The California Regional Water Quality Control Board, San Diego Region (hereinafter Regional Board), finds that:

1. On June 30, 1960, this Regional Board adopted Resolution 60-R20, A Resolution Prescribing Requirements for the Discharge of Wastes From The St. Charles Priory at Oceanside to the San Luis Rey River. Resolution 60-R20 established requirements for a design peak wastewater discharge of 5,000 gallons per day (GPD) from the resident and visitors quarters to the oxidation ponds located on Priory property.

2. In a letter dated September 9, 1978, from Brother Blaise, Regional Board staff was informed that the facility had changed its name from St. Charles Priory to Prince of Peace Abbey.

3. As part of the 1985/86 fiscal year Waste Discharge Order Update Program, Resolution 60-R20 has been reviewed by Regional Board staff.

4. In a February 26, 1986 telephone conversation, Brother Joseph informed Regional Board staff that the discharge to the oxidation ponds has been approximately 3,000 gpd and that there is no discharge to the San Luis Rey River. He also informed staff that no changes have occurred to the original treatment facility as described in Resolution 60-R20.

5. The site of the discharge is located in the NE\(\frac{1}{4}\) of Section 14, T11S, R5W, SBB&M, of the San Luis Rey River Valley in the Mission Hydrologic Subarea of the Bonsall Hydrologic Subunit of the San Luis Rey Hydrologic Unit.

* Concentrations of nitrogen and phosphorus, by themselves or in combination with other nutrients, shall be maintained at levels below those which stimulate algae and emergent plant growth. Threshold values have not been established for water bodies in question clearly show that water quality objectives changes are not to be exceeded by more than 10 percent of the time. These values are not to be exceeded by more than 0.025 mg/l in any standing body of water or 0.05 mg/l in any flowing waters in order to prevent plant nuisances in streams and other flowing waters. A desired goal in order to prevent plant nuisances in streams and other flowing waters is not to be exceeded by more than 0.1 mg/l of total P. These values are not to be exceeded by more than 10 percent of the time. 

** Ninety percent or more of natural season minimum oxygen concentration and more than 5.0 mg/l maintained at least 90 percent of the time. 

7. As indicated in Finding No. 1, the only discharge to the oxidation ponds consists of domestic wastewater. Given the characteristics of the wastewater, the low volume of discharge, and the type of treatment facilities, it is concluded that the discharge will comply with the water quality objectives set forth in the Basin Plan for Mission HydrologicSpheres. 

A list of all footnotes referenced will be found following the last page of the waste discharge requirements section.
8. The Basin Plan contains the following prohibitions applicable to the proposed discharge:

_Inland Water_

"Discharge of treated or untreated sewage or industrial wastes to a natural watercourse upstream of surface storage or diversion facilities used for municipal supply is prohibited.

"Discharge of treated or untreated sewage or industrial wastewater, exclusive of cooling water or other waters which are chemically unchanged, to a watercourse, is prohibited except in cases where the quality of said discharge complies with the receiving body's water quality objectives.

"Discharging of treated or untreated sewage or industrial wastes in such manner or volume as to cause sustained surface flow or ponding on lands not owned or under the control of the discharger is prohibited except in cases defined in the previous paragraph and in cases in which the responsibility for all downstream adverse effects is accepted by the discharger.

"The dumping or deposition of oil, garbage, trash or other solid municipal, industrial or agricultural waste directly into inland waters or watercourses or adjacent to the watercourses in any manner which may permit its being washed into the watercourse is prohibited."

9. Surface waters in the Mission Hydrologic Subarea are beneficially used for:

(a) Agricultural supply
(b) Industrial service supply
(c) Water contact recreation
(d) Noncontact water recreation
(e) Warm freshwater habitat
(f) Wildlife habitat
(g) Rare and endangered species habitat

10. Ground waters in the Mission Hydrologic Subarea are beneficially used for:

(a) Municipal and domestic supply
(b) Agricultural supply
(c) Industrial services supply
(d) Ground water recharge
4. The discharge of wastewater shall not:
- pond above 9 ft.
- cause the pH of waters pumped from the basin to fall below
- the basin.
- cause the presence of toxic materials in waters pumped from
- waters pumped from the basin.
- cause the occurrence of objectionable tastes and odors in
- waters pumped from the basin.
- cause the presence of coliform or pathogenic organisms in

3. Discharges of wastes other than domestic sewage to the ocean
- sewage, or high-level radioactive waste, are prohibited.

