CHROMIUM RESULTS FOR THIRD QUARTER 2015 GROUNDWATER MONITORING AND DOMESTIC WELL PLUME COMPLIANCE
IN UPPER AQUIFER
THIRD QUARTER 2015 GROUNDWATER MONITORING REPORT AND DOMESTIC WELL RESULTS
SITE-WIDE GROUNDWATER MONITORING PROGRAM
PACIFIC GAS AND ELECTRIC COMPANY
HINKLEY COMPRESSOR STATION
HINKLEY, CALIFORNIA

MW-77S Well ID
0.88ND Cr(VI)/Cr(T) concentrations in $\mu\text{g/L}$; maximum of primary and duplicate samples during Third Quarter 2015 sampling.

ABREVIATIONS:

- ugL microgram per liter
- Cr(VI) total hexavalent chromium
- Cr(T) total dissolved chromium
- IRZ In Situ Reactive Zone
- ND not detected
- NS not sampled

Groundwater Cr(VI) concentrations in monitoring wells:

- More than 1,000 ug/L
- 10 to 50 ug/L
- 1 to 10 ug/L
- 50 to 100 ug/L
- Less than 3.1 ug/L or ND

Approximate location of Lockhart Fault:
• Art trace is inferred, no surface expression (Stamos et al., 2001)
• Bedrock exposed at ground surface

1. Chromium results are shown for site-wide Groundwater Monitoring Program and domestic wells sampled in the Third Quarter (July through September) 2015 monitoring period. For wells sampled multiple times during the reporting period, the most recent results are shown.

2. The concentration contours are based on Third Quarter 2015 chromium results for the groundwater monitoring and extraction wells that are completed in the shallow zone and deep zone of the Upper Aquifer as noted on Figures 5-1 and 5-2. Results for domestic wells (brown-colored labels) were not used for chromium plume contouring except for those located north of Grasshopper Road, pursuant to the Lahontan Regional Water Quality Control Board's Letter Conditional Acceptance of Northern Areas Investigation Proposal dated February 26, 2014.

3. Pursuant to the Lahontan Regional Water Quality Control Board's letter Response of Chromium Plume Maps, Third Quarter 2013 Groundwater Monitoring Report and Agreement with Northern Investigation Concept dated December 12, 2013, groundwater monitoring wells are not used for chromium contouring if they are located in the areas southwest of the Lockhart Fault and on or east of Dixie Road.

4. Chromium plume contouring for concentrations of 10, 50 and 100 ug/L are completed using the more robust dataset presented in the October 15, 2015 Third Quarter 2015 Monitoring Report for the In Situ Reactive Zone and Northwest Freshwater Injection Projects and represent a composite of the shallow and deep zone contours presented therein. Select wells from that program are shown here for reference.
