

**California Regional Water Quality Control Board
Santa Ana Region**

March 13, 2020

Item: 9

SUBJECT: Second Workshop for the Permit Renewal for Poseidon Resources' Proposed Huntington Beach Desalination Facility

BACKGROUND

On November 22, 2019, Santa Ana Water Board staff issued the Tentative National Pollutant Discharge Elimination System (NPDES) Number CA8000403, Waste Discharge Requirements and draft California Water Code section 13142.5(b) determination for the Poseidon Resources' (Surfside) L.L.C. (Poseidon Water or Discharger) proposed Huntington Beach Desalination Facility (Facility) (Tentative Order). The Facility will be located at 21730 Newland Street, Huntington Beach on twelve acres at the AES Huntington Beach Generating Station (AES HBGS). The Discharger proposes to modify and operate the AES HBGS intake and discharge systems for its desalination operations. The Facility will produce an average annual volume of 50 million gallons per day (MGD) of potable water through a reverse osmosis (RO) process. The treatment process requires an intake of seawater averaging 106.7 MGD; discharge of concentrated brine will average 56.59 MGD.

On December 6, 2019, the Santa Ana Water Board held a public workshop to discuss details of the proposed Facility, to discuss the details of the draft tentative NPDES permit and draft Water Code 13142.5(b) determination, and to receive comments from interested parties. Topics summarized in the December 6, 2019 staff report and at the workshop included:

- Identified need for the desalinated water;
- Facility onshore location;
- Intake considerations (including subsurface and surface intake systems);
- Concentrated brine discharge considerations;
- Calculation of the marine life mortality impacts; and
- Determination of the best feasible mitigation project available.

At the December workshop, the Santa Ana Water Board had several inquiries and information requests for staff to address at a subsequent meeting. The inquiries related to the identified need for the desalinated water, the marine life mitigation requirements, a more detailed cost comparison for intake system alternative sites, and performance of the Carlsbad seawater desalination facility.

Due to the complexity of this project, Santa Ana Water Board staff recommended that a second workshop be conducted on March 13, 2020 to specifically to focus on the identified need for the desalinated water and the marine life mitigation requirements. The cost comparison of the intake system alternative sites, and performance of the Carlsbad seawater desalination facility are discussed later in this staff report.

PROJECT DESCRIPTION

As a reminder, the Discharger proposes to construct and operate the proposed Facility on a 12-acre parcel adjacent to the AES HBGS site. Once constructed, the Facility will discharge wastewater to the Pacific Ocean, a water of the United States.

The proposed Facility is designed to produce potable water for delivery into the water distribution and/or groundwater recharge systems within Orange County. The Discharger will receive its source water directly from the AES HBGS's intake system. Pursuant to the Water Quality Control Plan for Ocean Waters of California (Ocean Plan) requirements, the intake system will be equipped with a screening system consisting of four 1.0-mm slot wedgewire screens with a through-screen velocity of 0.5 feet per second or less. The wedgewire screen must have rotating brush-cleaned screens composed of stainless steel. The Discharger may use a boat-based or onshore air burst system or deploy divers to remove debris that accumulates on the screens.

The desalination process will consist of source water screening, coagulation, filtration, pH control, chlorination, de-chlorination, RO membrane separation, and product water chlorination and chemical conditioning. The RO system will use high-rejection seawater membranes. The proposed Facility will produce a 12-month average of 50 MGD of potable water and discharge an annual average of 56.59 MGD of concentrated wastewater and process water (e.g., backwash water, RO cleaning solutions) that will be discharged to the ocean through the existing AES HBGS outfall structure. At the discharge tower, the Discharger will install a multiport diffuser consisting of 14 ports equipped with Tideflex diamond shaped-nozzles (or similar) with an open area of 1.28 square feet.

WATER CODE SECTION 13142.5(B) DETERMINATION

Water Code section 13142.5(b) states “for each new or expanded coastal powerplant or other industrial installation using seawater for cooling, heating, or industrial processing, the best available site, design, technology, and mitigation measures feasible shall be used to minimize intake and mortality of all forms of marine life.”

To provide direction to regional water quality control boards for evaluating seawater desalination facilities pursuant to California Water Code section 13142.5(b) and to ensure a consistent statewide approach for minimizing the intake and mortality of all forms of marine life, in May 2015, the State Water Resources Control Board (State Water Board) adopted an amendment that added chapter III.M. to the Ocean Plan to address environmental impacts associated with the construction and operation of

seawater desalination facilities. The amendments were subsequently approved by the Office of Administrative Law and the United States Environmental Protection Agency. These provisions provide a consistent statewide approach based on best available science for minimizing intake and mortality of all forms of marine life, in addition to protecting water quality and related beneficial uses of ocean waters.

The focus of the Ocean Plan desalination provisions is to minimize the intake and mortality of all forms of marine life resulting from the construction and operation of desalination facilities. To achieve this, the Ocean Plan specifies requirements which aim to reduce the entrainment and impingement of marine life. Entrainment occurs when organisms are drawn in through the intake and perish when exposed to high pressure and heat inside the desalination system. Typically, entrainment affects smaller organisms, such as plankton, algae, larvae, and eggs; studies have shown that organisms typically do not survive entrainment. Impingement occurs when organisms get trapped against intake screens and cannot escape the suction power of the surface intake. To address entrainment and impingement effects, the Ocean Plan requires the use of subsurface intake facilities. If subsurface intakes are not technically and/or economically feasible, the Ocean Plan requires the use of slotted intake screens and the reduction of the intake flow velocity.

In addition to marine life mortality associated with an open ocean intake, there is also mortality associated with the discharge of concentrated brine. Mortality to planktonic organisms near the discharge port can be caused by shear stress as the organisms become entrained in the turbulent jet. Further, the brine is twice the salinity of ocean waters¹. Concentrated brine can behave differently than traditional wastewater effluent plumes because of its greater density. The increased density can cause the brine plume to sink and spread on the seafloor instead of mixing with the surrounding water thus impacting bottom-dwelling (benthic) organisms from the concentrated brine and any pollutants in the brine discharge. To minimize the mortality associated with the brine discharge, the Ocean Plan's preferred method of brine discharge is to commingle the brine with wastewater. If wastewater is not available, the next best preferred method is to utilize multiport diffusers to achieve rapid mixing of the brine discharge.

The Ocean Plan also requires that marine life impacts resulting from the construction and operation of a desalination facility be mitigated via an acceptable and approved Marine Life Mitigation Plan (MLMP).

¹ State Water Resources Control Board, "Final Staff Report Including the Final Substitute Environmental Documentation, Amendment to the Water Quality Control Plan for Ocean Waters of California Addressing Desalination Facility Intakes, Brine Discharges, and the Incorporation of Other Non-Substantive Changes," May 6, 2015

IDENTIFIED NEED FOR DESALINATED WATER

The Ocean Plan, chapter III.M.b.(2) requires that “the identified need for desalinated water” be “consistent with” an applicable urban water management plan (UWMP) prepared in accordance with I section 10631, or other water planning documents if an UWMP is not available. The Ocean Plan does not define “need” or elaborate on what it means to be “consistent with” water planning documents. As such, the Board has discretion in its interpretation of these terms. Staff’s proposed interpretation of the terms is included in pages 2 to 6 in Attachment G.2 to the Tentative Order and briefly discussed here.

The term “need” has been construed differently by various stakeholders. Environmental groups argue that there is no “need” for desalinated water if there are other sources of water that can meet regional water demands; on the other hand, water supply agencies and other similarly situated stakeholder groups view need as a more flexible concept that considers a range of factors that affect water supply reliability as well as water planning policies and priorities. The administrative record for the Desalination Amendment appears to indicate that the State Water Board intended a more flexible construction of “need” consistent with the latter view — a concept that allows for multiple considerations, including uncertainty of current supplies, competing demands, and the inherent risk of unforeseen circumstances. Further, to be “consistent with” water planning documents does not appear to require that water planning documents specifically identify a project and the specific volume of desalinated water as a source that is absolutely required to meet water demand. Based on guidance from interpretations of “consistent with” in other statutory contexts, staff interpreted “consistent with” water planning documents to require only that a proposed project be “in agreement or harmony with the terms of the applicable plan, not in rigid conformity with every detail thereof.” However, these terms are ambiguous and, as noted above, the Board may disagree with staff’s interpretation and direct staff to revise their analysis.

As was discussed at the December 6, 2019 workshop, the Municipal Water District of Orange County (MWDOC) and other municipalities have UWMPs that specifically identify the proposed Facility as an opportunity to develop a water supply and this represents support for the need for desalinated seawater. The MWDOC UWMP explains that the desalinated water would offset imported water demands and could be used to augment recycled water supplies used in the Talbert Seawater Barrier to prevent seawater intrusion. The MWDOC UWMP also lists the 56,000 acre-feet/year of desalinated water produced by the proposed Facility as a way to improve water supply and system reliability in Orange County. In addition to the UWMPs, the Orange County Water District (OCWD) has also prepared a Groundwater Management Plan and a Long-term Facilities Plan . The identified need for desalinated water appears to be consistent with the MWDOC and OCWD management plans.

MWDOC recently released its 2018 reliability study that projects water supply and demand in Orange County through the year 2050 and compares local projects that can

meet the forecasted water demands. The proposed Poseidon Water project is among the local projects that were compared, and the proposed Facility ranked last based on system reliability and supply reliability metrics. The purpose of the study, however, was not to determine which projects should be implemented; rather, it was intended to provide information to local decisionmakers charged with choosing local projects. While there may be more cost-effective projects to meet water supply needs in Orange County, the proposed Project is among the potential projects that local suppliers can choose to pursue to meet water demand.

In order to obtain clarification from Poseidon Water on the identified need for desalinated water, on January 8, 2020, Santa Ana Water Board staff requested additional information. Poseidon Water and OCWD submitted responses to Board staff inquiries. These documents have been provided to the Santa Ana Water Board. The March 13, 2020 workshop will be an opportunity for the Santa Ana Water Board will hear directly from the relevant water planning agencies on the identified need for the desalinated water.

DETERMINATION OF THE BEST AVAILABLE MITIGATION MEASURES FEASIBLE

Water Code section 13142.5(b) requires that the best available mitigation measures feasible be used to minimize the intake and mortality of all forms of marine life. Chapter III.M.2.e of the Ocean Plan sets forth requirements to implement mitigation measures in compliance with Water Code section 13142.5(b).

The Ocean Plan requires a specific type of mitigation to offset the desalination facility impacts. Chapter III.M.2.e.(3)(b)i requires:

“Mitigation shall be accomplished through expansion, restoration or creation of one or more of the following: kelp beds, estuaries, coastal wetlands, natural reefs, MPAs, or other projects approved by the regional water board that will mitigate for intake and mortality of all forms of marine life associated with the facility”.

As discussed in the Tentative Order and at the December workshop, Santa Ana Water Board staff estimate that 89.47 acres are needed to mitigate for impacts related to the proposed Facility’s construction and stand-alone operations. It is important to note, however that based on consideration of comments received from staff from other resource agencies (specifically, NOAA’s National Marine Fisheries Service [NMFS] and the California Coastal Commission), the acreage needed for mitigation may be revised.

To fulfill the required mitigation acreage, the Discharger proposed in their Marine Life Mitigation Plan (MLMP) to conduct maintenance dredging of the ocean inlet at Bolsa Chica to support the Bolsa Chica Lowlands Restoration Project in order to maintain full tidal flow within the Bolsa Chica wetlands. The inlet channel has historically shoaled and filled with sand limiting tidal exchange between the ocean and the wetlands.

Maintenance dredging of the inlet will provide essential tidal connectivity between the wetlands and the Pacific Ocean. In addition, dredging will help maintain the existing wetland system as well as support restoration and enhancement activities. The maintenance dredging of the ocean inlet will be done for the lifetime of the Project as needed to meet performance standards specified in the MLMP.

Santa Ana Water Board staff determined that the inlet maintenance dredging would be considered a “preservation” form of mitigation, not “expansion,” “restoration” or “creation” as is required by the Ocean Plan. The proposed maintenance dredging alone would only preserve the already existing habitat at Bolsa Chica.

Therefore, to be in compliance with the Ocean Plan, Santa Ana Water Board staff have worked extensively with the Discharger to ensure that the best available mitigation project feasible includes compliant restoration components. There are several areas within Bolsa Chica where the Discharger has proposed restoration activities. The major areas are within the Fieldstone Property (Cell 46, and Cell 42 of the Bolsa Chica Lowlands Restoration Project). The Fieldstone property consists of approximately 12 acres of dry, barren salt pans, with marsh and subtidal habitat. Within this property, the discharger proposes to restore approximately 4.5 acres of subtidal and tidal wetlands in addition to upland restoration. At several sites within Cell 46 and 42, oil pads and roads will be removed, and the areas restored to upland habitat. The individual sites for these activities are scattered throughout Cells 46 and 42 but will result, in total, in approximately 1.2 acres of additional restoration.

For these restoration projects to succeed, the Discharger must make improvements to the water circulation within the Muted Tidal Basins in Bolsa Chica. The circulation improvements constitute enhancement activities, which is considered a type of restoration, but most importantly, based on input from other resource agency staff (NMFS, the Coastal Commission, and the State Lands Commission), these improvements are required for the restoration projects to be fully successful.

The Discharger has not fully developed detailed descriptions of the restoration components of their proposed mitigation plan in the MLMP that has been submitted. The full development of the restoration components requires additional studies and information that are not currently available. Therefore, Santa Ana Water Board staff recommends that the Water Code section 13142.5(b) determination be conditioned on the Board’s approval of supplemental plans submitted by the Discharger in accordance with the Marine Life Mitigation Plan Schedule included in Attachment K to the Tentative Order. Provided that the Discharger satisfies the requirements of Attachment K, the mitigation at the Bolsa Chica Lowlands Restoration Project would provide the mitigation acreage identified below.

Total Bolsa Chica Mitigation Acreage

Preservation of the Full Tidal Basin via inlet maintenance dredging	108.0 acres
Restoration of the Fieldstone property to subtidal habitat	4.5 acres
Restoration of the Oil Pads to subtidal habitat	1.2 acres
Enhancement of water circulation within the Muted Tidal Basins	15.0 acres
Total	128.7 acres

It is Santa Ana Water Board staff's position that if Poseidon Water successfully implements the above components, they will have adequately mitigated for the construction and operation of the Facility over the 30-plus year life span of the Facility. The approval of all mitigation acreage is contingent upon:

- a. Completion of all tasks in the Marine Life Mitigation Plan Schedule (Attachment K to the tentative Order)
- b. Successful implementation of all four mitigation components in table above (as determined by performance standards)

Previous Inlet Dredging Mitigation Projects

While the Bolsa Chica ocean inlet dredging maintenance was originally funded in 1996-2005 by the Ports of Los Angeles and Long Beach as a Coastal Commission mitigation project for activities within the ports, the mitigation effort was based on a finite expenditure rather than funds necessary to maintain the mitigation efforts over a pre-determined amount of time. The funds identified for the Ports mitigation efforts have run out and it has been difficult to acquire the additional funding from the State or other sources necessary to continue those mitigation efforts. Dredging of the inlet would help preserve the wetlands and allow them to continue to function as designed.

Conditional Mitigation Requirements

Because Poseidon Water's proposal to mitigate for the marine life impacts associated with the construction and operation of the Facility at the Bolsa Chica Lowlands Restoration Project requires additional information to flush out the final details of their plan, the Tentative Order specifies that the Water Code section 13142.5(b) determination be made conditional on Poseidon Water's submission of a Coordination and Communication Plan, a Final Restoration Plan for the Fieldstone Property (this deliverable also requires submittal of an Enhancement Plan to Improve Water Circulation for the Muted Tidal Basins), a Final Restoration Plan for the Oil Pads and Road, and a Final Adaptive Management Plan in accordance with the schedule established in the Marine Life Mitigation Plan Schedule.

The Tentative Order requires that Poseidon Water's final MLMP be brought back to the Santa Ana Water Board for consideration and approval.

Prohibitions on Discharge and Intake

Related to the outstanding mitigation requirements, the Tentative Order prohibits the discharge of waste and the intake of seawater unless and until (1) the Discharger has submitted the supplemental plans required under the MLMP Schedule (Attachment K); (2) the Santa Ana Water Board has approved the Discharger's supplemental plans; (3) the Discharger has obtained all permits and other governmental approvals necessary to implement all components of the approved mitigation project (including the components included in supplemental plans required under the MLMP Schedule (Attachment K)); and (4) the Discharger has begun dredging of the Bolsa Chica inlet in accordance with the MLMP (Appendix TT3). Staff included the prohibition provisions in the Tentative Order to avoid a situation where Discharger would be operating and impacting marine life without mitigating for these impacts.

PERFORMANCE OF THE CARLSBAD SEAWATER DESALINATION FACILITY:

The Discharger has generally maintained compliance with requirements and provisions included in Order No. R9-2019-0003, issued by the San Diego Water Board on May 8, 2019, since it became effective on July 1, 2019, with the exception of two exceedances of the receiving water pH limit; that requires that pH shall not be changed more than 0.2 S.U. from that which occurs naturally. The receiving water pH limit was exceeded during the August 29, 2019 quarterly monitoring event (3rd Quarter of 2019) at two surf zone monitoring locations out of a total of 21 monitoring locations sampled (two pH measurements out of a total of 72 taken during the quarterly monitoring event). These two pH results were deemed as erroneous measurements by the discharger, based on several factors and these results were not confirmed by additional pH monitoring done at the two monitoring locations during the August 29, 2019 monitoring event. In addition, receiving water pH limit exceedances were not reported for the following monitoring event (4th Quarter of 2019) that was conducted by the Discharger. Also, during the 3rd Quarter of 2019 the Discharger failed to collect a final effluent sample for TCDD Equivalents determination² and to sample one receiving water monitoring location. No other violations have been reported by the Discharger to date.

² TCDD Equivalents is the sum of the concentrations of chlorinated dibenzodioxins (2,3,7,8-CDDs) and chlorinated dibenzofurans (2,3,7,8-CDFs) multiplied by their respective toxicity factors.

COST COMPARISON OF INTAKE SYSTEM ALTERNATIVE SITES:

As part of the feasibility analysis, the Discharger developed the cost comparison for equipping the existing intake (Station E) to installing a new intake at one of two locations (Station D2/U2). Station D2/U2 are equidistance from the existing facility; one is located 2 kilometers upcoast and the other is located 2 kilometers downcoast. The cost of a new intake at either location is assumed to be equal. The Santa Ana Water Board requested a more detailed breakdown of the cost estimates that is provided in the table below.

Intake Construction Cost Estimates for Station E and Stations D2/U2

Item	Project items	Station E (\$ Millions)	Station D2/U2 (\$ Millions)
1	Beach pipeline (1.3 miles) and associated infrastructure	-0-	26.3
2	Ocean pipeline (0.5 miles) and associated infrastructure using a trestle system for installation	-0-	31.6
3	Intake screens and airburst system for cleaning	24.3	24.3
Subtotal		24.3	82.2
4	Indirect (25%)	6.1	20.5
5	Insurance and environmental (5%)	1.2	4.1
6	Overhead and profit (25%)	6.1	20.5
Subtotal		13.4	45.1
7	Engineering (15%)	5.7	19.1
8	Contingency (40%)	15.1	50.1
Subtotal		20.8	69.2
Direct capital estimates subtotal (2018 costs)		34.2	114.3
Adjustment to year of construction ¹		3.0	38.7
Total intake cost estimates^{2,3}		37.2	153.0

1. Station E costs are escalated to 2020 financial close date, and Station D2/U2 costs are escalated to 2024 financial close date.
2. Station E are 2020 costs and Station D2/U2 are 2024 costs due to different construction start dates.
3. Poseidon reported additional costs for financing and contract management that resulted in a greater differential in costs because Station E has a 3.25 year construction period and Station U2/D2 has a 6 year construction period. These

costs are not reflected in this summary table but are shown in Discharger's Appendices JJJJJ-2 and RRRRR.

PUBLIC COMMENTS

Following the November 22, 2019 release of the Tentative Order determination, the 60-day public comment period closed on January 21, 2020. Regional Board staff received 217 unique comment letters that includes comments from concerned citizens, environmental groups, elected officials, water agencies, business organizations, federal, state and local agencies and the Discharger. All comment letters have been made available to the public through the State Board's FTP site.

Attached to this staff report is the compilation of comments received. Board staff is in the process of responding to all of these comments and, where appropriate, revising the Tentative Order and Water Code section 13142.5(b) determination.

RECOMMENDATION

Provide feedback to staff on the Tentative Order and direct staff to continue to prepare written responses to comments received and bring an appropriately revised Order and Water Code determination back to the Santa Ana Water Board for consideration at the April 3, 2020 public hearing.

ATTACHMENTS

- Summary Table of Comments Received
- USB containing Adobe PDF file copies of all of the comment letters received
note: USB provided to Regional Board members only

All comment letters are available to the Public on the Water Boards FTP site.

Item 9 - Draft Comments for Response Document

Regional Board staff received 217 letters, emails and form-emails. In order to provide the Regional Board with sufficient time to review the comments, Regional Board staff have provided a draft version of the individual comments for which Regional Board staff are currently preparing a "Response to Comments" document. This draft document identifies each letter and email by a number (e.g., "0199") and if there are multiple comments in a letter, each comment is identified by a suffix (e.g., "0199.01", "0199.02", etc.). If there were attachments or enclosures to a letter, those are acknowledged by a suffix to the letter identifier (e.g., "0199a", "0199b", etc.). Please note that these "broken-out" comments are draft and may be added to or revised as Regional Board staff prepare the final "Response to Comments" document.

There were 3 comment letters/emails that due to the number of "signatories", it was most efficient to identify the individual signatories in a separate attachment, as follows:

- Attachment A - Regional Board staff received one letter from Orange County Water Independence, Sustainability and Efficiency (OCWISE) that included a list of 16,539 individuals who signed on to a Change.org petition supporting the proposed project (Letter 0198).
- Attachment B – Regional Board staff received 1,008 identical emails that were generated by individuals that visited the Surfrider website (Letter 0199).
- Attachment C – Regional Board staff received a letter from Tyler Diep, Assembly-member for the 72nd District of the California State Assembly, who provided a copy of a letter of support that had been prepared by the California Legislature in 2018, that had been signed by 62 state assembly members and state senators and 3 letters of support from California Legislative leaders from 2015 and 2017 (Letter 0166 and Attachment 0166a).

Comment Number	Commenter	Date of Letter(s)	Comment
0001	Brett Korte Azul	December 03, 2019	<p>On behalf of Azul, the UC Irvine Environmental Law Clinic respectfully requests that the Regional Board extend the written comment deadline for Poseidon's Draft Waste Discharge Requirements (Order No. R8-2020-0005, NPDES No. CA8000403), and Water Code § 13142.5(b) Conditional Determination until the Regional Board's public hearing scheduled for March 27, 2020.</p> <p>In the alternative, Azul requests that, at minimum, the written comment deadline be extended through February 28, 2020.</p>
0002.01	Barbara Delgleize Council-member City of Huntington Beach	December 05, 2019	Base your decision on the 10+ years of project investigation. Please keep in mind that the City of Huntington Beach last approved the Project in 2010, and like your staff, found numerous alternatives to be infeasible and/or unacceptable to the City, including subsurface seawater intakes.
0002.02			This is a project that has undergone significant improvements since the Regional Board last amended the permit in 2012. I am immensely excited about the permit conditions that requires Poseidon to ensure the sustainability of the Bolsa Chica wetlands for the next generation.
0002.03			From a drinking water perspective, this project -according to the Orange County Water District- is the largest single source of new, climate resilient drinking water supply available to the county. This project will bring water, jobs and tax revenue to our community. And best of all, from the Regional Water Board's perspective, it is 100 percent compliant with the California Ocean Plan and the new desalination amendment.
0003.01	Judy and Art Levine	December 04, 2019	It's not a matter of if, but when the next serious drought will occur. Water conservation is an important piece of the puzzle; we are taking up turf and planting drought tolerant plants, but we must be proactive in developing new sources of water.
0003.02			I also support this plant because it will take an underutilized and ugly piece of industrial property and turn it into a facility that generates tens of millions of dollars in local property tax.

Comment Number	Commenter	Date of Letter(s)	Comment
0004.01	Pat Riley	December 05, 2019	<p>Questions for Santa Ana Regional Board Members and California Coastal Commission and Other Parties Concerned.</p> <p>How many videos have you seen of underwater brine disposal outflow pipes from large desalinization plants?</p>
0004.02			How many independent studies have you read regarding long-term effects of brine and chemical disposal waste?
0004.03			What prevents declining photo plankton death and other small marine organisms to include baby fish to be sucked up into the desalinization plant? A screen? and when that screen becomes plugged with seaweed and fish etc who's going to clean it? Will Poseidon just remove the screen after it gets approved? Who's going to monitor it? you? I've been informed the screen is only 1% effective. Not good.
0004.04			How many large desalinization plants have you visited, toured and studied extensively?
0004.05			Do you know how much fossil fuel is needed per year to power the proposed HB Poseidon desalination plant?
0004.06			Do you know the total annual operating costs of the proposed HB Poseidon desalination plant?
0004.07			Isn't it true The government EPA etc. is basically offering a credit card to Huntington Beach (Orange County) for building this billion \$ plus desal plant? Who will be paying off the credit card?
0004.08			Who would manage the Huntington Beach Poseidon desalination plant? A company from Israel?
0004.09			Do you know how much the Carlsbad desalination plant sold for? (to the foreign hedge fund investment group)
0004.10			The Poseidon plant would only encourage more growth and less conservation, how many more people does Orange County need? Another million 5 million? another 10 million?
0004.11			The issues of brine toxicity due to increased salinity and added anti-fouling chemicals has been documented at desal plants. How close are the outdated intake and the outfall pipe away from each other in Huntington Beach? Could toxic brine discharge affect the resulting desal production water?

Comment Number	Commenter	Date of Letter(s)	Comment
0004.12			It's obvious that the massive amounts of energy used in desalination contribute to climate change-causing greenhouse gas emissions, possibly exacerbating the local drought conditions that require use of desalination in the first place.
0004.13			How far is the outflow pipe at low tide? I believe the outflow pipe should be extended to a half mile and subsurface intakes be incorporated into the plant assuming this dinosaur pollution project gets passed for special interest Wall Street \$ and political crony capitalism.
0004.14			Is there video evidence showing the integrity of the concrete intake and outflow pipes and Huntington Beach? Could they be cracked or broken due to earthquakes and old age?
0004.15			What is the operating sound volume of the proposed Poseidon plant? The AES is 47 decibels at normal operating volume at the corner of Magnolia and Banning, according to general Manager speaking at South Huntington Beach gathering. Will the neighboring communities be bombarded with much louder NOISE POLLUTION and will their property values and tourism revenues drop because of it?
0004.16			Does desalination eliminate ALL radiation from nuclear accidents like Fukushima?
0004.17			An environmental analysis conducted under CEQA (California Environmental Quality Act) or NEPA (National Environmental Policy Act) should include an assessment of the cumulative impacts of not only the proposed project, but also other proposed projects (and existing facilities) in the area. These impacts would include the cumulative entrainment/impingement bioregion impacts, cumulative energy consumption impacts, cumulative growth-related impacts, and cumulative wastewater & urban runoff impacts, among others. This is especially important in areas where existing air quality, water quality or ecosystem health is already compromised"
0004.18			I strongly suggest this Poseidon desalinization plant be tabled or put on hold for 3 years so some more research can be done, so the general Orange County residents can be educated about the pros, cons, alternative options. Identified options that are more affordable should be drafted and employed. Furthermore it should be put on the ballot so Orange County residents can actually vote on this very important matter with the facts not just slick Poseidon special interest wall street propaganda.
0004.19			Alternatives to desalination operations include the recycling of local wastewater—processing and purifying sewage back to drinkable standards. In addition to being more environmentally friendly, this process costs roughly half the amount of desalination. Other options include improving stormwater management and harvesting, farmers utilizing drip irrigation, or offering rebates to consumers purchasing water efficient appliances.

Comment Number	Commenter	Date of Letter(s)	Comment
0005.01	Glenn Brooks	December 04, 2019	One expert on the subject contends that Orange County has a basin aquifer with 60,000,000 acre feet of water, which equates to centuries of water use without any ANY other water inputs, not Metro water, not GRWS water, not Santa Ana River flows - just the basin aquifer.
0005.02			Salt has a market value of \$60-\$80/ton*. If this project makes 50MGD of product water, that is 7,000 tons of salt per day and that seems to be \$490,000 of potential gross revenue. Furthermore the demand for salt is growing. One report expects a 3.7% growth rate or \$4.7 billion. Even raw brine is worth \$10/ton. That's \$70,000/day for selling brine. Is this developer even trying to align value and cost?
0005.03			Underground salt vaults or insulated tanks above ground can store waste heat from the desalination process to generate steam (to evaporate the brine?!?). Using a Combined Cycle Gas Turbine (CCGT), very common technology nowadays, would generate electricity to offset the enormous energy required by reverse osmosis. COST is one thing, but think of all the fossil fuel that won't be burned, all the greenhouse gas that won't be generated. Almost half the cost of reverse osmosis is energy. Why won't the developer use common, off-the-shelf CCGT technologies and innovate reverse osmosis desalination. Rate payers deserve better than this form of negligence.
0005.04			The 2015 Ocean Plan Amendment provides ample footing to make this project developer come back with solutions to resolve the violations in its proposal. California outlawed "Once Thru Cooling" and yet the developer thinks a WAIVER is owing because subsurface intake is a technology too expensive for this developer's 12% IRR.
0005.05			The marine life at this location has been suffering for decades cooling the AES power plant. The Ocean Plan took 10 years to formulate and the SARWQCB has the charge to protect the it. The loss of restored, recovered, renewed local marine life today will be a regional loss to marine life in a few short years and will continue to compound the ripple effects on the larger balance of the marine life ecology.
0006	Glenn Howland	December 04, 2019	Has the Board adopted Bioassay Protocols and Chemical testing methods for their use in monitoring complex effluent ocean discharges for the brine discharge associated with the HB Desalination Unit.
0007	Larry McNeely	December 04, 2019	I was a water treatment engineer and I find this expensive option out of line considering all the other options. When we ignore all the better options only to support a private for-profit investment scam who have influenced our decision makers with campaign support and have

Comment Number	Commenter	Date of Letter(s)	Comment
			bought mailers to spread their false information. It is now time to look at the facts and options. We as a community Huntington Beach do not support this fiasco.
0008.01	Barbara Mourant Irvine Ranch Water District (IRWD)	December 04, 2019	Irvine Ranch Water District (IRWD) understands that Poseidon and Orange County Water District (OCWD) have executed a non-binding term sheet for the purchase of product water from the Huntington Beach Desalination Plant (HBDP). Without firm commitments from retail groundwater agencies to accept deliveries of the HBDP product water (and OCWD has acknowledged that it has not received any firm commitments), OCWD will have to resort to recharging into the groundwater basin nearly all of the HBDP product water it purchases. This approach will force all of the groundwater producer agencies to accept and pay for water that many agencies have no need for; agencies that have no need for the water produced by HBDP should be allowed to opt-out of this supply.
0008.02			Investigations commissioned by IRWD quantified significant water quality impacts to the local groundwater basin as a result of recharge of “single pass” RO treated seawater, in violation of the State Water Resources Control Board Anti-Degradation Policy (Resolution No. 68-16). To reduce the impact of HBDP product water recharge, one of IRWD’s consultants recommends a “second pass” RO process would need to be implemented. Specifically, to avoid water quality impacts to IRWD’s recycled water system, it would require an 80% second pass RO treatment, resulting in a 127-MGD intake and a 77-MGD brine discharge. And to avoid additional boron accumulation in the local groundwater basin would require a 100% second pass RO treatment, resulting in a 131-MGD intake and an 81-MGD brine discharge. Neither the significant water quality impacts resulting from the recharge of the single pass RO treated water, nor the significantly increased flow rates through the HBDP intake and brine discharge facilities resulting from an 80% or 100% second pass RO treatment. Until the HBDP treatment process is refined, the HBDP cannot be evaluated by the Regional Board for an NPDES permit.
0008.03			IRWD recommends that the Regional Board defer consideration of an order to renew the NPDES permit for the HBDP until such a time the following have been accomplished: <ul style="list-style-type: none"> • Water agencies interested in purchasing the water produced by the HBDP have committed to purchase and take delivery of this water; • OCWD has developed a plan for distributing water from the HBDP and water supply integration studies have been completed based on the distribution method(s);

Comment Number	Commenter	Date of Letter(s)	Comment
			<ul style="list-style-type: none"> • Water quality specifications for the HBDP product water have been identified that are compatible with the selected distribution option and that avoid water quality impacts; • A preliminary design of the HBDP has been completed that complies with the identified water quality specifications; • Final HBDP intake and brine discharge flow requirements have been identified; and • A new or subsequent Environmental Impact Report is prepared and certified by the water agencies that have committed to purchase and take delivery of the product water, that evaluates the final HBDP intake and brine discharge flow requirements.
0008.04			<p>Should the Regional Board decide to proceed with an NPDES permit for the HBDP, it should require a more complete anti-degradation analysis to determine that the project meets the “maximum benefit” test under the State Water Resources Control Board Anti-degradation Policy. This complete analysis should include a degradation analysis of groundwater due to recharge of the product water and a degradation analysis of the ocean that includes intake and brine discharge flow scenarios associated with a two-pass RO system that will be needed to avoid water quality impacts. The Regional Board should also include a requirement for routine monitoring of boron in the seawater intake, brine discharge and product water. This will allow maintaining a mass balance of boron that will assist in avoiding impacts to the Basin and retail agency water supplies.</p>
0009	Robert Faiella	December 04, 2019	<p>As a longtime resident of Huntington Beach, I am completely against the de-sal plant!! We don't want it in our community and we will let everyone know we are against it.</p>
0010	Gino Bruno	December 03, 2019	<p>The Orange County Water District manages an enormous groundwater basin that contains over 60 million acre feet of fresh groundwater beneath the northern two-thirds of the county. That's enough water for almost 480 million people to live on comfortably for a year.</p> <p>OCWD captures Santa Ana River flows in large percolation ponds to regularly recharge the basin. OCWD has managed the Orange County groundwater basin very conservatively, only allowing pumping about 300,000 acre feet per year, about 0.5% of basin storage.</p> <p>Pumping down the groundwater basin a mere 5%, or 3 million acre feet, is enough of a water supply for 10 years, without any other outside sources of water to replenish the basin.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>With this affordable, local and reliable water supply already in the bank, why is Orange County entertaining a proposal for 56,000 acre feet of desalted ocean water a year at triple the cost of other sources?</p> <p>OCWD already uses up to 30 million gallons a day from its Ground Water Replenishment System. It is the largest wastewater purification project in the world that can treat up to 100 million gallons a day, at a fraction of the cost of desalination.</p> <p>When needed in the distant future, OCWD, as a public non-profit agency, will surely be able to build and operate a suitably designed and lower-cost alternative than what Poseidon Project is prematurely proposing today.</p>
0011	Mark Tonkovich	December 03, 2019	I cannot attend the meeting but want to express my opposition to Poseidon. There are better and less costly solutions.
0012	Paul Weghorst IRWD	December 05, 2019	(correction to an attachment for comment 0008)
0013	Penny Kyle	December 07, 2019	Please deny permits for the proposed Poseidon project. I am a citizen of Huntington Beach and am against this project.
0014.01	Jason Pyle	December 07, 2019	When the SEIR was accepted by the Huntington Beach City Council in 2010, there was a limit placed on the project that it not increase noise more than 5 decibels above ambient, at the nearest residential property and further, the City Council required a letter from Poseidon where Poseidon identified that the noise concern was valid and that the Noise Study was incomplete.
0014.02			<p>Since the EIR and SEIR was completed significant changes have taken place in the immediate area that will bring new legal challenges to Poseidon.</p> <p>The Magnolia Marsh Lands and the Brookhurst Marsh Land revitalization projects have been completed and there is more indigenous wildlife than when the 2010 SEIR was done.</p>
0014.03			AES power generation facility was approved by the CEC to build Two completely new Power Generating Plants. The new Generating Plants will have different noise impacts, different

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>geological positioning and will be under construction for the next 7 years. One of the two plants is now up and running.</p> <p>The Magnolia Tank Farm has been sold and is scheduled to be thousands of family homes that will be located 25 yards from the proposed Poseidon Project site. The proposed Poseidon Project will have Significant Impacts to the Residential Homes, specifically noise, that will be impossible for Poseidon to overcome.</p> <p>The construction of the New AES plant, and the construction of homes was never factored into Poseidon's EIR.</p> <p>Given the significant changes in the area since the Original EIR was done and the fact that Poseidon is now proposing completely different operational systems, it would only be prudent and responsible to require a new EIR to be argued in Court.</p>
0014.04			<p>The new water reclamation system is now up and running at the HB / Fountain Valley Sanitation Facilities and will produce over 120 million gallons of fresh water at a fraction of the cost to the Rate Payers.</p> <p>The need for the water produced by Poseidon is now questionable at best if not even needed.</p>
0014.05			<p>The Noise Study conducted by Poseidon only compared the anticipated noise levels to City Noise Ordinance standards and not on the comparison between current ambient noise and new operation noise which will have potential impacts on threatened and endangered wildlife in the neighboring marshes and the Wetlands and Wildlife Care Center. Further, Poseidon has ignored the cumulative impacts of the operation of both the AES energy facility and the Poseidon desal facility and possible cumulative impacts of construction at the AES energy facility as it changes out its once-through-cooling process and the construction of the Poseidon desal facility.</p>
0015.01	<p>Jordan Brandman</p> <p>Orange County Water District</p>	December 09, 2019	<p>One of the barriers to developing all new water supplies, including seawater desalination, has been capital costs; however, this WIFIA credit assistance program will help reduce the cost of building the project. Consistent with the water purchase terms between OCWD and Poseidon, the benefits of the lower-cost financing will accrue to the ratepayers in the form of lower-cost water and help pave the way for a new, locally controlled droughtproof supply of drinking water for Orange County.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0015.02			Project construction will create 700 jobs over four years.
0015.03			The drinking water that would be produced by the Huntington Beach Seawater Desalination plant is identified in the Orange County Water District's Groundwater Management Plan as the largest local supply available to Orange County. The water produced will be climate resilient and 100% carbon neutral.
0016	Pat Riley	December 09, 2019	<p>The two minutes I was allowed to speak at the Huntington Beach City Hall was not sufficient for me to communicate my report about Poseidon. I would appreciate it if the board and others concerned about this issue would watch my presentation</p> <p>https://www.youtube.com/watch?v=XJLWv2VEU9w&feature=youtu.be</p>
0017.01	Patrick Brenden Council-member City of Huntington Beach	December 04, 2019	I have reviewed the Tentative Order prepared by staff and find it to be robust and consistent with the prior approvals issued to the project by the City of Huntington Beach.
0017.02			The proposed project has changed significantly – and for the better - since the City's last approval in 2010 and the Regional Board's 2012 permit amendment. Today, the proposed facility will use almost 20% less seawater than previously permitted to produce the same 50 million gallons per day of drinking water, implement state-of-the-art seawater intake and discharge technology authorized under the California Ocean Plan, and maybe most notably the project now includes the long-term preservation and enhancement of the Bolsa Chica Wetlands.
0017.03			The Bolsa Chica mitigation plan proposed by Poseidon and incorporated into the permit by your staff is an urgent matter. Absent the implementation of this plan there is no identified long-term funding sources to ensure this valuable coastal habitat is preserved and enhanced in the future.
0017.04			The desalination project now qualifies as providing multiple public benefits - a climate resilient, drought- proof drinking water supply and an environmental enhancement project that will enhance the largest coastal wetlands complex in the Southern California Bight and one of the state's critical Marine Protected Areas.