2. The discharge of any radioactive, chemical or photographic
- requirements are not in force, are prohibited.

1. Discharges of wastes, to lands which have not been specifically
- surroundings thereof, shall comply with the following:

12. The need for developing boundaries within the region,
- quality of the area.
- water quality conditions that could reasonably be anticipated
- environmental characteristics of the hydrogeologic unit under
- effects on present and probable future beneficial uses of water.
- the needs and interests of water resource-related entities
- the proposal.
- the proposal is in another project and as such is exempt from the pro-
- The Regional Board shall use criteria that are consistent with the
-owers of the Regional Board shall notify the discharger and all known
- the proposal discharge of wastewater.
- the proposal discharge of wastewater.

11. The Regional Board, in establishing the requirements contained herein,
(f) Cause this Regional Board's objectives for the ground or surface waters of the Mission Hydrologic Subarea as established in the Basin Plan to be exceeded;

(g) Cause odors, septicity, mosquitos or other vectors, weed growth or other nuisance conditions in the San Luis Rey River or its tributaries; or

(h) Cause a surface flow in the San Luis Rey River or its tributaries.

5. The discharge of a waste flow volume in excess of 5,000 gallons per day (gpd) is prohibited unless the discharger obtains revised waste discharge requirements for the proposed increased flow.

6. Odors, vectors, and other nuisances of sewage or sewage sludge origin beyond the limits of the oxidation ponds are prohibited.

C. PROVISIONS

1. Neither the treatment nor the discharge of pollutants shall create a pollution, contamination or nuisance as defined by Section 13050 of California Water Code.

2. The discharger must comply with all conditions of this Order. Any waste discharge requirement noncompliance constitutes a violation of the California Water Code and is grounds for (a) enforcement action; (b) for waste discharge requirement termination, revocation and reissuance, or modification; or (c) for the denial of a Report of Waste Discharge renewal application.

3. In an enforcement action, it shall not be a defense for the discharger that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with this Order. Upon reduction, loss, or failure of the treatment facility, the discharger shall, to the extent necessary to maintain compliance with this Order, control production of all discharges, or both, until the facility is restored or an alternative method of treatment is provided. This provision applies, for example, when the primary source of power of the treatment facility fails, is reduced, or is lost.

4. The discharger shall take all reasonable steps to minimize or correct any adverse impact on the environment resulting from noncompliance with this Order.

5. The discharger shall, at all times, properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the discharger to achieve compliance with the conditions of this Order.

6. This Order may be modified, revoked and reissued, or terminated for cause. The filing of a request by the discharger for the modification, revocation and reissuance, or termination of this Order, or a notification of planned changes or anticipated noncompliance, does not stay any condition of this Order.
Refrain water quality in nuisance problem.

candy removed from the original area potentially causing dilution.
change to another drainage area, or a drainage area slightly
significantly change in the disposal area (e.g., moving the dis-
water.)

(b) After the discharge caused by a new report of waste discharge within 120

days prior to the following:

I. The discharge shall fill the new report of waste discharge within 120

D. REPORTING REQUIREMENTS

when this order becomes effective.

Resolution 60-R20, Resolution 60-R20 is hereby rescinded.

II. The requirements prescribed by this Order supersede the requirements

and shall be available to operating personnel at all times.

10. A copy of this Order shall be maintained at the principal office of Peace Abbey

Any location.

name of the discharger and incorporate such other requirements as

citation of reclamation and reclamation of this Order to change the

Regional Board may require permit.

7. This Order is not transmissible to any person except after notice.
(c) Increase in flow beyond that specified in the waste discharge requirements.

(d) Other circumstances which result in a material change in character, amount, or location of the waste discharge.

(e) Any planned changes in the regulated facility or activity which may result in noncompliance with these waste discharge requirements.

2. The discharger shall furnish to the Executive Officer of this Regional Board, within a reasonable time, any information which the Executive Officer may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Order. The discharger shall also furnish to the Executive Officer, upon request, copies of records required to be kept by this Order.

