

Tijuana River Valley Recovery Team

Tijuana River Estuary is designated as wetlands of international importance.

Storm events have caused up to several feet of sediment to deposit in the Tijuana River Valley.

The Tijuana River Valley is a unique resource with valuable salt marsh and riparian habitat.

Living with the Water

Recovery Team Goals

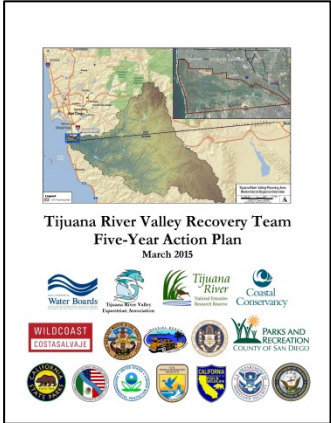

- Bi-national collaboration
- Operation and maintenance of sustainable trash and sediment controls
- Flood control to protect life and property
- Hydrologically connected, naturally functioning habitats
- Maintenance of recreation opportunities
- Informed and engaged community
- Long-term planning to restore the floodplain and estuary
- Respect existing uses

The Tijuana River Valley Recovery Team is a collaboration of more than 30 government agencies, property owners, academic and research institutions, and NGOs, from the U.S. and Mexico.

*In 2012, the Recovery Team released its **Recovery Strategy**, which outlines priorities and goals for the Tijuana River watershed.*

*In 2015, a **Five-Year Action Plan** was released that identifies the projects the Recovery Team aspires to accomplish over the next five years to continue advancing the Recovery Strategy goals.*