Comment Number	Commenter	Date of Letter(s)	Comment
0017.05			<p>Numerous agencies including the City of Huntington Beach and Regional Board have previously found the environmental effects of the proposed desalination project to be insignificant and/or capable of being mitigated. At the same time the local and regional benefits of this project are indisputable.</p> <p>Please approve your staff-prepared permit amendment this coming March without further delay.</p>
0018.01	Mike Posey Council-member City of Huntington Beach	December 04, 2019	The City of Huntington Beach has issued permits and entitlements to the planned desalination facility on several occasions over the year. I am pleased to see that after all these years that the City's determination that the facility can be built and operated in an environmentally responsible manner is being upheld by the Regional Board.
0018.02			The Regional Board's Tentative Order includes a vast investigation of project alternatives (i.e., project site, design, size, seawater intake and discharge technology, mitigation), just like the City did almost ten years ago, and the permit amendment correctly authorizes the operation of a project that complies with all local, state and federal laws and regulations.
0018.03			I want to commend your staff on their excellent work. I concur with the Regional Board staff's determination that issues commonly raised by desalination opponents about the cost of water and preferred alternative supplies are beyond the regulatory scope of the Regional Board and beyond the intent of the State Water Board's recently adopted desalination regulations.
0018.04			It's important for the Regional Board to know that as a condition to the aforementioned City-issued permits, Huntington Beach, at its sole option, can receive up to 3,360-acre feet per year of desalinated water at a 5% discounted price off the rate its pays for imported water. This will allow the city's water ratepayers to save money and access over 10% of its demand from a locally controlled, climate-resilient water supply.
0018.05			The vast majority of the 200,000 constituents that I represent support the proposed desalination plant as do I. I strongly encourage you to approve the amended and renewed permit in March and avoid and further delay in the implementation of this project.
0019	Dan Silver	December 11, 2019	Please reject this desalination plant. Water conservation can supply all the water needed, without the adverse marine effects and the huge energy consumption.

	Endangered Habitats League		
0020.01	Steve Knutsen	December 11, 2019	I feel very strongly that the Poseidon Project should be defeated. Here are just a few of the reasons why Poseidon would be such a bad project: -Extravagantly expensive - over a billion dollars cost for plant -Ratepayers would have to pay for all the Poseidon water for 30 years whether it's needed or not, guaranteed by the contract Poseidon proposes -Poseidon desal water costs 3 to 4 times more than the water we have now
0020.02			-Environmentally destructive - would create a dead zone in ocean in surrounding area - Endangered Least Terns and other wildlife would be threatened since their fishing area in wetlands and ocean would be badly damaged by pollution
0020.03			-Energy-intensive use of electricity to run the plant - we don't need the greenhouse gases it would cause
0020.04			-Water is not needed here since Orange County has a large aquifer which provides 70% of our water needs -the rest is imported water and is 3 times cheaper
0020.05			-Carlsbad Poseidon has failed to deliver all the water to San Diego County they promised by contract due to repair delays -Carlsbad Poseidon has paid million of dollars in fines for polluting the area -Conservation is a much more productive and inexpensive solution
0021	Scott Cooper	December 11, 2019	Please do not allow build the building of this plant in our neighborhood. There is no reason to add this "high cost" unnecessary eye sore to our city in my neighborhood.
0022.01	Lynn Friedman	December 11, 2019	Let us solve our water issues with a less intrusive, destructive and expensive program. There are many that have been shown to not only equal to what Poseidon claims to be able to accomplish in giving water, but that explain and answer the questions that are asked of them. Poseidon is not something we want in our beaches- it is bad for the marine life, ugly, expensive and asks us to pay these big sums without even supplying us answers to the questions asked of them. They have not given information asked of them by city council members.
0022.02			The Poseidon facilities running now do NOT have good track records, constantly in violation.

Comment Number	Commenter	Date of Letter(s)	Comment
0022.03			If in the future, should other programs fail, let's bring them back to the negotiating table. Then they need to prove answers and show what improvements they have made in the interim.
0022.04			I have lived here all my life and I and my family love the beauty of our neighborhoods and beaches. Do NOT allow Poseidon to build a desalinization plant here.
0023.01	Brett Korte UCI Law Environmental Law Clinic, Representing Azul	December 13, 2019	On behalf of Azul, the UC Irvine Environmental Law Clinic respectfully reiterates its request that the California Regional Water Quality Control Board, Santa Ana Region (Regional Board) extend the written comment deadline for Poseidon's Draft Waste Discharge Requirements (Order No. R8-2020-0005, NPDES No. CA8000403), and Water Code § 13142.5(b) Conditional Determination through, at a minimum, February 28, 2020.
0023.02			Additionally, as stated at the December 6, 2019 workshop, Azul requests that the Regional Board hold another public hearing at a date well before the adoption hearing, now scheduled for April 3, 2020. Azul believes that additional opportunities for comment are necessary to allow for adequate public participation.
0023.03			Finally, as requested in the Regional Board's Notice of Public Workshop and Notice of Public Hearing, the oral comment presented by Certified Law Student Michael Damasco on behalf of Azul at the December 6, 2019 workshop attached herein.
0023a	Michael Damasco, UC Irvine School of Law's Environmental Law Clinic, representing Azul (Summary of oral comments made at the December 6, 2019 Regional	December 06, 2019	(From Attachment provided): Azul has two requests. One, that the Board extend the deadline to submit written public comment to February 28. And two, that the Board provide an additional opportunity for the public provide oral comment at a hearing held well ahead of the adoption hearing. The public notice for the draft Order and Determination was delivered less than two weeks ago, and worse, today's workshop is the only listed opportunity for oral public comment before the adoption hearing. That does not honor the resolution to partner with communities and promote public participation that the Board just committed to. Extending the written comment deadline through the adoption hearing, and providing at least one additional opportunity for oral testimony will allow for a more appropriate level of public input. There are - of course - substantive concerns to be raised.

	Board public workshop)		
0024.01	Hildy Meyers	December 14, 2019	Poseidon proposes the most expensive of all water options for Orange County, which would make water less affordable for low income households in Orange County. Water is a human right and should not be privatized or priced beyond the means of low-income people.
0024.02			In the process of pursuing this boondoggle, Poseidon has bought off nearly every politician in Orange County and beyond.
0024.03			Poseidon proposes the use of outdated technology which is highly energy intensive, and therefore contributing to the climate crisis and ocean level rise. The discharge of waste water will further damage the environment, as will using the outmoded ocean water intake.
0024.04			Poseidon has a poor track record and is not a good corporate citizen. They should not be allowed to damage the environment in order to use outdated technology to privatize unneeded water in Orange County.
0025	Kaitlyn Kalua California Coastkeeper Alliance	December 16, 2019	The document provided supports California Coastkeeper Alliance's concern regarding Board Member Kris Murray's participation in matters concerning the Draft Waste Discharge Requirements for Poseidon-Huntington Beach Desalination Facility (Order No. R8-2020-0005, NPDES No. CA8000403), and we respectfully request that Board Member Murray recuse herself from Regional Board actions with respect to this project.
0025a	Sean Bothwell California Coastkeeper Alliance	December 12, 2019	(From Attachment provided): Given both Ms. Murray's previous support of the proposed Poseidon – Huntington Beach ocean desalination project and disqualifying financial interests, we request Ms. Murray be disqualified and removed from any Water Board action involving the project. At minimum, it is necessary that Ms. Murray recuse herself from any decision or action involving the proposed Huntington Beach ocean desalination facility to avoid any appearance of impropriety and avoid conflicts of interest in her role as a Regional Water Board member.
0026.01	Jim Madaffer, San Diego County Water Authority	December 19, 2019	The San Diego County Water Authority ("Water Authority") has a strong interest in making sure that discussions about the Carlsbad facility are based on fact. To this end, I want to address the following faulty impressions created by some stakeholder comments during your meeting: Comments were made at the workshop that the Carlsbad Desalination Plant is experiencing serious performance issues. The Water Authority strongly contests such comments. Since start-up in December 2015, the state-of-the-art desalination facility has provided San Diego County

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>with over 57 billion gallons of high-quality, locally controlled and climate resilient drinking water. During the state-imposed mandatory reductions on water use that took place during 2016, California regulators certified the Carlsbad Desalination Plant as a "drought-resilient" water supply. This certification provided San Diego County with relief from water restrictions and helped protect the regional economy.</p> <p>In fact, this past May the San Diego Regional Board approved the long-term operation of the Carlsbad facility, making it the first plant to be permitted by the Water Boards under the new Ocean Plan Amendment regulations.</p>
0026.02			<p>Like any complex water supply project, efforts to optimize the Carlsbad plant performance resulted in temporary shortfalls in production that are expected to occur during the initial years of startup and operation of any new facility. I'm pleased to report that these startup challenges have been resolved to the Water Authority's satisfaction, the temporary shortfalls didn't impact our ability to meet regional water needs, and - contrary to the comments made at the workshop that the plant continues to be plagued with performance problems - the Carlsbad plant has produced and delivered 99% of the water requested by the Water Authority in the contract year that started July 1, 2019. In recognition of this outstanding performance, Fitch Ratings recently upgraded its rating on the 2012 construction bonds for the Carlsbad plant, which directly translates to lower cost of water for the Water Authority.</p>
0026.03			<p>Comments were made at the workshop that the Water Authority has recovered significant "financial penalties" from Poseidon for non-performance. Such comments reflect a lack of understanding of the Financial protections in place for San Diego County ratepayers. Under our Water Purchase Agreement with Poseidon, the Water Authority only pays for water that is delivered, and Poseidon pays the debt service on the desalinated water delivery pipeline in proportion to any undelivered water. Thus, the so- called "financial penalties" are pipeline debt service payments made by Poseidon during the plant optimization period in accordance with the terms of the Water Purchase Agreement.</p>
0026.04			<p>Comments were made at the workshop that the Carlsbad Desalination Project is experiencing serious environmental compliance issues with respect to the chronic toxicity limit established for the plant discharge. The plant has never discharged "toxic brine" to the Pacific Ocean or been shut down due to permit violations. These statements significantly misrepresent the environmental compliance record for the Carlsbad plant.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>The citation conditions were self-reported and were administrative in nature and did not result in water quality issues or cause harm to ocean plants or animals.</p> <p>The toxicity incidents that Poseidon self-reported are an artifact of an <u>error</u> in the toxicity monitoring and reporting requirements in the original discharge permit adopted by the San Diego Regional Water Board for Carlsbad plant operations. The toxicity monitoring protocol in the previous permit failed to take into consideration the pre-dilution of the brine that is required under the permit prior to discharge. The San Diego Regional Water Board was aware of this problem from the onset of plant operations in 2015 and advised Poseidon to conduct testing on one sample in accordance with the permit requirements, and on a second sample that has been adequately diluted prior to discharge. Samples analyzed without consideration of predilution failed toxicity tests 30% of the time. The samples that were adequately diluted consistently passed the toxicity test, demonstrating that the plant operations did not cause toxic conditions in the ocean, and that violations were an artifact of the testing procedure in the permit. In May of 2018, the San Diego Regional Water Board adopted a revised permit for the Carlsbad plant that corrected the error in the toxicity testing requirements.</p>
0026.05			<p>Comments were made that desalinated water could harm potable water quality. Not only does water produced at the Carlsbad Desalination Plant provide increased local control and climate resiliency to the San Diego region's water supply, a recent study found it is also improving overall water quality. Since desalinated water was introduced into the region's water supply in late 2015, water hardness has decreased, along with the total dissolved solids and chlorides. The salinity and chloride concentrations of water produced at the Carlsbad Desalination Plant are only about half those of imported water. As a result, the current water supply is helping to prolong the lifespans of many household appliances, improve manufacturing and other industrial operations and support local agriculture. Since the Carlsbad Desalination Plant has lowered the regional water supply's salinity levels, water recycling facilities have observed a pass-through benefit of decreased salinity levels in their recycled water supplies, as well.</p>
0026.06			<p>At a cost of a 0.8 cents per gallon for production and delivery, the Carlsbad facility is proving to be cost competitive with the development of other new local supplies. At the end of the 30-year water purchase agreement with Poseidon, the Water Authority assumes ownership of the desalination facility. In October, the Water Authority authorized the ownership transfer of the Carlsbad facility conditioned upon Poseidon Water continuing in its</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			plant management role. By any metric, the Carlsbad Desalination Plant has been a tremendous success, it is a critical part of our region's infrastructure and we anticipate many more years of productive partnering with Poseidon.
0027.01	Forest Earl Surf City Voice	December 17, 2019	The OCWD Board of Directors majority has consistently and relentlessly pushed the proposed publicly subsidized \$1 billion ocean desalination plant for Huntington Beach proposed by Poseidon Water, a subsidiary of Brookfield Assets, a huge multinational corporation. They have done so through biased public hearings, biased studies that were specifically precluded from considering alternatives and whether a real need for the project exists or not, and through illegal secret meetings held with Poseidon representatives calling the shots (as revealed in articles I wrote for the Surf City Voice).
0027.02			The Poseidon project would produce 56,000 AF of water a year and replace an equal amount of cheaper water the OCWD currently imports to refill the Santa Ana River groundwater basin to safe levels after (often excessive) depletion caused by groundwater production by its 19 agencies or "producers." But the price of Poseidon's water would be 3 to 4 times greater than the imported water, which would be freed up for use by other districts outside of OCWD jurisdiction—those districts will be subsidized by OCWD at the rate of the price difference.
0027.03			This video (https://www.youtube.com/watch?v=3lqdT-bBlal) was taken on Dec. 6, 2019 at a public workshop held in Huntington Beach by the Santa Ana State Regional Water Quality Control Board which will vote in April on whether to issue needed permits for the project. A quorum of 8 out of 10 OCWD board members attended the meeting and several of them stood with Poseidon during its 20 minutes of time allotted by the Regional Board to make its case for the project. OCWD president and vice-president Vincent Sarmiento and Cathy Green (respectively) spoke of the supposed benefits of the Poseidon project, often with dishonest and misleading claims, as if the passage of a contract between the company and OCWD was a done deal, pending approval of state permits. The collection of OCWD board members at the Regional Board meeting, acting no less as an official arm of Poseidon Resources during the company's allotted time, raises ethical and legal questions about impartiality and Brown Act violations, such as holding in effect its own public meeting (within the Regional Board's meeting) without notice, public comments, etc. Watch as Scott Maloni, Poseidon's VP for marketing, kicks project-opponent/OCWD board director Kelly Rowe off of the podium platform, stating (as reported to me), "You're not going to speak on my time" and then brings paid Poseidon lobbyist Barbara Boxer to the podium.

Comment Number	Commenter	Date of Letter(s)	Comment
0027.05			Could it be any clearer who the OCWD BOD really represents? It seems that from now on it would be more appropriate to refer to the Orange County Water District as the Poseidon Water District of Orange County.
0028.01	Guadalupe Heredia	December 18, 2019	I understand the importance of having a reliable source of water, especially in Southern California where more than half of the water supply is imported. Governor Edmund G. Brown signed the Assembly Bill 685 states that "Every human being has the right to safe, clean, affordable, and accessible water. With this in mind, the proposed Desalination plant is not the solution for reliable water for the residents of Orange County. Orange County has a groundwater basin that supplies water to more than 2.4 million residents and is the least expensive source of water. There are alternatives to a desalination plant in Orange County that are economically and environmentally feasible. For example, expanding groundwater recharge, conservation, and stormwater capture.
0028.02			The desalination plant is expensive, bad for the environment, and is not sustainable. A UCLA study determined that the Poseidon desalination plant can double or triple water cost for rate players. The high rates would directly affect the low-income households by worsening water affordability concerns in Orange County. The desalination plant will impose threats to marine life and is very energy intensive. Two gallons of water are needed to create one gallon of water.
0028.03			The Municipal Water District of Orange County conducted an independent assessment on the feasibility of regional water supply strategies and found that the Poseidon Desalination Plant ranked last. There is no need for a Poseidon desalination plant in Orange County. In fact, Orange County has relatively few reliability deficiencies compared to the rest of California. Alternative forms of water projects should be implemented, and desalination plants should be a last resort measure.
0029	Ray Heimstra Orange County Coastkeeper	November 25, 2019	<p>Given the long timescale in developing this permit, and the complex, technical nature of the project, we respectfully request an extension to submit public comment on the draft permit published by your Board on November 22, 2019.</p> <p>We request an extension to internally review and to consult with technical third-party experts to properly assess the technical components of this draft permit. We have patiently and diligently waited two years for the release of this draft permit. Specifically, we are asking for a full 60-day comment period to prepare and submit comments on the draft permit.</p>
0030.01	Ann Tarkington	December 04, 2019	There are plenty of other nearby sources of water we have available that cost far less.

Comment Number	Commenter	Date of Letter(s)	Comment
			<ul style="list-style-type: none"> • OCWD manages a 60+ million acre-feet groundwater basin. That's enough water for almost 480 million people to live on comfortably for a year. • OCWD captures Santa Ana River flows in large percolation ponds to regularly recharge the basin. OCWD has managed the Orange County groundwater basin very conservatively, only allowing pumping about 300,000-acre feet per year, about 0.5% of basin storage. • This groundwater basin provides huge comfort to know we will not be short of good fresh groundwater supplies to maintain our great economy and quality of life, even in a long-term drought emergency situation. • Pumping down the groundwater basin a mere 5%, or 3 million acre-feet, is enough water supply for 10 years, without any other outside sources of water to replenish the basin.
0030.02			<ul style="list-style-type: none"> • With this affordable, local and reliable water supply already in the bank, why is Orange County entertaining a proposal for 56,000-acre feet of desalted ocean water a year at triple the cost of other sources? No wonder only insignificant 3,000-acre feet of Poseidon's water has purchase agreements from prospective water agencies. • OCWD already uses up to 30 million gallons a day from its Ground Water Replenishment System. It is the largest wastewater purification project in the world that can treat up to 100 million gallons a day, at a fraction of the cost of desalination.
0030.03			<ul style="list-style-type: none"> • Why should we reward this private, for-profit company and expect anything other than the same poor performance they've delivered here and in other parts of the country? • When needed in the distant future, OCWD, as a public non-profit agency, will surely be able to build and operate a suitably designed and lower-cost alternative than what Poseidon Project is prematurely proposing today.
0031.01	Joslin de Diego	December 04, 2019	This project has been proven to be a bad deal for our community for the following reasons: more expensive water, loss of ocean micro wildlife, acidification of the ocean, and the list goes on.
0031.02			Additionally, the term of contract is incredibly long for an outdated technology, more expensive water and a system that will ruin our local beach water.
0032.01	Taylor Haug	December 04,2019	As a HB resident, the cost of water will go up.
0032.02			Additionally, the OCWD only uses .5% of the water stored in the basin. There is plenty of water to go around for Southern California, and I'd hate to see proposal go to fruition.
0033.01	Steven Ferrell	December 9,2019	I feel it is not right for a private company to have access to Pacific Ocean water intake and discharge unknown amounts of byproduct.
0033.02			I think the impact to ocean life and plants can hurt us for generations.

Comment Number	Commenter	Date of Letter(s)	Comment
0033.03			The cost of using old technology is way too costly and will be forced on public when there are other options to replenish our aquifer.
0034	Meg Watson	December 23, 2019	Please make sure this project is really worth all the sacrifices we who live in the neighborhoods will be making: noise, pipes, stored ground water, heavy traffic, damage to homes along pipe route. Chance of student crossing danger, And the fact that we would feel better if we were dealing with a respected successful Desalination company with excellent results which are reportable to all of us.
0035.01	Dan Jamieson and Roxanne McMillen	December 30, 2019	Originally, Poseidon planned to use discharge water from the AES power plant to dilute Poseidon-produced waste brine. That dilution source will not be available, nor will alternate dilution sources. The resulting discharge of concentrated brine without dilution will result in a toxic plume that will settle on the ocean floor. Hence, the proposed site fails to use best mitigation measures as originally contemplated.
0035.02			OCWD's claim that just 3.8 MGD of subsurface intake could impact the freshwater aquifer is suspect and the Board should evaluate carefully the OCWD staff's ability to make such a prediction, and the conflicts inherent in relying on any OCWD analysis. If subsurface intake could indeed impact the fresh-water aquifer, as claimed by OCWD staff (whose board is pushing the Project), this is further evidence that the Project is too big to operate at the proposed site.
0035.03			Subsurface intakes, the best technology, were rejected in part simply due to the size of the proposed Project, and the unknowns of subsurface intake at the scale proposed by Poseidon. Simply propose a grandiose scheme big enough to negate use of best practices should not be justification for not using best practices. For a project of this size, test wells rather than modeling should be used to evaluate whether subsurface intakes are practical.
0035.04			The tentative order does not appear to address the benefit to marine organisms of AES no longer taking in and discharging ocean water. This benefit to marine life will be lost under the Project's intake plan and the 60-million-gallon per day toxic brine plume that will shear marine life and settle onto the ocean floor, creating an estimated 400-plus acre dead zone.
0035.05			The Ocean Plan requires that alternative sites be evaluated in order to determine the best site feasible to minimize the intake and mortality of all forms of marine life. Here, the tentative order fails. As noted by Board staff, equipment needed to study mortality at the various alternative sites failed during testing. In addition, surprise data errors, discovered by the consultant and unknown to Staff and the Coastal Commission, forced the consultant to make a series of statistical leaps about alternative site mortality. The Board cannot accept this flawed mortality study.

Comment Number	Commenter	Date of Letter(s)	Comment
0035.06			The Board will also consider socio-economic factors in its analysis. In my view, large industrial operations on the coast are a thing of the past (power plants, for example). Adding a brand new large industrial operation on the coast will impact beach goers, pedestrians, bicyclists, residents, anyone traveling near the coast, and recreational and commercial fishing activity. Working-class recreational anglers, for example, cannot afford travel to Catalina or multi-day offshore trips, and tend to rely on local waters for recreation and fresh fish.
0035.07			The Project will cause consumer water costs to rise, impacting low- income people the most. As a result, for socio-economic reasons, the proposed order fails.
0035.08			There can be no argument that desalination fits within relevant urban water management plans. How could it not? A local source independent of drought conditions is a no-brainer for any water plan. But the question is, at what cost to marine life? On this question, the Project fails. As the MWDOC 2018 water reliability study notes, Poseidon is at the bottom of the list in terms of new supply projects. (The MWDOC 2018 reliability study, covering the years from 2014-15 to 2040, reported that total direct and indirect water demands were projected to increase just 3.27%, from 499,120 AFY to 515,425 AFY. That's a total of 16 AFY. It remains unclear why OCWD is proposing to pay a large premium to Poseidon to produce 56,000 AFY.)
0036.01	Mark Dixon	January 08, 2020	While I am not a scientist, I have carefully studied numerous peer-reviewed articles, projections and analyses on the subject and am deeply disturbed about the effect upon the marine environment resulting from high concentrations of salt on the Huntington Beach shoreline.
0036.02			<p>Another concern of equal importance is the lack of demonstrated need for the plant. No research, no study, no evidence has established that a desalination plant off our fragile coast is needed.</p> <p>You must know by now that this part of the coast sits upon an aquifer more than adequate to serve the needs of citizens for many decades to come. Moreover, there are other effective and far less costly means to provide water to the area, including Waste Water Reclamation and Recycling and, if you prefer a no-cost alternative: Conservation.</p>
0037.01	Sandra Fazio	January 08, 2020	By now you know there is a lot of opposition to this planned desalination plant on Huntington Beach's coast. You should reconsider the position favored by staff so far. The salt will be very concentrated in a small area. Even with diffusers. This will create a potential dead zone.
0037.02			There is no need for the water. Orange County saved more water per day than this plant will produce without really trying at the height of the drought. We have not even begun to explore

Comment Number	Commenter	Date of Letter(s)	Comment
			recapturing rain water. And, the Orange County "Tap to Toilet" recycling plant can produce the same amount of water with a lot less side effects and for way less money.
0038	Jill Cagle OCWISE	January 08, 2020	Orange County Water Independence Sustainability and Efficiency (OCWISE) is a diverse, non-partisan coalition. The amended permit that your staff presented in December represents the culmination of literally years of work – three years actually, that is how long the Project permit has been in process. The coalition urges the Regional Board to move forward with a sense of urgency. This is literally the only climate proof source of water available to Southern California. On behalf of the coalition and the generations that will come after us, we must secure new water for Southern California.
0039	Darrell Neft	January 08, 2020	I oppose the Poseidon project. The output is too salty and can negatively affect marine life. The Poseidon project affects the viability of sanitation district projects in recycling waste water. Their current project will result in additional water resources at a lower cost than Poseidon project.
0040.01	William Dickinson	January 08, 2020	I believe the reasons that you should vote NO on the Poseidon Desalination plant are very simple and straight forward. The price of the desalinated water is unbelievably expensive. The water supply from it is not needed. Better we should spend the money on water reuse than desalination.
0040.02			It is not environmentally compatible as it would dump 5 TONS PER MINUTE OF SALT BACK INTO A SMALL AREA OF THE OCEAN.
0041.01	Paula Hulse	January 08, 2020	Was there not a study that showed how much the ocean will rise in the years to come and wipe out much of the coast line and the projects that depend on the ocean to keep them doing their questionable work?
0041.02			We do not need this project and the area is already in a mess with all the other projects that are being worked on (the Mud Dump.) There is already too much dirt, dust and noise; it will be much worse if you allow this to go further.
0042.01	Shawn Olson	January 09, 2020	I really do not understand why you're building a desalination pump. It's going to wreck the fish and sea life ecosystem even more than it has already been wrecked. Our oceans are dying and we need to be working toward restoring the only ocean that we have. The ocean has also been

Comment Number	Commenter	Date of Letter(s)	Comment
			getting saltier due to climate change; the potential proposed plant will increase the salt content in the water killing more of its sea life.
0042.02			Building a plant that is in our backyard that we do not need, is another thing that I should touch on. The water from the plant would not even be for us, HB does not have a water shortage problem. It would likely make the price of water go up in the area as well to offset the cost of the facility and the cost that it would be to produce expensive water through a plant like that. So it is not a good idea to begin with. The push for the dealination plant is money driven.
0043	Dorothy Riley	January 09, 2020	I am very much against the passage of the above project because of many different ways it could be affecting the marine life and health of our citizens of H.B. who enjoy our waters and beaches every day, especially during the warmer months. I feel it will be just another pollutant added to our waters. Not only to the water here but to our health. Noise and air pollution is not needed here as the residents of South Huntington Beach have been undergoing enough of all of the above for many years already, and has been the cause of many illnesses to date. Some more serious than others. I have developed a chronic cough since living right across from the AES landfill. I have owned my home since 1978 and put up with years of all of the above. Since there is no real evidence that this water is needed according to many of the experts that have been involved, I am convinced that it is not necessary now or in the near future.
0044	Kenneth Killian	January 09, 2020	<p>The need for this water simply does not exist when you consider the excellent conservation and underground water storage measures already in place This desal water will place a financial burden on residents for decades to come. Also, the actual cost of the water and project will be far greater than is now presented. This is a certainty with government projects!</p> <p>Huntington Beach is blessed with an amazing environment and incredible beaches! The intake pipe and salt brine waste from this plant will harm HB beaches and ocean. Please, let's not do anything to mess with our beautiful beaches and ocean. Preserving them should be always a top priority!</p>
0045	Lynn Friedman	January 09, 2020	It is irresponsible to build this plant for many reasons, two being that the Carlsbad plant has not only not provided the water it has promised (and it is at a much higher cost than other methods of attaining this water) but has multiple citations this year alone, due to salty, chemical laden brine that is dumped into the sea and harms ocean plants and animals.

Comment Number	Commenter	Date of Letter(s)	Comment
			There are other ways to increase our water supplies without the marine life damage, ugly structures and expense. This is a sham and we hope that you responsibly look at this project beyond the politics.
0046	Steve Southern	January 09, 2020	When I grew up in the 50s and 60s, there was an incredible abundance of life all along our coasts. Tide pools filled with a variety of wildlife. Now, there's not so much, and this desal plant, like the one in Chile, will kill everything around it. And, it is not even needed.
0047	Ron Smith	January 09, 2020	After reading and listening to all the pros and cons I believe the most sensible to be the one that said it makes no sense to build this plant now . I care about the marine life and ocean and what effect this plant will have on it. In the future, if the plant becomes truly needed, it can be built then. By waiting, more time will be given to see if better ways have been developed and/or proven that will have less impact on the marine life and ocean. My understanding is that the water is not needed now especially with the ground water replenish system being developed. In addition, it seems Poseidon is a very costly option that was at the bottom of the list for obtaining more water if needed.
0048	John Gordon	January 09, 2020	I believe the Poseidon plant will have an adverse effect on local marine life due to salt brine. I believe there are far better ways to use existing water by reclaiming. The track record of desalination and Posideon is not good. Thank you!
0049	Audrey Prosser	January 09, 2020	NO to this de-sal plant is not needed. In time the Huntington Beach shoreline will be a salt beach void of birds and sea life just like the Salton Sea. It won't happen overnight but it will be your legacy to your kids. Also it will be an Economic disaster to tourism.
0050	Christine Martin	January 09, 2020	Please, please, PLEASE do NOT let this boondoggle get approved. I'm sure you've read the scientific reasons, but just in simple terms we don't need the water, construction will be a nightmare, it will be years because we truly know the damage the brine will cause, and the entire project will probably be obsolete before it's finished.
0051	Vanessa and Jeff Webster	January 09, 2020	I want you to hear my loud NO to the Poseidon Plant! We must protect our marine life. There are other less costly and safer ways to ensure that we have water.
0052	Dan Silver	January 09, 2020	The Endangered Habitats League opposes this unneeded facility. Our water supply needs can be most cost-effectively met through water <i>conservation</i> . Desalination is unnecessary.

Comment Number	Commenter	Date of Letter(s)	Comment
	Endangered Habitats League		Furthermore, desalination has significant adverse effects on the marine environment including, but not limited to, salt brine and loss of sea life in intake pipes. Energy use is high, and again, water conservation is the best choice.
0053.01	Lena Hayashi	January 09, 2020	Please do not allow Poseidon to build a desalination plant at the AES site. This plan was conceived so many years ago, before the salt-intake cooling technique was curtailed. The expensive and environmentally destructive plant is out of date with the times and needs.
0053.02			Our water reclamation facilities are capturing water and successfully storing it. We can't store any more with Poseidon and yet have to pay for it. I know it is a complicated issue but I have lived in my home in Huntington Beach since 1972 and I have heard the pros and cons and I can't help but feel this is not in the interest of residents and that it is all about power and money.
0054.01	Michael Durgerian	January 09, 2020	This desalination plant for Huntington beach is a bad idea. Not only will it bill us 4 times the water rate but it will pump lots of salt back in the ocean and kill what is left of the sea life by putting too much salt proportional to water in our area. I live by the HB pier and surf and enjoy what is left of the wildlife. I vote and have rentals here too.
0054.02			The discharge of 5 tons of salt per minute to a small area of the ocean will negatively affect the marine environment. It happened in Chile where the destructive effects of salt brine are bad.
0055.01	Christine Padesky	January 09, 2020	<p>As a Huntington Beach resident, I have been following this issue for years and it comes down to two questions: 1) Do we need the water; 2) Is this project the best way to meet any unmet future needs. The answer to both questions is no.</p> <p>As to the need, we have extensive reserves in local aquifers and have recycling capacity in the local water treatment plant. If the SARWQB believes we do have unmet future water needs, then good management would suggest you issue an RFP and weigh more than one proposal to meet those needs. The Poseidon plan is old-fashioned (in 2040 or 2050 terms, the soonest any water is likely to be needed) and extremely expensive. Surely in the 20 years since Poseidon appeared on the scene there have been new technological advances that could lead to less expensive and more environmentally friendly proposals.</p>
0055.02			I am also worried about the effects of salt water brine produced by Poseidon (https://www.wired.com/story/desalination-is-booming-but-what-about-all-that-toxic-brine/)

Comment Number	Commenter	Date of Letter(s)	Comment
			I realize after so many years of debate you may want to just move this project forward to get it off your desks. However, sometimes the best leadership requires saying no to an old idea in order to make room for some new ideas. Since we currently have the ability to meet the county water needs for at least the next two or three decades, we can wait 10 years to see what new technologies develop that will cause less salt brine deposits in our ocean with greater efficiency and lower costs. The best legacy you could achieve as SARWQCB members would be to stop this project and take a pause. The likely result will be better technology for a future-oriented project.
0056	Pat Riley	January 09, 2020	(duplicate of 0016)
0057	Lisa Rodman Agua Hedionda Lagoon Foundation	January 09, 2020	<p>As the committed steward of the Agua Hedionda Lagoon, Poseidon Water has steadfastly upheld its promise to preserve and protect our local marine environment here in Carlsbad. Since assuming stewardship last year, Poseidon has taken steps to help ensure the ongoing vitality of this magnificent estuary while also preserving local access to the Lagoon's many recreational attractions. Poseidon Water has also proven to be a great neighbor, and we're proud to have such an important regional resource like the Carlsbad Desalination Plant contributing to the Agua Hedionda Lagoon's health and longevity.</p> <p>The Agua Hedionda Lagoon encompasses more than 400 acres of marine, estuarine and wetlands habitat teeming with hundreds of fish, invertebrate and bird species. Today, Poseidon Water maintains the periodic dredging of the lagoon which ultimately improves its overall environmental health and allows it to realize the life-sustaining benefits of an open connection to the Pacific Ocean. This stewardship also helps maintain the lagoon's tidal circulation, which is critical to the biological operations of the Carlsbad Aquafarm and Hubbs-Sea World Fish Hatchery, and provides extra sand to keep local beaches beautiful and sandy for visitors to enjoy.</p>
0058	Scott Mirtle	January 09, 2020	As a graduate of Huntington Beach High School, a life long citizen of Orange County and child of the ocean, I would greatly like to encourage you to find alternative methods for water supply other than the Poseidon Project. The salt brine that gets distributed back into the ocean will

Comment Number	Commenter	Date of Letter(s)	Comment
			cause too much harm to the local ecosystem. I can point to numerous scientific reports and I'm sure you can find counterpoints, but if I'm right and you're wrong the environment will suffer.
0059	Litta Cecchi-Bash	January 10, 2020	We do not want the spending of so much money on the above when we do not need the water and it will contribute to kill our marine life and environment. I oppose a project that has been proven a failure in Carlsbad.
0060.01	Cathy Green Orange County Water District	January 10, 2020	<p>I want to highlight, the importance of this project to the District and that this is not a new development and is not without significant consideration and documentation. In fact, in 2010, the District signed a Memorandum of Understanding with Poseidon for the consideration of the purchase of water from the proposed desalination Project. As the sole remaining Board member from that time period - you will remember I addressed you then on behalf of the District. In 2013, the District hired a financial advisor to evaluate the financial feasibility of District purchasing the full 50 MGD of drinking water to be produced by the facility. And in 2015, the District's Board of Directors voted to approve a non-binding Water Purchase Agreement Term Sheet for the purchase of 50 million gallons per day of drinking water from the proposed project.</p> <p>The Term Sheet was approved by the Board after numerous public meetings and review and amendments to the Term Sheet were proposed by a 30-member Citizens Advisory Committee. The term sheet was then updated in July 2018. All this history speaks to the conclusion reached by your staff that the project complies with the California Ocean Plan and specifically meets an identified need for desalinated water.</p>
0060.02			It is the District's mission to provide the cities and retail water districts it serves with a reliable, adequate, high-quality water supply at the lowest reasonable cost in an environmentally responsible manner. The Huntington Beach Project meets that test. Seawater desalination is the only source of water that is 100% climate resilient.
0061	Eugene Huettner	January 10, 2020	As a long time resident and taxpayer of Orange County I am apposed to approval of this plant in Huntington Beach. The plant poses many hazards to the environment as well as an ineffective use of energy which will have an impact on atmospheric carbon which we can ill afford. We should be doing more to recycle water rather than support paying much, much more for water from a for-profit company. I urge you to oppose this misadventure for our sake and the sake of our future families.

