

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD  
CENTRAL VALLEY REGION

ORDER R5-2017-0083

The California Regional Water Quality Control Board, Central Valley Region (Central Valley Water Board), finds that the Central Valley Water Board adopted the following Orders which are no longer applicable for the reasons shown:

a. **AMERIPRIDE, SACRAMENTO COUNTY**

Waste Discharge Requirements Order R5-2012-0100 (NPDES No. CA0085219), adopted 4 October 2012, by the Regional Water Quality Control Board, Central Valley Region, prescribes requirements for the discharge of treated groundwater from the AmeriPride Services, Inc., Operable Unit 3 Groundwater Extraction and Treatment Facility (Facility) to a Sacramento County storm water ditch where it is conveyed and discharged to Beacon Creek, a water of the United States and a tributary to the Sacramento River. The Discharger owns and operates the Facility that is addressing impacts emanating from the releases of tetrachloroethylene (PCE) from an industrial dry cleaning facility, which have impacted both soil and groundwater.

On 3 April 2017, AmeriPride Services, Inc. submitted a Notice of Intent (NOI) and applied for coverage under the General Order for Limited Threat Discharges to Surface Water, Order R5 2016-0076, NPDES No. CAG995002 (Limited Threat General Order). Based on the information in the NOI, the discharge meets the required conditions for coverage under the Limited Threat General Order and a Notice of Applicability was issued by the Central Valley Water Board's Executive Officer with an effective date of **1 August 2017**. Since regulatory coverage for the discharge of treated groundwater to surface water will be provided under the Limited Threat General Order, Order R5 2012 0100 is no longer necessary. Therefore, it is appropriate to rescind Order R5 2012 0100, effective **1 August 2017**.

b. **BILL AND KATHY'S WASTEWATER FACILITY, YOLO COUNTY**

Waste Discharge Requirements Order 87-089, adopted on 22 May 1987, prescribes requirements for the Bill & Kathy's Wastewater Treatment Facility, which consists of two wastewater disposal ponds located on County Road 89, south of the Dunnigan exit off Interstate 5 in Yolo County. Domestic and restaurant wastewater is generated from four fueling stations located at the intersection of County Road 89 and County Road 6. On 22 December 2016, Central Valley Water Quality Control Board received a Report of Waste Discharge for regulatory coverage under the Statewide General Order 2014-0153-DWQ for Small Domestic Wastewater Treatment Systems. Regulation of the discharge was transferred to the General Order under Order WQ 2014-0153-DWQ-R5221, approved on 10 April 2017. Therefore, it is appropriate to rescind Order 87-089

c. **ADAMS AVENUE RESEARCH FACILITY, FRESNO COUNTY**

Waste Discharge Requirements Order 91-127, adopted on 28 June 1991, prescribes requirements for the discharge of wastewater from the Adams Avenue Research Facility at the corner of Adams Avenue and San Mateo Avenue in Fresno County. The United States Department of Interior, Bureau of Reclamation (USBR), contracted in 1985 for a

study to determine the feasibility of using underground injection as a means of disposing of agricultural drain water in the San Luis Unit of the San Joaquin Valley. A test well was drilled in 1989 to evaluate the potential of injecting drain water as a means of disposal. Drain water was treated at the site in a test facility and a portion was discharged into the specially designed test well, tests were conducted in 1991 and a follow up test in 1993. After the final test in 1993 the site was abandoned and the well was plugged and capped. Therefore, it is appropriate to rescind Waste Discharge Requirements Order 91-127.

