the south. SCAG land use data from 2005 shows 62% of the area is open space, high density residential is 17% of the area, and low density residential is 2.3% of the area. Commercial and industrial land uses total 6% of the area and are found in all but a handful of the subwatersheds.

Many of the Santa Monica Bay beaches were identified on the 1998 CWA Section 303(d) List of impaired water bodies for high coliform counts and beach closures. Santa Monica Bay offshore and nearshore is on the 2010 CWA Section 303(d) List of impaired water bodies for debris, DDTs, PCBs and sediment toxicity. The elevated bacterial indicator densities during both dry and wet weather are causing impairments of the REC-1 and REC-2 designated beneficial uses of the Santa Monica Bay beaches. The debris and elevated concentrations of DDT and PCBs are causing impairments to the IND, NAV, REC-1, REC-2, COMM, EST, MAR, BIOL, MIGR, WILD, RARE, SPWN, SHELL, and WET designated beneficial uses of the Santa Monica Bay.

TMDLs have been adopted by the Regional Water Board and USEPA for bacteria at Santa Monica Bay Beaches, and for debris, DDTs, PCBs and sediment toxicity in Santa Monica Bay. In the bacteria TMDL, the Regional Water Board determined that discharges of storm water and non-storm water from the MS4 are the primary source of elevated bacterial indicator densities to Santa Monica Bay beaches during dry and wet weather. In the debris TMDL, the Regional Water Board determined that most of the land-based debris is discharged to the marine environment through the MS4. In the DDT and PCBs TMDL, USEPA determined that although DDT is no longer used, it persists in the environment, adhering strongly to soil particles. The manufacture of PCBs is no longer legal, but PCBs also persist in the environment and are inadvertently produced as a result of some manufacturing processes. Both DDT and PCBs are transported in contaminated sediments via urban runoff through the MS4 to Santa Monica Bay.

The Malibu Creek subwatershed drains an area of about 109 square miles (Figure B-2a). Approximately two-thirds of this subwatershed lies in Los Angeles County and the remaining third in Ventura County. Much of the land is part of the Santa Monica Mountains National Recreation Area and is under the purview of the National Parks Service. The watershed borders the eastern portion of Ventura County to the west and north and Los Angeles River watershed to the east. Major tributaries include Cold Creek, Lindero Creek, Las Virgenes Creek, Medea Creek, and Triunfo Creek. Located at the end of and receiving flows from Malibu Creek is the 40-acre Malibu Lagoon. The Malibu Creek subwatershed land uses are 88% open space, 3% commercial/light industry, 9% residential and less than 1% public.

The Malibu Creek Watershed is on the 2010 CWA Section 303(d) List of impaired water bodies for bacteria, nutrients, and trash. Elevated bacterial indicator densities are

causing impairment of the REC-1 and REC-2 designated beneficial uses of Malibu Creek, Malibu Lagoon, and the adjacent beaches. Excess nutrients are causing impairments to the REC-1, REC-2, WARM, COLD, EST, MAR, WILD, RARE, MIGR, and SPWN designated beneficial uses of waterbodies in the Malibu Creek Watershed. Trash is causing impairments to the MUN, GWR, REC-1, REC-2, WARM, COLD, MIGR, WILD, RARE, SPWN, and WET designated beneficial uses of the waterbodies in the Malibu Creek Watershed.

TMDLs have been adopted by the Regional Water Board for bacteria and trash in Malibu Creek. USEPA established a TMDL for nutrients in Malibu Creek. Fecal coliform bacteria may be introduced from a variety of sources including storm water and non-storm water discharges from the MS4. USEPA determined that high nitrogen and phosphorus loadings are associated with storm water discharges from commercial and residential land uses and also from undeveloped areas. During the summer non-storm water discharges add a significant portion of the load. The Regional Water Board determined in the trash TMDL that discharges from the MS4 are a source of trash to waterbodies in the Malibu Creek Watershed.

Ballona Creek and its tributaries drain a subwatershed of about 127 square miles (Figure B-2b). The watershed boundary extends in the east from the crest of the Santa Monica Mountains southward and westward to the vicinity of central Los Angeles and thence to Baldwin Hills. Tributaries of Ballona Creek include Centinela Creek, Sepulveda Canyon Channel, Benedict Canyon Channel, and numerous other storm drains. Ballona Creek is concrete lined upstream of Centinela Boulevard. All of its tributaries are either concrete channels or covered culverts. The channel downstream of Centinela Boulevard is trapezoidal composed of grouted rip-rap side slopes and an earth bottom. The urbanized areas of Ballona Creek, which consists of residential and commercial properties, accounts for 80% of the watershed; the partially developed foothill and mountains make up the other 20%.

Ballona Creek and Ballona Creek Estuary is on the 2010 CWA Section 303(d) List for trash, toxicity, bacteria, and metals. The Ballona Creek Wetlands is on the 2010 CWA 303(d) List for trash, exotic vegetation, Section habitat alterations and hydromodification. Trash is causing impairments to the REC-1, REC-2, WARM, WILD, EST, MAR, RARE, MIGR, SPWN, COMM, WET, and COLD designated beneficial uses of Ballona Creek. A suite of toxic pollutants, including cadmium, copper, lead, silver, zinc, chlordane, DDT, PCBs, and PAHs in sediments and dissolved copper, dissolved lead, total selenium, and dissolved zinc, are causing impairments to the REC-1, REC-2, EST, MAR, WILD, RARE, MIGR, SPWN, COMM, and SHELL designated beneficial uses of Ballona Creek Estuary and Ballona Creek and Sepulveda Channel, respectively. The elevated bacterial indicator densities are causing impairment of the REC-1, LREC-1, and REC-2 designated beneficial uses of Ballona Creek and Ballona Estuary. The excess sediment and invasive exotic vegetation is causing impairments to the EST, MIGR, RARE, REC-1, REC-2, SPWN, WET, and WILD designated beneficial uses of the Ballona Creek Wetlands.

TMDLs have been adopted by the Regional Water Board for trash, metals and toxic pollutants in Ballona Creek and Estuary, and bacteria. USEPA established a TMDL for

Sediment and Invasive Exotic Vegetation in the Ballona Creek Wetlands. Stormwater discharge is the major source of trash in Ballona Creek. Urban storm water has been recognized as a substantial source of metals. Storm drains convey a large percentage of the metals loadings during dry weather because although their flows are typically low, concentrations of metals in urban runoff may be guite high. Because metals are typically associated with fine particles in storm water runoff, they have the potential to accumulate in estuarine sediments where they may pose a risk of toxicity. Similar to metals, the majority of organic constituents in storm water are associated with particulates. There is toxicity associated with suspended solids in urban runoff discharged from Ballona Creek, as well as with the receiving water sediments. This toxicity is likely attributed to metals and organics associated with the suspended sediments. The major contributors of flows and associated bacteria loading to Ballona Creek and Ballona Estuary are storm water and non-storm water discharges from the MS4. The potential for sediment loading into the Ballona Creek Wetlands is associated with the flow coming down the watershed. Sediment moves from the watershed through the MS4 as a result of storms, wind and land based runoff. Major storms usually take place in winter and are responsible for major movements of sediment down the watershed into Ballona Creek and Ballona Wetland towards the coastal waterbodies. These activities can lead to discharge of large quantities of sediments in runoff.

The Marina del Rey subwatershed is approximately 2.9 square miles located adjacent to the mouth of Ballona Creek. The Marina del Rey subwatershed is highly developed at 80%, the remaining 20% is split between water and open/recreation land uses.

Marina del Rey is on the 2010 CWA Section 303(d) List for bacteria and sediment concentrations of copper, lead, zinc, DDT, PCBs, chlordane, and sediment toxicity. The elevated bacterial indicator densities are causing impairment of the REC-1 and REC-2 designated beneficial uses at Marina del Rey Harbor Mothers' Beach and back basins. The toxic pollutants are causing impairments to the REC-1, MAR, WILD, COMM, and SHELL designated beneficial uses of the Marina del Rey Harbor.

TMDLs have been adopted by the Regional Water Board for bacteria and toxic pollutants. Non-storm water and storm water discharges from the MS4 are the primary sources of elevated bacterial indicator densities to Marina del Rey Harbor Mothers' Beach and back basins during dry and wet weather. Urban storm water has been recognized as a substantial source of metals. Numerous researchers have documented that the most prevalent metals in urban storm water (i.e., copper, lead, and zinc) are consistently associated with suspended solids. Because metals are typically associated with fine particles in storm water runoff, they have the potential to accumulate in marine sediments where they may pose a risk of toxicity. Similar to metals, the majority of organic constituents in storm water are associated with particulates.

**Dominguez Channel and Greater Harbor Waters Watershed Management Area.** The Dominguez Channel and Los Angeles/Long Beach Harbors Watershed Management Area (Dominguez WMA) is located in the southern portion of the Los Angeles Basin (Figure B-3). Los Angeles Harbor is 7,500 acres and the Long Beach Harbor is 7,600 acres; together they have an open water area of approximately 8,128 acres. The 15 mile-long Dominguez Channel drains a densely urbanized area to Inner

Los Angeles Harbor. Near the end of the 19th century and during the beginning of the next century, channels were dredged, marshes were filled, wharves were constructed, the Los Angeles River was diverted, and breakwaters were constructed in order to allow deep draft ships to be directly offloaded at the docks. The Dominguez Slough was completely channelized and became the drainage endpoint for runoff from a highly industrialized area. Eventually, the greater San Pedro Bay was enclosed by two more breakwaters and deep entrance channels were dredged to allow for entry of ships.

Various reaches of the Dominguez WMA are on the 2010 CWA Section 303(d) List of impaired water bodies for metals, DDT, PCBs, PAHs, historic pesticides, coliform, and sediment toxicity. The elevated bacteria indicator densities is causing impairments to the SHELL, REC-1, and REC-2 designated beneficial uses of Los Angeles Harbor. The elevated levels of metals and organics are causing impairments to beneficial uses designated in these waters to protect aquatic life, including MAR and RARE. In addition, the elevated levels are causing impairments in the estuaries, which are designated with SPWN, MIGR, and WILD beneficial uses. Dominguez Channel also has an existing designated use of WARM and the Los Angeles River Estuary has the designated use of WET. Beneficial uses associated with human use of these waters that are impaired due to the elevated concentrations of metals and organics include REC-1, REC-2, IND, NAV, COMM, and SHELL.

TMDLs have been adopted by the Regional Water Board for toxic pollutants in the Dominguez WMA and for bacteria at Inner Cabrillo Beach and the Main Ship Channel. Discharges from the MS4 are a source of elevated bacterial indicator densities to Inner Cabrillo Beach and the Main Ship Channel during dry and wet weather. The major point sources of organochlorine pesticides, PCBs, and metals into Dominguez Channel are storm water and non-storm water discharges. The contaminated sediments are a reservoir of historically deposited pollutants. Storm water runoff from manufacturing, military facilities, fish processing plants, wastewater treatment plants, oil production facilities, and shipbuilding or repair yards in both Ports have discharged untreated or partially treated wastes into Harbor waters. Current activities also contribute pollutants to Harbor sediments, in particular, storm water runoff.

Machado Lake is listed for trash, nutrients, PCBs and historic pesticides. Trash, nutrients and toxic pollutants are causing impairments to the WARM, WET, RARE, WILD, REC-1 and REC-2 designated beneficial uses of Machado Lake. TMDLs have been adopted by the Regional Water Board for trash, nutrients, PCBs and pesticides for Machado Lake. The point sources of trash and nutrients into Machado Lake are storm water and non-storm water discharges from the MS4. Storm water discharges occur through the following sub-drainage systems: Drain 553, Wilmington Drain, Project 77/510, and Walteria Lake.

Los Angeles River Watershed Management Area. The Los Angeles River Watershed Management Area (LAR WMA) drains a watershed of 824 square miles (Figure B-4). The LAR WMA is one of the largest in the Region and is also one of the most diverse in terms of land use patterns. Approximately 324 square miles of the watershed are covered by forest or open space land including the area near the headwaters, which originate in the Santa Monica, Santa Susana, and San Gabriel

Greater Los Angeles County Municipal Separate Storm Sewer System ORDER NO. R4-2012-XXXX NPDES PERMIT NO. CAS004001

Mountains. The remainder of the watershed is highly developed. The river flows through the San Fernando Valley past heavily developed residential and commercial areas. From the Arroyo Seco, north of downtown Los Angeles, to the confluence with the Rio Hondo, the river flows through industrial and commercial areas and is bordered by rail yards, freeways, and major commercial and government buildings. From the Rio Hondo to the Pacific Ocean, the river flows through industrial, residential, and commercial areas, including major refineries and petroleum products storage facilities, major freeways, rail lines, and rail yards serving the Ports of Los Angeles and Long Beach. Due to major flood events at the beginning of the century, by the 1950s most of the LA River was lined with concrete. In the San Fernando Valley, there is a section of the river with a soft bottom at the Sepulveda Flood Control Basin. At the eastern end of the San Fernando Valley, the river bends around the Hollywood Hills and flows through Griffith and Elysian Parks, in an area known as the Glendale Narrows. Since the water table was too high to allow laying of concrete, the river in this area has a rocky, unlined bottom with concrete-lined or rip-rap sides. South of the Glendale Narrows, the river is contained in a concrete-lined channel down to Willow Street in Long Beach. The LA River tidal prism/estuary begins in Long Beach at Willow Street and runs approximately three miles before joining with Queensway Bay. The channel has a soft bottom in this reach with concrete-lined sides. A number of lakes are also part of the LAR WMA, including Peck Road Park, Belvedere Park, Hollenbeck Park, Lincoln Park, and Echo Park Lakes as well as Lake Calabasas.

Various reaches and lakes within the LAR WMA are on the 2010 CWA Section 303(d) List of impaired water bodies for trash, nitrogen compounds and related effects (ammonia, nitrate, nitrite, algae, pH, odor, and scum), metals (copper, cadmium, lead, zinc, aluminum and selenium), bacteria, and historic pesticides. Beneficial uses impaired by trash in the Los Angeles River are REC-1, REC-2, WARM, WILD, EST, MAR, RARE, MIGR, SPWN, COMM, WET and COLD. The excess nitrogen compounds are causing impairments to the WARM and WILD designated beneficial uses of Los Angeles River. Excess metals are causing impairments to the WILD, RARE, WARM, WET, and GWR designated beneficial uses of the Los Angeles River and its tributaries. Elevated indicator bacteria densities are causing impairments to the REC-1 and REC-2 designated beneficial uses of Los Angeles River and the Los Angeles River Estuary.

TMDLs have been adopted by the Regional Water Board for trash, nitrogen, metals, and bacteria in the Los Angeles River. USEPA established TMDLs for bacteria in the Los Angeles River Estuary and for various pollutants in Los Angeles Area Lakes. The Los Angeles River Watershed Trash TMDL identifies discharges from the municipal separate storm sewer system as the principal source of trash to the Los Angeles River and its tributaries. The Regional Water Board determined that urban runoff and storm water may contribute to nitrate loads. Discharges from the MS4 contribute a large percentage of the metals loadings during dry weather because although non-storm water flows from the MS4 are typically low relative to other discharges during dry weather, most of the metals loadings are in the particulate form and are associated with wet-weather storm water flow. On an annual basis, storm water discharges from the MS4 contribute about 40% of the cadmium loading, 80% of the copper loading, 95% of the lead loading, and 90% of the zinc loading. Discharges from the MS4 are the

principal source of bacteria to the Los Angeles River, its tributaries and the Los Angeles River Estuary in both dry weather and wet weather.

The Los Angeles Water Board identified 10 lakes in the Los Angeles region as impaired by algae, ammonia, chlordane, copper, DDT, eutrophication, lead, organic enrichment/low dissolved oxygen, mercury, odor, PCBs, pH and/or trash and placed them on California's 303(d) list of impaired waters. For several lakes, USEPA concluded that ammonia, pH, copper and/or lead are currently meeting water quality standards and TMDLs are not required at this time. In other lakes, recent chlordane and dieldrin data indicate additional impairment. Associated with this WMA are: Lake Calabasas TMDLs for total nitrogen and total phosphorus; Echo Park Lake TMDLs for nutrients (total nitrogen and total phosphorus), total chlordane, dieldrin, total PCBs, and trash; and Peck Road Park Lake TMDLs for nutrients (total nitrogen and total phosphorus), total chlordane, total DDT, dieldrin, total PCBs, and trash.

In Lake Calabasas beneficial uses impaired by elevated levels of nutrients include REC1, REC2, and WARM. At high enough concentrations, WILD and MUN uses could also become impaired. MS4 discharges from the surrounding watershed to Lake Calabasas during dry and wet weather contributes 97.7 percent of the total phosphorus load and 74.4 percent of the total nitrogen load.

In Echo Park Lake beneficial uses impaired by elevated levels of nutrients, PCBs, chlordane, and dieldrin are currently impairing the REC1, REC2, and WARM uses. At high enough concentrations WILD and MUN uses could also become impaired. Beneficial uses impaired by trash in Echo Park Lake include REC1, REC2, WARM and WILD. The Echo Park Lake nutrient TMDL found that MS4 discharges from the northern and southern watershed to Echo Lake contribute 29 percent of the total phosphorus load and 28 percent of the total nitrogen load during wet weather with dry weather loading data unavailable due to the majority of runoff being diverted downstream of the lake. PCBs, chlordane, and dieldrin in Echo Park Lake are primarily due to historical loading and storage within the lake sediments, with some ongoing contribution by watershed wet weather loads. Dry weather loading is assumed to be negligible because hydrophobic contaminants primarily move with particulate matter that is mobilized by higher flows. Storm water loads from the watershed were estimated based on simulated sediment load and observed pollutant concentrations on sediment near inflows to the lake. MS4 discharges via storm drains are the principal point source for trash in Echo Park Lake.

In Peck Road Park Lake beneficial uses impaired by elevated levels of nutrients, PCBs, chlordane, DDT, dieldrin, and trash are currently impairing the REC1, REC2, and WARM uses. At high enough concentrations WILD and MUN uses could also become impaired. The Peck Road Park Lake nutrient TMDL found that MS4 discharges from the surrounding watershed including both wet and dry weather contribute 80.2 percent of the total phosphorus load and 55.5 percent of the total nitrogen load. PCBs, chlordane, DDT, and dieldrin in Peck Road Park Lake loads are primarily due to historical loading and storage within the lake sediments, with some ongoing contribution by watershed wet weather loads. Dry weather loading is assumed to be negligible because hydrophobic contaminants primarily move with particulate matter that is

mobilized by higher flows. Stormwater loads from the watershed were estimated based on simulated sediment load and observed pollutant concentrations on sediment near inflows to the lake. MS4 discharges via storm drains are the principal point source for trash in Peck Road Park Lake.

**San Gabriel River Watershed Management Area.** The San Gabriel River Watershed (SGR WMA) receives drainage from a 689-square mile area of eastern Los Angeles County (Figure B-5). The main channel of the San Gabriel River is approximately 58 miles long. Its headwaters originate in the San Gabriel Mountains with the East, West, and North Forks. The river empties to the Pacific Ocean at the Los Angeles and Orange Counties boundary in Long Beach. The main tributaries of the river are Big and Little Dalton Wash, San Dimas Wash, Walnut Creek, San Jose Creek, Fullerton Creek, and Coyote Creek. Part of the Coyote Creek subwatershed is in Orange County and is under the authority of the Santa Ana Water Board. A number of lakes and reservoirs are also part of the SGR WMA, including Legg Lake and Puddingstone Reservoir. Land use in the watershed is diverse and ranges from predominantly open space in the upper watershed to urban land uses in the middle and lower parts of the watershed.

Various reaches of the SGR WMA are on the 2010 CWA Section 303(d) List of impaired water bodies due to trash, nitrogen, phosphorus, and metals (copper, lead, selenium, and zinc). Beneficial uses impaired by trash in Legg Lake include REC1, REC2, and WILD.

A TMDL has been adopted by the Regional Water Board for trash in Legg Lake. The Legg Lake Trash TMDL identifies MS4 storm drains as the principal point source for trash discharged to Legg Lake.

USEPA established TMDLs for metals and selenium in the San Gabriel River and various pollutants in Los Angeles Area Lakes. Segments of the San Gabriel River and its tributaries exceed water quality objectives for copper, lead, selenium, and zinc. Metals loadings to San Gabriel River are causing impairments of the WILD, WARM, COLD, RARE, EST, MAR, MIGR, SPWN, WET, MUN, IND, AGR, GWR, and PROC beneficial uses. The San Gabriel River metals and selenium TMDL found that the MS4 contributes a large percentage of the metals loadings during dry weather because although their flows are typically low, concentrations of metals in urban runoff may be quite high. During wet weather, most of the metals loadings are in the particulate form and are associated with wet-weather storm water flow.

The Regional Water Board identified 10 lakes in the Los Angeles Region as impaired by algae, ammonia, chlordane, copper, DDT, eutrophication, lead, organic enrichment/low dissolved oxygen, mercury, odor, PCBs, pH and/or trash and placed them on California's 303(d) list of impaired waters. For several lakes, USEPA concluded that ammonia, pH, copper and/or lead are currently meeting water quality standards and TMDLs are not required at this time. In other lakes, recent chlordane and dieldrin data indicate additional impairment. Associated with this WMA are: Legg Lake TMDLs for total nitrogen and total phosphorus; and Puddingstone Reservoir TMDLs for total nitrogen, total phosphorus, total chlordane, total DDT, total PCBs, total mercury, and dieldrin.

In Legg Lake beneficial uses impaired due to elevated nutrient levels include REC1, REC2, WARM and COLD. At high enough concentrations the WILD, MUN, and GWR uses could also become impaired. The Legg Lake nutrient TMDL found that MS4 discharges from the surrounding watershed to Legg Lake during dry and wet weather contributes 69.1 percent of the total phosphorus load and 36 percent of the total nitrogen load.

In Puddingstone Reservoir beneficial uses impaired due to elevated nutrient, mercury, PCBs, chlordane, dieldrin, and DDT levels include REC1, REC2, WARM, and COLD. At high enough concentrations the WILD, MUN, GWR, and RARE uses could also become impaired. The Puddingstone Reservoir nutrients TMDL found that MS4 discharges from the surrounding watershed to Puddingstone Reservoir during dry and wet weather contributes 79.8 percent of the total phosphorus and 74.1 percent of the total nitrogen load. Mercury, PCBs, chlordane, dieldrin, and DDT in Puddingstone Reservoir loads are primarily due to historical loading and storage within the lake sediments, with some ongoing contribution by watershed wet weather loads. Dry weather loading is assumed to be negligible because hydrophobic contaminants primarily move with particulate matter that is mobilized by higher flows. Stormwater loads from the watershed were estimated based on simulated sediment load and observed pollutant concentrations on sediment near inflows to the lake.

Los Cerritos Channel and Alamitos Bay Watershed Management Area. The Los Cerritos Channel is concrete-lined above the tidal prism and drains a small but densely urbanized area of east Long Beach (Figure B-6). The channel's tidal prism starts at Anaheim Road and connects with Alamitos Bay through the Marine Stadium; the wetlands connect to the Channel a short distance from the lower end of the Channel. Alamitos Bay is composed of the Marine Stadium, a recreation facility built in 1932; Long Beach Marina; a variety of public and private berths; and the Bay proper. A small bathing lagoon, Colorado Lagoon located entirely in Long Beach, has a tidal connection with the Bay. The majority of land use in this WMA is high density residential.

Los Cerritos Channel is on the 2010 CWA Section 303(d) List of impaired water bodies for metals (copper, zinc, and lead). Beneficial uses impaired by metals in the Los Cerritos Channel include WILD, REC2 and WARM. USEPA established a TMDL for various metals in Los Cerritos Channel. The TMDL for metals in Los Cerritos Channel found that the MS4 contributes a large percentage of the metals loadings during dry weather because although their flows are typically low, concentrations of metals in urban runoff may be quite high. During wet weather, most of the metals loadings are in the particulate form and are associated with wet-weather storm water flow.

**Middle Santa Ana River Watershed Management Area.** The Middle Santa Ana River Watershed Management Area (MSAR WMA) covers approximately 488 square miles and lies mostly in San Bernardino and Riverside Counties; however, a small part of Los Angeles County is also included. The area of Los Angeles County, which lays in the MSAR WMA, includes portions of the Cities of Pomona and Claremont (Figure B-7). The MSAR WMA is comprised of three subwatersheds. The subwatershed that includes portions of Pomona and Claremont is the Chino Basin Subwatershed. Surface

drainage from Pomona and Claremont is generally southward toward San Antonio Creek, which is tributary to Chino Creek, which feeds into the Prado Flood Control Basin.

Various reaches of the MSAR WMA, including Chino Creek, are listed on 2010 CWA Section 303(d) List for bacteria. Elevated bacterial indicator densities are causing impairments of the REC-1 and REC-2 designated beneficial for the Santa Ana River Reach 3; Chino Creek Reaches 1 and 2; Mill Creek (Prado Area); Cucamonga Creek Reach 1; and Prado Park Lake.

The Santa Ana Water Board adopted TMDLs for bacteria for the Middle Santa Ana River Watershed. The Basin Plan amendment incorporating the Middle Santa Ana River Watershed Bacterial Indicator TMDLs was approved by the Santa Ana Water Board on August 26, 2005 (Resolution No. R8-2005-0001), by the State Water Board on May 15, 2006, by the Office of Administrative Law on September 1, 2006, and by the USEPA on May 16, 2007. The TMDL was effective on May 16, 2007. The Santa Ana Water Board concluded based upon data and information collected in 1993, 1996-1998 and in 2002-2004, that urban runoff from the MS4 is a significant source of bacterial indicators year round to the Middle Santa Ana River and its tributaries (Rice, 2005). The TMDL specifies both dry weather and wet weather WLAs, with distinct implementation schedules. Compliance with the summer dry (April 1st through October 31st) WLAs is to be achieved as soon as possible, but no later than December 31, 2015. In recognition of the difficulties associated with the control of storm water discharges, compliance with the winter wet (November 1st through March 31st) WLAs is to be achieved as soon as possible, but no later than December 31, 2015.

**Calleguas Creek Watershed Management Area.** Calleguas Creek and its tributaries drain a watershed area of 343 square miles (sq. miles) in southern Ventura County and a small portion of western Los Angeles County. Approximately, 4.16 sq. miles of Los Angeles County is part of the Calleguas Creek Watershed. The land use of the 4.15 sq. miles is open space and recreation. The land use of the remaining 0.01 sq. miles is divided between low density residential, industrial, and agriculture (Southern California Association of Governments, 2008). Six TMDLs have been adopted and are in effect for the Calleguas Creek Watershed. None of the TMDLs assign waste load allocations to the Los Angeles County Flood Control District, County of Los Angeles or any incorporated city within Los Angeles County. Therefore, no water quality based effluent limitations were incorporated in this Order for TMDLs in the Calleguas Creek Watershed.

**Manner of Incorporation of TMDL WLAs.** The description of the permit conditions and the basis for the manner for incorporating requirements to implement the TMDLs' WLAs is discussed below.

WLAs may be expressed in different ways in a TMDL. In general, a WLA is expressed as a discharge condition that must be achieved in order to ensure that water quality standards are attained in the receiving water. The discharge condition may be expressed in terms of mass or concentration of a pollutant. However, in some cases, a WLA may be expressed as a receiving water condition such as an allowable number of exceedance days of the bacteria objectives.

In this Order, in most cases, TMDL WLAs have been translated into numeric WQBELs and, where consistent with the expression of the WLA in the TMDL, also as receiving water limitations. For each TMDL included in this Order, the WLA were translated into numeric WQBELs, which were based on the WLAs in terms of the numeric value and averaging period. For those TMDLs where the averaging period was not specific for the WLA, the averaging period was based on the averaging period for the numeric target.

For the bacteria TMDLs, where the WLA are expressed as an allowable number of exceedance days in the water body, the WLAs were translated into receiving water limitations. In addition to the receiving water limitations, WQBELs were established based on the bacteria water quality objectives. In the bacteria TMDLs, the numeric targets are based on the multi-part bacteriological water quality objectives; therefore, this approach is consistent with the assumptions of the bacteria TMDLs.

In the Ballona Creek Trash TMDL, the default baseline WLA for the MS4 Permittees is equal to 640 gallons (86 cubic feet) of uncompressed trash per square mile per year. No differentiation is applied for different land uses in the default baseline WLA. The default baseline WLAs for the Permittees has been refined based on results from the baseline monitoring conducted by the City of Los Angeles. The City of Los Angeles provided trash generation flux data for five land uses: commercial, industrial, high density residential, low density residential and open space and recreation. The Baseline WLA for any single city is the sum of the products of each land use area multiplied by the WLA for the land use area, as shown below:

WLA =  $\sum$  for each city (area by land uses x allocations for this land use)

The baseline was calculated using the City of Los Angeles trash generation flux data provided for the 2003-04 and 2004-05 storm years averaged for pounds of trash per acre and the 2003-04 storm year for gallons of trash per acre. The urban portion of the Ballona Creek watershed was divided into twelve types of land uses for every city and unincorporated area in the watershed. The land use categories are: (1) high density residential, (2) low density residential, (3) commercial and services, (4) industrial, (5) public facilities, (6) educational institutions, (7) military installations, (8) transportation, (9) mixed urban, (10) open space and recreation, (11) agriculture, and (12) water. The land use data used in the calculation is based on the Southern California Association of Governments 2005 data.

# 1. Compliance Determination

For TMDLs that establish individual mass-based WLAs or a concentration-based WLA such as the Trash TMDLs, Nitrogen TMDLs, and Chloride TMDL, this Order requires Permittees to demonstrate compliance with their assigned WQBELs individually.

A number of the TMDLs for Bacteria, Metals and Toxics establish WLAs that are assigned jointly to a group of Permittees whose storm water and/or non-storm water discharges are or may be commingled in the MS4 prior to discharge to the receiving water subject to the TMDL. TMDLs address commingled MS4 discharges by assigning a WLA to a group of MS4 Permittees based on co-location within the same subwatershed. Permittees with co-mingled storm water are jointly responsible for meeting the WQBELs and receiving water limitations assigned to MS4 discharges in this Order. "Joint responsibility" means that the Permittees that have commingled MS4 discharges are responsible for implementing programs in their respective jurisdictions, or within the MS4 for which they are an owner or operator, to meet the WQBELs and/or receiving water limitations assigned to such commingled MS4 discharges.

In these cases, federal regulations state that co-permittees need only comply with permit conditions relating to discharges from the MS4 for which they are owners or operators. (40 CFR § 122.26(a)(3)(vi).) Individual co-permittees are only responsible for their contributions to the commingled discharge. This Order does not require a Permittee to individually ensure that a commingled MS4 discharge meets the applicable WQBELs included in this Order, unless such Permittee is shown to be solely responsible for the exceedances.

Additionally, this Order allows a Permittee to clarify and distinguish their individual contributions and demonstrate that its MS4 discharge did not cause or contribute to exceedances of applicable WQBELs and/or receiving water limitations. In this case, though the Permittee's discharge may commingle with that of other Permittees, the Permittee would not be held jointly responsible for the exceedance of the WQBELs or receiving water limitation.

Individual co-permittees who demonstrate compliance with the WQBELs will not be held responsible for violations by non-compliant co-permittees.

**Demonstrating Compliance with Interim Limitations.** This Order provides Permittees with several means of demonstrating compliance with applicable interim WQBELs and/or interim receiving water limitations for the pollutant(s) associated with a specific TMDL. These include any of the following:

- **a.** There are no violations of the interim WQBELs for the pollutant(s) associated with a specific TMDL at the Permittee's applicable MS4 outfall(s),¹ including an outfall to the receiving water that collects discharges from multiple Permittees' jurisdictions;
- b. There are no exceedances of the applicable receiving water limitation for the pollutant(s) associated with a specific TMDL in the receiving water(s) at, or downstream of, the Permittee's outfall(s);

¹ An outfall may include a manhole or other point of access to the MS4 at the Permittee's jurisdictional boundary.

- c. There is no direct or indirect discharge from the Permittee's MS4 to the receiving water during the time period subject to the WQBEL and/or receiving water limitation for the pollutant(s) associated with a specific TMDL; or
- **d.** The Permittee has submitted and is fully implementing an approved Watershed Management Program, which includes analyses that provide the Regional Water Board with reasonable assurance that the watershed control measures proposed will achieve the applicable WQBELs and receiving water limitations consistent with relevant compliance schedules.

**Demonstrating Compliance with Final Limitations.** This Order provides Permittees with three general means of demonstrating compliance with an applicable *final* WQBEL and/or *final* receiving water limitation for the pollutant(s) associated with a specific TMDL.

These include any of the following:

- **a.** There are no violations of the final WQBEL for the specific pollutant at the Permittee's applicable MS4 outfall(s)²;
- b. There are no exceedances of applicable receiving water limitation for the specific pollutant in the receiving water(s) at, or downstream of, the Permittee's outfall(s); or
- c. There is no direct or indirect discharge from the Permittee's MS4 to the receiving water during the time period subject to the WQBEL and/or receiving water limitation for the pollutant(s) associated with a specific TMDL.

This Order provides the opportunity for Permittees to demonstrate compliance with *interim* effluent limitations through development and implementation of a Watershed Management Program, where Permittees have provided a reasonable demonstration through quantitative analysis (i.e., modeling or other approach) that the control measures/BMPs to be implemented will achieve the interim effluent limitations in accordance with the schedule provided in this Order. It is premature to consider application of this action based compliance demonstration option to the final effluent limitations and final receiving water limitations that have deadlines outside the term of this Order. More data is needed to validate assumptions and model results regarding the linkage among BMP implementation, the quality of MS4 discharges, and receiving water quality.

During the term of this Order, there are very few deadlines for compliance with final effluent limitations applicable to storm water, or final receiving water limitations applicable during wet weather conditions. Most deadlines during the term of this Order are for interim effluent limitations applicable to storm water, or for final effluent limitations applicable to non-storm water discharges and final dry weather receiving water limitations.

There are only five State-adopted TMDLs for which the compliance deadlines for final water quality-based effluent limitations applicable to storm water occur during the term of this Order. These include: Santa Clara River Chloride TMDL, Santa Clara River Nitrogen TMDL, Los Angeles River Nitrogen TMDL, Marina del Rey Harbor Toxics TMDL, and LA Harbor Bacteria TMDL. In most of these five TMDLs, compliance with the final water quality-based effluent limitations assigned to MS4 discharges is expected to be achieved (e.g., Santa Clara River Chloride TMDL³), or a mechanism is in place to potentially allow additional time to come into compliance (e.g. reconsideration of the Marina del Rey Harbor Toxics TMDL implementation schedule).

The Regional Water Board will evaluate the effectiveness of this action-based compliance determination approach in ensuring that interim effluent limitations for storm water are achieved during this permit term. If this approach is effective in achieving compliance with interim effluent limitations for storm water during this permit term, the Regional Water Board will consider during the next permit cycle whether it would be appropriate to allow a similar approach for demonstrating compliance with final water quality-based effluent limitations applicable to storm water.

# 2. Compliance Schedules for Achieving TMDL Requirements

A Regional Water Board may include a compliance schedule in an NPDES permit when the state's water quality standards or regulations include a provision that authorizes such schedules in NPDES permits.⁴ In California, TMDL implementation plans⁵ are typically adopted through Basin Plan Amendments. The TMDL implementation plan, which is part of the Basin Plan Amendment, becomes a regulation upon approval by the State of California Office of Administrative Law (OAL).⁶ Pursuant to California Water Code sections 13240 and 13242, TMDL implementation plans adopted by the Regional Water Board "shall include ... a time schedule for the actions to be taken [for achieving water quality objectives]," which allows for compliance schedules in future permits. This Basin Plan Amendment becomes the applicable regulation that authorizes an MS4 permit to include a compliance schedule to achieve effluent limitations derived from wasteload allocations.

Where a TMDL implementation schedule has been established through a Basin Plan Amendment, it is hereby incorporated into this Order as a compliance schedule to

³ Data from land use monitoring conducted under the LA County MS4 Permit from 1994-99 indicate chloride concentrations ranging from 3.2-48 mg/L, while more recent data from the mass emissions station in the Santa Clara River (S29) indicate concentrations ranging from 116-126 mg/l in dry weather, and 25.1-96.3 mg/l in wet weather, suggesting that storm water has a diluting effect on chloride concentrations in the receiving water.

⁴ See In re Star-Kist Caribe, Inc., (Apr. 16, 1990) 3 E.A.D. 172, 175, modification denied, 4 E.A.D. 33, 34 (EAB 1992)).

⁵ TMDL implementation plans consist of those measures, along with a schedule for their implementation, that the Water Boards determine are necessary to correct an impairment. The NPDES implementation measures are thus required by sections 303(d) and 402(p)(3)(B)(iii) of the CWA. State law also requires the Water Boards to implement basin plan requirements. (See Wat. Code §§ 13263, 13377; *State Water Resources Control Board Cases* (2006) 136 Cal.App.4th 189.)

⁶ See Gov. Code, § 11353, subd. (b). Every amendment to a Basin Plan, such as a TMDL and its implementation plan, requires approval by the State Water Board and OAL. When the TMDL and implementation plan is approved by OAL, it becomes a state regulation.

achieve interim and final WQBELs and corresponding receiving water limitations, in accordance with 40 CFR section 122.47. WQBELs must be consistent with the assumptions and requirements of any WLA, which includes applicable implementation schedules.⁷ California Water Code sections 13263 and 13377 state that waste discharge requirements must implement the Basin Plan.⁸ Therefore, compliance schedules for attaining WQBELs derived from WLAs must be based on a state-adopted TMDL implementation plan and cannot exceed the maximum time that the implementation plan allows.

In determining the compliance schedules, the Regional Water Board considered numerous factors to ensure that the schedules are as short as possible. Factors examined include, but are not limited to, the size and complexity of the watershed; the pollutants being addressed; the number of responsible agencies involved; time for Co-Permittees to negotiate memorandum of agreements; development of water quality management plans; identification of funding sources; determination of an implementation strategy based on the recommendations of water quality management plans and/or special studies; and time for the implementation strategies to yield measurable results. Compliance schedules may be altered based on the monitoring and reporting results as set forth in the individual TMDLs.

In many ways, the incorporation of interim and final WQBELs and associated compliance schedules is consistent with the iterative process of implementing BMPs that has been employed in the previous Los Angeles County MS4 Permits in that progress toward compliance with the final effluent limitations may occur over the course of many years. However, because the waterbodies in Los Angeles County are impaired due to MS4 discharges, it is necessary to establish more specific provisions in order to: (i) ensure measurable reductions in pollutant discharges from the MS4, resulting in progressive water quality improvements during the iterative process, and (ii) establish a final date for completing implementation of BMPs and, ultimately, achieving effluent limitations and water quality standards.

The compliance schedules established herein are consistent with the implementation plans established in the individual TMDLs. The compliance dates for meeting the final WQBELs and receiving water limitations for each TMDL are listed below in Table F-7.

⁷ See 40 C.F.R. § 122.44(d)(1)(vii)(B).

⁸ Cal. Wat. Code, § 13263, subd. (a) ("requirements shall implement any relevant water quality control plans that have been adopted"); Cal. Wat. Code, § 13377 ("the state board or the regional boards shall . . . issue waste discharge requirements and dredged or fill material permits which apply and ensure compliance with all applicable provisions of the [CWA], thereto, together with any more stringent effluent standards or limitations necessary to implement waste quality control plans, or for the protection of beneficial uses, or to prevent nuisance"); *see also, State Water Resources Control Board Cases* (2006) 136 Cal.App.4th 189.

* If an Integrated Water Resources Approach is approved and implemented then Permittees have an extended compliance deadline.

Γ

#### 3. State Adopted TMDLs with Past Final Compliance Deadlines

As required by federal regulations, this Order includes WQBELs necessary to achieve applicable wasteload allocations assigned to MS4 discharges. In some cases, the deadline specified in the TMDL implementation plan for achieving the final wasteload allocation has passed. (See Table F-8) This Order requires that Permittees comply immediately with WQBELs and/or receiving water limitations for which final compliance deadlines have passed.

#### Table F-8. State-Adopted TMDLs with Past Final Implementation Deadlines

	Final Compliance
TOTAL MAXIMUM DAILY LOADS (TMDL)	date has Passed
Santa Clara River Nitrogen Compounds TMDL	March 23, 2004
Upper Santa Clara River Chloride TMDL	April 6, 2010
Santa Monica Bay Beaches Bacteria TMDL Summer Dry Weather only	July 15, 2006
Santa Monica Bay Beaches Bacteria TMDL Winter Dry Weather only	July 15, 2009
Malibu Creek and Lagoon Bacteria TMDL Summer Dry Weather only	January 24, 2009
Malibu Creek and Lagoon Bacteria TMDL Winter Dry Weather only	January 24, 2012
Marina del Rey Harbor Mothers' Beach and Back Basins Bacteria TMDL Dry Weather Year-round only	March 18, 2007
Los Angeles Harbor Bacteria TMDL	March 10, 2010
Los Angeles River Nitrogen Compounds and Related Effects TMDL	March 23, 2004

Where a Permittee determines that its MS4 discharge may not meet the final WQBELs for the TMDLs in Table F-8 upon adoption of this Order, the Permittee may request a time schedule order (TSO) from the Regional Water Board. TSOs are issued pursuant to California Water Code section 13300, whenever a Water Board "finds that a discharge of waste is taking place or threatening to take place that violates or will violate [Regional Water Board] requirements." Permittees may individually request a TSO, or may jointly request a TSO with all Permittees subject to the WQBELs and/or receiving water limitations. Permittees must request a TSO to achieve WQBELs for the TMDLs in Table F-8 no later than 45 days after the date this Order is adopted.

In the request, the Permittee(s) must include, at a minimum, the following:

- a. Location specific data demonstrating the current quality of the MS4 discharge(s) in terms of concentration and/or load of the target pollutant(s) to the receiving waters subject to the TMDL;
- b. A detailed description and chronology of structural controls and source control efforts, including location(s) of implementation, since the effective date of the TMDL, to reduce the pollutant load in the MS4 discharges to the receiving waters subject to the TMDL;
- **c.** A list of discharge locations for which additional time is needed to achieve the water quality based effluent limitations and/or receiving water limitations;
- **d.** Justification of the need for additional time to achieve the water quality-based effluent limitations and/or receiving water limitations for each location identified in Part VI.E.3.c, above;

- e. A detailed time schedule of specific actions the Permittee will take in order to achieve the water quality-based effluent limitations and/or receiving water limitations at each location identified in Part VI.E.3.c, above;
- f. A demonstration that the time schedule requested is as short as possible, consistent with California Water Code section 13385(j)(3)(C)(i), taking into account the technological, operation, and economic factors that affect the design, development, and implementation of the control measures that are necessary to comply with the effluent limitation(s); and
- **g.** If the requested time schedule exceeds one year, the proposed schedule shall include interim requirements and the date(s) for their achievement. The interim requirements shall include both of the following:
  - i. Effluent limitation(s) for the pollutant(s) of concern; and
  - ii. Actions and milestones leading to compliance with the effluent limitation(s).

The Regional Water Board does not intend to take enforcement action against a Permittee for violations of specific WQBELs and corresponding receiving water limitations for which the final compliance deadline has passed if a Permittee is fully complying with the requirements of a TSO to resolve exceedances of the WQBELs for the specific pollutant(s) in the MS4 discharge.

# 4. USEPA Established TMDLs

USEPA has established seven TMDLs that include wasteload allocations for MS4 discharges covered by this Order (See Table F-9). Five TMDLs were established since 2010, one in 2007, and one in 2003.

# Table F-9.USEPA Established TMDLs with WLAs Assigned to MS4Discharges

Effective Date
March 26, 2012
March 17, 2010
March 26, 2007
March 21, 2003

In contrast to State-adopted TMDLs, USEPA established TMDLs do not contain an implementation plan or schedule. The Clean Water Act does not allow USEPA to either adopt implementation plans or establish compliance schedules for TMDLs that is establishes. Such decisions are generally left with the States. The Regional Water Board could either (1) adopt a separate implementation plan as a Basin Plan Amendment for each USEPA established TMDL, which would allow inclusion of compliance schedules in the permit where applicable, or (2) issue a Permittee a schedule leading to full compliance in a separate enforcement order (such as a Time

Schedule Order or a Cease and Desist Order). To date, the Board has not adopted a separate implementation plan or enforcement order for any of these TMDLs. As such, the final WLAs in the seven USEPA established TMDLs identified above become effective immediately upon establishment by USEPA and placement in a NPDES permit.

The Regional Water Board's decision as to how to express permit conditions for USEPA established TMDLs is based on an analysis of several specific facts and circumstances surrounding these TMDLs and their incorporation into this Order. First, since these TMDLs do not include implementation plans, none of these TMDLs have undergone a comprehensive evaluation of implementation strategies or an evaluation of the time required to fully implement control measures to achieve the final WLAs. Second, given the lack of an evaluation, the Regional Water Board is not able to adequately assess whether Permittees will be able to immediately comply with the WLAs at this time. Third, the majority of these TMDLs were established by USEPA recently (i.e., since 2010) and permittees have had limited time to plan for and implement control measures to achieve compliance with the WLAs. Lastly, while federal regulations do not allow USEPA to establish implementation plans and schedules for achieving these WLAs, USEPA has nevertheless included implementation recommendations regarding MS4 discharges as part of six of the seven of these TMDLs. The Regional Water Board needs time to adequately evaluate USEPA's recommendations. For the reasons above, the Regional Water Board has determined that numeric water quality based effluent limitations for these USEPA established TMDLs are infeasible at the present time. The Regional Water Board may at its discretion revisit this decision within the term of the Order or in a future permit, as more information is developed to support the inclusion of numeric water quality based effluent limitations.

In lieu of inclusion of numeric water quality based effluent limitations at this time, this Order requires Permittees subject to WLAs in USEPA established TMDLs to propose and implement best management practices (BMPs) that will be effective in achieving the numeric WLAs. Permittees will propose these BMPs to the Regional Water Board in a Watershed Management Program Plan, which is subject to Regional Water Board Executive Officer approval. As part of this Plan, Permittees are also required to propose a schedule for implementing the BMPs that is as short as possible. The Regional Water Board finds that, at this time, it is reasonable to include permit conditions that require Permittees to develop specific Watershed Management Program plans that include interim milestones and schedules for actions to achieve the WLAs. These plans will facilitate a comprehensive planning process, including coordination among co-permittees where necessary, on a watershed basis to identify the most effective watershed control measures and implementation strategies to achieve the WLAs.

At a minimum, the Watershed Management Program Plan must include the following data and information relevant to the USEPA established TMDL:

- Available data demonstrating the current quality of the MS4 discharge(s) in terms of concentration and/or load of the target pollutant(s) to the receiving waters subject to the TMDL;
- **ii.** A detailed time schedule of specific actions the Permittee will take in order to achieve the WLA(s);
- **iii.** A demonstration that the time schedule requested is as short as possible, taking into account the time since USEPA establishment of the TMDL, and technological, operation, and economic factors that affect the design, development, and implementation of the control measures that are necessary to comply with the WLA(s);
- a. For the Malibu Creek Nutrient TMDL established by USEPA in 2003, in no case shall the time schedule to achieve the final numeric WLAs exceed five years from the effective date of this Order; and
- iv. If the requested time schedule exceeds one year, the proposed schedule shall include interim requirements, including numeric milestones, and the date(s) for their achievement.

Each Permittee subject to a WLA in a TMDL established by USEPA since 2010 must submit a draft of a Watershed Management Program Plan to the Regional Water Board Executive Officer for approval no later than one year after the effective date of this Order.

Each Permittee subject to a WLA in a TMDL established by USEPA prior to 2010 must submit a draft of a Watershed Management Program Plan to the Regional Water Board Executive Officer for approval no later than six months after the effective date of this Order..

Based on the nature and timing of the proposed watershed control measures, the Regional Water Board will consider appropriate actions on its part, which may include: (1) no action and continued reliance on permit conditions that require implementation of the approved watershed control measures throughout the permit term; (2) adopting an implementation plan and corresponding schedule through the Basin Plan Amendment process and then incorporating water quality based effluent limitations and a compliance schedule into this Order consistent with the State-adopted implementation plan; or (3) issuing a time schedule order to provide the necessary time to fully implement the watershed control measures to achieve the WLAs.

If a Permittee chooses not to submit a Watershed Management Program Plan, or the plan is determined to be inadequate by the Regional Water Board Executive Officer and necessary revisions are not made within 90 days of written notification to the Permittee that that plan is inadequate, the Permittee will be required to demonstrate compliance with the numeric WLAs immediately based on monitoring data collected under the MRP (Attachment E) for this Order.

The Regional Water Board does not intend to take enforcement action against a Permittee for violations of specific WLAs and corresponding receiving water limitations for USEPA established TMDLs if a Permittee has developed and is implementing an approved Watershed Management Program to achieve the WLAs in the USEPA TMDL and the associated receiving water limitations.

#### E. Other Provisions

#### 1. Legal Authority

Adequate legal authority is required to implement and enforce most parts of the Minimum Control Measures and all equivalent actions if implemented with a Watershed Management Program (See 40 CFR section 122.26(d)(2)(i)(A through F) and 40 CFR section 122.26(d)(2)(iv). Without adequate legal authority the MS4 would be unable to perform many vital functions such as performing inspections, requiring remedies, and requiring installation of control measures. In addition, the Permittee would not be able to penalize and/or attain remediation costs from violators.

# 2. Fiscal Resources

The annual fiscal analysis will show the allocated resources, expenditures, and staff resources necessary to comply with the permit, and implement and enforce the Permittee's Watershed Management Program (See 40 CFR section 122.26(d)(2)(vi). The annual analysis is necessary to show that the Permittee has adequate resources to meet all Permit Requirements. The analysis can also show year-to-year changes in funding for the storm water program. A summary of the annual analysis must be reported in the annual report. This report will help the Permitting Authority understand the resources that are dedicated to compliance with this permit, and to implementation and enforcement of the Watershed Management Program, and track how this changes over time. Furthermore, the inclusion of the requirement to perform a fiscal analysis annually is similar to requirements included in Order No. 01-182 permit as well as the current Ventura County MS4 permit.

#### 3. Responsibilities of the Permittees

Because of the complexity and networking of the storm drain system and drainage facilities within and tributary to the LA MS4, the Regional Water Board adopted an area-wide approach in permitting storm water and urban runoff discharges. Order No. 01-182 was structured as a single permit whereby individual Permittees were assigned uniform requirements and additional requirements were assigned to the Principal Permittee (Los Angeles County Flood Control District). Because the Los Angeles County Flood Control District does not own or control land where most pollutants originate, it is relieved as Principal Permittee. This permit does not designate a principal Permittee and as such requires each Permittee to implement provisions as a separate entity. Furthermore it does not hold a Permittee responsible for implementation of provisions applicable to other Permittees.