Comment Number	Commenter	Date of Letter(s)	Comment
0062.01	Jay Drake	January 10, 2020	I strongly oppose the Poseidon desalination plant in Huntington Beach. The plant, intake pipes and salt brine deposits will be harmful to the marine environment, sea life and water quality.
0062.02			As a surfer in Huntington Beach for decades, the water quality is already not good due to runoff from the Santa Ana River and other rivers in the area, non-point source pollution from the streets, as well as industrial and oil activities. Any activities that will further degrade the water quality could have catastrophic and permanent harmful impacts. It will be harmful to surfers, fisherman, tourism, and the local economy. Huntington Beach is known throughout the world for its beaches and ocean quality. This desalinization plant in Huntington Beach will negatively impact Huntington Beach and its economy, beaches and ocean quality.
0062.03			The need for water sources should be pursued by conservation, water reuse, education and other methods. The need for water should not be pursued by this environmentally and economically harmful desalination plant.
0063	Cathy Cavecche OC Taxpayers Association	January 10, 2020	<p>To date, Poseidon Water has invested tens of millions of dollars over the past twenty years in the regulatory process of the Huntington Beach Seawater Desalination facility. These private dollars protect the taxpayers and ensure that the public water agencies that will decide whether to green-light this project will do so based on need and value and not based on the "sunk-cost" of tax dollar investment during the regulatory process.</p> <p>This project will provide a new, drought-proof, climate-resilient water supply for Orange County. Additionally, it will create an infusion of millions of dollars in tax revenue to the local community. And the mitigation Poseidon Water is proposing will ensure the protection and restoration of the Bolsa Chica wetlands at no cost to the taxpayers.</p>
0064	Donna Specht	January 10, 2020	We have been fighting Poseidon for I forget how many years. We just don't want their water. We don't need their water. We do want to protect our marine environment. Poseidon's desal will kill everything. You don't want to go down in history for approving this horrible, destructive idea.
0065	Brett Korte Azul	January 10, 2020	On behalf of Azul, the UC Irvine Environmental Law Clinic again requests that the Santa Ana Regional Water Quality Control Board extend of the deadline for written comments on Poseidon's Draft Waste Discharge Requirements (Order No. R8-2020-0005, NPDES No. CA8000403), and Water Code §13142.5(b) Conditional Determination through at least February 28, 2020.

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Since receiving Azul's last deadline extension request, the Regional Board took a laudable step by sending an Additional Informational Request to Poseidon on January 8. However, the deadline for Poseidon to respond, currently set for January 17, does not allow sufficient time for interested parties to analyze and comment on additional information provided before the written comment deadline of January 21, a mere four days later and spanning a holiday weekend.</p>
0066	Anna Ferree	January 11, 2020	<p>There will be about 5 tons per minute of salt returned to a small area of the ocean off our coast negatively effecting the marine environment.</p> <p>There are better ways to increase our water supply. This article gives some alternatives to desalination.</p>
0067.01	Bill Yarchin	January 11, 2020	<p>There is simply no need for the water.</p> <p>Not even close. The Orange County Water District's (OCWD) enormous groundwater basin contains over 60 million acre-feet of fresh groundwater. That's 13 times the volume of Lake Shasta, enough water to serve everyone in Orange County for 160 years. OCWD manages this groundwater basin very conservatively, only allowing about 300,000 acre-feet per year to be pumped out of the basin's storage. (= 0.5%).</p> <p><i>Thus, for the extended future, Orange County will have abundant good fresh groundwater supplies</i> for maintaining the economy and quality of life here. Even in a worst-case long-term drought emergency scenario, pumping the basin by 100 times the normal rate, the supply would last over 10 years.</p>
0067.02			<p>OCWD captures Santa Ana River flows in large percolation ponds to regularly recharge the basin. Imported water supplies are also purchased for routine basin replenishment, at a fraction of what Poseidon's water will cost.</p> <p>That's why that Poseidon's prospective customers – the local water agencies – have virtually no interest in buying its water. So almost all of the Poseidon very expensive desalinated water would be injected into freshwater aquifers, up to 56,000 acre-feet a year. Yet the OCWD already has water treatment capacity of 112,055 acre-feet a day at a fraction of the cost of desalination.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			In short: there is simply no need for the proposed desalination plant in Huntington Beach. Not even close.
0068	Craig Wagner	January 11, 2020	It will do too much harm to the environment. And we do not need this very expensive water.
0069.01	Randy Baker	January 12, 2020	Do the math that you are paid by the public to do. Not that math with the numbers that Poseidon's agents have given you and the rest of us. Their version is truly "fake news". Think of the astronomical environmental and financial debt you will be bequeathing to your children and grandchildren if you believe Poseidon's fakery.
0069.02			Ask your fellow citizens of North San Diego County how satisfied they are with the desalination "deal" they are obligated to pay for. Then ask yourselves why you would want to subject your North Orange County residents to that same kind of obligation.
0070.01	Chris Yates U.S. Depart. of Commerce National Oceanic and Atmospheric Administration (NOAA) National Marine Fisheries Service West Coast Region	January 15, 2020	<p>Seawater desalination may adversely affect essential fish habitat (EFH) via entrainment and impingement of living marine resources which reduces biological productivity.</p> <p>In addition, NMFS (2014) provided comments and general support for the Desal Amendment. (Under Background)</p> <p>The construction and operation of the Facility would adversely affect EFH by removing ecosystem components (i.e., early life stages of fish and invertebrates), reducing prey availability, and through direct mortality of managed fish species. The majority of taxa affected by the Facility are coastal marine species, some of which are commercially and recreationally important.</p> <p>The APF analysis for the Facility utilized 2003-2004 plankton data collection for the AES Huntington Beach Generating Station, and included both estuarine and coastal fish and invertebrate taxa.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			Northern anchovy yielded the highest APF (771.6 acres) of the taxa used in the Marine Life Mortality Report. Northern anchovy are an important prey resource providing forage to many upper trophic level predators, and historically supported a substantial fishery in California. Rock crab yielded the second highest APF (686.4 acres). Rock crab are not federally managed, but they are an ecologically important component of the nearshore environment (Carroll and Winn 1989). Juvenile rock crabs are important prey of numerous invertebrates and many commercially and recreationally important fishes. (Under Effects to EFH)
0070.02			In addition, the brine discharge may cause shear stress mortality and may be directly harmful to sensitive species and/or reduce habitat quality. (Under Background Title)
0070.03			<p>Board staff determined that the estimated marine life mortality resulting from the construction and operation of the Facility would be 421.42 acres without a mitigation ratio applied to estuarine or coastal taxa. (5th Paragraph)</p> <p>Board staff recommended that the final APF for impacts to coastal, soft bottom species be adjusted by using a mitigation ratio of 1:5.8.</p> <p>If the combined SONGS lampara and trawl data provide the best estimate for the shallow sand habitat, then the use of the corresponding habitat value (1227.2) would yield a productivity scaling mitigation ratio of 1:3.3. Given differences in seascape context, NMFS understands the Board's conclusion that affected shallow sand habitat off Huntington Beach may not be equivalent to the absolute habitat value (1227.2) calculated for San Onofre.</p> <p>(Under Productivity Scaling Mitigation Ratio)</p>
0070.04			As described in Appendix G.5, Board staff collaborated with NMFS staff to develop initial estimated values for the Mitigation Ratio Calculator (MRC) (King and Price 2004), which resulted in a mitigation ratio of 4.25:1. However, NMFS staff specifically noted that this ratio was lower than typical preservation action scenarios, and did not account for the fact that the Ports of Long Beach and Los Angeles received mitigation credit for the Bolsa Chica Lowlands Project. Therefore, NMFS staff indicated that Board staff should consider increasing the mitigation ratio to address these issues. In contrast, the Board ultimately lowered the mitigation ratio to 2.92:1.

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>NMFS notes that the USACE's South Pacific Division's Standard Operation 4 Procedure for Determination of Mitigation Ratios suggests that preservation should have a mitigation ratio between 4:1 and 20:1.</p> <p>Furthermore, NMFS does not believe the Board has fully accounted for the fact that the Ports of Los Angeles and Long Beach already received mitigation credit for Bolsa Chica Lowlands Project.</p> <p>(Under Bolsa Chica Wetlands Mitigation Ratio)</p> <p>NMFS believes the Board should re-evaluate their underlying mitigation ratio justification for the proposed preservation action. Specifically, NMFS believes the Board should increase the mitigation ratio to account for the above, and believes that 4:1 should be considered as a minimum preservation ratio for this particular action.</p> <p>(Last Paragraph)</p>
0071.01	Barbara and Steve Noffsinger	January 15, 2020	It uses antiquated technology
0071.02			It destroys marine life with its intake pipe and with the high salt brine export.
0071.03			It will produce costly water that we as rate payers will be forced to buy.
0071.04			we certainly don't need especially in Huntington Beach with our excellent reclamation system.
0071.05			It will tear up our streets for years!. If they want water in the south county, consider the retired San Onofre plant. Our south east Huntington Beach neighborhood has way too much going on with •magnolia tank farm, •new electrical plant, •old dump site, and •sewer treatment plant. It is too close to the Ascon landfill site with possible contamination and with the possibility of ocean rise due to climate change.
0072	R Lindsey	January 13, 2020	Over the last 30 years we have seen a return of species long gone from the area. I surf along this beach and witnessed first hand the return of the brown pelicans, pods of dolphins and the millions of shellfish that fill the sand at low tide. 30 years ago there were no dolphins, shellfish or

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>pelicans, just sand Now Poseidon wants to dump its waste water on them. The currents will carry the brine south in winter, north in summer and the prevailing onshore wind will deliver it to the beach.</p> <p>Conservation is the solution. We have converted our front and back lawns to native plants making a huge reduction in our water bill while providing habitat for the birds and bees.</p> <p>If we can't protect our little corner of the environment from industrialization, how can we save the planet from the larger issues of over population and climate change?</p>
0073.01	<p>Steve Bullock, David Fleming, Tracy Hernandez</p> <p>Los Angeles County Business Federation (BizFed)</p>	January 13, 2020	As noted by the Metropolitan Water District of Southern California (MWD) in its letter of support of the project that was sent to the State Lands Commission, MWD's "long-term Integrated Water Resources Plan (IRP) achieves diversification with an "all of the above" approach (that) includes... developing climate resilient resources such as seawater desalination."
0073.02			MWD has a goal of producing 2.4 million acre-feet of water from local supplies by the year 2040. Over that same time, Southern California is expected to grow by more than three million people. These residents and businesses need access to locally-controlled, droughtproof and climate-resilient supplies of water. The Huntington Beach Seawater Desalination Project checks every one of those boxes.
0073.03			LA BizFed encourages the Santa Ana Regional Water Quality Control Board to support staff's proposed draft permit and vote to amend and renew the permit for this project, which was first approved in 2006 and unanimously amended in 2012.
0074	Leslie Cochrane	January 13, 2020	Please please....NO Poseidon!!!!!!!

Comment Number	Commenter	Date of Letter(s)	Comment
0075	Jeanie Petrocella	January 13, 2020	I don't believe this company is reliable, poor track record. The water is too expensive and is not needed. Finally, there's too much environmental damage and it will be a nightmare for local residents.
0076	Jeanne Whitesell, Jeanie Petrocella	January 13, 2020	Same as 0075
0077	Flossie Horgan	January 13, 2020	I would like to know how the SARWQB will respond to such facts that demonstrate the damage that the outfall from the proposed Poseidon desal plant will produce to the ocean environment. In the Poseidon/HB case, to desalinate 50MGD of seawater, the process must dispose of 5 Tons per minute of just salt every minute of every day of every year for 30 years. That 5T/minute is only the weight of the salt---not the brine. Do the math: Seawater is 3.4% salt by weight; a gallon of seawater weighs 8.34 lbs.; a gallon of seawater contain 0.284 lb. of salt; therefore, 50MGD would contain 14,178,000 lbs. of salt per day. This works out to 9,486 lbs./minute or about 5 Tons/minute.
0078	Nora Pedersen	January 13, 2020	Please do NOT support the Poseidon project. Salt will be concentrated when it is dumped in the ocean and kill marine life. Secondly, the salt water sucked into the plant will also contain marine life eggs; they will die. The effect on the marine food chain will be devastating.
0079.01	Ron Miller LA/OC Building and Construction Trades	January 13, 2020	The Huntington Beach Seawater Desalination Plant is the right project in the right place at the right time. As you heard from such authoritative water district manages as the Orange County Water district and the Metropolitan Water District of Southern California, this project is needed to help Orange County reduce its reliance on imported water and become more water independent. This project is needed to help Orange County reduce its reliance on imported water and become more water independent. This project is without question the single largest source of new, drought-proof water supply available to Orange County.
0079.02			In addition to the billions of gallons of new drinking water and millions of dollars in new tax revenue, this project will also result in thousands of new jobs for the hard-working skilled and trained men and women in the building trades. Electricians, Laborers, Pipefitters, Cement Masons and countless other trades men

Comment Number	Commenter	Date of Letter(s)	Comment
			and women will bring this project to fruition on time and on budget. This will also create a pathway for entry into apprenticeship programs in the building and constructions trades for community members that live around the project and result in life long careers in construction.
0079.03			The applicant holds an existing permit; they are simply asking for an amendment and a renewal to that permit. The San Diego Regional Water Quality Control Board granted a similar request to the applicant for its Carlsbad Seawater Desalination plant, which uses the same technology that is proposed for this plant. I ask you to simply follow the science and follow the law and approve the permit as your staff has indicated would be the appropriate action for you to take.
0080.01	Vicky McGavack	January 13, 2020	With AES up and running I was so happy that HB will no longer need to use ocean water for cooling, allowing HB to conserve our marine life. Oh but wait!! You are considering to approved the Poseidon project, which is a disaster just like the movie. I don't understand why Huntington Beach, who takes such pride as "Surf City" and boasts our wonderful beaches, would consider the destructive effects that desalination (salt brine) will have on our marine life.
0080.02			There are other ways to conserve water; landscape changes, appliance and fixture upgrades and leak repairs.
0080.03			Lastly, in the propaganda I received from "HB Desalination Project" (sent from Carlsbad, CA), Poseidon said " Current funding to maintain the ocean inlet at the Bolsa Chica wetlands runs out in 2021 and without the maintenance of this inlet, the future of the wetlands could be at risk. The HB desalination project will provide funding needed to maintain this inlet and protect the Bolsa Chica wetlands for the next generation". I am sure that the Bolsa Chica wetlands leadership can figure out how to pay for an ocean inlet using fund raising and community resources as does the HB Wetlands and Wildlife care center. But apparently on their propaganda even the CA State Lands Commission felt that would be a great selling point. I am not buying it and hope you won't either.
0081	Timothy Stripe Grand Pacific Resorts	January 13, 2020	I am writing in support of the critical role desalination plays in supporting the San Diego region's booming tourism industry. Carlsbad Desalination Plant, which provides San Diego County with 50 million gallons of drought-proof water every day. As the largest seawater desalination plant in the nation, the Carlsbad plant provides tremendous benefits for the San Diego region's water reliability and gives local businesses the assurances they need to thrive. Additionally, the plant has boosted the local tourism market by attracting 30,000 visitors since its opening, and the steady water supply it provides has helped enhance the region's economic competitiveness.

Comment Number	Commenter	Date of Letter(s)	Comment
			Desalination helps provide the reliability our region needs to continue growing and thriving. I thank you for the opportunity to comment on this important matter and hope you will consider the many benefits desalination brings to both our region's economy and local quality of life.
0082.01	James Gosnell Gosnell International	January 13, 2020	Poseidon's proposed desalination plant would have a disastrous impact on California's marine life, ocean water quality and greenhouse gas emission goals.
0082.02			The draft Permit disregards the state's desalination regulations and would set a terrible precedent for future desalination projects. The draft permit holds a private company looking to profit off Californian's drought fears to an abysmally low standard for the protection of our precious coastal resources.
0082.03			Since 2010, the residents of Orange County have dramatically reduced our cumulative demand for freshwater - despite significant population and economic growth. The Orange County Water District has expanded Orange County's world-renowned Groundwater Replenishment System by 30 million gallons a day and is set to expand by that size again soon. Now Los Angeles County is planning a similar Groundwater Replenishment System that will contribute 60 million gallons a day to replenish Orange County's groundwater basin. Further, a recent study by the Municipal Water District of Orange County ranked Poseidon's project as the least attractive option for meeting Orange County's water needs.
0082.04			California state regulations for seawater desalination require projects to utilize sub-surface intakes to avoid impacts to marine life and to mix the brine with the nearby wastewater discharge before disposal to the ocean. The draft permit does not adequately address the absence of these design features in Poseidon's proposal. Instead, Poseidon plans to use outdated and harmful technology.
0082.05			We do not want to perpetuate the industrialization of our coastline. The people of California own our ocean public trust resources, yet Poseidon proposes to profit from taking seawater and converting it to the most expensive water supply available without showing a need for the water. It is your responsibility to protect our public trust resources.
0082.06			We deserve clean water to recreate in, clean air to breathe and a beautiful coastline to enjoy and share with visitors.

	of San Marcos Judy Ritter Mayor, City of Vista		
0085.02			Since its inception, the Carlsbad Desalination Plant has been a tremendous asset to our region. Construction of the Carlsbad plant and the 10-mile conveyance pipeline spanned our three cities and was often in close proximity to homes and businesses. The project team was successful in collaborating with numerous project partners and coordinating and communicating with nearly 25,000 nearby residents and businesses to ensure everyone was kept informed about construction activities. Throughout construction, local businesses were engaged to source critical components of the plant and pipeline, infusing hundreds of millions of dollars into the local economy and enhancing our region's economic competitiveness.
0085.03			Additionally, the project set new environmental standards for how desalination plants can be constructed in California by restoring 66 acres of wetlands in San Diego Bay and planting 5,000 trees in areas damaged by wildfires – measures that will benefit our region for generations to come.
0086	Rich Tonti Pacific Paradise Pools	January 15, 2020	I am a business owner of a swimming pool construction firm and know all too well the challenges California faces with water and its scarcity. The last drought was a tremendous strain on the entire CA economy, Our business included.
0086.02			I toured the Carlsbad Plant in December 2019 and am beyond impressed with its operations and the prospects of having a sustainable and renewable water supply available in Huntington Beach and to our neighbors in OC. I believe that this proposed Plant is long over due and one of many solutions to make OC less dependent on outside water sources.
0086.03			I believe that this proposed Plant is long over due and one of many solutions to make OC less dependent on outside water sources.
0087	Dirissy Doan	January 15, 2020	We have testified and written letters supporting the Huntington Beach Seawater Desalination plant and we continue to support approval of this project. A reliable, drought-proof, and climate-resilient water supply is more critical now and will become more important in the future. Most of

Comment Number	Commenter	Date of Letter(s)	Comment
	Orange County Realtors		us lived through the four-year drought that resulted in the state imposing water restrictions in order to manage our water use. While water use efficiency is crucial, new local water supplies must also be considered.
0088.01	Lori Shaw	January 15, 2020	I am strongly against this proposed plant for several reasons including the consequences of this project to the marine environment and to the beach I love so much. In addition I am concerned about the amount of damage the salt brine deposits and intake pipes will have on our local beach and marine life.
0088.02			We are still reeling from all the changes and tremendous increase in noise from the new Electrical Plant which will be right next door to the Poseidon if it is approved.
0088.03			Also I am not convinced about the need for this water in the first place
0088.04			and if anyone will be able to afford it after this Project is built because it will end up being so expensive.
0089	Laurie Davies Association of California Cities-Orange County	January 15, 2020	Our Groundwater Replenishment System (GWRS) is world renown for being the most technologically advanced Indirect Potable Reuse project on earth. Yet even with GWRS and the county's reduction in water use, Orange County still imports about half of its drinking water from Northern California and the Colorado River. This supply of imported water is reliant on rainfall and snowpack, which can vary wildly from year to year. Additionally, a natural disaster such as an earthquake, could cut this supply off for months or even years. And our growing populations in other western states further strains the Colorado River water supply. The Huntington Beach Seawater Desalination Plant would be the single largest source of new drought-proof water supply for our county. This project is identified in both the Municipal Water District of Orange County's Urban Water Management Plan and the Orange County Water District's Groundwater Management Plan as a planned future water supply. In other words, local agencies are counting on this project to meet future needs. This project will reduce Orange County's reliance on imported water and has the support of the Metropolitan Water District of Southern California.
0090	Richard and Sharon Schact	January 15, 2020	<p>We are concerned that a desalination plant in Huntington Beach will adversely affect our fragile ocean environment as well as the recreational aspects of our beach.</p> <p>The salt/brine that would be released seems to be very harmful. We have yet to hear how Huntington Beach will benefit from a desalination plant, yet the plant would seriously harm our environment. It would seem that there are other alternatives to desalination that would benefit us without the cost to our marine life.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0090.02			Also we assume there will be infrastructure going through Huntington Beach to carry the water.
0091.01	Mark Goodman	January 15, 2020	<p>In our view, there are a number of reasons this proposal should be rejected and not move forward.</p> <p>They include: The potential (and very probable) negative effects on the marine environment by both the destruction of marine life sucked into the huge plant intake pipe and the significant amounts of salt brine deposited back into the ocean.</p>
0091.02			The questionable need for the water. Many studies have highlighted the various more economical alternatives to desalination. With only some of these utilized to date, they have resulted in alleviating a large portion of potential water shortages.
0091.03			The use of the existing large intake pipe for this project is also questionable. The pipe, long used for the AES power plant, will no longer be used for that plant as having been deemed unacceptable by the State of California due to environment concerns. Why this pipe system is somehow acceptable for the Desal plant when not for the power plant is a mystery since the effects on the environment are actually significantly worse in the Desal application (due to the brine).
0091.04			The cost of the Desal water. The projected cost, as identified in the proposed contract is exceptionally high and appears to be based on some very questionable economics. The length of contract term of 30 years is unreasonable as technologies and other factors could significantly undermine the value of this plant in a short time.
0091.05			High energy use. The production of Desal water requires the highest use electrical energy when compared to virtually all other options.
0091.06			The company's track record. The performance of the company in both the Florida plant and Carlsbad plant are not very good with problems ranging from poor plant performance, economics not matching projections to citations for not meeting environmental requirements. There appears to be very little "teeth" in penalties or cost adjustments contained in the proposed contract to protect the community.
0091.05			Effects on the community. Distribution of the plant water will require numerous new piping systems. The installation of these will adversely affect the community due to road closures, increasing traffic, and impact commuting times.

Comment Number	Commenter	Date of Letter(s)	Comment
0092.01	Denise Jordan	January 15, 2020	We don't need and may not ever need a desalination plant. I understand we have several cheaper options, we have full aquifers for the next 20 years, and can utilize all the other options if a drought happens to occur.
0092.02			<p>The wealthy wall street east coast investors will make billions of dollars off of unsuspecting OC residents by making us pay for the desalination plant with much higher water bills for the next 35 years! I've heard 6-10.-/mo to start!!! We will only get 5% of the water and other cities that will be benefiting from this don't have to pay for it!</p> <p>Other cities residents where they use 80 gallons of water per day will benefit while we in HB are using far less and paying far more unnecessarily!</p>
0092.03			On top of all this, it will hurt our environment by killing the fish eggs, fish, and everything else in the ocean and create a dead zone with the super salinated water waste and who knows what else they will be spewing into the ocean.
0093	Nichole Pichardo	January 16, 2020	I want to express my support for the approval of the Huntington Beach Desalination Plant. I believe that this is a technology that we should harness to ensure that we have plenty of water in the years to come. Although we have had a few lucky years of rainy weather, this will not last. Climate change will surely send California into a drought once again and we need to be prepared.
0094	Debbie Workman	January 16, 2020	I feel strongly that this is something that will benefit our community greatly. The effects of climate change are currently threatening Orange County's water supply and we must act now to before it is too late. It's not a matter of if, but when, the next serious drought will occur. Water conservation is an important piece of the puzzle but we must be proactive in developing new sources of water. Seawater desalinization is a viable solution. It will help to alleviate this threat and insure that our community's water needs are met. Huntington Beach has a history of being a home to innovative technology and this is an important, innovative opportunity that many HB residents like myself support.
0095.01	Bethany Webb	January 16, 2020	#1 It will negatively hurt our precious coastline.
0095.02			#2 It will cost us money.
0095.03			#3 We don't need it.

Comment Number	Commenter	Date of Letter(s)	Comment
0096	Bonnie Benton	January 16, 2020	PLEASE take all facts into consideration in your final evaluation of this wrong-headed project. There is enough recent information about rising acid levels in coastal ocean water to warrant a denial of their permit at this time. Their financials do not make sense, and the larger issue is this project if approved as it is will set a standard. We all know there are many other projects in planning stages all along the coast in California. The project in Dana Point now seems to be losing support as well.
0097.01	William Workman	January 16, 2020	First, the staff's proposed environmental protection conditions for use of the proven desalination technology by Poseidon are strong contemporary measures to safeguard the ocean.
0097.02			<p>Second, Orange County is in a very vulnerable position with regards to its fresh water resources. Not openly discussed is the fact our groundwater basin can be destroyed by an earthquake, toxic spill or act of terrorism. Similarly, the fragile water transport system from Northern California is subject to a major disruption due to an earthquake, toxic spill or act of terrorism. A desalination facility can provide a measure of independence to partly address these two unthinkable occurrences.</p> <p>Thirdly, climate change is real and doing something now to increase water resources is critical. While long term weather forecasts are problematic, it is clear we need to have additional water sources to deal with Southern California's history of regularly occurring droughts. Having a desalination facility will complement our existing water sources. Lastly, secure and ample water resources is primary consideration for Orange County residents' quality of life, jobs, economic health and environmental protection. For all these reasons, it is a very good decision to support the Huntington Beach desalination facility today ... and not have regrets later.</p>
0098	John Wammes Water Works, Inc.	January 15, 2020	<p>I am writing to you regarding the many ways desalination can support the growth of our water and economic future.</p> <p>The Claude "Bud" Lewis Carlsbad Desalination Plant has helped diversify the San Diego region's water supply, which supports critical industries throughout San Diego. One of those industries, Craft Brewing, has become nationally and internationally regarded , propelling San Diego to be known as the number one craft beer destination in the country.</p> <p>There are numerous reasons why San Diego is able to maintain its place as a top craft beer locale, but one of the most important is often overlooked - high-quality water. Since 2015 when</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>the Carlsbad Desalination Plant opened, the addition of desal water into our region 's distribution system has created a noticeable increase in overall water quality. This has subsequently made our beer that much better and the recipe options more versatile. Purifying the water to remove minerals and organic compounds helps to extend life and reliability of brewing equipment and industrial manufacturing operations for companies throughout the region , supporting the economic vitality of these critical industries, as well. I encourage you to consider the reliability and peace of mind that desalination can provide for the many industries that rely on a secure and safe water supply.</p>
0099	Jim Ure	January 16, 2020	<p>I think we should proceed to develop and build the desal plant. We need a secure source of drinking water that will be available when we are back in a drought. I'd suggest negotiating a max limit on what the developer can charge for the water we use. Ideally, we can inject excess water into our aquifers to store for when we need it. If we had enough excess, we could stop or cut back on the amount of Colorado River water that we currently purchase.</p>
0100.01	Barbara Noffsinger	January 16, 2020	<p>Duplicate of 0071</p>
0101.01	Valli Febbraro	January 16, 2020	<p>As you may know by now, Poseidon's last project the Carlsbad Desalination Plant built by Poseidon was sold. They missed their production goal and had to pay 1.9 million in penalty, 5 major violations and that their water cost was \$2,685/ac-ft and is expected to increase to \$2,892/ac-ft this year. As far as I can tell OCWD only has one other district that is interested in signing up for the water. Why? It is expensive, low quality, boron levels exceed World Health Organization levels.</p>
0101.02			<p>We don't need this expensive, low quality water. I appreciate that you asked the hard questions and hope that you have been able to review everything that was discussed at the meeting. There are so many other options that should be considered first. When we had the recent drought the people were called upon to reduce their water use, we did! Plus, no one mentions all of the people that have changed their landscapes to water friendly. More and More people are doing that and it should have a big impact on water needs in the future. I don't have numbers on what % is used for landscaping but I am sure it is a good portion. I believe that OCWD was awarded 4 new grants for increasing water recycling.</p>
0101.03			<p>This plant will lock us into something that we can't get take back once we commit to it!. It Kills marine life, and creates a threat to marine habitat. Isn't it better to try less expensive options? Review MWDOC report.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0102.01	Jeff Rokos	January 16, 2020	<p>I am not opposed to the concept of desalination, but I am opposed to the design of this project, the location of this project, and the company behind this project.</p> <p>First of all is my concern for our local marine environment and the damage that this desal plant will cause to the same. The ocean-water intake system that used to be used for cooling the neighboring power plant is obsolete and has been prohibited by the state Supreme Court for year, mainly because of the amount of marine life that it killed. Yet, Poseidon's plan is dependent on that system since they admit the Coastal Commission's preferred sub-surface intake system would be "economically unfeasible." Well, it seems to me that makes the whole design unfeasible since it all starts with obtaining the ocean water.</p> <p>Secondly, the concentrated brine effluent that will be discharged back into the ocean is projected to create a 'dead zone' on the ocean floor of over 400 acres. And thirdly, the actual desalination process is energy-intensive, requiring high amounts of electrical power, thereby increasing the amount of greenhouse gases being released into our ever warming atmosphere.</p>
0102.02			<p>Additionally, I have concerns about this project being located in close proximity to the ocean which is expected to rise 4-6 feet by the end of the century, likely turning the location into an island. And that is only if it is not taken out of service by an earthquake or the resulting tsunami since the plant will sit atop an earthquake fault. It seems that this source of 'emergency water' will most likely be unavailable in the event of an emergency.</p>
0102.03			<p>Finally, the track record of the company that wants to build this desal plant is not good. Their first such project of note was built along Tampa Bay in Florida and eventually had to be taken over by the county at a considerable cost in order to make it feasible. They have since built a plant in Carlsbad similar to the one proposed for Huntington Beach that has yet to reach Poseidon's projected production levels while racking up numerous violations for the polluted, discharged effluent being released into the ocean there. They are a for-profit, venture capital firm that cares only about making a dollar. The fresh water they say they will deliver will be priced at multiples of what it can currently be obtained for. Water is the basis of all life, and it should never be allowed to be privatized on this scale. I urge you to deny the permit that Poseidon seeks, sending them yet another message that their expensive water project in Huntington Beach is harmful to the environment, unnecessary for your constituents, and unwanted by the community. After 20 years, it is time for them to cut their losses, fold their tents, and move on. Without your approval and other future commitments to buy their water, they will eventually see that they have no choice.</p>

0103.01	Ernie Courter	January 16, 2020	Poseidon's proposed desalination plant would have a disastrous impact on California's marine life, ocean water quality and greenhouse gas emission goals. The draft Permit disregards the state's desalination regulations and would set a terrible precedent for future desalination projects. The draft permit holds a private company looking to profit off Californian's drought fears to an abysmally low standard for the protection of our precious coastal resources. This plant would discharge toxic brine near surf breaks, create an enormous amount of greenhouse gases and kill billions of marine larvae every day. It is not an environmentally sound decision
0103.02			Poseidon is proposing to Construct this desalination plant in Huntington Beach utilizing decades old, poorly designed and outdated technology, with obsolete and abandoned intake and output pipes. Our neighbors in San Diego County have the same plant currently that has been cited with many environmental violations and cannot meet expected production expectations. This large-scale privatized desalination plants a bad deal for Cities, Water Districts and Consumers of this County. We have better, less environmentally damaging options to meet our water needs
0104	William Butts	January 16, 2020	I am strongly in favor of the HB desalination project since we need as many sources of fresh water as possible. I have tird the Carlsbad desalination plant and was very impressed in how they care for the ocean while providing a major source of water for San Diego county.
0105.01	Dallas Weaver Scientific Hatcheries	January 17, 2020	As an environmental scientist with expertise in larval aquatic animals, I can state that all the "concerns" about "larval entrainment" are effectively pure " junk science ". The model for estimating "impacts" contains know false assumptions to get the results the agency desired. There is no field evidence or experimental evidence to back up their model results and the model has never been published in a peer reviewed scientific journal. It couldn't get through even minimal peer review and it would be exposed as junk science.
0105.02			However, the water prices demanded by Poseidon are three time the world price for the same process and technology. Part of this excessive cost is to cover the time and effort to obtain permission. If your decision doesn't include costs, the science says YES.
0106	Terrell Koken	January 17, 2020	These people want to wreck the marine environment, stir up the crap, dump a lot of salty water back in the ocean, and charge us double for water we don't need, and for which there is no foreseeable need, but which we must buy anyway. They have oh-so-generously mandated that they will give us the whole plant in fifty years, for FREE! But there is documented proof that no

Comment Number	Commenter	Date of Letter(s)	Comment
			desal plant has ever lasted more than twenty years, so what they are generously donating to us is basically a superfund cleanup site.
0107	Marinka Horack	January 17, 2020	<p>There are a multitude of reasons why this project must be stopped. Chief among them is the damage it would do to the ocean habitat through its ocean water intake pipes that would kill countless numbers of sea life, thus degrading the rich ocean ecosystem. Add to that, the 24/7 discharge of concentrated brine and effluent from the plant which would create an increasingly degraded ocean environment. This would cause havoc for the ocean creatures and the sea birds that depend upon a healthy ecosystem to survive.</p> <p>The California Least Tern nesting site near the mouth of the Santa Ana River was set aside to protect this endangered species. The proposed Poseidon project nearby would put this species at great risk.</p>
0108	Armida Brashears	January 17, 2020	<p>We DO NOT need the Poseidon desalination facility !!! We only need to construct more waste water treatment facilities so that we can clean all our waste water to replenish our aquifer. That WILL NOT require taking water from the ocean and needing to mitigate damage to marine life. That WILL NOT require putting salty brine into the ocean, our oceans are already too salty. Waste water treatment is less expensive both for use of electricity and facility maintenance. Waste water treatment does not require the citizens to sign up for a contract that mandates us to pay for water that we may not need.</p>
0109.01	Tyler Diep California State Assembly	January 15, 2020	<p>Representing the 72nd Assembly District, which includes the Orange County cities of Fountain Valley, Los Alamitos, Seal Beach, Westminster, portions of Garden Grove, Huntington Beach, and Santa Ana, and the unincorporated areas of Midway City and Rossmore, the Huntington Beach Desalination Project is very important. Seeing it come to fruition will mean jobs, economic growth and a climate resilient water supply for Orange County.</p>
0109.02			<p>This project has been underway for more than a decade and the permit before you in April represents years of work. The renewal of the Poseidon permit, which your staff supports, takes us one step closer to a climate resilient water supply.</p>
0109.03			<p>And there is more, in the heart of my district is the Bolsa Chica Wetlands. At almost 1,500 acres, the Bolsa Chica Wetlands is the largest saltwater marsh between Monterey Bay and the Tijuana River Estuary, and it's designated by the state as a Marine Protected Area. Bolsa Chica has a variety of vital functions: a natural flood control, organic water purification, land erosion control, as well as providing critical habitats to over 1,100 species, including 50 endangered fish and wildlife species. Approximately 30,000 people visit the reserve each year for recreational</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			activities, educational tours, and wildlife watching. About a decade ago, tidal action to the Bolsa Chica Ecological Reserve (Bolsa Chica) wetlands was restored. This restoration effort assures long-term and effective tidal action to support estuarine and coastal fish populations in this important regional wetland habitat.
109.04			The State Lands Commission, which oversees Bolsa Chica, has stated that the funds to maintain the ocean inlet will be depleted by the end of 2021. As part of the project, Poseidon and the Regional Board staff have reached an agreement that will ensure the long-term restoration of Bolsa Chica. Without the long-term, sustainable source of funds, the wetlands and restoration effort are at risk. The years of work and effort risk being undone. This Bolsa Chica project feature will make the Huntington Beach Desalination Plant a net environmental benefit. In addition to the plant complying with the Ocean Plan, it appears there remains misinformation about the project. Various local and state authorities have vetted this project and your staff has recommended approval by the Board.
0110.01	Mikel Hogan Residents for Responsible Desalination	January 17, 2020	The proposed desal plant is not needed as we have other water supply options that are currently working well: recycling, conservation, and cleaning up groundwater. These options, moreover, are much less costly to the community and are better for the environment.
0110.02			Poseidon's intake system , for example, would kill marine life creating a dead zone offshore Huntington Beach and threaten our ocean biodiversity and marine habitat. The brine discharge from the proposed Poseidon plant is another environmental threat because it would increase salinity and toxicity of the ocean water again adding to the dead zone offshore Huntington Beach.
0110.03			We have just lived through a terrible drought without needing Poseidon's high cost, polluting water. Desalinated water should be a last resort water option for meeting our water needs because it is the most costly and energy intensive method to produce fresh water.
0111	Stefanie Tellez	January 17, 2020	As you might imagine, I had concerns about the potential disturbances associated with the work to make the plant operational, but Poseidon Water did a stand-up job of minimizing construction-related impacts to our community and letting us know in advance of work that may impact our traffic routes. They hosted several open houses and generally made themselves available at any time to address questions and concerns.