- d. **DINGERVILLE USA MOBILE HOME PARK AND CAMPGROUND (FACILITY), BUTTE COUNTY.** Waste Discharge Requirements (WDR) Order 93-241, adopted on 3 December 1993, prescribes requirements for the discharge from the Dingerville USA Mobile Home Park and campground (Facility). The Facility is comprised of a collection system, lift stations, and three infiltration/evaporation ponds. The Facility is now regulated under Water Quality Order 2014-0153-DWQ (General Order) for discharges to land from small domestic systems with a maximum average daily flow of 100,000 gallons or less. Therefore, it is appropriate to rescind WDR Order 93-241.
- e. **FOOTHILL MOBILE HOME PARK, (FACILITY) BUTTE COUNTY** Waste Discharge Requirements Order 99-127, adopted on 17 September 1999, prescribes requirements for the discharge from the Foothill Mobile Home Park, Butte County (Facility). The Facility is comprised of an extended aeration system, ponds, and land application areas. The Facility is now regulated under Water Quality Order 2014-0153-DWQ (General Order) for discharges to land from small domestic systems with a maximum average daily flow of 100,000 gallons or less. Therefore, it is appropriate to rescind Waste Discharge Requirements Order 99-127.
- f. **GRANT ELEMENTARY SCHOOL DISTRICT (FACILITY) SHASTA COUNTY** Waste Discharge Requirements Order 94-043, adopted on 25 February 1994, prescribes requirements for the discharge from the Grant Elementary School District (Facility). The Facility is comprised of a lift station, three septic tanks, an effluent lift station, recirculating pump station, a recirculating gravel filter and a leach field. The leach field is located offsite on land owned by the U.S. Department of the Interior, Bureau of Land Management. The Facility is now regulated under Water Quality Order 2014-0153-DWQ (General Order) for discharges to land from small domestic systems with a maximum average daily flow of 100,000 gallons or less. Therefore, it is appropriate to rescind Waste Discharge Requirements Order 94-043.
- g. **MCCLOUD CSD WASTEWATER COLLECTION SYSTEM, SISKIYOU COUNTY** Cease and Desist Order (CDO) 5-00-109, adopted on 15 June 2000, prescribes requirements for the evaluation, repair and replacement of the McCloud CSD Wastewater Collection System. The wastewater collection system was outdated and in a condition of disrepair that allowed for discharge and bypass of untreated wastewater to the environment. Between June 2000 and September 2006 the discharger completed

an \$11 million upgrade of its entire collection system and has addressed the violations cited in the CDO. Therefore, it is appropriate to rescind Cease and Desist Order 5-00-109.

**h. METROPOLITAN, SAN JOAQUIN COUNTY**

Waste Discharge Requirements Order R5-2012-0118 (NPDES No. CA0084174) was adopted on 7 December 2012, by the Regional Water Quality Control Board, Central Valley Region. The Order prescribes requirements for the discharge of de minimis quantities of dust suppressant, wash waters, fugitive dust, and spilled product into San Joaquin River, a water of the United States, which may occur during loading operations. Metropolitan Stevedore Company (Discharger) is the operator of a marine bulk commodity terminal at Port of Stockton (Facility). Stockton Port District owns the property at 2321 West Washington Street, Stockton, on which the Facility is located.

The Discharger submitted a Notice of Intent (NOI) and applied for coverage under the General Order for Limited Threat Discharges to Surface Water, Order R5 2016-0076, NPDES No. CAG995002 (Limited Threat General Order). Based on the information in the NOI, the discharge meets the required conditions for coverage under the Limited Threat General Order and a Notice of Applicability was issued by the Central Valley Water Board's Executive Officer with an effective date of 1 July 2017. Consequently, the de minimis discharge from the Facility is regulated by the Limited Threat General Order and Order R5-2012-0118 is no longer necessary. Therefore, it is appropriate to rescind Order R5-2012-0118, effective 1 July 2017.

**i. RENTAL MANUFACTURING COMPANY-RE-MANUFACTURING INC.**

Waste Discharge Requirements Order No. 95-065 adopted on 24 March 1995 regulates the closure of an unlined surface impoundment at Re-Manufacturing Inc. in Stockton. On 21 October 2016, the Discharger submitted the *Closed Surface Impoundment Waste Delineation Report*, which indicated that the Discharger had successfully defined the lateral and vertical extent of residual lead in soil at the site. Groundwater samples that were collected also indicated that lead had not migrated to groundwater. The Discharger then initiated remedial actions by removing of 2000 tons of lead impacted soil and then backfilling the area with clean, compacted material. Because the groundwater monitoring showed no lead impacts over multiple sampling events, and the surface impoundment was backfilled and compacted with clean soil, staff concurs with the Discharger's conclusion that the closed, class II surface impoundment no longer poses a threat to water quality. All the soil with elevated lead concentrations was not able to be removed; therefore, a deed restriction has been filed with San Joaquin County, limiting the future activities at the site. Therefore, it is appropriate to rescind Order 95-065 at this time

**j. SACRAMENTO RIVER RV PARK, SHASTA COUNTY**

Waste Discharge Requirements Order 96-174, adopted on 21 June 1996, prescribes requirements for the discharge from the Sacramento River RV Park, Shasta County (Facility). The Facility is comprised of four septic tanks, a dosing tank, a mounded leach field area, and four groundwater monitoring wells. The Facility is now regulated under