Part VI.A.4.a requires inter and intra-agency coordination to facilitate implementation of this Order. This requirement is based on 40 CFR section 122.26(d)(2)(iv) which requires "a comprehensive planning process which public participation and where

necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable [...]."

# 4. Reopener and Modification Provisions

These provisions are based on 40 CFR sections 122.44, 122.62, 122.63, 122.64, 124.5, 125.62, and 125.64, and are also consistent with Order No. 01-182. The Regional Water Board may reopen the permit to modify permit conditions and requirements, as well as revoke, reissue, or terminate in accordance with federal regulations. Causes for such actions include, but are not limited to, endangerment to human health or the environment; acquisition of newly-obtained information that would have justified the application of different conditions if known at the time of Order adoption; to incorporate provisions as a result of new federal or state laws, regulations, plans, or policies (including TMDLs and other Basin Plan amendments); modification in toxicity requirements; violation of any term or condition in this Order; and/or minor modifications to correct typographical errors or require more frequent monitoring or reporting by a Permittee.

# XIII. RATIONALE FOR MONITORING AND REPORTING REQUIREMENTS

40 CFR section 122.48 requires that all NPDES permits specify requirements for recording and reporting monitoring results. California Water Code sections 13267 and 13383 authorizes the Regional Water Board to require technical and monitoring reports. The MRP (Attachment E of this Order) establishes monitoring and reporting requirements to implement federal and state requirements. The following provides the rationale for the monitoring and reporting requirements contained in the MRP for this Order.

#### A. Integrated Monitoring Plans

#### 1. Integrated Monitoring Program and Coordinated Integrated Monitoring Program

As discussed in Part VI.B of this Fact Sheet, the purpose of the Watershed Management Programs is to provide a framework for Permittees to implement the requirements of this Order in an integrated and collaborative fashion and to address water quality priorities on a watershed scale. Additionally, the Watershed Management Programs are to be designed to ensure that discharges from the Los Angeles County MS4: (i) achieve applicable water quality based effluent limitations that implement TMDLs, (ii) do not cause or contribute to exceedances of receiving water limitations, and (iii) for non-storm water discharges from the MS4, are not a source of pollutants to receiving waters. This Order provides options for each Permittee to develop and implement an Integrated Monitoring Program (IMP), or alternatively, individual Permittee(s) may cooperate with other Permittees to develop a Coordinated Integrated Monitoring Program (CIMP). Both the IMP and CIMP are intended to facilitate the effective and collaborative monitoring of receiving waters, storm water, and non-storm water discharges and to report the results of monitoring to the Regional Water Board.

The key requirements for Watershed Management Programs are included in Part VI.C of this Order. The IMP and CIMP requirements within the MRP largely summarize the requirements and reinforce that, at a minimum, the IMP or CIMP must address all TMDL and Non-TMDL monitoring requirements of this Order, including receiving water monitoring, storm water outfall based monitoring, non-storm water outfall based monitoring, and regional water monitoring studies.

Both the IMP and CIMP approach provides opportunities to increase the cost efficiency and effectiveness of the Permittees monitoring program as monitoring can be designed, prioritized and implemented on a watershed basis. The IMP/CIMP approach allows the Permittees to prioritize monitoring resources between watersheds based on TMDL Implementation and Monitoring Plan schedules, coordinate outfall based monitoring programs and implement regional studies. Cost savings can also occur when Permittees coordinate their monitoring programs with other Permittees.

#### B. TMDL Monitoring Plans

Monitoring requirements established in TMDL Monitoring Plans, presented in Table E-1. Approved TMDL Monitoring Plans by Watershed Management Area, were approved by the Executive Officer of the Regional Water Board prior to the effective date of this Order are incorporated into this Order by reference.

#### C. Receiving Water Monitoring

The purposes of receiving water monitoring are to measure the effects of storm water and non-storm water discharges from the MS4 to the receiving water, to identify water quality exceedances, to evaluate compliance with TMDL WLAs and receiving water limitations, and to evaluate whether water quality is improving, staying the same or declining.

#### 1. Receiving Water Monitoring Stations

Receiving water monitoring is linked to outfall based monitoring in order to gauge the effects of MS4 discharges on receiving water. Receiving water monitoring stations must be downstream of linked outfall monitoring stations.

The IMP, CIMP or stand-alone receiving monitoring plan (in the case of jurisdictional monitoring) must include a map identifying proposed wet weather and dry-weather monitoring stations. Receiving water monitoring stations may include historical mass emission stations, TMDL compliance monitoring stations, or other selected stations. The Permittee must describe how monitoring at the proposed locations will accurately characterize the effects of the discharges from the MS4 on the receiving water, and meet other stated objectives. The plan must also state whether historical mass emission stations will continue to be monitored and describe the value of past receiving water monitoring data in performing trends analysis to assess whether water quality if improving, staying the same or declining.

# 2. Minimum Monitoring Requirements

Receiving water is to be monitored during both dry and wet weather conditions to assess the impact of non-storm water and storm water discharges. Wet weather and dry weather are defined in each watershed, consistent with the definitions in TMDLs approved within the watershed. Monitoring is to commence within 6 hours of the commencement of linked outfall monitoring. At a minimum, the parameters to be monitored and the monitoring frequency are the same as those required for the linked outfalls.

# D. Outfall Based Monitoring

The MRP requires Permittees to conduct outfall monitoring, linked with receiving water monitoring, a study of Pyrethroids and their effects in receiving waters and bioassessment. The MRP allows the Permittees flexibility to integrate the minimum requirements of this Order, applicable TMDL monitoring plans and other regional monitoring obligations into a single IMP or within a CIMP.

Per Part VI.A.2 of this Order, the Permittee must establish a storm drain system map to aid in the development of the outfall monitoring plan and to assist the Regional Water Board in reviewing the logic and adequacy of the number and location of outfalls selected for monitoring. The map must include the storm drain network, receiving waters, other surface waters that may impact hydrology, including dams and dry weather diversions. In addition, the map must identify the location and identifying code for each major outfall within the Permittee's jurisdiction. The map must include overlays including jurisdictional boundaries, subwatershed boundaries and storm drain outfall catchment boundaries. The map must distinguish between storm drain catchment drainage areas and subwatershed drainage areas, as these may differ. In addition, the map must include overlays displaying land use, impervious area and effective impervious area (if available). To the extent known, outfalls that convey significant non-stormwater discharges (see Part I.F to this Fact Sheet), must also be identified on the map, and the map must be updated annually to include the total list of known outfalls conveying significant flow of non-storm water discharge.

#### E. Storm Water Outfall Based Monitoring

The purpose of the outfall monitoring plan is to characterize the storm water discharges from each Permittee's drainages within each subwatershed. Outfall based monitoring is also conducted to assess compliance with WQBELs. Under an IMP approach, each Permittee must identify at least one outfall within each subwatershed (HUC 12) within its jurisdictional boundary to monitor storm water discharges. The selected outfall(s) should receive drainage from an area representative of the land uses within the portion of its jurisdiction that drains to the subwatershed, and not be unduly influenced by storm water discharges from upstream jurisdictions or other NPDES discharges. It is assumed that storm water runoff quality will be similar for similar land use areas, and therefore runoff from a representative area will provide sufficient characterization of the entire drainage area. Factors that may impact storm water runoff quality include the

land use (industrial, residential, commercial) and the control measures that are applied. Factors that may impact storm water runoff volume include percent effective impervious cover (connected to the storm drain system), vegetation type, soil compaction and soil permeability.

Storm water outfall monitoring is linked to receiving water monitoring (see above). Monitoring must be conducted at least three times per year during qualifying rain events, including the first rain event of the year and conducted approximately concurrently (within 6 hours) before the commencement of the downstream receiving water monitoring.

Monitoring is conducted for pollutants of concern including all pollutants with assigned WQBELs. Parameters to be monitored during wet weather include: flow, pollutants subject to a TMDL applicable to the receiving water, pollutants listed on the Clean Water Act Section 303(d) list for the receiving water or a downstream receiving water. Flow is necessary to calculate pollutant loading. Sampling requirements, including methods for collecting flow-weighted composite samples, are consistent with the Ventura County Monitoring program (Order No. C17388).

For water bodies listed on the Clean Water Act section 303(d) list as being impaired due to sedimentation, siltation or turbidity, total suspended solids (TSS) and suspended sediment concentration (SSC) must be analyzed. TSS is the parameter most often required in NPDES permits to measure suspended solids. However, studies conducted by the United States Geological Survey (USGS) have found that the TSS procedure may not capture the full range of sediment particle sizes contributing to sediment impairments. Therefore both TSS and SSC are required in this Order.

For freshwater, the following field measurements are also required: hardness, pH, dissolved oxygen, temperature, and specific conductivity. Hardness, pH and temperature are parameters impacting the effect of pollutants in freshwater (i.e., metals water quality standards are dependent on hardness, ammonia toxicity is dependent on pH and temperature. Temperature and dissolved oxygen are interdependent and fundamental to supporting aquatic life beneficial uses. Specific conductivity is a parameter important to assessing potential threats to MUN and freshwater aquatic life beneficial uses.

Aquatic toxicity monitoring is required in the receiving water twice per year during wet weather conditions. Aquatic toxicity is a direct measure of toxicity and integrates the effects of multiple synergistic effects of known and unidentified pollutants. When samples are found to be toxic, a Toxicity Identification Evaluation must be performed in an attempt to identify the pollutants causing toxicity. Aquatic toxicity is required to be monitored in the receiving water twice per year during wet-weather rather than three times per year due to the expense of the procedure.

The monitoring data is to be accompanied by rainfall data and hydrographs, and a narrative description of the storm event, consistent with the requirements in the Ventura County MS4 (Monitoring Program—No. CI 7388). This information will allow the

Permittee and the Regional Water Board staff to evaluate the effects of differing storm events in terms of storm water runoff volume and duration and in-stream effects.

# F. Non-Stormwater Outfall-Based Screening and Monitoring Program

The non-storm water outfall screening and monitoring program is intended to build off of Permittees prior efforts under Order No. 01-182 to screen all outfalls within their MS4 to identify illicit connections and discharges. Under this Order, the Permittees will use the following step-wise method to assess non-storm water discharges.

- Develop criteria or other means to ensure that all outfalls with significant non-storm water discharges are identified and assessed during the term of this Order.
- For outfalls determined to have significant non-storm water flow, determine whether flows are the result of illicit connections/illicit discharges (IC/IDs), authorized or conditionally exempt non-storm water flows, or from unknown sources.
- Refer information related to identified IC/IDs to the IC/ID Elimination Program (Part VI.D.9 of this Order) for appropriate action.
- Based on existing screening or monitoring data or other institutional knowledge, assess the impact of non-storm water discharges (other than identified IC/IDs) on the receiving water.
- Prioritize monitoring of outfalls considering the potential threat to the receiving water and applicable TMDL compliance schedules.
- Conduct monitoring or assess existing monitoring data to determine the impact of non-storm water discharges on the receiving water.
- Conduct monitoring or other investigations to identify the source of pollutants in nonstorm water discharges.
- Use results of the screening process to evaluate the conditionally exempt non-storm water discharges identified in Part III.A.2 and III.A.3 in this Order and take appropriate actions pursuant to Part III.A.4.d of this Order for those discharges that have been found to be a source of pollutants. Any future reclassification shall occur per the conditions in Parts III.A.2 or III.A.6 of this Order.

The screening and monitoring program is intended to maximize the use of Permittee resources by integrating the screening and monitoring process into existing or planned IMP/CIMP efforts. It is also intended to rely on the illicit discharge source investigation and elimination requirements in Part VI.D.9 of this Order and the MS4 Mapping requirements in Part VII.A of the MRP.

The screening and source identification component of the program is used to identify the source(s) and point(s) of origin of the non-storm water discharge. The Permittee is required to develop a source identification schedule based on the prioritized list of outfalls exhibiting significant non-storm water discharges. The schedule shall ensure that source investigations are to be conducted for no less than 25% of the outfalls in the inventory within three years of the effective date of this Order and 100% of the outfalls

within 5 years of the effective date of this Order. This will ensure that all outfalls with significant non-storm water discharges will be assessed within the term of this Order.

Additional requirements have been included to require the Permittee to develop a map and database of all outfalls with known non-storm water discharges. The database and map are to be updated throughout the term of this Order. If the source of the non-storm water discharge is determined to be an NPDES permitted discharge, a discharge subject to a Record of Decision approved by USEPA pursuant to section 121 of CERCLA, a conditionally exempt essential non-storm water discharge, or entirely comprised of natural flows as defined at Part III.A.d of this Order, the Permittee need only document the source and report to the Regional Water Board within 30 days of determination and in the next annual report. Likewise, if the discharge is determined to originate in an upstream jurisdiction, the Permittee is to provide notice and all characterization data to the upstream jurisdiction within 30 days of determination.

However, if the source is either unknown or a conditionally exempt non-essential nonstorm water discharge, each Permittee shall conduct monitoring required in Part IX.F of the MRP. Special provisions are also provided if the discharge is found to result from multiple sources.

The parameters to be monitored include flow rate, pollutants assigned a WQBEL or receiving water limitation to implement TMDL provisions for the respective receiving water, as identified in Attachments L - R of this Order, non-storm water action levels as identified in Attachment G of this Order, and CWA Section 303(d) listed pollutants for the respective receiving water. Aquatic Toxicity required only when receiving water monitoring indicates aquatic toxicity.

In an effort to provide flexibility and allow the Permittee to prioritize its monitoring efforts, the outfall based monitoring can be integrated within an IMP/CIMP. For outfalls subject to a dry weather TMDL, monitoring frequency is established per the approved TMDL Monitoring Program.

Unless specified in an approved IMP/CIMP, outfalls not subject to dry weather TMDLs must be monitored at least four times during the first year of monitoring. Due to the expense, Aquatic Toxicity monitoring is only required twice per year. The four times per year monitoring is reflective of the potential for high variability in the quality and volume of non-storm water discharges and duration as opposed to storm water discharges.

Collected monitoring data is to be compared against applicable receiving water limitations, water quality based effluent limitations, non-storm water action levels, or exhibited Aquatic Toxicity as defined in the Parts XII.F and G of the MRP and all exceedances are to be reported in the Integrated Monitoring Compliance Report required in Part XIX.A.5 of the MRP.

After the first year, monitoring for specific pollutants may be reduced to once per year, if the values reported in the first year do not exceed applicable non-storm water WQBELs, non-storm water action levels, or a water quality standard applicable to the receiving water.

After two years of monitoring, the Permittee may submit a written request to the Executive Officer of the Regional Water Board requesting to eliminate monitoring for specific pollutants based on an analysis demonstrating that there is no reasonable potential for the pollutant to exist in the discharge at a concentration exceeding applicable water quality standards.

# 1. Dry Weather Screening Monitoring

#### a. Background

Clean Water Act section 402(p) regulates discharges from municipal separate storm sewer systems (MS4s). Clean Water Act section 402(p)(3)(B)(ii) requires the Permittees to effectively prohibit non-storm water from entering the MS4.

Non-exempted, non-storm water discharges are to be effectively prohibited from entering the MS4 or become subject to another NPDES permit (55 Fed. Reg. 47990, 47995 (Nov.16, 1990)). Conveyances which continue to accept non-exempt, non-storm water discharges do not meet the definition of MS4 and are not subject to Clean Water Act section 402(p)(3)(B) unless the discharges are issued separate NPDES permits. Instead, conveyances that continue to accept non-exempt, non-storm water discharges that do not have a separate NPDES permit are subject to sections 301 and 402 of the CWA (55 Fed. Reg. 47990, 48037 (Nov. 16, 1990)).

In part, to implement these statutory provisions, Order No. 01-182 included nonstorm water discharge prohibitions. Several categories of non-storm water discharges are specifically identified as authorized or conditionally exempt nonstorm water discharges, including:

- i. Discharges covered under an NPDES permit
- ii. Discharges authorized by USEPA under CERCLA
- iii.Discharges resulting from natural flows
- iv.Discharges from emergency fire fighting activity
- v. Some Categories of Discharges incidental to urban activities

Further, as another mechanism to effectively prohibit non-storm water discharges into the MS4, Order No. 01-182 also requires the Los Angeles County MS4 Co-Permittees to implement an illicit connections and illicit discharges elimination program as part of their storm water management program pursuant to 40 CFR section 122.26(d)(2)(iv)(B).

Finally, Monitoring and Reporting Program CI 6948, a part of Order No. 01-182, required dry weather monitoring at the Mass Emissions Stations (MES) to estimate pollutant contributions and determine if the MS4 is contributing to exceedances of applicable water quality standards during dry weather.

# b. Evaluation of Dry Weather Data

40 CFR section 122.44(d)(1)(i) mandates that permits include effluent limitations for all pollutants that are or may be discharged at levels that have the reasonable potential to cause or contribute to an exceedance of a water quality standard. The process for determining reasonable potential and calculating WQBELs when necessary is intended to protect the designated uses of the receiving water as specified in the Basin Plan, and achieve applicable water quality objectives and criteria that are contained in the Basin Plan and other state plans and policies, or any applicable water quality criteria contained in the California Toxics Rule (CTR) and National Toxics Rule (NTR).

In an effort to evaluate the Discharger's program to effectively prohibit non-storm water discharges into the MS4, as well as to determine whether MS4 discharges are potentially contributing to exceedances of water quality standards, the Reasonable Potential Analysis (RPA) process was used as a screening tool. In doing so, dry weather monitoring data submitted by the Discharger was evaluated to identify where non-storm water discharges may impact beneficial uses and where additional monitoring and/or investigations of non-storm water discharges should be focused.

Order No. 01-182 and Monitoring and Reporting Program No. 6948 required the Discharger to implement core monitoring at seven mass emission stations:

- Ballona Creek
- Malibu Creek
- Los Angeles River
- San Gabriel River (representing the upper portion of the San Gabriel River Watershed Management Area)
- Coyote Creek (representing the lower portion of the San Gabriel River Watershed Management Area)
- Dominguez Channel
- Santa Clara River

In addition to wet weather monitoring requirements at each of the mass emission stations, a minimum of two dry weather samples were required each year. Monitoring was required for conventional pollutants (BOD, TSS, pH, fecal coliform, oil and grease), priority pollutants, and a variety of other nonconventional pollutants (e.g., nutrients, dissolved oxygen, salinity/conductivity).

Dry weather monitoring data were compiled from Annual Stormwater Monitoring Reports submitted by the Los Angeles County Department of Public Works for the period from 2005 to 2011 to reflect the most recent data. The Annual Stormwater Monitoring Reports include the results for dry weather samples that were collected from 2005 to 2011 on 15 different dates. For each monitored parameter, the most stringent applicable water quality objective/criterion was identified from the Basin Plan and the CTR at 40 CFR section 131.38. The following assumptions were made when conducting the analysis:

- The mass emissions stations represented only freshwater segments. Accordingly, CTR criteria for the protection of freshwater aquatic life were selected for comparison to monitoring results.
- For hardness-dependent metals, criteria were derived by using the lowest reported dry-weather hardness value for each mass emission station for the period of 2005 to 2011.
- For screening purposes the criteria associated with the most protective beneficial use for any segment within the watershed was selected for comparison to monitoring results.
- Basin Plan surface water quality objectives for minerals (i.e., total dissolved solids, sulfate, and chloride) apply to specific stream reaches within each watershed and are provided in Chapter 3 of the Basin Plan. Where no specific objectives are identified, footnote f to Table 3-8 provides guidelines for protection of various beneficial uses. When guidelines were presented as a range, the most protective (low end of range) value was selected and applied according to beneficial uses in the watershed.
- With the exception of bacteria, the water quality objectives used for the analysis are the most current in effect. Since adoption of Order No. 01-182 in 2001, some Basin Plan objectives and CTR criteria have been amended. As a result, the pollutants monitored under the MRP for Order No. 01-182 may not necessarily reflect current objectives.
- E coli bacteria was not required as part of the MRP to Order No. 01-182, thus screening for bacteria was based solely on fecal coliform. Monitoring results for fecal coliform were compared to the Basin Plan fecal coliform objective in effect during the monitoring period. The Basin Plan objective for bacteria was amended in December 2011 to omit fecal coliform as a fresh water objective. The existing numeric bacteria objectives are expressed as a single sample maximum and a geometric mean. In this screening, limited data precluded calculation of geometric means, therefore, the geometric mean objective was treated as a "not-to-exceed" criterion for screening purposes. The geometric mean objective to protect primary contact recreation beneficial use (REC-1) uses in freshwaters).
- Within a given watershed, where the Basin Plan designates a "Potential" beneficial use of MUN, drinking water maximum contaminant levels (MCLs) were not applied as the most stringent objectives. Within a given watershed, where the Basin Plan designates "Potential" or "Intermittent" for beneficial uses other than MUN, the appropriate protective objectives were used for screening. This is consistent with Basin Plan requirements and existing permitting procedures.

The maximum reported pollutant concentration was compared to the most stringent applicable water quality objective to determine if there was potential for receiving water concentrations to exceed water quality objectives.

Table F-10 summarizes the results of the RPA analysis based on evaluation of the 15 sets of data for the period of 2005 to 2011 for each of the mass emission stations. Generally, all priority pollutant organic parameters were reported as below detection levels at practical quantitation levels (PQLs) consistent with the minimum levels (MLs) listed in the SIP. The most prevalent pollutants of concern among the mass emission stations include fecal coliform bacteria, cyanide, mercury, chloride, sulfate, total dissolved solids, copper, and selenium. Reported fecal coliform bacteria, cyanide, copper, and selenium concentrations appear to consistently exceed objectives/criteria in all watersheds at relatively high levels. For watersheds where objectives apply for sulfate and total dissolved solids, the receiving water concentrations consistently exceeded the objectives. The incidences where exceedances are indicated for mercury are largely due to analytical detection levels that were higher than the applicable criterion.

Doromotor	Santa Clara	Los Angeles	Dominguez	Ballana Creak	Maliku Creak	San Gabriel River

Table F-10.Summary of LA County Watersheds and Frequency of Receiving WaterExceeding Criteria - 2005 to 2011- Dry Season Data Analysis¹

- ^{1.} Frequency of exceedance is denoted as number of exceedances/number of dry weather samples evaluated. For example, "2/15" indicates 2 of the 15 samples had analytical results that exceeded the water quality objective for a given parameter.
- ^{2.} The Basin Plan objective for turbidity for the protection of MUN is the secondary MCL of 5 NTU. The Basin Plan contains additional turbidity objectives expressed as incremental changes over natural conditions. Since inadequate data were available to assess criteria expressed as incremental changes, only the MCL was considered in the analysis.

#### c. Requirements for Controlling Non-Storm Water Discharges

The USEPA's approach for non-storm water discharges from MS4s is to regulate these discharges under the existing CWA section 402 NPDES framework for discharges to surface waters. The NPDES program (40 CFR section 122.44(d)) utilizes discharge prohibitions and effluent limitations as regulatory mechanisms to regulate non-storm water discharges, including the use of technology- and water quality-based effluent limitations. Non-numerical controls, such as BMPs for non-storm water discharges may only be authorized where numerical effluent limitations are infeasible.

As described in Table F-10 above, there were a number of pollutants for which it was determined that receiving water concentrations at the mass emission stations indicate possible exceedances of water quality standards within the watershed. However, for waterbody-pollutant combinations not subject to a TMDL, there is uncertainty regarding whether exceedances occurred within specific segments where standards apply; the extent to which non-storm water discharges from the MS4 have caused or contributed to any exceedances; and whether the exceedances are attributable to any one or more specific MS4 outfalls within the watershed management area.

Given the need for additional data on non-stormwater discharges from the MS4 where a TMDL has not been developed, USEPA and the State have used action levels as a means to gauge potential impact to water quality and to identify the potential need for additional controls for non-stormwater discharges in the future. If these action levels are exceeded, then additional requirements (e.g., numeric effluent limitations, increased monitoring, special studies, additional BMPs) are typically used to address the potential impacts. In this case, non-storm water action levels are applicable to non-storm water discharges from that MS4 outfall. Non-storm water discharges from the MS4 are those which occur during dry weather conditions. These action levels are not applied to storm water discharges, as defined within this Order. Storm water discharges regulated by this Order are required to meet the MEP standard and other provisions determined necessary by the State to control pollutants and have separate requirements under this Order.

The use of action levels in this Order does not restrict the Regional Water Boards ability to modify this Order in accordance with 40 CFR section 122.62 to include numeric effluent limitations should monitoring data indicate that controls beyond action levels are necessary to ensure that non-storm water discharges do not cause or contribute to exceedances of water quality standards.

# i. Approach for Deriving Action Levels

Where exceedances are indicated in Table F-10 and where a TMDL has not been developed, action levels are applied as a screening tool to indicate where non-storm water discharges, including exempted flows and illicit connections may be causing or contributing to exceedances of water quality objectives. Action levels in this Order are based upon numeric or narrative water quality objectives and criteria as defined in the Basin Plan, the Water Quality Control Plan for Ocean Waters of California (Ocean Plan), and the CTR.

# (1) Discharges to Inland Surface Waters, Enclosed Bays, and Estuaries

# Priority Pollutants Subject to the CTR

Priority pollutant water quality criteria in the CTR are applicable to all inland surface waters, enclosed bays, and estuaries. The CTR contains both saltwater and freshwater criteria. Because a distinct separation generally does not exist between freshwater and saltwater aquatic communities, the following apply, in accordance with Section 131.38(c)(3):

- For waters in which the salinity is equal to or less than 1 part per thousand (ppt), the freshwater criteria apply.
- For waters in which the salinity is greater than 10 ppt 95 percent or more of the time, the saltwater criteria apply.
- For waters in which the salinity is between 1 ppt and 10 ppt, the more stringent of the freshwater or saltwater criteria apply.

For continuous discharges, 40 CFR section 122.45(d)(1) specifies daily maximum and average monthly effluent limitations. Because of the uncertainty regarding the frequency of occurrence and duration of nonstorm water discharges through the MS4, average monthly action levels (AMALs) and maximum daily action levels (MDALs) were calculated following the procedure based on the steady-state model, available in Section 1.4 of the SIP. The SIP procedures were used to calculate action levels for CTR priority pollutants and other constituents for which the Basin Plan contains numeric objectives.

Since many of the streams in the Region have minimal upstream flows, mixing zones and dilution credits are usually not appropriate. Therefore, in this Order, no dilution credit is being allowed.

40 CFR section 122.45(c) requires that effluent limitations for metals be expressed as total recoverable concentration; therefore it is appropriate to include action levels also as a total recoverable concentration. The SIP requires that if it is necessary to express a dissolved metal value as a total recoverable and a site-specific translator has not yet been developed, the

Regional Water Board shall use the applicable conversion factor contained in the 40 CFR section 131.38.

Using nickel as an example, and assuming application of saltwater criteria (e.g., a situation where an MS4 outfall discharges to an estuary), the following demonstrates how action levels were established for this Order. The tables in Attachment H provide the action levels for each watershed management area addressed by this Order using the process described below.

The process for developing these limits is in accordance with Section 1.4 of the SIP. Two sets of AMAL and MDAL values are calculated separately, one set for the protection of aquatic life and the other for the protection of human health (consumption of organisms only). The AMALs and MDALs for aquatic life and human health are compared, and the most restrictive AMAL and the most restrictive MDAL are selected as the action level.

**Step 1:** For each constituent requiring an action level, identify the applicable water quality criteria or objective. For each criterion, determine the effluent concentration allowance (ECA) using the following steady state mass balance equation:

ECA = C + D(C-B) when C > B, and ECA = C when  $C \le B$ ,

Where:

- C = The priority pollutant criterion/objective, adjusted if necessary for hardness, pH and translators (criteria for saltwater are independent of hardness and pH).
- D = The dilution credit, and
- B = The ambient background concentration

As discussed above, for this Order, dilution was not allowed; therefore:

ECA = C

For nickel the applicable ECAs are:

 $ECA_{acute} = 75 \, \mu g/L$ 

ECA_{chronic}=  $8.3 \,\mu$ g/L

**Step 2:** For each ECA based on aquatic life criterion/objective, determine the long-term average discharge condition (LTA) by multiplying the ECA by a factor (multiplier). The multiplier is a statistically based factor that adjusts the ECA to account for effluent variability. The value of the

Los Angeles County Municipal Separate Storm Sewer System ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

multiplier varies depending on the coefficient of variation (CV) of the data set and whether it is an acute or chronic criterion/objective. Table 1 of the SIP provides pre-calculated values for the multipliers based on the value of the CV. Equations to develop the multipliers in place of using values in the tables are provided in Section 1.4, Step 3 of the SIP and will not be repeated here.

LTA_{acute} = ECA_{acute} x Multiplier_{acute 99}

LTA_{chronic}= ECA_{chronic} x Multiplier_{chronic 99}

The CV for the data set must be determined before the multipliers can be selected and will vary depending on the number of samples and the standard deviation of a data set. If the data set is less than 10 samples, or at least 80% of the samples in the data set are reported as non-detect, the CV shall be set equal to 0.6. For nickel, a CV of 0.6 was assumed.

For nickel, the following data were used to develop the acute and chronic LTA using equations provided in Section 1.4, Step 3 of the SIP (Table 1 of the SIP also provides this data up to three decimals):

CV	ECA Multiplier _{acute}	ECA Multiplier _{chronic}
0.6	0.32	0.53

 $LTA_{acute} = 75 \ \mu g/L \ x \ 0.32 = 24 \ \mu g/L$ 

 $LTA_{chronic} = 8.3 \ \mu g/L \ x \ 0.53 = 4.4 \ \mu g/L$ 

Step 3: Select the most limiting (lowest) of the LTA.

LTA = most limiting of LTA_{acute} or LTA_{chronic}

For nickel, the most limiting LTA was the LTA_{chronic}

 $LTA_{nickel} = LTA_{chronic} = 4.4 \ \mu g/L$ 

**Step 4:** Calculate the action levels by multiplying the LTA by a factor (multiplier). Action levels are expressed as AMAL and MDAL. The multiplier is a statistically based factor that adjusts the LTA for the averaging periods and exceedance frequencies of the criteria/objectives and the action levels. The value of the multiplier varies depending on the probability basis, the CV of the data set, the number of samples (for AMAL) and whether it is a monthly or daily limit. Table 2 of the SIP provides pre-calculated values for the multipliers based on the value of the CV and the number of samples. Equations to develop the multipliers in place of using values in the tables are provided in Section 1.4, Step 5 of the SIP and will not be repeated here.

AMAL_{aquatic life} = LTA x AMAL_{multiplier 95}

MDAL_{aquatic life} = LTA x MDAL_{multiplier 99}

AMAL multipliers are based on a 95th percentile occurrence probability, and the MDAL multipliers are based on the 99th percentile occurrence probability. If the number of samples is less than four (4), the default number of samples to be used is four (4).

For nickel, the following data were used to develop the AMAL and MDAL for action levels using equations provided in Section 1.4, Step 5 of the SIP (Table 2 of the SIP also provides this data up to two decimals):

No. of Samples Per Month	CV	Multiplier _{MDAL 99}	Multiplier _{AMAL 95}
4	0.6	3.11	1.55

Therefore:

 $AMAL = 4.4 \ \mu g/L \ x \ 1.55 = 6.8 \ \mu g/L$ 

MDAL=  $4.4 \ \mu g/L \ x \ 3.11 = 14 \ \mu g/L$ 

**Step 5:** For the ECA based on human health, set the AMAL equal to the ECA_{human health}

AMAL_{human health} = ECA_{human health}

For nickel:

 $AMAL_{human health} = 4,600 \ \mu g/L$ 

**Step 6:** Calculate the MDAL for human health by multiplying the AMAL by the ratio of the Multiplier_{MDAL} to the Multiplier_{AMAL}. Table 2 of the SIP provides pre-calculated ratios to be used in this calculation based on the CV and the number of samples.

 $MDAL_{human health} = AMAL_{human health} \times (Multiplier_{MDAL} / Multiplier_{AMAL})$ 

For nickel, the following data were used to develop the MDAL_{human health}:

No. of Samples Per Month	CV	Multiplier _{MDAL 99}	Multiplier _{AMAL 95}	Ratio
4	0.6	3.11	1.55	2.0

For nickel:

MDAL_{human health}= 4,600  $\mu$ g/L x 2 = 9,200  $\mu$ g/L

**Step 7:** Select the lower of the AMAL and MDAL based on aquatic life and human health as the non-storm water action level for this Order.

AMAL _{aquatic life}	MDAL _{aquatic life}	AMAL _{human health}	MDAL _{human health}
6.8	14	4,600	9,200

For nickel, the lowest (most restrictive) levels are based on aquatic toxicity and serve as the basis for non-storm water action levels included in this Order.

# Basin Plan Requirements for Other Pollutants

A number of pollutants were identified that exceed applicable Basin Plan objectives. These objectives however, are not amenable to the SIP process for developing action levels.

Resolution No. 01-018, Amendment to the Water Quality Control Plan for the Los Angeles Region to Update the Bacteria Objectives for Water Bodies Designated for Water Contact Recreation, adopted by the Regional Water Board on October 25, 2001, served as the basis for the action levels for bacteria. Subsequently, the Basin Plan was amended through Order No. R10-005 (effective on December 5, 2011) to remove the freshwater fecal coliform numeric objective while retaining the freshwater objective for *E. coli*. The dry-weather evaluation conducted for fecal coliform indicates of a need for a bacteria action level. Since the Basin Plan no longer contains freshwater objectives for fecal coliform, action levels have been developed for *E. coli* in freshwater. The current bacteria objectives (saltwater and freshwater) are applied directly to the MS4 outfalls discharging to freshwaters to serve as action levels.

The Basin Plan, in Tables 3-5 through 3-7, include chemical constituents objectives based on the incorporation of Title 22, Drinking Water Standards, by reference, to protect the surface water MUN beneficial use. The Basin Plan in Tables 3-8 and 3-10 also includes mineral quality objectives that apply to specific watersheds and stream reaches and where indicated by the beneficial use of ground water recharge (GWR). These objectives contained in the Basin Plan are listed as not-to-exceed values. Consistent with the approach used by the Regional Water Board

in other Orders for dry weather discharges, these not-to-exceed values will be applied as AMALs in this Order.

# (2) Discharges to the Surf Zone

From the Table B water quality objectives of the Ocean Plan, action levels are calculated according to Equation 1 of the Ocean Plan for all pollutants:

Ce = Co + Dm(Co-Cs)

Where:

- Ce = the Action Level  $(\mu g/L)$
- Co = the water quality objective to be met at the completion of initial dilution ( $\mu$ g/L)
- $Cs = background seawater concentration (\mu g/L)$
- Dm = minimum probable initial dilution expressed as parts seawater per part wastewater

The Dm is based on observed waste flow characteristics, receiving water density structure, and the assumption that no currents of sufficient strength to influence the initial dilution process flow across the discharge structure. Initial dilution is the process that results in the rapid and irreversible turbulent mixing of wastewater with ocean water around the point of discharge. It is conservatively assumed that when non-storm water discharges to the surf zone occur, that conditions are such that no rapid mixing would occur. Therefore, an initial dilution is not allowed and the formula above reduces to:

Ce = Co

The following demonstrates how the action levels for copper are established.

Copper

Ce =  $3 \mu g/L$  (6-Month Median) Ce =  $12 \mu g/L$  (Daily Maximum) Ce =  $30 \mu g/L$  (Instantaneous Maximum)

#### ii. Applicability of Action Levels

The action levels included in this Order apply to pollutants in non-storm water discharges from the MS4 to receiving waters that are not already subject to WQBELs to implement TMDL wasteload allocations applicable during dry weather.

This Order requires outfall-based monitoring throughout each Watershed Management Area, including monitoring during dry weather. The dry weather

monitoring data will be evaluated by the Permittee(s) in comparison to all applicable action levels.

# iii. Requirements When Action Levels are Exceeded

When monitoring data indicates an action level is exceeded for one or more pollutants, then the Permittee will be required to implement actions to identify the source of the non-storm water discharge, and depending on the identified source, implement an appropriate response. With respect to action levels, the Permittee will have identified appropriate procedures within the Watershed Management Program (Part VI.C) and the Illicit Connection and Illicit Discharge Elimination Program (Part VI.D.9).

#### G. New Development/Re-Development Effectiveness Monitoring

This Order requires the use of Low Impact Development (LID) designs to reduce storm water runoff (and pollutant discharges) from new development or re-development projects. In areas that drain to water bodies that have been armored or are not natural drainages, the goal of this requirement is to protect water quality by retaining on-site the storm water runoff from the 85th percentile storm event. This is the design storm used throughout most of California for water quality protection. If it is not technically feasible due to site constraints (e.g., close proximity to a drinking water supply, slope instability) or if instead the project proponent is proposing to supplement a groundwater replenishment project, the project proponent may provide treatment BMPs to reduce pollutant loading in storm water runoff from the project site. Flow through treatment BMPs are less effective in reducing pollutant loadings than on-site retention for the design storm. Therefore the project proponent must mitigate the impacts further by providing for LID designs at retrofit projects or other off-site locations within the same subwatershed. The effectiveness monitoring is designed to assess and track whether post construction operation of the LID designs are effective in retaining the design storm runoff volume.

For projects located in natural drainages, the goal of the LID design is to retain the predevelopment hydrology, unless a water body is not susceptible to hydromodification effects (e.g., estuaries or the ocean). Smaller projects that will disturb less than 50 acres of land are presumed to meet the criteria if the project retains the storm water runoff from the 95th percentile storm. The effectiveness monitoring in this situation should be design to confirm that storm water runoff is not occurring for any storm at or less than the 95th percentile storm. Projects may also demonstrate compliance by showing that the erosion potential will be approximately 1 as described in Attachment J of this Order. For larger projects, the project proponent may be required to conduct modeling to demonstrate compliance by comparing the hydrographs of a two-year storm for the pre-development and post-development conditions, or by comparing the flow duration curves for a reference watershed and the post project condition. Flow monitoring will be required to substantiate the simulated hydrographs or flow duration curves.

### H. Regional Studies

### 1. Pyrethroid Insecticides Study Requirements

In addition to routine monitoring, this Order requires the Permittees to conduct regional studies of Pyrethroid toxicity¹ in receiving waters as Pyrethroid toxicity has become an emerging issue in urban drainages. The Pyrethroid Toxicity monitoring program required in this Order is based on the Ventura County MS4 Monitoring and Reporting Plan.

The results of the receiving water monitoring, Pyrethroid Study and bioassessment surveys may be used in to optimize Watershed Management Program actions, as described in Part VI.C. of this Order (Watershed Management Programs).

### 2. Southern California Stormwater Monitoring Coalition Watershed Monitoring Program

Also, as a condition to this Order, Permittees must participate in the bioassessment studies conducted under the Southern California Stormwater Monitoring Coalition Watershed Monitoring Program. Bioassessment provides a direct measure of whether aquatic life beneficial uses are fully supported and integrates the effects of multiple factors including pollutant discharges, changes in hydrology, geomorphology, and riparian buffers.

### I. Aquatic Toxicity Monitoring Methods

Based on the stated goals of the CWA, the USEPA and individual states implement three approaches to monitoring water quality. These approaches include chemicalspecific monitoring, toxicity testing, and bioassessments (USEPA 1991a). Each of the three approaches has distinct advantages and all three work together to ensure that the physical, chemical and biological integrity of our waters are protected. Water quality objectives have been developed for only a limited universe of chemicals. For mixtures of chemicals with unknown interactions or for chemicals having no chemical-specific objectives, the sole use of chemical-specific objectives to safeguard aquatic resources would not ensure adequate protection. Aquatic life in southern California coastal watersheds are often exposed to nearly 100% effluent from wastewater treatment plants, urban runoff, or storm water; therefore, toxicity testing and bioassessments are also critical components for monitoring programs as they offer a more direct and thorough confirmation of biological impacts. The primary advantage of using the toxicity testing approach is that this tool can be used to assess toxic effects (acute and chronic) of all the chemicals in aqueous samples of effluent, receiving water, or storm water. This allows the cumulative effect of the aqueous mixture to be evaluated, rather than

the toxic responses to individual chemicals (USEPA, EPA Regions 8, 9, and 10 Toxicity Training Tool, January 2010).

Based on available data from the LA County MS4 Permit Annual Monitoring Reports, samples collected at mass emissions stations during both wet weather and dry weather have been found to be toxic in the San Gabriel River, Coyote Creek, the Los Angeles River, Dominguez Channel, Ballona Creek, Malibu Creek, and the Santa Clara River, demonstrating the need for this toxicity monitoring requirement (see Table below).

toxicity

This Order requires Permittee(s) to conduct acute toxicity tests (96-hour static renewal toxicity tests) on water samples, by methods specified in 40 CFR Part 136 which cites USEPA's Methods for Measuring the Acute Toxicity of Effluents and Receiving Waters to Freshwater and Marine Organisms, Fifth Edition, October 2002, USEPA, Office of Water, Washington D.C. (EPA/821/R-02/012) or a more recent edition.

**RB-AR4447** 

Los Angeles County Municipal Separate Storm Sewer System ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

In the selection of test species, USEPA recommends the use of species from ecologically diverse taxa. The recommendation is to screen an effluent with at least three species (a fish, an invertebrate, and a plant) for chronic testing and two species (a fish and an invertebrate) for acute testing. This recommendation is based upon the fact that there are species sensitivity differences among different groups of organisms to different toxicants (USEPA, EPA Regions 8, 9, and 10 Toxicity Training Tool, January 2010).

For freshwater, this Order requires the Permittee(s) to conduct the chronic toxicity test in accordance with USEPA's Short-Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Freshwater Organisms Fourth Edition, October 2002, (EPA/821/R-02/013), or a more recent edition.

For brackish water, this Order requires the Permittee(s) to conduct the chronic toxicity test in accordance with USEPA's Short-Term Methods for Estimating the Chronic Toxicity of Effluent and Receiving Waters to West Coast Marine and Estuarine Organisms, First Edition, August 1995, (EPA/600/R-95/136), or Short Term Methods for Estimating the Chronic Toxicity of Effluents and Receiving Waters to Marine and Estuarine Organisms, Third Edition, October 2002, (EPA/821-R-02-014), or a more recent edition.

This Order proposes the use of 3 organisms for chronic toxicity testing, but for acute testing, where the fish species is found to be the most sensitive of the two species tested, only fish (2 species) will be used for acute testing in cases where 2 fish species, tolerant of different salinities) are required based on the expected salinity of the receiving water. In cases where only one fish species is needed, both the fish and invertebrate test will be performed. In cases where the invertebrate is the most sensitive species, both the invertebrate and fish tests will be required. Rescreening of the test species is required to verify the most sensitive test species are being used.

Furthermore, the toxicity component of the Monitoring Program includes toxicity identification procedures so that pollutants that are causing or contributing to acute or chronic effects in aquatic life exposed to these waters can be identified and others can be discounted. Once these constituents are identified, the first phase of a Toxicity Reduction Plan (TRE) is to conduct a Toxicity Identification Plan (TIE). TIEs are needed to identify the culprit constituents to be used to prioritize management actions.

In this Order, Permittee(s) are required to prepare and submit a copy of the Permittee(s)'s initial investigation TRE workplan to the Executive Officer of the Regional Water Board for approval. The Permittee(s) shall use USEPA manuals EPA/600/2-88/070 (industrial) or EPA/833B-99/002 (municipal) as guidance. This workplan shall describe the steps the Permittee(s) intends to follow if toxicity is detected, and shall include, at a minimum:

• A description of the investigation and evaluation techniques that will be used to identify potential causes and sources of toxicity, effluent variability, and MCM and/or BMP efficiency.

- A description of the Permittee(s) methods for minimizing the toxicity of storm water and non-storm water discharges.
- If a TIE is necessary, an indication of the person who would conduct the TIEs (i.e., an in-house expert or an outside contractor).

TRE development and implementation is directly tied to the integrated monitoring programs and watershed management program, to ensure that management actions and follow-up monitoring are implemented when problems are identified. Permittees are encouraged to coordinate TREs with concurrent TMDLs where overlap exists. If a TMDL is being developed or implemented for an identified toxic pollutant, much of the work necessary to meet the objectives of a TRE may already be underway, and information and implementation measures should be shared.

Overall, the toxicity monitoring program will assess the impact of storm water and nonstorm water discharges on the overall quality of aquatic fauna and flora and implement measures to ensure that those impacts are eliminated or reduced. As stated previously, chemical monitoring does not necessarily reveal the totality of impacts of storm water on aquatic life and habitat-related beneficial uses of water bodies. Therefore, toxicity requirements are a necessary component of the MS4 monitoring program.

### J. Special Studies

Requirements to conduct special studies as described in TMDL Implementation Plans that were approved by the Executive Officer of the Regional Water Board prior to the effective date of this Order are incorporated into this Order by reference.

### K. Annual Reporting

The Annual Reporting requirement was also required in Order No. 01-182 and provides summary information to the Regional Water Board on each Permittee's participation in one or more Watershed Management Programs; the impact of each Permittee(s) storm water and non-storm water discharges on the receiving water; each Permittee's compliance with receiving water limitations, numeric water quality based effluent limitations, and non-storm water action levels; and the effectiveness of each Permittee(s) control measures in reducing discharges of pollutants from the MS4 to receiving waters. In addition the Annual Report allows the Regional Water Board to assess whether the quality of MS4 discharges and the health of receiving waters is improving, staying the same, or declining as a result watershed management program efforts, and/or TMDL implementation measures, or other Control Measures and whether changes in water quality can be attributed to pollutant controls imposed on new development, re-development, or retrofit projects. The Annual Report provides the Permittee(s) a forum to discuss the effectiveness of its past and ongoing control measure efforts and to convey its plans for future control measures as well as a way to present data and conclusions in a transparent manner so as to allow review and understanding by the general public. Overall the Annual Report allows Permittee's to focus reporting efforts on watershed condition, water quality assessment, and an evaluation of the effectiveness of control measures.

### L. Watershed Summary Information, Organization and Content

As a means to establish a baseline and then identify changes or trends, for each watershed, each Permittee shall provide the information on its watershed management area, subwatershed area, and drainage areas within the subwatershed area in its odd year Annual Report (e.g., Year 1, 3, 5). The requested information should be provided for each watershed within the Permittee's jurisdiction. Alternatively, permittees participating in a Watershed Management Program may provide the requested information through the development and submission of a Watershed Management Program report or within a TMDL Implementation Plan Annual Report. However, in either case, the Permittee shall bear responsibility for the completeness and accuracy of the referenced information. This reporting requirement helps to ensure that both the Permittee and the Regional Water Board have up to date information on the status of each of their watersheds and subwatersheds.

### M. Jurisdictional Assessment and Reporting

The requested information shall be provided for each watershed within the Permittee's jurisdiction. Annual Reports submitted on behalf of a group of Watershed Permittees shall clearly identify all data collected and strategies, control measures, and assessments implemented by each Permittee within its jurisdiction as well as those implemented by multiple Permittees on a watershed scale. Permittees must provide information on storm water control measures, an effectiveness assessment of storm water control measures, information on non-storm water control measures, an integrated monitoring compliance report, information on adaptive management strategies, and supporting data and information. The addition of this reporting requirement serves as a mechanism to evaluate and ensure the protection of receiving water quality on a watershed scale.

### N. TMDL Reporting

Reporting requirements included in this Order and Attachment E (MRP) were established during the TMDL development process for each individual TMDL. These reporting requirements have incorporated into this Order to implement TMDL requirements.

### XIV. SOCIOECONOMIC CONSIDERATIONS

The California Supreme Court has ruled that although California Water Code section 13263 requires the Water Boards to consider the factors set forth in California Water Code section 13241 when issuing an NPDES permit, the Water Boards may not consider the factors to justify imposing pollutant restriction that are less stringent than the applicable federal requlations require. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 618, 627). However, when the pollutant restrictions in an NPDES permit are more stringent than federal law requires, California Water Code section 13263 requires that the Water Boards consider the factors described in section 13241 as they apply to those specific restrictions.

The Regional Water Board finds that the requirements in this Order are not more stringent than the minimum federal requirements. Among other requirements, federal law requires MS4 permits to include requirements to effectively prohibit non-storm water discharges into the storm sewers, in addition to requiring controls to reduce the discharge of pollutants in storm water to the maximum extent practicable and other provisions that the agency determines are necessary for the control of pollutants in MS4 discharges. The requirements in this Order may be more specific or detailed than those enumerated in federal regulations under 40 CFR § 122.26 or in USEPA guidance. However, the requirements have been designed to be consistent with and within the federal statutory mandates described in Clean Water Act section 402(p)(3)(B)(ii) and (iii) and the related federal regulations and guidance. Consistent with federal law, all of the conditions in this Order could have been included in a permit adopted by USEPA in the absence of the in lieu authority of California to issue NPDES permits. Moreover, the inclusion of numeric WQBELs in this Order does not cause the permit to be more stringent than current federal law. Federal law authorizes both narrative and numeric effluent limitations to meet state water quality standards. The inclusion of WQBELs as discharge specifications in an NPDES permit in order to achieve compliance with water quality standards is not a more stringent requirement than the inclusion of BMP based permit limitations to achieve water quality standards. (State Water Board Order No. WQ 2006-0012 (Boeing).) Therefore, a 13241 analysis is not required for permit requirements that implement the effective prohibition on the discharge of non-storm water discharges into the MS4, or for controls to reduce the discharge of pollutants in storm water to the maximum extent practicable, or other provisions that the Regional Water Board has determined appropriate to control such pollutants, as those requirements are mandated by federal law...

Notwithstanding the above, the Regional Water Board has developed an economic analysis of this Order, consistent with California Water Code section 13241. That analysis is provided below. The Regional Water Board has considered all of the evidence that has been presented regarding the 13241 factors in adopting this Order. The Regional Water Board finds that the requirements in this Order are reasonably necessary to protect beneficial uses identified in the Basin Plan, and the econimic information related to costs of compliance and other section 13241 factors are not sufficient to justify failing to protect those beneficial uses. Where appropriate, the Regional Water Board has provided Permittees with additional time to implement control measures to achieve final WQBELs and/or water quality standards.

### A. Past, present and probable future beneficial uses of water.

Chapter 2 of the Basin Plan identifies designated beneficial uses for water bodies in the Los Angeles Region, which are the receiving waters for MS4 discharges. Beneficial uses are also identified in the findings of this Order and further discussed relative to TMDLs in section VI.D of this Fact Sheet.