Comment Number	Commenter	Date of Letter(s)	Comment
			I commend them for being a good neighbor and pleased to see that they have also become a positive addition to our business community. I am proud to have the largest and most energy-efficient desalination plant in the nation right here in our backyard and I would recommend them without hesitation to our neighboring communities.
0112	Shirley Bursvold	January 17, 2020	I'm writing to you today in support of desalination as a vital component of a long-term solution to California's water future. We must secure a diversified water portfolio to meet our state's growing population demands. We can no longer depend on snowpack and rainfall totals to fill our reservoirs, and the cost of importing water will only continue to rise. Desalination is a sustainable solution that we can depend on now and in the future. I encourage you to support the diversification of our state's water supply and embrace desalination as a viable solution for Huntington Beach.
0113	Long Pham	January 17, 2020	I urge that California communities move to secure our water security now. Desalination is proven a sound economical and environmentally process. We must protect ourselves from more severe droughts, climate change, less available and more expensive import water. This is a no regret decision.
0114.01	Jeanie Petrocella	January 17, 2020	Please don't approve of the Poisiden [sic] plant in Huntington Beach. Their track record is poor. Look at the lesser amount of water promised in Carlsbad, all the millions on fines. Who will make that right?? Huntington Beach does not need this debacle.
0114.02			There are other ways to provide water. Less costly and damaging. We showed how well we conserve. It's outrageous expense, especially since the 1 billion figure is 10 years old!! We don't need this, we don't want this, we can't afford this!!! Please vote NO to Poseidon.
0115.01	Steven LaMotte Building Industry Association OC Chapter	January 15, 2020	The Poseidon Water Huntington Beach Seawater Desalination plant is a model of that sustainability. The project will be 100% carbon neutral and by using ocean water as its source supply, it is climate resilient. Your board first approved this project's NPDES permit in 2006, then unanimously approved the amended permit in 2012. As your staff notes, this project is fully compliant with the State Water Board's Ocean Plan and has put countless hours into the Tentative Order that will be before you in April 2020 for your consideration.
0115.02			The Carlsbad Desalination Plant received its approval in May 2019 by the San Diego Regional Water Board under the State Water Board's new Ocean Plan regulations.

Comment Number	Commenter	Date of Letter(s)	Comment
			...would hope that the Santa Ana Regional Water Quality Control Board would follow the lead of the San Diego Regional Water Board and approve the NPDES permit that is supported by both the science and your staff.
0116.01	Toni Atkins CA Senate President pro Tempore	January 20, 2020	<p>California faces a range of water challenges, from severely depleted groundwater basins to vulnerable infrastructure to unsafe drinking water in many communities to uncertain water supplies for our cities and agriculture. Climate change magnifies the risk. Maintaining and diversifying water supplies is a core goal of Governor Newsom's recently released 2020 Water Resilience Portfolio, and seawater desalination is identified as one Portfolio proposal to enhance the diversification of a regional water supply.</p> <p>Seawater desalination operates independently of climate and weather patterns and will play a strong role in providing local sources of fresh drinking water as the state deals with the effects of climate change.</p>
0116.02			<p>The Carlsbad Desalination Plant's operation is carbon neutral and in its first 48 months of operation provided San Diego County with more than 58 billion gallons of fresh drinking water. The State Water Board's 2015 Ocean Plan Amendments offers clear, uniform regulations to ensure that the construction and operation of desalination facilities are protective of coastal and marine environment. The Regional Board's extensive analysis has determined that the proposed Huntington Beach Project complies with the Ocean Plan and is using the best available site, design, technology and mitigation measures feasible to minimize the intake and mortality of marine life.</p>
0117.01	Geri Von Freymann	January 17, 2020	<p>I am heartbroken at what is happening next to the salt marshes and squirrel park.</p> <p>There are alternatives to this project which cost a great deal less and will not have the detrimental impact on the ocean, sea life and coastal birds. The environment should matter.</p>
0117.02			<p>Selling out to big business for an unnecessary and cost exorbitant desalination project</p> <p>In addition data shows sufficient water without this project. It is a false urgency created by the project's venture capitalists who see huge dollar signs in their futures.</p> <p>Hold them accountable for reports, accurate data, and acknowledgement of past failures</p>
0118.01	Mary Clarke	January 17, 2020	I am deeply concerned about the marine environment. I have seen how adversely temporary pollution can affect the marine environment and believe that desalination of water off the coast

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>will permanently damage the marine environment, killing some life and causing other sea life to “relocate” at the ocean’s expense.</p> <p>The salt brine would be detrimental to the marine life, dumping tons of salt brine into the ocean daily. Just see what the salt brine has done to the coast off Chile. Divers say the appearance is like diving in a snowy area—everything is white.</p> <p>I understand that the intake pipes would be reused from AES when they are no longer needed for cooling. Their new plant will not be water cooled. Ordinarily, I like reusing things but these pipes were not built for a desalination plant and that is worrying to me. I’m thinking that Poseidon just wants to save money up front. Maybe they’ll have sold the plant like they did in Carlsbad, if the salt brine destroys the pipes at a later date.</p>
0118.02			<p>The tourist industry, which the city has worked hard to build up, may also be adversely effected.</p>
0118.03			<p>I’ll just say that their water is very pricey and we don’t need it. Instead of spending millions (that would be residents, not Poseidon) on a distribution system to get this high priced water, we could invest money in recycling water, capturing runoff, and other methods of enhancing our water without destroying the environment. Then there’s importing water at a lower price than Poseidon’s, where we already have the distribution system in place.</p>
0119.01	Chiyu Hu	January 18, 2020	<p>More people moving out of California than moving in, we don't have any urgent need for it !</p>
0119.02			<p>It costs too much of our money for such an outdated project that could very well need to be replaced before its completion.</p> <p>Can anyone give JUST ONE reason that we people must pay for it for nothing but endless trouble !</p>
0120.01	Jim Niswander	January 18, 2020	<p>I am a resident of Carlsbad where we have our desalination plant in production. It was a long process, but now we have a source of water independent from the others that gives us more security. Yes, I believe the cost may be higher than other sources today, but projections show that over time the desalination costs will be competitive with other sources.</p>
0120.02			<p>I am proud that our community provided the leadership to develop the desalination plant. I also enjoy going on the public tours to see the operation and hear about new developments. I encourage anyone considering building a desalination plant to come visit the facility in Carlsbad.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0121	Laura Tezer	January 18, 2020	<p>As a San Diego County resident and neighbor to the Claude “Bud” Lewis Carlsbad Desalination Plant, I’m writing to share with you my experience during the pipeline and plant construction.</p> <p>As you might imagine, I had concerns about the potential disturbances associated with the work to make the plant operational, but Poseidon Water did a stand-up job of minimizing construction-related impacts to our community and letting us know in advance of work that may impact our traffic routes. They hosted several open houses and generally made themselves available at any time to address questions and concerns.</p> <p>I commend them for being a good neighbor and pleased to see that they have also become a positive addition to our business community. I am proud to have the largest and most energy-efficient desalination plant in the nation right here in our backyard and I would recommend them without hesitation to our neighboring communities.</p>
0122	Tibor Farkas	January 18, 2020	<p>As a resident of San Diego County, I can attest to the many benefits desalination has brought to our region. The Carlsbad Desalination Plant is the first major infrastructure project in the State of California to eliminate its carbon footprint, playing a vital role in helping the state meet its climate goals while also providing a reliable water supply. Furthermore, seawater desalination is drought-proof and critical to reducing the need to pump water from Northern California and the Colorado River, two climate-dependent sources of water with documented environmental impacts and that require a lot of energy to transport.</p> <p>I encourage you to help our state become more climate-resilient by supporting the proposed Huntington Beach desalination project.</p>
0123	Dan Bosch	January 18, 2020	<p>Having seen firsthand the positive benefits of the Carlsbad Desalination Plant in San Diego, I am writing to urge your support for desalination, which significantly improves both water reliability and quality.</p> <p>In addition to providing a reliable water supply that isn’t dependent on rain or snow, desalination has made a noticeable difference in our region’s water quality. In fact, water hardness and dissolved solids have been reduced since the introduction of desal in San Diego County, resulting in better tasting, softer water that extends the lifespans of household appliances.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			I encourage your support of the Huntington Beach desalination project to help ensure a locally controlled supply of high-quality water for your region that meets or exceeds state and federal standards, as well.
0124	Susan Hughes	January 18, 2020	<p>Our roots have been very deep in this community for generations, and our family not only enjoys, but genuinely loves, the ocean here.</p> <p>But how will we be able to take joy in bringing our beautiful four year old granddaughter to the beach to play in the waves, knowing that huge quantities of saline sludge, mixed with toxic chemicals used in the desalination plant cleaning process, are being pumped into the ocean not that far from the shore? The Poseidon desalination plant would have a long term and very negative effect, not only on the families of this community and the many thousands of visitors who enjoy our beach, but on the health and viability of the ocean itself and the marine life in it. I am asking that you oppose and vote NO on the Poseidon desalination plant in Huntington Beach.</p>
0125	Linda Minko	January 18, 2020	I do NOT want the Poseidon project to go through. We do not need it. It will hurt our ocean life. I vote every election and always look to see who is for and against this project that will only cost us money and hurt our environment.
0126	John Scott	January 18, 2020	[Blank email with three attached graphics files]
0127	Stephen Billard	January 19, 2020	<p>Please move forward with the Huntington Beach desalination plant so we can ensure water reliability for our region now and in the future.</p> <p>The prospect of climate change threatens our normal sources of water. Orange County needs to take steps to future proof our water supply. Desalination is one step in the right direction.</p>
0128	Lynette Kent	January 19, 2020	<p>In California, we have access to an endless supply of water along our 840-mile coastline and the technology to turn ocean water into clean, drinking water that is sustainable, locally controlled and drought-proof.</p> <p>We have a responsibility to protect our valuable environmental resources like the Bay Delta, Colorado River and groundwater basins and we can do that by integrating desalinated water into our existing supply and reducing the demand on these sources.</p> <p>I hope you will consider supporting desalination as a viable, long-term solution to our state's water crisis.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0129	Art Brown	January 19, 2020	Please be part of the solution and not part of the problem and get us the water we need and want. Santa Barbara is STUPID. Stop paying us to put in rain barrels. Stop giving rebates for efficient new appliances. Stop sending certificates and plaques for buying efficient appliances. GET US THE WATER. You are not my nanny. You are a public utility. Act for the public good, not as water cops.
0130.01	Oliver Monus	January 19, 2020	<p>The Huntington Beach plant will take advantage of the latest and greatest technology available. For example, the plant will utilize cutting-edge technology to recapture energy from the desalination process, reducing overall energy usage and decreasing carbon emissions. These devices help save an estimated 146 million kilowatt-hours of energy per year, reducing carbon emissions by 42,000 metric tons annually – roughly equivalent to the annual greenhouse gas emissions from 9,000 passenger vehicles.</p> <p>Additionally, the process is incredibly efficient – turning seawater into drinking water in just a couple of hours!</p>
0130.02			Given recent weather patterns and water demand, we are undoubtedly going to need a locally controlled, drought-proof water supply in the future, which is why we should start working to develop that supply now by approving the Huntington Beach desal plant.
0131	David Lowe	January 19, 2020	I am in full support of the proposed desalination plant proposed to be built within 1/2 mile from our home. As a retired civil engineer I understand and support the idea of having redundancy in our water supply system. As a local surfer I believe the proposed impacts on the natural environment will be mitigated properly by the applicant.
0132.01	Mary Jo Baretich Residents for Responsible Desalination	January 19, 2020	<p>I attended the very first meeting about this proposal where the developers were asking for a desalination plant to be built next to the AES Energy plant. They said they needed water so they could build on the barren hills in south Orange County. Since that time, numerous studies and reports have been produced regarding the various impacts on the environment, along with numerous meetings on the subject both locally and statewide. The local impacts to our ocean waters, marine life, wetland animals and birds, and surrounding residents are of prime importance.</p> <p>We do not need this energy intensive plant and its expensive water. We are already producing 130 million gallons of purified water per day with the Ground Water Replenishment System (GWRS), pumping it into the Orange County aquifer in Anaheim which feeds the well for the central and northern Orange County cities and also pumping it into intrusion wells to keep the</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			ocean water from invading the aquifer. The small percentage not produced by the GWRS come from the Metropolitan Water District at a very low price (\$550 per acre foot).
0132.02			The GWRS water costs only \$470 per acre foot, but the Poseidon water is expected to cost \$2400 per acre foot or more. Their Carlsbad plant is even more expensive than that.
0132.03			Poseidon plans to use the antiquated 1950 AES Intake Pipe rather than building subsurface technology for water intake. There is a history of the AES plant having problems keeping the filters intact. The screens proposed will still entrap marine life like jellyfish, fish larvae and eggs. Cleaning and replacing these new filters and screens as they fail will not stop. I have been on several tours of the AES plant over the last 37 years, and have seen first hand juvenile fish, crabs, other crustaceans, and octopus in the Intake Vat and thousands of marine animals going up the conveyor belt into dumpsters. Millions of fish larvae and eggs were also sucked into the Intake Pipe and destroyed. The AES workers told me of Jellyfish and other marine life being impinged on the filters, and their constant problem of removing them and repairing the filters. The marine life, along with concentrated brine was then pumped out the Outflow Pipe, causing a dead zone. This area, even with diffusers, still covers over 400 acres. Poseidon dispersed water will have numerous chemicals along with the dead marine life and highly concentrated brine. We do not need more pollution of our ocean waters
0132.04			I have attached a dye study that was made in 2002 showing that this concentrated brine and waste made its way daily back to shore from its dumping site, causing eye infections for surfers and other swimmers.
0132.05			The Poseidon desal plant is proposed to run 24 hours a day and 7 days per week. It will have 33 pumps running at the maximum (or higher) allowed sound levels. This is unacceptable for both the homeowners and the wetland animals and birds living in close proximity to the proposed facility. Most of the homeowners living near the proposed facility do not have double-pane windows to block the noise.
0132.06			We are also concerned about the proposed pipeline to be built alongside the two most deadly Pits in the Ascon Toxic Waste Dump, containing arsenic, lead, mercury, cadmium, aviation fuel, and other detected contaminants. There is a real threat of an earthquake that could cause a leak in the 8 foot diameter pipe and allow the toxic chemicals and waste to contaminate the water downstream in our aquifer. The last large quake in the local area (1933) was centered not too far from the proposed desal plant. That quake leveled numerous buildings in Long Beach. The proposed plant location sits on top of the earthquake fault. And of course, there would be the real possibility of a huge Tsunami.

Comment Number	Commenter	Date of Letter(s)	Comment
0132.07			In addition, by not requiring this desal plant to use subsurface technology for the intake of their water, the water flowing to the plant will contain unacceptable levels of Boron. The molecules of Boron and water are very close in size, and difficult to remove from the water.
0132.08			And finally, our periodic algae blooms that occur in the ocean contain neurotoxins that also have molecules similar in size to water and will be impossible to remove.
0132.09			Please take all that I have said into consideration. This desalination plant is not necessary. It is extremely expensive and energy expensive. There is a great possibility that the water could become contaminated. Millions of our precious marine life will be destroyed, along with the avenue where our juvenile fish travel to and from the nurseries. Our wetland animals and birds in the Magnolia Marsh will be affected causing possible problems in our local ecosystem
0133.01	Mark Lopez Orange County Farm Bureau	January 16, 2020	On behalf of the Orange County Farm Bureau, I am writing in support of the role that desalinated water can play in meeting water demands for our state's agriculture community, one of the largest consumers of water resources. By adding desalinated water to our region's supply sources, we can provide much needed assurances to local farmers that our water supply is reliable in drought years and during mandated restrictions, which have wreaked havoc on our agricultural community in the past.
0133.02			As demonstrated in San Diego County, the Claude "Bud" Lewis Desalination Plant has been blending desalinated water with local supplies and farmers have reported positive impacts and improved crop health. Blended water supplies that include desalinated water have been found to have lower total dissolved solids, chlorides and reduced salt levels which allows crops to more easily absorb water.
0133.03			<p>With the renewed focus on PFOAS contaminants and their potential impacts to local water supplies, it is prudent to seriously consider new water supply options that are proven PFOAS free.</p> <p>We support the diversification of new water resources that advance our ability to maintain local water supplies, ensure local control, are not dependent on rainfall or snowpack and improve quality to support our farmers</p>
0134	Katie Greer	January 19, 2020	I want t to express my support for the Huntington Beach Desalination plant that is possibly going to be built at the AES plant location. There are many reasons why I support this proposal. For one thing, the location of the plant is ideal since it is already next to a power plant and will not be taking up any precious coastal real estate. Secondly, it would produce a new water source from the Pacific Ocean, which is right in our backyard! Thirdly, because of the success of the

Comment Number	Commenter	Date of Letter(s)	Comment
			Carlsbad plant which has proven to be able to successfully produce safe drinking water from seawater without harming the environment.
0135	Deb Janus	January 20, 2020	I oppose this desalination plant proposed in Huntington Beach. The salt and salt bring will pollute the waters near our shore and this will kill marine life and poison citizens.
0136.01	Milt Dardis	January 20, 2020	The supplement to a 2010 EIR addressed the possible environmental effects of a screen and diffuser added to the intake and outflow pipes. The State Lands Commission report, concluded that the screen on the intake pipe would help reduce harm to marine animals. The 2010 EIR had already concluded that the intake wouldn't significantly impact sea life. The screen would have 1-millimeter segments to keep marine life from being sucked into the tube. The diffuser is a part with several openings that would enable salt water leaving the plant to better mix with — diffuse into — the ocean since it would be sprayed in multiple directions.
0136.02			<p>The commission report said the salinity of discharges through the diffuser wouldn't pose a significant threat to marine populations. However, the commission concluded that the force of water from the diffuser could put unidentified sea creatures at significant risk, though it said it could not find such special species during its investigation.</p> <p>Poseidon Vice President Scott Maloni called that finding "scientifically unsound." "We don't think there is evidence that there will be any significant impact to any species, not to mention a species with special status," he said.</p>
0136.03			<p>Scott Maloni of Poseidon stated that the company determined the open-faced intake pipe previously called for in the plan would take in about two fish eggs for every 1,000 gallons of water, an amount he characterized as small. He said the amount would be even smaller with a screen in place. The commission said the copper-nickel material of the proposed wedge wire screen could leach and affect water quality nearby.</p> <p>So who we believe: It was Poseidon who argued discharge diffusers would cause more harm to marine life than the open intake. It's all documented in their participation in the Science Panel report that Scott Jenkins, the Poseidon Consultant, was a member of. Scott Jenkins argued the diffusers were harmful so that Carlsbad Plant would not have to retrofit.</p> <p>Now Scott' Maloni is arguing just the opposite -- diffusers are fine.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0136.04			<p>You folks are the experts so what is Fact and what is Fiction. I am just a Taxpayer who wants to know. That simple as am opposed to the development by Poseidon Resources of a Desal Plant that will double my water rate price and not being told THE TRUTH..</p>
0137	<p>Steve La Motte</p> <p>South Orange County Economic Coalition</p>	January 16, 2020	<p>As Chairman of the South Orange County Economic Coalition that covers a region that creates more than \$25 billion in economic activity annually, I'm writing on behalf of the thousands of businesses throughout the region to urge the Santa Ana Regional Water Quality Control Board to renew Poseidon Water's NPDES permit for the Huntington Beach Seawater Desalination plant.</p> <p>We need this drought-proof, climate resilient water reliability project to ensure that businesses have the confidence to put roots down in South Orange County and grow here. The proposed desalination project meets and exceeds every regulatory hurdle it has faced and it complies with the State Water Board's desalination amendment to the Ocean Plan.</p> <p>Governor Gavin Newsom approved this project when he served on the State Lands Commission in 2017 and has included desalination in his Climate Resilient Water Plan. Additionally, the California's Water Resilience Portfolio identifies desalination as a proposal to enhance regional water supply diversification.</p> <p>Orange County currently imports about 50% of the water we need. This proposed desalination project will help reduce that dependence on imported water and allow us to take one step closer to water independence.</p>
0138	<p>Reuben Franco</p> <p>Orange County Hispanic Chamber of Commerce</p>	January 16, 2020	<p>OCHCC supports the Huntington beach Seawater Desalination Project because it would provide Orange County with a new, local water supply that would enhance water reliability and facilitate economic development and investment opportunities for Hispanic and other minority-owned businesses.</p> <p>Seawater desalination ensures that orange county will always have a high-quality, climate resilient water supply that we control locally.</p> <p>This project has been under regulatory review for the better part of two decades and every scientific study conducted by local and state permitting agencies have approved the permits required to allow this project to move forward.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0139.01	David Ellis	January 20, 2020	<p>I am VERY concerned about the Poseidon Huntington beach desalination project. My concerns can best be summarized by questions:</p>
0139.02			<p>1. Why hasn't Poseidon used any of the \$56 million + they have invested so far educating the residents of Orange County on the benefits of this project? They have been at it for almost 20 years and I have yet to receive any educational information from "them".</p>
0139.03			<p>2. Why was "the most expensive" option (Poseidon) selected as the go-forward strategy for new water? As I understand it, many of the other options have realistic potential for a lot less cost.</p>
0139.04			<p>3. Why aren't other companies being considered? I don't know of any large/very large contracts, public or private, that don't go through some sort of competitive bid process. Is Poseidon the only company that can do this work, or has the expertise to accomplish this project? Was there a competitive selection process?</p>
0139.05			<p>4. Is it true that "if" Poseidon gets this project, they will have a use or loose contract? How on this earth during these economic times is a decision made that we may be paying (for over 50 years+) for water we may not even need, or use? By any measure, this is a highly questionable business decision.</p>
0139.06			<p>5. If we need the water, now or in the future, why don't we ("our" local water districts) build a desalination plant as a public utility? Water is a necessity! It should not be supplied by a "for-profit" business.</p>
0139.07			<p>6. Is it true that the beach, 2 kilometers east and west of the project site, will be have pipes installed for intake and out flow? Is the cost estimated to be half a billion dollars, plus usage impact for 2-3 years?</p> <p>Every time I get information on this project, the cost go up exponentially.</p> <p>Based on my informal survey of neighbors, friends and random new people I meet, there is a lot of confusion regarding this project. Most are poorly informed, or outright confused. They have no idea what impact this project will have on the beach, the environment and most of all their monthly budgets. I confess that I'm no expert, but this project looks like a boondoggle with the water rate payers on the hook for along-long time.</p>
0140.01	Donald Slaven	January 20, 2020	<p>As Past Chair of the Huntington Beach/Seal Beach Chapter of the Surfrider Foundation, I want to remind you that Surfrider Foundation and many other groups in Orange County and beyond, have been working to STOP the Poseidon desal plant for over 20 years!!</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Not only is this desalination plant unnecessary and an ultimate waste of taxpayer subsidies, it still IMPACTS directly, Huntington State Beach, which is one of the most heavily utilized California State Parks.</p>
0140.02			<p>The Orange County Sanitation Plant and water works has for decades been one of the most state-of-the-art facilities in the world, treating and recycling wastewater. Our Orange County plant is a world leader in technology driven methods to take raw sewage waters, filter, clean and sanitize it suitable for human consumption!</p> <p>The Orange County Sanitation and Water Plant can continue to expand the cleaning and REUSE of water into the future. There is NO reason why individual households continue to use water brought over a vast infrastructure, and then used once and flushed into the ocean.</p>
0141	<p>Daniel R. Ferons</p> <p>Santa Margarita Water District</p>	January 20, 2020	<p>Santa Margarita Water District (SMWD) strongly supports the development of new water resources in Orange County, including the Huntington Beach Seawater Desalination Project, and we respectfully request that the Santa Ana Regional Water Quality Control Board (SARWQCB) approve the National Pollutant Discharge Elimination System (NPDES) Permit Order No. R8-2020-0005, NPDES No. CA8000403.</p> <p>South Orange County is currently 100% reliant on imported water from northern California and the Colorado River to meet the needs of our customers. While we have invested heavily in the development of recycled water supplies and conservation programs over the years (and we will continue to do so), ensuring long-term water reliability will also require developing new sources of supply. SMWD views seawater desalination as an important part of our future regional water supply portfolio.</p> <p>It is prudent and necessary for SMWD to diversify its water supply portfolio to avoid over-reliance on any one source of water or strictly enforce demand-management measures. Balancing water supplies and demand-management measures to include imported water, increased water storage, water conservation, water recycling, groundwater recharge, and seawater desalination are critical for Orange County to maintain an adequate, safe and reliable water supply portfolio. Seawater desalination will provide a significant benefit to Orange County by producing 56,000 acre-feet of potable water each year. It would help to reduce our dependence on imported water as well as provide us with a local, drought-proof supply source.</p>

0142	Yvette and Ed Arango	January 20, 2020	<p>Although the concept of desalination sounds like a great idea, this is NOT needed here in SEHB due to many reasons listed below;</p> <ul style="list-style-type: none"> -The cost of this does not substantiate itself -There is no need for it here in HB or local areas. Sanitation already is at full capacity with grey water recirculation -No clear customer willing to pay for the expense -Concerned with Marine life and environment. <p>Aside from the reasons above this project is in the vicinity of AES power plant – that is still in testing of the new power stacks (very noisy so far).It is also next to ASCON a toxic dumpsite that is in process of being cleaned up (with many issues). Also a planned developer that is still not cleared at building homes and lodging.</p> <p>I am not in favor of this desalination plant.</p>
0143	Craig Peterson	January 20, 2020	Please help protect the HB we came here for. Please say no to the Poseidon project. Protect our environment and our town.
0144.01	Kaelyn Jenkins	January 21, 2020	<p>I am a life-long resident of Huntington Beach, and what I know to be absolutely true is that the biggest, most important asset, and THE main reason people love this place and want to come here - IS the BEACH.</p> <p>This decision is a no-brainer....NO to Poseidon!</p>
0144.02			The people behind this company have been trying to fool the people for over 20 years. Their technology is old. They are telling lies. We do not need their WAY overpriced water. This is wrong. There are still too many unanswered questions. Too much doubt to blindly allow them to proceed. If you allow this, it will be devastating to the sea life and all the extremely important ocean organisms that are here. The massive amount of salt content will be overwhelming. This will be devastating to our beach, to California, to the world.
0145	Lisa Ohlund East Orange County	January 08, 2020	The Carlsbad Desalination Project was the first desalination plant to be approved under the State Water board's new Ocean Plan regulations and has now been successfully operating for five years. This plant has been a critical element in San Diego County's water reliability plan – as was demonstrated during the 2015-2016 drought.

Comment Number	Commenter	Date of Letter(s)	Comment
	Water District		<p>The state has provided prudent and rigorous review of desalination projects and your board has been particularly thorough. Those that meet these rigorous requirements have earned the right to have their permits amended and/or renewed. The Huntington Beach plant fits these criteria.</p> <p>Thank you for considering the science and the hard work that your staff have put into its analysis of this project; we ask that your Board support responsible and sustainable desalination.</p>
0146.01	Greg Carrow		<p>As a lifelong resident of Huntington Beach that enjoys surfing and fishing our beautiful coastline, I want to convey my strong opposition to the proposed reverse osmosis desalination plant. I urge you to reject the requested permit from Poseidon Resources based on the following facts:</p> <ol style="list-style-type: none"> 1. The water is not needed at this location
0146.02			<ol style="list-style-type: none"> 2. The water would be too expensive compared to alternatives
0146.03			<ol style="list-style-type: none"> 3. The project would unnecessarily consume electricity just as automobiles are transitioning from combustion engines to electric batteries which will increase demand for electricity.
0146.04			<ol style="list-style-type: none"> 4. The project would unnecessarily release greenhouse gases and pollute the environment
0146.05			<ol style="list-style-type: none"> 5. The project would unnecessarily kill marine life from the first step to the last.
0146.06			<p>Since 2003, the Poseidon Resources Corporation has pushed to build a water desalination plant in Huntington Beach despite the fact the water is not needed in Orange County. If it were, there would be buyers but there are none given the outrageously high cost of production. And the city of Huntington Beach certainly does not need the water given it has a large aquifer that provides 70% of its water. Even if additional sources of water were needed, the proposed project in Huntington Beach is the most financially risky of possible alternatives including other desalination locations.</p>
0146.07			<p>One reason the proposed reverse osmosis desalination plant in Huntington Beach is financially risky is because of the enormous amount of electricity it will require for 30 years regardless of the cost of electricity, which is projected to increase as the world transitions away from fossil fuels that generate greenhouse gases. For example, the worldwide automotive industry is currently investing in technology to transition away from combustible engines to battery powered engines. These batteries will need to be charged daily and will be one reason the demand and cost of electricity will increase in the future. When the cost of production increases, ratepayers will pay the price.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0146.08			<p>It is worth noting that Poseidon Resources could have proposed using a sub-service intake system as required by law to protect marine life, but it chose not to. Instead, it chose to use political influence to lobby for an exception to the law. Not only will the open ocean water intake system kill marine life, the salty brine extract from the desalination process will kill marine life too when it is discharged back into the ocean.</p> <p>I strongly urge you to reject the permit to build a desalination plant in Huntington Beach.</p>
0147	<p>Diane Feinstein</p> <p>United States Senator</p>	January 17, 2020	<p>I am writing to express my support for the proposed 50 million gallon per day (MGD) Huntington Beach Desalination Project, which Poseidon Resources is seeking to construct and operate to provide potable water for purchase by local water districts.</p> <p>Given our state’s ongoing water supply challenges, I have long supported this project because it is important that federal, state, and local water agencies work together to pursue an “all of the above” strategy that includes desalination as well as the expansion of surface and groundwater storage, conservation, recycling, and water transfers.</p> <p>My support is based on the project’s development in an environmentally safe manner that is consistent with the State Water Resources Control Board’s Desalination Amendment to the Water Quality Control Plan for the Ocean Waters of California. It is my understanding that Poseidon made modifications to its Huntington Beach Desalination Plant design in order to adhere to the Board’s requirements and to minimize the impact to marine life.</p>
0148.01	<p>Kelly E. Rowe</p> <p>Orange County Water District</p>	January 20, 2020	<p>I propose your board not permit this project as there is no need for it in Orange County.</p> <p>Please note OCWD only has a <u>non-binding term sheet</u> set up with Poseidon, should they get required regulator permits and MET subsidy funding, would OCWD consider purchasing water from their project. We have many other sources of water for Orange County that are cheaper.</p>
0148.02			<p>Poseidon worked with MWDOC (Municipal Water District of Orange County) from 1999 to 2012 to see if their seawater desalination project made sense for Orange County and to gain support for the MET Local Resources Program (LRP) subsidy. For Poseidon’s project this equates to \$400M through MWDOC as a MET member agency: 56,000 acre-ft at \$475/acre-ft over 15</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>years. This subsidy would pass through MWDOC to OCWD. There is absolutely no guaranty the MET board will approve the subsidy, as it is a very large financial impact to MET and its member agencies.</p> <p><u>For twelve years</u> MWDOC and Poseidon went through much iteration on their project issues and cost estimates that shifted dramatically higher for the worse. They could also get generous goodwill gestures no higher than 15,000 acre-ft capacity interest (nothing firm) from all of the OC producers, yet Poseidon insists their project does not make sense to them unless it produces 56,000 acre-ft.</p>
0148.03			<p>MWDOC's report states the Poseidon project is not needed for Orange County. Out of the few of the many other OCWD projects considered by MWDOC, Poseidon's was ranked lowest with its highest in costs and highest in environmental impacts. MWDOC noted a total of nine (9) water resources projects OCWD could pursue, out of the 63 OCWD listed in its 2014 Long Term Facilities Plan (LTFP).</p>
0148.04			<p>Completion of a combined EIR/EIS for the Poseidon project is needed for it to proceed further. The simple limited 2010 EIR the City of Huntington Beach approved for construction of the seawater desalination plant on the 12 acre AES site is pitifully inadequate. For one it did not state there is a need for this water. It also ignores many important environmental "connected actions" of using the OCWD groundwater basin for its insane idea to store and distribute its produced water. As a result the 2010 EIR violates CEQA and NEPA laws/regulations by separating actions that are closely tied together (piecemealing), hoping the separate actions may pass individually. A complete project description EIR/EIS will allow the project to be in environmental compliance. It will allow the project to qualify for large state and federal grants of funds and low-interest loans to significantly reduce the cost of the project and lower the costs to the public.</p>
0148.05			<p>OCWD's groundwater recharge basins in Anaheim and Orange have particularly great value to Orange County during above average rainfall years when higher than normal flows offset the lower percolation amounts from average or below average rainfall years. Often several years of drought may be offset from one wet year. Surplus MET water supplies may also be purchased during both dry and wet years to augment the OCWD local recharge water flows, at discounted rates.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			Both OCWD and MWDOC evaluated the sources of water managed for groundwater recharge and local municipal groundwater production, based on historical analyses and future trends from technical research results, and determined there is no need for a new significant/large source of water for the Orange county Groundwater Basin. OCWD has operated the groundwater basin on a very conservative basis, using one-half of 1-percent, or about 300,000 acre-ft of the 60 million acre-ft of groundwater in storage. It is practically always full. Additional use of a mere 5-percent or 3 million acre-ft of groundwater in storage is sufficient water to sustain the OCWD service area for about 10 years, under extreme drought conditions, without replenishment from outside water sources. During droughts OCWD may allow more groundwater to be produced for local use, or be traded as a commodity with other outside water agencies that do not have groundwater resources.
0148.06			The South Branch of the Newport-Inglewood Fault runs essentially through the middle of the site. It is Southern California's largest/major coastal strike-slip fault related to the regional San Andreas Fault Network of faulting zones. This active fault has the potential to generate earthquakes over 6.4 magnitude. Hospitals and schools are prevented by law from building within 500-feet of an active fault in California. One good earthquake beneath or near the site could totally destroy Poseidon's plant.
0148.07			The Liquefaction Maps by the California Geological Survey (CGS, 2009) note the Poseidon site lies in the middle of the Talbert Channel sedimentary deposits along the coast with soil types, shallow ground and earthquake energy source conditions ideal for liquefaction conditions. Poseidon's plant could easily sink into the ground with major structural damages from a nearby earthquake.
0148.08			The 2019 FEMA Flood Insurance Rate Map (FIRM), recently updated for the near-shore flood areas, shows the site is within a Special Flood Hazard Area "Shaded X" flood zone, an area protected by levees from the 1-percent (or 100-year) chance flood. It is not protected from a 0.2-percent (or 500-year) chance flood event. However, the levees were originally constructed as a secondary containment facility, in case the large power plant fuel tanks ruptures, not for flood protection. A recent site visit and historical Google Earth images for the site show the levees have large trenches cut through them, at least since 2002, allowing the tanks areas to be easily flooded by 1-percent (or 100-year) chance flood events. New FEMA FIRMs expected by 2022, updating the 2009 FIRMs inland of the Orange County coastline should show more hazardous flood zone areas at and near the Poseidon site. The "Shaded X" zone designation should be

