

# **Workshop and Project Scoping Meeting**

**on Plans to Reduce  
Nitrogen, Phosphorus, and Sediment  
in Lake Tahoe**

**California Regional Water Quality  
Control Board  
Lahontan Region**

Robert Larsen  
Environmental Scientist

12 August 2009

# Agenda

## 1. Lake Tahoe TMDL Program Update

- TMDL Overview
- Implementation Tools

## 2. CEQA Scoping Meeting

- Stormwater Regulatory Approach
- Comments, questions, discussion

# What is the Lake Tahoe TMDL?

**A science-based plan to restore Lake Tahoe's deep water clarity**

# What pollutants are causing Lake Tahoe's clarity loss?

- **Suspended fine sediment particles**
- **Floating algae – fed by nutrients**

**Fine sediment particles (<16 micrometers) account for ~2/3 of the clarity condition**

# How much of each pollutant is reaching Lake Tahoe?

## Fine Sediment Particle Number Estimates (particles less than 16 micrometers) Percent Contribution per Source Category

**Total Fine Particle Load:  $481 \times 10^{18}$  Particles**

# Urban Particle Load – How the 72% is Distributed

## Urban Fine Sediment Particle Number Estimates - Percent by Jurisdiction

# What is a reasonable interim target?

# The Clarity Challenge: Reverse clarity decline and measurably improve clarity

# What are the options for reducing pollutant inputs to Lake Tahoe?

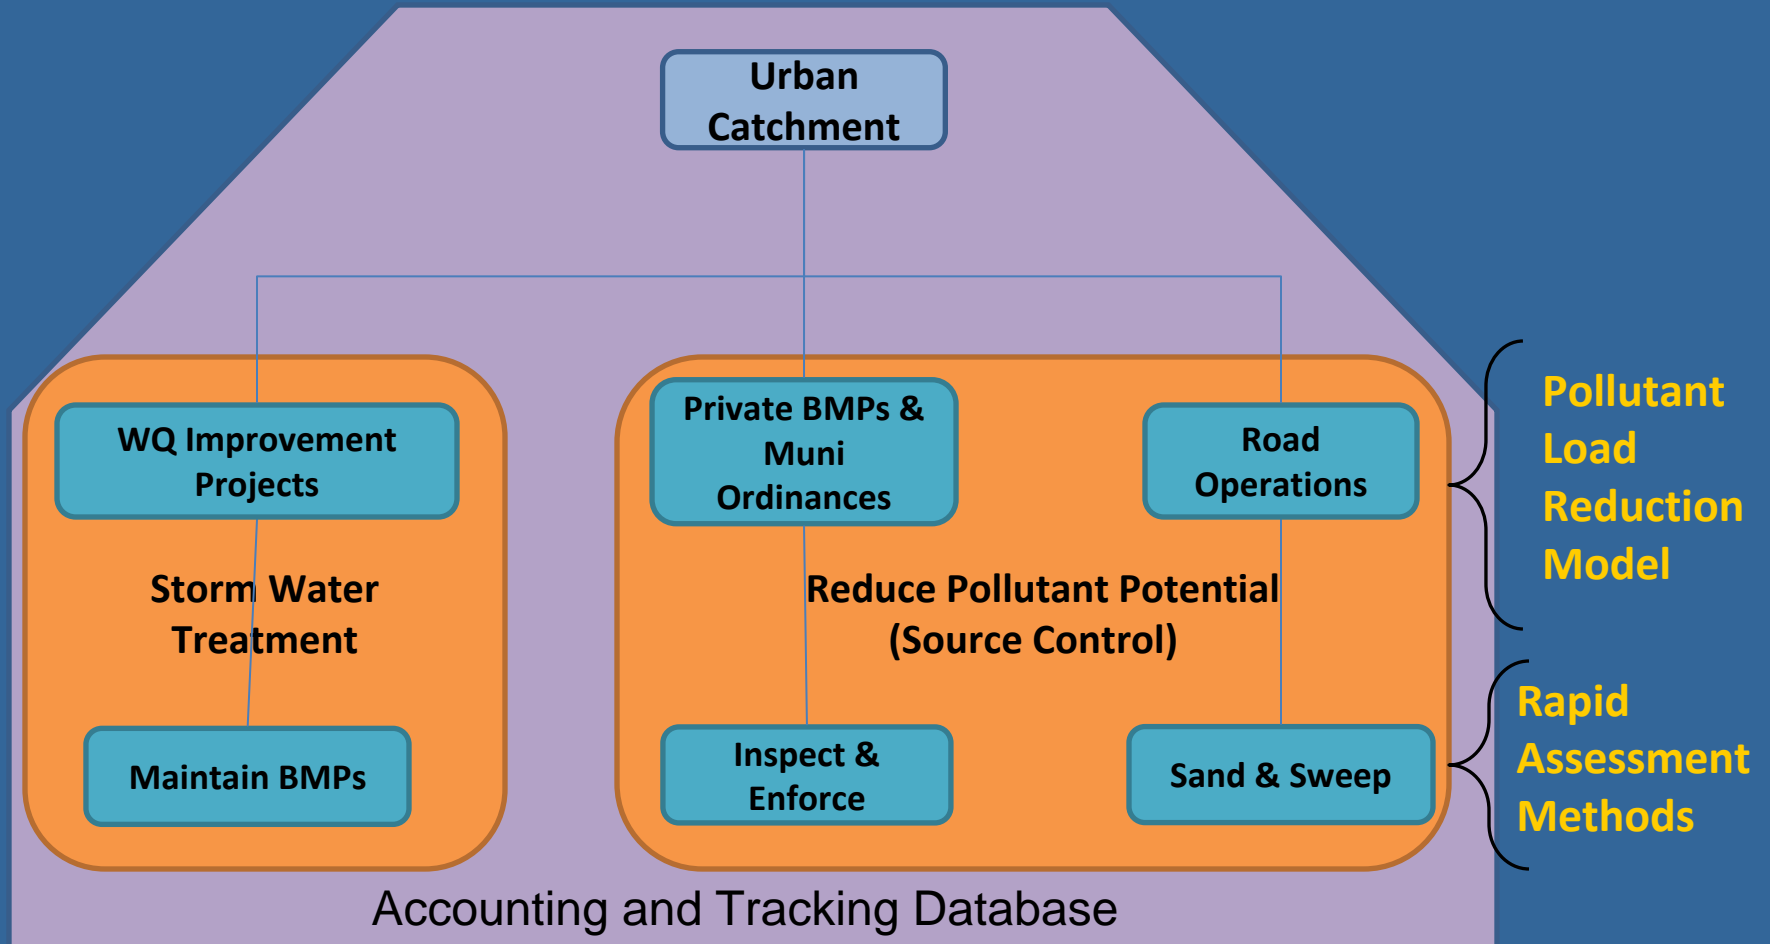

# Recommended Strategy

## Percent Reduction of **Basin-wide** Particle Load

Pollutant Source Category	Recommended Strategy Load Reduction