## B. Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

Environmental characteristics of each of the Watershed Management Areas covered by this Order, including the quality of water, are discussed in the Region's Watershed Management Initiative Chapter as well as available in State of the Watershed reports and the State's CWA Section 303(d) List of impaired waters.

The quality of water in major receiving waters for MS4 discharges has been routinely monitored by Permittees through the Monitoring and Reporting Program under Order No. 01-182. Below are summaries of water quality exceedances reported for the 2010-2011 reporting year.

### Summary of Constituents that Did Not Meet Water Quality Objectives at Mass Emission Stations during 2010-2011 for One or More Events

Mass Emission/Watershed	Wet	Dry
Ballona Creek (S01) ²	Fecal coliforms ³ pH ⁴ Dissolved zinc	рН ³
Malibu Creek (S02)	Fecal coliforms Cyanide pH ³ Sulfate	Fecal coliforms Sulfate
Los Angeles River (S10) ¹	Fecal coliforms ² pH ³ Dissolved zinc Cyanide	Fecal coliforms pH ³
Coyote Creek (S13)	Fecal coliforms ² pH ³ Dissolved zinc	Fecal coliforms
San Gabriel River (S14)	Fecal coliforms ² pH ³	
Dominguez Channel (S28) ¹	Fecal coliforms ² Dissolved copper Dissolved zinc	Fecal coliforms pH ³
Santa Clara River (S29)	Fecal coliforms pH ³ Dissolved zinc	

² More urbanized watersheds.

³ Subject to the fecal coliform water quality objective high-flow suspension (LARWQCB, 2003).

⁴ pH was evaluated outside of holding time.

Los Angeles County Municipal Separate Storm Sewer System ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

The following table summarizes the results of an analysis based on evaluation of the 15 sets of dry weather data for the period of 2005 to 2011 for each of the mass emission stations. The most prevalent pollutants of concern among the mass emission stations include fecal coliform bacteria, cyanide, mercury, chloride, sulfate, total dissolved solids, copper, and selenium. Reported results for fecal coliform bacteria, cyanide, copper, and selenium concentrations consistently exceeded water quality objectives in all watersheds. For watersheds where objectives apply for sulfate and total dissolved solids, the receiving water concentrations consistently exceeded the objectives. The incidences where exceedances are indicated for mercury are largely due to analytical detection levels that were higher than the applicable objective.

### Summary of LA County Watersheds and Frequency of Receiving Water Exceeding Water Quality Objectives (2005 to 2011 - Dry Season Data Analysis)¹

- ^{1.} Frequency of exceedance is denoted as number of exceedances/number of dry weather samples evaluated. For example, "2/15" indicates 2 of the 15 samples had analytical results that exceeded the water quality objective for a given parameter.
- ^{2.} The Basin Plan objective for turbidity for the protection of MUN is the secondary MCL of 5 NTU. The Basin Plan contains additional turbidity objectives expressed as incremental changes over natural conditions. Since inadequate data were available to assess criteria expressed as incremental changes, only the MCL was considered in the analysis.
- ^{3.} FW means freshwater

## C. Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.

Since 2001, municipalities both locally and nationally have gained considerable experience in the management of municipal storm water and non-storm water discharges. The technical capacity to monitor storm water and its impacts on water quality has also increased. In many areas, monitoring of the impacts of storm water on water quality has become more sophisticated and widespread. Better information on the effectiveness of storm water controls to reduce pollutant loadings and address water quality impairments is now available. The International Stormwater BMP Database (<u>http://www.bmpdatabase.org/</u>) provides extensive information of the performance capabilities of storm water controls. Additionally, the County of Los Angeles conducted a BMP effectiveness study as a requirement of Order No. 01-182.⁵

Generally, improvements in the quality of receiving waters impacted by MS4 discharges can be achieved by reducing the volume of storm water or non-storm water discharged through the MS4 to receiving waters; reducing pollutant loads to storm water and non-storm water through source control/pollution prevention, including operational source control such as street sweeping, public education, and product or materials elimination or substitution; and removing pollutants that have been loaded into storm water or non-storm water before they enter receiving waters, through treatment or diversion to a sanitary sewer. The following factors are generally accepted to affect pollutant concentrations in MS4 discharges⁶:

- Land use
- Climatic conditions
- Season (i.e. for southern California, dry season and winter wet season)
- Percentage imperviousness (in particular, "effective impervious area" or "EIA")
- Rainfall amount and intensity (including seasonal "first-flush" effects)
- Runoff amount
- Watershed size

In their 2010-2011 Annual Report, Permittees identified the following storm water and nonstorm water pollutant control measures as particularly effective:

⁵ County of Los Angeles Department of Public Works. "Los Angeles County BMP Effectiveness Study," August 2005.

⁶ Maestre, Alexander and Robert Pitt. "Identification of Significant Factors Affecting Stormwater Quality Using the NSQD" (draft monograph, 2005).

- Street sweeping;
- Catch basin cleaning;
- Catch basin inserts
- Trash bins;
- End-of-pipe controls such as low-flow diversions;
- Infiltration controls;
- Erosion controls; and
- Public education and outreach, including multi-lingual strategies.

Permittees summarized the most-used BMPs and most popular BMPs (according to the number of Permittees using a particular BMP) in their 2010-2011 Annual Report. An itemization of all BMPs installed and maintained during the 2010-11 reporting period is provided in Appendices B and C of the Permittees' Annual Report.

Some of the many advances in how to effectively control storm water and pollutants in storm water have occurred locally within the Los Angeles Region and include the development of cost effective trash full capture devices, storm water diversion, treatment and beneficial use facilities such as SMURRF and storm water capture, storage, and reuse facilities such as Sun Valley, low impact development/site design practices, and innovative/opportunistic culvert inlet multi-media filters. There are many other case studies of municipalities that have implemented innovative and effective storm water management measures (e.g., Portland, OR).

This Order is designed to reduce pollutant loading to waterbodies within Los Angeles County from discharges to and from the Los Angeles County MS4 through the implementation of multi-faceted storm water management programs at the municipal and watershed levels. Overall improvements in MS4 discharge quality are expected to occur over time with ongoing implementation of the Los Angeles County MS4 Permit. However, currently little information on the quality of storm water in the region and the water quality that can be achieved with the coordinated control of all MS4 discharges through full implementation of all storm water management measures by individual municipalities and collectively by all Permittees within a watershed is available. ThisOrder, however, is designed to effectively focus and broaden monitoring requirements with the addition of outfall monitoring and monitoring associated with the 33 TMDLs being incorporated, so pollutant loading from the MS4 can be better quantified and improvements in water quality resulting from implementation of storm water management measures can be tracked.

### D. Economic considerations.

The Regional Water Board recognizes that Permittees will incur costs in implementing this Order above and beyond the costs from the Permittees' prior permit. Such costs will be incurred in complying with the post-construction, hydromodification, Low Impact Development, TMDL, and monitoring and reporting requirements of this Order. The Regional Water Board also recognizes that, due to California's current economic condition, many Permittees currently have limited staff and resources to implement actions to address its MS4 discharges. This Order allows Permittees the flexibility to address critical water quality priorities, namely discharges to waters subject to TMDLs, but aims to do so in a focused and cost-effective manner while maintaining the level of water quality protection

mandated by the Clean Water Act and other applicable requirements. For example, the inclusion of a watershed management program option allows Permittees to submit a plan for Regional Water Board Executive Officer approval that would allow for actions to be prioritized based on specific watershed needs. The cost of complying with TMDL wasteload allocations has been previously considered during the adoption of each TMDL.

It is very difficult to determine the true cost of implementing storm water and urban runoff management programs because of highly variable factors and unknown level of implementation among different municipalities and inconsistencies in reporting by Permittees. In addition, it is difficult to isolate program costs attributable to permit compliance. Reported costs of compliance for the same program element can vary widely from Permittee to Permittee, often by a very wide margin that is not easily explained. Despite these problems, efforts have been made to identify storm water and urban runoff management program costs, which can be helpful in understanding the costs of program implementation.

Economic considerations of implementing this Order were examined by primarily utilizing the data that are self-reported by the Permittees in their annual reports and a State Water Board funded study, which examined the costs of municipal MS4 programs statewide.⁷ The economic impact to public agencies was tabulated based on the reported costs of implementing the six minimum control measures (Public Information and Participation, Industrial/Commercial Facilities Control, Development Planning, Development Construction, Public Agency Activities, and Illicit Connections and Illicit Discharges Elimination) required by 40 CFR section 122.26(d)(2)(iv) as well as costs associated with program management, monitoring programs, and a category described as other. As noted above, Permittees report wide variability in the cost of compliance, which is not easily explained. Based on reported values, the average annual cost to the Permittees in 2010-11 was \$4,090,876 with a median cost of \$687,633. This translated to an average annual cost per household⁸ of \$120.04 with a median cost of \$57.31 per household.

It is important to note that reported program costs are not all solely attributable to compliance with requirements of the LA County MS4 Permit. Many program components, and their associated costs, existed before the first LA County MS4 Permit was issued in 1990. For example, storm drain maintenance, street sweeping and trash/litter collection costs are not solely or even principally attributable to MS4 permit compliance, since these practices have long been implemented by municipalities. Therefore, the true program cost related to complying with MS4 permit requirements is some fraction of the total reported costs. For example, after adjusting the total reported costs by subtracting out the costs for street sweeping and trash collection, the average annual cost to the Permittees was \$2,397,315 with a median cost of \$290,000. This translates to an average annual cost per household of \$42.57 (or \$3.55 per month) with a median annual cost of \$17.89 per household.

E N T A T I V

Los Angeles County Municipal Separate Storm Sewer System ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

These results are consistent with the State Water Board funded study ("State Water Board Study") that surveyed the costs to develop, implement, maintain and monitor municipal separate storm sewer system management and control programs in 2004.⁹ The objectives of the study were to: 1) document stormwater program costs and 2) assess alternative approaches to MS4 guality control. The six cities selected for the study were judged by State Water Board staff as having good MS4 management programs, adequate accounting systems, and represented a variety of geographic locations, hydrologic areas, populations and incomes. The cities selected were Corona, Encinitas, Fremont, Fresno-Clovis Metropolitan Area, Sacramento and Santa Clarita. The results found that the annual total cost per household ranged from \$18 to \$46. The average cost was found to be \$35 and the median, \$36. The true mean, which is derived by dividing the total sample costs by the total sample number of households, is \$29 in 2002 dollars. This study was further examined and applied to the Ventura County MS4 Permit in "Economic Considerations of the Proposed (February 25, 2008) State of California Regional Water Quality Control Board Los Angeles Region, Order 08-xxx, NPDES Permit No. CAS004002, Waste Discharge Requirements for Stormwater (Wet Weather) and Non-Stormwater (Dry Weather) Discharges from the Municipal Separate Storm Sewer Systems within the Ventura County Watershed Protection District, County of Ventura and the Incorporated Cities Therein," and found that when adjusted for inflation, the total annual cost to the MS4 Permittees ranged from \$7.15 to \$10.9 million, depending on the averaging method applied. This translated to an annual cost per household that ranged from \$27.60 to \$42.00 in 2008 dollars.

The State Water Board Study noted inherent limitations in the cost data quality. The most significant data quality limitation cited is that the costs provided by the municipalities were not sufficiently detailed or referenced to provide opportunity for independent review of the accuracy and completeness of the cost data. Similarly, the costs presented in the Los Angeles County Unified Annual Report ("Unified Annual Report") are not presented with supporting data or references so that they can be independently reviewed. Some of the limitations of the reported cost data are illustrated by a comparison of monitoring costs in different sections of the Unified Annual Report. In the monitoring costs section, the total costs for monitoring, including sample collection, analytical results, and sampling station maintenance was \$713,409 for 2010-2011. In contrast, the same report showed the monitoring costs of \$9,008,460 in the Unified Cost Table. Absent further explanation in the Unified Annual Report, this suggests that the reported costs may not be reliable.

The State Water Board Study also found that certain stormwater implementation costs included activities that provide separate and additional municipal benefits such as street sweeping and storm drain and channel cleaning. The State Water Board Study indicated that the inclusion of these costs as stormwater implementation costs is not uniform across different municipalities. In order to assess the variability of costs reported by different municipalities under the same permit and determine if Los Angeles County MS4 Permittees are reporting costs for activities that provide municipal benefits beyond storm water management and permit compliance, Regional Water Board staff reviewed costs reported by Los Angeles County MS4 Permittees in the Unified Annual Report. The reported storm

⁹ Currier, Brian K., Joseph M. Jones, Glenn L. Moeller. "NPDES Stormwater Cost Survey, Final Report", Prepared for California State Water Resources Control Board, California State University Sacramento, Office of Water Programs, January, 2005.

### **RB-AR4459**

ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

water costs range from \$11.45 to \$928.10 per household per year. The average reported cost was \$120.04 per household per year and the median cost was \$57.31 per household per year. The wide spread of annual costs and the significant difference between the mean and median costs indicate that the LA County MS4 Permittees are not reporting costs in a uniform manner.

Staff also reviewed available cost data in the Unified Annual Report for Permittees that provided separate costs regarding street sweeping and trash collection. Staff adjusted the total costs so that the costs for these multi-benefit municipal programs were not included in the storm water cost and found that the adjusted storm water costs were greatly reduced by excluding these activities. These adjusted costs ranged from \$0.00 per household per year to \$903.10 per household per year. The mean adjusted rate is \$42.57 per household per year and the median adjusted rate is \$17.89 per household per year. Clearly, a significant portion (greater than 50%) of the costs attributed to storm water compliance activities also provide additional municipal benefits. (In the case of the Los Angeles County MS4 Permittees, some municipalities reported costs for trash collection; these costs were not reported by municipalities in the State Water Board Study.)

Finally, staff reviewed the cost breakdowns reported in the State Water Board Study and the Unified Annual Report for Los Angeles County MS4 Permittees. The following table summarizes the results:

Cost Category	State Water Board Study	Los Angeles County (2010-2011)
Watershed Management	6%	5%
Construction	11%	1%
Illicit Discharge	4%	2%
Industrial and Commercial	8%	1%
Overall Management	37%	5%
Pollution Prevention	2%	2%
Post Construction	3%	
Public Education	13%	2%
Monitoring	16%	3%
BMP Maintenance	Not Reported	2%
Development	Not Reported	1%
Other	Not reported	76%

The reported costs show differences between the MS4 Permittees surveyed in the State Water Board Study and the Los Angeles County MS4 Permittee costs in the following categories: construction, industrial and commercial activities, public education and monitoring. These categories all show greater proportional statewide cost allocations relative to the cost allocations by the Los Angeles County MS4 Permittees. The Los Angeles County MS4 Permittees report a cost category of BMP maintenance, which is not defined in the State Water Board Study. The management costs in the State Water Board Study were greater than the management costs reported by the Los Angeles County MS4 Permittees, but the Los Angeles County MS4 Permittees also reported a category of

"Other" that accounted for a large proportion of costs, which is not defined in the Unified Annual Report.

In addition to considering the costs of storm water management, it is important to consider the benefits of storm water and urban runoff management programs. A recent study conducted by USC/UCLA assessed the costs and benefits of implementing various approaches for achieving compliance with the MS4 permits in the Los Angeles Region. The study found that non-structural systems would cost \$2.8 billion but provide \$5.6 billion in benefit. If structural systems were determined to be needed, the study found that total costs would be \$5.7 to \$7.4 billion, while benefits could reach \$18 billion.¹⁰ Costs are anticipated to be borne over many years. As can be seen, the benefits of the programs are expected to considerably exceed their costs. Such findings are corroborated by USEPA, which found that the benefits of implementation of its Phase II storm water rule would also outweigh the costs.¹¹

### Economic considerations of Not Regulating MS4 Discharges.

Economic discussions of storm water and urban runoff management programs tend to focus on costs incurred by municipalities in developing and implementing the programs. This is appropriate, and these costs are significant and a major issue for the Permittees. However, in adopting Order WQ 2000-11, the State Water Board further found that in considering the cost of compliance, it is also important to consider the costs of impairment; that is, the negative impact of pollution on the economy and the positive impact of improved water quality. For example, economic benefits may result through program implementation, and alternative costs (as well as environmental impacts) may be incurred by not fully implementing the program. So, while it is appropriate and necessary to consider the cost of compliance, it is also important to consider the alternative costs incurred by not fully implementing the programs, as well as the benefits which result from program implementation.

The benefits of implementation of the Los Angeles County MS4 Permit include improvements in water quality, enhancement of beneficial uses, and increased employment, income and satisfaction from environmental amenities. Most of the benefits of this permit can be identified and, in some cases, quantified in monetary terms. Others cannot be expressed in dollar terms and can only be described. For example, household willingness to pay for improvements in fresh water quality for fishing and boating has been estimated by USEPA¹² to be \$158-210.62. This estimate can be considered conservative, since it does not include important considerations such as marine waters benefits, wildlife benefits, or flood control benefits. The California State University, Sacramento study corroborates USEPA's estimates, reporting annual household willingness to pay for statewide clean water to be \$180.63.¹³ When viewed in comparison to household costs of existing urban runoff management programs, these household willingness to pay estimates exhibit that per household costs incurred by Permittees to implement their urban runoff management programs remain reasonable.

¹³ State Water Board, 2005. NPDES Stormwater Cost Survey. P. iv.

Not regulating discharges from the Los Angeles County MS4 will result in greater pollution of rivers, streams, lakes, reservoirs, bays, harbors, estuaries, groundwater, coastal shorelines and wetlands. Urban runoff in southern California has been found to cause illness in people bathing near storm drains.¹⁴ A study of south Huntington Beach and north Newport Beach found that an illness rate of about 0.8% among bathers at those beaches resulted in about \$3 million annually in health-related expenses.¹⁵ In addition, poor beach water quality negatively affects tourism, which in turn reduces revenues to local businesses.

### Funding Sources.

Public agencies (both federal and state) recognize the importance of storm water improvement projects and have provided significant sources of funding through grants, bonds, and fee collections to help offset the costs of storm water management in Los Angeles County. The table below summarizes the funds that have been allocated to storm water management in Los Angeles County, to date.

Source of Money	Dollars	% of total costs funded by State (only for those projects which included State funding)
Only State Board-awarded funding (Propositions 12, 13, 40, 50, and 84; and federal money, 319h, 205j, ARRA)	\$49,143,132	47%
Only State money from any State agency (propositions only, no federal); includes State Board, DWR, Coastal Conservancy, Fish & Game	\$67,461,699	58%
Total costs (approx.) for projects involving State money	\$114,703,731	N/A
Prop A	\$4,981,772	N/A
Prop O	\$508,678,258	N/A
Measure V	\$9,107,959	N/A
Total Public Funds (federal, State, local bonds and measures) expended on stormwater control projects	\$645,389,932	N/A (information not available for projects funded by local bonds and measures)

In addition to current funding options, future funding options continue to be created. Assembly Bill 2554, known as the Los Angeles County Flood Control District's Water

¹⁵ Los Angeles Times, May 2, 2005. Here's What Ocean Germs Cost You: A UC Irvine Study Tallies the Cost of Treatment and Lost Wages for Beachgoers Who Get Sick.

Quality Funding Initiative, is currently awaiting voter approval and would create an estimated annual revenue of \$300 million earmarked for:

- New and Existing Water Quality Projects and Programs
- Maintenance of Existing Facilities
- TMDL and MS4 Permit Implementation

Of the estimated annual revenue of \$300M, 40% of the money would be returned to the municipalities to create new local projects and programs and maintenance. Below are the estimated revenues that would be allocated to certain municipalities.

Municipalities	Estimated Annual Revenue
City of Los Angeles	\$37 million
City of Santa Monica	\$1 million
El Segundo	\$600,000
Manhattan Beach	\$300,000
Redondo Beach	\$750,000
Unincorporated Areas on Los	\$15 million
Angeles County	

Fifty percent of the \$300M would be spread across nine watershed authority groups (WAGs) to develop Water Quality Improvement Plans and implement regional projects and programs. Some examples of the possible annual revenues available to the WAGs are provided below:

WAG	Estimated Revenue
Santa Monica Bay	\$12 million
Upper Los Angeles River	\$36 million
Lower Los Angeles River	\$15 million
Upper San Gabriel River	\$17 million

The remaining 10% of annual revenues is allocated to the Los Angeles County Flood Control District for administration of the program and other district water quality projects and programs.

### E. Need for developing housing within the region.

For over 100 years, this region has relied on imported water to meet many of our water resource needs. Imported water makes up approximately 70 to 75% of the Southern California region's water supply, with local groundwater, local surface water, and reclaimed water making up the remaining 25 to 30%.¹⁶ The area encompassed by this Order imports approximately 50% of its water supply. The Los Angeles County MS4 permit helps address the need for housing by controlling pollutants in MS4 discharges, which will improve the quality of water available for recycling and re-use. This in turn may reduce the demand for imported water thereby increasing the region's capacity to support continued housing development.

¹⁶ Southern California Association of Governments. The State of the Region 2007 Measuring Regional Progress (Housing, Environment). December 6, 2007. http://www.scag.ca.gov/publications/index.htm.

RB-AR4463

A reliable water supply for future housing development is required by law, and with less imported water available to guarantee this reliability, an increase in local supply is necessary.

In this Order, the Regional Water Board supports integrated water resources approaches. An integrated water resources approach manages water resources by integrating wastewater, stormwater, recycled water, and potable water planning through the capture and beneficial use of stormwater. An integrated approach can preserve local groundwater resources and reduce imported water needs. Thus, complying with this Order can positively affect the need for developing housing in the region. Furthermore, the low impact development (LID) requirements of this MS4 permit emphasize the necessity to balance growth with the protection of water quality. LID emphasizes cost effective, lot-level strategies that replicate the natural hydrology of the site and reduces the negative impacts of development. By avoiding the installation of more costly conventional storm water management strategies and harnessing runoff at the source, LID practices enhance the environment while providing cost savings to both developers and local governments.

### F. Need to develop and use recycled water.

Storm water runoff that travels across the urban landscape quickly becomes contaminated with the wastes inherent from urban living. This polluted water is then discharged to the surface waters and eventually the ocean where it wreaks havoc on the natural coastal ecosystem and impacts human health. If the storm water is captured and treated (or captured prior to contamination) a new resource could be added to local water supplies. If this water is more effectively harnessed and recycled, numerous benefits could be achieved. These include:

- Regional reduction on imported water;
- Aid in the restoration of area aquifers;
- Reduction in the need for extensive public works projects; and
- Improvement in the quality of impaired water bodies.

The exact volume of storm water available for capture is dependent on the intensity and duration of storm events. Looking at land uses across the region and applying land use-specific runoff coefficients, the annual average runoff in the Los Angeles subarea is 450,000 acre-feet/year (with an average annual rainfall of 15.5 inches). The Los Angeles and San Gabriel Rivers Watershed Council estimates that, on average, about 550,000 acre-feet/year of runoff are discharged from Los Angeles area to the ocean.¹⁷

It is not possible to capture all MS4 discharges; however, a significant portion could be put to beneficial use. Potentially, in Los Angeles, "[i]f we could capture 80% of the rainfall that falls on just a quarter of the urban area-15% of the total watershed-we would be reducing total runoff by approximately 30%. That translates into a diversion of 43 billion gallons of water per year (132,000 acre-feet) or enough to supply 800,000 people for a year."¹⁸ That

¹⁷ <u>http://www.lasgrwc.org/WAS/WASflyer_web.pdf</u>

¹⁸ Los Angeles and San Gabriel River Watershed Council. 1999. *Stormwater: asset not liability.* 

water capture would render a savings of almost sixty million dollars of imported State Water Project water. Capturing storm water from a larger portion of the watershed could increase the volume of this "new" water even further. Unlike traditional recycled water that requires the installation of dual plumbing and intensive infrastructure, much of the storm water capture could be done with minimal infrastructure retrofits in established communities.

Larger projects (and the corresponding savings) are also possible. The County of Los Angeles recharges storm water already. While the scale of these recharge activities is limited compared to the volume of water potentially available to recharge, the value of the process is significant. For example, in 2000 "County conservation efforts captured 220,000 acre-feet of local storm water runoff that was valued at \$80 million dollars."¹⁹

The unknown effects of infiltrating stormwater to recharge ground water have created some concern that such activities could introduce pollutants to the water supply. However, the U.S. Bureau of Reclamation has found²⁰:

"Based on the findings of the WAS research, decentralized stormwater management would provide a local and reliable supply of water that would not negatively impact groundwater quality. A decentralized approach could contribute up to 384,000 acre-feet of additional groundwater recharge annually if the first ³/₄" of each storm is infiltrated on all parcels, enough to provide water annually to approximately 1.5 million people. The value of this new water supply would be approximately \$311 million, using the MWD Tier 2 rate for 2010."

Recent studies in the Los Angeles area have also shown that in the process of infiltration through the soil, many contaminants are removed with no immediate impacts, and no apparent trends to indicate that storm water infiltration will negatively impact aroundwater.²¹. In areas with groundwater contamination issues, utilizing recycled storm water to recharge the aquifers may actually aid in the dilution of the buildup of salts. The value of this is hard to quantify but is an additional benefit. The use of recycled water can be accomplished in direct (such as irrigation projects or dual plumbing fixtures) or indirect (such as infiltration) ways. Both direct and indirect methods can be completed on a variety of different scales. To maximize the benefits available from using recycled water, the direct and indirect projects will need to be completed on household, neighborhood, watershed and regional scales. Currently there are a limited (but growing) number of projects in the region that can serve as examples of what may be accomplished through the development and implementation of recycled water projects. The Los Angeles County MS4 permit addresses the need for recycled water by controlling pollutants in storm water, which will result in water of improved quality with a greater potential for recycling or beneficial use. State law and policy advocates greatly expanding the use of recycled water to help meet local demand and reduce the volumes of water that are imported from other regions. Increased utilization of recycled water will require looking beyond the traditional reclaimed wastewater and will require utilizing storm water that is wasted by conveyance in the MS4

¹⁹ Los Angeles County Department of Regional Planning. 2008. 2008 Draft General Plan-

Planning Tomorrow's Great Places.

and dumping into the ocean. Storm water capture and use has not traditionally been included in the discussion of water recycling, but the process meets the definitional constraints and is bound by the same limitations and boundaries.

In addition, there are a number of Total Maximum Daily Loads (TMDLs) developed by the Regional Water Board that incorporate recycled water programs as potential implementation actions to meet TMDL requirements. These potential actions focus on both traditional water recycling and the newer storm water recycling approaches. Such recycled water programs could also reduce reliance on potable water supplies by expanding water recycling and aiding in the reclamation of poor quality, unconfined groundwater supplies. The capture, treatment and use of stormwater could augment these techniques as well. On-site capture of storm water helps prevent the water from being contaminated by urban by-products to begin with and the use of this high quality resource could reduce the unnecessary use of potable water for non-potable needs.

Some great examples of onsite capture are being demonstrated by TreePeople²² who have demonstration projects ranging from small scale rainwater harvesting at the single family home locations, to large scale watershed projects at Tuxedo Green in Sun Valley where the project redesigned the intersection with a flood control system that conveys most stormwater under, instead of into, the busy intersection. The water is stored in a 45,000-gallon cistern to be used for irrigating the landscaping at the new pocket park, which is planted with native and drought-tolerant species.

Another state of the art project was implemented by the City of Santa Monica called the Santa Monica Urban Runoff Recycling Facility (SMURFF).²³ The project harnesses the urban runoff (primarily during the dry season) and treats it for various pollutants to create a source of high quality water for reuse in landscape irrigation. Because the facility captures the dry weather runoff before it reaches the Santa Monica Bay it decreases a significant amount of pollutants from negatively impacting the Bay and associated beaches. The SMURFF is also open to the public and has several exhibits to raise public awareness of Santa Monica Bay pollution and the role of each individual in the watershed's health.

The County of Los Angeles Department of Public Works, Watershed Management Division has targeted the Sun Valley Watershed "...to solve the local flooding problem while retaining all storm water runoff from the watershed, increasing water conservation, recreational opportunities, wildlife habitat, and reducing stormwater pollution."²⁴ This aggressive plan involves several stakeholders and has implemented a variety of on-site BMPs as well as storm water infiltration retrofits and diversions.

### XV. UNFUNDED MANDATES

Article XIII B, Section 6(a) of the California Constitution provides that whenever "any state agency mandates a new program or higher level of service on any local government, the

²² <u>www.treepeople.org</u>

²³http://c0133251.cdn.cloudfiles.rackspacecloud.com/Case%20Study%20-

^{%20}Santa%20Monica%20Urban%20Runoff%20Recycling%20Facility%20SMURFF.pdf

²⁴ http://www.sunvalleywatershed.org/watershed_management_plan/wmp-0ES.pdf

state shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service." The requirements of this Order do not constitute state mandates that are subject to a subvention of funds for several reasons, including, but not limited to, the following.

First, the requirements of this Order do not constitute a new program or a higher level of service as compared to the requirements contained in the previous permit, Order No. 01-182 (as amended). The overarching requirement to impose controls to reduce the pollutants in discharges from MS4s is dictated by the Clean Water Act and is not new to this permit cycle. (33 U.S.C. §1342(p)(3)(B).) The inclusion of new and advanced measures as the MS4 programs evolve and mature over time is anticipated under the Clean Water Act (55 *Fed. Reg.* 47990, 48052 (Nov. 16, 1990)), and these new and advanced measures do not constitute a new program or higher level of service.

Second, and more broadly, mandates imposed by federal law, rather than by a state agency, are exempt from the requirement that the local agency's expenditures be reimbursed. (Cal. Const., art. XIII B, §9, subd. (b).) This Order implements federally mandated requirements under the Clean Water Act and its requirements are therefore not subject to subvention of funds. This includes federal requirements to effectively prohibit non-storm water discharges, to reduce the discharge of pollutants to the maximum extent practicable, and to include such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. (30 U.S.C. §1342(p)(3)(B).) Federal cases have held these provisions require the development of permits and permit provisions on a case-by-case basis to satisfy federal requirements. (Natural Resources Defense Council, Inc. v. U.S. E.P.A. (9th Cir. 1992) 966 F.2d 1292, 1308, fn. 17.) The authority exercised under this Order is not reserved state authority under the Clean Water Act's savings clause (cf. Burbank v. State Water Resources Control Bd. (2005) 35 Cal.4th 613, 627-628 [relying on 33 U.S.C. § 1370, which allows a state to develop requirements which are not "less stringent" than federal requirements]), but instead is part of a federal mandate to develop pollutant reduction requirements for municipal separate storm sewer systems. To this extent, it is entirely federal authority that forms the legal basis to establish the permit provisions. (See, City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region (2006) 135 Cal.App.4th 1377, 1389; Building Industry Ass'n of San Diego County v. State Water Resources Control Bd. (2004) 124 Cal.App.4th 866, 882-883.)

The maximum extent practicable standard is a flexible standard that balances a number of considerations, including technical feasibility, cost, public acceptance, regulatory compliance, and effectiveness. (*Building Ind. Asso., supra*, 124 Cal. App.4th at pp. 873, 874, 889.) Such considerations change over time with advances in technology and with experience gained in storm water management. (55 *Fed. Reg.* 47990, 48052 (Nov. 16, 1990).) Accordingly, a determination of whether the conditions contained in this Order exceed the requirements of federal law cannot be based on a point by point comparison of the permit conditions and the six minimum control measures that are required "at a minimum" to reduce pollutants to the maximum extent practicable and to protect water quality (40 CFR §122.34). Rather, the appropriate focus is whether the permit conditions, as a whole, exceed the maximum extent practicable standard. In recent months, the County of Los Angeles and County of Sacramento Superior Courts have granted writs setting aside decisions of the Commission on State Mandates that held that certain

Los Angeles County Municipal Separate Storm Sewer System ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

requirements in Phase I permits constituted unfunded mandates. In both cases, the courts found that the correct analysis in determining whether a MS4 permit constituted a state mandate was to evaluate whether the permit as a whole -- and not a specific permit provision -- exceeds the maximum extent practicable standard. (*State of Cal. v. Comm. On State Mandates* (Super. Ct. Sacramento County, 2012, No. 34-2010-80000604), *State of Cal. v. County of Los Angeles* (Super. Ct. Los Angeles County, 2011, No. BS130730.)

The requirements of the Order, taken as a whole rather than individually, are necessary to reduce the discharge of pollutants to the maximum extent practicable and to protect water quality. The Regional Water Board finds that the requirements of the Order are practicable, do not exceed federal law, and thus do not constitute an unfunded mandate. These findings are the expert conclusions of the principal state agency charged with implementing the NPDES program in California. (Cal. Wat. Code, §§13001, 13370.)

It should also be noted that the provisions in this Order to effectively prohibit non-storm water discharges are also mandated by the Clean Water Act. (33 U.S.C. §1342(p)(3)(B)(ii).) Likewise, the provisions of this Order to implement total maximum daily loads (TMDLs) are federal mandates. The Clean Water Act requires TMDLs to be developed for water bodies that do not meet federal water quality standards. (33 U.S.C. § 1313(d).) Once the USEPA or a state establishes or adopts a TMDL, federal law requires that permits must contain effluent limitations consistent with the assumptions and requirements of any applicable waste load allocation in a TMDL. (40 CFR § 122.44(d)(1)(vii)(B).)

Third, the local agency Permittees' obligations under this Order are similar to, and in many respects less stringent than, the obligations of non-governmental dischargers who are issued NPDES permits for storm water discharges. With a few inapplicable exceptions, the Clean Water Act regulates the discharge of pollutants from point sources (33 U.S.C. § 1342) and the Porter-Cologne Water Quality Control Act (Porter-Cologne Act) regulates the discharge of waste (Cal. Wat. Code, § 13263), both without regard to the source of the pollutant or waste. As a result, the "costs incurred by local agencies" to protect water quality reflect an overarching regulatory scheme that places similar requirements on governmental and non-governmental dischargers. (See *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 57-58 [finding comprehensive workers compensation scheme did not create a cost for local agencies that was subject to state subvention].)

The Clean Water Act and the Porter-Cologne Act largely regulate storm water with an even hand, but to the extent there is any relaxation of this even-handed regulation, it is in favor of the local agencies. Generally, the Clean Water Act requires point source dischargers, including discharges of storm water associated with industrial or construction activity, to comply strictly with water quality standards. (33 U.S.C. § 1311(b)(1)(C), *Defenders of Wildlife v. Browner* (1999) 191 F.3d 1159, 1164-1165 [noting that industrial storm water discharges must strictly comply with water quality standards].) As discussed in prior State Water Resources Control Board decisions, certain provisions of this Order do not require strict compliance with water quality standards. (SWRCB Order No. WQ 2001-15, p. 7.) Those provisions of this Order regulate the discharge of waste in municipal storm water under the Clean Water Act MEP standard, not the BAT/BCT standard that applies to other types of discharges. These provisions, therefore, regulate the discharge of waste in

municipal storm water more leniently than the discharge of waste from non-governmental sources.

Fourth, the Permittees have requested permit coverage in lieu of compliance with the complete prohibition against the discharge of pollutants contained in Clean Water Act section 301, subdivision (a) (33 U.S.C. § 1311(a)). To the extent that the local agencies have voluntarily availed themselves of the permit, the program is not a state mandate. (Accord *County of San Diego v. State of California* (1997) 15 Cal.4th 68, 107-108.)

Fifth, the local agencies' responsibility for preventing discharges of waste that can create conditions of pollution or nuisance from conveyances that are within their ownership or control under state law predates the enactment of Article XIIIB, Section (6) of the California Constitution.

Finally, even if any of the permit provisions could be considered unfunded mandates, under Government Code section 17556, subdivision (d), a state mandate is not subject to reimbursement if the local agency has the authority to charge a fee. The local agency Permittees have the authority to levy service charges, fees, or assessments sufficient to pay for compliance with this Order subject to certain voting requirements contained in the California Constitution. (See California Constitution XIII D, section 6, subdivision (c); see also Howard Jarvis Taxpayers Association v. City of Salinas (2002) 98 Cal. App. 4th 1351, 1358-1359.). Additional fee authority has recently been established through amendments to the Los Angeles County Flood Control Act (Chapter 755 of the Statutes of 1915, as amended by Assembly Bill 2554 (2010)) to provide funding for municipalities, watershed authority groups, and the LACFCD to initiate, plan, design, construct, implement, operate, maintain, and sustain projects and services to improve surface water quality and reduce storm water and non-storm water pollution in the LACFCD, which will directly support Permittees' implementation of the requirements in this Order. The Fact Sheet demonstrates that numerous activities contribute to the pollutant loading in the municipal separate storm sewer system. Local agencies can levy service charges, fees, or assessments on these activities, independent of real property ownership. (See, e.g., Apartment Ass'n of Los Angeles County, Inc. v. City of Los Angeles (2001) 24 Cal.4th 830, 842 [upholding inspection fees associated with renting property].) The authority and ability of a local agency to defray the cost of a program without raising taxes indicates that a program does not entail a cost subject to subvention. (Clovis Unified School Dist. v. Chiang (2010) 188 Cal. App.4th 794, 812, quoting Connell v. Superior court (1997) 59 Cal.App.4th 382, 401; County of Fresno v. State of California (1991) 53 Cal.3d 482, 487-488.)

### XVI. PUBLIC PARTICIPATION

Regional Water Board staff held a kick-off meeting on May 25, 2011 to discuss the preliminary schedule for permit development; identify potential alternative permit structures; and outline some of the major technical and policy aspects of permit development. All LA County MS4 Permittees, as well as other known interested stakeholders, were invited to attend. Ninety-five individuals attended the meeting, representing most of the permittees as well as environmental organizations. After a presentation by Board staff, Permittees and interested persons had an initial opportunity to ask questions of staff, raise concerns, and provide feedback.

Los Angeles County Municipal Separate Storm Sewer System ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

At the May 25, 2011 kick-off meeting, Board staff requested input from the attendees on various permit structures. In order to solicit more focused input from permittees on alternative permit structures, and per suggestions at the kick-off meeting, Board staff developed and distributed an on-line survey to permittees using the on-line survey tool, SurveyMonkey®. The survey was distributed to all Los Angeles County MS4 Permittees on June 14, 2011 and responses were requested within two weeks. Fifty-two permittees responded using the on-line survey tool. The on-line survey sought input on several options for permit structure, including an individual permit for each municipality, a single permit for all permittees (i.e., the existing permit structure), and a single or multiple watershed-based permits.

Regional Water Board staff also held three topical workshops on December 15, 2011, January 23, 2012, and March 1, 2012. At the December 2011 workshop, staff discussed and invited feedback on: tentative permit requirements for the "minimum control measures" that comprise Permittees core storm water management program, approaches to addressing non-storm water MS4 discharges, and options for flexibility in permit requirements to address watershed priorities. At the January 2012 workshop, staff discussed and invited feedback on: tentative permit requirements to implement TMDL waste load allocations assigned to MS4 discharges and monitoring and reporting requirements for this Order. At the March 2012 workshop, staff discussed the use of water quality-based effluent limitations in this Order, discussed a revised proposal for monitoring requirements based on comments from the January 2012 workshop, and provided additional detail on proposed minimum control measure requirements.

Three Regional Water Board workshops were held during regularly scheduled Board meetings on November 10, 2011, April 5, 2012, and May 3, 2012. At the November 2011 Board workshop, staff discussed the objectives for the new permit, the status and schedule for permit development, alternatives for permit structure, provisions to implement TMDL WLAs, and provisions for minimum control measures, and identified preliminary considerations related to provisions for non-storm water discharges, receiving water limitations, water quality-based effluent limitations, and requirements for monitoring and reporting.

Prior to the April 5, 2012 Board workshop, staff released complete working proposals of the permit provisions related to two key parts of this Order: the storm water management program "minimum control measures" and the non-storm water MS4 discharge prohibitions on March 21, 2012 and March 28, 2012, respectively. Staff provided Permittees and interested persons the opportunity to submit written and oral comments over a period of three weeks for early consideration by staff prior to the release of the tentative Order. At the April 2012 Board workshop, staff presented the working proposals and the Board invited public comments. Detailed comments were made on both working proposals, and in particular, comments were made on how to address "essential" non-storm water discharges from potable water supplies and fire fighting activities in this Order.

Prior to the May 3, 2012 Board workshop, staff released complete working proposals of the permit provisions related to three other key parts of this Order: provisions for watershed management programs, TMDL-related requirements, and receiving water limitations language. Staff provided Permittees and interested persons the opportunity to submit

written and oral comments over a period of three weeks for early consideration by staff prior to the release of the tentative Order. At the May 2012 Board workshop, staff presented the three working proposals and the Board invited public comments. Staff answered extensive questions from Board members following public comments.

In addition to staff and Board workshops, Regional Water Board staff met regularly with Permittees, including the LA Permit Group (a coalition of 62 of the 86 Permittees covered by this Order), the Los Angeles County Flood Control District and the County of Los Angeles, the City of Los Angeles, and interested environmental organizations including Heal the Bay, Santa Monica Baykeeper, and the Natural Resources Defense Council (NRDC). Staff also met on several occasions with other affected agencies including large public water suppliers (Los Angeles Department of Water and Power and Metropolitan Water District), small community water suppliers, and local fire departments.

Finally, staff hosted several "joint" meetings to bring together key leaders among the Permittees and environmental organizations to discuss significant issues and work towards consensus on these issues where possible. The first two of these were held on May 17, 2012 and May 31, 2012, during which the group discussed permit requirements for USEPA established TMDLs. Staff prepared a working proposal based on the areas of agreement from the May 17th joint meeting, and distributed the proposal for review prior to the second meeting on May 31st. The proposal was discussed and refined at the second meeting. A third meeting is scheduled for June 14, 2012.

Prior to the Board's consideration of this Order, the Regional Water Board notified the Permittees and all interested agencies and persons of its intent to hold a hearing to issue an NPDES permit for discharges from the Los Angeles County MS4 and provided them with an opportunity to submit written comments over a 45-day period. The procedures followed for submission of written comments are described in the Notice of Hearing and Opportunity to Comment published for this Order. Notification was provided through the Regional Water Board's website, the Regional Water Board's e-mail subscription service, and the LA Times.

The Regional Water Board held a public hearing on the tentative Order during its regular Board meeting on September 6-7, 2012. Permittees and interested persons were invited to attend. At the public hearing, the Regional Water Board heard testimony and comments pertinent to the discharge and this Order. The hearing procedures followed by the Regional Water Board are described in the Notice of Hearing and Opportunity to Comment published for this Order.

### ATTACHMENT G. NON-STORM WATER ACTION LEVELS AND MUNICIPAL ACTION LEVELS

### I. SANTA CLARA RIVER WATERSHED AREA

## Table G-1.Action Levels for Discharges to Inland Surface Waters, EnclosedBays, and Estuaries (with receiving water salinity equal to or less than 1 ppt)

Parameter	Units	Average Monthly	Daily Maximum
E. Coli Bacteria	#/100 ml	126 ¹	235 ²
Chloride	mg/L	3	
Sulfate	mg/L	3	
Total Dissolved Solids	mg/L	3	
Methylene Blue Active Substances	mg/L	$0.5^{4}$	
Aluminum, Total Recoverable	mg/L	1.0 ⁴	
Cyanide, Total Recoverable	µg/L	4.3	8.5
Copper, Total Recoverable	µg/L	5	5
Mercury, Total Recoverable	µg/L	0.051	1.0
Selenium, Total Recoverable	µg/L	4.1	8.2

E. Coli density shall not exceed a geometric mean of 126/100 ml.

² *E. Coli* density in a single sample shall not exceed 235/100 ml.

³ In accordance with applicable water quality objectives contained in Tables 3-8 and 3-10 of the Basin Plan.

⁴ Applicable only to discharges to receiving waters designated for Municipal and Domestic Supply (MUN) use as specified in Tables 2-1 and 2-2 of the Basin Plan.

⁵ Action levels are hardness dependent. See Section VII of this Attachment for a listing of the applicable action levels.

## Table G-2. Action Levels for Discharges to Inland Surface Waters, Enclosed Bays, and Estuaries (with receiving water salinity between 1 ppt and 10 ppt)

	U	2	
Parameter	Units	Average Monthly	Daily Maximum
E. Coli Bacteria	#/100 ml	126 ¹	235 ²
Total Coliform Bacteria	#/100 ml	1,000 ³	10,000 ⁴
Fecal Coliform Bacteria	#/100 ml	200 ³	400 ⁴
Enterococcus Bacteria	#/100 ml	35 ³	104 ⁴
Chloride	mg/L	5	
Sulfate	mg/L	5	
Total Dissolved Solids	mg/L	5	
Methylene Blue Active Substances	mg/L	0.5 ⁶	
Aluminum, Total Recoverable	mg/L	1.0 ⁶	
Cyanide, Total Recoverable	µg/L	0.50	1.0
Copper, Total Recoverable	µg/L	7	7
Mercury, Total Recoverable	µg/L	0.051	1.0
Selenium, Total Recoverable	µg/L	4.1	8.2
		6.400/400 1	

*E. Coli* density shall not exceed a geometric mean of 126/100 ml.

² *E. Coli* density in a single sample shall not exceed 235/100 ml.

³ Total coliform density shall not exceed a geometric mean of 1,000/100 ml. Fecal coliform density shall not exceed a geometric mean of 200/100 ml. Enterococcus density shall not exceed a geometric mean of 35/100 ml.

### **RB-AR4472**

### Los Angeles County Municipal Separate Storm Sewer System

ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

- ⁴ Total coliform density in a single sample shall not exceed 10,000/100 ml. Fecal coliform density in a single sample shall not exceed 400/100 ml. Enterococcus density shall not exceed a geometric mean of 104/100 ml.
- In accordance with applicable water quality objectives contained in Tables 3-8 and 3-10 of the Basin Plan.
- ⁶ Applicable only to discharges to receiving waters designated for Municipal and Domestic Supply (MUN) use as specified in Tables 2-1 and 2-2 of the Basin Plan.
- ⁷ The applicable action level is the most stringent between corresponding Table H-1 and Table H-3 action levels.

## Table G-3. Action Levels for Discharges to Inland Surface Waters, Enclosed Bays, and Estuaries (with receiving water salinity equal to or greater than 10 ppt 95% or more of the time)

Parameter	Units	Average Monthly	Daily Maximum
Total Coliform Bacteria	#/100 ml	1,000 ^{1, 2}	10,000 ^{2, 3}
Fecal Coliform Bacteria	#/100 ml	200 ¹	400 ³
Enterococcus Bacteria	#/100 ml	35 ¹	104 ³
Chloride	mg/L	4	
Sulfate	mg/L	4	
Total Dissolved Solids	mg/L	4	
Methylene Blue Active Substances	mg/L	0.5 ⁵	
Aluminum, Total Recoverable	mg/L	1.0 ⁵	
Cyanide, Total Recoverable	µg/L	0.50	1.0
Copper, Total Recoverable	µg/L	2.9	5.8
Mercury, Total Recoverable	µg/L	0.051	1.0
Selenium, Total Recoverable	µg/L	58	117

¹ Total coliform density shall not exceed a geometric mean of 1,000/100 ml. Fecal coliform density shall not exceed a geometric mean of 200/100 ml. Enterococcus density shall not exceed a geometric mean of 35/100 ml.

- ² In areas where shellfish may be harvested for human consumption, as determined by the Regional Water Board, the median total coliform density shall not exceed 70/100 ml and not more than 10 percent of the samples shall exceed 230/100 ml.
- ³ Total coliform density in a single sample shall not exceed 10,000/100 ml. Fecal coliform density in a single sample shall not exceed 400/100 ml. Enterococcus density shall not exceed a geometric mean of 104/100 ml.
- ⁴ In accordance with applicable water quality objectives contained in Tables 3-8 and 3-10 of the Basin Plan.
- ⁵ Applicable only to discharges to receiving waters designated for Municipal and Domestic Supply (MUN) use as specified in Tables 2-1 and 2-2 of the Basin Plan.

				<u></u>
Parameter	Units	6-Month Median	Daily Maximum	Instantaneous Maximum
Total Coliform Bacteria	#/100 ml	70 ¹	230 ¹	
Fecal Coliform Bacteria	#/100 ml		200 ²	400 ³
Enterococcus Bacteria	#/100 ml		35 ²	104 ³
Cyanide, Total Recoverable	µg/L	1	4	10
Copper, Total Recoverable	µg/L	3	12	30
Mercury, Total Recoverable	µg/L	0.04	0.16	0.4
Selenium, Total Recoverable	µg/L	15	60	150

### Table G-4. Action Levels for Discharges to Ocean Waters (Surf Zone)

In areas where shellfish may be harvested for human consumption, as determined by the Regional Water Board, the median total coliform density shall not exceed 70/100 ml and not more than 10 percent of the samples shall exceed 230/100 ml.

- ² Fecal coliform density shall not exceed a geometric mean of 200/100 ml. Enterococcus density shall not exceed a geometric mean of 35/100 ml.
- ³ Fecal coliform density in a single sample shall not exceed 400/100 ml. Enterococcus density shall not exceed a geometric mean of 104/100 ml.

### **RB-AR4478**

#### Los Angeles County Municipal Separate Storm Sewer System

ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

- ¹ Within the range of 6.5 to 8.5 at all times.
- ² *E. Coli* density shall not exceed a geometric mean of 126/100 ml.
- ³ *E. Coli* density in a single sample shall not exceed 235/100 ml.
- ⁴ Total coliform density shall not exceed a geometric mean of 1,000/100 ml. Fecal coliform density shall not exceed a geometric mean of 200/100 ml. Enterococcus density shall not exceed a geometric mean of 35/100 ml.
- ⁵ Total coliform density in a single sample shall not exceed 10,000/100 ml. Fecal coliform density in a single sample shall not exceed 400/100 ml. Enterococcus density shall not exceed a geometric mean of 104/100 ml.
- ⁶ The applicable action level is the most stringent between corresponding Table H-13 and Table H-15 action levels.

# Table G-15. Action Levels for Discharges to Inland Surface Waters, Enclosed Bays, and Estuaries (with receiving water salinity equal to or greater than 10 ppt 95% or more of the time)

	/			
Parameter	Units	Average Monthly	Daily Maximum	
рН	Standard units	6.5-		
Total Coliform Bacteria	#/100 ml	1,000 ^{2, 3}	10,000 ^{3, 4}	
Fecal Coliform Bacteria	#/100 ml	200 ²	400 ⁴	
Enterococcus Bacteria	#/100 ml	35 ²	104 ⁴	
Cyanide, Total Recoverable	µg/L	0.50	1.0	
Copper, Total Recoverable	µg/L	2.9	5.8	
Lead, Total Recoverable	µg/L	7.0	14	
Mercury, Total Recoverable	µg/L	0.051	1.0	
Selenium, Total Recoverable	µg/L	58	117	
1 Within the range of 6.5 to 8.5 at all times				

Within the range of 6.5 to 8.5 at all times.