Comment Number	Commenter	Date of Letter(s)	Comment
			changed to a more dangerous “AE” zone, since the levees have not been compliant with flood protection for about 20 years.
0148.09			As sea levels have long been predicted to rise another four feet by the end of this century, Poseidon’s site is likely to require continuing flood prevention/protection actions, such as raising the levees and flood insurance requirements. The site is presently surrounded by “AE8” 1-percent (100-year) flood zones (flooding to 8 ft above mean sea level) along the Huntington Beach Channel. It is also located about 1000 feet from the more dangerous coastal “VE14” flood zone along the beach. The VE zone designates a “Coastal High-Hazard Flood Area” subject to a 1-percent (100-year) base flood elevation with an additional 3-ft “wave action” from winds of storm events. Construction within VE zones requires structures to be built on piles, suspending structures above with clear areas below, to withstand the force of dangerous storm/wind wave actions on top of flood waters.
0148.10			The Poseidon site lies near the beach edge of the predicted middle of a large tsunami inundation area, extending an additional mile or so inland, between the Huntington Mesa and Newport Mesa. There are numerous active major faults that lie within 60 miles of the Orange County coastline area. Tsunami waves, or seismic-induced waves, are serious major flooding incidents that may happen at any time, from local earthquakes or from distant seismic events. Such incidents may surge one or more 20-ft or taller waves of ocean water inland from the beach a mile or more.
0148.11			<p>In 2016 OCWD staff completed a report that evaluated alternatives to deliver Poseidon’s water to the basin. Use of the three-times more expensive water ultimately appeared to make some sense by injecting the water in a network of pipelines and injection wells generally a distance of about 7 miles from the coast. This area has evidence of pumping depressions from local municipal groundwater production wells. GWRS water is dedicated by state-permits to only be used in the Talbert Barrier set of seawater intrusion barrier injection wells closer to the coast, which precludes use of Poseidon’s water for this purpose. It is insane to take Poseidon’s expensive treated seawater, inject it into an aquifer and then pump it out for use when needed, when it is sane to pump the water directly into a potable water supply pipeline network.</p> <p>The OCWD 2014 study concluded the Poseidon project injection well network component would cost an additional \$305 million in capital construction cost. It includes use of 26 new injection wells and about 7 miles of new water transmission pipelines to the wells. The annual debt service for the construction was estimated to be \$19.65 million over a 30-year period loan at a</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			5-percent interest rate. Assuming the MET LRP subsidy is not applied to this project the average increase in everyone's water bill was estimated to be about \$6.77/month, or \$81.24/year, from the additional injection wells and appurtenances.
0148.12			<p>OCWD recognized that additional production wells will be needed, as Poseidon's water will stuff the basin to its capacity and become a large financial burden to pay for this water. This ignored third element of the Poseidon project, new production wells required for all producers, has not been adequately described or assessed for its financial, engineering and environmental issues.</p> <p>Injection of Poseidon's water into the basin and its cost will force OCWD to raise the RA from 82- to 97-percent. Stuffing so much water into the basin will not allow OCWD to capture the "free" stormwater from Coyote Creek, Santa Ana River and Santiago Creek. This is a serious cost impact raising Orange County's expenses for water resources management.</p> <p>Orange County is considered very affluent, which is true mainly along the coast. However, there are very many pockets of disadvantaged communities located throughout the county. The main alignment for the Poseidon injection well field is Edinger Avenue in Santa Ana. Numerous residential properties will have to be acquired for the new injection well sites. The additional \$162.48/year to the water bills will add to the burden of poor folks in Orange County.</p>
0148.13			<p>The proposed Alternative Action –More Recharge Basins in North Orange County considers adding 500 acres of ONRA recharge basins mainly near the Santa Ana River, Santiago Creek and Coyote Creek floodplain areas. It will require close coordination of the Fullerton, Anaheim and Orange land use planners and city councils with OCWD and its water resources facilities planners.</p> <p>Use of 500 acres for discussion is more or less equivalent to the capital cost for the Poseidon project, considering an acre of land costs about \$2 million, equal to about \$1 billion. Assuming 50 days of storm water percolating an average of 2-ft per day, across 500-acres of new percolation areas equals 50,000 acre-ft/year. This would be a value of about \$50M/yr of new water resources in new recharge facilities that will essentially pay for themselves in about 20 years. Long-term operational and maintenance costs should be far less than Poseidon's project.</p>
0149	Dave Hamilton	January 17, 2020	Cover letter presenting two attachments, a 17-slide presentation given in 2015 and a comment letter

	Residents for Responsible Desalination		
0149a	Dave Hamilton Residents for Responsible Desalination		A 17-slide presentation given by Peer Swan of Irvine Ranch Water District at a 2015 public meeting of Residents for Responsible Desalination.
0149b.01	Dave Hamilton Residents for Responsible Desalination	January 17, 2020	<p>We believe that the proposed Doheny project will be found fully compliant with the requirements in the Ocean Plan amendment (OPA). However, the Poseidon proposal fails for several reasons we will document in a more thorough comment letter, as well as our general observations and comments below.</p> <p>We recognize the extraordinary effort staff has put into collecting information to analyze the Water Code 13142.5(b) determination, especially given the apparent resistance by Poseidon to submit adequate documentation when requested. Nonetheless, we respectfully disagree with some of the analyses and conclusions in the tentative permit.</p> <p>Given that this would be the first permit issued after adoption of the OPA regulatory guidance, it deserves heightened scrutiny to ensure full enforcement of the Water Code.</p>
0149b.02			The 50 MGD volume of product water was first proposed by Poseidon in Huntington Beach about the year 2000 with the first local coastal development permit issued by the City of Huntington Beach in 2005. It is our understanding that the rationale at the time was that this volume could be produced at the lowest cost by co-locating with the power plant, and using “source water” from the warm water discharged from the power plant’s “once through cooling”(OTC)system mixed with cold water diverted around the OTC system--to arrive at the preferred temperature to maximize RO treatment efficiency.

Comment Number	Commenter	Date of Letter(s)	Comment
			OTC has been all-but outlawed by the State. And importantly, second, the demand for water has remained relatively the same, while reliable local supplies have increased by approximately 130 MGD from the Groundwater Replenishment System (GWRS) development since 2005. Further, LA County Sanitation District and Metropolitan Water District plans are now progressing to replicate the GWRS in the nearby city of Carson, which would provide an approximately additional 60 MGD of local and reliable water available to OCWD for groundwater replenishment --at a fraction of the cost of seawater desalination.
0149b.03			It's important to note that the HydroFocus study concluded that withdrawing a lesser volume of water through slant wells could reduce the percentage of freshwater mixed in the source water, thereby reducing the concern of OCWD for additional costs from freshwater withdrawal. Further, we believe that if slant wells were used for source water, OCWD could reduce the volume of water injected into the seawater intrusion barrier without increasing the risk, and that saved volume of water available from reducing water injected into the barrier could be used to recharge the basin elsewhere. But until there are tests to calibrate the computer modeling provided by Poseidon, as was done for both the proposed Doheny and CalAm-Monterey proposals, and studies to determine the interaction of slant wells with the injection of water for the seawater intrusion barrier, it is unclear what volume of water could be produced by slant wells for any amount of product water.
0149b.04			We will document in our written comments on the tentative permit that the freshwater "drawdown" is not a "technical feasibility" criteria, but an economic consideration. Unfortunately, reliance on the ISTAP Phase 2 economic feasibility analysis, included in the tentative permit, is void of any consideration of slant wells' life-cycle costs as required in the OPA.
0149b.05			It's our recollection that the 2 options for using readily available imported water during "wet periods" were suggested at Board meetings in the past couple years. But the OCWD Board rejected the proposal given that the cost of additional imported water versus current imported water volumes would be fiscally irresponsible if the basin was already recharging from excess local stormwater. This logic is clearly hard to justify with the Term Sheet for a "take or pay" contracted purchase of the Poseidon water that mandates purchase of the entire 50 MGD regardless of whether or not the basin is fully recharged.
0149b.06			The Board members are correct that the 2018 Reliability Study ranked several alternatives for ensuring a reliable supply to meet the projected demands --that is, it ranked cost and reliability values of the alternatives for meeting the "identified need"--and Poseidon ranked last.

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Poseidon is objecting to actions nobody is proposing. MWDOC prepared the UWMP and Reliability Study completely independent of any influence from this Board, and much less any influence to utilize a “loading order.” We are simply pointing out there is no “identified need” for 50 MGD in MWDOC’s UWMP that overrides the “required” use of subsurface intakes, given there are clearly alternatives that MWDOC identified.</p>
0149b.07			<p>We would add that the development of the potable re-use and groundwater recharge plan proposed by LA County Sanitation District and Metropolitan Water District, similar to the OCWD GWRS, is also a new, local, drought and climate resistant supply that was not considered in the Poseidon White Paper.</p>
0149b.08			<p>It seems feasible that an intake could be constructed without any of the on-land development and the associated costs. A pipeline already exists to move the sea water into the property where the treatment plant is planned –the existing intake pipe. Rather than constructing a 2 kilometer pipeline on-land, then turning and crossing under the beach, and then building a trestle system to construct the pipe from the shore to the required depth –why not simply connect to the terminus of the existing pipe, and lay pipe on the seafloor for the 2 kilometers, then connect the screen at the alternative site? Wouldn’t this reduce the costs of the proposed pipeline to alternative sites D2 or U2?</p> <p>It’s our understanding that there were significant problems with the data used to analyze the benefits of U2 and D2. The best attempts at reconciling the data gaps resulted in showing those sites could minimize intake and mortality compared to Poseidon’s preferred site, but that alternative was rejected because of the costs associated with construction. Now the costs estimates used in that decision are also clearly unacceptable.</p>
0150.01	<p>Michael Wellborn</p> <p>Friends of Harbors, Beaches and Parks</p>	<p>January 20, 2020</p>	<p>As an organization focused on the environmental health of Orange County, we urge the Regional Board to deny the requested permits for Poseidon for reasons including these serious concerns:</p> <ol style="list-style-type: none"> 1) Should the plant be built and become operational at the 50 MGD level, the brine discharge to the Orange County coastline would be staggering. Negative impacts to coastal resources would be substantial with the equivalent of five tons of salts deposited in the near-shore zone every minute.
0150.02			<ol style="list-style-type: none"> 2) Should the plant be built and become operational, the continued use of the old seawater intake pipes would remain a constant negative and significant impact to marine life. There is just no excuse to consider utilizing these out-of-date pipelines with the CA

Comment Number	Commenter	Date of Letter(s)	Comment
			Water Resources Control Board's direction to implement sub-surface intakes.
0150.03			3) North Orange County is very fortunate to have an aquifer that has a capacity of over one million acre feet that provides highly effective drought protection for the local communities. The simple fact is that north Orange County <u>does not need</u> the water – especially high-priced water sourced from a for-profit corporation. As former Orange County Water District Director Phil Anthony pointed out, “if OCWD really needed the water, we would have already built it!”
0150.04			In conclusion, FHBP urges the Regional Board to deny the requested permits for the proposed Poseidon desalination plant in Huntington Beach.
0151	Rob Hayashi	January 21, 2020	<p>Having seen firsthand the positive benefits of the Carlsbad Desalination Plant in San Diego, I am writing to urge your support for desalination, which significantly improves both water reliability and quality.</p> <p>In addition to providing a reliable water supply that isn't dependent on rain or snow, desalination has made a noticeable difference in our region's water quality. In fact, water hardness and dissolved solids have been reduced since the introduction of desal in San Diego County, resulting in better tasting, softer water that extends the lifespans of household appliances.</p>
0152	Rob Hayashi	January 21, 2020	<p>As you might imagine, I had concerns about the potential disturbances associated with the work to make the plant operational, but Poseidon Water did a stand-up job of minimizing construction-related impacts to our community and letting us know in advance of work that may impact our traffic routes. They hosted several open houses and generally made themselves available at any time to address questions and concerns.</p> <p>I commend them for being a good neighbor and pleased to see that they have also become a positive addition to our business community.</p> <p>I am proud to have the largest and most energy-efficient desalination plant in the nation right here in our backyard and I would recommend them without hesitation to our neighboring communities.</p>
0153	Vito Bica	January 21, 2020	<p>We live in San Diego, and fully believe that desalination is part of the equation when it comes to solving So Cal's water crisis.</p> <p>Interruptions in water supply can cause major losses for local businesses and jeopardize economic growth. Desal gives local businesses the assurances they need to thrive and grow because they know that even during a drought, we will still have access to a reliable water</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>supply.</p> <p>Desalination creates local control over water supplies, enabling the local economy to thrive.</p>
0154	Victor Cao California Apartment Association	January 21, 2020	<p>Poseidon Water's Carlsbad Desalination Plant has effectively and efficiently produced more than 57 billion gallons of drinking water for San Diego County residents and businesses over the past four years. This project provides not only a drought-insurance policy for San Diego, but a climate-resilient water supply that creates water independence and security for the region.</p> <p>Orange County deserves that same opportunity for a reliable water supply. This project meets all of the state's new standards as defined in the Ocean Plan. This water supply has an identified need based on the water experts at the Orange County Water District (OCWD).</p>
0155	John Kerry	January 21, 2020	<p>I am writing to urge your support for the proposed Huntington Beach seawater desal plant because it will improve both water reliability and quality for our community.</p> <p>Not only does desal create a reliable water supply not dependent on rain or snow, but it can also have a noticeable difference in regional water quality. In San Diego County, water hardness and dissolved solids have been reduced since the introduction of desal in 2015, helping to extend the lifespans of household appliances.</p>
0156	Bertha Sterling	January 21, 2020	<p>I'm writing to you today in support of desalination as a vital component of a long-term solution to California's water future.</p> <p>We must secure a diversified water portfolio to meet our state's growing population demands. We can no longer depend on snowpack and rainfall totals to fill our reservoirs, and the cost of importing water will only continue to rise. Desalination is a sustainable solution that we can depend on now and in the future.</p>
0157	Tim Florio	January 21, 2020	<p>I'm in disbelief that we are still trying to get such a logical infrastructure program approved. Maybe dumbfounded is a better description. I've written letters and sent emails. I've even had an editorial printed in the local newspaper so when I say I support desalination I mean I've supported this project from the very beginning. How long has it been? I can't really remember but it has to be fifteen years. To me that's a long time to make such a logical affirmative decision.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>You have 99% of the world's water lapping up on your shoreline and all you have to do is take the salts out and you have potable water. You can remove the salts cheaper than you can transport water. I could go on and on listing all the positive logical reason this proposal should be approved but I won't. I will ask you to do this. If you don't approve this proposal give all of us supporters a detailed explanation why you didn't.</p>
0158	Lancy Dyer	January 21, 2020	<p>I am writing to express my support for the proposed desalination plant in Huntington Beach. I watched closely as the desalination plant was built in Carlsbad and had the opportunity to tour it last year. It is an incredible facility with a low environmental footprint. Most importantly, it delivers 50 million gallons of drinking water to San Diego from seawater.</p> <p>As populations grow, we can build more power plants to meet demand, however we can't "build" any more rain. With rainfall constant and water demand growing, we need to develop alternate methods of securing drinking water which is critical for life. The proposed plant will diversify the water supply in OC and provide water security at a manageable cost.</p>
0159	Kaitlyn Kirkup	January 21, 2020	<p>I encourage you to approve the permit for the proposed Huntington Beach desalination plant so that Orange County residents can enjoy the many benefits of desalination.</p> <p>The proposed Huntington Beach plant will produce 50 million gallons of fresh, desalinated water per day while taking important steps to protect and enhance our precious coastal resources. The plant will provide our region with the water reliability we need to continue growing and thriving by providing us with a water supply that is locally controlled and not dependent on weather.</p>
0160.01	Shawn Dewane Mesa Water District	January 21, 2020	<p>The Pacific Ocean provides a climate resilient supply of water – given the recent drought, Colorado River water declining and a need for new supplies – this makes sense.</p> <p>We cannot conserve our way into creating new water, and the claim that we do not need the water is just patently false! Projects like this are smart investments in our region's future – look at the success of Orange County Water District's Groundwater Replenishment System – smart investments make sense.</p> <p>Objections over the cost of desalination are a Red Herring and beyond the scope of the Regional Board. As proven by the Carlsbad project the household cost of desalination is on part</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>with the cost of mandatory conservation or the investment in any new water supplies including wastewater recycling or stormwater capture.</p> <p>Here a few of the key compelling components that are also supported by your staff's recommendation:</p> <ul style="list-style-type: none"> • We NEED the water and are in compliance with the OPA's "identified" need provision • Carlsbad using the same proven seawater intake technology received this same permit last year and the performance of the plant is of [sic] the charts • Needed mitigation funding to maintain and assure future generations enjoyment of Bolsa Chica – which will literally be wiped out without this project
0160.02		January 21, 2020	<p>Mesa Water currently participates in OCWD's coastal in lieu groundwater management program which allows OCWD to help prevent seawater intrusion by replacing Mesa's supplies from groundwater pumping with imported water. Mesa is held financial neutral in this transaction. In the future desalinated water from Huntington Beach could replace the imported water needed under OCWD's coastal in lieu program thus achieving multiple benefits of reducing demand on imported water, protecting the groundwater basin and enhancing the quality of the drinking water supply. Mesa senior staff have indicated to OCWD our interest in pursuing such an arrangement should the desalination plant be permitted.</p>
0161	Robert Sulnick	January 21, 2020	<p>I support the need for desalination facilities and believe it is important for the future of California, which is why I strongly urge you to move forward on the Huntington Beach facility.</p> <p>In order to meet the needs of our region's growing population, it is crucial we develop options like desalination to keep up with demand. It is not practical to rely on annual rainfall and snowpack, as they are not consistent. The best option to secure a sustainable, long term and locally-controlled water supply solution is desalination.</p>
0162.01	Barbara Boxer Former U.S. Senator	January 21, 2020	<p>I am writing to express my strong support for the Huntington Beach Seawater Desalination Project and ask that the Regional Board approve National Pollutant Discharge Elimination System Permit Order No. R8-2020-0005, NPDES No. CA8000403.</p> <p>I'm pleased that your extremely diligent and thorough staff has found that the proposed Project complies with California Water Code section 13142.5(b) and the Ocean Plan Amendment and that the Project will continue to use the best available site, design,</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			technology and mitigation measures feasible to minimize the intake and mortality of all forms of marine life.
0162.02			<p>As someone who worked for many years on policies that will prepare us for the ravages of climate change, I am so pleased that our governor, Gavin Newsom, has put forward a plan for climate resilient water supplies that are critical to the people of our great state. Yes, prior govemors have rolled out ambitious water plans before, but this is different.</p> <p>Governor Newsom's 2020 Water Resilient Water Plan released earlier this month emphasizes principles such as the incorporation of water reliability successes from around the world, embracing innovation and new technology, and encouraging regional approaches to our water reliability challenges.</p> <p>I am pleased that the Governor's Water Resilience Portfolio specifically includes seawater desalination as a water resource management strategy for the state and I believe the Huntington Beach Seawater Desalination Project can follow in the footsteps of the successful Carlsbad facility and be a model for desalination done right in the state of California.</p>
0162.03			<p>The vast majority of the state's 40 million (and growing) residents live in coastal counties bordering the Pacific Ocean. Desalination doesn't depend on local precipitation or faraway snowpack. It's a proven technology that's worked around the world, and now it's working here at home. The Carlsbad Desalination Plant in San Diego County is the largest, most technologically advanced, energy efficient and environmentally sound desalination plant in the Western Hemisphere. The operation of the plant is carbon neutral and in its first 48 months of operation the plant provided San Diego County with more than 58 billion gallons of fresh drinking water.</p>
0162.04			<p>Because seawater desalination is independent of climate and weather patterns the Carlsbad facility has helped protect public health, safety and the economy during the worst recorded drought in California's history.</p>
0162.05			<p>At the cost of less than a penny per gallon, desalination is cost competitive with other new sources of drinking water, and while areas of the state - and country - struggle with polyfluoroalkyl substances linked to cancer and other contaminated and unsafe drinking water, the plant's reverse osmosis technology has provided safe, ultra-pure water that has measurably enhanced drinking water quality throughout a 4,500-square mile county that touches the Mexican border.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0163	Valerie Nera California Chamber of Commerce	January 21, 2020	<p>CalChamber supports the proposed Seawater Desalination Project because it will provide a dependable, climate resilient/drought-proof supply of NEW water for Orange County that would benefit the public and support the long-term growth and sustainability of its economy.</p> <p>Southern California imports a significant amount of water from the Colorado River and from Northern California to meet the needs of its growing economy. Orange County's pursuit of seawater desalination, as a local water supply, will help to reduce its dependence on imported water as well as provide greater certainty for residents, businesses and potential investors that Orange County's water future is reliable and secure.</p> <p>The project would generate several hundred million dollars in economic activity and approximately 3,000 jobs during construction. Dozens of additional jobs would be created, high-paying jobs, once the facility is up and running. As confirmed by your staff, this project is fully compliant with the Ocean Plan Amendment and the design protects marine life and water quality. The facility is designed to be carbon neutral and is designed with an energy recovery system to reduce energy consumption.</p>
0164	Jesse Ben-Ron OC Business Council	January 21, 2020	<p>Orange County Business Council urges the Santa Ana Regional Water Quality Control Board to approve the permit renewal to Poseidon Water for the Huntington Beach Seawater Desalination plant.</p>
0165.01	Kevin Fockler	January 21, 2020	<p>When Senator Boxer spoke about Poseidon (as a lobbyist), at the HB Study Session, she did so while touting a fact that is incredibly off base and is erroneous by its very nature. She claimed, her words, "Poseidon is a Carbon Neutral Plant."</p> <p>The fact is this: Poseidon will have one of the largest Carbon Footprints in all of Orange County.</p>
0165.02			<p>At \$2,600 an acre foot!? Do we really want to use the most expensive water around to pump into the ground to help mitigate seawater intrusion? The OCWD can buy partially treated water for far less money to inject in order to stop the intrusion, or, better yet, use water from one of the distant wells to pump into Talbert in order to stop the intrusion of seawater.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>So who wants it? Northern and Central California farmers who want unlimited water sources; big Agri farming concerns; lobbyists representing the farming business; Wall Street Businesses who have an eye out for the next dollar; former political leaders turned lobbyists who reach out to politicians to do their bidding for them; and many, many others who will make money off this pyramid of an idea. Look at Boxer! Look at Governor Brown's sister, Kathleen, she is LEGAL COUNCIL for one of the lobbying firms! Even Governor Newsom has ties to some of these lobbying firms who helped get him into office. Every single one of them gains financially from this. I won't gain from it, and neither will anyone in the general population. Some will clap their hands because they bought the idea, they bought into the created fear from the Greatest Salesman that... <i>Californians need these plants because they are drought resistant!</i></p>
0165.03			<p>They have created a need for something that we already have plenty of...water, but people are focused on the horrors of what a drought could bring. It is a great diversion tactic. Their arguments are many, some are reasonable and many are flawed, but their biggest weapon is creating a vision that prays on our FEARS; your fears. What they are peddling is something that hits us right in the center of the gut...fear of the future without water.</p> <p>Poseidon will give us less than 10% of what we use in a year (if they were to ever hit their capacity), so couldn't the people just conserve? We will examine that later.</p>
0165.04			<p>Here are some questions for each Board Member: Is fear driving the Water Board? Is fear driving the public to think these plants are needed? Are the lobbyists that good at using half-truths to get their points across, or do they make salient points? Do their points truly address the future needs of the county?</p>
0165.05			<p>This was the first Workshop since the Annual Carlsbad Poseidon report came out. IT WAS NOT A GLOWING AFFIRMATION OF THE PLANT!</p> <p>Here is a quick overview of the glowing Poseidon results:</p> <ul style="list-style-type: none"> • 5 Citations for wastewater discharge violations • Underperformance in their water delivery schedule by more than 5,000 acre feet • Their water cost was an astonishing \$2,695 an acre foot • That is 50% more than what it costs OCWD customers now per acre foot
0165.06			<p>Rising water prices will impact those who already struggle to make ends meet here in costly California.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0165.07			<p>The brine being discharged is right at my surfing beach, which is a highly used State Beach here in California. Can you guarantee the toxicity levels of the brine will dissipate before hitting the surf line? Because we are not talking about just salt here, but the chemicals added to keep the pipes in order. Are you putting the public in harms way? On a strong South Swell that toxic-brine pool can easily flow to the surf zone and to the beach. Did you do any comprehensive studies on that? All you have to do is watch the water movement on a strong swell and you can see how the tainted water will move to shore. Then it is right in the middle of surfers, bathers, swimmers or anyone in that area.</p>
0165.08			<p>Next, the MWDOC called Poseidon the most expensive alternative to adding new water of any county water project. Maybe they should not have said anything. Maybe they should have kept their report private. But they didn't. So the question now is this, "why would they slam another district's project"? Is it out of hatred, malice, jealousy? Or was it a warning saying there are better alternatives?</p>
0165.09			<p>Here are some real options to consider:</p> <ul style="list-style-type: none"> • Buy lessor quality water to use for the GWRS or to use for the Talbert Injection Wells to control the Sea Water intrusion...not \$2,600 an acre foot of Poseidon water. You can purchase partially treated water for far less money. • Tap into the over 2,000,000 A.F. (two million Acre Feet) of new ground water found in our aquifer as per the recent studies and the report by Mr. Kelly Rowe. • Import more water when there is no drought, conserve, so it can be used when we have a drought. • Listen to Kelly Rowe, one of the most informed persons on the OCWD Board. As a geo-hydrologist, he knows what the aquifer can produce. Why would he lie? We have 6-8 million acre feet to tap. We only use 500,000 a year in all of O.C.
0165.10			<p>Informed decisions:</p> <ul style="list-style-type: none"> • OCWD could build and operate a plant at a cost far less than Poseidon (We already use R.O. technology to purify water for our GWRS). It could be owned and operated by us...not a Wall Street firm that must guarantee profits. The money that would subsidize Poseidon would be used by the county to build a plant. OCWD would control it. • Even if we didn't use the GWRS we have over 10 years of water stored underground. (Per Kelly Rowe-OCWB)

Comment Number	Commenter	Date of Letter(s)	Comment
			<ul style="list-style-type: none"> • Poseidon Carlsbad HAS NEVER MET THEIR GOALS, and we are to believe they can do it now? And deliver lower cost water? This is from their September report- NEW INFORMATION TO EVERYONE AT THIS WORKSHOP. • Poseidon would provide Orange County with less than 10% of the water consumed in an average year. 10%...we want to mortgage ourselves over 10%? • Doheny's plant is a better model. Not many people are arguing about that one. If we need water for seawater intrusion mitigation, then build a plant of that size whose only goal is to shore up the defense of sea water intrusion.
0165.11			<p>Here are more facts to consider...</p> <p>Water usage in Orange County, per person usage, is actually going down. And that is even with a growing population. The latest OCWD Annual Report has a chart that shows water usage over the last 20 years declining at a quickening pace. (Page 5 of OCWD annual report)</p> <p>So while the population in this water district has grown by over 10 percent over the last 20 years, the overall water consumption has decreased by almost 20%, or 60,000 acre feet of water!</p>
0165.12			<p>The people of Orange County do not deserve higher rates for doing a herculean effort at conserving water. They have done a great job conserving water and it would be a shame to reward that effort by raising rates, and compounding that chaos by building a plant that will negatively impact the environment.</p>
0165.13			<p><u>The toxic brine.</u></p> <p>We know the toxic brine could affect: the ocean; the nearby wetlands; the surfers who surf there; and the lifeguards who protect us. Passing it off as if it won't affect things is not prudent. No one knows the long term affects.</p> <p>Can you guarantee that when Red Tides occur the plant is shut down? That with a warming ocean the algae blooms won't affect the operation of the plant or what we drink?</p>
0165.14			<p><u>Microplastics</u></p> <p>The R.O. filters at the plant cannot filter out all the plastics. This means that Poseidon_water will contain microplastics.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0165.15			<p>Can you guarantee me safe drinking water? Can you guarantee that the consumption of microplastics is okay over the long haul?</p> <p><u>IV Alternative Supply/Compromise</u></p> <ol style="list-style-type: none"> 1. Build a smaller plant, along the lines of Doheny. 2. Lower the pumps we now have to a depth that will pump out the difference between what is pumped into the Talbert Wells and what the "Original Poseidon Plant" would have given to us. <p>Look at purchasing water from other sources, during non-drought times to help enhance our GWRS system because it is maxed out.</p>
0166	<p>Tyler Diep</p> <p>CA State Assembly</p> <p>(see Attachment C)</p>	<p>January 21, 2020</p>	<p>As a follow-up to the letter I submitted on January 15, 2020, enclosed you will find support letters from the State Legislature for the Huntington Beach Seawater Desalination Facility. Please include the attached letters for part of the administrative record for the amendment and renewal of the Huntington Beach Desalination Project.</p> <p>I thought it would be valuable for the Board to appreciate the bipartisan support the desalination facility has. Most of the Assemblymembers and Senators of the letters are still members of the Legislature today.</p> <p>See Attachment C for the California State Legislature signatories.</p>
0167	<p>James Parkinson</p>	<p>January 21, 2020</p>	<p>When my wife and I moved our young family to Huntington Beach in about 1967, we settled in the Seabury housing tract, just off of Magnolia between Indianapolis and Atlanta streets. In those days Magnolia didn't run all the way to P.C.H, but stopped at Hamilton with a short length of Cannery Street extending from Magnolia and paralleling the mud dump. A low cost weekend entertainment we enjoyed with our new neighbors in those days was to car pool or bike to the beach and dig for Pismo Clams in front of the Edison Steam Plant. You could find the clams with your toes while wading on the sandy ocean floor. We would return to one of the neighbor's houses with our catch and grind up those tough old clams, make a chowder and add a bottle of cheap wine to the table and we had instant good times. This was, of course, before the adverse effects of the cooling water intake and return of the warmer effluent from the steam plant destroyed the marine habitat in the area.</p> <p>The new A.E.S. plant is air cooled and does not rely on the ocean for electricity generation. Consequently, with time, healing of the environment and with it a return of healthy sea life</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>should occur. However, if Poseidon is allowed to build their desalination plant and use the existing sea water intake system, nothing will change. Further, the combined salt removed and the salt brine residue from the process (estimated at 5 Tons per minute of operation) will require disposal, least additional pollution of our ocean shall occur. It is already known that desalination is highly energy dependent, requiring vast amounts of electricity in its process. Adding to these costs with salt and brine disposal makes desalination a poor choice.</p> <p>I would support a far better solution to increasing our drinking water requirements: Recharging our ground water aquifers with reclaimed water. This is a proven process, requiring little in the way of infrastructure changes.</p>
0168.01	Oscar Rodriguez	January 21, 2020	<p>I am opposed to the project because of the cost. We all know that desalination is the most expensive way to produce fresh water because of the energy costs and at the end of the day, ratepayers are the ones that will foot Poseidon's bill through increasing costs. While Poseidon states that the average increase will not be much, I am well aware that most in my community could not afford to pay more, especially for a project that will lock us in a contract that will be in place for decades.</p>
0168.02			<p>I have been following the developments of Poseidon's previous project in Carlsbad, CA and have found the news from there disturbing. For example, in a peer-reviewed scientific study on the ocean water at the site of intake and brine discharge there, scientists have found a significant increase in salinity and toxicity of the water that actually goes above the limits set by the state of California's Ocean Plan Amendment. What reason do I have to believe that anything different would occur in my community?</p>
0168.03			<p>The carbon cost of the Huntington Beach project, despite the remediation plan for the Balsa Chica that Poseidon has yet to fully outline, will use as much energy as 2-300,000 homes, further contributing to climate change. Furthermore, I do not think we need to be killing the ocean any more than we already are, and we need to be thinking about how to make it better. Desalination only makes it worse and it be a black mark in my community.</p>
0168.04			<p>Finally, I have yet to see a convincing argument that this plant is even needed. The MWDOC reliability study and other documents that my community members have circulated to me show that this project is listed last on list of necessary steps towards a sustainable water future. We have the Groundwater Replenishment System, or GWRS that is working well in Orange County, and they are planning to expand this project in the future. For what reason do we need a</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			desalination plant? Orange County doesn't need Poseidon's water, or the dead marine life and polluted water that go with it.
0169	Keith Bohr Former Huntington Beach Mayor Diane Feinstein	January 21, 2020	<p>As a former Huntington Beach Mayor that originally voted to approve this important project back in 2005, I respectfully request that the attached letter of support from Senator Feinstein dated September 3, 2019 be added to the record [sic].</p> <p>Senator Feinstein's September 3, 2019 letter to Governor Newsom provided the following points in support of the Poseidon desalination project:</p> <ul style="list-style-type: none"> • This project would further diversify Orange County's water supplies, expanding upon the 100 MGD produced by Orange County Water District's Groundwater Replenishment System. • The project will create more than 3,000 jobs and infuse \$500 million into Orange County's economy during its 35-month construction and start-up period and an additional 400 permanent jobs, according to Poseidon Resources. • Support is based on the project's development in an environmentally safe manner that is consistent with the State Water Resources Control Board's Desalination Amendment to the Water Quality Control Plan for the Ocean Waters of California. As outlined in the amendment, the proposed plant must "use the best available site, design, technology, and mitigation measures feasible to minimize intake and mortality of all forms of marine life." • My understanding that Poseidon made three modifications to its Huntington Beach Desalination Plant design in order to adhere to the Board's requirements and to minimize the impact to marine life.
0170	Charles Falzon Amigos de Bolsa Chica	January 21, 2020	<p>Our mission is to advocate for the preservation, restoration, and maintenance of the Bolsa Chica wetlands. In order to maintain a viable ecosystem, it is critical that the tidal flows are able to circulate from the open ocean. This can only happen through a controlled sand management program at the wetland's tidal inlet.</p> <p>Funding for this sand management program is expected to expire next year. Poseidon Water has proposed as a part of their mitigation requirements the continued funding of this sand management program that will keep the wetlands thriving for the next generations. This is</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>critical to the survival of the wetlands where the Amigos de Bolsa Chica have spent almost 50 years working for its restoration and now for resources to maintain it. Keeping the tidal inlet open and functioning will mean that over 2,000 acres of wetlands will be protected, if not we will have a dying resource. Not only an environmental resource, but the loss of millions of dollars spent in restoration.</p> <p>Amigos supports the mitigation efforts of Poseidon because it will guarantee the financial resources to keep the tidal inlet functioning as designed. We are confident that this mitigation plan will be a net benefit to the region. We hope that you will remember that the benefits will not only be to Orange County, but to the State, as you determine the importance of your decisions.</p>
0171.01	David Maricich	January 21, 2020	<p>I am strongly opposed to the Poseidon project and desalination in Huntington Beach for the following reasons:</p> <p>The Marine Environment / Intake Pipes – I’m a surfer and have a strong concern based on research and science that the desal project would negatively impact the marine and coastal environment. The intake will kill many fish and eggs and for this reason alone should take the project off the table for consideration.</p>
0171.02			<p>Salt Brine - I’m also very concerned about the brine and impacts the environment. There is evidence that the salt brine at a Chilean desal toxifies the marine environment, turning the affected coast into a “dead zone”</p>
0171.03			<p>Do we really need the water? - The answer is no. There are so many better technologies like the water reclamation / infusion project here in Orange County. Also the recent news that LADWP will be creating a reservoir under Owens Lake is another positive development for our water resources in the region. I’m just scratching the surface here.</p> <p>There are multiple additional reasons that have been voiced by many others about why the water isn’t needed at the premium price that would be charged and it’s clear that this is a special interest play that would not benefit the community.</p>
0172	Tracy McNiven	January 21, 2020	<p>We should not have to wait for another drought to realize what we already know – we need the water. We are fighting on all fronts to combat the impacts of Climate Change – wild fires, droughts – and this project provides for a climate resilient water source. You have the opportunity to do something that is right, that takes a step in the right direction and is in line with the Governor’s Climate Resiliency Plan. Renew the permit and let’s get moving.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0173.01	Rhona Villanueva	January 21, 2020	For many years I have been following this disaster in-the-making and never changed my mind. This is not the right solution. Never have I heard or read that the city of Huntington Beach has requested proposals from companies other than Poseidon, which is a normal thing to do.
0173.02			The track record Poseidon has is not the best to say the least. Just look at Carlsbad. Citation after citation and never produced the amount of water they promised they would.
0173.03			The damage to the ecosystem, the beaches, the ocean floor is horrible. Too much salt kills! I have lived in Chile for many years and know about the plant in Antofagasta. I know also about the fishermen's distress. They hardly can make a living because the ocean floor is dead, there are no more sea creatures of any kind.
0173.04			It is too expensive as well and in about 40 or so years it will be sitting in water due to the rise of sea levels.
0173.05			There are many ways to conserve water to avoid the installation of this monster.
0174.01	Scott Maloni Poseidon Resources, LLC	January 21, 2020	The Tentative Order's prohibition of any discharge until Poseidon has obtained all necessary permits for restoration of the fieldstone and Oil Pad/Road parcels prohibits the successful and timely completion of the Project because it impedes Poseidon's ability to secure construction financing. As described in greater detail in Exhibit to Cover Letter 3, Poseidon is proposing amendments to the Tentative Order and Attachment K that will (1) remove potential Project feasibility conflicts; (2) ensure the Bolsa Chica MLMP complies with OPA requirements, and; (3) ensure sufficient compensatory mitigation is in place prior to commercial operations and for the operating life of the desalination facility.
0174.02			<p>As explained most recently in Latham & Watkins' January 9, 2020 and Poseidon's January 16, 2020 letters to Regional Board Staff [Appendix CCCCC], the Tentative Order's determination of compliance with the identified need for the desalinated water (California Ocean Plan, Chapter 1 1 1.M.2.b(2)) is well documented and legally sound.</p> <p>The State Water Resources Control Board has expressly concluded that the local water providers must make water supply need determinations; such determinations are not within the purview of the Water Boards. In addition to the agreed upon Water Purchase Agreement Term Sheet between Poseidon Water and the Orange county Water District, OCWD has provided substantial information (Appendices P, P2, P3, P4, P5, MM, VV, GGG, ZZZ3, ZZZ6, CCCCC) in support of its interest in the Project's full 50 MGD capacity and the Project's compliance with the identified need for the desalinated water (California Ocean Plan, Chapter 1 1 1.M.2.b.(2)).</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Moreover, both the State Lands Commission, in its 2017 Final Supplemental Environmental Impact Report for the Project, and Superior Court Judge Sueyoshi, have confirmed that there is a substantial evidence supporting the need for Project water.</p>
0174.03			<p>Poseidon’s calculation of Project marine life impacts required by OPA Chapter III.M.2.e.(1) relies upon the best available biological data, which is from the 2003-2004 entrainment study prepared for the Huntington Beach generating Station. As described in the Regional Board’s Neutral Third-Party Review of the marine life impact analysis, the 2003-2004 entrainment study complies with all OPA requirements and produced extremely robust data for use in the Project’s Water Code section 13142.5(b) determination.</p> <p>Indeed, Regional Board staff has already approved use of the 2003-2004 data in carrying out the Water Code section 13142.5(b) analysis. (See Tentative Order, Attachment G, Finding 38.) The Regional Board’s approval of the Project’s NPDES permit in 2006 and again 2012 relied on the 2003-2004 entrainment data as did the City of Huntington Beach’s 2010 FSEIR and Stand Lands Commission’s 2017 FSEIR. In addition to being OPA compliant, utilization of the 2003-2004 entrainment data ensures analytical consistency throughout the Project permit amendment and renewal process.</p> <p>However, the Tentative Order includes several confusing references to “data limitations” related to the 2003-04 study data. (See, e.g., Tentative Order, Staff Report, p. 9.) The 2003-2004 entrainment study data fully complies with OPA guidance and provided a complete analysis of all proposed project-related marine life mortality impacts. Thus, Poseidon proposed redline edits to the Tentative Order are designed to eliminate potential inconsistency and confusion caused by references to “data limitations” or other concerns related to use of the 2003-2004 study data.</p>
0174.04			<p>Poseidon concurs with the Regional Board’s finding under OPA Chapter M.2.d.(1)(a)(ii) that a combination of subsurface and surface intakes are not a feasible alternative for the proposed Project. The environmental, social and economic impacts of a hypothetical small-scale combined surface-subsurface intake system outweigh any corresponding reduction in the intake and mortality of marine life.</p> <p>The administrative record, and Regional Board staff, identified multiple challenges presented by the subsurface intake wells that would be constructed in any hypothetical combined intake system. (See March 22, 2019 Regional Board Staff presentation.) The regional Board’s findings</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			are consistent with the conclusions of the California Coastal Commission's Independent Scientific & Technical [sic] Advisory Panel ("ISTAP"), which found beach wells, regardless of design capacity, are technically infeasible for the proposed Project due in part to: (a) performance risk; (b) local hydrologic conditions that would result in adverse environmental impacts including to fresh water aquifers and local wetlands; (c) sensitivity to sea level rise; (d) poor geochemistry; and € lack of precedent in similar geological conditions. Along with the Coastal Commission ISTAP reports, Poseidon also submitted numerous technical reports confirming that subsurface intakes, even with a reduced capacity, are infeasible for the Project due to site-specific factors. (See, e.g., Appendices A1, A2, A3, D, F, G, K, L, L2, L3, M, HHH, III, OOOO.)
0174.05			Poseidon's proposed redline edits to the Monitoring and Reporting program ("MRP") for the Project are included as Attachment E to the Tentative Order, and are directed at clarifying certain monitoring and reporting requirements.
0175.01	Gary Geramo	January 21, 2020	The information I have read and heard raises a number of concerns for me: the potential and significant increase in water costs, potential danger to our marine life caused by the intake pipes and the brine buildup and no less important, the poor history of Poseidon's implementation and follow through with their other desalination plants.
0175.02			It appears that there is no need for the plant other than to satisfy a business proposal that hopes its product will generate more money (with evidence suggesting that is certainly not the case). I urge you to consider that the citizens and marine life of my community do not benefit from this proposal and are indeed at risk if it is implemented.
0176.01	Eric Gillies California State Lands Commission	January 21, 2020	The new linear diffuser design would include two 7-port linear diffuser sections connected to the seaward and shoreward sides of the existing discharge tower. Each section would have a 4-foot-diameter pipe header, and the pipes would be placed directly on the seabed on concrete pipe saddles. The riprap currently surrounding the discharge tower would be removed and replaced around the new footprint, which would be smaller than that evaluated in the 2017 FSEIR. The new linear diffuser design would minimize the marine mortality impacts associated with diffuser shear, in accordance with California Water Code section 13142.5(b).
0176.02			Commission staff requests that the Regional Board consider the following comments on the Addendum, to ensure that impacts to State sovereign land are adequately analyzed for the Commission's use of the Addendum to support any potential future lease amendment. General Comments

