10 September 2010

Mr. Tony Long
Angelica Corporation
1105 Lakewood Parkway, Suite 210
Alpharetta, GA 30009

NOTICE OF APPLICABILITY OF GENERAL ORDER NO. R5-2008-0149, ANGELICA TEXTILE SERVICE, 1409 W. 4\textsuperscript{th} STREET, ANTIOCH, CONTRA COSTA COUNTY (LUSTIS NO. 070113)

Angelica Corporation submitted a Notice of Intent on 5 March 2010, requesting coverage under General Order No. R5-2008-0149, General Waste Discharge Requirements for In-Situ Groundwater Remediation at Sites with Volatile Organic Compounds, Nitrogen Compounds, Perchlorate, Pesticides, Semi-Volatile Compounds and/or Petroleum Compounds. Based on information in your submittals, it is our determination that this project meets the required conditions to be approved under Order R5-2008-0149. As such you are assigned Order No. R5-2008-0149-014.

Project Location:

The project is in the City of Antioch in Contra Costa County, T2N, R1E, S13&14, MD B&M. The assessor parcel number is 0741-300-002.

Project Description:

On October 21, 2008, one 1,000-gallon fuel oil Underground Storage Tank (UST) was removed from this site. Soil and groundwater samples collected from beneath the UST’s indicated the presence of petroleum hydrocarbons. The primary constituents are total petroleum hydrocarbons as gasoline (TPH\textsubscript{g}), diesel (TPH\textsubscript{d}) and motor oil (TPH\textsubscript{mo}). From 2008 to present a number of soil and groundwater investigations have been completed. The contamination remains. Additional remediation efforts are required to expeditiously and cost-effectively clean up the impacts to soil and groundwater.

Angelica Textile and their environmental consultant, Quest Geosystems Management (GSM), conducted a successful limited pilot study and are proposing full implementation of in-situ chemical oxidation for remediating the remaining petroleum impacts. Angelica Textile and GSM propose to inject hydrogen peroxide into the groundwater at six source area monitoring wells. They will also be conducting the applicable sampling and reporting. The results will be evaluated by Central Valley Water Quality Control Board (Board) staff. Adequate fail-safe alternates are contained within the Dischargers proposal, should adverse water quality conditions, such as the creation of Cr+6, occur.
No comments were received regarding the subject Order during the 30-day public comment period ending on June 6, 2010.

**General Information:**

1. The project will be operated in accordance with the requirements contained in the General Order No. R5-2008-0149 and in accordance with the information submitted in the Notice of Intent, and otherwise as specified in this Notice of Applicability.

2. The required annual fee (as specified in the annual billing you will receive from the State Water Resources Control Board) shall be submitted until this Notice of Applicability is officially revoked.

3. Injection of materials other than those specified in the Notice of Intent into the subsurface is prohibited, unless analysis, as specified in Order No. R5-2008-0149, of the injectant is provided and approval is given by Board staff.

4. Failure to abide by the conditions of the General Order and this Notice of Applicability can result in enforcement actions as authorized by provisions of the California Water Code.

5. The Dischargers shall comply with the attached Monitoring and Reporting Program, and any revisions thereto as ordered by the Executive Officer or directed by Region staff.

If you have any questions regarding this matter, please call Pat Vellines at (916) 464-4696 or he can be reached by e-mail at pvellines@waterboards.ca.gov.

PAMELA C. CREEDON  
Executive Officer

Eric Garcia, Quest GeoSystems Management, Oakley
This Monitoring and Reporting Program (MRP) describes requirements for monitoring an in-situ groundwater remediation system. This MRP is issued pursuant to California Water Code section 13267, and has been prepared based on Attachment C, a part of General Order R5-2008-0149.

No changes to this MRP shall be implemented unless and until a revised MRP is issued by the Executive Officer of the Central Valley Water Board (Board). As appropriate, Board staff shall approve specific sample station locations prior to implementation of sampling activities.

PROJECT

1. **Parties Submitting a Notice of Intent under General Order R5-2008-0149**: Angelica Textile Service and Angelica Corporation (hereafter collectively referred to as “Dischargers”).

2. **Project Location**: The project is in the City of Antioch in Contra Costa County, T2N, R1E, S13&14, MD B&M. The assessor parcel number is 0741-300-002.

3. **Project Description**: On October 21, 2008, one 1,000-gallon fuel oil underground storage tank (UST) was removed from this site. Soil and groundwater samples collected from beneath the UST’s indicated the presence of petroleum hydrocarbons. The primary constituents are total petroleum hydrocarbons as gasoline (TPHg), diesel (TPHd) and motor oil (TPHmo). From 2008 to present a number of soil and groundwater investigations have been completed. The contamination remains. Additional remediation efforts are required to expeditiously and cost effectively clean up the impacts to soil and groundwater.

