Project Name: OC Reclamation Inert Debris Engineered Fill Operation Project

Date Application Date Posted: 9/10/2020

Received: 9/1/2020

Project City: Orange

Project County: Orange

Applicant Organization: OC Reclamation, LLC

Applicant Name: John Robertson

Waterboard Staff: MZ

Brief Description of Project:

Project Description: OC Reclamation, LLC proposes to operate an Inert Debris Engineered Fill Operation at a former sand and gravel excavation site. The operation intends to backfill the site with inert material to approximately natural grade.

Project Activities: The facility will import inert debris to the site. Material accepted at this facility will be in compliance with the definition of an Inert Debris Engineered Fill Operation. Inert materials will be spread on land in lifts and compacted under controlled conditions to achieve a uniform and dense mass which is capable of supporting structural loading, as necessary or supporting other uses such as recreation, agriculture and open space in order to provide land that is appropriate for an end use consistent with approved local general and specific plans (e.g., roads, building sites or other improvements) where an engineered fill is required to facilitate productive use(s) of the land. The engineered fill shall be constructed and compacted in accordance with all applicable laws and ordinances and in accordance with specifications prepared and certified at least annually by a Civil Engineer, Mechanical Engineer, Certified Engineering Geologist or similar professional licensed by the State of California and maintained in the operating record of the operation. The operator shall also certify under penalty of perjury, at least annually, that only approved inert debris has been placed as engineered fill and specifying the amount of inert debris placed as fill.