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>“Similar To” Versus “The Same As”: The Addendum evaluates the changes in onshore and offshore vehicles/vessels as well as activities and impacts, compared to what was analyzed in the 2017 FSEIR. However, the document refers to equipment, activities, or impacts that are “similar to” as well as “the same as” those evaluated in the 2017 FSEIR. For example, on page 9 the document states that “...construction of the new linear diffuser would entail use of a similar set of construction vessels as analyzed in the 2017 FSEIR” , page 10 states that the onshore support vehicles at the selected port would be the same as those analyzed for construction of the Lease Modification Project, and page 11 notes that “...a similar set of vessels and crew will be required as analyzed in the 2017 FSEIR.”</p> <p>Commission staff assumes that these two terms are meant to distinguish the vehicles, vessels, impacts, or activities as they relate to what was analyzed in the 2017 FSEIR. It would appear that “similar to” means that there will be the same type of activity and associated equipment/impact, but with additional equipment or other changes from the 2017 FSEIR evaluation. The Addendum would then be using the term “the same as” to mean that the same equipment/activity will be operating in the same manner and on the same days (unless otherwise specified) as what was presented in the 2017 FSEIR. When attempting to review the subsequent impact analysis, Commission staff are unable to determine whether there are changes in equipment numbers or days of operation, and thus the impact determinations are unclear. If this terminology is deliberate, Commission staff requests that the two terms be clearly explained and distinguished so that the impact analyses accurately depict the changes from the 2017 FSEIR. In instances where the equipment, activities, or impacts are “similar to” rather than “the same as” those analyzed in the 2017 FSEIR, please explain what specifically will be different and how that will not trigger any of the conditions described in California Code of Regulations, title 14, Section 15162.</p>
0176.03			<p>Project Description</p> <p>Dredged Sediment Disposal: Page 11 of the Addendum describes the construction approach for the linear diffuser installation. #2 discusses the leveling, or dredging that would be required and states that the marine sediments “...would be side-cast and would be redistributed by natural ocean currents, as described in the 2017 FSEIR”. Commission staff would like to clarify that the 2017 FSEIR evaluated the worst-case scenario, where the dredged sediments from the wedgewire screen installation could not be side-casted and instead would be towed to the Port</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			of Long Beach for onshore disposal. Please include that information on page 11 so that the analysis is not misleading.
0176.04			<p>Air Quality Criteria Pollutant Emissions: The table on page 16 provides information relating to the emissions analyzed in the 2017 FSEIR as well as the calculated emissions from the linear diffuser construction activities. Commission staff has substantial concerns with the data presented.</p> <ul style="list-style-type: none"> • First row (“Typical Daily Construction Emissions”): This row is unnecessary and misleading. Under CEQA, other responsible agencies and the public are looking at the linear diffuser emissions to determine how many additional pounds per day will be added to the highest emissions evaluated under the 2017 FSEIR that could occur on the same day. This provides the “adjusted” worst-case scenario to support or refute the conclusion that there are no substantial increases in the severity of the previously identified significant and unavoidable air quality impact. Commission staff recommends that this row be removed, or its purpose clearly explained.
0176.05			<ul style="list-style-type: none"> • Second row (“One Day Total Construction Emissions for the New Linear Diffuser”): This row provides that 40.05 pounds per day (lbs/day) of nitrogen oxides (NOx) will be emitted during the linear diffuser construction. Commission staff notes that if this amount is added to the 73.85 lbs/day of NOx emissions evaluated in the 2017 FSEIR, then the combined total will exceed the CEQA threshold. The table currently lacks a critical piece of information to determine whether there is a potentially significant air quality impact – the amount of NOx that would have been emitted as a part of the 73.85 lbs/day. Once that volume is identified, the 40.05 lbs/day of NOx can be added to concurrent wedgewire installation activity emissions, and Regional Board staff can appropriately determine which construction day has the worst-case criteria pollutant emission scenario to evaluate. This information is important to understand the extent of the proposed changes.
0176.07			Air Quality Impact Analysis: On the bottom of page 16, the Addendum provides a rationale for no substantial increase in the severity of the air quality impacts compared to those evaluated in the 2017 FSEIR. Commission staff notes, however, that this determination is focused on the dredged sediment volume rather than how that volume relates to the criteria pollutant emissions, which would be needed to understand the air quality impact. The Addendum needs to explain whether the equipment needed for dredging and potential onshore sediment disposal would be operating on the same day that it was anticipated to be used for wedgewire screen activities in

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>the 2017 FSEIR. It appears that the Regional Board is assuming the two occur simultaneously, as evidenced on page 15 in the paragraph below Table 2.</p> <p>The Addendum does not explain, if this equipment could be working simultaneously on the wedgewire intake and linear diffuser dredging, how there is not a one-day increase in emissions over the 73.85 lbs/day of NOx evaluated in the 2017 FSEIR. Commission staff believes that the issue to be evaluated is not whether there are additional total hours of equipment use and how those can be “absorbed” into the conservative dredge volume estimates evaluated in the 2017 FSEIR, but rather whether using that equipment for the linear diffuser sediment dredging and onshore disposal would increase emissions on the same day or a different day than was evaluated under the 2017 FSEIR. Please clarify whether there is a new worst-case daily emissions scenario given the potential use of the dredging and disposal equipment in two places at the same time.</p>
0176.08			<p>Installation Details: The Addendum states, on page 15, that “there is no change between the 2017 proposal and the modified design for the technical details of installation”. Commission staff does not believe this is correct. The 2017 FSEIR evaluated a diffuser that would have been set upon a lowered concrete discharge tower. The new linear diffuser configuration will require dredging or leveling, concrete cradles placed on the seafloor, and access ports cut into both sides of the existing tower. Please revise this statement to more accurately indicate what remains unchanged from the 2017 FSEIR diffuser design.</p>
0176.09			<p>Dredged Volume Change: The table on page 15 notes in the far right-hand column “Unsure about change from 400 to 600 cy”. This is relating to the volume of dredged or leveled sediments that would be affected by the linear diffuser installation activities. While evaluating the impacts associated with 600 cubic yards of dredged sediment is sufficient under CEQA to cover the worst-case scenario (as compared to 400 cubic yards), Commission staff requests the Addendum explain the purpose of that information in the table, and identify any additional areas of uncertainty that should be identified in the document.</p>
0176.10			<p>Marine Biological Resources Special-Status Species Impact: Commission staff requests that page 17 of the Addendum clarify, as it does for other resource areas, that the special-status species impact in the 2017 FSEIR was ultimately determined to be less than significant with mitigation. The mitigation assumed species within the diffuser shear area would suffer 100 percent mortality.</p>
0176.11			<p>Marine Transportation</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Marine Vessels: The Addendum notes, on the bottom of page 22, that “the new diffuser will be constructed and submerged at the same depth as the 2017 [Final] Supplemental EIR”.</p> <p>Commission staff notes that this is not correct, because the linear diffuser will be placed on the seafloor and it appears the existing discharge tower will not be lowered, as it was in the 2017 FSEIR. Therefore, the Addendum should instead distinguish any height differences for both the discharge tower and the seafloor components and evaluate any marine vessel conflicts.</p>
0176.12			<p>Technical Corrections</p> <ul style="list-style-type: none"> • Please correct all the Figures to reference the defined term “2017 FSEIR” or indicate more clearly if the intent is to reference the Draft SEIR. • Page 10: insert “the” before “City’s Municipal Code”. • Page 11: The following sentences already occur on page 10 under “Installation of the Diffuser”. Please remove <ul style="list-style-type: none"> ○ “Installation of the diffuser may occur before, or concurrently with, the wedgewire screen intake installation. In either case, a similar set of vessels and crew will be required as analyzed in the 2017 FSEIR”. • Page 12: “This Addendum evaluates the potential for the new linear diffuser design, installation, and operation to result in new or...” (new recommended language in underline). • Page 18: The third line of the “Previous Environmental Analysis” section has Appendix G calculations that are from the 2017 FSEIR which included the combined wedgewire intake and diffuser construction activities. Please revise accordingly.
0177.01	Tom Luster California Coastal Commission	January 21, 2020	<p>Our concerns focus on the following five issue areas:</p> <ol style="list-style-type: none"> 1) Operating Life: The Tentative Order describes the proposed facility as having a shorter operating life than is proposed by Poseidon. This results in an underestimate of the magnitude of the proposed project’s expected effects in at least two issue areas – mitigation and hazards. 2) Mitigation: It appears that additional mitigation is needed for the proposed project to meet the Ocean Plan Amendment’s requirement that the project fully mitigate its adverse effects on marine life. 3) Hazards: The Tentative Order’s approach for addressing climate change-related hazards does not appear to conform to relevant requirements and would delay the analyses of these hazards and their related risks. We believe the analyses should be done now, so as to inform the proposed siting of the facility. 4) Water Need: The Tentative order appears to conflate the OPA’s required determination of water supply “need” with water supply “opportunity” or “potential.”

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>5) Ocean Acidification: The Tentative Order does not evaluate the proposed project's expected effects related to ocean acidification or mitigate for these effects.</p> <p>Overall, we recommend that the Board modify the Tentative Order to address these comments and concerns prior to your consideration of approval.</p>
0177.02			<p>Poseidon has proposed that its facility operate for at least 50 years. However, the facility is characterized in the Tentative Order as having just an expected "30-plus year operating life." As a result, the Tentative Order's analyses in at least two issue areas – project mitigation and hazards to the facility – do not appear to adequately evaluate the proposed project's expected impacts and risks.</p>
0177.03			<p>We concur with the selection of Bolsa Chica as a suitable site for some of the required mitigation. However, for the reasons described below, we believe that the Tentative Order's proposed mitigation approach would not fully comply with the OPA's requirement (at Section M.2.e(3)(b)(I)) that mitigation take the form of "expansion, restoration, or creation" of suitable habitat, or its requirement (at Section M.2.e) that the mitigation be sufficient to address the expected project impacts over the "operational lifetime of the facility." further, and as we have informed Board staff, the proposed mitigation is likely not sufficient to conform to Coastal Act and Local Coastal Program mitigation provisions.</p>
0177.04			<p>Regarding the OPA requirement that mitigation take the form of expansion, restoration, or creation, Poseidon's proposed mitigation would instead consist primarily of dredging to maintain and preserve areas of Bolsa Chica that are already restored (and for which mitigation credits have already been approved – see below). The Tentative Order's mitigation approach would provide relatively little actual restoration acreage – about 10 acres – which, when compared to Poseidon's 421.4-acre APF suggests that the additional productivity provided by the proposed mitigation will be far less than the relatively extensive loss of marine life the facility would cause.</p>
0177.05			<p>Regarding the proposed mitigation's conformity to Coastal Act and LCP provisions, both generally require that the project provide "mitigation to the maximum extent feasible," which is a different standard than the OPA's requirement to provide "best available" mitigation feasible. This will likely result in Poseidon needing to provide additional mitigation beyond what that Tentative Order currently proposes. Additionally, and as the Tentative Order describes (at Attachment G.5), the Coastal Commission, along with several other state and federal agencies,</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			has already awarded mitigation credits to the Ports of Long Beach and Los Angeles for most of the actions Poseidon is proposing to conduct as mitigation.
0177.06			To ensure that impacts to marine life are fully mitigated as required by the OPA, we recommend that the Board decrease the number of mitigation credits Poseidon would receive for the proposed work at Bolsa Chica to reflect the type of mitigation being proposed - I.e., primarily preservation – and to account for the “double counting” described above.
0177.07			<p>Finally, and importantly, Commission staff is concerned that the mitigation opportunities available at Bolsa Chica will not provide the full amount of mitigation required for the proposed project. The documentation provided as part of the Board and Commission staff review of Poseidon's mitigation proposal points to Bolsa Chica as not being able to provide adequate mitigation during the expected "operational lifetime of the facility;" as required by the OPA. As noted above, the Tentative Order describes Poseidon's project as having a "30-plus year" expected operating life, while Poseidon's application to the Board states that its facility has an expected operating life of at least 50 years. However, Bolsa Chica is not expected to function or provide the expected levels of productivity in its current form for either of those time periods. Bolsa Chica was restored based on a mid-1990s <i>Bolsa Chica Restoration Plan</i> that anticipated just a half-foot of sea level rise over the upcoming century. Current projections far exceed that amount, and Bolsa Chica's constraints...limit its ability to adapt to higher ocean elevations. In 2018, the Bolsa Chica Managing Agencies, which are responsible for the day-to-day and long-term management of the site, stated that Bolsa Chica is subject to "extreme risk of failure" within five years. The Board staff's above-referenced use of the MRC included an assumption that mitigation would be successful for just 12 years, and Poseidon's suggested MRC calculation included expected mitigation success for just 25 years. None of these time periods would be sufficient to mitigate for Poseidon's expected 50+ year operating life. Importantly, during all of these periods – 5, 12, 25, 30, or 50 years – available documentation shows that Bolsa Chica will be experiencing significant and severe effects of climate change and sea level rise...most of which are likely to lead to diminished estuarine functions and productivity. This suggests that, without significant design or management changes, none of which are identified or proposed as part of the Tentative Order, Bolsa Chica will not provide adequate mitigation for the expected operating life of the facility. Importantly, the types of extensive and fundamental changes Bolsa Chica is expected to experience go beyond those that are</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>addressed through the kind of adaptive management plan begin contemplated in the Tentative Order - i.e., the plan would identify corrective actions at a site that may be no longer functioning in a way that would provide the level of productivity needed to mitigate for the project's impacts.</p> <p>To address these concerns, we recommend the Tentative Order be modified to include an evaluation of the long-term expectations (i.e., at least 50 years) of mitigation success and to identify additional mitigation that will be needed to comply with the OPA's requirement that Poseidon fully mitigate for its adverse marine life effects over the operational lifetime of the facility. Doing so will also help ensure consistency with any future Coastal Commission permitting action.</p>
0177.08			<p>The Tentative Order proposes that Poseidon be required to develop and implement a Climate Change Action Plan ("CCAP") within three years of the effective date of the Tentative Order. This proposed CCAP is based on recommendations in Poseidon's February 4, 2019 letter to the Regional Board (which is Appendix 00000 of Poseidon's application materials to the Board). The Tentative Order states (on page A-38) that the "purpose of the CCAP is to project potential climate change impacts on the Facility and operations, and document steps to address potential impacts on the Facility." The CCAP would include analyses of flooding effects, greenhouse gas emissions, sea level rise, and other impacts related to the proposed facility's design and location. The Tentative Order's Section VI.A.2 includes a provision that would require the facility to be protected to reduce infrastructure vulnerability to these and other events associated with climate change. The Tentative Order further states that the proposed CCAP is meant to conform, in part, to the OPA's Section M.2.b.(4), which requires that the Regional Board "analyze the direct and indirect effects on all forms of marine life resulting from facility construction and operation, individually and in combination with potential anthropogenic effects on all forms of marine life resulting from other past, present, and reasonably foreseeable future activities within the area affected by the facility." Appendix 00000 additionally asserts that including the CCAP in the Tentative Order would make the permit consistent with the State Water Board's Resolution No. 2017-12- <i>Comprehensive Response to Climate Change</i>, which requires various implementation measures be integrated into State and Regional Water Boards' actions. As detailed below, Commission staff has several concerns about this</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			proposed CCAP and Appendix 00000, including several mischaracterizations of expected hazards and risks at the proposed project site.
0177.09			<p>Commission staff concurs with the Board that a full analysis of climate change impacts on the proposed facility as well as impacts on the surrounding environment by the facility is a critical component of project review. However, given that the proposed project would be located within an extensive low-lying area that is designated as flood-prone, that is within a designated tsunami inundation zone, and that is expected to experience inundation risk from sea level rise and associated increased wave and storm energy in the relatively near future, we believe it is critical that these hazards and risks be identified prior to permitting.</p> <p>Appendix 00000 instead proposes delaying those analyses until three years after the effective date of the Board's approval (and presumably after facility construction has started). This would inappropriately delay analysis of any potential adverse climate change-related effects identified through those analyses as well as identification of mitigation measures that may be needed to address those adverse effects.</p> <p>The Coastal Commission will be conducting most of the analyses identified in the CCAP as part of its review to determine whether Poseidon's proposed project can conform to relevant provisions of the Coastal Act and Local Coastal Program, and we note that Appendix 00000 acknowledges that "development of the Project site falls under the land use authority of the Coastal Commission." It is also not clear that the CCAP is needed to conform to OPA Section M.2.b.(4), since that section requires the Board to analyze the facility's direct and indirect effects on marine life, not effects of climate change on the facility. With that acknowledgement, and with there being no requirement for the CCAP pursuant to the above-cited provision of the OPA, it would be appropriate for the Board to make the Tentative Order effective only after the Coastal Commission completes its required hazards evaluations. However, if the Board wishes to require that the Tentative Order be revised to include the completed analyses from the proposed CCAP, we recommend that it consider the concerns described below as part of that review. Coastal Commission staff would be happy to coordinate with Board staff on these analyses to ensure they are adequate for purposes of Board requirements and of Coastal Act and Local Coastal Program provisions.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0177.10			<p>Regarding Appendix OOOOO's statement that the CCAP would conform to the State Water Board's Resolution No. 2018-012, it appears that neither the Tentative Order nor Poseidon's letter provide sufficient information or analysis to determine conformity to this Resolution.</p> <p>We are also concerned that Appendix OOOOO and other relevant submittals from Poseidon do not accurately characterize several key elements of existing and expected site conditions, leading to a significant underestimation of hazards and risks at the site and surrounding area and an unsupported conclusion that the proposed project will remain feasible over its full proposed operating life. Our Specific concerns include:</p> <ul style="list-style-type: none"> • Climate resiliency: Appendix OOOOO states that seawater desalination in general, and its Huntington Beach proposal in particular, are climate resilient water supplies. The letter does not acknowledge, however, that determining whether a particular desalination facility is "climate resilient" requires a site –and project –specific evaluation. • Critical facility determination: Appendix OOOOO contends that the proposed project should not be considered a "critical facility" or "critical infrastructure" for purposes of hazards planning. State and local guidance and requirements direct that "critical facilities" and other types of projects be reviewed under the "extreme," or "H++" sea level rise scenarios, but Poseidon believes its project should not be subject to that level of evaluation. • Tsunami run-up elevations: Appendix OOOOO proposes that a maximum four-foot tsunami run-up elevation would be appropriate and conservative for reviewing the proposed project, but it does not provide a basis for that proposed elevation. Importantly, Poseidon, in its 2013 <i>Geotechnical Hazards Assessment Report</i>, already provided an analysis based on a 10- to 12-foot tsunami runup that showed expected onsite inundation. Appendix OOOOO provides no rationale for decreasing the runup elevation from that previous assessment. Commission staff, in consultation with staff of the California Geologic Survey, selected an 11-foot runup (plus SLR) as a reasonable elevation to use in our hazards analyses.
0177.11			<p>The OPA establishes that if a desalination facility's proposed production volume exceeds the need for water as identified in applicable Urban Water Management Plans ("UWMPs"), that excess volume cannot be used to determine that subsurface intakes are infeasible. We believe that the Tentative Order interprets these OPA "need" requirements for Poseidon's proposed project in a manner that is inconsistent with the intent of OPA's required feasibility determination and could serve as a precedent in which a Board determination on subsurface intake feasibility is based on inflated water need estimates.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>...[t]he Tentative Order states that the MWDOC UWMP is the relevant document for determining compliance with the OPA's assessment of whether water from the proposed project is 'needed'...[The MWDOC] UWMP's statement of need shows that MWDOC, and by extension, OCWD, expect all needed supplies will be available from MWD and surface storage. The Tentative Order, though, cites the UWMP's inclusion of Poseidon project in its Section 7.3 – "Planned Water Supply Projects and Programs" as the basis for the area having an identified need for 56,000 acre-feet of seawater desalination.</p> <p>We believe this does not accurately characterize the identified need in the UWMP or as required for an OPA determination. The cited section of the UWMP identifies not only the Poseidon project, but several dozen other projects that would be potential sources of additional or improved supplies, not needed supplies. Importantly, if the inclusion of Poseidon's project in this UWMP section is sufficient evidence of need, then all the projects included in this section would also be considered needed. This is clearly not the case, as these projects together would represent thousands of acre-feet of additional supplies, far more than what MWDOC has identified as need and far more than the service area could handle. Just as these other projects identified in this section represent "potential," not "needed" water, so does Poseidon's proposal. The UWMP's inclusion of Poseidon in this section does not serve as evidence of need for OPA purposes.</p> <p>The Tentative Order's currently proposed interpretation of the OPA's "need" requirements could render key elements of the OPA meaningless. The Tentative Order proposes that the OPA's "identified need" provisions can be met if a UWMP mentions a proposed seawater desalination project just as a future opportunity or potential project. Because all UWMPs are required to identify future desalination opportunities regardless of whether they are part of their future needed supplies, the Tentative Order's proposed approach could result in any potential desalination project mentioned in a UWMP being able to contend that it is needed, even if its proposed production volume exceeds the amount that could be provided using a subsurface intake. This could inappropriately limit the analyses conducted pursuant to the OPA's subsurface feasibility determination and result in an increased likelihood of marine resource impacts from new facilities with open water intakes, which is clearly not the OPA's intent.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0177.12			<p>As a final concern regarding need, we note that the 56,000 acre-feet of water supply from this proposed project has remained consistent throughout its approximately 20-year review history. If this volume was actually need-based, it presumably would have changed during that period - for example, increasing or decreasing as the area's water districts developed other sources of water, addressed concerns about the effects of long-term drought on available water supplies, etc. This unchanging characteristic of the project during three cycles of UWMP preparation during which water districts re-evaluated their needed supplies, during a significant statewide drought, and during development of substantial new water sources in the region, suggest that the consistently proposed 56,000 acre-feet is based on something other than an identified water need.</p>
0177.13			<p>As Board staff is aware, desalination effluent is generally more acidic than ocean water. For example, the effluent at Poseidon's Carlsbad desalination facility, which uses a treatment process similar to that proposed at Huntington beach, generally ranges from about 7.7 to 8.0 pH units while the nearshore receiving waters have an ambient pH varying from about 7.9 to 8.2 pH units. It is not clear whether this effluent consistently meets the required water quality objectives, since the permit for that facility does not require simultaneous collection of effluent and ambient pH levels. As a result, although the effluent discharge generally appears to remain between the required 6.0 and 9.0 pH units, monitoring data indicates that there could be times when the discharge exceeds the water quality objective of no more than "0.2 units from that which occurs naturally."</p> <p>This is significant because even if these discharges are within the required water quality objective of between 6.0 to 9.0 pH units, a 0.2 unit difference between effluent pH and ambient pH would represent a significant increase in acidification. At the scale of Poseidon's proposed discharge at Huntington beach of approximately 60 million gals per day, this could result in a substantial degradation of nearshore water quality and of conditions for marine life. Importantly, even if the discharge remained within these numerical water quality objective limits, it could be inconsistent with the water quality objective's requirements regarding biological characteristics, which state, in part: "Marine communities, including vertebrate, invertebrate, algae, and plant species, shall not be degraded."</p>
0177.14			<p>We recommend that the Tentative order require Poseidon to modify its discharge so that it is no more acidic than the receiving waters. We also recommend the Board modify the Tentative Order to include additional monitoring provisions that allow Poseidon to demonstrate that its</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>effluent is no more acidic than the receiving waters and to allow Poseidon to adjust its effluent as needed, or to at least allow the Board to determine whether the effluent remains within 0.2 pH units of the receiving waters. We recommend that, along with the continuous influent monitor, the effluent and receiving water monitoring be done weekly and concurrently to allow a comparison of the samples taken from all three monitoring locations.</p> <p>Alternatively, the Board could require additional mitigation to address the adverse marine life impacts resulting from Poseidon's more acidic discharge.</p>
0178	Chris Cagle	January 21, 2020	<p>The Regional Board's Tentative Order finds that project alternatives including subsurface seawater intakes and/or moving the proposed screened ocean intake up or downcoast are infeasible due in part to short and long-term social and economic impacts to Huntington State Beach. Towards this end I am enclosing for your review a copy of the recent 2019 "Economic Impact of Tourism" study commissioned by Visit Huntington Beach. The study concludes that an estimated 3.74 million non-Orange County resident visitors spent \$565 million in 2018, increases of 7.0% and 13.3%, respectively, from 2017 and that international visitation has reached almost at a half-million tourists per year. These are astounding facts.</p> <p>During the Regional Board's December 6, 2019 workshop Board President Ruh asked staff for details on the Project's potential tourism impacts. It should be clearly noted for Chairman Ruh in your final permit that while the City of Huntington Beach's environmental analysis finds the proposed project will have NO social or economic impacts to the beach, the alternatives studied by the Regional Board would have pronounced impacts that could effect the city's primary economic engine.</p>
0178a	Chris Cagle	January 21, 2020	A 34-slide presentation from 2018, entitled "The Economic Impact of Tourism in Huntington Beach, CA".
0179.01	Sean Bothwell CA Coastkeeper Alliance	January 21, 2020	<p>As detailed below, the Draft Permit is inappropriate and unlawful for the following reasons:</p> <p>I. The Santa Ana Water Board has failed to require the Best Available Technology in the Draft Permit.</p> <ul style="list-style-type: none"> ➤ Freshwater aquifer drawdown is not a technical feasibility criterion under the Ocean Plan Amendment. ➤ If aquifer drawdown was a feasibility criterion the Regional Water Board has not conducted a sufficient analysis to determine subsurface intakes are infeasible.

Comment Number	Commenter	Date of Letter(s)	Comment
			<ul style="list-style-type: none"> ➤ The Santa Ana Water Board findings that conclude subsurface intakes are economically infeasible for the Poseidon-Huntington Beach ocean desalination facility are not supported by the evidence. ➤ The Santa Ana Water Board failed to identify the need for the Project, thus allowing a 50 MGD design capacity to rule out the use of subsurface intakes. ➤ The Santa Ana Water Board has failed to determine whether subsurface intakes are feasible for a reasonable range of alternative intake design capacities. ➤ The Santa Ana Water Board failed to analyze the Best Available Design independently to minimize marine life mortality.
0179.02			<p>II. The Santa Ana Water Board has failed to require the best available site to minimize marine life mortality.</p> <ul style="list-style-type: none"> ➤ The Santa Ana Water Board has failed to include sufficient evidence in the record to bridge the analytical gap to conclude Segments 4 – 9 are not the best available site to minimize marine life mortality. ➤ The Santa Ana Regional Board’s use of land use constraints, social impacts, and other CEQA considerations to eliminate the remaining subsurface intake sites was unlawful and erroneous under the OPA. ➤ The Santa Ana Water Board failed to determine the best available site for an open ocean intake to minimize marine life mortality.
0179.03			<p>III. The Santa Ana Water Board fails to use proper mitigation measures and does not require adequate mitigation to address the level of anticipated harm to marine resources.</p> <ul style="list-style-type: none"> ➤ The Santa Ana Water Board relies on outdated science and an inaccurate baseline to determine the best available mitigation. ➤ The Santa Ana Water Board misapplies the Mitigation Ratio Calculator. ➤ The Santa Ana Water Board failed to require the best available mitigation because the restoration is too small, will not exist long enough to mitigate impacts for the life of the project, and is already being done in another mitigation project.
0179.04			<p>IV. The Santa Ana Water Board has failed to protect water quality as required by the Clean Water Act.</p> <ul style="list-style-type: none"> ➤ The Santa Ana Water Board must reassess whether Poseidon’s discharge can be comingled with wastewater as the best available technology.