Forest Uplands	1.0%
Stream Channel Erosion	1.8%
Atmospheric Deposition	4.6%
Urban Uplands	24.5%
<b>Clarity Challenge</b>	<b>32%</b>

# Lake Clarity Crediting Program & Implementation Tools

# Transition to TMDL Implementation

**One year “Beta” testing period:**

**Fall 2009-Fall 2010**

- **Lake Clarity Crediting Program**
- **Pollutant Load Reduction Model**
- **Rapid Assessment Methodologies**
- **Accounting and Tracking System**

# Schedule

**TMDL Peer Review Posting – September**

**Agency and Public Review Draft – Winter  
2009/10**

**TMDL adoption – Spring 2010**

**Municipal NPDES Permit & MOA – Fall 2010**

© WildNatureImages.com

# California Environmental Quality Act (CEQA)

**California law guarantees public  
involvement in government decision  
making**

**Requires evaluation and disclosure of  
possible adverse environmental  
impacts**

# What is “The Project”?

**Amending the Water Quality Control Plan for the Lahontan Region (Basin Plan) to:**

- **Incorporate the Lake Tahoe TMDL**
- **Adjust Basin Plan language to facilitate TMDL implementation**

**The project is NOT on-the-ground actions to reduce pollutant loads**

# Why Scope for CEQA?

Obtain public feedback to help guide environmental analysis of our Basin Plan Amendment

Identify reasonably foreseeable **significant adverse environmental impacts** from this Basin Plan amendment