3. The discharger must notify the Executive Officer, in writing at least 30 days in advance of any proposed transfer of this Order's responsibility and coverage between the current discharger and the new discharger. This agreement shall include an acknowledgment that the existing discharger is liable for violations up to the transfer date and that the new discharger is liable from the transfer date on.

4. The discharger shall comply with the attached Monitoring and Reporting Program No. 86-24. Monitoring results shall be reported at the intervals specified in Monitoring and Reporting Program No. 86-24.

5. Where the discharger becomes aware that they failed to submit any relevant facts in a Report of Waste Discharge, or submitted incorrect information in a Report of Waste Discharge or in any report to the Regional Board, they shall promptly submit such facts or information.

6. The discharger shall report any noncompliance which may endanger health or the environment. Any information shall be provided orally to the Executive Officer within 24 hours from the time the discharger becomes aware of the circumstances. A written submission shall also be provided within five days of the time the discharger becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times; and if the noncompliance has not been corrected: the anticipated time it is expected to continue; and steps taken to reduce, eliminate, and prevent recurrence of the noncompliance. The Executive Officer, or an authorized representative, may waive the written report on a case-by-case basis if the oral report has been received within 24 hours. Any discharge of treated or untreated wastewater resulting from sewer line breaks, obstruction, surcharge or any other circumstance must be reported to the Executive Officer within 24 hours.
In the event the report is delayed beyond the deadline, or if the information provided is incomplete, the Regional Board may issue a citation to the person responsible for the delay or omission.

2. The Regional Board may issue a citation to the person responsible for the delay or omission.

3. The citation shall be issued within 10 days of the report's due date.

4. The citation shall be issued to the person responsible for the delay or omission.

5. The citation shall be issued in accordance with the Regional Board's policies and procedures.

6. The citation shall be issued to the person responsible for the delay or omission.

7. All reports or information submitted to the Regional Board shall be reviewed and certified by the Regional Board.

8. The discharge shall submit reports required under this order, or other reports as requested by the Executive Officer.

Order No. 86-24
I, Ladin H. Delaney, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, San Diego Region, on March 24, 1986.

Ladin H. Delaney
Executive Officer
Footnote references for waste discharge requirements of Order No. 86-24, PRINCE OF PEACE ABBEY, OCEANSIDE, SAN DIEGO COUNTY

1. The recommended plan would allow for measurable degradation of ground water in this basin to permit continued agricultural land use. Point sources, however, would be controlled to achieve effluent quality corresponding to the tabulated numerical values. In future years demineralization may be used to treat ground water to the desired quality prior to use.

2. A portion of the Upper Mission Basin is being considered as an underground potable water storage reservoir for treated imported water. The area is located north of Highway 76 on the boundary of hydrographic subareas 3.11 and 3.12. If this program is adopted, local objectives approaching the quality of the imported water would be set and rigorously pursued.
A. MONITORING PROVISIONS

1. Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity. Effluent samples shall be collected by a grab sample in the oxidation pond.

2. The discharger shall retain records of all monitoring information including all calibration and maintenance records, copies of all reports required by this Order, and records of all data used to complete the application for this Order, for a period of at least three years from the date of the sample, measurement, report or application. This period may be extended by request of the Executive Officer at any time.

3. Records of monitoring information shall include:
   (a) The date, exact place, and time of sampling or measurements;
   (b) The individual(s) who performed the sampling or measurements;
   (c) The date(s) analyses were performed;
   (d) The individual(s) who performed the analyses;
   (e) The analytical techniques or methods used; and
   (f) The results of such analyses.

4. Monitoring results must be reported on Discharge Monitoring Report forms supplied by the Regional Board.

5. Monitoring must be conducted according to United States Environmental Protection Agency test procedures approved under 40 CFR, Part 136, "Guidelines Establishing Test Procedures for Analysis of Pollutants."

6. If the discharger monitors any pollutant more frequently than required by this Order, using test procedures approved under 40 CFR, Part 136, or as specified in this Order, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the discharger's monitoring report.

7. All analyses shall be performed in a laboratory certified to perform such analyses by the California Department of Health Services or a laboratory approved by the Executive Officer.
The number of permanent residents and visitors per month shall be reported annually.

D. Resident and Visitor Use

and reported annually in terms of average monthly flow.

The volume of wastewater discharged to the oxidation pond shall be estimated.

C. wastewater volume