² Total coliform density shall not exceed a geometric mean of 1,000/100 ml. Fecal coliform density shall not exceed a geometric mean of 200/100 ml. Enterococcus density shall not exceed a geometric mean of 35/100 ml.

³ In areas where shellfish may be harvested for human consumption, as determined by the Regional Water Board, the median total coliform density shall not exceed 70/100 ml and not more than 10 percent of the samples shall exceed 230/100 ml.

⁴ Total coliform density in a single sample shall not exceed 10,000/100 ml. Fecal coliform density in a single sample shall not exceed 400/100 ml. Enterococcus density shall not exceed a geometric mean of 104/100 ml.

Parameter	Units	6-Month Median	Daily Maximum	Instantaneous Maximum
рН	Standard units		6.0-9.0 ¹	
Total Coliform Bacteria	#/100 ml	70 ²	230 ²	
Fecal Coliform Bacteria	#/100 ml		200 ³	400 ⁴
Enterococcus Bacteria	#/100 ml		$35^3$	104 ⁴
Cyanide, Total Recoverable	µg/L	1	4	10
Copper, Total Recoverable	µg/L	3	12	30
Lead, Total Recoverable	µg/L	2	8	20
Mercury, Total Recoverable	µg/L	0.04	0.16	0.4
Selenium, Total Recoverable	µg/L	15	60	150

### Table G-16. Action Levels for Discharges to Ocean Waters (Surf Zone)

Within the range of 6.0 to 9.0 at all times.

- ² In areas where shellfish may be harvested for human consumption, as determined by the Regional Water Board, the median total coliform density shall not exceed 70/100 ml and not more than 10 percent of the samples shall exceed 230/100 ml.
- ³ Fecal coliform density shall not exceed a geometric mean of 200/100 ml. Enterococcus density shall not exceed a geometric mean of 35/100 ml.
- ⁴ Fecal coliform density in a single sample shall not exceed 400/100 ml. Enterococcus density shall not exceed a geometric mean of 104/100 ml.

## V. MALIBU CREEK WATERSHED MANAGEMENT AREA NON-STORM WATER ACTION LEVELS

## Table G-17. Action Levels for Discharges to Inland Surface Waters, Enclosed Bays, and Estuaries (with receiving water salinity equal to or less than 1 ppt)

Parameter	Units	Average Monthly	Daily Maximum
E. Coli Bacteria	#/100 ml	126 ¹	235 ²
Sulfate	mg/L	3	
Total Dissolved Solids	mg/L	3	
Cyanide, Total Recoverable	µg/L	4.3	8.5
Mercury, Total Recoverable	µg/L	0.051	0.10
Selenium, Total Recoverable	µg/L	4.1	8.2

*E. Coli* density shall not exceed a geometric mean of 126/100 ml.

² *E. Coli* density in a single sample shall not exceed 235/100 ml.

³ In accordance with applicable water quality objectives contained in Tables 3-8 and 3-10 of the Basin Plan.

## Table G-18. Action Levels for Discharges to Inland Surface Waters, Enclosed Bays, and Estuaries (with receiving water salinity between 1 ppt and 10 ppt)

Parameter	Units	Average Monthly	Daily Maximum
E. Coli Bacteria	#/100 ml	126 ¹	235 ²
Total Coliform Bacteria	#/100 ml	1,000 ³	10,000 ⁴
Fecal Coliform Bacteria	#/100 ml	200 ³	400 ⁴
Enterococcus Bacteria	#/100 ml	35 ³	104 ⁴
Sulfate	mg/L	5	
Total Dissolved Solids	mg/L	5	
Cyanide, Total Recoverable	µg/L	0.50	1.0
Mercury, Total Recoverable	µg/L	0.051	0.10
Selenium, Total Recoverable	µg/L	4.1	8.2

E. Coli density shall not exceed a geometric mean of 126/100 ml.

² *E. Coli* density in a single sample shall not exceed 235/100 ml.

³ Total coliform density shall not exceed a geometric mean of 1,000/100 ml. Fecal coliform density shall not exceed a geometric mean of 200/100 ml. Enterococcus density shall not exceed a geometric mean of 35/100 ml.

⁴ Total coliform density in a single sample shall not exceed 10,000/100 ml. Fecal coliform density in a single sample shall not exceed 400/100 ml. Enterococcus density shall not exceed a geometric mean of 104/100 ml.

⁵ In accordance with applicable water quality objectives contained in Tables 3-8 and 3-10 of the Basin Plan.

# Table G-19. Action Levels for Discharges to Inland Surface Waters, Enclosed Bays, and Estuaries (with receiving water salinity equal to or greater than 10 ppt 95% or more of the time)

Parameter	Units	Average Monthly	Daily Maximum
Total Coliform Bacteria	#/100 ml	1,000 ^{1, 2}	10,000 ^{2, 3}

Attachment G - Non-Storm Water Action Levels

**RB-AR4480** 

		Daily Maximum
#/100 ml	200 ¹	400 ³
#/100 ml	35 ¹	104 ³
mg/L	4	
mg/L	4	
µg/L	0.50	1.0
µg/L	0.051	0.10
µg/L	58	117
	#/100 ml mg/L mg/L μg/L μg/L	#/100 ml         35 ¹ mg/L         4           mg/L         4           μg/L         0.50           μg/L         0.051

Total coliform density shall not exceed a geometric mean of 1,000/100 ml. Fecal coliform density shall not exceed a geometric mean of 200/100 ml. Enterococcus density shall not exceed a geometric mean of 35/100 ml.

² In areas where shellfish may be harvested for human consumption, as determined by the Regional Water Board, the median total coliform density shall not exceed 70/100 ml and not more than 10 percent of the samples shall exceed 230/100 ml.

³ Total coliform density in a single sample shall not exceed 10,000/100 ml. Fecal coliform density in a single sample shall not exceed 400/100 ml. Enterococcus density shall not exceed a geometric mean of 104/100 ml.

⁴ In accordance with applicable water quality objectives contained in Tables 3-8 and 3-10 of the Basin Plan.

### Table G-20. Action Levels for Discharges to Ocean Waters (Surf Zone)

Parameter	Units	6-Month Median	Daily Maximum	Instantaneous Maximum
Total Coliform Bacteria	#/100 ml	70 ¹	230 ¹	
Fecal Coliform Bacteria	#/100 ml		200 ²	400 ³
Enterococcus Bacteria	#/100 ml		35 ²	104 ³
Cyanide, Total Recoverable	µg/L	1	4	10
Mercury, Total Recoverable	µg/L	0.04	0.16	0.4
Selenium, Total Recoverable	µg/L	15	60	150

In areas where shellfish may be harvested for human consumption, as determined by the Regional Water Board, the median total coliform density shall not exceed 70/100 ml and not more than 10 percent of the samples shall exceed 230/100 ml.

Fecal coliform density shall not exceed a geometric mean of 200/100 ml. Enterococcus density shall not exceed a geometric mean of 35/100 ml.

³ Fecal coliform density in a single sample shall not exceed 400/100 ml. Enterococcus density shall not exceed a geometric mean of 104/100 ml.

### VI. SAN GABRIEL RIVER WATERSHED MANAGEMENT AREA

## Table G-21. Action Levels for Discharges to Inland Surface Waters, Enclosed Bays, and Estuaries (with receiving water salinity equal to or less than 1 ppt)

Parameter	Units	Average Monthly	Daily Maximum
рН	Standard units	6.0-	9.0 ¹
E. Coli Bacteria	#/100 ml	126 ²	235 ³
Chloride	mg/L	4	
Nitrate Nitrogen, Total (as N)	mg/L	4	
Sulfate	mg/L	4	
Total Dissolved Solids	mg/L	4	

**RB-AR4481** 

Parameter	Units	Average Monthly	Daily Maximum
Aluminum, Total Recoverable	mg/L	1.0 ⁵	
Cyanide, Total Recoverable	µg/L	4.3	8.5
Cadmium, Total Recoverable	µg/L	6	6
Copper, Total Recoverable	µg/L	6	6
Lead, Total Recoverable	µg/L	6	6
Mercury, Total Recoverable	µg/L	0.051	0.10
Nickel, Total Recoverable	µg/L	6	6
Selenium, Total Recoverable	µg/L	4.1	8.2
Silver, Total Recoverable	µg/L	6	6
Zinc, Total Recoverable	µg/L	6	6

Within the range of 6.5 to 8.5 at all times.

² *E. Coli* density shall not exceed a geometric mean of 126/100 ml.

³ *E. Coli* density in a single sample shall not exceed 235/100 ml.

⁴ In accordance with applicable water quality objectives contained in Tables 3-8 and 3-10 of the Basin Plan.

⁵ Applicable only to discharges to receiving waters or receiving waters with underlying groundwater designated for Municipal and Domestic Supply (MUN) use as specified in Tables 2-1 and 2-2 of the Basin Plan.

⁶ Action levels are hardness dependent. See Section VII of this Attachment for a listing of the applicable action levels.

# Table G-22. Action Levels for Discharges to Inland Surface Waters, Enclosed Bays, and Estuaries (with receiving water salinity between 1 ppt and 10 ppt)

Parameter	Units	Average Monthly	Daily Maximum
рН	Standard units	6.0-	9.0 ¹

### ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

#### MUNICIPAL ACTION LEVELS VIII.

# **Conventional Pollutants**

Pollutants	рН	TSS mg/L	COD mg/L	Kjedahl Nitrogen (TKN) mg/L	Nitrate & Nitrite- total mg/L	P- total mg/L
Municipal Action Level	7.70	264.1	247.5	4.59	1.85	0.80

# Metals

Pollutants	Cd- total	Cr-total	Cu- total	Pb- total	Ni- total	Zn- total	Hg- total
	µg/L	µg/L	µg/L	µg/L	µg/L	µg/L	µg/L
Municipal Action Level	2.52	20.20	71.12	102.00	27.43	641.3	0.32

This Order establishes Municipal Action Levels (MALs) to identify subwatersheds requiring A additional Best Management Practices (BMPs) to reduce pollutant loads and prioritize implementation of additional BMPs. MALs for selected pollutants are based on nationwide Phase MS4 for pollutants Т monitorina data in storm water (http://unix.eng.ua.edu/~rpitt/Research/ms4/mainms4.shtml, last visited on May 9, 2012). The MALs were obtained by computing the upper 25th percentile for selected pollutants for Rain Zone 6.

Under this Order, the Municipal Action Levels (MALs) shall be utilized by Permittees to identify subwatersheds discharging pollutants at levels in excess of the MALs. Within those subwatersheds where pollutant levels in the discharge are in excess of the MALs, Permittees shall implement controls and measures necessary to reduce the discharge of pollutants.

In order to determine if MS4 discharges are in excess of the MALs, Permittees shall conduct outfall monitoring as required in the Monitoring and Reporting Program (MRP) (Attachment E). A MAL Assessment Report shall be submitted to the Regional Water Board Executive Officer as part of the Annual Report. The MAL Assessment Report shall present the monitoring data in comparison to the applicable MALs, and identify those subwatersheds with a running average of twenty percent or greater of exceedances of the MALs listed in this attachment in discharges of storm water from the MS4.

Beginning in Year 3 after the effective date of this Order, each Permittee shall submit a MAL Action Plan with the Annual Report (first MAL Action Plan due with December 15, 2013 Annual Report) to the Regional Water Board Executive Officer, for those subwatersheds with a running average of twenty percent or greater of exceedances of the MALs in any discharge of storm water from the MS4. The plan shall include an assessment of the sources responsible Attachment G – Non-Storm Water Action Levels G-17

Los Angeles County Municipal Separate Storm Sewer System ORDER NO. R4-2012-XXXX NPDES NO. CAS004001

for the MAL exceedances, the existing storm water programs and BMPs that address those sources, an assessment of potential program enhancements, alternative BMPs and actions the Permittee shall implement to reduce discharges to a level that is equivalent to or below the MALs, and an implementation schedule for such actions for Executive Officer approval. The MAL Action Plan shall provide the technical rationale to demonstrate the proposed measures and controls will attain the MALs. If the MAL Action Plan is not approved within 90 days of the due date, the Executive Officer may establish an appropriate plan with at least 90 day notification and consultation to the Permittees.

Within 90 days of the plan approval by the Regional Water Board Executive Officer, the Permittee shall initiate the BMPs and actions proposed in the MAL Action Plan, together with any other practicable BMPs or actions that the Executive Officer determines to be necessary to meet the MALs. The Permittee shall complete the proposed actions in accordance with the approved implementation schedule.

Upon completion of the actions specified in the approved MAL Action Plan, the Permittee shall re-monitor the subject subwatershed in accordance with the MRP, and submit a Post-Project MAL Assessment Report to the Regional Water Board Executive Officer.

As additional data become available through the MRP or from the Regional Subset of the National Dataset, MALs may be revised annually by the Regional Water Board Executive Officer in accordance with an equivalent statistical method as that used to establish the MALs in this attachment with at least 90 day notification and consultation to the Permittees.

Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angeles, CA 90013

#### SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request the Regional Board to provide sufficient time for review the draft NPDES Permit for MS4 Discharges needed to make this process **open and transparent**.

The LA Permit Group is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for new water quality monitoring, however our permittees have been given only 45 days to provide written comments.

While we understand a new MS4 Permit is long overdue in LA County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. It is in everyone's best interest to keep the permitting process as open and transparent as possible. Through this entire process, the LA Permit Group has committed to a process that would cooperatively develop the next MS4 Permit. We have made every effort to stay engaged in the process and have proactively sought involvement in all aspects of the Permit development. The LA Permit Group is appreciative of the efforts the Board and Staff has taken to review certain aspects of the Permit with permittees in workshops; however, upon release of the Tentative, many of the Permit provisions contained substantial changes from previous versions, or contained brand new sections that we had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only 45 days to comment makes it impossible for this process to be open and transparent. In order to develop and provide relevant and meaningful comments, each permittees must first:

- Read a 500 page permit,
- Study the 500 page permit to understand how the provisions work together,
- Compare it to the last permit,
- Evaluate the resource needs to comply with the permit,
- Determine the fiscal and organizational impacts on city services; this requires coordination with several city departments,
- Prepare legal review and comments,

# **RB-AR4503**

- Present information to and gather feedback from municipal governing body (the process of scheduling an item for a City Council Agenda requires at least 30-60 days in most cities). This does not allow staff time to conduct the following items listed above prior to presenting to their governing bodies, and then
- prepare written comments

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The <u>45-day comment period does not allow time for permittees to fully discuss the permit amongst each other</u> in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also necessary as many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit, coordinate and prepare comments.

Furthermore, for this process to be clearly open and transparent, permittee (City) staff should be given sufficient time to vet this permit within our agency staff and with our elected officials and then be given time to discuss and negotiate issues with Regional Board staff prior to the Tentative Draft comments due date.

The LA Permit Group respectfully requests for the comment period to be extended by **180 working days** for permittees to first try to work with Regional Board staff to draft a permit that has a reasonable chance for compliance and then prepare written comments on un-resolved issues. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

If you have any questions or request additional information, I may be reached at (626) 932-5577 or hmaloney@ci.monrovia.ca.us.

Sincerelv

Heather M. Maloney, Chair LA Permit Group

### RE: REQUEST FOR PUBLIC REVIEW AND COMMENT PERIOD TIME EXTENSION REGARDING THE TENTATIVE NPDES PERMIT FOR MS4 DISCHARGES WITHIN THE LOS ANGELES COUNTY FLOOD CONTROL DISTRICT, INCLUDING UNINCORPORATED AREAS OF LOS ANGELES COUNTY, AND THE INCORPORATED CITIES THEREIN, EXCEPT THE CITY OF LONG BEACH (NPDES PERMIT NO. CAS004001)

Dear Honorable Chairperson Mehranian:

On behalf of the City of Vernon, a named Permittee of the tentative National Pollutant Discharge Elimination System (NPDES) for Municipal Separate Storm Sewer System (MS4) Discharges within the Los Angeles County Flood Control District, including unincorporated areas of Los Angeles County and the incorporated cities therein, except the City of Long Beach (NPDES Permit No. CAS004001), we request at minimum a 180-day time extension to review and comment on the aforementioned permit. We would like to express our interest in submitting comments, but the 45-day comment period provided to Permittees is an insufficient amount of time to perform an adequate review and provide meaningful comments. Additionally, we request that a revised tentative permit be released with a reasonable comment period so that Permittees have the opportunity to review any changes made to the permit and have an opportunity to provide comments prior to the adoption hearing.

The draft Los Angeles County NPDES MS4 Permit is not only voluminous, it is also an exceptionally complex technical document with requirements that are enormously intricate and have significant, far-reaching implications. The requirements deal not just with the compliance points but also with compliance schedules that immediately place the Permittees out of compliance and potentially liable for third-party lawsuits. As a Permittee, we are just beginning to understand the range of risks that might result from these requirements.

Moreover, the opportunity for public comment on other NPDES Permits such as the Caltrans, Ventura County NPDES MS4 and General Construction Permits was much more generous and as much

Exclusively Industrial

as two (2) years to review these respective draft NPDES permits. The City needs adequate time to carefully review each of the requirements and provide meaningful comments. A forty-five (45) day comment period is simply an inadequate amount of time to fully examine the tentative Los Angeles County NPDES MS4 permit.

We understand that Los Angeles Regional Water Quality Control Board staff has set July 23, 2012, as the deadline for Permittees to submit comments on the draft permit. Yet this is insufficient time for our staff to review the 500+page permit, fully understand the implications of the permit, its effects on both the City's resources and financial capabilities then to meet and confer with our management and City Council. With so much at stake the impacted cities review should not be rushed and sacrificed.

In anticipation of the Supreme Court's decision to hear the Los Angeles County's appeal on the case involving NRDC v. Los Angeles County Flood Control District, this too may make a significant impact on the responsibilities of this tentative Los Angeles County NPDES MS4 permit. Therefore, the review period should not end until such time as the Court has rendered its opinion.

We hope you understand our concerns and that the Permittees be given additional time to adequately review and respond to the tentative Los Angeles County NPDES MS4 permit. This simply cannot be accomplished within the 45-day window. As such, the City of Vernon respectfully requests at minimum a 180-day time extension to review and comment on the aforementioned permit. Additionally, we request that a revised tentative permit be released with a reasonable comment period so that Permittees have the opportunity to review any changes made to the permit and have an opportunity to provide comments prior to the adoption hearing.

Sincerely,

Samuel Kevin Wilson, P.E. Director of Community Services & Water

Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angeles, CA 90013

Honorable Chairperson Mehranian:

### SUBJECT: Comment Period for Draft NPDES Permit for LA County MS4 Discharges

The City of Hermosa Beach received the June 6, 2012 Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. We strongly urge the Board to extend the comment period on this permit as requested in the letter sent by the LA Permit Group. The LA Permit Group has been working proactively and diligently through twice monthly general meetings as well as additional subcommittee meetings to promote constructive collaboration and problem-solving between the Permittees and the Los Angeles Regional Water Quality Control Board (LARWQCB) toward development of a new NPDES Permit that is capable of integrating the protection of water quality with other watershed objectives in a cost-effective and science-based manner to focus limited municipal resources on implementation of water quality protection activities that are efficient, effective and sustainable.

This draft permit represents a paradigm shift in the approach to permitting of municipal stormwater, yet our staff has been given a scant 45 days to review and understand the provisions and prepare written comments. The draft permit is over 500 pages long incorporating provisions for a host of new TMDLs, restructuring of the permit centered on a Watershed Management Approach, extensive new requirements for water quality monitoring, with a myriad of new provisions throughout the permit including significant new administrative requirements. Our staff must have more time to fully digest the permit provisions and the 151-page fact sheet laying out the basis for these provisions. We need this time to provide cogent comments for your staffs' consideration in order to create a workable and implementable permit that achieves our mutual objectives of protecting and improving the quality of receiving waters in the Santa Monica Bay.

Maria Mehranian, Chairperson California Regional Water Quality Control Board July 5, 2012 Page Two

The City of Hermosa Beach is committed to protecting and improving the water quality of the Santa Monica Bay and has taken the opportunity to utilize Federal ARRA funding through the Clean Water State Revolving Fund to implement two award winning water quality projects for the benefit of water quality in the Santa Monica Bay. However it is crucial in this time of fiscal austerity that we have time to assess the organizational and budget impacts of these new permit provisions to ensure that our scarce public funds are utilized in the most effective manner to achieve water quality objectives.

It would be a mistake to rush this important permit through the approval process without providing sufficient opportunity for review and comment and to work with your staff to improve the permit; your decision on this matter will not be fully informed unless sufficient time is allocated for that process. The City of Hermosa Beach respectfully requests that the Regional Board lengthen the review period for this draft permit and provide a more reasonable schedule for permit development as requested by the LA Permit Group prior to an adoption hearing, allowing at least 6 months or 180 working days for municipal staff to work with Regional Board staff through the permit development process.

Sincerely,

Telila

Honorable Chairperson Mehranian:

### SUBJECT: Request for extended Comment Period for Draft NPDES Permit for MS4 Discharges

The City of Torrance is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements, and extensive new requirements for new water quality monitoring.

It is the City's belief that the Regional Board desires a review process that is open and transparent; however, the Board has only allowed participating cities 45 days to read and learn a 500-page permit, meet with affected divisions for input, compare it to the last permit, evaluate the resources that will be required to comply, determine the fiscal and organizational impacts on City services, and present that information to our governing body, then prepare written comments to follow-up with the Regional Board.

In order to adequately respond to the request for comment, permittee (City) staff should be given sufficient time to vet this permit within our agency and with our elected officials, and adequate time to negotiate with Regional Board staff issues of the permit compliance. Attempting to rush this landmark regulation through the approval process is of concern, as it is in everyone's best interest to keep the permitting process as open and transparent as possible. It is our understanding that other Regional Boards have had a year or two to completely vet a new NPDES Permit for MS4 Discharges.

Maria Mehranian, Chairperson California Regional Water Quality Control Board July 5, 2012 Page 2 of 2

The City of Torrance respectfully requests six months or **180 working days** for the opportunity to review and work with Regional Board staff to draft a permit that has a reasonable chance for compliance and then prepare written comments on unresolved issues.

Please contact Ms. Fran Fulton, Senior Management Associate with the City Manager's Office, at (310) 618-2875 or <u>FFulton@TorranceCA.gov</u> for further discussion on this matter.

Sincerely,

LeRoy J Jackson City Manager

### SUBJECT: Comment Period for Draft National Pollutant Discharge Elimination System (NPDES) Permit for Municipal Separate Storm Sewer System (MS4) Discharges within Los Angeles County

Honorable Chairperson Mehranian:

Please accept this letter as a request from the City of Hidden Hills (City) for the California Regional Water Quality Control Board (Regional Board) to provide sufficient time for review of the draft National Pollutant Discharge Elimination System (NPDES) Permit for Municipal Separate Storm Sewer System (MS4) Discharges within Los Angeles County (Permit).

The City is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit, and the draft Permit. This draft Permit is over five-hundred (500) pages and incorporates provisions for thirty-three (33) TMDLs and implementation requirements, new low impact development requirements, and extensive new requirements for new water quality monitoring; however, the permittees have been given only forty-five (45) days to provide written comments.

While the City understands a new Permit is long overdue in Los Angeles County, we are concerned by the very expedited review and approval process for this landmark regulation. We believe it is in everyone's best interest to keep the permitting process as open and transparent as possible. The City has committed to a process that would cooperatively develop the next Permit. We have made every effort to stay engaged with Regional Board Staff in the process and have proactively sought involvement in all aspects of the Permit development. The City is appreciative of the efforts the Board and Staff have taken to review certain aspects of the Permit with permittees in workshops; however, upon release of the Tentative Permit on June 7, 2012, many of the Permit provisions contained substantial changes from previous versions, or contained brand new sections that we had not yet seen throughout this process. Seeing the Tentative Permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the Permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only forty-five (45) days to comment makes this impossible. In order to develop and provide relevant and meaningful comments, each permittees must first:

- Read a 500 page Permit;
- Study the 500 page Permit to understand how the provisions work together;
- Compare it to the last Permit;
- Evaluate the resource needs to comply with the Permit;

Maria Mehranian, Chairperson July 6, 2012 Page 2

- Determine the fiscal and organizational impacts on City services, which requires coordination with several City departments;
- Prepare legal review and comments;
- Present information to and gather feedback from the City Council. Staff needs time to conduct a thorough review of the items listed above, prior to presenting them to the City Council; and,
- Prepare written comments.

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The <u>45-day comment period</u> <u>does not allow time for permittees to fully discuss the Permit</u> in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also necessary, as many of the Permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale.

Lastly, for this process to be clearly open and transparent, City staff should be given sufficient time to vet this Permit with our elected officials, and then be given time to discuss and negotiate issues with Regional Board Staff prior to the Tentative Draft comments due date.

The City of Hidden Hills respectfully requests that the comment period be extended by one-hundred and eighty (**180**) working days for permittees to work with Regional Board Staff to draft a Permit that has a reasonable chance for compliance, and to prepare written comments on un-resolved issues. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

If you have any questions or need additional information, please contact Kimberly Colbert, the City's Environmental Coordinator, at (310) 257-2004.

Sincerely,

# Re: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request the Regional Board to provide sufficient time for review the draft NPDES Permit for MS4 Discharges needed to make this process open and transparent.

The City of Paramount is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for new water quality monitoring, however our permittees have been given only 45 days to provide written comments.

While we understand a new MS4 Permit is long overdue in LA County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. It is in everyone's best interest to keep the permitting process as open and transparent as possible. Through this entire process, the City of Paramount has committed to a process that would cooperatively develop the next MS4 Permit. We have made every effort to stay engaged in the process and have proactively sought involvement in all aspects of the Permit development. The City of Paramount is appreciative of the efforts the Board and Staff has taken to review certain aspects of the Permit with permittees in workshops; however, upon release of the Tentative, many of the Permit provisions contained substantial changes from previous versions, or contained brand new sections that we had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only 45 days to comment makes it impossible for this process to be open and transparent. In order to develop and provide relevant and meaningful comments, each permittees must first:

- Read a 500 page permit,
- Study the 500 page permit to understand how the provisions work together,
- Compare it to the last permit,
- Evaluate the resource needs to comply with the permit,

- Determine the fiscal and organizational impacts on city services; this requires coordination with several city departments,
- Prepare legal review and comments,
- Present information to and gather feedback from municipal governing body (the process
  of scheduling an item for a City Council Agenda requires at least 30-60 days in most
  cities). This does not allow staff time to conduct the following items listed above prior to
  presenting to their governing bodies, and then
- Prepare written comments

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The 45-day comment period does not allow time for permittees to fully discuss the permit amongst each other in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also necessary as many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit, coordinate and prepare comments.

Furthermore, for this process to be clearly open and transparent, City staff should be given sufficient time to vet this permit within our agency staff and with our elected officials and then be given time to discuss and negotiate issues with Regional Board staff prior to the Tentative Draft comments due date.

The City of Paramount respectfully requests for the comment period to be extended by 180 working days for permittees to first try to work with Regional Board staff to draft a permit that has a reasonable chance for compliance and then prepare written comments on un-resolved issues. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

If you have any questions or request additional information, I may be reached at 562-220-2020.

Re: Comments on Tentative County of Los Angeles Municipal Separate Storm Sewer System (MS4) Permit (NPDES No. CAS00400, Order No. R4-2012-XXXX)

Honorable Chairperson Mehranian:

Los Angeles, California 90013

Thank you for the opportunity to provide comments on the tentative County of Los Angeles Municipal Separate Storm Sewer System Permit (hereinafter referred to as the "LA MS4 Permit"). The City of San Dimas ("City") is a Permittee of the LA MS4 Permit and is located in the San Gabriel River Watershed. As a Permittee, the City would like to request the following:

Extension of the proposed Permit adoption date and

Timeline extension as outlined in Part VI.D.1.b.

Extension of the Proposed Permit Adoption Date

The proposed LA MS4 Permit adoption date of September 6, 2012 should be extended at least six (6) months (180 days) to provide adequate time for thorough review and necessary coordination, As whatever form the final permit is adopted, it will likely result in costly compliance with TMDLs and other requirements. For this reason we request an extension to allow adequate time to gauge and comprehend the budgetary impact to our budget. In addition, the LA MS4 Permit adoption schedule should parallel the adoption schedules provided to cities in the neighboring Counties of Orange and Ventura, as well as in San Diego County. Regional Boards for the aforementioned counties released and adopted MS4 Permits as follows:

- San Diego Regional Board released tentative Order No. R9-2012-0011 on April 9, 2012 and has indicated that they will allow permittees at least one (1) year to negotiate and prepare for the upcoming permit requirements.
- Santa Ana Regional Board posted Tentative Order No. R8-2008-0030 on November 10, 2008. Following four (4) draft Permits the final MS4 Permit was adopted on May 22, 2009. (6 months)

245 EAST BONITA AVENUE • SAN DIMAS • CALIFORNIA 91773-3002 • [909] 394-6200 • FAX [909] 394-6209

Comments on Tentative County of Los Angeles Municipal Separate Storm Sewer System (MS4) Permit (NPDES No. CAS00400, Order No.. R4-2012-XXXX)

July 6, 2012

Page 2

**RB-AR4515** 

 Los Angeles Regional Board – released the draft Ventura County MS4 Permit on April 29, 2008. This draft later became Order R4-2009-0057 and was adopted on May 7, 2009. (one (1) year)

#### Timeline Extension As Outlined in Part VI.D.1.b.

The timeline for LA MS4 Permit implementation in Part VI.D.1.b. should be extended from thirty (30) days to a <u>minimum of 120 days</u>. This extension will allow adequate time to develop ordinances, modify municipal codes, legal protocols for public hearings, and storm water programs (not otherwise given a compliance date) to make them consistent with the proposed LA MS4 Permit.

The City also requests that the LA MS4 Permit language mirror language in the tentative Caltrans Municipal Separate Storm Sewer System (MS4) Permit revised April 27, 2012. Language that

- Provides for an iterative process (trial and error process in meeting a TMDL);
- Assures Permittee compliance with the LA MS4 Permit and waste load allocations as long as BMPs are implemented;
- Determines compliance at the outfall and <u>not</u> the receiving water through BMP WQBELs rather than strict numeric WQBELs; and
- Relieves Permittees of having to comply with wet weather waste load allocations via Ambient monitoring that satisfy the receiving water monitoring requirement, to be conducted by the Regional Board using the SWAMP surcharge on the annual MS4 permit fee.

Again, thank you for the opportunity to provide comments on the tentative LA MS4 Permit. Should you have any questions or need additional information, please contact me at your convenience at (909) 394-6245 or via email at kpatel@ci.san-dimas.ca.us.

Sincerely,

# SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request that the Regional Board provide sufficient time for reviewing the draft NPDES Permit for MS4 Discharges and the need to make this process open and transparent.

The City of Inglewood is in receipt of the Notice of Opportunity for Public Comment and the Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. The draft permit is over 500 pages long and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for new water quality monitoring; however, permittees have only been given 45 days to provide written comments.

Providing permittees only 45 days to comment makes it nearly impossible to develop and provide relevant and meaningful comments. We feel that it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit and coordinate and prepare comments.

The City of Inglewood respectfully requests for the comment period to be extended by 180 working days. Additionally, we request that a revised Tentative Permit be released with a 45- day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

The City of Inglewood is a member of and in support of the LA Permit Group. If there are any additional questions, please feel free to contact Lauren Amimoto at (310) 412-5192.

Sincerely. Harry/Frisby, Jr.

July 10, 2012

Office of the City Manager

Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angeles, CA 90013

# SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request the Regional Board to provide sufficient time for review of the draft NPDES Permit for MS4 Discharges needed to make this process **open and transparent**.

The City of Pomona is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This Draft Permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements, and extensive new requirements for new water quality monitoring. However, the Los Angeles County Permittees have been given only 45 days to provide written comments.

While we understand a new MS4 Permit is long overdue in LA County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. Through this entire draft development, the City of Pomona has committed to a process that would cooperatively develop the next MS4 Permit. City staff has made every effort to stay engaged in the process and have proactively sought involvement in all aspects of the Permit development. The City of Pomona is appreciative of the efforts the Regional Board staff has taken to review certain aspects of the Permit with Permittees in workshops. However, upon release of the Draft Tentative Los Angeles County MS4 Permit, many of the Permit provisions contained substantial changes from previous versions, or contained brand new sections that staff has not yet seen throughout this process. Seeing the Permit in its entirety, and having the opportunity to understand how each of the sections and programs work together, is imperative in order for all Permittees to fully understand the Permit provisions and to prepare comments.

City of Pomona staff believes the Regional Board wants a review process that is collaborative; however, providing Permittees only 45 days to comment makes it impossible for this process to achieve that goal. In order to develop and provide relevant and meaningful comments, each Permittees must first:

- Read a 500 page permit;
- Study the 500 page permit to understand how the provisions work together;
- Compare it to the last permit;

Comment Period for Draft Tentative NPDES Permit for MS4 Discharges Page 2 of 2

- Evaluate the resource needs to comply with the permit;
- Determine the fiscal and organizational impacts on City services; this requires coordination with several City Departments;
- Time for City Attorney to review Draft Tentative Permit and provide comments;
- Present information to and gather feedback from municipal governing body (the process of scheduling an item for a City Council Agenda requires at least 30-60 days in most cities). This does not allow staff time to conduct the following items listed above prior to presenting to their governing bodies; and
- Prepare written comments to Regional Board by July 23, 2012

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft Tentative MS4 Permit. <u>The 45-day comment period does not allow time for Permittees to fully discuss the Permit amongst each other in order to adequately coordinate comments and responses</u>. This process is not only desired by Permittees, but also necessary as many of the Permit provisions are intended for Permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that Permittees (staff and elected officials) be allowed adequate time to fully understand the Permit, coordinate and prepare comments.

Furthermore, for this process to be clearly open and transparent, City staff should be given sufficient time to vet this Permit within our agency staff, and with our elected officials, and then be given time to discuss and negotiate issues with Regional Board staff prior to the Tentative Draft comments due date.

The City of Pomona respectfully requests for the comment period to be extended by **180 working days** for Permittees to first try to work with Regional Board staff to draft a Permit that has a reasonable chance for compliance, and then prepare written comments on un-resolved issues. Additionally, we request that a Revised Tentative MS4 Permit be released with a 45-day comment period so that Permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

If you have any questions or request additional information, please contact Julie Carver, Environmental Programs Coordinator at (909) 620-3628.

July 10, 2012

Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angeles, CA 90013

#### SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

The City of Santa Monica is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This draft permit is over 500 pages long and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for water quality monitoring. Despite the comprehensiveness and complexity of this permit document, permittees have been given only 45 days to review and provide written comments. With this letter we respectfully request the Regional Board to extend the review and comment period to provide permittees sufficient time to evaluate the Draft Permit.

The City of Santa Monica is appreciative of the efforts the Board and Staff have taken to review certain aspects of the Permit with permittees in workshops; however, many of the Draft Permit provisions contain substantial changes from previous versions, or contain new sections that had not been previously seen by permittees. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is essential for permittees to fully understand the permit provisions and to prepare comments.

In order to develop and provide relevant and meaningful comments, each permittee must first:

- Read and evaluate the 500+ page permit in light of current and future compliance efforts, including policies, code requirements, BMPs, monitoring and enforcement
- · Evaluate the resource needs to comply with the permit moving forward
- · Determine the fiscal and organizational impacts on city services
- Complete legal review and draft comments
- Present information to and gather feedback from City Council (which requires at least 30-60 days in most cities)
- Prepare final written comments

Additionally, emphasis on coordination of comments among cities has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. This process is essential because many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit, coordinate and prepare comments. However, the current 45-day comment period does not allow sufficient time for cities to adequately coordinate responses.

For the reasons noted above the City of Santa Monica respectfully requests the comment period be extended by **180 working days** to allow for a thorough review and comment on the Draft NPDES Permit prior to the Adoption Hearing. Thank you for your consideration of this request.

Sincerely,

Rod Gould City Manager

#### SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request the Regional Board to provide sufficient time for review the draft NPDES Permit for MS4 Discharges needed to make this process **open and transparent**.

The City of La Cañada Flintridge (City) is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for new water quality monitoring, however our permittees have been given only 45 days to provide written comments.

While we understand a new MS4 Permit is long overdue in LA County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. It is in everyone's best interest to keep the permitting process as open and transparent as possible. Through this entire process, the City has committed to a process that would cooperatively develop the next MS4 Permit. We have made every effort to stay engaged in the process and have proactively sought involvement in all aspects of the Permit development. The City is appreciative of the efforts the Board and Staff has taken to review certain aspects of the Permit with permittees in workshops; however, upon release of the Tentative, many of the Permit provisions contained substantial changes from previous versions, or contained brand new sections that we had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only 45 days to comment makes it impossible for this process to be open and transparent. In order to develop and provide relevant and meaningful comments, each permittees must first:

- Read a 500 page permit,
- Study the 500 page permit to understand how the provisions work together,
- Compare it to the last permit,
- · Evaluate the resource needs to comply with the permit,
- Determine the fiscal and organizational impacts on city services; this requires coordination with several city departments,
- Prepare legal review and comments,

Comment Period for Draft NPDES Permit for MS4 Discharges Page 2 of 2

- Present information to and gather feedback from municipal governing body (the process of scheduling an item for a City Council Agenda requires at least 30-60 days in most cities). This does not allow staff time to conduct the following items listed above prior to presenting to their governing bodies, and then
- prepare written comments

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The <u>45-day comment period does not allow time for permittees to fully discuss the permit amongst each other</u> in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also necessary as many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit, coordinate and prepare comments.

Furthermore, for this process to be clearly open and transparent, permittee (City) staff should be given sufficient time to vet this permit within our agency staff and with our elected officials and then be given time to discuss and negotiate issues with Regional Board staff prior to the Tentative Draft comments due date.

The City respectfully requests for the comment period to be extended by **180 working days** for permittees to first try to work with Regional Board staff to draft a permit that has a reasonable chance for compliance and then prepare written comments on un-resolved issues. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

If you have any questions or request additional information, I may be reached at (818) 790-8880.

Sincerely,

Eablah

Stephen A. Del Guercio Mayor

Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angles, CA 90013

Honorable Chairperson Mehranian:

# SUBJECT: Comment Period for Draft NPDES Permit for LA County MS4 Discharges

The City of Manhattan Beach received the June 6, 2012 Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for LA County MS4 Discharges. We believe it is crucial that the Board extend the comment period on this permit as requested in the letter sent by the LA Permit Group.

This draft permit represents a significant new approach to permitting of municipal stormwater, yet our staff has been given less than 45 days to review and understand the provisions and prepare written comments. This draft permit is over 500 pages long incorporating provisions for many new TMDLs, restructuring of the permit centered on a Watershed Management Approach, extensive new requirements for water quality monitoring, with significant new administrative provisions throughout the permit. Our staff needs sufficient time to fully understand the permit provisions and the 151-page fact sheet laying out the basis for these provisions. Without this time we cannot provide cogent comments for your staff's consideration to create a workable and implementable permit that achieves our mutual objectives of protecting and improving the quality of receiving waters in the Los Angeles Basin.

The City of Manhattan Beach is committed to protecting and improving the water quality of the Santa Monica Bay and to working with your staff to achieve that objective. However in this time of fiscal austerity we must be afforded the opportunity to assess the organizational and budget resources that will be required by these new permit provisions to ensure that our precious public funds are deployed in the most effective way to achieve water quality objectives.

We urge you not to rush this important permit through the approval process without providing sufficient opportunity for review and comment and for Permittee staff to work with Regional Board staff to improve the permit; your decision on this matter will not be well-taken unless sufficient time is allocated for that process. The City of Manhattan Beach respectfully requests that the Regional Board lengthen the review period for this draft permit and provide a reasonable schedule for permit development as requested by the LA Permit Group, allowing at least 6 months or 180 working days for municipal staff to work with Regional Board staff through the permit development process.

Sincerely,

ore

David N. Carmany City Manager

# SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request that the Regional Board allow additional time for review of the draft NPDES Permit by MS4 dischargers prior to adoption in order for cities to be able to make informed and meaningful comments.

The City of Rosemead, a member agency of the LA Permit Group, is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for new water quality monitoring, however we have been given only 45 days to provide written comments.

While we understand a new MS4 Permit is long overdue in LA County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. It is in everyone's best interest to keep the permitting process as open and transparent as possible. Through this entire process, the LA Permit Group has committed to a process that would cooperatively develop the next MS4 Permit. We have made every effort to stay engaged in the process and have proactively sought involvement in all aspects of the Permit development. The LA Permit Group is appreciative of the efforts the Board and Staff has taken to review certain aspects of the Permit with permittees in workshops; however, upon release of the tentative draft, many of the Permit provisions contained substantial changes from previous versions, or contained brand new sections that we had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only 45 days to comment makes it impossible for this process to be such. In order to develop and provide relevant and meaningful comments, Cities like ourselves must first:

- Read a 500 page permit,
- Study the 500 page permit to understand how the provisions work together,
- Compare it to the last permit,
- Evaluate the resource needs to comply with the permit,
- Determine the fiscal and organizational impacts on city services; this requires coordination with several city departments,
- Prepare legal review and comments,
- Present information to and gather feedback from municipal governing body (the process of scheduling an item for a City Council Agenda requires at least 30-60 days in most cities). This does not allow staff time to conduct the following items listed above prior to presenting to their governing bodies, and
- Prepare written comments

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The 45-day comment period does not allow time for permittees to fully discuss the permit amongst each other in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also necessary as many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit, coordinate and prepare comments.

Furthermore, for this process to be clearly open and transparent, City staff should be given sufficient time to vet this permit within our agency staff and with our elected officials and then be given time to discuss and negotiate issues with Regional Board staff prior to the Tentative Draft comments due date.

The City of Rosemead, on behalf of the LA Permit Group, respectfully requests for the comment period to be extended by 180 working days. This extension will provide the opportunity for permittees to try to work with Regional Board staff to draft a permit that has a reasonable chance for compliance and then prepare written comments on unresolved issues. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

If you have any questions or need additional information, I can be reached at (626) 569-2100 or jallred@cityofrosemead.org.

Sincerely,

**Čity Manager** 

July 11, 2012

Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angeles, CA 90013

### SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request that the Regional Board provide sufficient time for review the draft NPDES Permit for MS4 Discharges needed to make this process open and transparent.

The City of San Gabriel is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for new water quality monitoring, however our permittees have been given a mere 45 days to provide written comments.

While we understand a new MS4 Permit is long overdue in Los Angeles County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. It is in everyone's best interest to keep the permitting process as open and transparent as possible. Through this entire process, the City of San Gabriel has committed to a process that would cooperatively develop the next MS4 Permit. We have made every effort to stay engaged in the process and have proactively sought involvement in all aspects of the Permit development. The City of San Gabriel is appreciative of the efforts the Board and Staff has taken to review certain aspects of the Permit with permittees in workshops; however, upon release of the Tentative, many of the Permit provisions contained substantial changes from previous versions, or contained brand new sections that we had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only 45 days to comment makes it impossible for this process to be open and transparent. In order to develop and provide relevant and meaningful comments, each permittee must: read the 502-page permit and associated appendices; study the permit to understand how the provisions work together; compare it to the last permit; evaluate the fiscal and staffing resource needs to comply with the permit; determine the associated impacts on city services; prepare legal review and comments; present information to city management and elected officials; and then, finally, prepare written comments.

Letter to Chairperson Mehranian July 10, 2012 Page 2 of 2

Emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The 45-day comment period does not allow time for permittees to fully discuss the permit amongst each other in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also necessary as many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit, coordinate and prepare comments.

Furthermore, for this process to be truly open and transparent, permittee staff should be allowed sufficient time to review this permit with other internal staff (e.g., city management and affected departments such as planning, code enforcement, fire, and water) as well as with our elected officials and be given time to discuss and negotiate issues with Regional Board staff prior to the Tentative Draft comments due date.

The City of San Gabriel respectfully requests that the comment period be extended by 180 working days to allow permittees time to work with Regional Board staff to reach agreement on numerous critical issues and then prepare written comments on still unresolved issues that may remain. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to review the changes and provide any final comments prior to the Adoption Hearing.

If you have any questions or request additional information, I may be reached at (626) 308-2806 ext. 4631 or dgrilley@sgch.org.

Sincerely, COMMUNITY DEVELOPMENT

## SUBJECT: REQUEST FOR EXTENSION OF THE LOS ANGELES MS4 PERMIT COMMENT PERIOD BY 180 WORKING DAYS

Honorable Chairperson Mehranian:

The City of Covina respectfully requests that the Regional Board provide sufficient time for the City and other stakeholders to review the draft NPDES Permit for MS4 Discharges by extending the comment period by 180 working days. This additional time is needed to ensure that the permit development process is open and transparent. The current timeline rushes the process and does not provide sufficient opportunity for the regulated cities to understand, analyze and comment on the myriad of provisions and impacts of the proposed permit.

The City of Covina is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit that was made available on June 6, 2012. The comment period that closes at noon on July 23, 2012, provides cities a mere 45 calendar days to review the Draft Permit, which is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for new water quality monitoring.

While we understand a new MS4 Permit is long overdue in LA County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. It is in everyone's best interest to keep the permitting process as open and transparent as possible. Through this entire process, as part of the LA Permit Group, the City of Covina has committed to a process that would cooperatively develop the next MS4 Permit. The City of Covina is appreciative of the efforts the Board and Staff has taken to review certain aspects of the Permit with permittees in workshops; however, upon release of the Tentative, many of the

Permit provisions contained substantial changes from previous versions, or contained brand new sections that we had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only 45 days to comment makes it impossible for this process to be open and transparent. In order to develop and provide relevant and meaningful comments, each permittees must first:

- Read a 500 page permit,
- Study the 500 page permit to understand how the provisions work together,
- Compare it to the last permit,
- Evaluate the resource needs to comply with the permit,
- Determine the fiscal and organizational impacts on city services; this requires coordination with several city departments,
- Prepare legal review and comments,
- Present information to and gather feedback from municipal governing body (the process of scheduling an item for a City Council Agenda requires at least 30-60 days in most cities). This does not allow staff time to conduct the following items listed above prior to presenting to their governing bodies, and then
- prepare written comments

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The 45-day comment period does not allow time for permittees to fully discuss the permit amongst each other in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also necessary as many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit, coordinate and prepare comments.

Furthermore, for this process to be clearly open and transparent, permittee (City) staff should be given sufficient time to vet this permit within our agency staff and with our elected officials and then be given time to discuss and negotiate issues with Regional Board staff prior to the Tentative Draft comments due date.

The City of Covina respectfully requests for the comment period to be extended by **180 working days** for permittees to first try to work with Regional Board staff to draft a permit that has a reasonable chance for compliance and then prepare written comments on un-resolved issues. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

Finally, please replace the City of Covina's Facility Contact name listed in the Draft Permit with my name, Vivian Castro, Environmental Services Manager. The other contact information listed for the City, including my email, is correct. If you have any questions or request additional information, I may be reached at (626) 384-5480.

Sincerely,

## SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request the Regional Board to provide sufficient time for permittee review of the draft NPDES Permit for MS4 Discharges.

The City of Lakewood is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for new water quality monitoring, however the city has been given only 45 days to provide written comments.

While we understand a new MS4 Permit is long overdue in LA County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. The City of Lakewood is appreciative of the efforts the Board and Staff has taken to review certain aspects of the Permit with permittees in workshops; however, upon release of the Tentative Permit, many of the Permit provisions contained substantial changes from previous versions, or contained brand new sections that had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for the city to fully understand the permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only 45 days to comment makes it impossible for this process to be open and transparent. In order to develop and provide relevant and meaningful comments, city staff must first:

- Read a 500 page permit,
- Study the 500 page permit to understand how the provisions work together,
- Compare it to the last permit,
- Evaluate the resource needs to comply with the permit,
- Determine the fiscal and organizational impacts on city services; this requires coordination with several city departments,
- Prepare legal review and comments,

Comment Period for Draft NPDES Permit for MS4 Discharges Page 2 of 2

- Present information to and gather feedback from our City Council (the process of scheduling an item for a City Council Agenda requires at least 30 days). This does not allow staff time to conduct the following items listed above prior to presenting to our Council, and then
- Prepare written comments

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The <u>45-day comment</u> period does not allow time for permittees to fully discuss the permit amongst each other in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also necessary as many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit, coordinate and prepare comments.

Furthermore, city staff should be given sufficient time to vet this permit within our executive management staff and with our elected officials prior to the Tentative Draft comments due date.

The City of Lakewood respectfully requests for the comment period to be extended by **180 working days** for permittees to work with Regional Board staff to draft a permit that has a reasonable chance for compliance and then prepare written comments on un-resolved issues. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

If you have any questions or request additional information, I may be reached at (562) 866-9771 ext. 2500.

Sincerely,

Dialmu Rapp

Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angeles, CA 90013

Subject: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request the Regional Board to provide sufficient time for reviewing the draft MS4 NPDES Permit to insure the process open and transparent and so that our City leaders can fully understand to true impact of these significant new regulations.

The City of Redondo Beach is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft MS4 NPDES Permit. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new Low Impact Development requirements and extensive new requirements for new water quality monitoring, however our staff have been given only 45 days to provide written comments.

We believe the Regional Board wants a review process that is open and transparent, however providing our staff 45 days to read and learn a 500 page permit, meet with effected divisions for input, compare it to the last permit, evaluate the resources that will be required to comply with the permit, determine the fiscal and organizational impacts on City services and present that information to our City Council and then prepare written comments makes it impossible for this process to be open, transparent and fully understood.

For this process to be clearly open and transparent then City staff should be given sufficient time to vet this permit within our agency staff and with our elected officials and then be given time to negotiate with Regional Board staff issues that would make the permit compliance impossible. We do not understand why the Regional Board would want to rush this landmark regulation through the approval process if it is in everyone's best interest to keep the permitting process as open and transparent as possible. I understand that other Regional Boards have used a year or two to completely vet a new MS4 NPDES Permit. The City of Redondo Beach respectfully request 6 months or **180 days** for our staff to first try to work with Regional Board staff

Comment Period for Draft NPDES Permit Page 2

July 12, 2012

to draft a permit that has a reasonable chance for compliance and then prepare written comments on un-resolved issues.