   Angelica Textile and their environmental consultant, Quest Geosystems Management (GSM), conducted a successful limited pilot study and are proposing full implementation of in-situ chemical oxidation for remediating the remaining petroleum impacts. Angelica Textile and GSM propose to inject hydrogen peroxide into the groundwater at six source area monitoring wells. They will also be conducting the applicable sampling and reporting. The results will be evaluated by Central Valley Water Quality Control Board (Board) staff. Adequate fail-safe alternates are contained within the Dischargers proposal, should adverse water quality conditions, such as the creation of CR+6, occur.
LEGAL REQUIREMENTS

4. CWC section 13267 states, in relevant part:
   (a) A regional board … in connection with any action relating to any plan or requirement
       authorized by this division, may investigate the quality of any waters of the state within its
       region.

   (b)(1) In conducting an investigation specified in subdivision (a), the regional board may require
       that any person who has discharged, discharges, or is suspected of having discharged or
       discharging, or who proposes to discharge waste within its region ... shall furnish, under penalty
       of perjury, technical or monitoring program reports which the regional board requires. The
       burden, including costs, of these reports shall bear a reasonable relationship to the need for the
       report and the benefits to be obtained from the reports. In requiring those reports, the regional
       board shall provide the person with a written explanation with regard to the need for the reports,
       and shall identify the evidence that supports requiring that person to provide the reports.
       
       The Dischargers have submitted a Notice of Intent to the Board indicating that they are
       responsible for the project subject to Order R5-2008-0149. The reports required herein are
       necessary to ensure compliance with Order R5-2008-0149.

5. CWC section 13268 states, in relevant part:
   (a)(1) Any person failing or refusing to furnish technical or monitoring program reports … or
       falsifying any information provided therein, is guilty of a misdemeanor, and may be liable civilly
       in accordance with subdivision (b).

   …

   (b)(1) Civil liability may be administratively imposed by a regional board in accordance with
       Article 2.5 (commencing with Section 13323) of Chapter 5 for a violation of subdivision (a) in an
       amount which shall not exceed one thousand dollars ($1,000) for each day in which the violation
       occurs.

   …

   (c) Any person discharging hazardous waste, as defined in Section 25117 of the Health and
       Safety Code, who knowingly fails or refuses to furnish technical or monitoring program reports
       as required by subdivision (b) of Section 13267, or who knowingly falsifies any information
       provided in those technical or monitoring program reports, is guilty of a misdemeanor, may be
       civilly liable in accordance with subdivision (d)...

   (d)(1) Civil liability may be administratively imposed by a regional board in accordance with
       Article 2.5 (commencing with Section 13323) of Chapter 5 for a violation of subdivision (c) in an
       amount which shall not exceed five thousand dollars ($5,000) for each day in which the violation
       occurs.

It is Hereby Ordered that the Dischargers shall comply with the following Monitoring and
Reporting Program requirements:

GENERAL REQUIREMENTS

1. All samples should be representative of the volume and nature of the discharge or matrix of
   material sampled. The time, date, and location of each grab sample shall be recorded on
   the sample chain of custody form.
GROUNDWATER MONITORING

2. There are 8 monitoring wells, and 6 injection wells associated with this site (MW-01 through MW-14). The groundwater monitoring program for these wells and any treatment system wells installed subsequent to the issuance of this MRP, shall follow the schedule below. Monitor wells with free phase petroleum product or visible sheen shall be monitored, at a minimum, for product thickness and depth to water. The volume of extracted groundwater, if applicable, shall also be provided in quarterly monitoring reports. Sample collection and analysis shall follow standard EPA protocol.

The monitoring wells, extraction wells and/or injection wells shall be sampled according to the schedule in Table 1 and the samples analyzed by the methods in Table 2, as follows:

<table>
<thead>
<tr>
<th>Well Number</th>
<th>Frequency¹</th>
<th>Constituent Suite(s)</th>
<th>Monitoring Objective</th>

**FIELD SAMPLING**

3. In addition to the above sampling and analysis, field sampling and analysis shall be conducted each time a monitoring well or extraction well is sampled. The sampling and analysis of field parameters shall be as specified in Table 3.

### Table 3: Field Sampling Requirements

<table>

</tbody>
</table>

Field test instruments (such as those used to test pH and dissolved oxygen) may be used provided that:

1. The operator is trained in proper use and maintenance of the instruments;
2. The instruments are calibrated prior to each monitoring event;
3. Instruments are serviced and/or calibrated by the manufacturer at the recommended frequency; and
4. Field calibration reports are submitted as described in item (b) of the “Reporting” section of this MRP.

**DISCHARGE MONITORING**

4. The Discharger shall monitor daily the discharge of water and amendments that are injected into the groundwater according to the requirements specified in Table 4. Each amendment addition shall be recorded individually, along with information regarding the time period over which the amendment was injected into the aquifer.

