RE Comments on Administrative Draft

Dear Sir / Madam

Thank you for a well organized workshop on the draft administrative permit. Initial comments follow:

1. Stakeholder groups should be representative of the community not equal numbers of special interests from those that cause the environmental abuse? burden - Developers ^{very}

2. All requirements should eliminate the use of the "rural Q" in making any calculations of run off.

3. The concept of limited resources should not be allowed for governments that are and have been issuing development building permits that cause or contribute to the storm water production

4. Any new reporting requirements must create a full and transparent public record

5. Local school and community college districts must be included in any permits

Thank you for a great start. Please respond in writing and notice me of future meetings.

John Stump
