The California Regional Water Quality Control Board, San Diego Region (hereinafter Regional Board), finds that:

2. The Bonsall Sanitary Landfill operated from 1968 to 1985. Pursuant to Title 27, Section 20580(g), landfills which were closed, abandoned, or inactive on or before November 27, 1984 are not specifically required to be closed in accordance with Title 27, Subchapter 5, Articles 1 and 2. However, these landfills are subject to post-closure maintenance requirements in accordance with Title 27, Section 21090 (b) and (c); and other requirements for the protection of water resources (Section 20580 et seq.).

3. The County of San Diego is responsible for the protection of useable waters from discharge of wastes, gases, and leachate, during the landfill maintenance period. This responsibility continues with any subsequent change in land use of the landfill.

4. Landfill cover at inactive landfills which ceased operation prior to 1984 may not be adequate to minimize percolation of liquids through wastes as described in Title 27, Section 20705.

5. By letter dated September 6, 2000, the County of San Diego requested a revision of the monitoring parameters and monitoring well network for the Bonsall Sanitary Landfill. These changes are included in this Addendum.

6. As part of the FY 2001/2002 Waste Discharge Order Update Program, Order No. 97-15 has been reviewed by Regional Board staff as required by Section 15383 of the California Water Code. This Addendum updates the findings and requirements of Order No. 97-15 in order to address current State and Regional Board policies, regulations and the current status of the landfill.
7. A variety of approaches may be effective as Best Management Practices (BMPs) for control of surface water runoff and erosion of cover materials. BMPs for control of surface water runoff should be used in areas where cover materials have been placed and in areas undergoing landfill containment system construction or maintenance. Effective BMPs are best implemented on a site-specific basis and may include, but are not limited to, the use of: bonded fiber matrix materials, anchored fiber rolls, fiber blankets, and other measures as appropriate.

8. The Bonsall Sanitary Landfill is an existing facility and as such is exempt from the provisions of the California Environmental Quality Act in accordance with Title 14, California Code of Regulations, Chapter 3, Article 19, Section 15301.

9. The Regional Board has considered all water resource related environmental factors associated with the Bonsall Sanitary Landfill.

10. The Regional Board has notified interested parties of its intent to update waste discharge requirements for the Bonsall Sanitary Landfill.

11. The Regional Board, in a public meeting heard and considered all comments pertaining to the Bonsall Sanitary Landfill.

**IT IS HEREBY ORDERED**, that Order No. 97-15 be amended as follows:

1. Replace **B. POST-CLOSURE MAINTENANCE SPECIFICATIONS** with the following:

   **B. MAINTENANCE SPECIFICATIONS**

   **General Maintenance Requirements**

   1. The discharger shall prepare a maintenance plan by **June 28, 2002**, which contains, but is not limited to, the following:

   a. The persons, companies, or agencies responsible for each aspect of landfill maintenance, along with their addresses and phone numbers.

   b. Location maps indicating property boundaries and the existing limits of waste, internal roads, and structures inside the property boundary.

   c. A location map of the current monitoring and control systems including drainage and erosion control systems and landfill gas monitoring and control systems.
2. Annually by April 30, the discharger shall submit any and all modifications to the landfill maintenance plan as part of the Annual Summary Report. If no modifications have been made since the previous year, the discharger shall provide a statement to that effect in the Annual Summary Report.

3. The landfill maintenance period shall continue until the Regional Board determines that remaining wastes in all waste management units (WMUs) will not threaten water quality.

4. The discharger shall comply with all applicable requirements of Title 27, CCR, Subchapter 5, Article 2.

5. Waste containment structures/units shall be adequately protected from any washout, erosion of wastes or cover material. The surface drainage system shall be designed to adequately handle the rainfall from a 100-year 24-hour storm event.

6. The structural integrity and effectiveness of all containment structures and the existing cover shall be maintained as necessary to correct the effects of settlement or other adverse factors.

7. Vegetation used at the site shall be selected to require minimum irrigation and maintenance, and shall not impair the integrity of containment structures including the existing cover.

8. The migration of landfill gas from the site shall be controlled as necessary to ensure that landfill gases and gas condensate are not discharged to surface waters or ground waters. Condensate shall be collected and removed from the site except as defined in 27CCR Section 20096(e).

Erosion Control

9. Annually, prior to the anticipated rainy season but not later than October 31, any necessary erosion control measures shall be implemented, and any necessary construction, maintenance, or repairs of precipitation and drainage control facilities shall be completed to prevent erosion, ponding, flooding, or to prevent surface drainage from contacting or percolating through wastes at the facility. In addition, maintenance, and repairs necessitated by changing site conditions can be made at any time.
10. Structural and non-structural Best Management Practices (BMPs) shall be used to prevent erosion of cover materials and in areas undergoing landfill containment system construction and/or maintenance.

11. All areas, including surface water drainage courses, shall be maintained to minimize erosion. The landfill cover shall be maintained to minimize percolation of liquids through wastes.

Surface Water Drainage

12. Surface water runoff within the boundary of the landfill (i.e., precipitation that falls on the landfill cover) shall be collected by a system of berms, ditches, downspouts, swales and drainage channels, and shall be diverted off the landfill to either the detention basins or to the natural watercourses offshore.

13. Surface water runoff from tributary areas and internal site drainage from surface and subsurface sources shall not contact or percolate through waste and shall either be contained onsite or be discharged in accordance with applicable storm water regulations.

14. Surface water runoff from the landfill is subject to State Board Order No. 97-03-DWQ, National Pollutant Discharge Elimination System (NPDES) General Permit No. CAS00009, "Waste Discharge Requirements for Discharges of Storm Water Associated with Industrial Activities Excluding Construction Activities" and any subsequent revisions or renewals thereof.

15. Where surface water runoff results in erosive flow velocities, surface protection such as asphalt, concrete, riprap, silt fences or other erosion control material shall be used for protection of drainage conveyance features. Interim bench ditches shall be provided with erosion control material and riprap to control erosion where necessary.

16. Where surface water runoff results in erosive flow velocities at terminal ends of downspouts or where downspouts cross the landfill cover access roads, erosion control material shall be applied to exposed soil surfaces.

17. Energy dissipators shall be installed to control erosion at locations where relatively high erosive flow velocities of surface water runoff are anticipated.
2. Replace Provision C.2 with the following:

"The discharger shall comply with the applicable provisions of California Code of Regulations Title 27 (27 CCR) and all conditions of this Order. Any noncompliance with this Order constitutes a violation of the California Water Code and is grounds for: (a) enforcement action; (b) termination, revocation and reissuance, or modification of this Order; or (c) denial of a Report of Waste Discharge in application for new or revised Waste Discharge Requirements."

3. Replace Provision C.12 with the following:

"Alternatives, exceptions, and exemptions of waivers from requirements of 27CCR shall be subject to the approval of the Executive Officer and shall be authorized only as provided for by 27CCR. Implemented alternatives to 27 CCR requirements shall meet the conditions for approval of such alternatives established in 27CCR throughout the post-closure period."

4. Replace Reporting Requirement D.8 with the following:

"The discharger shall comply with the attached Monitoring and Reporting Program No. 97-15. Monitoring results shall be reported at the intervals specified in Monitoring and Reporting Program No. 97-15."

5. Replace Reporting Requirement D.10 with the following:

"The discharges shall submit reports required under this Order and other information requested by the Executive Officer to:

California Regional Water Quality Control Board
San Diego Region
9174 Sky Park Court, Suite 100
San Diego, CA 92123"

6. Add the following as Reporting Requirement D.11:

"Annually, by April 30, a copy of its Storm Water Pollution Prevention Plan, or as updated shall be submitted to this office."

7. Replace Notification E.5 with the following:

"TITLE 27 DEFINITIONS

Definitions of terms used in this Order shall be as set forth in California Code of Regulations, Title 27:"

8. Replace 3. Site Maintenance of Monitoring and Reporting Program No. 97-15 with the following:

"The discharger shall perform quarterly inspections of the landfill site and report the results semi-annually. The report shall contain information on the site condition and a discussion of any significant findings with regard to:

a) General site condition;
b) Surface cover and slope;
c) Drainage facilities;
d) Ground water and vadose zone monitoring networks;
e) Methane gas control system;
f) Observation of seepage from the site; and
g) Maintenance activities at the site."

9. Replace 3. Ground Water Sampling and Analysis, Monitoring and Reporting Program No. 97-15, with the following:

"Ground Water Sampling and Analysis

a. The ground water monitoring network shall consist of monitoring wells BOGW-1, BOGW-3, BOGW-7, BOGW-8, BOGW-9, BOGW-10, BOGW-11, IIBO-1 and OFBO-1 as shown on Attachment No. 1 to this Addendum.

b. The discharger shall sample ground water monitoring wells for the following constituents semi-annually:

<table>