Sincerely,

Bill Workman City Manager

Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angles, CA 90013

SUBJECT: Comment Period for Draft NPDES Permit for LA County MS4 Discharges

Honorable Chairperson Mehranian:

The City of Rolling Hills received the June 6, 2012 Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. We strongly urge the Board to extend the comment period on this permit.

This draft permit represents a significant change in the approach to permitting of municipal stormwater, yet our staff has been given only 45 days to review and understand the provisions and to prepare written comments. This draft permit is over 500 pages long incorporating provisions for 32 new TMDLs, restructuring of the permit centered on a Watershed Management Approach, extensive new requirements for water quality monitoring, with a myriad of new provisions throughout the permit including significant new administrative requirements.

Rolling Hills, as a municipality and in its geography, is unique. The City is by design of its founders and the General Plan, a low density, low impact, rural residential community with primary drainage conveyed via natural canyons. As a gated community of approximately 3 square miles consisting of numerous steep canyons, surrounded 360-degrees by other municipalities, with a population of approximately 1,800, and 684 homes, there are no industrial or commercial land uses of any type within the City. With lots ranging in size from a minimum of one-acre to as much as 17-acres, most all the land is also pervious allowing for the natural infiltration of water. Roads are private, i.e., not part of a public right-of-way, and are not equipped with curb-and-gutter, and so are not conveyances for trash or pollutants. Dry weather flows and significant rainfall events are infiltrated within the natural, largely undisturbed and vegetated soft-bottom canyons which are the primary drainage system; there is no continuous improved storm drain system throughout the City. Source control is the primary means

Mehranian July 11, 2012 Re: Comment Period for Draft NPDES Permit for LA County MS4 Discharges Page 2

available to the City for maintaining and improving water quality since structural control/treatment devices are not technically feasible or environmentally appropriate in natural canyons.

Our staff needs more time to fully digest the permit provisions and how they apply to our very unique City. We need this time to provide cogent comments for your staffs' consideration in order to create a more workable and implementable permit that achieves our mutual objectives of protecting and improving the quality of receiving waters in the Los Angeles Basin. It is also crucial in this time of fiscal austerity that we have time to assess the fiscal and organizational impacts of these new provisions and to present that information to our governing body so that this regulatory process is open and transparent. In addition, we are concerned that the hearing dates to consider this permit conflict with the League of California Cities annual conference which is to be held in San Diego September 5-7; this conflict would make it difficult for elected officials to participate fully in the hearing.

It would be a mistake to rush this important permit through the approval process without providing sufficient opportunity for review comment and to work with your staff to improve the permit; your decision on this matter will not be fully informed unless sufficient time is allocated for the process. The City of Rolling Hills respectfully requests that the Regional Board lengthen the review period for this draft permit and provide a more reasonable schedule for permit development prior to an adoption hearing, allowing at least 6 months or 180 working days for municipal staff to work with Regional Board staff through the permit development process, and to defer the hearing so that elected officials are able to be present and provide testimony.

Respectfully, James Black, M.D.

James Black, M.I. Mayor

Dear Sam,

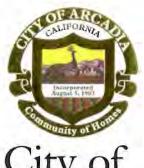

During the July 9, 2012 stakeholder meeting and the July 12, 2012 Regional Board hearing, several stakeholders requested an extension of the comment period on the Draft Los Angeles County Municipal Separate Storm Sewer System Permit, which is currently set for July 23, 2012. Appropriately, Regional Board staff responded that the deadline would stand. Heal the Bay, NRDC and Los Angeles Waterkeeper concur that the comment deadline and hearing dates (scheduled for September 6 and 7) should remain unchanged. Regional Board staff has held numerous workshops, released working draft documents of key sections of the permit and met with stakeholders on multiple occasions. Thus, we believe a 45 day comment period is sufficient to review and comment on the Draft Permit. Given that the Permit is more than five years overdue for renewal, it is important that the updated Permit is adopted as soon as possible. Our organizations urge the Board not to delay these proceedings further.

Sincerely,

Kirsten James, Heal the Bay

Liz Crosson, Los Angeles Waterkeeper

City of Arcadia

Dominic Lazzaretto City Manager Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angeles, CA 90013

### SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request the Regional Board to provide sufficient time for review of the draft NPDES Permit for MS4 Discharges. We believe the extended time is needed to make this process **open and transparent**.

The City of Arcadia is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft MS4 NPDES Permit. This Draft Permit is over 500 pages, incorporates provisions for 33 TMDLs, and requires extensive new and additional requirements including low impact developments and water quality monitoring. Yet, the affected permittees are given only 45 days to provide written comments.

While we understand a new MS4 Permit is long overdue in Los Angeles County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. It is in everyone's best interest to keep the permitting process as open and transparent as possible. Through this entire process, the City has committed to a process that would cooperatively develop the next MS4 Permit. We have made every effort to stay engaged in the process and have proactively sought involvement in all aspects of the Permit development.

The City of Arcadia is appreciative of the efforts made by the Board and Staff to review certain aspects of the Permit with permittees in various workshops. However, upon release of the Draft Permit, many of the Permit provisions contained substantial changes from previous versions or contained brand new sections that we had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only 45 days to comment makes it impossible for this process to be open and transparent. In order to develop and provide relevant and meaningful comments, each permittees must first.

- Read a 500 page Permit,
- Study the 500 page Permit to understand how the provisions work together,
- Compare it to the last Permit,

240 West Huntington Drive Post Office Box 60021 Arcadia, CA 91066-6021 (626) 574-5401 (626) 446-5729 Fax dlazzaretto@ci.arcadia.ca.us www.ci.arcadia.ca.us

- Evaluate the resource needs to comply with the Permit,
- Determine the fiscal and organizational impacts on city services; this requires coordination with several city departments,
- Prepare legal review and comments,
- Present information to and gather feedback from municipal governing body (the process of scheduling an item for a City Council Agenda requires at least 30-60 days in most cities). This does not allow staff time to conduct the following items listed above prior to presenting to their governing bodies, and then prepare written comments

The Regional Board has placed a greater emphasis on coordination by permittees to work collaboratively to implement many of the provisions of the Permit on watershed and sub-watershed levels. In order to fully understand how these provisions will work, it is essential that permittees (staff and elected officials) be allowed adequate time to fully understand the Permit, coordinate and prepare necessary comments. The 45-day comment period <u>does not</u> allow time for such discussions.

Furthermore, for this process to be clearly open and transparent, City staff should be given sufficient time to vet this permit within our agency staff and with our elected officials and then be given time to discuss and negotiate issues with Regional Board staff prior to the Draft Permit comments due date of July 23, 2012.

The City of Arcadia respectfully requests for the comment period to be extended by **180 working days** for permittees to first try to work with Regional Board staff to draft a permit that has a reasonable chance for compliance and then prepare written comments on un-resolved issues. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

If you have any questions or request additional information, please contact Tom Tait, Public Works Services Director at (626) 305-1386 or Vanessa Hevener, Environmental Services Officer at (626) 305-5327.

Cordially,

Dominic Lazzaretto

116 East Foothill Blvd., Glendora, California 91741 www.ci.glendora.ca.us

July 16, 2012

Maria Mehranian, Chairperson California Regional Water Quality Control Board Los Angeles Region 320 West 4th St., Suite 200 Los Angeles, CA 90013

SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

This letter is to request the Regional Board to provide sufficient time for review of the draft NPDES Permit for MS4 Discharges needed to make this process **open and transparent**.

The City of Glendora is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges and of the draft permit. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements and extensive new requirements for new water quality monitoring; however, our permittees have been given only 45 days to provide written comments.

While we understand a new MS4 Permit is long overdue in LA County, we do not understand why the Regional Board would want to rush this landmark regulation through the approval process. It is in everyone's best interest to keep the permitting process as open and transparent as possible. Through this entire process, the City of Glendora has committed to a process that would cooperatively develop the next MS4 Permit. We have made every effort to stay engaged in the process and have proactively sought involvement in all aspects of the Permit development. The City of Glendora is appreciative of the efforts the Board and Staff has taken to review certain aspects of the Permit with permittees in workshops; however, upon release of the Tentative, many of the Permit provisions contained substantial changes from previous versions, or contained brand new sections that we had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the permit provisions and to prepare comments.

We believe the Regional Board wants a review process that is open and transparent; however, providing permittees only 45 days to comment makes it impossible for this process to be open and transparent. In order to develop and provide relevant and meaningful comments, each permittee must first:

- Read a 500 page permit,
- Study the 500 page permit to understand how the provisions work together,
- Compare it to the last permit,
- Evaluate the resource needs to comply with the permit,

### PRIDE OF THE FOOTHILLS

- Determine the fiscal and organizational impacts on city services; this requires coordination with several city departments,
- Prepare legal review and comments,
- Present information to, and gather feedback from, the municipal governing body (the process of scheduling an item for a City Council Agenda requires at least 30-60 days in most cities). The 45 day time period does not allow staff time to complete the items listed above prior to presenting to their governing bodies, and then
- prepare written comments

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The <u>45-day comment period does not allow time for permittees to fully discuss the permit amongst themselves</u> in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also necessary as many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit, coordinate, and prepare comments.

Furthermore, for this process to be clearly open and transparent, permittee (City) staff should be given sufficient time to vet this permit within our agency staff and with our elected officials and then be given time to discuss and negotiate issues with Regional Board staff prior to the Tentative Draft comments due date.

The City of Glendora respectfully requests for the comment period to be extended by **180 working days** for permittees to first try to work with Regional Board staff to draft a permit that has a reasonable chance for compliance and then prepare written comments on un-resolved issues. Additionally, we request that a Revised Tentative Permit be released with a 45-day comment period so that permittees have the opportunity to see any changes made to the Permit and have the chance to provide comments prior to the Adoption Hearing.

If you have any questions or request additional information, I may be reached at (626) 914-8249 or spatton@ci.glendora.ca.us.

Sincerely,

1

July 16, 2012

Maria Mehranian, Chairperson Los Angeles Regional Water Quality Control Board 320 West 4th Street, Suite 200 Los Angeles, CA 90013

Request to Extend Planned Hearing Date of the Tentative MS4 permit

Honorable Chairperson Mehranian:

The City of Hawthorne (City) requests that the Regional Board's September 6th-7th adoption hearing for the Los Angeles Countywide NPDES MS4 permit (permit) be extended for a period of 180 days. The LA Permit Group, of which the City is a participating member, has submitted a similar request for extension. This letter serves to stress the importance of this extension, which is necessary to address the following:

- 1. The tentative permit is over 500 pages, the contents of which are a significant departure from the current permit, yet the permit comment period is only 45 days. This is insufficient time to provide well-informed comments.
- The adoption hearing dates of September 6th and 7th conflict with a League of Cities conference that will be attended by many City elected officials. This will prevent their ability to provide comments at the hearing.
- 3. Previously, municipal stormwater permittees have presumed that permit languagein conjunction with Board Policy (WQ 99-05) established an iterative management approach as a basis for compliance. However, on July 13, 2011, the Ninth Circuit Court of Appeals in NRDC vs. County of Los Angeles / Los Angeles County Flood Control District found the defendants had caused or contributed to an exceedance of a water quality standard and therefore violated the Receiving Water Limitations, irrespective of the application of the iterative process. I the receiving waters limitations are proposed are not changed, all discharges to receiving waters will likely need to meet water quality standards to avoid being in violation of the permit. The City certainly recognizes the importance of attaining water quality standards; but at the same time, no one reasonably expects any permittee to immediately realize this goal at the moment of permit adoption. Additional time is needed by both the cities that will be affected by this permit and the Regional Board to consider the language of the proposed Statewide Cal-Trans permit and several other versions of alternative language being proposed by other statewide coalitions.

Therefore the City respectively requests a 180 day postponement for the adoption hearing of the MS4 permit. Thank you for your consideration of this request. Please contact me at 310-349-2980 if you have any questions.

Sincerely,

Ans

Maria Mehranian, Chairperson Los Angeles Regional Water Quality Control Board 320 West 4th Street, Suite 200 Los Angeles, CA 90013

Hearing Date of the Tentative MS4 permit Request for Extension

Honorable Chairperson Mehranian:

The City of Monterey Park has been working with Los Angeles Permit Group (LAPG) since late 2011. The City supports the LAPG's recent request for a 180 day extension of the adoption hearing for the next MS4 permit. The city is herein submitting a separate letter to reemphasize the importance of this extension to two primary reasons:

First, September 6th and 7th coincide with a long planned League of Cities conference that many of our elective representatives (City Council) will be attending. This scheduling conflict will likely prevent them from appearing at the Regional Board's hearing to provide comments.

Secondly, municipal stormwater permittees have long presumed that the permit's receiving waters limitation language in conjunction with Board Policy (WQ 99-05) established an iterative management approach as a basis for compliance. However, the 2011 Ninth Circuit Court of Appeals decision in NRDC vs. County of Los Angeles / Los Angeles County Flood Control District found the defendants had caused or contributed to an exceedance of a water quality standard and therefore violated the Receiving Water Limitations, irrespective of the application of the iterative process. If the receiving waters limitations as proposed are not changed, all discharges to receiving waters will likely need to meet water quality standards to avoid being in violation of the permit.

The City certainly recognizes the importance of attaining water quality standards; but at the same time, it is unreasonable to expect any permittee to immediately realize this goal at the moment of permit adoption. Additional time is needed by both the cities that will be affected by this permit and the Regional Board to consider the language of the proposed Statewide Cal-Trans permit and several

### Re: Request to Extend Planned Hearing Date of the Tentative MS4 permit

Honorable Chairperson Mehranian:

The City of Norwalk recently received a copy of the Los Angeles Permit Group's request for a 180-day postponement of the next MS4 permit adoption hearing currently scheduled for September 6 and 7, 2012. Today, the City received a copy of the Regional Board's subsequent rejection of that request. The City of Norwalk has been reviewing the MS4 permit and herein asks the Regional Board to reconsider the Los Angeles Permit Group's original request.

- The Tentative MS4 permit is over 500 pages in length and highly technical. As with any complex document of this length, there are many items that need clarification, as well as several areas of inconsistencies. Forty-five (45) days is too short a time period to allow a thorough review and understanding of the permit.
- September 6th and 7th coincide with a long planned League of California Cities conference that many of our elected officials (City Council) will be attending. This scheduling conflict will likely prevent them from appearing at the Regional Board's hearing to provide comments.
- Previously, municipal stormwater permittees have presumed that permit language in conjunction with Board Policy (WQ 99-05) established, at least in part, an iterative approach as a basis for compliance. The recent Ninth Circuit Court of

Appeals in NRDC vs. County of Los Angeles / Los Angeles County Flood Control District found the defendants had caused or contributed to an exceedance of a water quality standard and therefore violated the Receiving Water Limitations, irrespective of the application of the iterative process. If the receiving waters limitations as proposed in the Tentative Permit are not changed, all discharges to receiving waters will likely need to meet water quality standards to avoid being in violation of the permit. Norwalk recognizes the importance of attaining water quality standards; but at the same time, permittees cannot reasonably be expected to immediately attain this goal at the moment of permit adoption. This is especially true for pollutants that neither have established TMDLs nor listed as causing impairments on the 303d list. Additional time is needed by both the cities that will be affected by this permit and the Regional Board to consider the language of the proposed Statewide Cal-Trans permit and several other versions of alternative language being proposed by other statewide groups.

Therefore the City of Norwalk respectively requests the Regional Board reconsider the Los Angeles Permit Group's request for a 180-day postponement for the adoption hearing of the MS4 permit. Thank you for your consideration of this request. Please contact Adriana Figueroa, Administrative Services Manager at (562) 929-5915, or Dan Garcia, City Engineer at (562) 929-5727 if you have any questions.

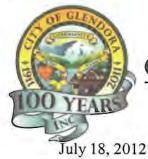

Sincerely

Michael J. Egan City Manager

# CITY OF GLENDORA CITY HALL

(626) 914-8200

Los Angeles Regional Water Quality Control Board Mr. Samuel Unger, Executive Officer 320 West 4th Street, Suite 200 Los Angeles, CA 90013

Dear Mr. Unger,

The effects of the Los Angeles County MS4 permit are far too complicated to allow a comment period of 45 days from the release of the 1st complete draft to adoption.

The comments made in your July 13, 2012 letter to the L.A. Permit Group are correct that there have been multiple opportunities to discuss what should be in the new MS4 permit. However, providing 45 days to review the 1st draft of the permit is not sufficient. Reviewing a complete draft permit is far different than having conceptual discussions about draft piecemeal sections of an uncompleted permit.

The time period for review of the Ventura County MS4 permit from 1st draft to adoption spanned December 2006 to May 2009. The time period for review of the San Diego MS4 permit from 1st draft to adoption was 2007 to 2009. Los Angeles County has three times more population than of San Diego County and more than 10 times more than Ventura. This permit affects a huge number of residents yet is being given the least amount of time for review and comment by the more than 80 cities it affects. Cities who must work together to meet the requirements of the permit.

We request that you reconsider your decision not to extend the comment period for the Los Angeles County MS4 Permit for at least 6 months preferably one year which is in keeping with other draft permit reviews.

Sincerely,

A' ... Jerry L. Burke, P.E. Assistant Director of Public Works/City Engineer

#### SUBJECT: Comment Period for Draft NPDES Permit for MS4 Discharges

Honorable Chairperson Mehranian:

We appreciate the efforts of the Regional Board in working with the municipalities of Los Angeles County. The process leading up to the revised MS4 permit has been cooperative with representatives from the cities making efforts to address Regional Board issues and those of the environmental community in our comments and suggestions. Given the extent of the current draft MS4 permit, the City of Diamond Bar requests that the Regional Board provide sufficient time to review the draft NPDES Permit for MS4 Discharges.

Ling-Ling Chang Mayor

Jack Tanaka Mayor Pro Tem

Ron Everett Council Member

Carol Herrera Council Member

Steve Tye Council Member The City of Diamond Bar is in receipt of the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit for MS4 Discharges. This draft permit is over 500 pages and incorporates provisions for 33 TMDLs and implementation requirements, new low impact development requirements, and extensive new requirements for water quality monitoring. However, the permittees have been given only 45 days to provide written comments.

Through this entire process, the City of Diamond Bar has committed to a process that would cooperatively develop the next MS4 Permit. Diamond Bar is a member of the LA Permit Group and has actively participated in the LA Permit Group meetings and negotiations. The LA Permit Group will be submitting a letter regarding comments on the Draft MS4 Permit and Diamond Bar wholly endorses the comments that are forthcoming. We have made every effort to stay engaged in the process and have proactively sought involvement in all aspects of the permit development. The City of Diamond Bar is appreciative of the efforts the Board and Staff has taken to review certain aspects of the permit with the permit provisions contained substantial changes from previous versions, or contained brand new sections that we had not yet seen throughout this process. Seeing the permit in its entirety and having the opportunity to understand how each of the sections and programs work together is imperative in order for permittees to fully understand the permit provisions and to prepare comments. Page 2 Comment Period for Draft NPDES Permit for MS4 Discharges July 19, 2012

The 45 day comment period does not provide adequate review time and makes it difficult for the permittees to provide relevant and meaningful comments. The review process is very time consuming as each permittee must review the 500 page permit, compare against the prior version, determine fiscal and organizational impacts on City resources, and incorporate legal review and input from governing bodies on what resources can be relied upon to comply.

Additionally, emphasis on coordination of comments has been called out in the Notice of Opportunity for Public Comment and Notice of Public Hearing for the Draft NPDES Permit. The 45-day comment period does not allow time for permittees to fully discuss the permit amongst each other in order to adequately coordinate comments and responses. This process is not only desired by permittees, but also beneficial as many of the permit provisions are intended for permittees to work together on a watershed (or sub-watershed) scale. In order to fully understand how these provisions will work on a watershed scale, it is necessary that permittees (staff and elected officials) be allowed adequate time to fully understand the permit to coordinate and prepare comments.

The City of Diamond Bar respectfully requests for the comment period to be extended by 180 working days for permittees to continue to work with Regional Board staff to develop a comprehensive permit while allowing adequate time for permittees to prepare written comments on un-resolved issues.

If you have any questions or request additional information, you may contact Mr. Rick Yee, Senior Civil Engineer, or me, at 909.839.7040.

Sincerely,

David G. Liu, P.E. Public Works Director/City Engineer

Maria Mehranian, Chairperson Los Angeles Regional Water Quality Control Board 320 West 4th Street, Suite 200 Los Angeles, CA 90013

#### Request to Extend Planned Hearing Date of the Tentative MS4 permit

Honorable Chairperson Mehranian:

The City of Rancho Palos Verdes recently received a copy of the Los Angles Permit Group's request for a 180 day postponement of the next MS4 permit's adoption hearing, currently scheduled for September 6th and 7th. Today, the city received a copy of the Regional Board's subsequent rejection of that request. The City of Rancho Palos Verdes has been reviewing the MS4 permit and herein asks the Regional Board to reconsider the Los Angeles Permit Group's original request, for the following reasons:

- The Tentative MS4 permit is over 500 pages in length and highly technical. As with any complex document of this length, there are many items that need clarification, there are several areas of inconsistencies and the expected typographical errors. Forty-five (45) days is too short a time period to allow a thorough review and understanding of the permit.
- September 6th and 7th coincide with a long planned League of Cities conference that many of our elected officials (City Councilmembers) will be attending. This scheduling conflict will likely prevent them from appearing at the Regional Board's hearing to provide comments.
- Previously, municipal stormwater permittees have presumed that permit language in conjunction with Board Policy (WQ 99-05) established, at least in part, an iterative approach as a basis for compliance. The recent Ninth Circuit Court of Appeals in NRDC vs. County of Los Angeles / Los Angeles County Flood Control District found the defendants had caused or contributed to an exceedance of a water quality standard and therefore violated the Receiving Water Limitations, irrespective of the application of the iterative process. If the receiving waters limitations as proposed in the Tentative Permit are not changed, all discharges to receiving waters will likely need to meet water quality standards to avoid being in violation of the permit. Rancho Palos Verdes recognizes the importance of attaining water quality standards; but at the same time, permittees cannot reasonably be expected to immediately attain this goal at the moment of permit

adoption. This is especially true for pollutants that neither have established TMDLs nor are listed as causing impairments on the 303d list. Additional time is needed by both the cities that will be affected by this permit and the Regional Board to consider the language of the proposed Statewide Cal-Trans permit and several other versions of alternative language being proposed by other statewide groups.

Therefore the City of Rancho Palos Verdes respectfully requests the Regional Board reconsider the Los Angeles Permit Group's request for a 180 day extension of the currently scheduled hearing for the adoption of the MS4 permit. Thank you for your consideration of our request. Please contact Andy Winje at 310-544-5249 if you have any questions.

GEORGE TROXCIL CITY MANAGER

July 19, 2012

Maria Mehranian, Chairperson Los Angeles Regional Water Quality Control Board 320 West 4th Street, Suite 200 Los Angeles, CA 90013

#### Re: Request to Extend Planned Hearing Date of the Tentative MS4 permit

Honorable Chairperson Mehranian:

The City of South Gate is a participating member of the Los Angeles Permit group which has previously submitted a request for a 180 day extension of the adoption hearing for the next MS4 permit. The purpose of this separate letter is to emphasize the importance of this request. The primary reasons for this request are:

- 1. The Tentative MS4 permit is over 500 pages in length and 45 days is too short a time period to allow a thorough review and understanding of the permit.
- September 6th and 7th coincide with a long planned League of Cities conference that many of our elective representatives (City Council) will be attending. This scheduling conflict will likely prevent them from appearing at the Regional Board's hearing to provide comments.
- 3. The Receiving Waters Limitations Language of the Tentative Permit as currently written will likely expose cities to 3rd party litigation immediately upon adoption. This is an untenable situation for South Gate. Additional time is needed by both the cities that will be affected by this permit and the Regional Board to consider the language of the proposed Statewide Cal-Trans permit and several other versions of alternative language being proposed by other statewide coalitions.

Therefore, the City of South Gate respectively requests a 180 day postponement for the adoption hearing of the MS4 permit. Thank you for your consideration of this request. Please contact Director of Public Works Mohammad Mostahkami at (323) 563-9512, if you have any questions.

Sincerely,

July 13, 2012

Cherie L. Paglia City Manager City of Hidden Hills 6165 Spring Valley Road, Hidden Hills, CA 91302

# RESPONSE TO REQUEST FOR EXTENSION OF COMMENT PERIOD FOR TENTATIVE LOS ANGELES COUNTY MS4 PERMIT

Dear Ms. Paglia:

The Regional Board is in receipt of the City of Hidden Hills' letter dated July 6, 2012, requesting a 180-working day extension to develop the permit and an additional 45-day comment period. The Regional Board has provided an open and transparent process throughout the past 15 months, beginning in May 2011, realizing the importance of having Permittees closely involved in the Permit development process.

The Regional Board has provided myriad opportunities for Permittees to present issues and concerns to the Board and Board staff through three board workshops, five staff-level workshops, and one to two meetings per month since November 2011, with the LA Permit Group Negotiating Committee.

Additionally, Board staff distributed to Permittees five working proposals of the permit provisions, covering the principal sections of the permit. For each working proposal, Board staff provided Permittees with a three-week written comment period as well as the opportunity to discuss the working proposals with the Board at board workshops held on April 5, 2012 and May 3, 2012. The draft permit was revised to address many of the written and oral comments received on the working proposals. The tentative LA County MS4 Permit, which was released for public comment on June 6, 2012, reflects these changes.

Board members directed staff to adhere to a permit development schedule that would ensure that the permit would be considered by the Board at its regularly scheduled September Board meeting. In order to meet this directive, and in light of the many opportunities for engagement and comment on the draft permit that have been provided over the past 15 months, I am not granting your request for an extension of the comment deadline.

#### RESPONSE TO REQUEST FOR EXTENSION OF COMMENT PERIOD FOR **TENTATIVE LOS ANGELES COUNTY MS4 PERMIT**

Dear Mr. Frisby:

The Regional Board is in receipt of the City of Inglewoods' letter dated July 6, 2012, requesting a 180-working day extension to develop the permit and an additional 45-day comment period. The Regional Board has provided an open and transparent process throughout the past 15 months, beginning in May 2011, realizing the importance of having Permittees closely involved in the Permit development process.

The Regional Board has provided myriad opportunities for Permittees to present issues and concerns to the Board and Board staff through three board workshops, five staff-level workshops, and one to two meetings per month since November 2011, with the LA Permit Group Negotiating Committee.

Additionally, Board staff distributed to Permittees five working proposals of the permit provisions, covering the principal sections of the permit. For each working proposal, Board staff provided Permittees with a three-week written comment period as well as the opportunity to discuss the working proposals with the Board at board workshops held on April 5, 2012 and May 3, 2012. The draft permit was revised to address many of the written and oral comments received on the working proposals. The tentative LA County MS4 Permit, which was released for public comment on June 6, 2012, reflects these changes.

Board members directed staff to adhere to a permit development schedule that would ensure that the permit would be considered by the Board at its regularly scheduled September Board meeting. In order to meet this directive, and in light of the many opportunities for engagement and comment on the draft permit that have been provided over the past 15 months, I am not granting your request for an extension of the comment deadline.

# RESPONSE TO REQUEST FOR EXTENSION OF COMMENT PERIOD FOR TENTATIVE LOS ANGELES COUNTY MS4 PERMIT

Dear LA Permit Group:

The Regional Board is in receipt of the LA Permit Groups' letter dated July 2, 2012, requesting a 180-working day extension to develop the permit and an additional 45-day comment period. The Regional Board has provided an open and transparent process throughout the past 15 months, beginning in May 2011, realizing the importance of having Permittees closely involved in the Permit development process.

The Regional Board has provided myriad opportunities for Permittees to present issues and concerns to the Board and Board staff through three board workshops, five staff-level workshops, and one to two meetings per month since November 2011, with the LA Permit Group Negotiating Committee.

Additionally, Board staff distributed to Permittees five working proposals of the permit provisions, covering the principal sections of the permit. For each working proposal, Board staff provided Permittees with a three-week written comment period as well as the opportunity to discuss the working proposals with the Board at board workshops held on April 5, 2012 and May 3, 2012. The draft permit was revised to address many of the written and oral comments received on the working proposals. The tentative LA County MS4 Permit, which was released for public comment on June 6, 2012, reflects these changes.

Board members directed staff to adhere to a permit development schedule that would ensure that the permit would be considered by the Board at its regularly scheduled September Board meeting. In order to meet this directive, and in light of the significant number of opportunities for engagement and comment on the draft permit that have been provided over the past 15 months, I am not granting your request for an extension of the comment deadline.

Los Angeles County MS4 Permittees and Interested Persons:

The Regional Board staff has received many letters requesting a 180-working day extension to develop the permit and an additional 45-day comment period to review a revised tentative permit. Beginning in May 2011 the Regional Board has worked diligently to provide an open and transparent permit development process, realizing the importance of having Permittees and other interested persons closely involved.

The Regional Board has provided myriad opportunities for Permittees and other interested persons to present issues and concerns to the Board and Board staff through three board workshops, five staff-level workshops, and one to two meetings per month since November 2011 with the LA Permit Group Negotiating Committee. In addition, Regional Board staff has met frequently with several other entities including the City of Los Angeles, Los Angeles County Flood Control District, NRDC, Los Angeles Waterkeeper, and Heal the Bay, throughout the permit development process to ensure all interested persons had opportunities to vet their concerns.

Furthermore, Regional Board staff distributed to Permittees and interested persons five working proposals of the permit provisions, covering the principal sections of the permit to facilitate the understanding of the permit on a section by section basis. For each working proposal, Board staff provided Permittees and interested parties with a three-week written comment period as well as the opportunity to discuss the working proposals with the Regional Board at Board workshops held on April 5, 2012 and May 3, 2012. The draft permit was revised to address many of the written and oral comments received on the working proposals. The tentative LA County MS4 Permit, which was released for public comment on June 6, 2012, reflects these changes. Regional Board staff has made every effort to involve Permittees and interested persons to address concerns and comments during this 15-month development process.

Regional Board members directed staff to adhere to a permit development schedule that would ensure that the permit would be considered by the Board at its regularly scheduled September Board meeting. In order to meet this directive, and in light of the significant number of opportunities for engagement and comment on the draft permit that have been provided over the past 15 months, I am not granting requests for an extension of the comment deadline.

MARIA MEHIGADIAN, CHAIR | SAMUEL UNGER, EXECUTIVE OFFICER

320 West 4th St., Sode 200, Los Angales, CA 90013 | www.waterboards.ca.gov/)osangales

LA County MS4 Permittees and Interested Persons

-2-

July 30, 2012

Regional Board staff will continue to be available to meet and confer on any permit provisions prior to the September board hearing. If you have any questions, please call Renee Purdy at (213) 576-6622 or Ivar Ridgeway at (213) 620-2150.

Sincerely,

Samuel Ungen

Samuel Unger Executive Officer

EDMUND G. BROWN JR.

MATTHEW RODRIGUEZ SECRETARY FOR INVIRONMENTAL PROTECTION

Los Angeles Regional Water Quality Control Board

TO: Los Angeles County MS4 Permittees and Interested Persons

Samuel Unger, P.E. FROM: **Executive Officer** 

- DATE: August 7, 2012
- NOTICE OF CHANGE TO DATE OF BOARD HEARING ON THE TENTATIVE SUBJECT: NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT FOR MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) DISCHARGES WITHIN THE LOS ANGELES COUNTY FLOOD CONTROL DISTRICT BOUNDARIES, INCLUDING UNINCORPORATED AREAS OF LOS ANGELES COUNTY, AND THE INCORPORATED CITIES THEREIN, EXCEPT THE CITY OF LONG BEACH (LOS ANGELES COUNTY MS4 PERMIT) (NPDES PERMIT NO. CAS004001)

The date of the public hearing on which the Los Angeles Regional Water Quality Control Board will receive comments and evidence, and consider adoption of, the Tentative NPDES Permit for MS4 discharges within the Los Angeles County Flood Control District boundaries (Tentative Permit) has been changed from September 6-7, 2012 to October 4-5, 2012. The hearing will take place on:

Date: Thursday, October 4, 2012 and Friday, October 5, 2012 Time: 9:00 AM Place: Metropolitan Water District of Southern California, Board Room 700 North Alameda Street Los Angeles, CA 90012

This schedule change avoids the scheduling conflict between the Annual League of Cities Conference and Expo and the original dates for the Board hearing on the Tentative Permit, which was brought to our attention by several Los Angeles County MS4 Permittees.

Please check the Board's website (http://www.waterboards.ca.gov/losangeles/) for the most upto-date public hearing location as it is subject to change. If there should not be a quorum on the scheduled date of this hearing, the item will be automatically continued to the next scheduled meeting. A continuance of this item will not automatically extend any of the deadlines set forth in the Notice of Opportunity for Public Comment and Notice of Public Hearing dated on June 6, 2012. If you have any questions, please call Renee Purdy, Chief, Regional Programs Section at (213) 576-6622 or Ivar Ridgeway, Chief, Storm Water Permitting Unit, at (213) 620-2150.

MARIA MERRANIAN, CHAIR | SAMUEL UNGER, EXECUTIVE OFFICER

Mr. Ivar Ridgeway Los Angeles Regional Water Quality Control Board 320 W. 4th Street, Suite 200 Los Angeles, CA 90013

# Re: Draft MS4 NPDES Permit for Los Angeles County and Cities Therein Except the City of Long Beach; Request for Production of Documents at Hearing

Dear Mr. Ridgeway:

On behalf of the City of Signal Hill ("Signal Hill"), we request a 30 minute allocation of time for Signal Hill's presentation during the October 4-5 public hearing on the Draft National Pollutant Discharge Elimination System (NPDES) Permit for Municipal Separate Storm Sewer System (MS4) Discharges Within the Los Angeles County Flood Control District, Including Unincorporated Areas of Los Angeles County, and the Incorporated Cities Therein, Except the City of Long Beach (Los Angeles County MS4 Permit) (NPDES Permit No. CAS004001) ("MS4 Public Hearing").

We further request that staff bring to the MS4 Public Hearing the July 23, 2012 comment letter from Signal Hill City Manager Kenneth Farfsing, including attachments. The attachments include:

- July 22, 2012 Letter (and attachment) from Kinnetic Laboratories to Kenneth Farfsing regarding "Comments on Attachment E Draft Monitoring and Reporting Program and the proposed Municipal Action Levels (Attachment G)";
- Cost Estimation and Environmental Impacts Worksheet (Trash TMDL, Metals TMDL and Bacteria TMDL) for the Los Angeles River, July 25, 2006; and
- Statement before the Los Angeles Regional Water Quality Control Board, NPDES Permit Workshop November 10, 2011, by Steve Myrter, Director of Public Works, City of Signal Hill.

**RB-AR4613** 

Mr. Ivar Ridgeway August 22, 2012 Page 2

Please do not hesitate to call if you have any questions.

Very truly yours,

ALESHIRE & WYNDER, LLP

David D. Boyer Attorney

### Subject: Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit

Dear Mr. Ridgeway:

I am writing on behalf of the City of Signal Hill to provide comments on the June 6, 2012 Tentative Order for the reissued NPDES Permit for the Greater Los Angeles County Municipal Separate Storm Sewer System. Thank you for the opportunity to provide these comments.

The City of Signal Hill appreciates the process that the Regional Water Board and its staff have followed in developing the new permit. We particularly appreciate the availability and responsiveness of the key staff members working on development of the draft permit. However, given the magnitude of the permit and the complexities and costs of some of the new and revised requirements, we would have appreciated an Administrative Draft between the incomplete Staff Working Proposal and the Tentative Order. We have several concerns with the Tentative Order that might have been resolved had there been an Administrative Draft with a comment period that would have allowed further discussions with staff and presentations to the Board on critical permit issues.

The City of Signal Hill has several concerns with the Tentative Order. The most significant is the tremendous cost increase at a time when municipalities have lost money

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 2 of 19

to the State and are in dire financial straits. Our second serious concern is that the way the discharge prohibitions and receiving water limitations are expressed in the Tentative Order is inconsistent with precedential State Water Board Order 99-05 and will expose our city and the other Permittees to third-party lawsuits, even though we are following the permit and the iterative process in a conscientious manner to improve water quality. The third most serious flaw is the expression of final TMDL waste load allocations as numeric water quality-based effluent limits (WQBELs). Fourthly, the City of Signal Hill is extremely disappointed that our request for a separate MS4 is denied in the Tentative Order.

We will offer explanations of three of our major concerns with the Tentative Order, followed by specific comments on other sections of the Tentative Order, and a justified request for a separate MS4 permit for the City. Some of the following comments were previously provided to staff in letters that we understand were not provided to individual Regional Water Board Members.

#### **Excessive and Disruptive Costs**

We recognize that both the State Water Board and the Regional Water Board have been handicapped by lack of funds for staff and needed research by the State's budgetary woes. However, it appears that Regional Board staff did not fully consider the costs of proposed new and expanded elements of the Tentative Order; nor did they appear to appreciate the fiscal crisis impacting cities and counties in Los Angeles County.

One example of staff's misunderstanding of municipal finances, or lack of concern about the fiscal crisis facing Los Angeles County and the cities within the County, is Provision VI.A.3.a. This provision requires that "Each Permittee shall exercise its full authority to secure the fiscal resources necessary to meet all requirements of this Order." We note that this provision is labeled a standard provision. However, we could not find it in either the Standard Provisions or the Special Provisions of Order No. 01-182. the current MS4 Permit. Inclusion of such a provision in the Tentative Order appears to demonstrate that staff believed they were given carte blanche to include new and expanded requirements without serious consideration of costs or the ability of municipalities to pay to meet the requirements without cutting other services. In reality, stormwater quality programs arc, for the most part, utilities without dedicated funding sources. Since the passage of Proposition 218 in 1996, it has been extremely difficult for local governments to charge new fees to pay for the ever-expanding requirements of MS4 permits.

One component of the Tentative Order where staff included new and expanded requirements without serious consideration of costs is the Monitoring and Reporting Program. This component and the inclusion of TMDL implementation requirements are the major drivers of the increased costs associated with the new Los Angeles County MS4 permit(s). Our city was so concerned about the complexities and potential costs of the expanded Monitoring Program that we enlisted the assistance of Kinnetic Laboratories. Incorporated (KLI) to review the proposed new monitoring requirements

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 3 of 19

and the proposed Municipal Action Levels. Their comments are found in Attachment 1 to this letter. Many of their comments relate to the cost impacts of the new requirements. KLI's overall assessment is that "The Draft Monitoring and Reporting Program in the tentative order will drastically increase monitoring costs." They go on to say that "We strongly believe that the programs, as currently specified, will only lead to magnification of current monitoring costs without any substantial improvements in addressing the real issue of assuring that beneficial uses are maintained in the receiving waters." KLI's specific comments on elements of the Monitoring Program are addressed below in the monitoring comments section of this letter.

The fiscal plight of cities in Los Angeles County and across the state was highlighted in a July 19. 2012, front-page article in the Los Angeles Times entitled, "Compton on Brink of Bankruptcy." In addition to discussing the fiscal challenge facing the City of Compton, the article describes "the complexity of the fiscal crisis roiling California cities this year." Also in the July 19, 2012, edition of the Times, the Capitol Journal column by George Skelton was entitled "Fatal Flaws in State Finances." The opinion piece starts by noting, "San Bernardino, Stockton, and Mammoth Lakes all screwed up and became bankrupt. But the rest of us shouldn't get sanctimonious." Mr. Skelton makes the point that the root cause of the financial plight of local governments in California is systemic and that the funding arrangements between the State and the cities, counties, and school districts is unworkable. He also asserts that things could get worse before they get better. He notes that eight other cities, including Monrovia and El Monte, have notified potential bond buyers that the cities are in scrious trouble.

Skelton also observes that the cities flirting with bankruptcy are "vulnerable to all the falling financial crud that threatens to bury them." This includes the exponentially increasing costs of stormwater quality management and compliance associated with implementing the Tentative Order, as written. The costs of the expanded monitoring program and the method of incorporating permit requirements that are consistent with the assumptions and requirements of waste load allocations of over 500 water body-pollutant combinations contained in 33 TMDL documents will place extreme financial stress on cities that are already coping with a bad economy, pension liabilities and the seizure of redevelopment funds by the state, as well as exposure to third-party lawsuits. Member Lutz, Mayor of the City of Monrovia, should be able to shed some light on the financial plight of cities for the Board since Monrovia is one of the eight cities that, according to the State Treasurer's office, disclosed the seriousness of its financial problems to potential bond buyers.

The loss of redevelopment funding is a significant problem for Signal Hill, where the Signal Hill Redevelopment Agency had budgeted over \$800,000 this year to begin to address five of the six TMDLs that currently regulate our small. 2.2 square mile community. AB 1X26 effectively dissolved redevelopment agencies statewide and has resulted in Signal Hill's having to devote additional General Fund revenues to implement our stormwater program at a very difficult financial time for the community. Without the planned Redevelopment Agency expenditures, the City has budgeted \$869,235 for the coming fiscal year (see table below) to fund its Stormwater Program. However, this

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 4 of 19

amount is far below what is required to fully address the TMDLs that impact our city. Our estimated stormwater budget for the next few years to fully address permit requirements and TMDL implementation is approximately \$1.6 million per year. We don't foresee a time in the next four to five years when our General Fund will be able to keep up with the stormwater costs resulting from the Tentative Order, as written, which means that existing programs will need to be severely reduced or eliminated to fund the new stormwater requirements.

#### Figure 1

City Acct. No.	Budget Item Description	FY 12/13 Budget	Comments
510	Personnel	\$ 63,010	
309	Trash Reduction TMDL	\$ 74,575	Catch Basin Inserts and Hamilton Bowl
347	Annual MS4 Permit Fee	\$ 5,000	
355	Legal Services	\$ 50,000	
356	Storm Water Quality Contract Services & Technical Studies	\$427,000	Includes expenditures required for special studies for newly implemented and proposed TMDL's
372	Restaurant /Industrial Waste Inspections	\$ 44,000	Cost offset by fees
3 <b>7</b> 6	Street Sweeping	\$150,400	
	Bus Shelter Cleaning	\$ 31,000	Cost offset by Proposition A
440	Recycling and Haz-Waste	\$ 24,250	
Proposed FY 12-13 NPDES Budget:		\$869,235	

#### City of Signal Hill Environmental/Stormwater Program Budget

It appears from the magnitude of increased costs associated with the Tentative Order that Regional Board staff assumes that the stormwater fee proposed by the Los Angeles County Flood Control District will be approved by property owners next spring. Actually, passage of the fee is far from certain. In fact, the proposed fee came before the County Board of Supervisors three times before staff was directed to move forward with creation of a Final Draft Ordinance, a protest hearing, and a possible vote. If the Regional Water Board agrees with staff that the new costly programs should be required, perhaps those City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 5 of 19

programs should be contingent upon passage of the stormwater quality fee next year. This would be parallel to the actions taken by the University of California Board of Regents in freezing undergraduate and some graduate school tuitions pending the vote on the Proposition 30 tax hike measure in November.

The County has estimated that Signal Hill is likely to receive only \$211,000 annually if the water quality fee is passed by the voters. Although this amount will be helpful, it is only a fraction of the estimated amount necessary to implement the six TMDLs regulating our community and to meet other permit requirements. As the Regional Board is aware, these six TMDLs are likely to be supplemented by additional TMDLs and the NPDES permit requires compliance with other water quality standards not found in the TMDLs.

To further illustrate the dire financial impact that the Tentative Order will have on the City of Signal Hill, we are submitting the attached Cost Estimation and Environmental Impacts Worksheet for implementing the Trash TMDL, the Metals TMDL, and a Bacteria TMDL for the Los Angeles River dated July 25, 2006. At that time, the total NPDES budget was estimated at \$534,475 (Attachment 2). As shown above, our costs to implement our ongoing stormwater quality program, including maintenance costs associated with implementing the Los Angeles River Trash TMDL, are projected to be over \$869,000 for 2012-2013. This budget does not include full implementation costs for the Los Angeles River Metals TMDLs, the Los Angeles River Bacteria TMDL, the Los Angeles River Estuary Bacteria TMDL, or the Los Cerritos Channel Metals TMDLs.

## Consistency with State Water Board Order 99-05

The City of Signal Hill agrees with the LA Permit Group's concern that the receiving water limitation (RWL) language currently in the Tentative Order creates an unnecessary and counter-productive liability for municipalities. If the language in the Discharge Prohibitions and Receiving Water Limitations Parts of the Order were fully consistent with precedential State Water Board Order 99-05, the liability for municipalities could be avoided.

With the exception of section references and substituting "Receiving Water Limitations" for "Water Quality Standards" and "Water Quality Objectives or Water Quality Standards," the language in the Tentative Order is virtually identical to the receiving water limitation language in the 2001 MS4 Permit that the United States Court of Appeals for the Ninth Circuit has interpreted differently than the State Water Board's interpretation since Order 99-05 was adopted on June 17, 1999. In this precedential order, the State Water Board substituted EPA receiving water limitation language for language that the State Water Board had included in Order 98-01, to which EPA objected when the language was used in permits issued by the San Francisco Bay and San Diego Regional Water Boards.

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 6 of 19

During the July 9, 2012 staff workshop on the Tentative Order, staff stated that the language had not been substantially changed because the current language was mandated by the State Water Board's precedential order. However, the language in the 2001 MS4 permit was not totally consistent with the precedential order issued by the State Water Board. Order 99-05 clearly states that "The Permittees shall comply with Discharge Prohibitions [ ]³ and Receiving Water Limitations [ ] through timely implementation of control measures and other actions to reduce pollutants in the discharges in accordance with the SWMP and other requirements of this permit including any modifications." Footnote 3 directs that appropriate numbers for prohibitions and limitations that implement water quality objectives and water quality standards be inserted in place of the brackets. The Order goes on to say that "If exceedances of water quality objectives and water quality standards (collectively, WQS) persist not withstanding implementation of the SWMP and other requirements of this permit, the Permittees shall assure compliance with Discharge Prohibitions [ ] and Receiving Water Limitations [ ] by complying with the following procedure ...." The specified procedure is the procedure that has become known as the iterative process.

The Tentative Order and the 2001 MS4 Permit are both inconsistent with Order 99-05 in that the iterative process is only included in the Receiving Water Limitations part of the permit instead of being included in both the Discharge Prohibition and the Receiving Water Limitations parts of the permit. The Regional Water Board could correct this deficiency by adding iterative process language similar to the language in Part V of the Tentative Order to Part III of the Order. The Board should also make sure that the iterative process language clearly applies to the cause or contribute prohibitions contained in the Receiving Water Limitations part of the Tentative Order. One way of accomplishing this would be to incorporate the Receiving Water Limitations language suggested by the California Stormwater Quality Association.

The Regional Board should also specifically reference Watershed Management Programs in Parts III and V in order to better integrate the Watershed Management Program provisions with the iterative process in the Discharge Prohibitions and the Receiving Water Limitations parts of the permit. In addition to achieving compliance with Order 99-05, such modifications to the proposed permit would foster implementation of the adaptive management process described in the Watershed Management Program provisions and reduce the vulnerability of the Permittees to enforcement actions and third-party lawsuits when they are engaged in an iterative (adaptive management) process through a watershed-based program to address exceedances of water quality objectives and water quality standards in a prioritized, systematic manner, as the Regional Board is encouraging with the incorporation of the Watershed Management Program provisions into the permit.

Further, the Regional Water Board should work with the State Water Board to consider other ways to strengthen the iterative process mandated by Order 99-05. The magnitude of changes resulting from expressing the final waste load allocations from 33 TMDL documents as numeric water quality-based effluent limitations could place some City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 7 of 19

Permittees in immediate non-compliance with the permit if they do not have the ability to respond to exceedances of water quality standards, including WQBELs, through an orderly adaptive management process.

#### Consistency with Assumptions and Requirements of WLAs in TMDLs

The City of Signal Hill supports the premise behind Provision VI.E.1 that provisions of this part of the permit must be "consistent with the assumptions and requirements of all waste load allocations (WLAs) established in TMDLs for which some or all of the Permittees in this Order are responsible." This statement is consistent with the requirement in 40CFR 122.44(d)(1)(vii)(B) which requires that when developing water quality-based effluent limits, the permitting authority shall ensure that:

"(B) Effluent limits developed to protect a narrative water quality criteria, a numeric water quality criteria. or both, are consistent with the assumptions and requirements of any available waste load allocation for the discharge prepared by the State and approved by EPA pursuant to 40 CFR 130.7."

However, the regulations do not require WQBELs to be numeric in order to be consistent with the assumptions and requirements of waste load allocations. In fact, 2002 and 2010 EPA guidance memos both clearly allow the WQBELs in permits to be expressed either numerically or in the form of BMPs. It is a decision left to the permitting authority.

The issue of how to express water quality-based effluent limitations in NPDES permits has long been debated. On August 26, 1996, EPA gave notice in the Federal Register (61 Fed. Reg. 43761) that it had issued a policy outlining an interim approach for incorporating water quality-based effluent limitations into stormwater permits. The policy states that stormwater permits do not need to include water quality-based effluent limitations. Instead, the policy focuses on the use of BMPs followed by "expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards." The policy applies only to EPA, but EPA encouraged states to adopt similar policies for stormwater permits. California did so, as explained in SWQCB Order 91-03. This policy formed the basis for what was later articulated in State Water Board Order 99-05.

In Order 98-01, the State Water Board explained that it has "determined that for municipal separate storm water permits, BMPs constitute valid effluent limitations to comply with both the technology-based and water quality-based effluent limitation requirements." The State Board also noted that, "In fact, narrative effluent limitations requiring implementation of BMPs are generally the most appropriate form of effluent limitations when designed to satisfy technology requirements, including reduction of pollutants to the maximum extent practicable, and water quality-based requirements of the CWA." The State Water Board also concluded that "storm water permits must City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 8 of 19

achieve compliance with water quality standards, but they may do so by requiring implementation of BMPs in lieu of numeric water quality-based effluent limitations," and that, "Given the unique nature of storm water discharges, it is reasonable that implementation take place, where appropriate, on a phased basis." Based on these and other conclusions, and as a precedential decision, the State Water Board approved receiving water limitation language to be included in future municipal storm water permits. As explained above, this language was not acceptable to EPA and the State Water Board adopted more rigorous language in Order 99-05.

EPA affirmed the appropriateness of an iterative adaptive management BMP approach for improving water quality over time in its November 22, 2002 Memorandum "Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations for Storm Water Sources and NPDES Permit Requirements Based on Those WLAs." This memorandum clarified EPA's regulatory requirements for, and provided guidance on, establishing waste load allocations for stormwater discharges in TMDLs approved or established by EPA. It also provided guidance for the establishment of water qualitybased effluent limits in NPDES permits based on WLAs for stormwater discharges in TMDLs. A key point presented in the memorandum was that "EPA expects that most WQBELs for NPDES-regulated municipal and small construction storm water discharges will be in the form of BMPs, and that numeric limits will be used only in rare instances."