Water Quality Order 2014-0153-DWQ (General Order) for discharges to land from small domestic systems with a maximum average daily flow of 100,000 gallons or less. Therefore, it is appropriate to rescind Waste Discharge Requirements Order 96-174.

k. **SHASTA MARINA AND RESORT, SHASTA COUNTY**

Waste Discharge Requirements Order 97-143, adopted on 20 June 1997, prescribes requirements for the discharge from Shasta Marina & Resort, Shasta County (Facility). The Facility was comprised of a wastewater collection system with septic tanks and leachfields. The Facility is no longer in operation at the site. Therefore, it is appropriate to rescind Waste Discharge Requirements Order 97-143.

l. **SOUTH SUTTER WATER DISTRICT, CAMP FAR WEST, YUBA COUNTY**

Waste Discharge Requirements Order 5-00-144, adopted on 16 June 2000, prescribes requirements for the discharge from the Camp Far West, North Side Recreational Area in Yuba County. A wastewater pond is used at the facility for the disposal of domestic wastewater. On 1 March 2017, Central Valley Region Water Quality Control Board received a Report of Waste Discharge from the Discharger requesting coverage under the Statewide General Order 2014-0153-DWQ for Small Domestic Wastewater Treatment Systems. Regulation of the discharge was enrolled for coverage under the General Order WQ 2014-0153-DWQ-R5228 on 27 March 2017. Therefore, it is appropriate to rescind Order 5-00-144

m. **SOUTH SUTTER WATER DISTRICT FAR WEST, SOUTH SIDE, PLACER COUNTY**

Waste Discharge Requirements Order 5-01-265, adopted on 7 December 2001, prescribes requirements for the discharge from the Camp Far West, South Side Recreational Area in Placer County. A wastewater pond is used at the facility for the disposal of domestic wastewater. On 1 March 2017, Central Valley Region Water Quality Control Board received a Report of Waste Discharge from the Discharger requesting coverage under the Statewide General Order 2014-0153-DWQ for Small Domestic Wastewater Treatment Systems. Regulation of the discharge was enrolled for coverage under the General Order WQ 2014-0153-DWQ-R5229 on 27 March 2017. Therefore, it is appropriate to rescind Order 5-01-265

n. **STATE OF CALIFORNIA DEPARTMENT OF PARKS AND RECREATION, EMPIRE MINE STATE HISTORIC PARK, NEVADA COUNTY**

The State of California Department of Parks and Recreation (Discharger) is the owner and operator of the Empire Mine State Historic Park (Facility), which includes a historic gold mine. The Discharger installed a passive treatment system to treat the mine drainage which includes arsenic, iron, manganese, and other suspended materials. The treated mine drainage flows by gravity to Magenta Drain Channel, which is tributary to South Fork Wolf Creek. Discharge from the Facility is currently regulated by Waste Discharge Requirements (WDRs) Order R5-2012-0050 adopted on 8 June 2012.

On 8 June 2012, Time Schedule Order (TSO) R5 2012-0051 was adopted to establish interim effluent limitations and a compliance schedule to achieve final effluent limitations required by WDR Order R5-2012-0050. The compliance schedule required full

compliance with effluent limitations for arsenic, dissolved oxygen, iron, manganese, and turbidity by 1 June 2015.

By 31 December 2014, the Facility was in compliance with their final effluent limitations. The Executive Officer plans to issue a Notice of Applicability under the General Order for Limited Threat Discharges to Surface Water Order No. R5 2016 0076 by 8 June 2017. The Notice of Applicability will set forth the applicable effluent limitations for arsenic, iron, and manganese for the treated mine drainage and identify the new receiving water monitoring locations. Therefore, the WDR and TSO are no longer necessary, and it is appropriate to rescind WDR R5 2012-0050 and TSO R5-2012-0051. A Notice of Public Hearing was sent to the Discharger and interested parties on 4 May 2017 for a 30-day comment period closing on 5 June 2017.

IT IS HEREBY ORDERED that the above Orders are rescinded on the date of this order unless otherwise stated above.

I, PAMELA C. CREEDON, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Central Valley Region on June 9, 2017

---

PAMELA C. CREEDON, Executive Officer