Comment Number	Commenter	Date of Letter(s)	Comment
			<ul style="list-style-type: none"> ➤ Complete antidegradation analysis and updated mitigation requirements must be conducted for the revised brine diffuser. ➤ The Santa Ana Water Board should require stormwater to be captured and treated by the facility's reverse osmosis system to prevent degradation of water quality and to promote future water reuse. ➤ The Draft Permit's effluent limitation for oil & grease and total suspended solids are inconsistent with the goals and requirements of the Ocean Plan. ➤ The Draft Permit's toxicity requirements must be revised to be protective of aquatic health.
0179.05			<p>V. The Santa Ana Water Board is the Lead Agency for the Poseidon-Huntington Beach CEQA Project and has unlawfully segmented its environmental review of the Project.</p> <ul style="list-style-type: none"> ➤ CEQA requires a complete environmental assessment of the environmental impacts of the Project. ➤ The Project has not yet received a full environmental review, despite the existence of the Interagency Permit Sequencing Framework Agreement. ➤ Regulatory circumstances have changed since the completion of 2010 FSEIR. ➤ The Santa Ana Water Board has erroneously piecemealed its analysis of the environmental impacts posed by the Project.
0180.01	<p>Michael Posey</p> <p>Council-member, City of Huntington Beach</p>	January 21, 2020	<p>I am writing at this time to submit my personal perspective on the Regional Board's evaluation of alternative seawater intake technologies and sites. I believe the Tentative Order correctly finds that alternative subsurface seawater intakes are infeasible and relocating the proposed 1-mm screened seawater intake over 1 mile up or downcoast is infeasible due to the economic, social and environmental impacts. The Tentative Order says that the Regional Board continues to rely on the City's 2010 FSEIR and that the City is the lead CEQA agency. However, missing from your analysis is the fact the City of Huntington Beach's 2010 Final Substitute Environmental Impact Report already reached the same conclusion that Project alternatives that have social and recreational impacts on the beach are infeasible.</p>
0180.02			<p>It should be noted in your final permit that moving the Project's proposed seawater intake up or downcoast is also infeasible because it would require a host of approvals from the City of Huntington Beach including additional environmental certification under CEQA. It is unlikely the City would make those permits available to Poseidon given our current CEQA findings and permit conditions, and the lack of charged circumstances or any clear environmental benefit.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0181	Duane D. Cave Moulton Niguel Water District	January 21, 2020	I am writing to you today as a board member of the Moulton Niguel Water District in South Orange County. We have made significant strides in water savings during the recent drought. As a result, we have become more efficient and all treat water like the precious commodity it is.
0181.01			However, conservation and development of new water supplies cannot be mutually exclusive. The Ocean Plan Amendment details the requirements a desalination plant must meet, and the Huntington Beach Proposal has come through, meeting all the requirements of the Ocean Plan Amendment.
0181.02			As a coastal county, desalination must be part of our new water portfolio. It is essential that we become more independent from imported water supplies. This is literally the only climate resilient water source available and we would be foolish to pass up on this opportunity.
0181.03			I urge you to once again support the renewal of the permit for the Huntington Beach desalination project. The project has been studied by independent marine biologists and other scientists for nearly two decades and has passed every test and earned every permit.
0181.04			As an elected water board member, I can tell you that new water supplies like this are needed.
0182.01	Wendy Ridderbusch CalDesal		<p>I am the Executive Director of CalDesal, a non-profit organization dedicated to educating and advocating for brackish water and ocean desalination and salinity management as a part of California's diverse water supply portfolio....I also testified in support of this project at the December 6th workshop in Huntington Beach.</p> <p>My statewide background has given me a unique perspective on the state's water system and how we must work locally to ensure environmentally sound desalination projects like the Huntington Beach Project move forward.</p>
0182.02			That day you heard a number of comments focused on the nuances of the draft permit but I will hope you will not lose sight of why this project is before you for yet a 3rd permit renewal in the last 13 years. The origin of the State Water Board's Ocean Plan Amendment is an acknowledgement that seawater desalination is needed to diversify water supplies and protect the state against the effects of a changing climate. Seawater desalination is a proven technology currently used successfully in California and around the world by many other countries.

Comment Number	Commenter	Date of Letter(s)	Comment
0182.03			The HB Desal project complies with the new State Water Board Ocean Plan regulations. It will be the second plant to use wedgewire screens as the best feasible intake technology, as the San Diego Regional Board made the same finding on the Carlsbad facility last year.
0182.04			This project represents a key piece of Southern California's water portfolio diversity and water supply security. I encourage you to reject calls from desalination opponents to pit this project's application to amend and renew an existing permit against alternative water facilities. This is not the role of the Regional Board and not the intent of the Ocean Plan Amendment as your staff report correctly notes.
0183.01	Ronald Gilbert	January 21, 2020	<p data-bbox="684 545 2045 613">Please keep that in mind when deciding on the proposed Huntington Beach seawater desal plant that the future depends on these kinds of projects.</p> <p data-bbox="684 654 2045 829">The Huntington Beach plant will utilize innovative technology to recapture energy from the desalination process, decreasing carbon emissions and cutting down on overall energy usage. On average, these devices help save an estimated 146 million kilowatt-hours of energy per year, reducing carbon emissions by 42,000 metric tons annually – roughly equivalent to the annual greenhouse gas emissions from 9,000 passenger vehicles.</p>
0183.02			Additionally, the process is incredibly efficient – turning seawater into drinking water in just a couple of hours!
0184.01	Jeremy Crutchfield San Diego County Water Authority	January 21, 2020	<p data-bbox="684 919 2045 1057">On behalf of the San Diego County Water Authority and in response to misleading statements and mischaracterizations about the Claude "Bud" Lewis Carlsbad Desalination Plant, I am writing to share with you several benefits that have been realized by integrating high-quality water from the plant into our regional supply.</p> <p data-bbox="684 1097 2045 1312">As a Water Resources Manager at the Water Authority, I have been closely involved in this process and observed the benefits firsthand. The 50 mgd Carlsbad Desalination Plant immediately increased local control and climate resiliency of the San Diego region's water supply after being certified by the state in 2016 as a drought-resilient supply. The plant's timely commercialization was a critical factor in minimizing the impacts of the 2012-2016 drought on our residents and economy.</p>
0184.02			In addition, the Carlsbad Desalination Plant created significant water quality benefits. The Water Authority has quantified water quality improvements by participating in a comprehensive Water Research Foundation study. The study analyzed the integration of desalinated water using water samples from throughout the region. The results showed a 30 percent reduction in total

Comment Number	Commenter	Date of Letter(s)	Comment
			dissolved solids ad compared with imported supplies, no disinfection by-product formation in the desalinated water, and a decrease in nitrification potential in parts of the system. They also showed that the region has successfully managed the disinfectant residual and distribution pipeline corrosion potential.
0184.03			In addition, water recycling facilities in the San Diego region have benefitted from decreased salinity in their recycled water supplies, reducing operating costs. For example, the Vallecitos Water District observed a reduction of nearly 50 percent in total dissolved solids at one of its wastewater reclamation facilities since the introduction of desalinated water.
0184.04			In addition, the Otay Water District reported positive feedback from residents after desalination was introduced due to the reduction in total dissolved solids. The many secondary benefits include prolonging the lifespans of household appliances across the region, improving manufacturing and other industrial operations, and supporting local agriculture by decreasing the hardness of our water.
0185.01	Ray Heimstra Orange County CoastKeeper	January 21, 2020	<p>It is critical to note that this is the first application of the desalination amendments to Ocean Plan (OPA) to a new desalination plant. Poseidon's Carlsbad plant was explicitly exempted from the OPA when constructed and their recent NPDES renewal for that plant fell under the requirements for an "expanded facility" that is already in place. The permit and determination underway for Poseidon's Huntington Beach proposal will set the precedent for "new facilities" and desalination plant design in California going forward.</p> <p>Since the role of the Regional Board under the OPA is to minimize the intake and mortality of all forms of marine life, it must directly consider the intake capacity of the proposed plant using this lens. There is ample evidence in the public record to show that a smaller project, or no project at all, is functionally appropriate. Unfortunately the Regional Board left this information out of their analysis. An analysis of the necessity of any impact to marine life from the project must be included in any revised permit.</p> <p>These facts clearly demonstrate that the Regional Board analysis must look beyond the mere listing of the Poseidon project in a UWMP in determining whether the impacts the project will have on marine life meet the goals of the OPA. This includes requiring a detailed analysis of different intake capacities and technologies to limit the mortality of marine life. Alternates to Poseidon's proposed 50 million gallon per day capacity were only given a cursory look in previous studies. The Board members must direct staff to do a full analysis of intake capacities</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>including the drilling of test wells to prove groundwater models related to subsurface intake feasibility. The goal of this analysis needs to be the minimization of impacts to marine life rather than maximizing Poseidon's profits.</p> <p>Another issue that must be addressed by the Regional Board is the lack of fish data to effectively conduct an analysis on the appropriate location for a surface intake as required by the OPA. The board staff recognized that the data used was nineteen years old, but then tried to rationalize that by saying ocean conditions have not changed. This is spite of abundant evidence of major changes in ocean circulation patterns, fish species distribution, ocean acidification, and more.</p>
0185.02			<p>The Water Reliability studies provide the details behind the UWMP and the 2018 Study stated that:</p> <ul style="list-style-type: none"> o Local groundwater makes up more than 75% of North Orange County's supplies. With effective groundwater management, this region can manage potential shortages that occur only about once every 20 years with conservation mandates alone. o The projected average shortage for Orange County Water District (OCWD) is 13,500 AFY. That is less than 1/4 of the amount of water that would be produced by Poseidon's proposed Huntington Beach seawater desalination plant (56,000 AFY). <p>As of January 2020, no end users within the OCWD service area have been identified, two users outside the service area have expressed an interest in a combined 3,000 AFY of water, and no delivery system has been developed. This leaves 53,000 AFY, 95% of Poseidon's 56,000AFY total capacity, uncommitted and OCWD's official position remains that they have reached no conclusions on how desalinated water could be used by the district or distributed.</p>
0185.03			<p>Another critical issue that was ignored in the draft permit is the impact that desalinated water would have on the groundwater basin if injected on a large scale. This is a likely scenario as the last workshop OCWD held on the potential distribution of desalinated water (July 2016) identified five potential distribution options, all of which included injecting desalinated water into the groundwater basin.</p> <p>At the December 6, 2019 Regional Board workshop on Poseidon the Irvine Ranch Water District (IRWD) gave a detailed presentation on the risks injecting desalinated water into the groundwater basin would pose to drinking water quality in the groundwater basin and to IRWDs</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>ability to continue their existing water recycling program. Injecting Poseidon's water would degrade water quality in the groundwater basin.</p> <p>The board members need to direct the staff to include an analysis on the impacts of desalinated water on the groundwater basin.</p>
0186.01	<p>Diane Thompson</p> <p>Huntington Beach Chamber of Commerce</p>	January 09, 2020	<p>The Huntington Beach Chamber has been supportive of the Huntington Beach Seawater Desalination plant since it was first proposed nearly 20 years ago. We have testified in support of this climate resilient water reliability project in front of the City Planning Commission, the City Council, the State Lands Commission as well as in front of your board.</p> <p>We were there in 2006 when you first approved the permit for the project and again in 2012 when your board voted unanimously to renew that permit. We ask that you again renew the permit for the project in an effort to bring this needed water reliability project to fruition.</p>
0186.02			<p>This is a water reliability project that will not only provide us with a locally-controlled, climate resilient supply from a near infinite source (the Pacific Ocean), but it will also protect and preserve one of Huntington Beach's greatest ecological jewels, the Bolsa Chica wetlands.</p> <p>The Marine Life Mitigation Plan as proposed by Poseidon Water, will ensure the viability of the wetlands for the next generation. The wetlands are essential for both environmental and economic reasons in Huntington Beach. Tourism is one of our main economic drivers in Surf City and visitors are not only here for our beautiful beaches and surf, but also to visit our wetlands and other attractions.</p>
0186.03			<p>This project will create billions of gallons of water, millions of dollars in tax revenue and thousands of jobs for our local economy. On behalf of the Huntington Beach Chamber of Commerce Board of Directors, I ask that you approve the amended permit for this project.</p>
0187	George Lambert		<p>I am writing this letter as a life long resident of the amazing town of Huntington Beach. I am also a 2nd generation Huntington Beach surfer and now my children are 3rd generation surfers. I urge you to be opposed to the proposed desalination plant in Huntington Beach.</p> <p>I am opposed to a private entity being in charge of us the tax payers water rates. This is a total fleecing of the Tax payers! It is a potential environmental disaster and the effect it could have on the environment will be damaging! There are definitely other ways that we can save and produce water without this boondoggle being forced upon us.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0188	Yvonne Gonzalez Duncan California League of United Latin American Citizens	January 21, 2020	<p>We have closely followed this project through the years and stand steadfastly in support of the project and encourage your approval at your April 3, 2020 hearing.</p> <p>The State Lands Commission conducted an extensive review of environmental justice considerations before certifying the Final Environmental Impact Report (FEIR) for the Huntington Beach Seawater Desalination project on October 19, 2017. At this hearing, the State Lands Commission found that this project has “no impact” as it relates to environmental justice issues with disadvantaged communities. Further, the State Lands Commission evaluated the project’s environmental impacts to disadvantaged communities in the areas of noise, air, traffic, etc. and found that this project would have no significant impact to any disadvantaged communities under its Environmental Justice policy.</p>
0188.01			<p>The Santa Ana Regional Water Quality Control Board should be lauded for adopting its Human Right to Water policy at its December 6, 2019 board meeting. Not only is the Huntington Beach Seawater Desalination Project not in conflict with that policy, this type of water reliability project is essential because availability of quality drinking water is the most basic of human rights.</p>
0188.02			<p>As we noted in our letter to you and your board members on July 10, 2019, LULAC recognizes that the development of all new local water supply projects is projected to result in initial cost increases to the consumers. This is not unique to seawater desalination. Desalinated water costs less than a penny a gallon and has proven to be a great boon to San Diego County where the Carlsbad desalination project has been operational for more than five years. Latino families and businesses in San Diego County have benefited from this high-quality, drought-proof, affordable water supply. The scare tactics about the cost of desalination is nothing but a red herring, which is evident by the deafening silence we hear in San Diego County regarding the cost of desalination.</p>
0188.03			<p>In addition to adding a new drought-proof, climate-resilient water supply to serve Orange County, this project has many other benefits that will serve disadvantaged communities, including:</p> <ul style="list-style-type: none"> ● the preservation and restoration of the Bolsa Chica wetlands;

Comment Number	Commenter	Date of Letter(s)	Comment
			<ul style="list-style-type: none"> ● educational programs organized and funded by Poseidon Water for Latino youth from inland communities to visit and learn about the wetlands at Bolsa Chica; ● millions in tax revenue that will benefit our local schools, parks, police and fire; and ● thousands of good-paying construction jobs that benefit Latino men and women throughout Orange County
0189	Zeke Hernandez League of United Latin American Citizens	January 21, 2020	I am deeply troubled by those who claim to oppose the Project on environmental justice grounds. Such claims undermine the integrity of such serious issues. The State Lands Commission conducted an extensive review of environmental justice considerations before certifying the Project's Environmental Impact Report in 2017 and found that environmental impacts to disadvantaged and minority communities in the areas of noise, air emissions, traffic, etc. to be insignificant.
0189.01			The Santa Ana Regional Water Quality Control Board should be lauded for adopting its Human Right to Water policy at its December 6, 2019 board meeting. Not only is the Huntington Beach Seawater Desalination Project not in conflict with that policy, this type of water reliability project is essential because availability of quality drinking water is the most basic of human rights.
0189.02			The effects of climate change will negatively affect millions of middle-and-low income Latino families in California. The 2012-2016 drought drained about \$10 billion from the California economy according to the American Society of Civil Engineers and Latino families and businesses suffered.
0189.03			<p>As LULAC California State Director Yvonne Gonzales noted in her letter to you and your board members on July 10, 2019, LULAC recognizes that the development of all new local water supply projects is projected to result in initial cost increases to the consumers. This is not unique to seawater desalination.</p> <p>Desalinated water costs less than a penny a gallon and has proven to be a great boon to San Diego County where the Carlsbad desalination project has been operational for five years. Latino families and businesses in San Diego County have benefited from this high-quality, drought-proof, affordable water supply.</p>
0189.04			In addition to adding a new drought-proof, climate-resilient water supply to serve Orange County, this project has many other benefits that will serve disadvantaged communities, including:

Comment Number	Commenter	Date of Letter(s)	Comment
			<ul style="list-style-type: none"> • the preservation and restoration of the Bolsa Chica wetlands; • educational programs organized and funded by Poseidon Water for Latino youth from inland communities to visit and learn about the wetlands at Bolsa Chica; • millions in tax revenue that will benefit our local schools, parks, police and fire; and • thousands of good-paying construction jobs that benefit Latino men and women throughout Orange County.
0190	Dave Simpson	January 21, 2020	<p>This debate needs to end soon. We are wasting time. I encourage you to approve the permit for the proposed Huntington Beach desalination plant so that Orange County residents can enjoy the many benefits of desalination.</p> <p>The proposed Huntington Beach plant will produce 50 million gallons of fresh, desalinated water per day while taking important steps to protect and enhance our precious coastal resources. The plant will provide our region with the water reliability we need to continue growing and thriving by providing us with a water supply that is locally controlled and not dependent on weather</p>
0191	Timothy Reilly	January 21, 2020	<p>Please do the right thing and figure out how to ensure the southern California population has sufficient drinking water! I urge you in the strongest possible terms to think about our region's future needs and vote in favor of the Huntington Beach desal plant. The Huntington Beach desalination project will produce 50 million gallons of fresh water per day. The process takes steps in protecting and enhancing our cherished coastal resources. The plant will provide assurance and local control over precious water resources, rather than depending on the weather and rainfall – which varies each year. Desalination is a perfect example and solution that communities like ours need to support the needs of residents and minimize vulnerability to statewide drought conditions. Please move forward ASAP with the Huntington Beach plant.</p>
0192.01	Andrea Leon-Grossman Azul Suzanne Denbow	January 21, 2020	<p>I. Approving the Draft Permit Would Not Align with the Regional Board's Commitment to the Human Right to Water</p> <p>Just last month, the Regional Board committed to take action that “[w]ill promote policies that advance the human right to water and discourage actions that delay or impede opportunities for communities to secure safe, clean, affordable, and accessible water” Additionally, the Regional Board vowed to “promote achievement of the human right to water through . . . outreach and public participation . . . and partnership with communities, agencies and municipalities.” In addition, to these general policies, the Regional Board adopted a more</p>

Comment Number	Commenter	Date of Letter(s)	Comment
	Environmental Law Clinic, UC Irvine		<p>detailed “Work Plan.” The Work Plan for 2020 commits the Regional Board to performing equity assessments on its existing programs to identify any adverse impacts to disadvantaged communities, tribes, and environmental justice communities. The Work Plan specifically states that the Regional Board’s permitting program, which includes NPDES permitting, will receive an equity assessment in 2020.</p> <p>To Azul’s knowledge, no such equity assessment has been performed for the Draft Permit, leaving potential adverse impacts on environmental justice communities unaccounted for. Azul respectfully requests that the Regional Board perform an equity assessment of the NPDES program, as it committed to in its Human Right to Water Resolution, before granting a NPDES permit for Poseidon’s facility. Alternatively, the Regional Board should at least complete a project-specific equity assessment of the Draft Permit. Without conducting this assessment, the Regional Board will have failed to live up to its recent commitment to California’s Human Right to Water, and have failed to consider the impacts of the Poseidon facility on Orange County’s most vulnerable communities</p>
0192.02			<p>A. The Regional Board’s Public Comment Process Is Insufficient</p> <p>The opportunities for public participation provided in Poseidon’s permitting process are inadequate and at odds with commitments the Regional Board made in its Human Right to Water Resolution. Environmental justice, the human right to water, and basic fairness all require that the Regional Board provide the public with a reasonable opportunity to engage and participate meaningfully. Here, the Regional Board neglected its commitment to the human right to water by not providing a sufficient opportunity for either oral or written public comment on the Draft Permit.</p> <p>The Regional Board released the Draft Permit and related documents—nearly 500 pages of material—one week prior to the only public workshop scheduled before the adoption hearing. To make matters worse, that week included the Thanksgiving holiday. Despite numerous appeals to provide at least one additional public hearing before the adoption meeting, the Regional Board has not yet granted even this very basic request. The refusal to provide an opportunity to speak after sufficient time to read and analyze the Draft Permit is burdensome even to well-equipped stakeholders. It is particularly onerous, however, for environmental justice community members</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>who do not enjoy the benefit of paid staff, attorneys, or technical experts to assist them in voicing their concerns.</p> <p>The opportunity for interested parties to submit written comment is also inadequate. Azul has requested repeatedly that the deadline for written comments be extended through February 28, 2020, in order to allow interested parties to thoroughly analyze and provide feedback on the relevant documents. The need for such an extension only increased after the Regional Board sent Poseidon a Request for Additional Information, with a response deadline of January 17. As of January 21, Poseidon's full response was not available, leaving no opportunity for the public to provide written feedback on this relevant information. Interested parties should have time to review all information the Regional Board will rely upon in acting on the Draft Permit.</p> <p>The Regional Board's lackluster efforts to provide public participation in the administrative process do not align with the promise of community partnership it made in its Human Right to Water Resolution. To rectify deficiencies in the public participation process, the Regional Board should extend the deadline for written public comment through at least February 28, 2020, and provide at least one additional opportunity for public testimony well before the Regional Board holds any adoption hearing.</p>
0192.03			<p>B. Poseidon's Desalinated Water Will Decrease Affordability</p> <p>The Draft Permit also raises concerns about affordability, a key tenet of the Human Right to Water Resolution. Poseidon's desalinated water will unquestionably raise rates for consumers. Estimates by the Orange County Water District ("OCWD") and the Irvine Ranch Water District ("IRWD") estimate that the price of desalinated water will be between \$1,641 and \$1,941 per acre-foot.¹² The cost of groundwater, recycled water, and imported water in Orange County, in both the near- and long-term, will almost certainly be more affordable than Poseidon's desalinated water.</p> <p>A study by UCLA's Luskin Center for Innovation found that groundwater is a far more affordable source of water than Poseidon's desalinated water. As of 2018, the rate for groundwater was about \$666 per acre-foot. Recycling also provides a less costly source of water than desalination. Orange County, home to OCWD's Groundwater Replenishment System, one of the nation's largest water recycling facilities, receives more than 111,100 acre feet of water annually from recycled sources. Without factoring in any subsidies, and factoring in distribution costs, recycled water is estimated to cost \$1,200 per acre-foot, a significantly more cost-effective alternative than the most favorable estimates for Poseidon's desalinated water. Finally, imported water is also more affordable than Poseidon's desalinated water. The cost of</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>imported water is currently \$1,015 per acre-foot.¹⁹ In every tested scenario, the cost of water imported by Metropolitan Water District (“MWD”), which manages the majority of water imported to Orange County, is consistently cheaper than the expected cost of desalinated water from Poseidon.</p> <p>These sources of water are not only more cost effective now, but will remain so for the foreseeable future. Under current plans, Poseidon’s water will be heavily subsidized by taxpayers. These subsidies will not last indefinitely, and costs will necessarily increase once the subsidies expire. Based on historical data from similar agreements, including Poseidon’s Carlsbad facility, the Regional Board can reasonably expect Poseidon will pass the extra cost of desalinated water on to consumers. The UCLA report suggests that Poseidon’s proposed agreement with OCWD will not only create moderate to severe affordability concerns for disadvantaged residents in the immediate term, but that those concerns will persist throughout the lifespan of the Facility. Granting the Draft Permit would violate the Regional Board’s commitment to promoting affordability made in its Human Right to Water Resolution.</p>
0192.04			<p>C. Poseidon’s Desalinated Water Will Not Improve Water Quality</p> <p>Thankfully, drinking water quality is a relatively minor issue in Orange County for most of its citizens. In fact, Orange County has the lowest number of drinking water system health violations per capita in the state. There have only been 139 violations since 1993, and over half of those violations were monitoring and compliance related. Most of the health-related violations were concentrated within small drinking water systems or mobile home parks. Eight of the smallest systems in the county serve a high proportion of low-income households. While any number of drinking water violations is concerning, there is no evidence that the communities most at risk would receive Poseidon’s desalinated water.</p> <p>The Facility will not improve water quality for any residents, and in fact, may lead to new water quality issues for Orange County. Rather than improving water quality, the desalination process has the potential to cause boron and chloride contamination. Poseidon water would in no way benefit Orange County communities most vulnerable to water quality issues.</p>
0192.05			<p>The amended Ocean Plan requires the Regional Board to analyze any proposed desalination facility for “feasibility” in a multi-step process. First, the Regional Board must analyze a range of “feasible alternatives for the best available site, the best available design, the best available technology, and the best available mitigation measures to minimize intake and mortality of all forms of marine life.” At this stage of the analysis, each factor must be examined independently,</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>not in the aggregate. After the objective feasibility analyses of all four factors, the Regional Board must consider the factors collectively to “determine the best combination of feasible alternatives to minimize intake and mortality of all forms of marine life.” Appendix I of the Ocean Plan defines “feasible” as “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors.” It is the Regional Board’s responsibility to conduct independent feasibility analyses.</p> <p>Regional Board staff’s December 6, 2019 presentation on the Draft Permit did not demonstrate that alternative sites, designs, technologies, or mitigation measures were truly infeasible, but rather, were undesirable from Poseidon’s perspective. For example, the Ocean Plan requires that new or expanded desalination facilities use the least-invasive intake technology, where feasible. Subsurface intake technology is the most successful method of reducing marine life entrainment, but the Regional Board failed to consider this technology, apparently due to Poseidon’s proposed intake volume of 107MGD. According to the Regional Board, this is “a large intake compared to the known uses of slant wells anywhere else.” The Regional Board has therefore concluded that subsurface intake technology is infeasible for Poseidon’s facility, based on the fact that Poseidon’s intake volume is larger than the Regional Board believes existing slant well technology can support. Not only did the Regional Board fail to evaluate any sites where Poseidon’s proposed intake volume may feasibly support the Ocean Plan’s preferred intake technology (for example, a site that could support test wells), it also failed to consider another feasible design alternative: requiring Poseidon reduce its intake volume. Considering alternatives that would be available if Poseidon’s proposed intake volume were reduced is particularly relevant because, as explained in III below, there is no identified need for such a large volume of desalinated water</p>
0192.06			<p>Another factor considered in the feasibility analyses regarding site selection is the current use of the proposed site by Applied Energy Services (“AES”) for a gas-based power generating facility. The AES facility is currently scheduled to cease intake and discharge operations after December 31, 2020, when AES will bring newer, more efficient technology online. After AES terminates intake operations, the potential exists for environmental conditions at the intake and discharge locations to eventually return to background conditions. Poseidon’s proposed intake activity was repeatedly mischaracterized by Regional Board staff at the December 6 workshop as “neutral” given the current AES operations at the site, and the imminent cessation of intake activity and discharge activity by AES was repeatedly downplayed. By failing to consider the</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0192.07			<p data-bbox="684 248 2039 313">potential for the site to return to background environmental conditions, the Regional Board further obfuscated the feasibility of the site in its Water Code § 13142.5(b) determination.</p> <p data-bbox="684 321 2049 1003">In addition to design, technology, and environmental factors that do not align with Poseidon’s interests, the Regional Board also failed to adequately analyze pertinent economic factors, a relevant consideration under the Ocean Plan’s definition of “feasibility.” As discussed in I.B. above, the cost of Poseidon’s water will ultimately raise rates for Orange County residents. MWDOC conducted a study of five proposed desalination facilities in the Southern California area. Of the five, MWDOC’s report found Poseidon to be the least cost-effective due to the enormous discrepancy between purported output and the region’s need. Even in the event of catastrophic climate change, the estimated shortage of water supply that Poseidon water could be used to supplant would be 22,000 acre-feet annually, which is far less than the 56,000 acre-feet Poseidon intends to produce. The MWDOC has also projected that the cost of imported water will likely rise at a rate of 4.1% annually. Poseidon has countered with an estimation of 6.25%. No matter which figure is correct, the end user still loses. Even using Poseidon’s biased estimate, it would still take 13 years for the cost of produced desalinated water to fall below that of imported water, 13 years of unnecessarily high costs for Orange County residents. The term “feasible,” as it relates to Water Code § 13142.5(b) determinations, does not mean whatever is necessary for Poseidon to achieve the financial return it has promised to its investors. Azul strongly encourages the Regional Board to reject the Draft Permit, and conduct another feasibility study in which it considers a full range of alternatives to the site, design, technology, and mitigation measures favored by Poseidon, as required by the Ocean Plan</p>
0192.08			<p data-bbox="684 1019 2039 1084">III. The Regional Board Failed to Adequately Consider the Need for Poseidon’s Desalinated Water</p> <p data-bbox="684 1092 2049 1442">The Regional Board has not sufficiently considered the need for Poseidon’s desalinated water. The Ocean Plan requires the Regional Board to “[c]onsider whether the identified need for desalinated water is consistent with an applicable adopted urban water management plan” In the Additional Information Request sent to Poseidon on January 8, the Regional Board acknowledged a critical flaw in the Draft Permit’s tentative Water Code § 13142.5(b) determination, stating that comments from the public, an OCWD board member, and IRWD, along with the fact that OCWD has not made final plans for distributing Poseidon’s desalinated water “raised questions with board members as to whether the need for the desalinated water has been sufficiently identified.” Poseidon refused to respond to the inquiry, and has not offered any need-based justification that does not rely on reaching its own intended profit margin.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>OCWD, which is comprised of 19 individual water distributors in Orange County, receives 75% of its water from “abundant groundwater aquifers and a landmark groundwater replenishment system that turns wastewater into potable water.” The remaining 25% of the water distributed by OCWD is imported by MWDOC, and it is this portion of the current water supply that Poseidon seeks to supplant. As discussed above, costs of Poseidon’s desalinated water could nearly double that of this imported water. IRWD, one of the largest distributors of water within the OCWD, has explained that it is not interested in purchasing Poseidon’s water. While Poseidon insists on producing 56,000 acre-feet of desalinated water, it would take, at most, 22,000 acre-feet annually to replace the water Orange County may need from imports.⁵⁰ Though decreasing reliance on imported water may be desirable, there are better options available to meet this need.</p>
0192.09			<p>It is possible that there is need for desalinated water in some parts of Orange County. For example, the South Coast Water District (“SCWD”), which would be served by the pending Doheny Beach desalination facility, imports 95% of its water. This leaves SCWD with far more vulnerability, and therefore a greater need for desalinated water than OCWD, yet the Doheny Beach desalination facility is still substantially smaller than the behemoth proposed by Poseidon. Despite the arguably greater need for desalination in the service area, initial proponents of the Doheny Beach facility are still concerned with the potential for drastic departure between projected and actual costs. This shows that even dire need may not justify exorbitant cost, and here, neither the Regional Board, Poseidon, nor any of its proponents, have established sufficiently established “identified need” for Poseidon’s desalinated water in the proposed service area as required by the Ocean Plan.</p>
0192.10			<p>IV. The Mitigation Requirements in the Draft Permit Are Inadequate Poseidon’s proposed mitigation efforts primarily concern the maintenance and “restoration” of the Bolsa Chica Wetlands, the southernmost portion of which are located adjacent to the current AES facility. As mentioned in II above, AES is currently scheduled to cease intake and discharge operations on December 31, 2020. This would provide a valuable opportunity for the surrounding Bolsa Chica wetlands to return to background environmental conditions – an opportunity that both state lawmakers and environmentalists have long advocated for. However, the proposed location of Poseidon’s facility would squander that opportunity.</p>
0192.11			<p>In the Draft Permit, the Regional Board determined that the Facility will detrimentally impact approximately 421.42 acres of wetlands. Yet, the Draft Permit requires Poseidon to mitigate for only 89.47 acres. While this 1:5.8 ratio is higher than the 1:10 ratio prescribed by the Ocean</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Plan, it still falls well short of a desirable solution. The Draft Permit's mitigation measures would give Poseidon credit for performing restoration that would likely occur naturally were it not for Poseidon continuing intake and discharge activities at the site. As with the other aspects of the Regional Board's feasibility analyses in the Draft Permit, the mitigation measures imposed on Poseidon should be reevaluated to adequately consider the economic, environmental, social, and technological factors, particularly in light of the site's potential to return to baseline environmental conditions.</p>
0193.01	<p>Elizabeth Taylor and Mandy Sackett</p> <p>Surfrider Foundation</p>	January 21, 2020	<p>Surfrider strongly opposes the Draft Permit issued for the Poseidon-Huntington Beach ocean desalination project. The Huntington Beach plant would be the first to be permitted under California's new Water Quality Control Plan for the Ocean Waters of California 2016 Desalination Amendment (OPA). It violates the letter and the spirit of the Ocean Plan Amendment and would set an unacceptably low standard for interpretation of the new regulations that could be mimicked throughout the state. While desalination may have a time and a place in California, this proposal in Huntington Beach is not needed and is not sited or designed in accordance with state regulations.</p> <p>Surfrider is not categorically opposed to ocean desalination. In some places that have exhausted conservation and recycling potential, desalination can be a valuable new water source. For most of the state, however, there are better options to meet water needs and this includes Orange County where Poseidon Resources, LLC has proposed a plant for Huntington Beach.</p> <p>Conservation and efficiency are the easiest and most cost-effective supply options, and the state has a new framework to scale up efficiency. Recycling and stormwater capture are also more affordable, and are being adopted by communities across the state. These solutions also offer an added benefit of reducing polluted runoff, while seawater desalination impairs water quality through the release of toxic brine. These other options also avoid marine life mortality associated with open ocean intake for desalinated water. We recycle just 13% of wastewater in California. According to research by the Pacific Institute, we could increase our water conservation by 57% if cities would adopt common conservation and efficiency measures.</p> <p>Surfrider's objections to the Poseidon-Huntington Beach ocean desalination project</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>are numerous but will focus on failure to comport with the OPA requirements. To comply with the OPA and its relevant regulations, the Santa Ana Water Board must analyze separately as independent considerations a range of feasible alternatives for the best available site, the best available design, the best available technology, and the best available mitigation measures to minimize intake and mortality of all forms of marine life. The Draft Permit fails to meet these requirements, as these comments elaborate below, including: (1) Poseidon has not adequately demonstrated need for the project; (2) there is insufficient data to adequately measure impacts to marine life and a failure to adequately address marine mortality and water quality impacts; and (3) the proposed plant does not comply with mitigation requirements.</p>
0193.02			<p>1. Poseidon Has Not Adequately Demonstrated Need for the Project The Ocean Plan requires that an identified need for the desalinated water must be consistent with an urban water management plan (UWMP) or similar planning document. The mere inclusion of a 50-million gallon a day ocean desalination facility in an UWMP list of potential water sources does not demonstrate “need” in the region. At present, Orange County’s existing water supply is anticipated to be sufficient to cover its anticipated needs through 2040. The Metropolitan Water District of Orange County (“MWDOC”) has published an Urban Water Management Plan which highlights several options to ensure the conservation of Orange County’s water supply through this date. These alternatives include water recycling, stormwater capture, and enhanced water storage facilities. MWDOC has also identified brackish groundwater desalination, as well as smaller seawater desalination projects as viable, and preferred, local water supply options. As Regional Board staff note in the Tentative Order, MWDOC recently released its 2018 reliability study that projects water supply and demand in Orange County through the year 2050 and compares local projects that can meet the forecasted water demands. The proposed Poseidon project is among the local projects that were compared and ranked last based on system reliability and supply reliability metrics. Further, even in a multi-year drought, MWDOC is capable of meeting all customers’ needs through 2040 via its water reserves. MWDOC staff have also determined that the Poseidon-Huntington Beach ocean desalination plant would “supply more water than needed in most every year.” While seawater desalination projects are among these options included in the Urban Water Management Plan, this inclusion by itself is not sufficient to demonstrate need for such a facility in Orange County.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			We urge the Regional Water Board to deny the Poseidon-Huntington Beach ocean desalination permit. Our communities should invest in ocean desalination only after all feasible and less-costly methods of water conservation have been pursued and implemented.
0193.03			<p>2. Failure to Address Impacts to Marine Life and Water Quality</p> <p>This permit violates the Ocean Plan mandate that marine communities, including vertebrate, invertebrates, and plant species, shall not be degraded. In the Ocean Plan Amendment, the State Water Board has made a clear and definitive finding that subsurface intakes are the preferred technology for ocean desalination in California. In addition, California Water Code Section 13142.5(b) makes it clear that desalination plants must use “best available site, design, technology, and mitigation measures feasible ... to minimize the intake and mortality of all forms of marine life.” The Draft Permit must be rejected because it incorrectly relies on freshwater drawdown as the reason for concluding subsurface intakes are infeasible. The Regional Water Board erroneously concluded that subsurface intakes were infeasible for a 50 MGD facility without independently determining the best available design capacity to minimize marine life mortality. The Draft Permit inappropriately relies on 1-millimeter screens – screens that only have a one percent rate of efficacy in preventing entrainment or impingement of marine life – in place of subsurface intakes to reduce marine life mortality.</p>
0193.04		 The Ocean Plan requires the use of the Empirical Transport Model/Area of Production Foregone (ETM/APF) method to estimate entrainment of marine life. ⁷ However, the staff report notes that there was insufficient data to calculate ETM/APF at the relevant sites. ⁸ Rather than require additional monitoring to obtain the necessary data, the Draft Permit allows for an alternative approach, in violation of the Ocean Plan requirements.
0193.05			The proposed facility will produce high-salinity brine and then discharge it into the coastal ecosystem. In addition to elevating salinity levels, the discharged brine contains residual chemicals used in the desalination process that are toxic to marine organisms. Effluent limitations listed in Table 4 of the Draft Permit do not comport with discharge prohibitions and water quality objectives of the Ocean Plan. There is no analysis of impacts to marine life caused by these effluents, which include persistent chemicals such as hexavalent chromium and large quantities of oil and grease. The permit fails to address the complexity of ocean ecosystems and the fact that models are often inaccurate. For example, the permit states that models indicated that initial dilution will always be completed within 100 meters of the discharge point and therefore monitoring stations beyond 100 meters are not required. However, a recent