On November 12. 2010, EPA issued a revised guidance memorandum that indicated a preference for numeric WQBELs and recommended that permitting authorities use numeric effluent limitations in permits for MS4s and/or small construction stormwater discharges, where feasible. However, EPA continued to acknowledge permitting authority discretion concerning whether to use numeric WQBELs or to express WQBELs in the form of BMPs.

The 2010 EPA guidance memo states that when WQBELs are expressed in the form of BMPs, "the permit should contain objectives and measurable elements (e.g., schedule for BMP installation or level of BMP performance)." The City of Signal Hill strongly urges the Regional Water Board to direct staff to follow this approach and incorporate narrative WQBELs in the permit consistent with the WLAs in applicable TMDLs. This would facilitate the creation and use of a deemed compliant approach as was used in the Los Angeles River and Ballona Creek Trash TMDLs with approved full-capture devices. It would also allow a credit toward a compliance approach in which credit could be given for pollution prevention programs, such as SB 346, which target the true sources of pollutants over which Permittees have little or no control. Integrating WQBELs into the next generation of MS4 permits in the form of BMPs will encourage experimentation and strong pollution prevention efforts that could lead to achievement of water quality standards in a cost-effective manner. One example of how this could be done is from the Los Angeles River Metals TMDL, which states:

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 9 of 19

> "Each jurisdictional group shall demonstrate that 75% of the group's total drainage area served by the storm drain system is effectively meeting the dry weather WLAs."

This requirement could be expressed in the permit as a WQBEL in the form of BMPs, as follows:

Permittees shall demonstrate that source control measures and treatment controls designed to effectively meet dry weather WLAs are being implemented and maintained in 75% of the total area served by the storm drain system.

In most cases, converting waste load allocations to WQBELs expressed as BMPs should not be time consuming, and having BMP implementation targets is an understandable and manageable task if money is available. On the other hand, meeting numeric WQBEL targets can be frustrating and potentially paralyzing and could cause more money to be spent on lawyers than on best management practices and other control measures. We urge you to direct staff to use the WQBELs as BMPs approach in a Revised Tentative Order.

The staff statement to Vice Chair Stringer during the May 3, 2012 Regional Board Permit Workshop that Permittees think the BMP approach gives more certainty about being in compliance because of the variability in rainfall was an accurate summation of the situation. In the absence of a uniform design storm for TMDL compliance. Permittees fear the potential for third-party litigation, especially after a large, high intensity rain event. The situation is compounded by the incorporation of 33 TMDL documents, including requirements for over 500 waterbody/pollutant combinations. Even though Permittees are already addressing many of these TMDL requirements on an *ad hoc* basis, the requirements are now going to be grouped together in the permit, and Permittees will be exposed to third-party litigation due to the TMDLs now being permit requirements.

The City of Signal Hill requests that the Board recognize the fears of Permittees and encourage expedient efforts to address the water quality impairments by including WQBELs expressed in the form of MEP compliant BMPs in the MS4 permits. Ideally, we would prefer that WQBELs always be expressed in the form of BMPs. However, we acknowledge that both the Board and the environmental community have concerns about the commitment of municipalities to effectively address water quality impairments. We believe that municipalities are more committed to improving water quality than either the Board or environmental groups believe we are. In order to give us a chance to demonstrate our commitment, we ask that you express WQBELs in the MS4 permits for at least the next permit term in the form of BMPs, with the provision that you will review this decision during the development of the next cycle of permits.

The City of Signal Hill also requests that Provision VI.E.2.d.i be modified by adding a subsection that specifies that a Permittee shall be considered in compliance with an interim water quality-based effluent limitation and/or interim receiving water limitations

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 10 of 19

for pollutant(s) associated with a specific TMDL while preparing a Watershed Management Program Plan in accordance with Provision VI.E.3 and Provision VI.C. We further request that interim implementation schedules be placed in the permit for EPA-established TMDLs covered by Provision VI.E.3 to provide protection from third-party litigation while Watershed Management Programs are being prepared and Basin Plan Amendments with implementation schedules are being drafted and adopted.

We would be pleased to work with staff and other interested parties to develop workable language.

#### Watershed Management Programs

Staff noted at the beginning of the April 5, 2012 Board Workshop on reissuance of the Permit that there was a decision last fall to structure the permit in such a way as to facilitate watershed management. The City of Signal Hill appreciates Staff's efforts to encourage and facilitate the watershed approach. It could encourage collaboration and could focus resources on the highest priorities, especially if the AB 2554 stormwater fee - with 50% of its funding allocated to watershed efforts approved by the proposed Watershed Authority Groups - is supported by property owners.

The City of Signal Hill is vitally interested in watershed planning. In fact, the City took a leadership role in organizing 40 cities, Los Angeles County, and Caltrans in the Los Angeles River Watershed to address the monitoring requirements for the Los Angeles River Metals TMDLs. Signal Hill convinced 35 of the cities, the County, and Caltrans to fund critical special studies related to the TMDLs.

The City also organized Jurisdictional Group 1 for the Los Angeles River Metals TMDLs. Upon the withdrawal of the City of Los Angeles and the County of Los Angeles, Signal Hill organized the remaining cities pursuant to MOAs with the Gateway Council of Governments. In addition, the City of Signal Hill organized cities within the Los Cerritos Channel Watershed to work with EPA and with the Regional Water Board. The Los Cerritos Channel work began informally in late 2008 initially to negotiate elements of the Metals TMDLs to be established by EPA. In 2010, the watershed cities formalized this watershed cooperation through a series of MOAs with the Los Angeles Gateway Region Integrated Regional Water Management Joint Powers Authority (Gateway Water Management Authority) to develop an implementation plan, work with Regional Board staff on a Basin Plan Amendment to appropriately incorporate the TMDLs into the Basin Plan, conduct special studies, and implement measures to achieve compliance with the Los Cerritos Channel Metals TMDLs.

We are encouraged by the staff's draft provisions in the Tentative Order that would allow individual cities to customize their strategies, control measures and BMPs to address these customized measures, either individually and/or with a larger group of Permittees, in the Watershed Management Programs. The City trusts that customization will foster creativity and allow experimentation. For instance, with Metals TMDLs, we believe that City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 11 of 19

to be successful in meeting water quality standards over the long-term, we will need to address the sources of metals deposited on the watershed through atmospheric deposition and get the help of various State and Regional agencies to control these sources.

We agree with the goal of the Watershed Management Program provisions to ensure that discharges from the MS4 achieve applicable water quality-based effluent limitations and do not cause or contribute to exceedances of receiving water limitations. We also recognize that programs cannot guarantee that either effluent limitations or receiving water limitations are met at all times because of variations in rainfall and the absence of a water quality design storm above which water quality standards would not be enforced on dischargers. Requiring achievement of effluent limitations and receiving water limitations for large, rare storms exceeds the maximum extent practicable (MEP) standard for MS4 discharges. The Tentative Order does specify that structural BMPs should be sized to treat the volume of stormwater runoff from the 0.75-inch, 24-hour rain event, or the 85th percentile, 24-hour storm, whichever is greater. However, the Tentative Order does not clearly state that this design storm is also the design storm for permit compliance.

The City of Signal Hill requests that the permit be structured to use the runoff from the 85th percentile, 24-hour storm event as a consistent design storm for both BMP design and enforcement of water quality standards. We have seen the Power Point presentation given by Dr. Youn Sim on the development of a water quality design storm at the 2011 CASQA Annual Conference. It builds on the work done by the Regional Board's design storm task force and presents a compelling argument for the 85th percentile, 24-hour design storm for both design and enforcement. Such an action by the Regional Board would help convince municipalities that they are not wasting money by investing in BMPs and other control measures in the absence of a physical limit on the storm size for which they have to meet water quality standards.

The City agrees with the requirement in Provision VI.C.1.c. that, within a Watershed Management Program, customized strategies and BMPs can be implemented through each Permittee's stormwater program, and/or collectively by all participating Permittees through the Watershed Management Program. We further agree with the requirement in Provision VI.C.3.b.i that Permittees identify strategies, control measures, and BMPs to be implemented through their individual stormwater programs, and collectively on a watershed scale, and Provision VI.C.3.b.iv.(4)(e) that Watershed Management Program plans clearly identify the responsibilities of each participating Permittee for implementation of watershed control measures. This measure should protect conscientious Permittees from being held liable for the actions or inactions of other Permittees. We would appreciate confirmation of our interpretation that the provision provides protection against joint and several liability related to the actions or inactions of "bad actors." Making this clear in the permit will help convince every Permittee that it will be held responsible for its own actions or inactions, and that it will not be possible to hide and depend on the actions of other entities for protection.

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 12 of 19

The City strongly supports the requirement in Provisions VI.C.1.f.ii that each Watershed Management Program identifies and implements strategies, control measures, and BMPs to achieve applicable water quality-based effluent limitations, receiving water limitations, and/or non-stormwater action levels. It is imperative that Permittees and the Regional Board think beyond traditional treatment control BMPs in order to cost-effectively achieve compliance with water quality standards. However, we question the language of Provision VI.C.1.f.iii related to executing a monitoring and assessment program to determine progress toward achieving applicable limitations and/or action levels. We understand that the Regional Board would prefer to have a numeric indicator to monitor progress toward achievement of applicable water quality standards, but we are concerned with the wording of the requirement.

Specifically, we believe that the proposed wording is insufficient to prevent diversion of time, effort, and money due to third-party lawsuits based on temporary exceedances. The wording of the Provision should be modified to state that the monitoring and assessment program should be based on true benchmarks – indicators, rather than compliance points – designed to promote an adaptive management process during the implementation period.

The City is concerned that Provision VI.C.3.b.iii (Watershed Control Measures) does not sufficiently recognize pollution prevention, including what the California Stormwater Quality Association (CASQA) has described as *true source control*. Signal Hill, other cities within the region, and the Coalition for Practical Regulation contributed financial support, lobbyist services, and support letters for CASQA's efforts to address the major source of copper brake pad dust through a State legislative control measure, SB 346. The WMP section of the Permit should be re-written to recognize and encourage true source control as a pollution prevention measure that will ensure long-term compliance with water quality standards.

We acknowledge that Provision VI.C.3.b.IV(4) does recognize pollution prevention as a non-structural best management practice that can be included in Watershed Management Plans. However, we believe that true source control, including product substitution and materials substitution, as well as product take-back, needs more emphasis in regional and statewide efforts to improve water quality.

The City also appreciates the fact that the Regional Water Board's Watershed Management Areas (WMAs) may be subdivided into subwatersheds to focus water quality prioritization and implementation efforts by receiving waters, as well as the opportunity for individual municipalities to establish their own watershed management programs for watershed sub-drainages.

Further, the City appreciates Provision VI.C.3.b.iv.(4)(e) that specifies that the Water Management Program plans "shall clearly identify the responsibilities of each participating Permittee for implementation of watershed control measures." We trust that this provision, in combination with a provision in the Code of Federal Regulations [40]

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 13 of 19

CFR 122.26(a)(3)(vi)] that states, "co-Permittees need only comply with permit conditions related to discharge from municipal storm sewers for which they are operators," will protect conscientious Permittees from being held liable for actions or inactions of other Permittees participating in the same Watershed Management Program.

The City of Signal Hill strongly supports the adaptive management process. A formal adaptive management process is specified in the Watershed Management Program section of the Tentativc Order, but we regard the process as an integral element of the entire water quality improvement program. It was incorporated by the State Water Board into the receiving water limitation language adopted in State Board Order 99-05 as what has become known as the "iterative process." It was also recommended in the 2001 National Research Council report, *Assessing the TMDL Approach to Water Quality Management.* The Council's Committee to Assess the Scientific Basis of the Total Maximum Daily Load Approach to Water Pollution Reduction strongly recommended that "TMDL plans should employ adaptive implementation." The Committee defined adaptive implementation as "a cyclical process in which TMDL plans are periodically assessed for their achievement of water quality standards including beneficial uses."

Although adaptive management is a continuous process, having a requirement in the permit to report annually during the permit term beginning in 2015 could be valuable in focusing on continuous evaluation and improvement of a watershed management program, and on progress toward achieving water quality-based effluent limitations and receiving water limitations. The requirement in Provision III.C.6.b.i that individual Permittees revise their Jurisdictional Stormwater Management Programs annually will also foster continuous evaluation and adaptation of program elements.

## Monitoring and Reporting Program

As noted above, the City of Signal Hill had Kinnetic Laboratories, Incorporated review the monitoring component of the Monitoring and Reporting Program because of its complexities and potential costs. KLI concluded that the monitoring program, as proposed, would be extremely costly and impractical. KLI's report (Attachment I) described the substantial monitoring effort over the last 20 years to assess chemical, physical, and biological impacts of pollutants on receiving waters and listed some of the many benefits of long-term monitoring of stormwater quality and quantity. However, they concluded that continuing and expanding on the current approach will tremendously inflate the costs of monitoring without substantially increasing the likelihood of making measurable progress of meeting the Clean Water Act goals of "fishable and swimmable waters." Specifically, KLI recommended that continued intensive annual mass-emission sampling be conducted during alternating permit cycles to track long-term trends. Continual intensive monitoring for TMDLs should be limited to the constituents of concern. Savings from decreased mass-emission monitoring could be directed toward special studies to identify whether stormwater discharges are having measureable impacts on beneficial uses.

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 14 of 19

KLI also concluded that the proposed monitoring in Attachment E to the draft order would drastically increase monitoring costs, largely because of the proposed wet-weather stormwater outfall monitoring and toxicity testing requirements. Because of the requirement to monitor at least one major outfall per subwatershed drainage area within a Permittee's jurisdiction, the total number of outfalls monitored could be 200 or more. If the equipment purchase, installation, and operation of auto-sampler at 200 sites were to cost an average of \$75,000 cach, there could be a first year cost of \$15 million for outfall monitoring. If each site were to cost \$100,000, the total cost to establish the stormwater outfall-based monitoring element of the monitoring program could be \$20 million.

KLI further concluded that the toxicity monitoring requirements could have a large impact on costs because of the large sample volumes required to allow both toxicity and chemistry monitoring. They also questioned the capacity of bioassay laboratories in Southern California to handle the large volume of samples.

In addition, KLI concluded that the present toxicity identification evaluation (TIE) requirements would add substantial costs to the program without providing useful information. They indicated that TIEs have served a purpose and will continue to play an important role in the identification of toxicants, but they argued that they should be used judiciously. KLI further suggested that simple measurements of chemicals currently known to be of concern are normally sufficient to identify problems without the added expense of numerous TIEs.

The report also contains several detailed comments in support of KLI's general conclusions. The City of Signal Hill recommends that Regional Board staff meet with KLI and other monitoring consultants to refine the Monitoring and Reporting Program to make it more practicable and less costly.

## **Attachment A - Definitions**

The City appreciates the inclusion of a Definitions attachment. The attachment is much more complete than the limited definition section in the Minimum Control Measures part of the Working Proposal. However, a few revisions should be made to clearly define additional terms used in the Tentative Order and to expand upon current definitions.

- **BMPs** There is already a definition for BMPs in Attachment A, but it should be revised to specifically reference source control, including true source control. Adding true source control to the definition of BMPs would encourage Permittees to be mindful of it as they design their stormwater quality improvement programs.
- Development The definitions of Development, New Development, and Redevelopment should be clearly defined and added to the Definitions Section as they are in the existing MS4 permit, except that the 5,000 square foot threshold in the definition of redevelopment should be increased to at least 10,000 square feet.
- Environmentally Sensitive Areas (ESAs) This term should be defined.

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 15 of 19

- **Green Infrastructure** This term should be defined. EPA states on the LID page of its website that green infrastructure "is a relatively new and flexible term" that "has been used differently in different contexts." EPA also states, "Green infrastructure can be used at a wide range of landscape scales in place of, or in addition to, more traditional stormwater control elements to support the principles of LID."
- **Operational Source Control** This term needs to be clearly identified and utilized throughout the document to differentiate it from True Source Control.
- **Predevelopment conditions** This term is used in Provision VI.D.6.c.v(1)(c)(ii)2 and could be viewed in an overly broad manner unless it is clearly defined in the definition section.
- Stormwater harvest and use Since it may be desirable in the course of implementing TMDLs to harvest stormwater from an existing built-up area to infiltrate or use for irrigation, this term should be defined.
- **True Source Control** This term needs to be defined. Staff could use the definition from CASQA's True Source Control Initiative.

#### **Request for a Separate Permit**

While the City of Signal Hill appreciates the Regional Water Board's effort to reduce the potential problems of "Joint and Several Liability" in the Tentative Order, the City would still prefer to have its own MS4 NPDES Permit.

Provision VI.A.4.a of the Tentative Order specifies, "Each Permittee is required to comply with the Requirements of this Order applicable to discharges within its boundaries. Permittees are not responsible for the implementation of the provisions applicable to other Permittees." This is a welcome clarification in light of the joint and several liability provisions in TMDLs, such as the Los Angeles River Metals TMDLs, that are being addressed by the Tentative Order.

We also appreciate the clarification in part VI. E.2.b.ii that, in situations of commingled discharges in the MS4 prior to discharging to the receiving water that, "Pursuant to 40 CFR Section 122.26(a)(3)(vi), each Permittee is only responsible for discharges from the MS4 for which they are owners and/or operators." Further, we appreciate that provision VI.C.3.b.(4).(e) requires that a Watershed Management Program Plan "shall clearly identify the responsibilities of each participating Permittee for implementation of watershed control measures." As mentioned above, this provision should help protect conscientious Permittees from being held liable for the actions or inactions of other Permittees.

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 16 of 19

However, as noted by Steve Myrter in his statement at the Regional Water Board NPDES Permit Workshop on November 10, 2011, the City of Signal Hill strongly believes that it can and should be granted its own permit. The background and justification for the City's request for its own permit is contained in Mr. Myrter's statement (Attachment 3 to this letter).

The Fact Sheet (attachment F to the Tentative Order) cites on pages F-15 and F-16 several factors that the Regional Water Board considered in evaluating the Reports of Waste Discharge (ROWDs) requesting separate MS4 permits. The first factor referred to the large inter-connected nature of the Los Angeles County MS4 system and the fact that the discharges from multiple cities often co-mingle in the MS4 prior to discharging to receiving waters. This factor should not preclude the City of Signal Hill from having its own separate permit. The City discharges to both the Los Angeles River and the Los Cerritos Channel through the City of Long Beach that already has a separate MS4 permit.

The second factor relates to the requirement to implement 33 predominantly watershed – based TMDL documents in this Order. The fact sheet asserts that having separate permits would make implementation of TMDLs more cumbersome. The City of Signal Hill strongly disagrees with this assertion. The City led the organization of Jurisdictional Group 1 for the Los Angeles River Metals TMDLs and accommodated the withdrawal of the City of Los Angeles and the County of Los Angeles by organizing the remaining cities and Caltrans through MOAs with the Gateway Council of Governments. The City of Long Beach is one of the cities in Jurisdiction Group 1, and both Caltrans and the City of Long Beach have separate MS4 permits. In fact, the Caltrans permit was issued by a different Water Board, the State Water Board. Because all the entities are subject to the same metals TMDLs and have organized themselves pursuant to MOAs with the Council of Governments, having separate permits has absolutely no impact the ability of the entities within the Jurisdictional Group to work together to implement the TMDLs.

The City of Signal Hill also led the organization of the entities within the Los Cerritos Channel Watershed to address the Cerritos Channel Metals TMDLs established by USEPA. The County also withdrew from this group and Caltrans has not yet formally joined, although it is represented at Technical Committee meetings. The cities within the watershed are organized pursuant to MOAs with the Gateway Water Management Authority. The fact that the City of Long Beach has a separate MS4 Permit from the other six cities in the watershed has not had an impact on their ability to work together to address the metals TMDLs.

The Fact Sheet also mentions the Watershed Management Areas (WMAs) specified in the Order. Three of these MWAs include the City of Long Beach with its separate permit.

The third factor mentioned in the Fact Sheet is the passage of AB 2554, the development of the County's Water Quality Funding Initiative, and the fact that 50% of the funding is allocated to Watershed Authority Groups (WAGs) to implement collaborative water quality improvement plans. Long Beach, with its separate permit, is in two of the WAGs. Furthermore, the WAGs are to be organized as joint powers authorities, so the fact that City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 17 of 19

one or more Permittee might have a separate MS4 permit will have no impact. A fourth factor apparently considered by Regional Board staff was the results of the online survey administered by the Regional Board staff. The fact that only four Permittees expressed a preference for individual permits is not justification for a single, one-sizefits-all, approach.

Furthermore, issuing a separate MS4 permit will not end the City's leadership in responding to multiple TMDLs nor place undue burdens on the Regional Water Board. The City is committed to continuing to organize and lead the 42 entities in the Los Angeles River Watershed with respect to coordinated monitoring and special studies. We are also committed to working with the entities in Jurisdictional Group 1 for the Los Angeles River Metals TMDLs and with the cities in the Los Cerritos Channel Watershed. In addition, we will be working with multiple jurisdictions to address the Los Angeles River bacteria TMDLs, the City of Long Beach Beaches and Los Angeles River Estuary Bacteria TMDL, and the Harbor Toxics TMDL. The City of Long Beach, with its separate MS4 permit, is a party to all of these TMDLs, so having a second city with a separate permit will not make addressing the TMDLs more cumbersome.

With respect to the extra work for the Regional Water Board, there should not be much. Since the Tentative Order for the new Los Angeles County MS4 permit does not include a Principal Permittee, each Permittee will submit its own annual report and presumably its own Report of Waste Discharge (ROWD) 180 days prior to the Order expiration date. In addition, Permittees and/or Watershed Monitoring Programs will be submitting monitoring plans, multiple monitoring reports, and financially supporting regional studies.

One other reason that there should not be undue burden placed on Regional Water Board staff as a result of giving the City of Signal Hill its own permit is that the structure of the Tentative Order is such that it could easily be converted to an individual permit. We expect we would be subject to essentially the same requirements as the others cities in the County. However, the number of attachments would be fewer since we are not subject to all 33 of the TMDL documents being addressed in the Tentative Order. To assist Regional Board staff, we would be willing to prepare a suggested revision in Word "track changes" mode to facilitate development of a separate MS4 permit for the City.

We agree with Member Glickfeld that the permit should provide a variety of options. One option that we would like to see is for proactive cities, especially those in multiple watersheds, to receive separate permits. Such separately permitted cities could still work with watershed or sub-watershed groups through Memoranda of Agreement to address TMDL implementation and other water quality issues. Given its unique geographic characteristics, its industrial heritage, its comprehensive and effective stormwater quality program, and its regional leadership in organizing municipalities to address water quality problems in multiple watersheds, the City of Signal Hill should be given its own MS4

City of Signal Hill Comments on the Draft Tentative Order for the Reissued Los Angeles County MS4 Permit 23 July 2012 Page 18 of 19

permit. See attached Statement by Steve Myrter and Power Point presentation presented to the Regional Water Board on June 7, 2012. (Attachments 4 and 5).

## Conclusion

We urge Regional Board to give serious consideration to the comments of all Permittees regarding the language and requirements of the Tentative Order. It is the Permittees who have experience with design, construction, operation, and maintenance of BMPs and the implementation of MS4 permit requirements. Utilizing that experience could significantly enhance the workability of the new MS4 permit. We particularly ask that the Board direct staff to reduce the increased costs of new and expanded permit requirements, including the costs of the Monitoring and Reporting Program. In addition, it is critical that the Discharge Prohibitions and Receiving Water Limitations language be changed to completely incorporate the iterative process element of State Board Order 99-05 and that both interim and final WQBELs included to be consistent with the assumptions and requirements of TMDL wasteload allocations be expressed as BMPs, at least for the permit cycle.

Finally, the City of Signal Hill would strongly prefer to have its own MS4 permit. We think we have demonstrated the ability to manage our own permit, that the factors used to review ROWDs should not preclude our being issued an individual permit, and that it would not be a burden on the Board or its staff to issue the City of Signal Hill an individual permit.

Thank you again for the opportunity to provide these comments.

Sincerely,

CITY OF SIGNAL HILL

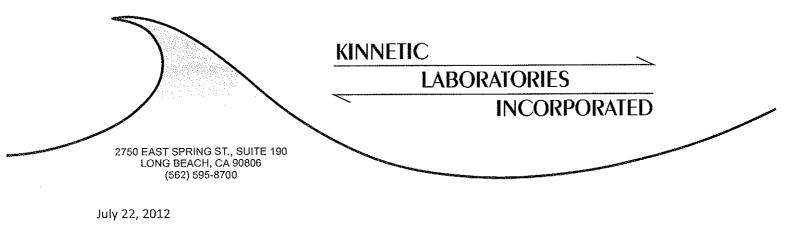

Kenneth Farfsing City Manager

## Re: Comments on Attachment E Draft Monitoring and Reporting Program and the proposed Municipal Action Levels (Attachment G)

Per your request, we have reviewed several items included in the **Tentative Waste Discharge Requirements For Municipal Separate Storm Sewer System (MS4) Discharges Within The County Of Los Angeles Flood Control District, Including The County of Los Angeles and Incorporated Cities Therein, Except The City Of Long Beach** (Tentative Order). These include the Draft Monitoring and Reporting Program in Attachment E and the proposed Municipal Action Levels in Attachment G. Complete comments are enclosed.

We support shifting towards a watershed-based permitting system for more effective stormwater management. However, this should be done using a more adaptive management approach that allows the dischargers to address the issues in a staged manner where it is first determined whether discharges are having a significant impact on the receiving waters, identifying the nature of the impact, and then prioritizing further work in the watersheds or subwatersheds to address the primary issues. The present program will be extremely costly and impractical. Toxicity testing as currently designed will far exceed the capacity of the qualified bioassay laboratories in Southern California.

Please feel free to contact us if you have any questions regarding the detailed comments enclosed with this letter.

Sincerely,

Marty & Starmson

Marty Stevenson Principal and Senior Scientist

Enclosure (1)

# COMMENTS ON ATTACHMENT E DRAFT MONITORING AND REPORTING PROGRAM AND ATTACHMENT G MUNICIPAL ACTIONS LEVELS

#### **GENERAL COMMENTS**

Overall the proposed Monitoring and Reporting Program provides a number of elements that could be implemented selectively to address the listed primary objectives. The authors suggest that the plan also "provides flexibility to develop an integrated monitoring program to address all of the monitoring requirements of this Order and other monitoring obligations or requirements in a cost efficient and effective manner." Although we recognize and appreciate the benefits of being able to address these issues on a watershed or subwatershed basis, the overly prescriptive requirements will severely limit any cost-efficiencies that may have been achieved by this approach.

A substantial effort has been expended over the past 20 years in order to assess chemical, physical, and biological impacts on receiving waters as well as to characterize pollutant concentrations and loads. While this effort has proven valuable in many ways, continuing and expanding on upon this approach will tremendously inflate the costs of monitoring without substantially increasing the likelihood of making measurable progress towards meeting the Clean Water Act goals of "fishable and swimmable waters". Many of the benefits of long-term monitoring of stormwater quality and quantity include:

- the identification of organophosphate pesticides as a serious problem in stormwater discharges triggering the ultimate removal of these pesticides from the open market,
- Documentation of the rapid process in which diazinon and chlorpyrifos declined to levels below those that would cause a measureable amount of toxicity in urban stormwater,
- Identification of problems with pyrethroid pesticides that replaced former applications of diazinon and chlorpyrifos. Monitoring was actually not necessary to identify these compounds as likely problems in the receiving waters. This was predicted by many water quality professionals.
- The long-term monitoring efforts are just starting to show decreasing trends for lead and, to a
  lesser degree, zinc while many other common contaminants show no signs of change that can
  be distinguished such factors as normal variability due to the time of year, the size of the storm
  events, and antecedent dry weather conditions.
- Many of the persistent organic contaminants show signs of being detected more frequently at some sites but these types of compounds are poorly quantified by routine stormwater monitoring methods. Alternative, high volume (high cost) sampling methods are necessary to accurately assess loads for most of these compounds.

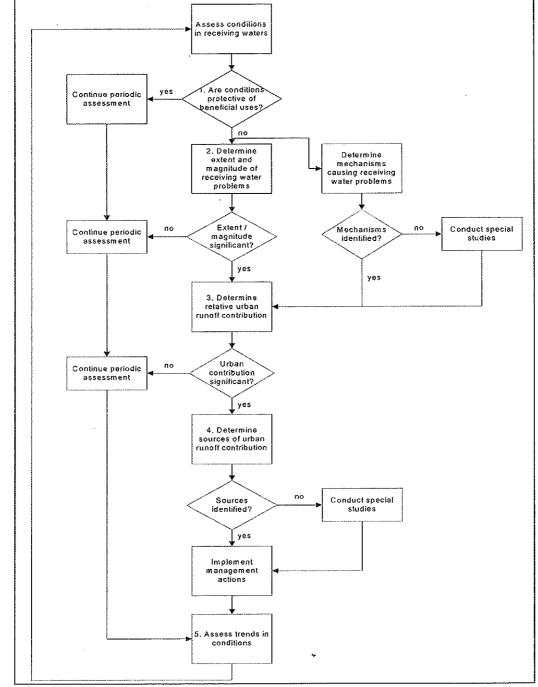

At the slow rates of decline that we are encountering for many of the remaining pollutants of concern, continued intensive annual sampling is not expected to be cost effective. Eliminating this type of monitoring for one permit cycle and then reintroducing this type of monitoring during the subsequent permit cycle should still be sufficient to document the more gradual decreases that we have only recently identified. Unless a site is subject to a TMDL, continued intensive monitoring of concentrations and loads is not expected to provide the benefits that we are seeking. For TMDL monitoring, only the constituents of concern would be sampled. Rather than increasing the intensity of monitoring, we would suggest decreasing routine mass emission monitoring. During the permit cycle where routine monitoring is minimized efforts could be better directed towards conducting receiving water monitoring designed to assess if stormwater discharges are having measureable impacts on the receiving waters and the nature of the impact. The mass emission monitoring effort would then be modified on the basis of these findings to focus on prioritized watersheds and subswatersheds that are having the greatest impacts on receiving waters.

Municipal Action Levels (MALs) are listed at the end of Attachment G to the Tentative Order. MALs are included for total mercury as 0.32 ug/L. These should be excluded for two reasons:

- Due to the volatility of mercury, it is inappropriate to collect and analyze mercury using
  peristaltic pumps and the intensive mixing processes necessary while combining multiple
  composite containers and subsampling into laboratory containers. If mercury was included in a
  program, sampling would need to be conducted manually using proper containers and sampling
  equipment. Although we recognize that the database used for the MALs was from composite
  samples, that still does not validate the approach.
- In addition to the problems with sampling methods, mercury was reported as detected in only 17% of the 178 samples. These included 30 samples of which 11 were reported as detected at the detection limit. Overall, this should not be considered an appropriate data set for calculation of MALs.

Savings introduced by decreasing the intensity of routine mass emission monitoring could be directed towards better studies in the receiving waters to identify whether stormwater discharges are having measureable impacts on beneficial uses. The results of these studies could then be used to prioritize and focus monitoring efforts on watersheds or sub-watersheds that are demonstrated to contribute to these impairments. This approach would be more consistent with the strategy suggested for the Model Municipal Stormwater Monitoring Program developed by the Southern California Stormwater Monitoring Coalition (Figure 1).

2

.

Figure 1. Flow Chart proposed by the Stormwater Monitoring Coalition (1994) for a Model Municipal _ Stormwater Monitoring Program.

The Draft Monitoring and Reporting Program in the tentative order will drastically increase monitoring costs. We strongly believe that the program, as currently specified, will only lead to magnification of current monitoring costs without any substantial improvements in addressing the real issue of assuring that beneficial uses are protected and maintained in the receiving waters. The wet-weather stormwater outfall monitoring toxicity testing requirements comprise two of the most significant impacts on monitoring costs. Site selection, equipment purchase, installation, and operation of each of these sites will run roughly \$75K-\$100K for the first year of the program and many Cities will have two or three sites that will need to be monitored since they discharge into multiple subwatersheds.

The toxicity testing requirements have a large impact on costs from at least three perspectives. The large sample volumes required (cited as five gallons in the MRP but likely greater) alone will require that sample containers be switched at least two to four times within a 24 hour period. This will be necessary to assure that sufficient water is collected to cover both toxicity testing requirements and chemistry. In addition, the samplers must be set conservatively to assure that the full volume is obtained. This can result in even more bottle changes if the storm exceeds the predicted magnitude. When large numbers of bottle changes are needed, additional storm crews are needed to assure that bottles are changed as soon as possible after filling to avoid loss of storm coverage.

The cost of the toxicity testing requirements is a significant factor but, the availability of qualified bioassay labs to meet the high demands of this and other stormwater monitoring programs may be an even greater issue. With all stormwater programs requiring that sampling be conducted during the first major storm event, bioassay laboratories in Southern California <u>will not</u> have the capacity to handle the large volume of samples. This is exacerbated by the recent closure of several bioassay laboratories that had been active in stormwater programs.

The TIE requirements will also introduce substantial costs to the program and are highly unlikely to provide useful information. A successful TIE requires enough toxicity be present to allow the procedures to effectively partition the toxicity. The minimum cost of a TIE will run at least \$5,000 and can run much higher with incorporation of Phase II and III TIE procedures. It also requires that the toxicity is relatively stable. There have been many stormwater TIEs conducted of the past 12-15 years where the toxicity was either not stable or not of a sufficient magnitude to allow the nature of the toxicity to be partitioned. TIEs should be used judiciously to assure that they are applied only when there is a strong probability of producing results that are valid, scientifically supportable and that can be used to support actions that may be necessary to control the source of the toxicity.

There have been many successful TIEs conducted on stormwater in the past 20 years that have provided valid information that led to actions being taken to eliminate the source of the toxicity. This included TIEs conducted using *Ceriodaphnia* from roughly 1995 to 2005 that resulted in diazinon and chlorpyrifos

being removed from residential use. They have also been used to identify pyrethroid pesticides as the major cause of toxicity in receiving water sediments as a result of chemicals used to replace diazinon and chlorpyrifos. While TIEs have served a purpose and will continue to play an important role in identification of toxicants, simple measurements of chemicals currently known to be of concern are normally sufficient to identify the problem without the added expense of numerous TIEs.

#### **DETAILED COMMENTS**

#### E.2 Storm water outfall based monitoring, page E-4

This type of monitoring should be selectively applied when necessary to track upstream sources of contaminants. It should be recognized that if this monitoring requirement is uniformly applied across all of the municipalities covered by the permit it could include in excess of 200 sites. Identification of suitable sites meeting the criteria later established in this document would be useful so that additional source tracking could be more easily implemented but the current approach is contrary to the intent of the National Research Council (2008) that suggested movement toward watershed-based monitoring.

#### G. Analytical Procedures, page E-6

Analysis of Suspended-Sediment Concentrations (SSC) ASTM D-3977-97 is specified on this page and at other locations in the document. This requires further explanation since, strictly speaking, this method is inconsistent with composite sampling. The SSC analytical approach relies on analysis of the entire sample whereas stormwater samples are the result of a subsampling process. The SSC method is most applicable to samples taken with USGS methods based upon isokinetic sampling through the flow profile and subsequent sampling of the entire bottle. The large and inconsistent differences in sediment concentrations attributed to TSS measurements vs SSC measurements were mostly based upon comparison of the Standard Methods TSS method and the SSC method. The SM TSS method uses a pipette to obtain samples from a 1-Liter container. The more accurate EPA TSS procedure uses stirring and pouring of a subsample from the bottle. Guo (2007) did a thorough laboratory study comparing the three methods using laboratory developed particle size distributions. The percent recovery of solids and correlations among TSS, SSC and true concentrations were compared. Guo demonstrated that the EPA TSS method was comparable to the SSC and true concentrations until particle sizes reached 50 - 100 microns. Differences between the EPA-TSS procedure and SSC were attributed to larger particles not being well mixed and remaining in the 1-L bottle after pouring a subsample.

Ultimately, the measurement of solids in stormwater depends upon two steps. The first step involves use of a sound subsampling method to assure that larger particles are well distributed in the subsamples. The second step involves the process used to extract the sediment and

water from the laboratory container. For stormwater, use of the whole subsample is critical to avoid loss of residuals. This is similar to the SSC methods with the exception that SSC procedures do not involve a subsampling procedure that inherently adds error to the measurement. It is therefore important to specify that the SSC method used with composite stormwater samples is actually a modified procedure that relies on the use of sound, reproducible subsampling procedures.

## VI.C Minimum Wet Weather Receiving Water Monitoring Requirements, Page E-14

In general, this section needs to be split to separate monitoring requirements that might be appropriate for a mass emission station located at a site considered to be a receiving water site in a stream or channel and monitoring that is intended for bays, estuaries and the ocean where flow is not relevant. It is not clear that wet weather monitoring in the ocean, bays or estuaries should even be specified at this time. Any such work would more likely be developed as a special study if deemed necessary. Several monitoring efforts have previously been conducted to track plumes and toxicity but repeating these efforts may not be appropriate until it is demonstrated that land-based sources of zinc and copper, which were identified as the primary toxicants from Ballona Creek, are controlled down to levels expected to significantly reduce the observed toxic responses. Alternatively, this section may be intended to apply to wet weather monitoring as currently performed at the mass emission sites but that is not clear.

**1.b.i** The definition of a storm water event for purposes of sites located in the ocean, bay, or estuarine receiving waters is defined as "greater than or equal to 0.1 inch of precipitation, as measured from at least 50% of the Los Angeles County controlled rain gauges". This is inconsistent with typical definitions of storm events and, would unlikely be a quantifiable event in terms of flow. Section VI.C.1.b.iii provides a definition for the first significant storm event of the year that should apply to all events. This section requires permittees to target the first storm event of the year where at least 0.25 inches of rainfall is predicted at a 70% probability 24-hours before the expected start of the storm.

**1.b.iii** This section specifies that sampling events be separated by a minimum of three days of less than 0.1 inch of rain each day. This is an insufficient condition for defining the minimum interval between events. Dry conditions should persist for at least 3 day with a total of less than 0.1 inches of rain for the period. It should be further emphasized that wet weather monitoring should preferably be separated by at least seven days of dry weather (less than a total of 0.1 inches). A suitable amount of time must be provided between sampling efforts to allow build-up of contaminants and to provide data needed to better understand contaminant build-up rates.

**1.c, page E-15** This section requires further clarification. If this section is referring to stream or river receiving water monitoring, the start of monitoring needs to rely on the increasing flows in

response to the rainfall. It is unclear how it would apply to receiving waters defined as ocean waters, bays or estuaries. Monitoring of ocean, bay, or estuary receiving waters should normally be initiated in response to declining salinity or increasing turbidity in surface waters. Ultimately, initiation of monitoring should depend upon the sampling objectives that would be developed as part of a special study rather than a specification.

#### VIII. STORM WATER OUTFALL BASED MONITORING, Page E-17

Requirements under this section of the Monitoring and Reporting Plan will lead to an astronomical increase in monitoring costs and will completely overwhelm toxicity labs that are located in Southern California and capable of performing this type of work. Utilization of this sampling strategy should be applied extremely judiciously and only for the purpose of tracking critical sources of contaminants.

#### VIII. STORM WATER OUTFALL BASED MONITORING, Page E-18

#### C. Sampling Methods.

This section allows for samples to be collected during the first 24 hours of discharge. By not sampling all runoff from a given storm event, this approach introduces a bias into load estimates and the data cannot be compared to other whole storm composites. We realize that this is to ease the sampling effort and help address issues for constituents with short holding times. When monitoring is cut off at 24 hours for a lengthy storm, data should be flagged to indicate that it should not be used for correlative purposes. In the same manner, the data should not be considered for inclusion in the National Stormwater Quality Database that is used to generate Municipal Action Levels (MALs).

#### XI. REGIONAL STUDIES, Page E-25

#### A. Pyrethroid Insecticides Study Requirements

This sediment study requirement should be at least delayed if not eliminated. Intercalibration studies remain to be performed for pyrethroid pesticides. An initial round of testing was conducted under the SMC laboratory intercalibration program but participation was limited and the group detection limits were high (approximately 10 ng/L rather than 1 ng/L limits needed for water testing). The results of that program were not promising. While we recognize that the SMC testing was conducted for analyses in water rather than sediment, there is still concern regarding the accuracy and precision of this relatively new analytical procedure when comparing laboratories. A successful laboratory intercalibration study is necessary for both water and sediment before a program of this magnitude should be implemented.

This program is supposed to incorporate sediment collection in major rivers but does not appear to address other receiving waters (ocean, bays and estuaries) that may even be more of a concern. Since many of the waterways are constructed of concrete it should be specified that this study is not intended to include sediment that may temporarily accumulate on the concrete bottoms.

The incorporation of toxicity testing will make this program even more expensive. Determining where toxicity in the sediments is associated with pyrethroid pesticides will require Phase I/II TIEs using a variety of manipulations with esterase, PBO, and temperature adjustments. Although a study of this magnitude is scientifically of interest, initial screening may more appropriately rely on sediment measurements of pyrethroids and TOC. The data would then be normalized to the TOC and compared against previously established  $LC_{50}$ s for TOC normalized concentrations of pyrethroids. These data should be sufficient to further identify watersheds where these compounds have the potential to produce toxicity. Use of these existing TOC normalized  $LC_{50}$ s to calculate expected acute Toxicity Units (TU_a) should be sufficient to trigger actions to reduce/eliminate pyrethroids in urban watersheds. If necessary, toxicity testing could be a followup action at sites where the chemistry is not sufficient to be confident of a toxic response.

Through the work of the California Stormwater Quality Association (CASQA) and the California Department of Pesticide Regulation (DPR) new requirements became effective on July 19 that will modify the way that professional applicators apply pyrethroid insecticides around buildings. In parallel, new labeling of pyrethroid products were implemented voluntarily by manufacturers at DPR's request. These include special labels for the most persistent pyrethroid, bifenthrin, which will provide further water quality protection. The combination of these efforts is expected to reduce treatments of outdoor impervious surfaces, thus reducing the quantity of pyrethroids that can be washed directly into gutters and storm drains when it rains or when water like irrigation overflow runs across treated surfaces. Together, it has been predicted that the regulations and the new labeling will reduce the amount of pyrethroid insecticides in urban stormwater runoff by 80-90%. We would suggest allowing some time for these actions to take impact before considering full implementation of the pyrethroid survey with both chemistry and toxicity testing.

#### XII. AQUATIC TOXICITY MONITORING METHODS, Page E-28 to E-29

This element of the program has not been well evaluated from either the practical perspective of conducting this work or from the incredible costs that would result from the program. During the initial screening phase, bioassay testing alone could run \$4,000 to \$5,000 per site. If TIEs are triggered, costs could run another \$5,000. Many of the aquatic toxicity monitoring requirements appear to be extracted from testing requirements and procedures used for wastewater discharges and do not recognize the problems associated with toxicity testing in stormwater.

#### C. Sample volumes

Section C indicates suggests a minimum of 5 gallons of water be collected for baseline studies and TIE studies. The base requirement to perform the initial chronic screening will be more like 6 gallons assuming that the acute testing requirements can be fulfilled by the first portion of the chronic tests. If that is not the case, 7-8 gallons would be necessary to fulfill both requirements. In order to accommodate a TIE during this screening phase, another 5 gallons of water would be necessary.

With the need for increasing volumes of stormwater comes the need for more field crews to be available to rapidly change out bottles as each fills. The highest volume composite containers commonly used are 20-L media bottles which roughly correspond to a 5 gallon container. With two bottles needed for bioassay testing another 1 to 2 bottles for chemical testing and QAQC, it becomes more challenging to collect high quality, representative samples. To meet this capacity requirement, the stormwater stations must be set at a conservative sampling rate that allows for a successful event even with storm volumes coming in below predictions so it would not be unusual to end up with 5-6 20-L bottles or more for a single event. These bottles will then require thorough mixing to make sure that each container represents a full storm composite. After that process subsamples would need to be taken for delivery to the labs.

Laboratory capacity for bioassay testing is already stressed at the beginning of the storm season when all permits are targeting the first event. Adding the quantity of toxicity tests required in the different elements specified in Attachment E of Tentative Order will simply not be feasible.

#### F. Acute Toxicity

We support use of 100% samples as a sound method for toxicity screening. This approach should be considered as the primary test with full dilution testing being the first response to exceedences of the targets

More flexibility needs to be added for alternative species to be used. Selection of test species should consider existing knowledge regarding pollutants of concern, selective sensitivity of the various test species and availability. The Pacific mysid is a good test species but is wild caught and often unavailable when needed. Other mysids such has Acanthomysis are cultured so they are more readily available and also can be tested in waters where the salinity must be adjusted with sea salts.

#### G. Chronic Toxicity, Page E-30

The chronic screening process is specified to be conducted over three events **y**et testing of wet weather discharges using bioassay tests is only scheduled for 2 events per year. This screening would not be complete until midway into year 2. This would result in three full rounds of three-species screening tests followed by one round using the species selected as the most sensitive. The three species screening studies would then start again at the start of the third year.

This type of process was designed for the wastewater industry and is not suitable for routine stormwater monitoring. The Regional Board should consult with SCCWRP and other stormwater programs throughout the State to determine an appropriate suite of bioassay tests based upon testing conducted over the past 20 years and knowledge of emerging contaminants.

#### G.4 Chronic Toxicity Identification Evaluation

A successful TIE requires sufficient toxicity present in the sample to enable dissection of the source of toxicity. Attachment E of the Tentative Order requires implementation of a TIE when effluent exceeds 1.0 TU_c which is defined as 100/NOEC. In the 1991 Technical Support Document (TSD), EPA actually recommends use of the  $EC_{25}/IC_{25}$  to assess presence of chronic toxicity (100/IC₂₅). This helps avoids marginal hits and triggering of expensive, inappropriate TIEs with little hope of a successful endpoint.

Although chronic measurements are considered in triggering a TIE, the actual TIE process typically uses acute measures. Therefore acute measurements ( $LC_{50}$ ) should also be considered when making the decision to move forward with a TIE. As a general rule, at least one TUa above the detection limit is desirable to allow for a successful TIE while avoiding the high costs of false starts and disappearing toxicity. Some stormwater programs have therefore been authorized to use values of 2 TU_a for tests using full dilution series (e.g. *Ceriodaphnia* -water fleas) and 3 TU_a tests using brine to salt up to full strength sea water (e.g. the sea urchin fertilization test). These triggers have helped minimize implementation of TIEs without sufficient toxicity to expect definitive results.

#### XIV. STANDARD MONITORING AND REPORTING PROVISIONS

Β.

It should be noted that the SMC laboratory intercalibration studies have not included all tests required in the Tentative Order.

## <u>Worksheet</u>

## Trash TMDL, Metals TMDL and Bacteria TMDL For the Los Angeles River

July 25, 2006

## **Background Information**

City:	SIGNAL HILL
Population (2005):	10,951
Number of Households (2005):	4,236
Total General Fund Budget (FY2005-06):	15, 970,000
Square Miles in City:	2.2
Square Miles in Watershed:	[.]
Percentage of Residential Land Uses in City:	35 %

# NPDES Budget: (Attachment U-4 of the NPDES Permit 2004-05)

Program Management	\$ 12,070
Public Information	13,000
Industrial/Commercial Inspections	23,950
Development Planning	7,600
Construction Inspections	8,535
Public Agency Activities	460, 520
IC/ID Program	<u> </u>
Total NPDES Budget:	\$ 534,475
"Per Household" Expenditures FY2004-05:	5_126.17

Note: The Regional Board estimates that the average City in Los Angeles County was investing \$18 per household in NPDES Compliance (2005 estimate)

Cost Estimation and Environmental Impacts Worksheet Page 2 of 19

## <u>Part I</u>

# Calculation of the Costs of Compliance with Trash, Metals and Bacteria TMDL

## A. Cost of Studies

The Trash TMDL will require cities to monitor the effectiveness of their programs annually. It is difficult to estimate the costs of BMP compliance.

The Metals TMDL requires that the cities complete several special studies, including water quality monitoring.

## 1. Water Quality Monitoring

The TMDL will require additional monitoring. Recent cost estimates for the Los Angeles River Metals TMDL (prepared by the TMDL Public Works Officials) indicates that \$1,290,000 will be necessary in one-time costs to set up monitoring equipment and \$983,000 will be required annually for water quality laboratory analysis.

Set Up Monitoring Costs = \$1,290,000 Annual Monitoring Costs = \$983,000 x 5 years = \$4,915,000

Cost allocation formula: The cities have examined various cost allocation formulas for funding the monitoring and special studies. For purposes of this review we have divided the costs by the number of local agencies involved in the TMDL, each paying equal shares. The local agencies include Los Angeles County, Caltrans and 43 cities, for a total of 45 entities.

A.2. Monitoring Costs "per city" = (\$109.222)

## 3. Additional Studies

The Metals TMDL lists a number of additional studies. The LA River Metals TMDL Public Works Officials have recommended that four additional studies be completed, including the participation in a Copper Site Specific Objective study. The Southern California Coastal Water Research Project and Tetra Tech, Inc., developed a detailed work plan in December of 2004. The cities should anticipate \$1.2 million in study costs.

The second study would be paired measurements of atmospheric deposition. The costs are estimated at \$590,000. The third study would be storm flow sampling, with costs estimated at \$530,000. The fourth study would review the effectiveness of Best Management Practices. This study is estimated to cost \$833,000 overall.

Cost Estimation and Environmental Impacts Worksheet Page 3 of 19

## Study Costs Per City

Copper SSO	\$26,666
Atmospheric Deposition	\$13,111
Storm Flow Sampling	\$11,777
BMP Effectiveness	\$18,511

A.3 – Voluntary Study Costs "per city" = \$70,065

Implementation Plan - Non-Structural Programs

The Metals TMDL anticipated that cities could comply with 20% of the numeric waste load reductions by implementing the non-structural programs below. The Trash TMDL requires that cities reduce trash in storm water with a combination of non-structural and structural programs.