# Supplemental Scoping

**Previous scoping meetings  
described TMDL findings**

**This meeting focuses on changes  
to support implementation**

# Current Basin Plan Stormwater Language

**20 year, 1-hour design storm**

**Concentration-Based Numeric Effluent Limits**

Turbidity, Nitrogen, Phosphorus, Iron,  
Oil & Grease

**20 year implementation schedule  
(ending in 2008)**

# **New TMDL Stormwater Approach**

**Emphasize average annual mass-based load reductions**

**Identify and target actions in high-polluting watersheds**

**Link proposed actions to expected pollutant load reductions**

**Hold municipalities responsible for meeting TMDL load reduction targets**

# Stormwater Regulation Approach

	Existing Policy
<b>Regulatory Focus</b>	Concentration limits – everywhere, all the time
<b>Compliance Prospects</b>	Not reasonable – even advanced measures may not meet effluent limits
<b>Linkage between actions/benefits</b>	Poor - hard to link projects/actions to lake clarity response
<b>Comparability</b>	Little ability to compare results across different implementers

# Stormwater Regulation Approach

	Existing Policy	Proposed Approach
<b>Regulatory Focus</b>	Concentration limits – everywhere, all the time	Load limits – average annual
<b>Compliance Prospects</b>	Not reasonable – even advanced measures may not meet effluent limits	Reasonable – possible demonstrate progress toward achieving stated goals
<b>Linkage between actions/benefits</b>	Poor - hard to link projects/actions to lake clarity response	Strong – TMDL load reductions directly related to clarity response
<b>Comparability</b>	Little ability to compare results across different implementers	Direct performance comparisons, transparent through reporting

# What Will Change?

**Intensify erosion control and stormwater treatment actions**

- Innovative treatment measures
- Enhanced operations and maintenance

**Target areas of highest pollutant loading**

# Checklist Categories

- I. AESTHETICS
- II. AGRICULTURE RESOURCES
- III. AIR QUALITY
- IV. BIOLOGICAL RESOURCES
- V. CULTURAL RESOURCES
- VI. GEOLOGY AND SOILS
- VII. HAZARDS AND HAZARDOUS MATERIALS
- VIII. HYDROLOGY AND WATER QUALITY
- IX. LAND USE AND PLANNING
- X. MINERAL RESOURCES
- XI. NOISE
- XII. POPULATION AND HOUSING
- XIII. PUBLIC SERVICES
- XIV. RECREATION
- XV. TRANSPORTATION/TRAFFIC
- XVI. UTILITIES AND SERVICE SYSTEMS

# Checklist Example

## ISSUES

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
I. AESTHETICS -- Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

# Analyze Potential Impacts

## **CEQA Will Consider:**

Direct physical changes  
in the environment

Reasonable foreseeable  
compliance measures

Reasonably foreseeable  
indirect changes

## **Will not consider:**

Speculative changes

Changes with effects  
already considered

Changes that would  
occur regardless of  
the amendment

A scenic landscape photograph of a lake, likely Lake Superior, with mountains in the distance. The foreground is dominated by a large, smooth, light-colored rock on the left and dense green foliage at the bottom. The water is a deep blue, reflecting the bright sky. The word "Questions?" is overlaid in large, bold, red font in the center of the image.

**Questions?**

# Pollutant Reduction Opportunity Project

**Four Source Category Groups**

**Assessed different levels of effort**

**Evaluated site-scale and basin-wide implementation**

**Provided average load reductions and costs**

**Estimates offer relative benefit comparisons**

# Forest Uplands Recommended Strategy

**Restore/maintain roads as planned**

**Revegetate/treat disturbed lands**

**Treat forest fuels**

**Achieve ~1% reduction in total fine  
particle budget (12% of Forest  
load)**

**Estimated Cost: \$120M Capital,  
\$4.5M Annual O&M**

# Stream Channel Restoration Recommended Strategy

**Continue current restoration activities on the UTR, Blackwood and Ward Creeks**

**Support monitoring and research**

**Achieve ~2% reduction in total fine particle budget (53% of Stream source)**

**Estimated Cost: \$40M Capital**

# Atmospheric Deposition Recommended Strategy

**Focus on dust control measures**

**Continue VMT reduction efforts**

**Achieve ~5% reduction in total  
fine particle budget (31% of  
Atmospheric source)**

**Estimated Cost: \$45M Capital,  
\$0.4M Annual O&M**

# Urban Uplands Recommended Strategy

**Continue to implement known technologies**

**Move toward more innovative practices and intensive operations and maintenance**

**Achieve ~25% reduction in total fine particle budget (34% of Urban Source)**

**Estimated Cost: \$1.3B Capital, \$6M Annual O&M**

# Recommended Strategy

## Particle Load Reductions by Source Category

**Current Particle Load and Percent Reduction Target**