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>independent study at the Carlsbad desalination facility found elevated salinity up to 600 meters beyond the discharge point, well outside of the permitted area.⁹ Poseidon claims that monitoring is not necessary beyond 100 meters of the discharge point. However, this study proves that claim erroneous. It also shows that the harm to marine life is greater than predicted and is indicative of the failure to require adequate controls to prevent harm to marine life.</p>
0193.06			<p>Poseidon's Proposed Desalination Plant Does Not Comply with Mitigation Requirements</p> <p>The Ocean Plan requires expansion, restoration, or creation of specific habitat types to offset impacts to marine life. To comply with the Ocean Plan Amendment, the Santa Ana Water Board must first analyze as an independent consideration the best available mitigation measures to minimize intake and mortality of all forms of marine life.¹⁰ As proposed, the Poseidon–Huntington Beach ocean desalination project would withdraw roughly 107 million gallons of seawater each day, killing all larvae and other marine life caught in its open-ocean intake system, and would discharge 60 million gallons of brine waste a day into coastal waters. The OPA requires mitigation to be accomplished through expansion, restoration or creation of marine habitat. However, the calculated mitigation includes only 5.5 acres of restored wetlands, 15 acres of “restoration credit” from improved circulation, and 108 acres of “restoration credit” from maintaining tidal influence that already exists. As a result, the Regional Board’s mitigation is not large enough to restore the acreage harmed by the PoseidonHuntington Beach ocean desalination project. Further, the overwhelming majority of mitigation is 108 acres of credit for dredging the inlet. This maintenance dredging does not equate to a satisfactory mitigation requirement. The Ocean Plan clearly states that in-kind mitigation is preferred and should be required. In addition, based on the 2019 Carlsbad study referenced above, the area of impact is significantly greater than 100 meters beyond discharge, requiring significantly greater area for mitigation. In sum, based on its evaluation and issuance of the Draft Permit, the Santa Ana Water Board has erroneously determined that the proposal uses the best available mitigation measures.</p> <p>Hereafter, evidence is presented that Poseidon Resources has not been a trustworthy permit holder, especially with respect to numerous and ongoing discharge violations. To better understand what to expect in Huntington Beach, we can look to Poseidon’s Carlsbad and Tampa Bay plants.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
0193.07			<p>Poseidon's Carlsbad plant began delivering water to San Diego County in December 2015 and is the nation's largest seawater desalination plant. Poseidon's efforts to cut costs and maximize profit have resulted in numerous and ongoing water quality violations and exceedances since operations began. In April 2016, the Regional Water Board issued a notice of violation finding that the Carlsbad plant had failed to comply with several provisions of its discharge permit, including failures to comply with discharge prohibitions, receiving water limitations, and effluent limitations, and failure to monitor in accordance with discharge provisions.</p> <p>Later, in December 2016, the Regional Water Board issued a staff enforcement letter describing 19 occasions on which Poseidon had exceeded daily maximum toxicity limits. In its annual discharge permit monitoring report for 2016, Poseidon stated that it had exceeded chronic toxicity limits in 30% of tests. In 2017, the Regional Water Board cited Poseidon for exceeding chronic toxicity violations in 36 out of 90 total toxicity tests as well as 11 deficient monitoring and 2 reporting violations. In 2018, Poseidon was cited for 11 chronic toxicity violations, 1 deficient monitoring violation and 1 Category one pollutant violation for exceeding total suspended solids effluent limitations. In 2019, Poseidon violated order conditions by causing discoloration of receiving waters beyond the discharge channel. They also failed to maintain ELAP laboratory certification for turbidity, received 1 chronic toxicity violation and 4 salinity exceedances and conducted TCDD analysis for the entire CY19 Q3 reporting period out of accordance with the orders.</p> <p>For several years, Poseidon was unable or unwilling to resolve the chronic toxicity issue. The testing limits established for chronic toxicity at location M-001 (see Figure 1), before the brine is diluted, and listed as enforceable in the plant's original NPDES permit. To resolve the issue, Poseidon simply proposed to remove the testing location where the violation occurred all together. Fortunately, the San Diego Regional Water Board did not remove the testing location in Poseidon's new stand-alone permit that was approved in 2019. The new permit was necessary due to the closing of the Encina Power Plant. In the new permit, chronic toxicity is listed as enforceable only at location M-002, after the brine is diluted and no longer at M-001 (pre-dilution).</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Poseidon's explanation of the toxicity exceedances comes without any further justification for changing the testing requirements. The new order states that: "[...] between December 2015 through January 2018, the Discharger reported 61 exceedances of the chronic toxicity maximum daily effluent limitation of 16.5 TUC at monitoring location M-001 of the undiluted brine. In response to the effluent limitation exceedances for chronic toxicity, the Discharger reported that the violations are an artifact of the chronic toxicity effluent limitation in Order No. R9-2006-0065 not accounting for the flow augmentation dilution water provided by the Encina Power Station. Monitoring samples that account for the flow-augmentation dilution water provided by the Encina Power Station did meet the chronic toxicity effluent limitation prior to discharging to the Pacific Ocean, and also passed the TST statistical approach for determining compliance with chronic toxicity monitoring included in this Order. Nevertheless, the Discharger conducted an extensive Toxicity Identification Evaluation (TIE), and the results were inconclusive as to the source and cause of toxicity" (emphasis added).</p>
0193.08			<p>In summary, Poseidon's explanation for the chronic toxicity violations is that the brine is undiluted. However, this is precisely the point of the (once) enforceable testing location M-001. The pre-dilution limitation was set according to acceptable chronic toxicity limitations in concentrated brine. Testing location M-001 is crucial to understanding the Carlsbad plant's discharge. There is an acceptable limit of chronic toxicity – no matter how much the brine is diluted. This is because the discharge is released into the nearshore environment upon which marine life, ocean users, beach goers and recreational users rely. According to toxicologists, there is a potential for accumulation of elements of the chronic toxicity in the nearshore environment, despite dilution.</p>
0193.09			<p>Poseidon completed a series of toxicity evaluations to determine the cause of the chronic toxicity and released the final evaluation report (TRE report) in April 2018 (Attachment A). The report rules out several potential direct causes such as salinity and harmful algal blooms. The report found that certain chemical and polymer additives could contribute to the toxicity findings at higher concentrations. And though the evaluation did not test the actual concentration of polymer additives in the final effluent, the report states that the effluent is "suspected" to have low enough additive concentration levels that polymers would not have a significant effect.</p> <p>The TRE report speculates that a confluence of polymer and chemical additives may be at fault. In light of the Carlsbad plant's past and ongoing discharge permit violations and the inconclusive results of the Poseidon's toxicity evaluations, the San Diego Regional Water Board included</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>increased sampling and monitoring locations in their stand alone permit issued in 2019. The Sediment Assessment for Physical and Chemical Properties section of the permit, attachment E requires Poseidon to conduct a sediment assessment as part of the Benthic Monitoring Work Plan. The results of the first Sediment Assessment samples will be available in July 2020. According to the plant's order,</p> <p>"Sediments can accumulate these particles over the years until the point where sediment quality is degraded and beneficial uses are impaired. Benthic organisms are strongly affected by sediment contaminant exposure because these organisms often live in continual direct contact with sediment/pore water, and many species ingest significant quantities of sediment as a source of nutrition."</p> <p>Given the potential for serious impacts, along with ongoing chronic toxicity violations at the Carlsbad plant, Surfrider is highly concerned about the impact that such a violation would have in Huntington Beach over several years if left unresolved as it was in Carlsbad. Notably, the impact may be exacerbated in Huntington Beach given that the plant would not have a dilution pond. In Huntington Beach, the exceedingly toxic brine would be discharged directly into the ocean through a multi-port diffuser.</p> <p>At a minimum, Poseidon should be required to conduct an annual Sediment Assessment for Physical and Chemical Properties in Huntington Beach as they are in Carlsbad and as described in the Carlsbad plant order no. R9-2019-0003 on page E-17 in Attachment E.</p>
0193.10			<p>There are ways to make desalination much less impactful and harmful to humans and marine life. One of those is to use subsurface intakes. Subsurface intakes are a way to reduce marine life entrainment and impingement associated with open ocean seawater intake and it reduces the toxicity of discharge by avoiding chemical additives in the first place. We must locate desalination plants in places where subsurface is feasible.</p> <p>One way to potentially avoid chronic toxicity issues is to avoid chemical additives in the first place. This is exactly what subsurface intakes do – as Figure 2 above demonstrates. A 2013 study created the diagram above to show the reverse osmosis treatment process. The study surveyed sea water reverse osmosis plants located globally and found that "[i]n many cases, the water produced from a subsurface intake can be transmitted directly to the cartridge filters, thereby eliminating mixed media filtration, coagulation processes, and the need to use various</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>chemicals (e.g., ferric chloride, chlorine)." Subsurface intakes, shown at the bottom of the diagram, are able to bypass many of the chemical laden treatment processes.</p> <p>The main finding of the publication is that: "The use of chlorine, coagulants, and other chemicals can be essentially eliminated by the use of subsurface intake systems. Reduction in chemical use and power consumption in operation of pretreatment systems causes a reduction in the carbon footprint of a sea water RO system and in potential environmental impacts." Thus, subsurface intakes would clearly reduce the likelihood of toxicity exceedances in brine discharge.</p> <p>Unfortunately, the Carlsbad plant and Poseidon's proposed Huntington Beach plant use outdated and inefficient open ocean intakes. With open ocean intakes, pretreatment is done with anti fouling chemicals to reduce fouling of membranes and increase permeate water quality and to kill all the marine life they've sucked in. Figure 2 demonstrates the number of steps involved with pretreatment from open ocean intake compared to subsurface intakes in the diagram here. Subsurface is shown at the bottom of the diagram with far fewer processing steps.</p>
0193.11			<p>Desalination may not be as drought friendly and reliable as Poseidon would like us to believe. Poseidon's Carlsbad plant has had numerous and ongoing supply water shortfalls since operations began. Desalination is not the miracle water supply it's being painted out to be by Poseidon and it's clearly far less reliable and far more costly than those paid by Poseidon are spinning it to be.</p> <p>The San Diego County Water Authority's 2019 fiscal year report on the Carlsbad desalination plant was recently released and not surprisingly, it shows poor performance. The report showed that water from the Carlsbad facility was far more costly than any other alternative, at a cost of \$2,685 per acre foot, and is expected to increase 5 percent over the next year, around \$2800 per acre foot. 15 In 2018, the average cost for the year was \$2,511 per acre-foot. The myth of Poseidon's water getting less expensive over time is just that. In fact, Poseidon's desalinated water rings in as one of California's most expensive water sources. In 2019, the County Water Authority paid an astonishing total of \$121 million for Poseidon's desalinated water for one year. In one instance in 2018, the plant was \$3 million over budget due to what they called an "unexpected" increase in energy costs.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Poseidon also failed to deliver enough water to comply with their contract according to the annual report, falling short by more than 5,000 acre feet and paid an associated \$1.9 million penalty in 2019. Despite this, the report also indicated that Poseidon received a 'Management Fee' from the Water District based on their performance and the amount of the fee was not disclosed.</p> <p>Since Poseidon's Carlsbad desalination plant became operational, it has been notably unreliable. In the San Diego County Water Authority's recent 2018 Performance Report for the Carlsbad plant, significant water delivery shortfalls were reported. Poseidon was unable to deliver 10,880 acre-feet of a requested 51,772 acre-feet. The previous year, the plant operated at similar shortfalls of 9,196 acre-feet. Both years, the plant fell short by approximately 20% on average, and in the third quarter of 2017, operating capacity was at just 42%.¹⁶ Is this really the rate of reliability we want to depend on for critical water sources?</p> <p>The primary cause, up to 60% of the shortfall in 2018, was due to a mechanical failure of the plant's reverse osmosis high-pressure feed piping (train 5). Other causes of the water supply shortfalls include: ocean water quality issues such as algae blooms and elevated ocean water salinity; SDG&E power outages and other mechanical, inspection and repair issues. In 2018, the water supply shortfalls resulted in payment from Poseidon to the County Water Authority of \$5,359,070 for not meeting its supply obligations.</p> <p>Reliability is one of desalination's key selling points, yet the Carlsbad Desalination Plant has been anything but reliable. Meanwhile, Poseidon has been spending millions lobbying state officials and making campaign contributions,¹⁷ as well as hiring influential lobbyists including former Senator Barbara Boxer and Axiom Advisors, a lobbying firm with ties to Governor Newsom¹⁸. Poseidon is also funding a front group called OCWISE. All this in order to push forward a plant that does not conform with California state regulations and to skirt our environmental protection laws.</p>
0193.12			<p>In March 1999, Florida water officials authorized the construction of a 25 MGD desalination facility at Apollo Beach to serve the city of Tampa. Poseidon Resources was selected to design, build, own and operate a desalination plant for local water agency Tampa Bay Water. Tampa Bay Water chose the private partnership approach in order to save costs – but, as explained</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>hereafter, this tactic was costly in the long run. Since construction, the plant has been fraught with reliability issues.</p> <p>As noted in Carlsbad, reliability is a key claim of water agencies and private companies that are pushing desalination. However, this claim has only become more problematic over the years, and especially now in light of the historical record of large-scale desalination globally. The Tampa facility was promised to be privately owned and operated with a budget of \$110 million and scheduled to be operational in 2003. Intended to offset declining groundwater levels and a growing population, the Poseidon facility would generate enough water to supply 1.8 million customers.</p> <p>In Tampa Bay, Poseidon Resources claimed that the cost of water would be very low and competitive with other local sources. However, the project was fraught with difficulties, and after 7 years, was still not in operation due to serious management and technological failures. After a series of contractor bankruptcies and running \$40 million over budget, the Tampa Bay desalination plant opened five years behind schedule in 2008. The plant failed its initial performance test, and required \$30 million dollars in repairs to replace such items as corroded machinery and frequently fouling membranes. To date, Tampa has consistently failed to meet their promised freshwater production levels. According to one report, the membranes lasted months instead of years and cartridges that should last months were lasting for weeks.</p> <p>In 2002, Tampa Bay Water had to buy out Poseidon's interest in the plant to complete it, which ended up saving the utility \$1 million/year in financing charges.²¹ After several years of redesign, the 2018 Comprehensive Annual Financial Report indicates that Tampa Bay Water produced only 5.8 mg/d of desalinated water in 2018, which has been on the steady decline from the 2009 amount of 16.6 mg/d.</p> <p>This failure not only weakens Poseidon's argument of water independence, but also demonstrates the significantly increased costs of private desalinated water. Similarly to the Carlsbad plant, the facility also violated their sewer discharge permit due to the discharge of cleaning chemicals used to treat the sensitive membranes.</p>
0193.13			<p>Additionally, according to Poseidon's term sheet with the Orange County Water District (OCWD), OCWD will be required to purchase desalinated water whether needed or not, guaranteeing Poseidon and its investors a substantial profit. However, this places ratepayers at</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>substantial financial risk. Elsewhere, such as Santa Barbara, Tampa Bay and four of the six plants built in Australia, water agencies have decided to let expensive desalination plants sit idle due to extremely high operational costs. Orange County Water District will not have that option, even in the wettest of years.</p> <p>With so many factors that can go wrong – and obviously are going wrong – we need to make sure we can trust the entities we rely on to deliver our water and develop our water infrastructure.</p>
0193a	Surfrider Foundation		Attachment consisted of a 10-page report entitled “Toxicity Reduction Evaluation Final Report - Carlsbad Desalination Project” by IDE Americas, dated April 2018.
0194	<p>Sam Ross</p> <p>Visit Carlsbad</p> <p>A Desalination Marketing Organization</p>		<p>I am writing to shed some light on the many benefits the Claude “Bud” Lewis Carlsbad Desalination Plant has brought to our region and to attest to Poseidon Water’s strong dedication to the local marine environment.</p> <p>As the committed steward of the Agua Hedionda Lagoon, Poseidon Water has steadfastly upheld its promise to preserve and protect our local marine environment here in Carlsbad. Since assuming stewardship last year, Poseidon has taken steps to help ensure the ongoing vitality of this magnificent estuary while also preserving local access to the Lagoon’s many recreational attractions. Poseidon Water has also proven to be a great neighbor, and we’re proud to have such an important regional resource like the Carlsbad Desalination Plant contributing to the Agua Hedionda Lagoon’s health and longevity.</p> <p>The Agua Hedionda Lagoon encompasses more than 400 acres of marine, estuarine and wetlands habitat teeming with hundreds of fish, invertebrate and bird species. Today, Poseidon Water maintains the periodic dredging of the lagoon which ultimately improves its overall environmental health and allows it to realize the life-sustaining benefits of an open connection to the Pacific Ocean. This stewardship also helps maintain the lagoon’s tidal circulation, which is critical to the biological operations of the Carlsbad Aquafarm and Hubbs-SeaWorld Fish Hatchery and provides extra sandy to keep local beaches beautiful and sandy for visitors to enjoy.</p>
0195	Timothy Karpinski	January 12,2020	I strongly oppose this action by Poseidon. I’m a local fisherman who will be affected by this action. Please stop this unnecessary and wasteful activity!

0196	<p>Timothy Stripe</p> <p>Grand Pacific Resorts</p>	January 13,2020	<p>On behalf of Grand Pacific Resorts, I am writing in support of the critical role desalination plays in supporting the San Diego region's booming tourism industry.</p> <p>As you know, tourism is a vital economic engine for our state, injecting millions of dollars each year into local economies, and generating billions more in local and state tax revenue. However, one of our biggest operational concerns is the reliability of our local water supply, because without it, we can't maintain our operations and provide the quality of service that attracts guests.</p> <p>That's why I've been a longtime supporter of the Carlsbad Desalination Plant, which provides San Diego County with 50 million gallons of drought-proof water every day. As the largest seawater desalination plant in the nation, the Carlsbad plant provides tremendous benefits for the San Diego region's water reliability and gives local businesses the assurances they need to thrive. Additionally, the plant has boosted the local tourism market by attracting 30,000 visitors since its opening, and the steady water supply it provides has helped enhance the region's economic competitiveness.</p>
0197	<p>Brad Coffey</p> <p>Metropolitan Water District of Southern California</p>	January 21,2020	<p>The purpose of this letter is to express The Metropolitan Water District of Southern California's (Metropolitan) support for seawater desalination as part of our service area's water resource portfolio.</p> <p>The severity of California's recent drought, coupled with the extended dry period on the Colorado River and the projected long-term impacts of climate change, underscore the need for continued diversification of Southern California's water resource portfolio. Metropolitan's long-term Integrated Water Resources Plan (IRP) achieves diversification with an "all of the above" approach. This includes stabilizing Metropolitan's imported supplies while developing new local resources to accommodate projected future growth. A 2015 update to the IRP established a local supply production goal—which includes desalinated seawater—of 2.4 million acre-feet by 2040. The Huntington Beach Seawater Desalination Project is identified in the IRP as a potential project that can help the region meet these goals.</p> <p>Desalination, like other local resource development and conservation programs, provides benefits across the region regardless of the project's location. Benefits include helping increase reliability, improving water quality, reducing imported water demands, decreasing the burden on</p>

			infrastructure, reducing system costs, freeing up conveyance capacity, providing critical insurance against potential imported supply disruptions, and helping meet legislative mandates.
0198	Allan Bernstein Orange County Water Independence Sustainability and Efficiency 16,635 signatories (see Attachment A)	January 15, 2019	More than 16,000 individuals have signed an on-line petition asking the Santa Ana Regional Water Quality Control Board and the California Coastal Commission to grant the final permits necessary to build the Huntington Beach Seawater Desalination Plant
0199.01	Surfrider 1,008 emails (see Attachment B)	various	<p>Each signatory submitted a form letter with the following comments:</p> <p>I am writing in opposition to the Regional Water Board permit for the Huntington Beach - Poseidon Desalination Plant.</p> <p>Poseidon's proposed desalination plant would have a disastrous impact on California's marine life, ocean water quality and greenhouse gas emission goals. The draft Permit disregards the state's desalination regulations and would set a terrible precedent for future desalination projects. The draft permit holds a private company looking to profit off Californian's drought fears to an abysmally low standard for the protection of our precious coastal resources.</p>
0199.02			Since 2010, the residents of Orange County have dramatically reduced our cumulative demand for freshwater, despite significant population and economic growth. The Orange County Water District has expanded Orange County's world-renowned Groundwater Replenishment System by 30 million gallons a day and is set to expand by that size again soon. Now Los Angeles County is planning a similar Groundwater Replenishment System that will contribute 60 million gallons a day to replenish Orange County's groundwater basin. Further, a recent study by the

Comment Number	Commenter	Date of Letter(s)	Comment
			Municipal Water District of Orange County ranked Poseidon's project as the least attractive option for meeting Orange County's water needs.
0199.03			California state regulations for seawater desalination require projects to utilize sub-surface intakes to avoid impacts to marine life and to mix the brine with the nearby wastewater discharge before disposal to the ocean. The draft permit does not adequately address the absence of these design features in Poseidon's proposal. Instead, Poseidon plans to use outdated and harmful technology.
0199.04			The people of Orange County do not want this project. We do not want to perpetuate the industrialization of our coastline. The people of California own our ocean public trust resources, yet Poseidon proposes to profit from taking seawater and converting it to the most expensive water supply available without showing a need for the water. It is your responsibility to protect our public trust resources. We deserve clean water to recreate in, clean air to breathe and a beautiful coastline to enjoy and share with visitors.
0199.05			Please stand up to Poseidon and reject the currently proposed draft permit. Poseidon has failed to demonstrate adequate need for this project and we should not undermine our state regulations so that private corporations can exploit and profit off of our coastal resources.
0200	Scott Walker, Bjarne Nicolaisen, Douglas Hawkins, Ronald Magnuson, William Clow, Gerald Crain, Doug Klick, Linda Cordero, Allan Leader, Larry Greenfield, Charles Hyde,	various	<p>Each signatory submitted a form letter with the following comments:</p> <p>We support of desalination as a vital component of a long-term solution to California's water future. We must secure a diversified water portfolio to meet our state's growing population demands. We can no longer depend upon snowpack and rainfall totals to fill our reservoirs, and the cost of importing water will only continue to rise. Desalination is a sustainable solution that we can depend on now and in the future.</p> <p>The Carlsbad Desalination Plant in San Diego County is meeting about 10 percent of the region's potable water needs. Since coming online in 2015, the region has had a dependable, locally controlled source of water. As a result, during recent drought restrictions, residents had relief from mandatory water cutbacks due in large part to the locally controlled, drought-proof water provided by the Carlsbad Desalination Plant.</p> <p>I encourage you to support the diversification of our state's water supply and embrace desalination as a viable solution for Huntington Beach, as well.</p>

Poseidon's regular communications and responsible development strategies have enabled the Carlsbad Desalination Plant to become a great new addition to our community and a major resource for our entire region.</p> <p>As you can see, we are very satisfied with the results of the Carlsbad Desalination Plant and strongly encourage you to move ahead with one in Huntington Beach, too!</p>
0214.01	Sean Bothwell California Coastkeeper Alliance	January 21, 2020	<p>A. The Draft Permit does not minimize marine life mortality as required by the Ocean Plan Amendment and will result in significant adverse impacts to California's coast and marine environment.</p> <p>The Poseidon-Huntington Beach ocean desalination facility, as proposed, will withdraw 107 million gallons per day of seawater from the Pacific Ocean to produce roughly 50 million gallons per day of potable drinking water. Entrainment and impingement caused by the proposed facility is anticipated to affect a minimum of 36 different fish and shellfish species including northern anchovy and yellow crab, Pacific rock crab, and squid. Depending on the size of the fish, the</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Poseidon-Huntington Beach facility may impinge a total of 2,000 –8,000 fish on the intake screen each year.</p> <p>Under the proposed design of the Poseidon-Huntington Beach desalination facility, the brine would be dispersed using a multi-port diffuser that will not only impact marine life with its brine discharge, but would create high-velocity jets of water that would kill marine life upon contact. The brine discharged from the proposed ocean desalination facility may impact marine life up to 30 miles from the site, threatening neighboring wetlands and the historic network of Marine Protected Areas (MPAs) located off the California coast. There are 9 Marine Protected Areas within 25 miles of Poseidon’s proposed desalination plant, yet the Draft Permit does not assess the potential impacts of long-term operation (30 –55 years) of this plant on the future viability of those protected areas, and the benefits of replenishing marine life populations outside the MPAs’ boundaries.</p> <p>The proposed Poseidon-Huntington Beach desalination facility is projected to require two times more energy than importing water via the State Water Project. The energy needs of the proposed Poseidon-Huntington Beach ocean desalination facility are in direct conflict with California’s energy “loading order” policy and current renewable energy targets by increasing demand on the existing electric grid and increasing reliance on out-of-state importation of electricity from non-renewable sources.</p>
0214.02			<p>B. Orange County does not have an “identified need”, as described in the Ocean Plan Amendment, for water from the proposed Poseidon-Huntington Beach ocean desalination facility.</p> <p>Orange County’s existing water supply is anticipated to be sufficient to cover its anticipated needs through 2040, even during a multi-year dry period.</p> <p>Further water demand in MWDOC’s service area will also be limited due to increased water efficiency and conservation measures. By 2040, MWDOC expects total retail water demand in its service area to increase by only 3.27 percent, even as population grows by 10 percent.</p>
0214.03			<p>Given this project proposal is the first to be considered since adoption of the OPA and can set precedent for future desalination proposals statewide, it is critical for the Regional Board to</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>ensure there is an identified need for the project before determining a subsurface intake is not feasible.</p> <p>We urge the Regional Water Board to deny the Draft Permit as it is presented, and instruct Poseidon to site and design a facility using subsurface intakes.</p>
0214.04			<p>C. The proposed Poseidon-Huntington Beach ocean desalination facility fails to meet the requirements of the OPA.</p> <p>To comply with the OPA and its relevant regulations, the Santa Ana Water Board must first analyze separately as independent considerations a range of feasible alternatives for the best available site, the best available design, the best available technology, and the best available mitigation measures to minimize intake and mortality of all forms of marine life. The Regional Board should then consider all four factors collectively and determine the best combination of feasible alternatives to minimize intake and mortality of all forms of marine life.</p>
0214.05			<p>1. The Proposed Poseidon-Huntington Beach Ocean Desalination facility fails to use the Best Available Technology by allowing the use of harmful open ocean intakes instead of the preferred subsurface intakes.</p> <p>The OPA establishes a strong preference for the use of subsurface water intakes for seawater desalination facilities and provides an analytical framework for regulating proposed desalination facilities to ensure the selection of appropriate sites, facility design, and control technologies in the first instance, with mitigation measures available only after such selections have been made. Specifically, the OPA requires a stringent analysis of the feasibility of subsurface intakes for a range of reasonable facility sites and designs (including facility sizes, layouts, forms, and functions), and directs the Regional Boards to require subsurface intakes unless they determine that subsurface intakes are not feasible with respect to each of those considerations.</p> <p>We oppose the Draft Permit because, among other things, it incorrectly relies on freshwater drawdown as the reason for concluding subsurface intakes are infeasible. Even if freshwater drawdown was allowed to be used to conclude subsurface intakes are infeasible for Poseidon,</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			the Regional Board should require a third-party review of Poseidon's drawdown analyses prior to the adoption of the Draft Permit.
0214.06			<p>2. The proposed Poseidon-Huntington Beach Ocean Desalination facility fails to use the Best Available Design and the Regional Board did not conduct an evaluation of different design capacities (e.g. 25MGD, 20MGD, etc.) as part of its analysis as required by the OPA.</p> <p>The Regional Board has failed to determine whether subsurface intakes are feasible for a reasonable range of alternative intake design capacities in the Draft Permit. The Regional Board inappropriately asked Poseidon to only consider alternative design capacities for one site – Poseidon's predetermined site. The Draft Permit only considers a 50 MGD project at alternative sites –never considering alternative design capacities at other sites. The Draft Permit cannot determine subsurface intakes are not the best available technology based solely on the project's design capacity without an adequate showing of need and size of the facility. The Draft Permit must include a determination as to whether subsurface intakes are feasible for a reasonable range of alternative intake design capacities at Poseidon's predetermined site by removing freshwater drawdown from the analysis and analyze alternative intake design capacities at alternative sites.</p> <p>The Regional Board never independently assessed whether 50 MGD is the best available design capacity to minimize marine life mortality. The OPA is explicit that "[d]esign is the size, layout, form, and function of a facility, including the intake capacity and the configuration and type of infrastructure, including intake and outfall structures." The Regional Board's Findings are completely devoid of any analysis to independently determine the best available size and design capacity to minimize marine life mortality.</p>
0214.07			<p>3. The proposed Poseidon-Huntington Beach Ocean Desalination facility inappropriately relies on 1-millimeter screens in place of subsurface intakes to reduce marine life mortality.</p> <p>The Ocean Plan explicitly requires an evaluation of the intake and mortality of all forms of marine life. Poseidon's analysis, however, fails to account for the fact that Santa Ana Water</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>Board staff does not approve of omitting Emerita (mole crab) from any analyses as Emerita make up 90% of the diet of barred surf perch (<i>Amphistichus argenteus</i>), which are an important sport fish species in southern California.</p> <p>The State Lands Commission has required the installation of screens with a one-millimeter aperture on the intake pipe to “mitigate” marine life impacts, however, studies commissioned by the State Water Board have concluded that screens with one-millimeter openings only reduce marine life entrainment by less than one percent.</p>
0214.08			<p>4. The proposed Poseidon-Huntington Beach Ocean Desalination facility fails to use the Best Site Location.</p> <p>The Draft Permit failed to adequately assess whether alternative sites exist to make subsurface intakes feasible in Phase I of the sites analysis. The OPA states that for “each potential site, in order to determine whether a proposed facility site is the best available site feasible to minimize intake and mortality of all forms of marine life, the regional water board shall require the owner or operator to: Consider whether subsurface intakes are feasible.” Erroneously, the Regional Board concluded that the “Santa Ana Water Board finds that subsurface intakes are not feasible for a 50 MGD facility at the proposed site or at nearby sites.” As discussed above, the Regional Board’s Finding is erroneous because it assumes a 50 MGD design capacity without first independently assessing whether a smaller design capacity is the best available for minimizing marine life mortality. Furthermore, neither the proposed site nor any alternative site was analyzed using the common practice of drilling test wells to calibrate the modeling used, as was done for both the proposed Cal Am Monterey desalination plant and the proposed Doheny desalination plant in Southern Orange County.</p>
0214.09			<p>From our review of the record, Poseidon’s hydrogeological analysis was nothing more than reviewing topography and determining conclusions without the evidence to bridge the analytical gap as to why sites should be eliminated. The Draft Permit failed to select the best available site for minimizing marine life mortality for the open ocean intake. Yet, the Draft Permit explicitly admits that Poseidon’s proposed open ocean intake site (Station E) is not the best site for minimizing marine life mortality.</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>The Regional Board has failed to adequately analyze alternative sites for use of subsurface intakes, and has failed to require the best available site for Poseidon’s open ocean intake. Other sites exist that would reduce marine life mortality more than Poseidon’s self-selected Station E. The Best Available Site analysis contains no economic feasibility element. Yet Station E is being allowed simply because it is less expensive than other sites that would best minimize marine life mortality.</p>
0214.10			<p>5. The proposed Poseidon-Huntington Beach Ocean Desalination facility fails to use proper Mitigation measures and does not require adequate mitigation to address the level of anticipated harm to marine resources.</p> <p>The Regional Board’s mitigation is not large enough to restore the acreage required to replace marine life killed by the Project. The draft mitigation documentation shows the estimated Area of Production Foregone (APF) as 421.4 acres. Yet the calculated mitigation includes a mere 5.5 acres of restored wetlands and 15 acres of “restoration credit” from improved circulation. The overwhelming majority of “restoration credit” is 108 acres from maintaining tidal influence that already exists—what the Draft Permit characterizes as “preservation.”</p> <p>Given that the Draft Permit does not include any enforcement of the requirement to use the best available technology, and relies on a flawed rationale for excluding alternative design capacities and sites, the proposed mitigation, with all the imprecision and uncertainties of success, is the only proposed measure to minimize the intake and mortality of marine life. This logic must be rejected by the Board. The mortality associated with the open ocean intake must be resolved by utilizing a subsurface intake. Alternative sites to mitigate the mortality of estuarine species from the discharge must also be analyzed. Finally, separate mitigation for ocean species must be explored, including the use of artificial reefs.</p>
0214.11			<p>D. The Santa Ana Regional Water Board is the Lead Agency for the Poseidon-Huntington Beach CEQA Project and has unlawfully segmented its environmental review by failing to consider the full range of impacts caused by the Project</p> <p>The CEQA process for this Project evolved as follows: (1) The City of Huntington Beach served as the original CEQA lead agency, preparing and certifying an EIR for the</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>desalination Project in 2010; (2) Poseidon never obtained all of the necessary government approvals for the Project evaluated in the 2010 EIR and never constructed that Project; (3) In 2015, California adopted stringent new regulations for ocean desalination facilities that required Poseidon to redesign certain aspects of the Project, to assess the need for the Project as sized, and to reevaluate alternative intake designs, technologies, and locations that could mitigate or avoid marine impacts; (4) Changes to the Project and its circumstances, in turn, triggered CEQA's requirement for an updated EIR to be used in future approvals by at least four public agencies; (5) At that point, the City of Huntington Beach disclaimed any further discretionary approval authority over the Project; and (6) The State Lands Commission thereafter volunteered to prepare and certify an updated supplemental EIR when it issued the next discretionary approval for the Project—which included a modification and substantial extension of its expiring public tidelands lease with Poseidon.</p> <p>Rather than evaluate impacts and alternatives for the Project, however, Regional Board staff redefined the subject and scope of its updated environmental review as an Addendum to the Final Subsequent Environmental Impact Report and limited the analysis to Poseidon's "Outfall Modifications—New Linear Diffuser." In doing so, the Regional Board expressly deferred additional necessary environmental impacts review and alternatives analysis to other agencies. The Regional Board's explicit refusal to evaluate the full range of impacts and alternative of the Project undermines CEQA's single EIR mandate and flies directly in the face of the California Supreme Court's recent holding in <i>Banning Ranch Conservancy v. City of Newport Beach</i>, which reaffirmed that such truncated CEQA analysis is unlawful.</p>
0214.12			<p>Given the significant costs to ratepayers, marine life impacts caused by the proposed facility high energy use, GHG emissions, and improper permit analyses, we strongly urge you to deny the Draft Permit and instruct Poseidon to design and site a facility using subsurface intakes if they choose to continue pursuing desalination in this region at this time.</p>
0215	Lynn Schaulis	January 23, 2020	<p>The decimation to the marine environment and proximity to the SuperFund toxic clean-up site will not be tolerated by lifelong citizens like myself. We do not want this project and see through the massive corporate effort to make money off of our community.</p> <p>Though the argument for a stable, clean water source is valid, we know that there are other viable plans - most notably water recycling, water conservation, and cleaning up available</p>

Comment Number	Commenter	Date of Letter(s)	Comment
			<p>groundwater sources.</p> <p>Do not be swayed by the argument that funding this Newland/PCH development will help protect the Bolsa Chica wetlands. This is false logic as we know there are countless other sources that can protect this area and many concerned citizens are actively involved in seeking those non-destructive avenues.</p> <p>Please honor the voices of locals and protect our ocean. We have seen nough development plague this narrow, beautiful coastline. It belongs to future generations and they should not have to pay for the shortsightedness of people looking for corporate profits – or council members swayed by those pressures.</p>
0216	Lauren Lloyd	January 17, 2020	<p>I'm writing to you today to express my deep objection to the Poseidon desalination plant proposal in Huntington Beach. As a mother and lover of our coastline, I plan to live in Huntington Beach for decades to come, and I will not stand to see my environment negatively impacted by a proposed water solution that we simply do not need.</p> <p>Orange County Coastkeeper laid out facts against desalination in their petition. A Wired article also discusses problems with desalination.</p>
0217	Keith Bohr Bolsa Chica Conservancy	January 14, 2020	<p>As a former Huntington Beach Mayor and Bolsa Chica Conservancy Board Member I am writing you to urge the Board to support the staff recommendation and approve the permit on the HB Desai project in April.</p> <p>The Bolsa Chica Conservancy needs funds. We are out of money in 2021. All the hard work, effort and restoration will be for not. We lose all that we have worked for at Bolsa Chica without continued funding. And while the Bolsa Chica mitigation is compelling, there are other compelling reasons to renew this permit.</p> <ul style="list-style-type: none"> • Seawater desalination is drought-proof • Seawater desalination is climate resilient • Seawater desalination is needed to reduce the need to pump water from Northern California and the Colorado River <p>The state-of-the-art seawater intake technology is the best available and feasible technology to protect against marine life impacts. Your staff agrees. It's time to renew this permit.</p>