# B. Street Sweeper Upgrades and Increases in Frequency of Sweeping

Both the Trash TMDL and the Metals TMDL recommend the use of upgraded dryvacuum assisted sweepers. As a benchmark cities should report estimated costs above the NPDES Street Sweeping

NPDES Reported Street Sweeping Costs: 453,580Estimated Additional Costs: 470,000

C. Increased Catch Basin Cleaning Costs/ Trash TMDL Compliance Measures

The Trash TMDL requires additional Catch Basin Cleaning, based on Priority areas:

Cities can estimate full-capture compliance with catch basis excluders/inserts. Number of Catch Basins x \$2,100 =

## D. Dry Weather Diversions

Cities may not be able to utilize dry-weather diversions, since the County Sanitation District is concerned about metals limits in their existing NPDES Permits. The Sanitation Districts' permits required their discharges to meet "end-of-pipe" California Toxics Rule metals standards in the receiving waters at their treatment plants. Cities should anticipate some type of metals removal process, in order to not impact the Sanitation Districts NPDES Permits. Cost Estimation and Environmental Impacts Worksheet Page 4 of 19

Cities estimating dry-weather diversions costs should anticipate the costs of storage tanks or holding ponds, for discharge in "off-peak" hours. Cities may also want to review sewer capacity issues. For comparison purposes, the cost of the dry-weather diversion plan for the Santa Monica Bay Beaches TMDL is estimated at \$26 million for 27 diversions. These costs do not include storage or retention facilities construction.

## Implementation/ Capital Improvements

The Metals TMDL anticipated the construction of sand filters in 20% of the urbanized watershed. Using your city's total square mileage in the watershed on page one, please perform the following calculations:

## Sand Filter Construction Costs

Total Square Miles in Watershed  $\underline{1 \cdot 1}$  x 640 Acres per Square Mile = total Acres in

Watershed 704-

Total acres in Watershed 704, x.0.20 = 141 Acres for Sand Filters

Acres for Sand Filters 14-1 /50 acres per filter = Total Filters 3

Number of Sand Filters 3 x \$4.5 million * = Total Construction Costs of Sand Filters 3 3.000

## Sand Filter Land Acquisition Costs (Residential)

0.7 acres = 30,492 square feet / 6,200 square feet = 5 Single-Family Homes

Number of Sand Filters <u>3</u> x 5 Single Family Homes = <u>15</u> Total Homes Necessary

Total Homes Necessary ______ x Average April Home Costs (See Exhibit A)

\$_675,000 = Estimated Land Acquisition Costs \$_10,125,000

## E. Infiltration Trenches

The TMDL anticipates the installation of infiltration trenches in 20% of the urbanized watershed. Using the total square mileage of watershed on page one, please perform the following calculations:

# **RB-AR4649**

Cost Estimation and Environmental Impacts Worksheet Page 5 of 19

## Infiltration Trench Construction Costs

Total Square Miles in Watershed  $1 \cdot 1$  x 640 acres per square mile = Total Acres in

Watershed 704

Total Acres in Watershed 704 x 0.20 = 141 Acres for Infiltration

Acres for Infiltration Trenches 141 / 5 acres per Trench = Number of Trenches

28

Number of Infiltration Trenches 28 x \$372,000 * = Total

Construction Costs of Infiltration Trenches \$_10, 416,000

Infiltration Trench Land Acquisition Costs (Residential)

0.07 acres = 3,049 square feet / 6,200 square feet = 1 Single-Family Homes

Number of Infiltration Trenches 28 x 1 Single-Family Homes =

28 Total Homes Necessary

Total Homes Necessary 2-2 x Average April Home Costs (See Exhibit A)

\$ 675,000 = Estimated Land Acquisition \$ 18,900,000

#### F. <u>Relocation Assistance</u>

The Uniform Relocation Assistance and Real Property Acquisition Polices Act of 1970 (URA) requires relocation assistance for homeowners when local government agencies purchase a home for Federal projects and for which federal funds are used. Similar State and local relocation assistance rules apply for non-federal funded projects. These payments include actual reasonable moving expenses or fixed moving expenses, purchase and rental assistance. Some cities pay greater benefits, however this analysis relies on the minimum payments required for owner-occupied single-family homes. This analysis relies on the \$22,500 housing assistance payment contained in State law, which should be considered low.

Total Number of Homes Required

Filters 3 x \$22,500 = \$ 67,500

Trenches 28 x  $$22,500 = $ _630,000$ 

Cost Estimation and Environmental Impacts Worksheet Page 6 of 19

Total Estimated Minimum Relocation Assistance \$_697, 500

## G. Program Costs

The Regional Board provided no cost increases, however we believe that additional technical staff will be necessary to oversee the studies, non-structural programs and capital improvement program necessary. Costs range from \$90,000 to \$120,000 annually.

#### H. Operations and Maintenance Costs

The infiltration trenches and sand filters will require additional maintenance costs during and after storm events. Public Works crews will be required to clear debris and prevent flooding to surrounding properties. We average 32 rainfall days in the watershed annually. Caltrans peer reviewed annual maintenance costs were \$2,910 per Austin Sand Filters. Annual costs for infiltration trenches were estimated at \$2,660 per trench.

Number of Filters 3 x 2,910 = Annual O & M Costs 2,730

Number of Trenches 28 x \$2,660 = Annual O & M Costs 74.480

Total O & M \$ 83, 210

Cost Estimation and Environmental Impacts Worksheet Page 7 of 19

•

## Summary of TMDL Costs

A. Cost of Studies – One Time Estuary Study (Reach 1 Cities) Water Quality Monitoring (set up) Annual Monitoring (Five Years) Copper SSO Atmospheric Deposition Storm Flow Sampling BMP Effectiveness	\$100,000 \$22,291 \$70,625 \$20,750 \$12,290 \$11,041 \$17,354
Total Studies	\$254,351
B. Street Sweeping Upgrades (Annual)	\$ 53,580
C. Increased Catch Basin Cleaning (Annual)	\$ <u> </u>
Insert/Excluder Costs	SN/A

Cost Estimation and Environmental Impacts Worksheet Page 8 of 19

### <u>Part II</u>

## Financing the TMDL Program

This worksheet is divided into two options for those cities that do not have sufficient General Fund revenues or reserves to implement the TMDL program costs. Cities will be asked to determine the size of a municipal bond issue. The worksheet will assist you calculating the annual debt service to implement the TMDL program costs. The first bond will be required in 2007 (30% of the Total Costs), with a second bond required in 2012 (40% of the Total Costs). The remaining bond would be financed in 2020 (30% of the Total Costs).

The annual debt service is used to calculate the potential size of a Utility Tax to fund the bonds or the size of budget reductions or eliminations, if special storm water taxes are not approved by the 2/3rds requirement.

#### Bond Input

Total Funding Requirement (Costs of TMDL Program) - \$	
Inflation Rate – Assumed 3% annual	
Bond Start Date – 2007 30% x Total Funding Required \$ = \$	
Bond Start Date – 2012 40% x Total Funding Required \$=\$	

Bond Start Date – 2020 30% x Total Funding Required\$_____=\$_____

The Total Funding Amount and the 1st, 2nd and 3rd Financing Amounts should be placed into Section A. Bond Input, of Table 1 of the Stanley R. Hoffman Associates Debt Service Model.

#### **Operations and Maintenance**

(z.)

Initial Study Costs - S_____

Annual O&M \$_____

These costs should be placed into Section B, Operations & Maintenance, Table 1 of the Stanley R. Hoffman Associates Debt Service Model.

Cost Estimation and Environmental Impacts Worksheet Page 9 of 19

## **Annual Debt Service**

The Debt Service Model will provide you with the annual debt service for the three bond issues.

Annual Debt Service 2007 - \$_____

Annual Debt Service 2012 -\$_____

Annual Debt Service 2020 - \$_____

Maximum Debt Service (add all three above) - \$_____

# Utility Tax Necessary to Support TMDL Program Debt Service

Please calculate the annual revenues that 1% of your total Utility Tax Revenues would generate.

Annual Utility Tax Revenues \$_____x 0.1 = \$_____

Maximum Debt Service \$_____/Annual Utility Tax Revenues

\$_____% Utility Tax to Support TMDL Program

# Budget Reductions Necessary to Support TMDL Program Debt Service

It is necessary for cities to consider budget reductions, should the special taxes fail to gain the necessary 2/3rd voter approval. The worksheet focuses on "across the board" budget cuts in 2007, in order to gauge the magnitude of the cuts.

General Fund Budget (FY2006-07) \$_____ / Annual Debt Service

\$ _____ = Percent Budget Reductions _____%

Cities may wish to estimate the budget reductions in 2012 and 2020.

Cost Estimation and Environmental Impacts Worksheet Page 10 of 19

## <u>Part III</u>

## **Budget Reductions/ Environmental Impacts**

Cities should use the following checklist to determine how "across the board" budget reductions would reduce or eliminate existing public services and the resulting environmental impacts. Cities can calculate the budget reductions beginning in 2007 and examine the cumulative impacts in 2020.

2007 – Percentage Budget Reductions = ____%

Police/ Sheriff Services

Public Safety Budget (FY2006-07) = \$_____

Reduction in 2007 = (FY2006-07 Public Safety Budget) S______X

Budget Reduction = \$_____ Total Public Safety Budget Reduction

Likely Environmental Impacts from Budget Reductions -

Reductions in daytime and nighttime patrol shifts, increases in crime rates (assaults, vandalism, graffiti), slower response time to emergency calls, officer safety issues due to reduced patrol sizes, less crimes solved, increases in vehicular speeding and increase in the physical deterioration of the community.

## Fire/ Paramedic Services

Fire/Paramedic Services Budget (FY2006-07) = \$_____

Reduction in 2007 = (FY2006-07 Fire/Paramedic Budget) \$_____ x ____% Budget Reduction = \$_____ Total Fire/Paramedic Reduction

## Likely Environmental Impacts from Budget Reductions -

Reductions in Fire/Paramedic services will result in delayed response times to medical and fire emergencies, increased likelihood of serious injuries or death, increased property losses from fire.

Public Works - Parks/Facilities Maintenance

Parks and Facilities Maintenance Budget (FY2006-07) = \$_____

Cost Estimation and Environmental Impacts Worksheet Page 11 of 19

Budget Reductions (FY2007-08) = \$_____

Likely Environmental Impacts from Budget Reductions -

Reductions or elimination of park, median and city building maintenance, tree trimming, resulting in deterioration of quality of life in community, impacts on property values, increased private property damage and injuries (from falling tree limbs).

Public Works - Street, Sidewalk and Traffic Signal Maintenance

Street, Sidewalk and Traffic Signal Maintenance Budget (FY2006-07) = \$_____

Budget Reductions (FY2006-07) = \$_____

Likely Environmental Impacts from Budget Reductions -

Reductions in Public Works staffing for street, sidewalks and signal maintenance programs, resulting in additional street deterioration, increased potholes, trip and fall hazards and inoperative traffic signals, increase in injuries from trip and falls hazards, increase in traffic accidents due to poorly maintained streets, increase in injuries and death from traffic accidents.

Graffiti Removal Program

Graffiti Removal Budget (FY2006-07) = \$_____

Budget Reductions (FY2006-07) = \$_____

Likely Environmental Impacts -

Reductions in Graffiti Removal programs will result in slower response times to graffiti removal requests, additional graffiti, decrease in the quality of like and property values, increase in gang activity, with an increase of injury and death.

Cost Estimation and Environmental Impacts Worksheet Page 12 of 19

## <u>Methodology</u>

## Cost Estimation/Environmental Impacts from the Los Angeles River TMDLs

## Background

The Los Angeles Regional Water Quality Control Board is under a court order to complete a supplemental environmental review of the impacts of the Trash TMDL on Los Angeles River. The Regional Board's environmental review should be similar to environmental impact reports prepared on major projects, like general plan updates or specific plans.

The Regional Board staff has not adequately discussed the environmental impacts of the TMDL program on municipal budgets, the likely local government program reductions and the resulting impacts on the quality of life.

Determining the costs to local government of the TMDL program has been complicated by the evolving nature of the program and its requirements. The Trash TMDL for the Los Angeles River was adopted in 2001. The Metals TMDL was adopted in 2005 and the Bacteria TMDL is anticipated for adoption in 2007. The impacts of these TMDLs are bccoming increasingly known, as subsequent TMDLs are adopted.

There are several known cost benchmarks, including the construction of a series of sand filters and infiltration trenches by Caltrans (see the Retrofit BMP Program). Some cities have completed or are underway with the construction of capital improvements for the Trash TMDL (trash nets, vortex-separation units, catch basin inserts, etc). The County and the City of Los Angeles have constructed several dry-weather diversions.

The Regional Board suggested a broad implementation plan for the Trash TMDL, which made it difficult for citics to estimate compliance costs. The Board extended full compliance to those local agencies that constructed vortex-separation units. However, these units have resulted in the generation of bacteria, which is subject to a later TMDL. The County demolished a unit in Culver City due to noise impacts compliants.

With the adoption of the Metals TMDL, the Regional Board began to suggest the likely TMDL compliance measures – including having cities construct sand filters and infiltration trenches. The City of Los Angeles entered into Memorandum of Understanding to complete the Bacteria TMDL on the Los Angeles River. The exact compliance measures have not yet been determined. However, the Board is proposing bacterial treatment facilities for runoff into the Ballona Creek, under the Bacteria TMDL for the Ballona Creek.

The State Water Board convened a panel of national experts in storm water to study whether it was feasible and practical to apply numeric effluent limits to urban runoff. The panel has concluded that numeric limits should not be applied to urban runoff, due to Cost Estimation and Environmental Impacts Worksheet Page 13 of 19

a series of issues, including the high variability of storm flows in terms of duration and magnitude. These factors make is difficult to design treatment devices, since civil engineers require a "design storm" to appropriately size the planned treatment devices. The panel felt that it was unreasonable for local agencies to be held responsible for the largest storm events and that large events will have to bypass the treatment devices. The expert panel's recommendations have not been reflected in either the Trash or Metals TMDLs

The expert panel also suggested that urban runoff will require the construction of "treatment trains." This term refers to the construction of a series of devices, each designed to deal with a specific pollutant. Typical treatment trains construct gross solids and debris removal first (Trash TMDL). The second stage is typically metals removal by sand filters or infiltration trenches (Metals TMDL). The Caltrans study revealed that sand filters do not effectively deal with the dissolved fraction of metals and do not meet the California Toxics Rule (CTR) limits. Unless there are changes in the application of CTR, cities may need to construct micro-filtration or reverse osmosis units to reach the CTR limits. The third stage involves bacteria treatments, through the chlorination/dechlorination process or treatment with ultra-violet light or ozone.

Cost Estimation and Environmental Impacts Worksheet Page 14 of 19

## Part I - Engineering and Planning Assumptions

## Design Storm

These worksheets are based on data compiled from U.S. Environmental Protection Agency guidebooks and the real costs from a recent Caltrans pilot program that installed sand filters and infiltration trenches in Los Angeles County. In the definition of a full capture device, the draft Trash TMDL for the Los Angeles River specifies a design treatment capacity of not less than the peak flow rate Q resulting from a one-year, onehour storm in the sub-drainage area. The Metals TMDL for the Los Angeles River has no design storm. However, in the Implementation Section of the TMDL, Regional Board staff used cost estimates based on treating 0.5 inches of runoff while recognizing that Caltrans designed its sand filters and infiltrate trenches in its BMP Retrofit Pilot Program to handle up to one inch of runoff. The general SUSMP design storm for the urbanized area of the watershed is 0.75 inches.

Based on the premise that infiltration trenches and sand filters could be used to address the requirements of both the Trash TMDL and the Metals TMDL, and an assumption that cities would be required to exceed SUSMP requirements in order to comply with the TMDLs, the cost estimator is based on capturing and treating a one-inch rainfall storm event. The cost estimates include construction of the sand filters and infiltration trenches plus the necessary storage capacity to handle runoff from a one-inch storm event.

Implementation Schedules

. YEAR

Local government will be dealing with three time schedules mandated by the TMDLs. The Trash TMDL will require that cities fully comply in 10 years. The Metals TMDL requires compliance over a 22 period. This worksheet assumes that the cities will need to comply with the Bacteria TMDL during the same 22-year time period as the Metals TMDL. The chart below presents a comparison of the time schedules.

Trash TMDL Schedule	<u>Metals TMDL Schedule</u>

10% by 2008 20% by 2009 30% by 2010 40% by 2011 50% by 2012 60% by 2013 70% by 2014 80% by 2015 90% by 2016 100% by 2017

50% dry weather/ 25% wet weather

2020 – 75% dry weather/ 2024 – 100% dry weather/ 50% wet weather 2028 – 100% wet weather Cost Estimation and Environmental Impacts Worksheet Page 15 of 19

# Compliance with Non-Structural Programs and Capital Improvements

The Trash TMDL provided the cities with a range of options from non-structural programs (additional street sweeping and catch basin cleaning) to structural programs (catch basin inserts & excluders, trash nets, vortex separators, etc.). The Metals TMDL estimated that cities would rely upon non-structural programs in 30% of the watershed, install infiltration trenches in 20% of the watershed, sand filters in 20% of the watershed and develop Integrated Regional Water Plans (IRWP) for the remaining 30% of the watershed. The Board did not provide cost estimates for the IRWP portion of the implementation plan. Dry-weather implementation costs were also not provided.

For purposes of this study we have assumed that infiltration trenches and sand filters will be installed in residential neighborhoods. The Regional Board supplied land use data that indicates that 52.05% of the watershed is residential. The Regional Board also estimated that residential areas account for 59% to 71.5% of the metals loads to the Los Angeles River. We believe that a high number of devices will be constructed in residential neighborhoods, due to the predominance of this land use in the watershed and the Regional Board's reporting on metal loads.

The study uses the average single-family home price as the default value. We have estimated land acquisition costs based on construction of sand filters and infiltration trenches in residential neighborhoods, since monthly pricing data is readily available on the average single-family home. It is recognized that some sand filters and infiltration trenches will be installed in multi-family neighborhoods. However, the "per lot" property values in these neighborhoods are generally higher than single-family "per lot" value, due to increased density. Cities with less than 40% residential land uses may wish to adjust the worksheet to install sand filters and infiltration trenches in industrial and commercial areas, as well as supply local property acquisition costs.

## Average Residential Lot Sizes

We have assumed average residential lot sizes of 6,200 square feet based on GIS information on the watershed. Some cities may have lower average lot sizes and the worksheets can be adjusted for this information.

## Sand Filter Assumptions

Neither the Metals TMDL, nor the Trash TMDLs contain specific recommendations on sand filter sizes and the size of drainage tributary areas. However, the TMDL for the San Gabriel River anticipated the construction of Austin sand filters to serve 50-acre drainage areas. We believe that this is a reasonable assumption for this study as well.

The per acre Adjusted Caltrans Cost Estimate is from Section 7.4.2 of the San Gabriel River Metals and Selenium TMDL staff report based on the installation of Austin sand filters, designed to capture one-inch rain events. This design is greater than the SUSMP requirement, but less than the open-ended Los Angeles River Metals TMDL requirement Cost Estimation and Environmental Impacts Worksheet Page 16 of 19

to design devices to comply with water quality objectives for any sized storm. This construction cost was subjected to "peer review" during the Caltrans BMP Pilot Retrofit Program in January 2004. There may be some savings if projects are grouped and constructed together.

## Sand Filter Retention Areas

The Metals and Trash TMDLs do not discuss the appropriate size of the retention areas, based on the requirements that all rain events be planned for. This cost estimate relies upon the "Preliminary Data Summary of the Urban Storm Water Best Management Practices – EPA-821-R-99-012, August 1999) in order to correctly size the retention area for a 50-acre retention facility. EPA assumes that 35% of the watershed is impervious.

However, analysis of data in the model used to simulate wet-weather metals loading from the Los Angeles River watershed indicates that the average imperviousness of the non-forest parts of the watershed averages 45%. Highly urbanized cities in the watershed may be 70% impervious surface. We have assumed 45% imperviousness for this review. Table 6-9 of the EPA report assumes the land required for a retention basin is 2%-3% of the impervious area in the drainage area. Using the 3% figure, the land required for a retention basin to serve 50-acres is 0.7 acres. We assume the 3% based on the requirement to have space for access and maintenance. Cost Estimation and Environmental Impacts Worksheet Page 17 of 19

#### Infiltration Trench Assumptions

As with the sand filters, neither the Trash nor the Metals TMDL provides much direction on the size of infiltration trenches or the size of their tributary drainage areas. The Metals TMDL for the San Gabriel River anticipates the construction of infiltration trenches to serve 5-acre drainage areas. We believe this is a reasonable assumption for this study as well.

The per acre Adjusted Caltrans Estimate is from Section 7.4.2 of the San Gabriel River Metals and Selenium TMDL staff report and is based on one inch storm events. This design number is greater than the SUSMP requirement, but less than the Los Angeles River TMDL requirement to comply with water quality objectives for any sized storm event. This construction cost number was "peer reviewed" during the Caltrans BMP Pilot Retrofit Program in January of 2004. There may be costs savings if projects are grouped and constructed together. However, these costs savings may be negated by the increase in construction costs, since the Caltrans pilot projects were constructed for smaller facilities, instead of larger and more complex subwatersheds.

Neither the Trash nor Metals TMDL discusses the appropriate size of the retention areas, based on the requirement that all rain events be planned for. This cost estimate relies upon the "Preliminary Data Summary of the Urban Storm Water Best Management Practices – EPA-821-R-99-012, August 1999) in order to correctly size the retention areas for a 5-acre retention facility. EPA assumes that 35% of the average urban watershed is impervious. However, analysis of the data in the model used by the Regional Board to simulate wet-weather metals loading from the San Gabriel River watershed indicates that the average imperviousness of the non-forest part of the watershed is 45%. Table 9-6 of the EPA report assumes the land required for an infiltration trench and retention basin is 2%-3% of the impervious area in the drainage. We suggest using a 3% factor to allow for access and maintenance areas, as well as variable infiltration rates due to soils in a subwatershed. At 3%, the land required for infiltration trenches and equalization basins to capture and slowly release large storms to serve a 5-acre subwatershed that is 45% impervious would be .07 acres.

The analysis relates to locating infiltration trenches in single-family residential neighborhoods. It is reasonable to assume that a significant portion of infiltration trenches will be located in residential neighborhoods, since the TMDL assigns high metals loads to these areas. Single-family homes are also more cost-effective to purchase, as compared to multi-family and commercial uses, yielding more land per costs for the trenches. We have assumed average residential lots of 5,000 square feet in size.

#### Bacteria Treatment

It is anticipated that the Bacteria TMDL will require structural treatment or diversion of urban runoff in order to meet the REC-1 and REC-2 objectives in the Basin Plan for the Los Angeles River. We have relied upon installing bacteria treatment devices on the sand filters, in order to understand the magnitude of the costs.

Cost Estimation and Environmental Impacts Worksheet Page 18 of 19

#### Part II - Financing Assumptions

Cities will have to determine if they have sufficient General Fund reserves to fund the TMDL Program. Two basic financing options are included in this worksheet in case General Fund revenues or reserves are not sufficient. The first option revolves around the passage of voter approved special taxes to implement the new requirements. The second option involves reduction in existing local government budgets to fund the TMDL program.

Storm water taxes and fees must comply with Proposition 13, Proposition 218 and case law. The most recent case on storm water fees is *Howard Jarvis Taxpayers Association v. the City of Salinas*. The *Salinas* case affirmed the requirement that storm water fees be subjected to voter approval as a 2/3rds affirmative vote, when the City of Salinas added a storm water fee on their municipal services bill with a vote of the City Council.

Although there are several taxes that cities could consider, including parcel taxes and benefit assessments, this study examines funding storm water programs through the adoption of a utility tax. For watershed cities that have utility taxes, completion of the worksheet will be much easier.

For cities without sufficient General Fund Reserves, we have assumed that the cities will fund the TMDL program through the issuance of municipal bonds. These bonds would be phased in order to anticipate the requirements of the TMDL implementation schedules. Phasing of bonds will assist cities in planning for capital improvements, which require time for engineering design, purchasing property, bidding and construction.

We have assumed that cities will require 30% of the total funds beginning in Year One of the program (assume 2007 start date). This assumption is supported by the TMDL schedules, which require 50% compliance with the Trash TMDL by 2012 and compliance with 50% of the dry-weather and 25% of the wet-weather Metals TMDL limits by 2012.

We have assumed that the cities will need to finance a second bond, another 40% of the program costs by 2012, since cities must be in full compliance with the Trash TMDL by 2017 and 75% of the dry-weather requirement in the Metals TMDL by 2020. The Metals TMDL schedule becomes very aggressive in 2024 – requiring that cities meet 100% of the dry weather and 50% of the wet weather requirements. Cities must be in full compliance by 2028. We anticipate that the cities will require that the remaining 30% of the financing he in place by 2020.

Cost Estimation and Environmental Impacts Worksheet Page 19 of 19

# Part III - Environmental Impacts from Reduced/Eliminated Services

Cities should be careful to translate budget reductions into direct environmental impacts to their community. The worksheet contains samples of the environmental impacts – such has increased vandalism or graffiti from reductions in patrol/sheriff services. Cities may want to expand the impacts to community services, library, senior center, child-care and other programs supported by General Fund revenues.

Statement before the Los Angeles

• •

Regional Water Quality Control Board

NPDES Permit Workshop - November 10, 2011

By

Steve Myrter, Director of Public Works

City of Signal Hill

The U.S. EPA recently adopted principals for the restoration of the nation's urban water bodies in the Urban Waters Federal Partnership program. A core guiding principle of EPA is to "be open and honest, and listening to the communities…recognize their values and seek to understand environmental issues through their eyes. We will work from the bottom up rather than taking a top down, one-size-fits-all approach." The Regional Board is being asked by your staff to only issue a region wide MS4 permit and to deny the Los Angeles County Flood Control District, the Cities of Downey, Long Beach and Signal Hill, in other words, the agencies who filed separate ROWD's, their own applications for individual NPDES permits under the law. We urge you to reject this one-size-fits-all approach of your staff and embrace EPA's guiding principles.

Signal Hill's request for our individual permit is an opportunity for the Board to work with a small community that is taking seriously its responsibility to improve our local water quality and to address the unique circumstances confronting our community. Other cities have chosen to group together for their own reasons and we respect their decisions. We have chosen to apply for our individual MS4 permit for equally valid reasons and would hope that our decision is respected as well.

In June of 2006, Signal Hill submitted an individual ROWD/NPDES Permit application for permit coverage only for our respective jurisdiction. Our application explained how Signal Hill is located in the geographic middle and completely surrounded by the City of Long Beach on all sides. Runoff originates in the upland portions of Signal Hill and flows directly into the City of Long Beach, where our City is proposing to install water quality monitoring stations in order to characterize our runoff. It is important to note that the Board has issued two individual NPDES permits to the City of Long Beach beginning in 1999 and that your staff is recommending issuing a third permit to the City of Long Beach.

In response to our June 2006 ROWD application, Regional Board staff concluded in their July 12, 2006 letter that our ROWD/Permit application was "incomplete." Nowhere in the letter did the Executive Officer ever indicate that the Regional Board would refuse to issue an individual permit to Signal Hill. Instead, the Regional Board staff indicated the opposite, that the City was *"proposing some positive changes"* to our NPDES Permit, and that the Board Staff looked *"forward to working out these details with your Staff during the MS4 Permit Reapplication Process."* (see the July 12, 2006 letter)

The City responded in a timely manner on September 12, 2006 to each of the points raised in the Executive Officer's July 12th letter as to why Signal Hill's ROWD was consistent with the requirements of federal law and why the ROWD satisfied the requirements of federal regulations, including EPA's Interpretative Policy Memorandum. Signal Hill's letter concluded that the City looked forward to working with the Executive Officer to address all relevant issues necessary and looked forward to the issuance of the NPDES Permit for the City of Signal Hill.

Unfortunately, Signal Hill's letter was not responded to over the past five years. During this time, the City of Signal Hill has moved forward to implement new programs designed to insure compliance with our application for our individual NPDES Permit. Signal Hill has worked hard to implement our individual waste load allocation assigned by the Regional Board under the Los Angeles River Trash TMDL. We are pleased to report that our City is ahead of schedule at a 94% trash reduction rate, while the TMDL requires a 60% reduction rate this year.

Oil was discovered in Signal Hill in 1924 and this discovery ushered in several decades of heavy industry, including well drilling, with oil sumps, tank

farms and refining. These industries have left Signal Hill with a legacy of soil contamination and over 1,700 abandoned oil wells, including numerous leaking wells. Signal Hill formed its redevelopment agency in 1978 with the express intent of remediating these environmentally distressed properties. Since 1989, the Agency has re-abandoned over 92 wells and invested over \$15 million into soil remediation, ground water clean-up and oil well abandonment projects. Over one million barrels of oil are pumped annually in Signal Hill, creating unique issues for our community and the need for an individually tailored storm water programs. The City's historical legacy also dictates the need for an individual MS4 permit, in order to better tailor storm water programs for Signal Hill's unique industrial history and existing industries.

This unique industrial heritage and the problems associated with the City's petroleum and other heavy industries, led Signal Hill to apply for and receive its own stand-alone County Sanitation District. Although the Los Angeles County Sanitation Districts functions as a county-wide system for 77 municipalities, Signal Hill's Sanitation District #29 is a stand-alone entity, with its own board of directors, maintenance staff, budget, permits and fee structure. The application for our individual MS4 Permit is an example of the planning for that is necessary for the unique problems that confront our community.

Our City Council directed City staff to move ahead on a Storm Water Quality Master Plan, which will be a comprehensive plan for water quality in our community. Signal Hill has worked hard to improve water quality, including the installation of CDS units and 14 trash nets in the Hamilton Bowl. We have installed full capture devices in the majority of our 174 catch basins that drain into the Los Angeles River. We have also implemented SUSMP and LID requirements on dozens of developments, including state of the art infiltration devices on a concrete-batch-plant, which was recently studied by the National Academy of Sciences. We have moved forward implementing new programs, including additional inspections and have budgeted for the installation of two auto sampler monitoring stations this next year. The City is also designing a dryweather diversion in order to address dry-weather requirements for the LA River Metals and Bacteria TMDL.

۰.

Issuing an individual permit to Signal Hill will not open up the flood gates to 88 ROWD's as suggested by your staff. Signal Hill's runoff is not co-mingled in some larger MS4 system. Issuing an individual NPDES Permit does not mean that the City of Signal Hill will halt its participation in important watershed and regional efforts to address water quality. Our City Manager has taken the lead in coordinating the 40 cities, Los Angeles County and Caltrans to complete the Special Studies on the Los Angeles River Metals TMDL. These special studies are now into their second of three planned study years, with a total investment of \$2.1 million from the 42 public agencies. We participated in the organization and administration of the coordinated monitoring plan and we participate the County's public education program.

Signal Hill is also leading a seven member group of cities in developing the Implementation Plan for the Los Cerritos Channel Metals TMDL, a TMDL adopted by the U.S. EPA in 2010. In addition, we are also participating in Jurisdictional Group One Group for the LA River Metals TMDL. Your staff is involved in all of these efforts. Your staff, as well as our neighboring cities, can attest that Signal Hill's is not only a willing participant in group planning efforts, but a leader of regional and sub-regional efforts to improve water quality.

The LAR Metals TMDL was adopted by the Regional Board in 2006 and assigned group waste load allocations to the Jurisdictional Groups. We commented to the Regional Board at the time that this requirement would have unintended consequences and would essentially make one city (or a small subset of cities) responsible for all of the cities in their Jurisdictional Group. This implementation scheme, combined with the current permit's requirement of "Joint and Several Liability," resulted in Signal Hill rethinking its participation in the larger system-wide permit.

The Regional Board staff has cited in the past what they believe are the relevant sections of the federal codes to argue that the Board has the discretion as the permitting authority to determine whether to issue the system-wide or jurisdiction-wide permit. This assertion is incorrect, since it is clear from a plain reading of the federal codes that cities have the express ability to submit individual applications in conjunction with other MS4 operators, or alternatively, submit for a **"distinct permit application which only covers discharges from the"** individual city system in question.

40 CFR Section 122.26(a)(5) reads as follows:

(iii) The operator of a discharge from a municipal separate storm sewer which is part of a large or medium municipal separate storm sewer system must:

- (A) Participate in a permit application (to be a permittee or to be copermittee) with one or more other operators of discharges from the large or medium municipal storm sewer system which covers all, or a portion of all, discharges from the municipal separate storm sewer system; (or)
- (B) <u>Submit a distinct permit application</u> which only covers discharges from the municipal separate storm sewers for which the operator is responsible.

Further, the federal codes make it clear that a city has the right to apply for and obtain their own individual NPDES Permit under Sections 122.26 and 122.333. The individual permit is a *"distinct permit application which only the discharges from the municipal storm water sewers for which the operator was responsible."* (Section 122.26(a)(3)(iii)(B). The federal codes are also clear that small cities, with populations of under 50,000 residents, have the right to be included in a system-wide permit, if they so choose. (Section 122.333)

We understand that the Regional Board intends to incorporate numeric limits from the various TMDLs into the upcoming permit. The Regional Board also intends to hold cities responsible for exceedances to water quality standards in permit language. We believe that these policies and permit language will result in a watershed of litigation and enforcement activity in the 2012 permit.

The Regional Board's joint and several liability permit language has already led to litigation in the region under the 2001 permit. For example, the NRDC and the Baykeeper are suing the County of Los Angeles for violations to water quality standards on the Los Angeles and San Gabriel Rivers based on monitoring station data. The County in turn has requested tolling agreements from 50 cities that are located upstream from the monitoring stations. The tolling agreements only place future County vs. Cities litigation in abeyance until the final outcome of this litigation. We believe this is the beginning of the "watershed of litigation" that many foresaw, where private parties are suing the cities and county, the county is suing the cities, and cities are suing other cities.

The Regional Board's policies have raised the issue of what approach should local governments follow in achieving compliance with water quality standards and permit requirements. Signal Hill does not choose to be included in the system-wide permit for a variety of reason, including the unfair grouped waste load allocations, the Regional Board's policy of holding one City accountable for all Cities (the Joint and Several Liability language in the permit) and the proposed incorporation of numeric limits from the various TMDLs into the upcoming permit, enforced by the receiving waters limitations requirement.

Signal Hill believes that we must monitor and characterize our stormwater and urban runoff in order to design programs that address our particular impairments. The "one-size fits all" approach of a system-wide permit breaks apart as it cannot adequately address the individual circumstances of Signal Hill. The characteristics of water quality vary based the mix of industrial, commercial and residential uses in our community, history of brownfield contamination, our proximity to major sources of airborne pollutants, the existing effort of our city to regulate runoff and the availability of storm water infrastructure to address water pollution, as well as other factors unique to Signal Hill.

Like the County of Los Angeles, which has applied to withdraw from their 2006 ROWD and now seeks an individual MS4 permit for the Los Angeles County Flood Control District, Signal Hill looks forward to working with you and the Flood Control District in a collaborative process during the upcoming Permit renewal process. Signal Hill looks forward to working with both the Regional Board and the City of Long Beach in designing and implementing our individual NPDES Permit.

#### VIA E-MAIL AND U.S. MAIL

Mr. Ivar Ridgeway Los Angeles Regional Water Quality Control Board 320 W. 4th Street, Suite 200 Los Angeles, CA 90013

## Re: <u>Hearing on Proposed Order No. R4-2012-XXX, Draft NPDES</u> Permit for MS4 Discharges within the County of Los Angeles

Dear Mr. Ridgeway:

This letter is submitted on behalf of the County of Los Angeles ("County") and the Los Angeles County Flood Control District ("LACFCD") and responds to the Notice of Public Hearing dated June 6, 2012, Public Notice No. 12-022 ('Hearing Notice"), concerning the above referenced Draft Permit.

#### I. Objection to Time Deadlines and Procedures

The Regional Board released the Draft Permit, Fact Sheet, and attachments for public comment on June 6, 2012. This was the first time the County, LACFCD, or any other party was provided with the full Draft Permit and their attachments.

The Draft Permit is a highly complex document, over 120 pages in length. The Fact Sheet incorporated into the permit, along with the attachments, result in a total Permit of more than 500 pages.

The Hearing Notice requires that comments on the Draft Permit were to have been submitted by July 23, 2012. The County and LACFCD submitted timely comments by this deadline. Nevertheless, this notice did not provide the County or LACFCD sufficient time to respond to the hundreds of pages of Draft Permit, Fact Sheet, and attachments. This unrealistic deadline has created a

Mr. Ivar Ridgeway August 23, 2012 Page 2

process that is fundamentally unfair, a violation of the California Administrative Procedure Act ("APA"), and due process.

This unrealistic deadline, combined with the possibility that responses to comments and a revised tentative draft will not be issued until shortly before the hearing, will also result in an unnecessarily long and complex permit hearing, as the permittees, including the County and LACFCD, will be required to proceed on issues that might have been resolved prior to the hearing if the parties had been given an opportunity to do so.

Accordingly, the County and LACFCD object to the current manner of proceeding. The County and LACFCD request that Water Board staff issue responses to comments on the Tentative Draft as well as a new draft permit and hold a workshop and invite public comment on that draft. This will allow the permittees and the public to review staff's responses to comments made to date and to respond to any proposed revisions prepared by staff. It will also allow the permittees additional time to work with staff and interested parties in an attempt to resolve the outstanding issues that currently exist.

The County and LACFCD also request that there be adequate time for the permittees to analyze and respond to staff's responses to comments as well as any proposed changes in the draft permit. Therefore, we request that staff release their final comment responses and any proposed changes to the draft permit at least 21 days prior to the hearing or, if the process set forth above is not followed, at least 30 days prior to the hearing. This will allow permittees and other interested persons sufficient time to review the responses and changes to the draft permit to refine their presentations as appropriate.

## II. Administrative Record

The Hearing Notice states that the entire Administrative Record may not be present at the hearing. The County and LACFCD respectfully object to the absence of portions of the Administrative Record and request that the entire Administrative Record be present for the entirety of the hearing. Should the Board deny this request, then the County and LACFCD request that at least the documents set forth on Attachment A be available at the hearing.

Mr. Ivar Ridgeway August 23, 2012 Page 3

#### III. Parties

## A. Regional Board Staff

The Hearing Notice states that the Los Angeles Water Board staff is not a party to this proceeding. This statement is inconsistent with the APA. The County and LACFCD request that Water Board staff clearly state their status in this hearing prior to the commencement of the proceeding.

#### B. Requests for Party Status

The Hearing Notice letter sets forth the list of parties to the proceeding. It then provides that other persons or organizations who wish to participate as a party can request party status.

The County and LACFCD request the opportunity to comment and be heard on any request by any entity to be designated as a party to this proceeding before such designation occurs. As permittees that will be the subject to the permit, the County and LACFCD have the right to comment and be heard on any request by any non permittee to participate in this adjudicative proceeding.

The County and LACFCD make this request because designation of additional parties could unduly complicate and lengthen this hearing without substantial benefit. While the County and LACFCD do not wish to limit the ability of interested third parties to voice their concerns, it is critical that any additional time needed to allow for the participation of third parties not limit the time given to the permittees to address their substantive issues.

As set forth below, the County and LACFCD suggest that any requests for party status be addressed at a pre-hearing conference with the Chair.

#### IV. Procedures at the Hearing

## A. Objection to Proceeding Contrary to the Code of Regulations, Government Code or Evidence Code

This proceeding is a formal adjudicative proceeding, governed by 23 Cal. Code Reg. § 648, *et seq.* Chapter 4.5 of the APA (Government Code § 11400 *et seq.*), Government Code § 11513, and Evidence Code §§ 801 through 805. The County and LACFCD object to any procedure contrary to or inconsistent with any of these provisions.

Mr. Ivar Ridgeway August 23, 2012 Page 4

## B. Prehearing Conference

The County and the LACFCD respectfully request that the Chair hold a pre-hearing conference with staff and all parties to address procedural issues. These issues include ruling on requests for party status, the presentation and submission of evidence, segmentation of the hearing by subject as discussed below, and any other procedural issue that the Chair, staff or parties believes should be addressed in order to allow the hearing to proceed in an orderly fashion.

## C. Submittal of Evidence

The Hearing Notice states, in Section VI, that pursuant to 23 Cal. Code Reg. § 648.4, "untimely submittal of written comments or evidence will not be allowed or accepted into the Administrative Record without a showing of good cause for the delay, and in no event if any party or the Board would be unduly prejudiced by the late submittal or if staff or the Los Angeles Water Board would not have an adequate opportunity to review, consider, and respond to the comments or evidence."

The County and LACFCD object to this provision to the extent that it is inconsistent with 23 Cal. Code Reg. § 648 *et seq.*, Chapter 4.5 of the APA, and Government Code § 11513. The County and LACFCD reserve the right to present evidence at the hearing consistent with these provisions, including the right to subpoena witnesses.

## D. Direct Testimony

The County and LACFCD desire to make their presentations on permit issues as efficiently and clearly as possible and to minimize the time required. Therefore, we intend to forego our right to question our witnesses through counsel. Instead, each witness will make a presentation to the Water Board.

## E. Coordination with Other Permittees

The County and LACFCD will work with other permittees to coordinate presentations as appropriate.

## F. Cross-Examination

The County and LACFCD reserve the right to cross-examine all witnesses and parties. Government Code § 11513.

Mr. Ivar Ridgeway August 23, 2012 Page 5

## G. Hearsay

The County and LACFCD object to hearsay evidence being used for any purpose other than supplementing or explaining other evidence. The County and LACFCD object to any finding that is supported solely by hearsay. Government Code § 11513(d).

## H. Opening Statement

The County and LACFCD request the right to make a short opening statement before the presentation of evidence. The County and LACFCD submit that the presentation of a short opening statement, summarizing the issues of concern, before the presentation of evidence will help the Board focus on the matters of greatest concern to permittees. The Board could also use this time to hear from elected officials, who may prefer to speak at the commencement of the proceedings rather than during the presentation of evidence.

## I. Closing Statement

The County and LACFCD reserve the right to make a closing statement after the conclusion of the presentation of all evidence. 23 Cal. Code Reg. § 648.5(d).

## V. Time Requested

The current proposed manner of proceeding makes it difficult to estimate the time the County and LACFCD will need to present their comments and evidence. As discussed above, the absence of another tentative draft or the opportunity to make additional comments will result in many issues remaining unresolved, leading to an unnecessarily long and complex hearing. The County and LACFCD believe that there are outstanding issues that possibly could be resolved if Board staff issues their responses to the initial comments and releases another tentative draft that addresses those comments, holds a workshop on that draft and receives additional comments. The County and LACFCD therefore urge the Regional Board to reconsider its current manner of proceeding.

If the Board proceeds as currently noticed, there are several major subjects that must be addressed as well as the detailed language of the Draft Permit and its attachments. Under the current procedure, the County and LACFCD will require at least 5 hours to present their evidence and comments at the hearing. This estimate is without prejudice to revision, upwards or

Mr. Ivar Ridgeway August 23, 2012 Page 6

downwards, in light of any presentation made by Board staff or any other designated party at the hearing and in light of the responses to comments which have not yet been provided to the County or LACFCD. As noted, the County and LACFCD will work with other permittees to coordinate presentations and in light of that coordination this estimate may be able to be reduced.

## VI. Segmentation of Subjects at the Hearing

Given the number of highly complex matters and the likely number of presenters, witnesses, and interested parties, and given that this hearing is set for two days, the County and LACFCD suggest that the hearing should be divided into segments, so that the Water Board can focus its attention on discreet issues as the hearing proceeds rather than waiting until the end of the hearing. This will greatly help to simplify consideration of the issues.

The County and LACFCD therefore suggest that the hearing be divided into at least three substantive segments. The first segment would address Parts III, IV, V, and VI.E of the Draft Permit, the discharge prohibitions, receiving water limitations, incorporation of TMDLs, and costs. The second segment would cover the remainder of Part VI (minimum control measures and other programmatic permit requirements and monitoring). The third segment would cover the remainder of the permit's provisions. If this approach is followed, the Water Board may wish to further divide the first segment.

Instead of each party making a presentation on the entire permit, which could become lengthy and difficult to recall, each party would instead have the opportunity to make its presentation with respect to the issues covered by the respective segment. Cross-examination, if any, would occur at that time with respect to those issues. Any interested person would also be given the opportunity to comment on the segment's issues at this time. This would be followed by the Water Board's questions and discussion by the Water Board on that segment's issues. In its discretion, the Water Board could also entertain motions at that time on potential amendments to the Permit language relating to those issues, amendments that would be incorporated into the final motions at the end of the hearing.

In this way, the presentations would focus on related substantive issues before moving to the next segment. This approach will promote clarity and avoid the risk that comments or evidence will be lost or forgotten during this highly complex hearing.

Mr. Ivar Ridgeway August 23, 2012 Page 7

Accordingly, the County and LACFCD request that, with the leave of the Chair, the hearing be conducted as follows:

- 1. Administration of oath to persons who intend to testify
- 2. Opening statements by Water Board staff and parties (summarizing principal comments in support/opposition to proposed permit language)
- 3. Hearing Segment 1 (Discharge Prohibitions, Receiving Water Limitations, TMDL Incorporation, and Costs):
  - Water Board staff presentation;
  - Party presentations;
  - Interested persons' comments;
  - Cross-examination/rebuttal by staff and parties;
  - Questions from Water Board to parties and staff;
  - Closing statements by staff and parties;
  - Discussion by Board;
  - At the discretion of Water Board, motions on potential amendments regarding permit issues discussed in Segment 1 (subject to modification during final Water Board deliberations)
- 4. Hearing Segment 2 (Minimum Control Measures and Monitoring): (as in Segment 1)
- 5. Hearing Segment 3 (All other portions of Permit): (as in Segment 1)
- 6. Final Regional Board deliberations
- 7. Regional Board decision (including amendments made during segments)

On behalf of the County and the LACFCD, we appreciate this opportunity to respond to the Hearing Notice. If you or other Board staff have any questions

BURHENN & GEST LLP

Mr. Sam Unger Executive Officer and Members of the Board California Regional Water Quality Control Board, Los Angeles Region 320 West 4th Street, Suite 200 Los Angeles, CA 90013 *Email: iridgeway@waterboards.ca.goy* 

## Re: Request of NRDC, Los Angeles Waterkeeper, and Heal the Bay for Party Status and Comments on Hearing Procedure for Los Angeles County MS4 Permit

Dear Mr. Unger:

On behalf of the Natural Resources Defense Council ("NRDC"), the Los Angeles Waterkeeper ("Waterkeeper"), and Heal the Bay, we are writing with regard to the Los Angeles Regional Water Quality Control Board ("Regional Board") Hearing on the Tentative National Pollutant Discharge Elimination System ("NPDES") Permit for Municipal Separate Storm Sewer System (MS4) Discharges Within the Los Angeles County Flood Control District, Including the County of Los Angeles, and the Incorporated Cities Therein, Except the City of Long Beach, Draft permit R4-2012-XXXX, NPDES Permit No. CAS004001 ("Tentative Order"), scheduled for October 4-5, 2012 ("Permit Hearing").

## I. <u>NRDC</u>, Waterkeeper, and Heal the Bay Request Party Status for the Permit <u>Hearing</u>

Pursuant to Public Notice issued by the Regional Board on June 6, 2012 for the October 4-5, 2012 hearing on the Tentative Order, the NRDC, Waterkeeper, and Heal the Bay (collectively, "Environmental Groups") each hereby request party status. Environmental Groups have been deeply involved with the permit process for the draft Tentative Order and have been among the most active public interest organizations in the stormwater and urban runoff field in southern California, investing an enormous effort over many years to reduce water quality degradation related to stormwater runoff.

## A. NRDC, Waterkeeper, and Heal the Bay Have Direct and Substantial Interests in This Proceeding that Justify Their Designation as Parties

First, Environmental Groups represent members who recreate in the waters to which the Tentative Order regulates discharges of stormwater runoff. The groups' members are impacted by pollution in stormwater runoff and its resulting health impacts, and by beach closures which restrict the ability of residents and visitors in Los Angeles County to use the beach and local waters for recreation and other purposes.

Second, Environmental Groups submitted extensive written comments and expert analysis on the Tentative Order on July 23, 2012, and have submitted written comments on prior staff working proposals for the permit's Minimum Control Measures and (submitted April 13, 2012), Non-Storm Water Discharge Prohibitions (submitted April 18, 2012) and its Receiving Water Limitations ("RWLs"), Total Maximum Daily Load ("TMDL"), and Watershed Program provisions (submitted May 14, 2012). Environmental Groups also presented testimony and/or participated at Regional Board Workshops on the draft Tentative Order on March 1, 2012, April 5, 2012, May 3, 2012, and July 3, 2012; participated in stakeholder discussions convened by Regional Board staff on May 17, 2012, May 31, 2012, and July 9, 2012; and met with Board staff to discuss draft permit terms on numerous additional occasions in 2011 and 2012. We have worked throughout the drafting process to ensure the adopted Order will meet the requirements of federal and state law and achieve relevant requirements for water quality in Los Angeles County.

Third, Environmental Groups also have a long history of working to adopt, strengthen and enforce the MS4 permit for Los Angeles County, the TMDLs it implements, and the water quality standards that it is designed to achieve. For example, in 2003, Environmental Groups successfully intervened in a lawsuit filed by many of the Permittees against the Regional Board, challenging the application of water quality standards to stormwater in the 2001 Los Angeles County MS4 Permit. (See, County of Los Angeles v. California State Water Resources Control Bd. (2006) 143 Cal.App.4th 985.) The California Appellate Court rejected the Permittees' arguments and found that "substantial evidence" supported a finding by the trial court that the Permit's restrictions on pollutant discharges were lawful. (Id.) In 2008, Environmental Groups successfully intervened in a lawsuit filed by many of the Permittees and the Building Industry Legal Defense Foundation against the Regional Board and State Water Resources Control Board ("State Board") that sought an order requiring the Water Boards to declare the application of water quality standards to stormwater null and void and cease all activities relating the implementation and application of water quality standards to stormwater pending further review by the Boards. (See, City of Arcadia v. State water Resources Control Bd. (2010) 191 Cal.App.4th 156.) On Appeal, the Court determined, among other findings, that the "Regional Board's actions were compelled by federal law," and that the Permittees could not cite to state law requirements to compel lower water quality levels. (Id. at 179.) NRDC and Waterkeeper are further parties to litigation seeking to

Mr. Sam Unger, Executive Officer RWQCB Los Angeles Region August 23, 2012 Page | 3

enforce violations of the current MS4 permit for Los Angeles County. (See, *Natural Resources Defense Council v. County of Los Angeles* (2011) 673 F.3d 880.)