</tbody>
</table>
AMENDMENT ANALYSIS

5. Prior to use, amendments shall be analyzed for the constituents listed in Table 5. The analysis should be done on the pure amendment and on a mixture of the amendment and deionized water at the estimated concentration that would be injected during the pilot project.

1 Or an equivalent EPA Method that achieves the maximum Practical Quantitation Limit.
2 All concentrations between the Method Detection Limit and the Practical Quantitation Limit shall be reported, and reported as an estimated value.
3 Alkalinity, bicarbonate, potassium, chloride, sulfate, total hardness, nitrate, nitrite, ammonia.
4 Metals include arsenic, barium, cadmium, calcium, total chromium, copper, iron, lead, manganese, magnesium, mercury, molybdenum, nickel, selenium and silica.

ESTABLISHMENT OF BACKGROUND CONCENTRATION VALUES

6. The Discharger shall develop background values for concentrations of dissolved iron, dissolved manganese, metals, total dissolved solids and electrical conductivity in groundwater following the procedures found in CCR Section 20415(e)(10). The Discharger shall submit a proposal to develop the background concentrations by 30 November 2010.

REPORTING

7. When reporting the data, the Discharger shall arrange the information in tabular form so that the date, the constituents, and the concentrations are readily discernible. The data shall be summarized in such a manner as to illustrate clearly the compliance with this Order. In addition, the Discharger shall notify the Regional Board within 48 hours of any unscheduled shutdown of any soil vapor and/or groundwater extraction system. The results of any monitoring done more frequently than required at the locations specified in the Monitoring and Reporting Program shall also be reported to the Regional Board.

8. As required by the California Business and Professions Code Sections 6735, 7835, and 7835.1, all reports shall be prepared by a registered professional or their subordinate and signed by the registered professional.
9. The Discharger shall submit quarterly electronic data reports, which conform to the requirements of the California Code of Regulations, Title 23, Division 3, Chapter 30. The quarterly reports shall be submitted electronically over the internet to the Geotracker database system by the 30th day of the month following the end of each calendar quarter by 30 January, 30 April, 30 July, 30 October, and 30 January until such time as the Executive Officer determines that the reports are no longer necessary. Hard copies of quarterly reports shall also be submitted to the Regional Board by the 30th day of the month following the end of each calendar quarter. Each quarterly report shall include the following minimum information:

(a) a description and discussion of the groundwater sampling event and results, including trends in the concentrations of pollutants and groundwater elevations in the wells, how and when samples were collected, and whether the pollutant plume(s) is delineated;

(b) field logs that contain, at a minimum, water quality parameters measured before, during, and after purging, method of purging, depth of water, volume of water purged, etc.;

(c) groundwater contour maps for all groundwater zones, if applicable;

(d) pollutant concentration maps for all groundwater zones, if applicable;

(e) a table showing well construction details such as well number, groundwater zone being monitored, coordinates (longitude and latitude), ground surface elevation, reference elevation, elevation of screen, elevation of bentonite, elevation of filter pack, and elevation of well bottom;

(f) a table showing historical lateral and vertical (if applicable) flow directions and gradients;

(g) cumulative data tables containing the water quality analytical results and depth to groundwater;

(h) a copy of the laboratory analytical data report, which may be submitted in an electronic format;

(i) the status of any ongoing remediation, including an estimate of the cumulative mass of pollutant removed from the subsurface, system operating time, the effectiveness of the remediation system, and any field notes pertaining to the operation and maintenance of the system; and

(j) if applicable, the reasons for and duration of all interruptions in the operation of any remediation system, and actions planned or taken to correct and prevent interruptions.

(k) a discussion of the long-term trends in the concentrations of the pollutants in the groundwater monitoring wells;

(l) an analysis of whether the pollutant plume is being effectively treated;
(m) a description of all remedial activities conducted during the year, an analysis of their
effectiveness in removing the pollutants, and plans to improve remediation system
effectiveness;

(n) an identification of any data gaps and potential deficiencies/redundancies in the
monitoring system or reporting program; and

(o) if desired, a proposal and rationale for any revisions to the groundwater sampling plan
frequency and/or list of analytes.

10. A letter transmitting the monitoring reports shall accompany each report. Such a letter shall
include a discussion of requirement violations found during the reporting period, and
actions taken or planned for correcting noted violations, such as operation or facility
modifications. If the Discharger has previously submitted a report describing corrective
actions and/or a time schedule for implementing the corrective actions, reference to the
previous correspondence will be satisfactory. The transmittal letter shall contain the penalty
of perjury statement by the Discharger, or the Discharger’s authorized agent, as described

The Discharger shall implement the above monitoring program on the first day of the month
following adoption of this Order.

Ordered by:
