

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION**

**ADDENDUM NO. 2
TO
ORDER NO. 2000-165**

**WASTE DISCHARGE REQUIREMENTS
FOR
EASTERN MUNICIPAL WATER DISTRICT
TEMECULA VALLEY REGIONAL WATER RECLAMATION FACILITY
RIVERSIDE COUNTY**

The California Regional Water Quality Control Board, San Diego Region (hereinafter Regional Board), finds that:

1. On September 13, 2000, the Regional Board adopted Order No. 2000-165, "*Waste Discharge Requirements For Eastern Municipal Water District Temecula Valley Regional Water Reclamation Facility Riverside County*", which regulates the discharge of up to 12.0 million gallons per day (MGD), of tertiary treated wastewater from the Temecula Valley Regional Water Reclamation Facility (TVRWRF).
2. By letter dated November 18, 2004, EMWD requested an amendment of Order No. 2000-165 to increase the permitted flow rate from 12.0 MGD to 13.2 MGD at TVRWRF, based on the fact that the design hydraulic capacity for the facility is 13.2 MGD, and TVRWRF is capable of treating 13.2 MGD without any modification to treatment equipment or processes. On February 9, 2005, the Regional Board adopted Addendum No.1 to Order No. 2000-165, which increased the permitted flow rate at the TVRWRF from 12.0 MGD as a 30-day average dry weather flow to 13.2 MGD as a 30-day maximum flow rate.
3. On August 9, 2005, EMWD submitted an Interim Capacity Rating Report, certifying that with the addition of new cloth disk filters and new chlorine contact basins, the facility is capable of treating a 30-day average dry weather flow of 15.0 MGD. EMWD requested Regional Board's approval for TVRWRF to operate at this interim capacity of 15.0 MGD until a full expansion of 18.0 MGD is completed by June 2006.
4. By letter dated September 26, 2005, Department of Health Services (DHS) recommends the Regional Board approve the requested 15.0 MGD interim capacity for TVRWRF.
5. Pursuant to the California Environmental Quality Act, in January 2004, EMWD submitted a Final Mitigated Negative Declaration and Initial Study & Mitigation Monitoring Program for TVRWRF's expansion to 18.0 MGD. The project as approved by EMWD will not have a significant impact on the environment. Issuance of this addendum is in compliance with the California Environmental Quality Act.
6. The Regional Board has notified EMWD and all known interested parties of its intent to modify Order No. 2000-165.

5. The Regional Board has, at a public meeting, heard and considered all comments pertaining to this addendum to Order No. 2000-165.

IT IS HEREBY ORDERED that Discharge Specifications of Order No. 2000-165 be revised as follows:

1. The 30-day average dry weather flow from the Temecula Valley Regional Water Reclamation Facility shall not exceed 15.0 million gallons per day.

I, John H. Robertus, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, San Diego Region, on December 14, 2005.

JOHN H. ROBERTUS
Executive Officer