Fourth, in 1999, Heal the Bay and Waterkeeper (represented by NRDC) brought an action against the U.S. EPA for its failure to develop TMDLs as required by the federal Clean Water Act. (*Heal the Bay, Inc. v. Browner* (N.D. Cal. 1999) Case No. C 98-4825 SBA.) To settle the claims, the parties entered into a Consent Decree, approved by District Court Judge Armstrong in 1999, whereby EPA would develop dozens of TMDLs, many of which will be implemented by the Tentative Order. In 2010 Heal the Bay additionally successfully intervened in a lawsuit filed by the County of Los Angeles and the Los Angeles County Flood Control District seeking to vacate MS4 permit amendments to incorporate and implement the Santa Monica Bay Beaches Dry Weather Bacteria TMDL. (*County of Los Angeles v. State Water Resources Control Bd.*, No. BS122724 (L.A. Super. Ct. July 16, 2010).) Over Intervenor Heal the Bay's objections, the Court vacated the TMDL amendments on purely procedural grounds.

## **B.** Without Party Status, the Action of the Board May Impair Environmental Groups' Ability to Protect Their Interests

The outcome of the Permit Hearing may impair or impede Environmental Groups ability to protect the interests described above in numerous ways. For example, the disposition may impair the ability of Heal the Bay and Waterkeeper (represented by NRDC) to protect their legal interests in matters relating to TMDLs in Los Angeles County, most notably those found in *Heal the Bay, Inc. v. Browner* (N.D. Cal. 1999) Case No. C 98-4825 SBA. The outcome of the Permit Hearing has potential ramifications for the incorporation and implementation of those TMDLs through the Tentative Order. NRDC and Waterkeeper are further parties to litigation seeking to enforce violations of the current MS4 permit for Los Angeles County and have an interest in ensuring the new Permit fully complies with federal and state laws. (See, *Natural Resources Defense Council v. County of Los Angeles* (2011) 673 F.3d 880.)

# C. Environmental Groups' Interests Are Not Adequately Represented by the Existing Parties to this Hearing

The current parties to these permit proceedings are municipal and county entities that will be regulated under the Tentative Order and ultimately responsible for implementing the requirements it imposes. Conversely, Environmental Groups are nonprofit organizations focused on protecting Los Angeles County's aquatic resources, including Santa Monica Bay, and its beachgoers. Environmental Groups have throughout the Tentative Order drafting process presented, and undoubtedly will at the hearing present, arguments that are in opposition to positions taken by the existing parties and will add necessary elements to the hearing that the existing parties will likely neglect. These include full discussion of the impacts and costs of failing to adequately reduce pollution in stormwater runoff; providing discussion of federal and state legal requirements that

mandate many of the terms contained in the Tentative Order, including the Order's RWLs, TMDL, and Low Impact Development Requirements, and discussion of the federal process for adoption of the permit and that this process cannot be undercut directly or indirectly by state law; and presentation of case studies, scientific research, and other documentation demonstrating the feasibility of terms in the Tentative Order or of additional provisions that are currently lacking in the Tentative Order. As no existing or other party will adequately represent the Environmental Groups and their unique interests, they are properly given party status here.

Environmental Groups are regular, consistent participants in water quality matters large and small before the Regional Board, State Board, as well as in litigation related to water quality issues, including directly involving the MS4 permit for Los Angeles County. We have been deeply involved with the adoption process for the draft Tentative Order for over a year. As such, we each request designation as a party to the proceeding. In order to allow for adequate time for preparation for the Permit Hearing, Environmental Groups request that the Regional Board respond by no later than Thursday, September 6, 2012.

## II. <u>Environmental Groups Request Four Hours for Presentation and Hearing</u> <u>Practice</u>

Environmental Groups request that the Regional Board allocate to them a total of four (4) hours of time for presentation, expert witness testimony, and cross examination as necessary. This time would be divided roughly as follows: Presentation (1.5 hours); Expert Witness Testimony (2-4 witnesses at approximately 20 minutes each – 40 to 80 minutes); Cross-Examination of Staff/Witnesses/Other Parties: (1 hour) and time for remaining hearing practice.¹ This amount of time is necessary to ensure a proper vetting of the issues and complexities raised by the Tentative Order and comments submitted by permittees.

The Public Notice for the Hearing states that the "Los Angeles Water Board staff is not a party to this proceeding." We also write here to confirm that Regional Board staff will be available for cross-examination by the parties as necessary at the Permit Hearing.

¹ Environmental Groups request 4 hours as the minimum amount of time necessary for adequate presentation of the issues raised by the Tentative Order. However, in the event that additional time over and above four hours is requested by any other party to the hearing and granted to that party by the Regional Board, Environmental Groups request that we be granted additional time equal to that other party in order to ensure a fair hearing.

## III. <u>Environmental Groups Request that the Regional Board Designate a Time or</u> Date Certain for Public Comment at the Permit Hearing

The current lack of any set agenda for the Permit Hearing, scheduled for two days from October 4-5 creates significant hardship for members and partners of Environmental Groups in presenting testimony during any period for public comment. The lack of such schedule or agenda could result in a member of the public being required to take two full days off from work in order to present testimony, with no guarantee of whether their comments would be heard on the first or second day of the Permit Hearing. We request that the Regional Board establish a date certain (October 4 or 5), preferably specifying morning or afternoon, for the public to present testimony at the Permit Hearing.

## IV. Designated Contact for Receipt of Notices About this Proceeding

Communications related to this proceeding or to the Environmental Groups' request for Party Status may be directed to:

Noah Garrison Natural Resources Defense Counsel 1314 Second Street Santa Monica, CA 90405 Tel: 310-434-2300 / Email: <u>ngarrison@nrdc.org</u>

Liz Crosson Los Angeles Waterkeeper 120 Broadway, Suite 105 Santa Monica, CA 90401 Tel: 310-394-6162 / Email: <u>liz@lawaterkeeper.org</u>

Kirsten James Heal the Bay 1444 9th Street Santa Monica, CA 90401 Tel: 310-451-1500 / Email: kjames@healthebay.org

## V. <u>The Regional Board Must Provide Separate Counsel to Serve as Advisor to</u> <u>the Board</u>

Courts are clear that staff or counsel for the Regional Board may "not act as both an advocate before the [Regional Board] and an advisor to the [Regional Board]." (See attachment A: Notice of Entry of Judgment and Issuance of Peremptory Writ of Mandate, in *County of Los Angeles v. State Water Resources Control Bd.*, No. BS122724 (L.A. Super. Ct. July 16, 2010); see also, *Nightlife Partners, LTD. v. City of Beverly Hills* (2003) 108 Cal.App.4th 81.) The Notice of Public Hearing released by the Regional

Board on June 6, 2012 states that "Los Angeles Water Board staff is not a party to this proceeding" and the proceeding "does not involve investigative, prosecutorial, or advocacy functions." However, the potential exists for Regional Board counsel to be required to fulfill dual roles—acting, on the one hand, to cross examine witnesses or to present evidence before the Regional Board, and, on the other hand, to rule on the admissibility of evidence, on proper procedure for witness conduct, or to otherwise serve in an advisory capacity to the Regional Board dedicate a separate legal staff member for solely procedural and evidentiary matters, to prevent any actual or perceived conflict between the various potential roles required of Board counsel at the hearing.

We note that this issue has resulted in the voiding and setting aside of an amendment to the Los Angeles County MS4 Permit previously. (See Attachment A.) In that case, years of work and substantial resources of the Regional Board, the Permittees, and stakeholders, including Environmental Groups, to incorporate and implement the Santa Monica Bay Beaches Dry Weather Bacteria TMDL were lost due to appearance that Board counsel was acting as both advocate and advisor to the Regional Board. The Board should take every step to ensure that this outcome is not repeated here.

## VI. <u>Conclusion</u>

Environmental Groups request party status to the October 4-5 Regional Board Hearing on the Tentative Order, and that the Regional Board designate separate counsel for solely procedural and evidentiary questions that may arise during the Hearing. Environmental Groups further reserve our right to raise objections on procedural or other grounds that may arise during, or prior to, the Permit Hearing. Thank you for your attention to this matter, and please do not hesitate to contact us with any questions you might have.

Sincerely,

Noah Garrison Project Attorney Natural Resources Defense Council

Liz Crosson Executive Director Los Angeles Waterkeeper

3	IT IS HEREBY ORDERED, ADJUDGED, AND DECREED that:		
4	1. The Petition for Writ of Mandate is granted. For the reasons set forth in the Court's		
5	minute order dated June 2, 2010, Respondent California Regional Water Quality Control Board, Los		
б	Angeles Region ("Regional Board"), committed a prejudicial abuse of discretion.		
7	2. A Peremptory Writ of Mandate shall issue commanding Respondents:		
8	(a) To void and set aside Los Angeles Regional Water Quality Control Board		
9	Order No. R4-2006-0074 and all amendments to the Los Angeles County Municipal Storm Water		
10	Permit (Order No. 01-182) effected thereby;		
11	(b) To void and set aside State Water Resources Control Board Order WQ 2009-		
12	0008, without prejudice to the State Water Resources Control Board's consideration of the matters		
13	addressed in Order WQ 2009-0008 based on any new administrative record that may come before it;		
14	(c) To cease and suspend any and all activities taken by Respondents pursuant to		
15	Los Angeles Regional Water Quality Control Board Order No. R4-2006-0074 or State Water		
16	Resources Control Board Order WQ 2009-0008; and		
17	(d) To make and file a return to this writ ninety (90) days from the date a copy of		
18	this writ is served on them showing what they have done to comply with this writ.		
19	3. The Peremptory Writ shall further command that, should Respondent Regional Board CONDUCT ANY FURTHER HEARING UPON REMAND, AT		
20	choose to amend the Los Angeles County Municipal Storm Water Permit (Order No. 01-182) to SUCH HEARING		
21	reflect the terms of the Santa Monica Bay Beaches Dry Weather Bacteria TMDL, Regional Board		
22	SHALL- Resolution No. 02-004, such amendment shall occur at a hearing in which the same person does not		
23	act as both an advocate before the Los Angeles Regional Water Quality Control Board and an		
24	advisor to the Los Angeles Regional Water Quality Control Board, and in which the Regional Board		
25	counsel who participated in the last Regional Board hearing does not participate. 4. OBJECTIONS BY RESPONDENTS AND INTERVENOR to		
26	THIS PROPOSED JUDGMENT ARE OVERIULED.

Mr. Sam Unger Executive Officer and Members of the Board California Regional Water Quality Control Board, Los Angeles Region 320 West 4th Street, Suite 200 Los Angeles, CA 90013 *Email: sunger@waterboards.ca.gov* 

## *Re:* Participation of Board Member Mary Ann Lutz in Los Angeles MS4 Permit Hearing

Dear Mr. Unger and Members of the Board:

On behalf of the Natural Resources Defense Council ("NRDC") and the Los Angeles Waterkeeper ("Waterkeeper"), we are writing with regard to Board Member Mary Ann Lutz's proposed participation in the Hearing of the Los Angeles Regional Water Quality Control Board ("Regional Board") on the Tentative National Pollutant Discharge Elimination System ("NPDES") Permit for Municipal Separate Storm Sewer System (MS4) Discharges Within the Los Angeles County Flood Control District, Including the County of Los Angeles, and the Incorporated Cities Therein, Except the City of Long Beach, Draft permit R4-2012-XXXX, NPDES Permit No. CAS004001 ("Tentative Order"), scheduled for October 4-5, 2012 ("Permit Hearing"). Due to positions taken and statements made by Board Member Lutz and by groups with whom she has partnered—and in order to ensure a fair hearing—we respectfully request that she be recused from the Permit Hearing and any further Board process concerning the Tentative Order.

## I. Background and California Water Code Section 13207

As the Mayor of the City of Monrovia, a waste discharger subject to the Los Angeles County MS4 permit, Board Member Lutz was barred by California Water Code section 13207 from participating in Regional Board proceedings related to the Tentative Order.¹ However, based on changes to section 13207 made effective on June 27, 2012, the Regional Board transmitted a letter on July 6, 2012, stating that "[u]nder the new law,

¹ California Water Code section 13207 required that a Board member "shall not participate in any Board Action," including an action to adopt an NPDES permit, "which involves . . . any waste discharger with which he or she is connected as a director, officer or employee."

Mr. Sam Unger, Executive Officer RWQCB Los Angeles Region August 23, 2012 Page | 2

Board Member Lutz is not prohibited from participating as a discharger....² We disagree with this conclusion reached by the Regional Board, as Board Member Lutz continues to receive salary of \$400 per month that implicates Water Code section 13207's prohibition against a "disqualifying financial interest in the decision within the meaning of Section 87103 of the Government Code."

#### II. Board Member Lutz Must be Recused For Due Process Considerations Including Bias and Presence of Ex Parte Communications

California Courts are clear that "[j]ust as in a judicial proceeding, due process in an administrative hearing also demands an appearance of fairness and the absence of even a probability of outside influence on the adjudication. In fact, the broad applicability of administrative hearings to the various rights and responsibilities of citizens and businesses, and the undeniable public interest in fair hearings in the administrative adjudication arena, militate in favor of assuring that such hearings are fair." (*Nightlife Partners v. City of Beverly Hills* (2003) 108 Cal.App.4th 81, 90.) In order to assure a fair hearing, Board Member Lutz must not participate in the Permit Hearing or further Board process related to the Tentative Order.

A. <u>Board Member Lutz's Prior Statements Demonstrate an Unacceptable Probability of Actual Bias</u>

"Procedural due process in the administrative setting requires that the hearing be conducted '*before a reasonably impartial, noninvolved reviewer*."" (*Nasha, L.L.C. v. City of Los Angeles* (2004) 125 Cal.App.4th at 483 (emphasis in original).) Where "an unacceptable probability of actual bias on the part of those who have actual decisionmaking power over their claims" is present, it violates the "undeniable public interest in fair hearings in the administrative adjudication arena." (*Id.* at 483.) The actions of Board Member Lutz while she was precluded from participation in Regional Board action on the Tentative Order, demonstrate such "an unacceptable probability of actual bias."

For example, Board Member Lutz has stated, with respect to the stormwater requirements at issue before the Regional Board that, "the basic issue is that groups simply do not have the money to adhere to the requirements."³ In this regard, she has predetermined issues of cost and selection of pollution control measures that will be before the Regional Board as part of the Permit Hearing. Further, Board Member Lutz has worked, "in partnership" with the LA Permit Group, a consortium of 60 or more municipalities in Los Angeles County that have advocated for and taken specific positions on terms in the Tentative

² Letter from Frances McChesney, Office of Chief Counsel, to Regional Board Members, re: Amendment to Water Code Section 13207(a) (July 6, 2012), at 2.

³ Mary Ann Lutz (Spring 2012) "Cleaning Up Our Act is No Small Cost to Cities," Council for Watershed Health, Watershed Wise v. 14 no. 2, at

Mr. Sam Unger, Executive Officer RWQCB Los Angeles Region August 23, 2012 Page | 3

Order, "to develop a unified voice to participate in a collaborative negotiating process."⁴ Indeed, many of these same dischargers also fund a staff advisor for Board Member Lutz.⁵ Her significant involvement in this organized effort by LA MS4 Permittees and the funding provided for her staff advisor demonstrate that she cannot reasonably be expected to cast the unbiased, impartial vote mandated by due process. Were Board Member Lutz to now vote to adopt any of the positions advocated by the LA Permit Group at the Permit Hearing, such as to incorporate a "safe harbor" provision in the Tentative Order's Receiving Water Limitations, or to oppose the incorporation of TMDL waste load allocations as numeric effluent limitations,⁶ it would taint the entire Tentative Order adoption process.

B. <u>Board Member Lutz has engaged in Ex Parte Communications Regarding the</u> <u>Tentative Order</u>

We also note that prior to the July 6 Regional Board letter, Member Lutz engaged in an as yet unreleased number of *ex parte* communications with stakeholders and parties to the Permit Hearing, that would ordinarily be prohibited under California Government Code section 11430.10.⁷ Receipt of such communications by a Member of the Regional Board may be grounds for disqualification under Government Code section 11430.60 and, even if properly authorized when received, such communications may further compound due process concerns. We understand that that the Regional Board is working to release these communications for public review and comment. We reserve the right to comment on any *ex parte* communications of Board Member Lutz at that time and to request her disqualification as a result of these *ex parte* communications and any demonstration of potential bias they may reveal. We urge the Board to make these communications available by the end of this week to allow for their full evaluation prior to the Permit adoption hearing.

As the Board is well aware, procedural due process issues have previously resulted in the voiding and setting aside of an amendment to the Los Angeles County MS4 Permit.⁸ In that case, years of work and substantial resources of the Regional Board, the Permittees,

Mr. Sam Unger, Executive Officer RWQCB Los Angeles Region August 23, 2012 Page | 4

and stakeholders, including Environmental Groups, to incorporate and implement the Santa Monica Bay Beaches Dry Weather Bacteria TMDL were lost due to improper adherence to procedural due process requirements. The Board should take every step to ensure that such an outcome is not repeated here. While it is unfortunate that the timing of changes to the California Water Code complicate the participation of a Board member in these proceedings, for the foregoing reasons we respectfully request that Board Member Lutz be recused here.

Please do not hesitate to contact us with any questions you may have.

Sincerely,

Noah Garrison Project Attorney Natural Resources Defense Council

# Letter from the Executive Director

Nancy L.C. Steele, D. Env.

The San Gabriel River Regional Monitoring Program is a truly innovative collaboration of agencies and organizations whose purpose is to better understand and track the state of an urban watershed. As the first such monitoring program in California, and among the few such programs in the nation, the program stands as an example of what is possible when agencies and organizations work across boundaries towards a common goal, in this case to improve the health of a large urban watershed that serves more than 2 million people.

Although it is often Overshadowed by the Los Angeles River - its more famous neighbor to the West – the San Gabriel is a workhorse. The roughly 700 square mile watershed starts in a national forest and discharges southeast of two international ports, traveling through nine County-operated and two federal-operated dams. Flood control operations on the river allow water to percolate into aquifers, serving as a source of drinking water for much of the San Gabriel Valley.

The water flows over the land and through about 1,200 miles, dropping from the highest point - Mount Baldy at 10,068 feet - to sea level at Alamitos Bay. The watershed supports a Wide variety of plants and animals, some common and some endangered. Visitors in the forest and recreation areas enjoy camping, hiking, biking, fishing, boating, swimming, and skiing. The San Gabriel River Trail allows people to access 61-miles of mostly car-free bike path from Whittier Narrows to Long Beach.

The San Gabriel River is a lifeline and a source of joy for many. Our goal through the monitoring program is to stimulate improvements in the health of the watershed. While we don't often resort to citing quality control experts in this magazine, it is a truism that you can't improve what you don't measure. Thus we thank the program partners for ensuring that we can measure and monitor the watershed –Sanitation Districts of Los Angeles County, Los Angeles Regional Water Quality Control Board, SCCWRP, Los Angeles County Flood Control District, Orange County Watersheds, City of Downey, and Aquatic Bioassay & Consulting.

Council for Watershed Health, 700 N. Alameda St., Los Angeles, CA 90012 P: 213-229-9945 | F: 213-229-9952 | W: www.watershedhealth.org

# Cleaning Up Our Act

## is no small cost to cities

Mary Ann Lutz | Mayor of Monrovia

For those of us who have been working for years to improve water quality in Southern California, it can sometimes feel like we are swimming upstream. Though many cities and counties recognize the vital importance of environmental responsibility and watershed health, they are restrained by rising costs amidst a floundering economy. Our cities scramble to stay sustainable with severely limited resources.

In Monrovia, for example, the cost associated with following the bacterial Total Maximum Daily Loads (TMDLs) is about 10% of our general fund. Even more money is required to hire professionals to do the required research. With a struggling economy, funding from both the federal and state governments has dried up, and our local governments have been forced to decrease services to residents. Meanwhile, the cost of meeting clean water standards continues to increase.

Municipalities and water districts have known for years that recharging and recycling water can help ease demand and assist in stormwater clean-up. The problem is usually not with cities' willingness to comply, however, but with associated costs and the urgent need to generate economic growth.

Unfortunately this conflict can cause groups to turn to the courts. I have seen countless lawsuits filed because of strict water regulations, and the basic issue is that groups simply do not have the money to adhere to the requirements. These lawsuits have done nothing to advance water-quality clean-up. The reality is that stormwater still needs to be cleaned, and it will take a lot of money to do so. Without a significant change in attitudes and practices, improving water quality will continue to be costly, litigious and sometimes frustrating.

I believe that a collaborative, comprehensive and patient approach to water quality is the answer. To accomplish long-term goals for clean water, our communities need to start working together. We need to balance science-based regulations with cost effectiveness. We need to start looking at water not in terms of whether it is potable water or stormwater, but through a more inclusive lens. After all, water does not recognize boundaries. It does not know if it is drinking water or wastewater, and we should not make the distinction either.

...continued on p. 8

# **PROTECTING OUR LAKES...**

Addressing Challenges And Providing Recreational Opportunities

Jim Hughes | Lake Aquatics Manager, County of Los Angeles Parks and Recreation

There are three major lakes in Los Angeles County: Castaic Lake, Santa Fe Dam, and Puddingstone Lake at Bonelli Park. These are full-contact recreational lakes, meaning that they are used for recreation activities involving body contact with the water, such as swimming, water-skiing and fishing. Combined, these lakes provide recreational opportunities for nearly 400,000 local residents and tourists annually. As Lake Aquatics Manager at Santa Fe Dam and Puddingstone Lake, my responsibilities include lake patrol and lifeguard services.

Puddingstone Lake was completed in 1928 and Santa Fe Dam was completed in 1978 by the Army Corps of Engineers. Swimming in both lakes immediately became popular, particularly during the warm summer months. The high density of swimmers, however, resulted in elevated bacteria levels that were potentially harmful to human health. In response, both lakes were closed to swimmers-Santa Fe Dam was closed from 1986-1987 and Puddingstone Lake from 1992-1997.

#### "Through a strict vehicle inspection program, Quagga mussels have been eradicated from the area."

- Jim Hughes, Lake Aquatics Manager, Frank G. Bonelli Regional Park

Santa Fe Dam's open-water chlorine-injection system was repaired in 1987 and this caused bacteria levels to decrease to safe levels that allowed the lake to reopen to swimmers the same year. A "Photozone" system was installed in 1989 to further disinfect the water and prevent high bacterial levels. In 1997, a chlorine system modeled after Santa Fe Dam's was constructed in Puddingstone Lake to make the water safe for swimmers. The chlorine systems in both Santa Fe Dam and Puddingstone Lake have been completely rebuilt and updated since their inception, with construction taking place during 1995 and 2009 at Santa Fe Dam and Puddingstone Lake, respectively.

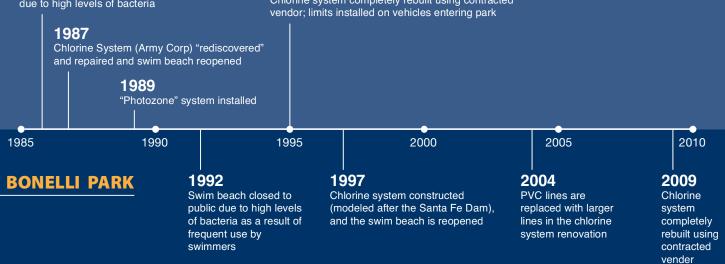

Santa Fe Dam swim beach closed to public due to high levels of bacteria

1995

Chlorine system completely rebuilt using contracted

Another challenge to the regional lakes was the discovery of Quagga and Zebra Mussels, both invasive species in the state. Quagga Mussels, which invaded Southern Californian lakes, are water filterers, meaning they remove suspended matter including plankton from the water. With clearer, filtered water, sunlight reaches deeper into the lake, increasing vegetation growth and thereby altering oxygen levels. This, coupled with lower plankton levels, threatens fish populations. Quagga Mussels also have detrimental effects for swimmers and boaters. These mussels clog piping structures (Figure 1), compromising the chlorination system and increasing the risk of high bacteria levels. They can also harm boat engines and increase drag.

Through a strict vehicle inspection program, however, the mussels have been eradicated from the area. Before launching, boats are thoroughly inspected and must be clean, drained and dry to prevent contamination. In Bonelli Park and Santa Fe Dam, 20 vessels were denied launch in 2010 and nine in 2011. As of June 30, 2011, there were no mussels found on any vehicle entering either lake.

Both lakes are currently safe for swimmers, and Lake Lifequards continue to provide crucial services. Lifequards conduct land operations, including ground-based emergency response and rescues for hikers throughout the Parks. They are also trained in swift-water rescue, marine firefighting, scuba diving, and law enforcement, issuing hundreds of citations annually as boating safety officers. With the lakes now safe for swimmers, lifeguards work to prevent drowning and keep these swimmers protected.

# **Assessing Watershed**

The Department of Agriculture (USDA)

There are nearly 17 million people living and working within an hour's drive of Angeles National Forest, the most urban National Forest in the country. With so much urbanization in the surrounding area, the Forest offers a welcome relief. It provides over 70% of the open space in Los Angeles County and welcomes 3.5 million visitors annually. The Forest provides recreation, including hiking, camping, and fishing, and is also home to nine federally listed Threatened or Endangered plant and animal species.

My focus, however, is on the Forest's connection to the local watersheds. The 650,000 acres of land in the Angeles National Forest are spread across four major watersheds: the Los Angeles River, Mojave River, Santa Clara River, and San Gabriel River. The Forest is the source of nearly a third of the water in the Los Angeles basin.

On June 3, 2011, United States Department of Agriculture (USDA) Secretary Tom Vilsack announced the release of the Watershed Condition Framework (WCF), the agency's first national assessment of all 193 million acres of National Forest lands. In the assessment, the USDA outlines its strategies to improve watershed and forest health and increase restoration through partnerships and interagency coordination. The WCF provides a science-based method to classify watershed conditions (ranging from "Impaired Function" to "Functioning Properly") and prioritizes watersheds for improvements. The WCF deviates from previous plans in that it focuses on implementing treatments at a watershed scale and as opposed to just at individual sties, it aims to preserve what is already working, and it deems partnerships and collaboration essential.

A healthy watershed is characterized as such based on five main criteria: high biotic integrity of habitat and species, the ability to recover quickly from disturbances, high degree of connectivity, the ability to provide ecosystem services such as high-quality water, and maintenance of long-term soil productivity.

For impaired watersheds, the WCF outlines a six-step process to improve their health. Based on existing data and knowledge, watersheds' baseline conditions were established in 2010,

# Health

## Watershed Condition Framework (WCF)

Lisa Northrop | Resource Officer, Angeles National Forest

and they were prioritized for restoration in 2011. The remaining four steps are to develop Action Plans that specify how each watershed will be improved, implement the projects beginning with high-priority watersheds, track the accomplishments, and monitor any changes in watershed conditions.

To assess the health of a watershed, the WCF created a plan based on the weighted average of aquatic and terrestrial physical and biological characteristics of the watershed as measured through 12 indicators. Watershed condition assessments throughout California indicated that there is a close link between recent wildfires and impaired watersheds, as well as a correlation between urban centers and impaired watersheds. In part because of the close proximity to Los Angeles, it was found that streams higher in the watershed (and thus farther from the urban center), were generally more functional and healthy.

Of the 11 sixth-level San Gabriel River subwatersheds located in the Angeles National Forest, only one, San Dimas Wash, received a score in the "Functioning Properly" range. Seven subwatersheds were categorized as "At Risk," and three, the Lower West Fork, Devils Canyon and Santa Fe Flood Control Basin, were classified as "Impaired Function." The Santa Fe Flood Control Basin received the highest, and therefore worst, score: 2.7 out of 3. There were no indicators in the functioning range, and water quality, aquatic biota, aquatic habitat, and soil were all listed as impaired.

The implementation of the WCF is an ongoing process and one that will serve to improve the quality of the regional watersheds and the health of the Angeles National Forest. To become a volunteer, involved person or partner in our efforts, please visit our website at http://www. fs.fed.us/r5/angeles.

The full text of the Watershed Condition Framework is available at http://www.fs.fed.us/publications/watershed/ Watershed_Condition_Framework.pdf The State Of The San Gabriel River Watershed A five-year assessment

Over 1,236 miles of streams comprise the San Gabriel River Watershed, supporting more than 2.3 million people from the San Gabriel Mountains to the Pacific Ocean. In order to integrate and expand monitoring efforts in the San Gabriel River Watershed, the Council for Watershed Health and its partners created the San Gabriel River Regional Monitoring Program (SGRRMP) in 2004.

The SGRRMP is a watershed–scale program that provides a more complete and comprehensive assessment of watershed health. The SGRRMP addresses five questions of particular interest to watershed managers:

- 1. What is the condition of streams in the watershed?
- 2. Are conditions at areas of unique interest getting better or worse?
- 3. Are receiving waters near discharges meeting water quality objectives?
- 4. Is it safe to swim?
- 5. Are locally caught fish safe to eat?

Since 2005, the SGRRMP has monitored targeted and randomly selected sites throughout the watershed during the dry months of May through July. The monitoring is rigorous and sciencebased, and the SGRRMP has collected data from the mountainous upper watershed, the urbanized lower watershed, and the mainstream.

On July 20, 2011, the Council for Watershed Health hosted a State of the San Gabriel River Watershed Symposium in Whittier, California. The Symposium presented results from the State of the Watershed Report, which represents the culmination of five years of successful, cooperative monitoring by the SGRRMP. The Symposium speakers represented by local scientists, watershed managers and regulatory agencies addressed the five primary questions

Dr Kristy Morris, Senior Scientist at the Council for Watershed Health and Scott Johnson, Senior Scientist at Aquatic Bioassay and Consulting Laboratories inc. addressed the first question. Johnson discussed the results from 69 randomly selected sites that were monitored during the period 2005-2009. To assess surface water condition, each site was examined for chemicals of concern and toxicity and was evaluated based on its physical habitat and biological communities. The results showed that sites higher in the San Gabriel Mountains and farther from urban cities were comparatively more undisturbed and had healthier aquatic insect communities (Figure 1). These sites did, however, have higher water toxicity than the urbanized portions of the streams. Overall, Basin Plan objectives were typically achieved throughout the watershed. Dr. Eric Stein, Principal Scientist with the Southern California Coastal Water Research Project, did caution that more data over the next 15-20 years will be necessary to see trends and capture anomalies.

Karen Larsen, Deputy Director with the Office of Information Management and Analysis with the State Water Resources Control Board, answered the second of the five questions. Larsen discussed regional results of the statewide Surface Water Ambient Monitoring Program (SWAMP). Over the five-year period, three watershed habitats were studied and monitored to track how conditions changed over the years. However, there were no clear trends in either the upper or lower watershed. The California Rapid Assessment Method (CRAM) was also used, and this confirmed that conditions remained stable throughout the testing period, although the CRAM scores of the sites ranged from merely moderate to poor.

Phil Markle, Environmental Scientist with the Sanitation Districts of Los Angeles County, talked about question three. This five-year report studied the impact of effluents from five publicly owned treatment facilities discharging into the San Gabriel River. Markle indicated that all nutrients, metals and organics tested fell within the Basin Plan thresholds, meaning they can be regarding as safe for human and aquatic life. E. Coli concentrations, however, were higher than California standards, though below the discharges the concentrations decreased below the standards due to the dilution by effluents. Diazinon, a pesticide banned by the EPA, was observed in a few samples, and ammonia levels exceeded standards before the implementation of nitrification/denitrification in 2003.

Bernard Franklin, Chief Environmental Health Specialist with the Los Angeles County Environmental Health - Recreational Waters Program, Jim Hughes, Lake Aquatics Manager for the Frank G. Bonelli Regional Park with the County of Los Angeles Parks and Recreation, and Lisa Northrop, Forest Resources Officer with Angeles National Forest, addressed question four. They spoke about the human health impacts of swimming in regional streams and lakes. A bacteria monitoring program implemented in 2007 assesses the safety of the watershed. E. Coli levels were tracked between May through September, 2007-2009, in eight popular swimming locations in the upper watershed. While these levels were usually below California standards, on weekends or holidays with high recreational use, the standards were occasionally exceeded. The EPA is currently reviewing alternative technologies and methodologies to detect and quantify bacteria levels and identify sources of contamination.

#### ...continued on p.8

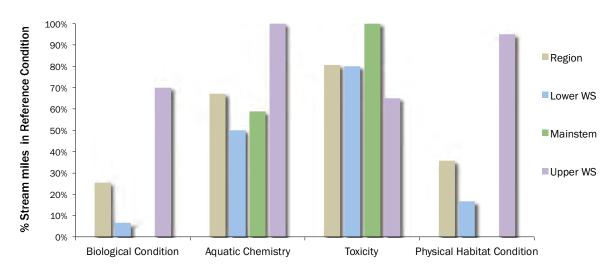

FIGURE 1. Percentage of stream miles within an acceptable biological condition.

#### ...continued from p.1 CLEANING UP OUR ACT

Already, groups in the greater Los Angeles area have taken concrete steps to address water issues in a more unified way. The San Gabriel Valley Council of Governments, for example, has merged its subcommittees into one working group to focus on a more comprehensive approach to water resources.

Yet even with similar changes throughout the region, the problem of costs will not disappear. With a more integrated program, however, the Los Angeles basin can work together instead of competing with neighboring cities for funding. The anticipated regional support for the 2013 Los Angeles County Flood Control District's Water Quality Funding Initiative, to support the development of watershed plans, educational programs and water quality monitoring, is a step in the right direction.

While collaboration is the key to moving forward, the road will not be easy. Non-governmental organizations and environmentalists may have to sacrifice their desire for rapid regulation implementation and instead settle for slower progress to ensure effective compliance by all parties. Cities and counties may have to sacrifice some degree of economic growth to be sure that environmental preservation receives the focus it deserves. Everyone must do his or her part, and everybody must be willing to give a little. If our strategies to tackle water issues in Southern California reflect a more integrated and collaborative approach, then we will be able to deliver on our promises of respecting our resources and improving watershed health.

#### ...continued from p.7

#### STATE OF THE SAN GABRIEL

Finally, Michael Lyons, Environmental Scientist with the Los Angeles Regional Water Quality Control Board, answered the final question regarding the safety of fish in the watershed. The levels of mercury, selenium, total DDTs and total PCBs were analyzed and compared to state standards. The results showed that while tilapia, red ear sunfish, and bluegill had contaminant levels under state standards, other species' contaminants exceeded the safe levels. Largemouth bass and common carp from Puddingstone Lake and Santa Fe Dam had higher levels of mercury, and largemouth bass, common carp, and striped mullet from the Upper Estuary had PCB concentrations high enough for the SGRRMP to recommend people limit their consumption to one meal a week. The SGRRMP plans to continue the bioaccumulation program to gather more data regarding fish safety.

In the next five-year period, from 2010 to 2014, the SGRRMP plans to continue its monitoring, specifically examining mercury levels in fish tissues, PBDEs (flame retardants) in watershed sediments, and the recovery of the areas burned by the 2009 Morris fire. The SGRRMP will also begin to conduct trash assessments at monitoring sites. While the SGRRMP has already begun working on these future projects, the July Symposium provided an opportunity to reflect on the past five years and to share results to the five central questions.

# In the News...

Excerpt from Pasadena Star News Article titled "San Gabriel River gets good grade despite signs of stress" from July 20, 2011

"Although conditions of the San Gabriel River are better than expected, some swim areas have high bacteria counts and fish caught at Santa Fe Dam and Puddingstone Lake contain trace amounts of mercury, according to a report released Wednesday."

"From 2005 to 2009, samples taken from more than 220 sites along the river stretching from the San Gabriel Mountains to the Pacific Ocean showed a healthy river habitat in the undisturbed upper portions but increasingly impaired habitat in the middle and lower portions that traverse an area populated by more than 2.3 million people."

#### **RE:** LA Permit Group Technical Assistance

As you know, the Los Angeles Regional Water Quality Control Board (LARWQCB) is currently developing a new National Pollutant Discharge Elimination System Municipal Separate Sanitary Storm Sewer (MS4 NPDES Permit). This permit establishes regulations related to stormwater discharges and requires implementation of the following programs:

- ✓ Public Information and Participation Program
- ✓ Industrial/Commercial Facilities Control Program
- ✓ Development Planning Program
- ✓ Development Construction Program
- ✓ Public Agency Activities Program
- ✓ Illicit Connections and Illicit Discharges Elimination Program

#### **Total Maximum Daily Load Compliance**

In the state of California, regional stormwater permits are developed and enforced under the Regional Water Quality Control Boards. Since 1996, the cities in Los Angeles County (with the exception of the City of Long Beach), unincorporated areas in Los Angeles County, and Los Angeles County Flood Control District have been covered under a county-wide Phase 1 MS4 NPDES permits. The most recent permit was issued in 2001. In 2011, the LARWQCB began the process of reissuing the MS4 NPDES permit containing all Los Angeles County municipalities with watershed-based chapters. The Regional Water Quality Control Board has indicated that the new permit will be issued to all parties as co-permittees and will not designate a principle permittee. The permit is tentatively scheduled for consideration in the spring of 2012.

The potential costs and the legal implications of the new permit are high, so the municipalities in Los Angeles County formed the LA Permit Group, in partnership with Regional Board Vice Chair Mary Ann Lutz, to develop a unified voice to participate in a collaborative negotiating process. To prepare for negotiations for the new permit, the LA Permit Group is seeking technical consulting services to assist in the negotiations for the new permit. The services desired include the following:

- 103. <u>Technical Assistance</u>
  - 103.1. Help to tie the technical sub-committees' proposals together
  - 103.2. Provide technical back-up (legal and examples of other permits) to substantiate negotiation points.
  - 103.3. Provide draft permit language based on negotiation points.
  - 103.4. Advise on negotiation and packaging strategy
- 104. Outreach and Consensus Building
  - 104.1. Outreach Plan
  - 104.2. Assist the LA Permit Group to engage stakeholders to build consensus and identify partnerships/supporter
  - 104.3. Assist the Negotiations Committee to develop talking points and provide advisement on how to approach the Regional Board, stakeholders, city management/elected officials, and area elected officials.
  - 104.4. Assist with outreach to other permittees to help build consensus

#### The Role of SGVCOG

In October 2011, the LA Permit Group asked the San Gabriel Valley Council of Governments to assist in developing a public procurement process to attain a technical consultant and to collect the funds necessary to support the contract. At the November 2nd, 2011 meeting of SGVCOG's City Manager Steering Committee, they recommended that the COG assess each jurisdiction in the San Gabriel Valley COG and Los Angeles County a flat-fee not to exceed \$5,000. Because every city in Los Angeles County will be heavily impacted by this permit and will benefit from the services that the Consultant is providing, the Steering Committee also recommended that the SGVCOG undertake an extensive outreach effort to collect a fee of \$5,000 from those jurisdictions that are outside of the San Gabriel Valley that are also co-permittees on the new permit. The Steering Committee's recommendation was unanimously approved by the SGVCOG Governing Board at its November 17, 2011 meeting. This letter is the beginning of this outreach effort. The fee collected will only be used to cover the cost of this contract, and the SGVCOG will not receive any portion of the collected funds. If the amount of money collected exceeds the amount of the contract, each jurisdiction will be reimbursed a pro-rata share of the cost.

#### Next Steps

The Technical Assistance RFP was released on Friday, November 18th and proposals were due on Monday, December 5th. The LA Permit Group selected Larry Walker Associates as the technical assistant consultant due to their proven track record and knowledge on the permit process.

We are asking interested jurisdictions to submit a payment of \$5,000 to fund this technical assistance consultant for the LA Permit Group. Due to the short timeline for the project, we are asking cities to notify us of their interest as soon as possible. To indicate your interest, I have attached an *Intent to Participate* letter (Attachment 1). To support your accounting, I have also attached an invoice for \$5,000 (Attachment 2).

If your jurisdiction is interested in participating, please return the attached *Intent to Participate* by **Friday**, **December 30th**. Please submit your payment by **Tuesday**, **January 17th**. If you have any questions, please contact me at (626) 457-1800.

There was a motion to approve the consent calendar (M/S/C: R. Bobadilla / R. Wishner / Unanimous).

#### 6.0 Regular Business Items

6.1 ACE Phase II

There was extended discussion on this item.

There was a motion recommend to the Transportation Committee funding of the top eight projects – after removing project alternatives for the same grade crossing – (Fullerton Road, Montebello-Greenwood, Hamilton Boulevard, Fairway Drive (Alh), Turnbull Cyn Road (LA), Fairway Drive (LA),Puente Ave. (Alh), and Durfee Ave. (LA) ) as ranked by the SGVCOG's ACE Phase II Subcommittee; should additional funds be available, from State, Federal or local sources, additional projects should be funded according to the rank order as developed by the Subcommittee (M/S/C: R. Wishner / J. Fuentes / Ayes: Covina, Glendora, Rosemead; Noes: La Canada Flintridge).

#### Members Absent: Diamond Bar San Dimas San Gabriel San Marino West Covina

### Page 1 of 151

There was a motion to recommend to the Transportation Committee that ACE submit project schedules and budgets for all active Phase II projects prior to commencing further work (M/S/C: J. Fuentes / R. Wishner / Unanimous / Abstain: La Canada Flintridge).

The Committee also requested that ACE work with the impacted cities to revisit potential pedestrian safety improvements for all 34 grade crossings.

There was discussion regarding the staff recommendation to require that jurisdictions share in the funding of any cost overruns. No action was taken and this item was tabled.

6.2 Los Angeles Regional Water Quality Control Board (LARWQCB) Staff Assistance

The Executive Director provided an update on efforts to secure funding to continue providing technical staff assistance to Mayor Mary Ann Lutz, Vice-Chair and Municipal Government Representative on LARWQCB. He indicated that he would be bringing a recommendation to the Governing Board to contribute \$7,500 in funding towards this position.

- 6.3 San Gabriel Valley NPDES/Stormwater MS-4 Permit Coordination The Executive Director gave a brief update on the status of the MS-4 LA Permit Group Technical Assistance RFP and funding commitments from cities.
- 6.4 SGVCOG Organization and Operation Review The Executive Director indicated that staff, Governing Board and Committee Chair interviews had been completed in November and that a draft report is anticipated in January.

#### 7.0 New Business items for Next Regular Meeting

#### 4.0 Consent Items

- 4.1 Minutes from December 7th, 2011 meeting
  - There was a request to revise the minutes:

The sentence was "There was a motion to recommend to the Transportation Committee that ACE submit full project schedules and budgets for all Phase II projects prior to commencing further work (M/S/C: J. Fuentes / R. Wishner / Unanimous / Abstain: La Canada Flintridge)." changed to read "There was a motion to recommend to the Transportation Committee that ACE submit project schedules and budgets for all active Phase II projects prior to commencing further work (M/S/C: J. Fuentes / R. Wishner / Unanimous / Abstain: La Canada Flintridge)." La Canada Flintridge)."

The sentences "There was discussion regarding the staff recommendation to require that jurisdictions share in the funding of any cost overruns. This item was tabled for later discussion." were changed to read, "There was discussion regarding the staff recommendation to require that jurisdictions share in the funding of any cost overruns. No action was taken, and this item was tabled."

There was a motion to approve the minutes as amended (M/S/C: C. Jeffers / R. Wishner / Unanimous).

#### 5.0 Regular Business Items

5.1 Local Government Sustainable Energy Coalition

H. Choy (LA County) provided a brief presentation on the LGSEC and the benefits of membership.

The City Managers' Steering Committee recommended to the Governing Board submitting a membership application to the Local Government Sustainable Energy Coalition (LGSEC) and authorizing the expenditure

#### Members Absent:

Rosemead San Dimas San Gabriel San Marino West Covina of \$10,000 that is currently budgeted for Federal Advisory services for annual membership fees (M/S/C: C. Jeffers / J. Keating / Unanimous).

5.2 SGVCOG and ACE FY 2010-2011 Financial Audit Reports

The Executive Director indicated that this item had been pulled from agenda, as the SGVCOG's financial auditor has not completed all of the necessary work.

#### 5.3 Status of Caltrans Audit

The Executive Director gave a brief overview of the correspondence from Caltrans regarding status of audit, including outstanding reimbursement still being requested.

#### 5.4 ACE IRS Audit Report

R. Richmond provided an update on IRS ACE Audit. He indicated that ACE had received a "not action" letter from the IRS.

The Committee members requested that a discussion on ACE's contract for financial advisory services be agendized for a future meeting.

- 5.5 San Gabriel Valley NPDES/Stormwater MS-4 Permit Coordination The Executive Director provided an update on the effort to assist LA Permit Group cities in securing technical assistance for the negotiation of the new MS-4 permit.
- 5.6 Los Angeles Regional Water Quality Control Board (LARWQCB) Staff Assistance The Executive Director provided information on the staff recommendation to the Governing Board to authorize an expenditure of \$7,500 to continue providing technical staff assistance to Mayor Mary Ann Lutz, Vice-Chair and Municipal Government Representative on LARWQCB.
- 5.7 Status of SGVCOG Organization and Operation Review D. Parrish update on the SGVCOG's Organization and Operation review.

#### 6.0 New Business items for Next Regular Meeting

The Executive Director indicated that he would be bringing a proposal to re-instate small business services in the San Gabriel Valley at a future meeting.

The Committee members requested that an action item regarding ACE's financial services be agendized for the next week as well as discussion on the Steering Committee's role related to financial oversight of ACE.

#### 9.0 Adjourn

The meeting was adjourned at 1:10 p.m.

Date: January 24, 2012

To: City Managers' Steering Committee

From: Nicholas T. Conway, Executive Director

Re: Legal Clarification of Financial Oversight Duties and Responsibilities

At your January 4th committee meeting, several members asked, once again, for clarification from the COG General Counsel regarding the Steering Committee's role and responsibilities with respect to oversight of financial matters involving the COG's Alameda Corridor-East Construction Authority. The COG Attorney will be in attendance to discuss the four citations listed below and answer any additional questions from the committee members relating to this matter.

#### Background

Article VI, Section B, of the San Gabriel Valley Council of Governments' Bylaws sets forth the duties and responsibilities of the City Managers' Committee, along with the COG Treasurer/Auditor, regarding both ACE and the COG financial matters.

B. Steering Committee. There shall be a Steering Committee of the CMTAC, designated by the CMTAC, to provide assistance and support to the full CMTAC, the Governing Board and/or the Executive Committee and to oversee certain policy and financial matters for the Council. The Chair of the CMTAC shall also chair the Steering Committee.

The Steering Committee shall meet at least quarterly. A quorum of the Steering Committee shall be forty percent (40%) of its membership and all actions will be by a majority of those members present with a quorum in attendance. All meetings of the Steering Committee shall be held in accordance with the Ralph M. Brown Act. (Government Code Section 54950 <u>et seq.</u>)

The Steering Committee shall: together with the Treasurer/Auditor and with the assistance of the ACE Construction Authority, recommend the independent auditor for the annual audit of the Council and the ACE Construction Authority, develop the scope of work for the audit, and review and comment on the preliminary and final audit reports prior to their presentation to the ACE Construction Authority and the Governing Board; oversee the investment of Council funds in accordance with the Council's investment policy; review and modify the Council's investment policy when required; review, as necessary, those insurance policies purchased for the benefit of the Council including policies purchased by consultants working for the Council; monitor compliance of the

Council with applicable federal, state and locals laws, ordinances, statutes, codes and regulations; and undertake those additional assignments as directed by the Governing Board. The Steering Committee shall also review and monitor all matters related to the Council's and the ACE Construction Authority's financial affairs including reviewing quarterly financial reports, audits conducted by external auditors and agencies, grant compliance and bond issuance as well as any matters related to best management practices or state/federal requirements.

At the January 18th meeting of the Finance Directors subcommittee, there was, again, questions raised regarding the role and responsibilities of the SCVCOG Treasurer/Auditor.

Bylaws

"G. Treasurer and Auditor. Pursuant to Government Code Section 6505.6, the Treasurer of the Council and the Auditor of the Council shall be the same person and shall be a contract employee of the Council. The Treasurer/Auditor shall not be an officer of the Council. The duties and responsibilities of the Treasurer/Auditor are:

1. The Treasurer/Auditor shall possess the powers described in, and shall perform those functions required by: Government Code Sections 6505, 6505.5 and 6505.6; all other applicable laws and regulations, including any subsequent amendments thereto; the Agreement; these Bylaws; and/or the direction of the Governing Board .

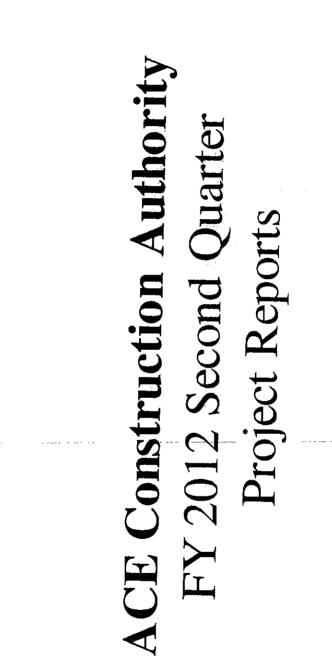

2. The Treasurer/Auditor shall have custody of all Council and ACE Construction Authority funds and shall provide for strict accountability thereof in accordance with Government Code Section 6505.5 and other applicable laws.

3. <u>The Treasurer/Auditor shall annually cause an independent audit to be made of</u> the Council and of the ACE Construction Authority by a single certified public accountant or by separate certified public accountants, in accordance with Government Code Sections 6505 and 6505.6.

Council Treasurer (JPA)

Section 14. Council Treasurer. The person holding the position of Treasurer of the Council shall have charge of the depositing and custody of all funds held by the Council. The Treasurer shall perform such other duties as may be imposed by provisions of applicable law, including those duties described in Section 6505.5 of the Government Code, and such duties as may be required by the Governing board. The Council's Auditor shall perform such functions as may be required by provisions of applicable law, this Agreement, the Bylaws and by the director of the Governing Board.

The COG's Accountant/Auditor directs the external audits of both COG and ACE. In that capacity, he should be provided the drafts and final audit reports along with any management letters prior to distribution to COG Governing Board and ACE Construction Authority.

Draft

As of December 31, 2011

Notes:

a) Transferred by LA County to ACE for the Nogales-LA project.

b) Federal budgetary reduction.

c) Appropriations reduced by 15%.

d) Spiroprimities reactions of project closeout.
e) \$19.7 million programmed to other entitles (yet to be allocated by State).

f) Allocated to City of LA.

g) Adjustment made by MTA based on 17% of total project cost. h) An additional \$358M for the ACE Project is included in the voter approved Measure R program and is

An additional 555am for the Act Project is included in the total application and action of March 2010, expected to be available between Fiscal Years 2011 and 2019 per Metro Board action of March 2010. Based on individual projects, UPRR paid 1/2 before and 1/2 after construction phase.

\$30,921M committed by UPRR but due to phasing of construction, only \$13,459M has been received.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 205                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 22                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 9                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 80                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                   | ,
